> The International Ladies Garment Workers' Union is a blessing to its members, a pride to the general labor movement, and a hope for the progress of humanity at large.

The twin themes of female and Jewish liberation also impelled many thousands – and later hundreds of thousands – of American Jewish women to view the new Jewish community in the Land of Israel as a model. This Jewish country could embody,

they believed, a reflection of what modern society ought to be: pluralistic, healthy, welcoming, egalitarian, and accessible to all Jews. The fact that very few American Zionist women expected to actually set foot in Palestine did not represent a contradiction for them. It simply meant that their ideology would remain romantic and insulated from the harsh reality of Jewish life in Ottoman and then British Palestine. Zionism for these women became a way of fighting their own assimilationist tendencies, rather than a way of addressing the ideological imperative of emigration.

The groundswell of popular interest in Zionism in the United States, especially among East European Jewish immigrants, led to the creation of a diverse array of Zionist women's organizations and groups by the 1920s and 1930s. In fact, women's Zionist organizations in the United States were frequently stronger and more effective than their male counterparts. For example, since its inception in 1897, the *Zionist Organization of America (ZOA) purported to be *the* representative body of the American movement. Though the rank and file was comprised of men and women, the organization's leadership was entirely male. Relegated to conventional and secondary roles, female ZOA members performed social functions rather than substantive ones, and were shunted to the margins of political activity. In 1912, a few Jewish women had created their own Zionist organization, named Hadassah. As Hadassah grew and flourished, the ZOA leadership demanded that it fold into the male-dominated ZOA. In a remarkable instance of resistance, American Zionist women decided to take matters into their own hands and establish a separate independent organization, rather than allow Hadassah to become the ZOA's female auxiliary. The new American *women*'s Zionist organization determined to assume a full range of social, financial and political roles.

Not only did the ZOA stand to lose a significant portion of its membership and the women's services, it was also threatened with stiff competition. In the event, the ZOA leadership sought to compel Henrietta *Szold to merge Hadassah into the organization's ranks. Szold refused. She was interested in mobilizing American Jewish women and foresaw the potential and power of a distinct Zionist women's organization. Indeed, American women's colleges, medical schools and other institutions had already successfully employed a similar strategy. A crisis ensued, but Szold held firm. Since that time, Hadassah has grown to become the largest Jewish women's organization in the world. It remains a powerful and, arguably, the most significant Zionist group in the United States. By contrast, the ZOA has enjoyed only sporadic organizational and political success.

With some variation, the scenario described above was repeated in other Zionist quarters. For example, *Poalei Zion (Workers of Zion), the American wing of the Russian socialist-Zionist party, opposed the establishment of a separate women's organization. Similarly, when *Pioneer Women was created in 1925, it too became more successful than its male counterpart. But Pioneer Women is instructive in an additional way: it demonstrates the impact of Jewish women *from* Palestine on the mobilization of American Jewish woman. In this case, American women's Zionist activity and ideology were not exclusively a product of conditions in America, of Jews generally, or of women. Rather, these spheres were strongly influenced by female emissaries from Palestine, charismatic leaders such as Raḥel Yanait *Ben-Zvi and Manya Wilbushewitz Shohat.

Last, American Zionist women leaders like Irma *Lindheim and Henrietta Szold traveled back and forth between Palestine and the United States, bringing with them compelling descriptions and instructive reports of life in the Yishuv and forging a bond between the two communities. In general, Hadassah appealed to a new generation of middle-class English-speaking American Jewish women, while Pioneer Women attracted working-class first- and second-generation Jewish women from the Yiddish-speaking immigrant milieu. There were also American female Zionist organizations within the Orthodox community. In all cases, ranging among the varied classes and religious spheres, American Jewish women understood their Zionist activities both in terms of aiding the Jewish community in Palestine, and in retaining their own Jewish identity through self-education. The focus of the women's organizations was on fundraising and social projects, particularly projects that would aid women and families. In short, American Zionist women's groups – whether left-leaning, middle-class, or religious – emerged as a loosely constructed coalition that emphasized a residual national consciousness in American Jewish life and worked alongside other women's groups who sought to participate in and shape the larger public conversation about the Americanization of Jewish identity and culture.

CLASH BETWEEN "GREENHORNS" AND "NATIVES". Unlike the many other immigrant groups that reached the United States at the same time as the East European Jews, the latter had the important patronage and protection of their established German Jewish predecessors. By this time, settled Jews had largely fallen away from Germanism and were beginning to feel the impact of systematic social and political exclusion from mainstream American culture – a phenomenon that reached an abrupt climax during World War I with the swift rise of nationwide anti-German sentiment. Feelings between New York City's uptown "native" Jews and downtown "greenhorns" – and those in Jewish communities elsewhere where German and East European Jews also derisively referred to each other, respectively, as *yahudim* and *yidn* – were none too fond. Meanwhile, strong anti-immigrant sentiment was to be found especially among working-class native Jews, such as cigar makers and skilled tailors. Notwithstanding irritation over the allegedly "clannish" and "backward" character of the Yiddish-speaking immigrants, their political radicalism, and their presumed ingratitude for the philanthropy they received, the native Jews regarded the East European newcomers as their wards, to be helped, chided, and guided. Writing in 1915, Israel *Friedlaender, a Polish-born, German- and French-educated

Jewish public intellectual and professor of Semitics and Bible at the Jewish Theological Seminary, described the American setting and the cultural clash between German and East European Jews in the following terms:

> America has, in less than one generation, become the second largest center of the Jewish Diaspora, and bids fair to become the first, instead of the second, within another generation. No other country in the world offers, even approximately, such a favorable combination of opportunities for the development of Diaspora Judaism, as does America: economic possibilities, vast sparsely populated territories, freedom of action, liberty of conscience, equality of citizenship, appreciation of the fundamentals of Judaism, variety of population, excluding a rigidly nationalistic state policy, and other similar factors. It is no wonder, therefore, that in no other country did Reform Judaism [brought from Germany], as the incarnation of Diaspora Judaism, attain such luxurious growth as it did in America. It discarded more radically than in Europe, the national elements still clinging to Judaism, and it solemnly proclaimed that Judaism was wholly and exclusively a religious faith, and that America was the Zion and Washington the Jerusalem of American Israel.
>
> On the other hand, the emigrants from Russia brought the antithesis on the scene. They quickly perceived the decomposing effect of American life upon Jewish doctrine and practice, and they became convinced more firmly than ever that Diaspora Judaism was a failure, and that the only antidote was Palestine and nothing but Palestine. The nationalists among them beheld in the very same factors in which the German Jews saw the possibilities of Diaspora Judaism the chances for organizing Jewry on purely nationalistic lines. Nowhere else, except perhaps in Russia, can be found a greater amount of Palestinian sentiment, as well as a larger manifestation of a one-sided nationalism, than is to be met with in this country.
>
> This conflict of ideas became extraordinarily aggravated by numerous influences of a personal character. The division between the so-called German Jews and the so-called Russian Jews was not limited to a difference in theory. It was equally nourished by far-reaching differences in economic and social position and in the entire range of mental development. The German Jews were the natives; the Russian Jews were the newcomers. The German Jews were the rich; the Russian Jews were the poor. The German Jews were the dispensers of charity; the Russian Jews were the receivers of it. The German Jews were the employers; the Russian Jews were the employees. The German Jews were deliberate, reserved, practical, sticklers for formalities, with a marked ability for organization; the Russian Jews were quick-tempered, emotional, theorizing, haters of formalities, with a decided bent toward individualism. An enormous amount of explosives had been accumulating between the two sections which if lit by a spark might have wrecked the edifice of American Israel while yet in the process of construction.

The ubiquitous Hebrew Relief Societies that arose in different parts of the country in this period rapidly transformed into social agencies dedicated to the relief of economic distress and family aid. Most changed their names between 1910 and 1925 to reflect the American sensibility of self-help and became known as Jewish Social Service Associations. Such institutions as the Educational Alliance in New York, the Council Educational Alliance in Cleveland, the Jewish People's Institute in Chicago, and the Abraham Lincoln House in Milwaukee all demonstrated the interest of native Jews in bringing social and cultural amenities to immigrant Jews, particularly the youth, hastening their "Americanization." The founders' and directors' frequent indifference or antagonism to the cultural heritage and aspirations of their clientele generated an undertone of tension that occasionally broke into open conflict. However, the art, music, sports, health education, mothers' classes, lectures, and other activities of these institutions proved of enduring value. The Jewish immigrant districts also developed numerous social services, including hospitals and medical clinics, as well as non-Jewish institutions such as (in New York City) Cooper Union, the Rand School, and the Labor Temple.

A subtler issue between natives and immigrants was religious life. The Reform temples of native American Jewry were uninviting, while the *ḥevrot* and *landsmanshaft* synagogues could only attract their own devotees. Several prominent communal leaders and religious figures worried about the young generation who rejected the religion of their forebears in favor of secularism and radical social doctrines. In the eyes of some, a modernized form of traditional Judaism was required for the rising generation of Jews of East European ancestry who were raised or born on American soil. Against this background, the moribund *Jewish Theological Seminary of America was revived in 1902 for the training of modern rabbis (and from 1909, teachers for Jewish schools). It was substantially endowed by a group of German Jewish patrician leaders and under the direction of Solomon *Schechter, a distinguished scholar-theologian, an outstanding library and faculty were quickly assembled. The growth of the seminary was slow, but its professors deeply influenced many of the younger religiously oriented intelligentsia.

For their part the immigrants had unflattering perceptions of the native "uptown" Jews, whom they regarded as snobbish and patronizing, excessively assimilated, and lacking Jewish kindness and sympathy. Yet the natives did provide the immigrants with a model for being American and Jewish. Immigrants and their problems were the main content of Jewish communal life and concerns from the 1880s until the 1930s. The intellectuality and Jewish fervor common among the newcomers, and such achievements as their labor movement and the New York City Kehillah, showed some natives – of whom Louis D. Brandeis might be cited as the outstanding example – a more authentic, passionate way to be a Jew. Quite a few native Jews were thus drawn into the cultural life and social movements of the Yiddish-speaking immigrant milieu, including Zionism.

East European Jewish immigration brought about the establishment of Orthodoxy in the United States, although only a minority of immigrants and few of their children actually remained Orthodox Jews. Several hundred East European rabbis settled throughout the country, but their influence was far more limited than it had been in their native lands. Before

the 1930s most Orthodox synagogues were immigrant *ḥevrot*. At the other end of the spectrum Reform Judaism reached its greatest distance from Jewish tradition at the turn of the 19th and 20th centuries. Proposals were considered at length for a Reform synod to settle matters of belief and practice, but they were not accepted. Extensive discussion took place over shifting the Sabbath from Saturday to Sunday, and several large congregations did so. The Reform rabbinate began to take an active interest in contemporary social problems and its strong anti-Zionism slowly softened so that it was able to countenance the *Balfour Declaration of 1917. There was also considerable preoccupation with the inroads made by Christian Science, *Ethical Culture, and New Thought. If Orthodox Judaism was hampered by its intimate identification with Old World life and customs, and Conservative Judaism lacked a strong congregational constituency and depended for recruits upon acculturated immigrants, Reform after the 1890s tended to lose contact with the mainstream of American Jewish life and affairs. Its layleaders, who included many significant leaders of American Jewry, participated in Jewish life mostly outside the framework of Reform Judaism. During the 1920s Reform interest in tradition and Jewish peoplehood revived largely as a result of the developments in Palestine and the widening influence of East European forms of secular Jewish life.

COMMUNAL STRUCTURE AND EDUCATION. Before the fin-de-siècle, American Jewry as a body consisted essentially of dozens of local communities. The de facto communal leaders were lawyers, substantial merchants, bankers, and some political activists in the large metropolitan centers. Such elites were often the pillars of the Reform temples, the B'nai B'rith lodges, the Hebrew Relief Societies, the Jewish social clubs, and the emerging Jewish labor movement. The most significant countrywide organizations were B'nai B'rith (and several other internally oriented fraternal bodies), the Union of American Hebrew Congregations, and the National Council of Jewish Women. Mass immigration and increasing manifestations of antisemitism, however, brought charity and the defense of Jewish rights to the foreground of American Jewish concerns, while the development of nationwide transportation and communications provided the means of making Jewry an organic, nationwide body. Beginning in 1895 with the creation of Boston's Combined Jewish Philanthropies, local Jewish charities set up federations for unified fundraising and allocation purposes. This federation method was soon taken up by every larger community, and essentially covered the United States with the founding in 1917 of the Federation for the Support of Jewish Philanthropic Societies (see *Philanthropy) in New York City. These bodies tended to assume local Jewish leadership, developing a quasi-ideology that philanthropy was the one tie uniting Jews of all kinds. The most influential national Jewish spokesman from its founding in 1906 was the American Jewish Committee, which drew its membership by invitation from the leading Jews of every city but was centered in New York City. The elitist viewpoint of the American Jewish Committee frequently conflicted with such movements as Zionism and Jewish trade unionism, which drew their strength from East European Jewish immigrant mass followings. However, the wealthy, well-connected, and extremely able leadership of the American Jewish Committee, notably Jacob H. Schiff, Mayer *Sulzberger, and above all Louis Marshall, exhibited a talent for compromise and enjoyed prestige which gave the committee's membership of bankers, merchants, lawyers, and politicians its leadership.

Well before massive East European immigration began, American Jews were committed to the public school for the education of their children. With the firm establishment of free, state, compulsory, universal elementary and then secondary schools, Christian, i.e., Protestant influence, was largely removed. Catholics rejected religiously neutral public schools and erected a parochial school system, but Jews gladly saw their children educated in the public schools. Jewish education in the specific sense became the responsibility of synagogues, most of which maintained Sunday schools attended by their own children and some others. In these schools the course of study lasted three years, and the teaching usually involved a moralistic interpretation of Bible stories and an inculcation by catechism of the principles of Judaism.

When East European immigrants first undertook to educate their sons in Judaism – virtually nothing was done initially for daughters – they merely copied traditional *ḥeder* instruction with its shortcomings. After about 1905 a new direction became prominent in Jewish education as a synthesis of religion, modern Hebraism, and Zionism, came to prevail in the afternoon Hebrew schools, known as Talmud Torahs. A new curriculum emphasized the study of the Hebrew language by the "natural method," Hebrew Bible, music, and Jewish customs and ceremonies. The new Hebrew pedagogues were often learned and devoted men, but they had to struggle against financial adversity even in prosperous times, and to overcome widespread parental indifference to Jewish education beyond sketchy *bar mitzvah* lessons. A variety of secular Yiddish-speaking supplementary schools also flourished in this period. Supported by the Arbeter Ring, the Labor Zionist movement, and other socialist groups, these schools – known as *folkshuln* (pl.) (people's schools) – emphasized a mix of classes on Yiddish and Hebrew language, Jewish history, culture, and literature, and contemporary Jewish society. They also sought to educate Jewish youth in the ideologies of Jewish socialism, Yiddishism, and Zionism. The swift adaptation of the East European Jews to American society is evident in the plethora of aforementioned institutions and the fact that the children of Yiddish-speaking immigrants frequently moved seamlessly between them. Thus, for example, in addition to the modernizing influence of American public schools, it would not have been at all unusual for a child to receive traditional instruction in an Orthodox *shul* (synagogue), regularly attend a Talmud Torah or *folkshul* which emphasized a variety of contemporary educational methods and concerns, and even belong to a Zionist or socialist group.

WORLD WAR I AND ZIONISM. World War I (1914–18), which the United States entered in 1917, proved decisive in welding together the various segments of American Jewry and affirming their place in American society. When the war started there was considerable Jewish sympathy with Germany as the enemy of Russian tsarism, a bastion of socialist strength, and the ancestral land of a large proportion of American Jewry. In November 1914 early efforts for overseas relief were unified by the establishment of the *American Jewish Joint Distribution Committee, led by Jacob H. Schiff, his son-in-law and partner Felix M. *Warburg, Nathan *Straus, Herbert H. *Lehman, and prominent personages from immigrant circles. As the war raged, Jewish opinion moved with American opinion generally toward a pro-Allied policy. Another by-product of this complex era was the waning of the decades old American Jewish attachment to German culture. But there were also dissident and pacifist voices heard amidst the din of battle and growing anti-Hun sentiment, including that of the socialist Zionist ideologue Nachman Syrkin, who resigned from the Poalei Zion party's central committee when the latter adopted a pro-war stance, and the radical anarchist Emma *Goldman, a brilliant orator who inspired audiences in Yiddish, English, Russian, and German. Sounding the clarion call of labor militancy, Goldman frequently exhorted striking workers to "demonstrate before the palaces of the rich; demand work. If they do not give you work, demand bread. If they deny you both, take bread. It is your sacred right." As a result of her anarcho-syndicalist and anti-war activity, she spent two years in prison in the United States before being deported in 1919 to the recently established Soviet Union.

The critical year during World War I was 1917. The overthrow of Russian tsarism, the idealistic motivation of the United States' entry into the war, and the British conquest of Palestine, soon followed by the Balfour Declaration which recognized Palestine as the "national home" of the Jewish people, stirred a fever of enthusiasm. Approximately 250,000 Jews served in the United States Armed Forces in 1917 and 1918, a majority of them young immigrants. As a consequence, Zionism acquired influence in American Jewish circles that it had not previously enjoyed. The organized movement dated from 1897, but there had been proto-Zionist groups as early as 1882. The leadership was composed of several acculturated businessmen and Hebraic intelligentsia, centering on such persons as Richard J.H. *Gottheil, Harry *Friedenwald, Judah L. Magnes, Stephen S. Wise, Jacob *De Haas, Philip *Cowen, Henrietta Szold, and Israel Friedlander. Funds and outlets for activity were extremely limited, however, and membership was mostly young people of immigrant parentage, with modest means and connections. The coming of war and the neutrality of the United States, with the probability of the breakup of the Ottoman Empire, stirred considerable interest in Palestine's Jewish society-in-the-making. In addition, Louis D. Brandeis entered the movement and in 1914 assumed active leadership of the Federation of American Zionists (later renamed the Zionist Organization of America). Brandeis' participation in Zionism brought the movement instant recognition and credibility. The Zionist idea began to elicit excitement among American Jews as it appeared to be a Jewish counterpart of the "self-determination of nations" propounded by President Woodrow *Wilson. It was adapted to the American Jewish outlook by stressing Palestine as a refuge for oppressed Jews and a place where an ideal society would be built. American Zionist ideology avoided interpreting all lands except Palestine as exile (*galut*). At one and the same time, Brandeis proved to be an especially eloquent spokesman for American Zionism as well as an exemplar of the rise of a new American Jewish consciousness. In a public address given to the Eastern Council of Reform Rabbis in 1915, he addressed the question of divided loyalties.

> Let no American imagine that Zionism is inconsistent with patriotism. Multiple loyalties are objectionable only if they are inconsistent. A man is a better citizen of the United States for being also a loyal citizen of his state, and of his city; for being loyal to his family, and to his profession or trade; for being loyal to his college or lodge. Every Irish American who contributed towards advancing home rule [in the Irish Free State] was a better man and a better American for the sacrifice he made. Every American Jew who aids in advancing the Jewish settlement in Palestine, though he feels that neither he nor his descendants will ever live there, will likewise be a better man and a better American for doing so.

With the escalation of the war, American Jewish sentiment increasingly favored Russian Zionist leader Ze'ev *Jabotinsky's call to establish the Jewish Legion. In the United States, David *Ben-Gurion, Yitzhak *Ben-Zvi, and Pinḥas *Rutenberg, all three of whom were expelled from Palestine by the Turkish authorities and spent much of the war in exile, threw their support behind the idea of a Jewish military force and assumed the leadership of the American campaign. Marshaling the support of the fledgling Zionist group *He-Ḥalutz (The Pioneer), they organized the 39th and 40th Battalions of Royal Fusiliers, the American regiments of the British-sponsored *Jewish Legion. The He-Ḥalutz members formed the idealistic core of the legion's American recruits who, according to one member, were motivated by "the strong desire to participate in the liberation of the land of our forefathers and, if spared, to remain among its builders." One observer offered the following description of a Jewish immigrant recruit:

> A Jewish driver entered the recruiting office and asked in uncouth Yiddish, "Do you take soldiers here for Palestine? I want to go myself." "Your age?" "Thirty-one." "Are you an American citizen?" "No." "Are you out of work?" "I make thirty to thirty-five dollars a week." "Why do you want to go?" He burst out in a rage and came near hitting the recruiting officer. "Are you a Jew? When they are fighting for Palestine will I stay here? I can kill twenty Turks for one breakfast."

In fact, a majority of the 5,000 legionnaires were not members of the Zionist movement. As a report to the American Poalei Zion convention of 1918 indicated, most were workers, clerks, students and individuals from white collar professions. Yet the

groundswell of interest in the Jewish Legion illustrates the allure the notion of liberating the Jewish National Home held for a broad cross-section of American Jews. Public displays of support for the legionnaires were common. For example, as hundreds of young recruits traveled along the eastern seaboard en route to the legion's British military training camp in Windsor, Ontario, they evoked an enthusiastic response from the region's Jewish communities. One sympathetic witness observed:

> At every town in New England where the train stops on the way to Canada crowds come out to wish God-speed to the men who are going to fight for the Jewish people, for them… *Hatikvah* [The Hope] takes on a new sound and a new meaning in gatherings such as [these]. It is not the wail of a people which protests that its hope is not yet dead. It is the triumphant battle-cry of a people whose hope is to be realized.

Of the American recruits, only 2,500 legionnaires actually fought during World War I. The 39th Battalion, together with the British 38th "Judean" Battalion, played notable roles in this regard. Both the 38th and 39th Battalions were stationed in Palestine near Jericho. On September 22, 1918, the Jewish Legion routed the Turks from a strategic ford of the Jordan River, north of the lake of Galilee, and opened the way to Damascus for the Australian and New Zealand cavalry. After the war's conclusion, a group of 280 American legionnaires provided the nucleus for the establishment of Aviḥayil, a moshav ovedim (workers cooperative) near the oceanside town of Natanyah. Although relatively few in number, the former legionnaires comprised a significant segment of the 600 American Jews who settled in Palestine during the 1919–23 postwar wave of Zionist immigration.

The Jewish Legion's task was defined in Wilsonian terms as making the world safe for democracy and in Zionist terms as establishing a Jewish foothold in Ereẓ Israel. Although the Jewish Legion's contribution to the total Allied war effort was minimal, the unit had great symbolic value for American Jews. American Jews relished the image of a Jewish military force that would combat the stereotype of immigrant Jews as rootless, cowardly, and defenseless. The Jewish Legion thus assumed an importance in the public sphere disproportionate to its actual wartime role. The legionnaires themselves sustained this myth; they were credited with and took credit for successes in which they played only a part. Military experience was an intensive acculturation to the larger American scene for a sizable number of Jews who came from urban immigrant districts.

Under Brandeis, Zionist membership and influence in this period grew rapidly. Significant headway in this regard was made when the American Jewish Committee's dominance in American Jewish affairs was challenged by the Zionist-inspired movement for an American Jewish Congress which, it was rightly supposed, would include the realization of the Zionist goal among postwar Jewish demands. The congress movement succeeded in calling a countrywide Jewish election on June 4, 1917, at which pro-Zionist delegates were chosen. By this time the American Jewish Committee compromised, and soon thereafter the Balfour Declaration, endorsed by the United States, appeared to settle the Palestine question. After the war, the delegation sent to the Paris Peace Conference by the American Jewish Congress was headed by the Zionist leader Julian W. *Mack and non-Zionist leader Louis Marshall, both distinguished jurists, who collaborated with other European Jewish representatives in acquiring national minority rights for Jews in the newly created states of Central and Eastern Europe. Another important American Jewish figure to attend the conference was Bernard *Baruch, a senior advisor to President Woodrow Wilson and outspoken opponent of Zionism. In the event, Baruch helped design the Versailles Treaty's economic sanctions, which ultimately imposed heavy reparations payments on Germany and contributed to the instability of the Weimar Republic. American Jewry thus made its debut at the center of world Jewish affairs, like the United States itself – at the very moment when postwar withdrawal from European involvements was reflected in decreased American Jewish interest in foreign matters and a drastic drop in the funds raised for overseas purposes, with the notable exception of Palestine.

THE TURBULENT TWENTIES. Flanked by the swift rise of new ethnic and immigrant groups, on the one hand, to which entrenched American elements responded with a mixture of xenophobia and racism, and the collapse of America's economy, on the other, historian John Higham has dubbed the interlude between World Wars I and II as "The Turbulent Twenties." In this period, the American Zionist movement entered into prolonged decline after Brandeis, who Wilson in the meanwhile elevated to the United States Supreme Court, and his well-connected leadership group withdrew from Zionist activities following their defeat in 1921 by the *Weizmann wing of the Zionist Organization. The conflict at hand arose from whether Palestine was to be developed by large-scale public corporate enterprise or by mass contributions to the new *Keren Hayesod (Palestine Foundation Fund) general development scheme. It also derived from a lack of personal chemistry between Brandeis and Weizmann. Thereafter deprived of access to large givers, the principal Zionist funds could raise no more than $15,000,000 during the 1920s. Meanwhile, Hadassah, founded by Henrietta Szold in 1912, continued to raise increasingly substantial sums for health services projects in Palestine, as did the Labor Zionist movement – the Po'alei Zion (Workers of Zion), Zei'rei Zion (Youth of Zion), Pioneer Women's Organization, and Farband (Labor Zionist fraternal order) – in the name of the Geverkshaften campaign for Palestine labor institutions.

The United States' turn toward isolationism, the "Red Scare" of 1919–21, and the surge of nativism and anti-urbanism during the 1920s bore serious consequences for American Jewry. A great wave of anti-foreignism and fervor for "Americanization," as propagated in the press, books, and the public schools, bore down hard on Jewish cultural distinctiveness.

Jews were prominent among political radicals of all shades, few of whom felt anything but indifference or hostility to their Jewish origins, but antisemitism in the United States in lurid tones tied Jews as a body to Bolshevism and political radicalism. The canard of an international Jewish plot to overthrow Western civilization spread countrywide. At the same time doctrines of the inferiority of specific racial types became widely accepted in academic as well as popular thinking. This philosophy had a vigorous proponent of unlimited financial means in the automobile magnate Henry Ford, who published the *Dearborn Independent* and *The International Jew* in millions of copies until forced by a lawsuit in 1927 to cease and to retract his statements. Louis Marshall spearheaded the latter effort and succeeded in extracting a public apology from Ford. The hooded southern society of the Ku Klux Klan, refounded about 1915, spread far beyond its original locale in the South to the Middle West and even the East, propagating antisemitism alongside its racism and anti-Catholicism. It gained short-lived political power in some states. Public revulsion at the Klan's corruption and weariness with its antics caused the organization virtually to disappear by 1927.

By far the most important result of these movements was the Johnson-Reed Act of 1924 restricting immigration, which took effect in several stages beginning in 1925. An earlier immigration act of 1921 established the principle of the national origins quota, by providing that the number of immigrants to be admitted in any year was not to exceed three percent of their respective native lands' stock (i.e., immigrants and their children) residing in the United States in 1910. Following vigorous agitation by racist intellectuals like Prescott F. Hall and Madison Grant, and their ally Senator Henry Cabot Lodge of Massachusetts, and by Southern and Western nativist opponents of foreign immigration, the Johnson-Reed Act was passed in 1924. Its provisions were founded on a belief in "Nordic" (Northern and Western European: English, Irish, German Scandinavian) superiority over Mediterraneans, Slavs, Orientals, and Jews, for it not only limited yearly immigration to 154,000 but also gave overwhelming preference to immigrants from Northern and Western Europe. This was accomplished by setting the quota at two percent of the foreign stock living in the United States in 1890, a census year before "undesirable" Slavic and Mediterranean elements were heavily represented in the population. Thus, only 5,982 immigrants could be admitted yearly from Poland, 2,148 from Russia, and 749 from Romania. A prospective immigrant was categorized for quota purposes by his/her land of birth so that, for example, a Jew born in Poland who spent his/her life in England was a Pole under the Johnson-Reed Act. The only means of reaching American shores outside the quota was by affidavits guaranteeing support submitted by relatives in the United States. The quota system, worked out in detail during the late 1920s, closed off the great stream by which almost 2,500,000 Jews came to the United States between 1880 and 1925. The effect of the Johnson-Reed Act, therefore, was to hasten the day when the majority of American Jews were native born, which was around 1940.

Racist and nativist movements became rife during a period of massive movement of Jews out of the immigrant quarters into newer, more attractive urban districts, and out of immigrant trades into commercial, clerical, and professional occupations. During the prosperity of the 1920s large numbers of young Jews, children of immigrant parents reaching maturity, tended to enter the professions of law, medicine, dentistry, teaching, and to some extent social work. As far as can be reckoned, the largest trend was toward small, independent business and clerical, managerial ("white collar") employment. It was in this connection that antisemitism in the United States assumed the most directly injurious forms. Large insurance companies, banks, retail chains, law firms, and large companies generally did not employ Jews, with the exception of a few who had no chance of advancement in the positions they held. Private colleges and universities habitually imposed quotas on Jewish student admissions, usually between five and ten percent. Most rigorous were antisemitic restrictions in almost all medical schools that forced many intelligent and capable young Jews to study abroad. Antisemitism in the medical profession also applied to opportunities for specialty training and appointment to hospital staffs, even in public institutions. The Jewish hospitals founded late in the 19^{th} century for the needs of Jewish patients became devoted from the 1920s to alleviating the plight of the Jewish physicians. College and university faculties were with few exceptions closed to Jews, and Jewish teachers could usually secure employment in public schools only in the largest cities.

These occupational trends into clerical, managerial, entrepreneurial, and professional employment coincided with the gradual departure of Jews from the heretofore Jewish trades, mainly in the garment industry. By the 1930s Jews constituted only two-fifths of the membership of the International Ladies Garment Workers Union and the number in the Amalgamated Clothing Workers dropped, although the leadership continued to be Jewish. A similar Jewish union arose during the 1920s, the Fur and Leather Workers Union. These unions were torn by factional disputes between Communist and anti-Communist groups.

The 1920s were the ripest years of Yiddish culture. There were eleven Yiddish theaters in New York City and seventeen elsewhere in the United States which, during a one-month period in the fall of 1927, presented 645 performances of 85 plays, many of high artistic quality. The Yiddish school system also reached its peak during these years, enrolling approximately 12,000 children, while such a Yiddish organization as the Workmen's Circle (Arbeter Ring) attained its maximum membership of about 80,000. Symptomatic of future decline, however, was the lowered circulation of the Yiddish press from its 1915 peak. Hebrew culture attracted a devoted but much smaller following, organized in the Histadruth Ivrith of America and publishing the weekly *Hadoar* ("The Mail"). Hebraists were particularly prominent in the rabbinate and Jewish education.

During the 1920s Jews began to appear in American literature. Several semi-autobiographical novels about Jew-

ish immigrant life appeared in English – two noteworthy examples are Ludwig *Lewisohn's *Up Stream* (1922) and Anzia *Yezierska's *Bread Givers* (1925) – while persons like Gertrude *Stein and Maxwell *Bodenheim were literary modernists. Other gifted American Jewish writers, whose work reached a broad Yiddish and English readership in this period, were Sholem Asch, Moshe Leib Halpern, Anna Margolin, Joseph *Opatoshu, I.J. Schwartz, and Yehoash (Yehoash-Solomon Bloomgarden). Such publishers as Alfred A. *Knopf and Horace *Liveright specialized in issuing the best of contemporary literature. The first American Jewish literary magazine, the **Menorah Journal*, began publication in 1915 and enjoyed its most distinguished years of "fostering the Jewish 'humanities'" during the 1920s. The door was thus opened for the rise of other Anglo-Jewish journals of high quality, many of which focused on questions of literature, art, religion, and contemporary politics. Consequently, the emergence of **Commentary*, the *Contemporary Jewish Record*, *Jewish Frontier*, the *Jewish Spectator*, *New Palestine*, the *Reconstructionist*, and others in the 1930s and 1940s – and their success as a platform for vigorous Jewish public debate – can be traced to the pioneering efforts of the *Menorah Journal*.

At a different cultural level, the advent of mass film entertainment in the United States was largely the work of Jewish producers and entrepreneurs who made Hollywood the world's film capital after 1920. Poor immigrants like Adolph *Zukor, Carl *Laemmle, Louis B. *Mayer, Lewis J. *Selznick, Jesse L. *Lasky, and the *Warner brothers eventually developed motion pictures into a worldwide entertainment industry in the 1920s and 1930s. They virtually dominated the new industry for several decades and in the meantime made themselves and others multimillionaires. In turn, these "moguls" attracted a rich cadre of Jewish immigrant talent that helped shape Hollywood's golden age and set 20th-century American culture on a new path.

In fact, the first "talkie," *The Jazz Singer* (1927) – the story of a Jewish boy struggling to escape his Yiddish-speaking immigrant background and make it as a show business entertainer – was produced by Warner Brothers and featured the vaudeville singing and dancing star Al *Jolson. The film ushered in the new mixed technology of celluloid photography and synchronized sound and quickly became a countrywide sensation. It also promoted a positive and liberal view of the Americanization process and introduced a variety of theater audiences to East European Jewish culture and life, including traditional Jewish rituals, liturgical music, and the Yiddish language. In the story, the protagonist Jakie Rabinowitz (played by Jolson), runs away from home, adopts the non-Jewish stage name Jack Robin, and works hard to achieve success and acclaim. He is eventually reconciled with his dying traditionalist father, honors his parents' wishes by chanting the **Kol Nidrei* service on Yom Kippur eve, and then resumes his Broadway career. The film ends with Jolson singing "Mammy" in blackface, while his adoring widowed mother looks on. "If God wanted him in His house," she reasons, "He would have kept him there."

Notwithstanding *The Jazz Singer*'s unapologetic use of Jewish subject matter and its commercial and artistic success, the story line serves to illustrate the trajectory of many Jews in the growing American film industry. From the producers and movie makers behind the scenes to the box office celebrities who became iconic figures of the silver screen, Hollywood offered many Jews the opportunity to jettison their East European ancestry and remake themselves fully as Americans. They distanced themselves from the organized Jewish scene and played nary a visible role in the wider community. "When I arrived at Paramount [movie studio] as a contract writer," Abraham Polansky later reported, "another Jewish writer told me to change my name. He told me it sounded Jewish and that movies were seen all over America. I didn't change my name… but many actors did." Thus, following in the tradition of many German Jewish immigrants, including Erich Weiss, the celebrated escape artist of the early 20th century who became Harry *Houdini, Israel Iskowitz became Eddie *Cantor, Julius Garfinkle became John *Garfield, Emanuel Goldberg became Edward G. *Robinson, Melvyn Hesselberg became Melvyn *Douglas, and Marion Levy became Paulette *Goddard. Among other especially popular Jewish performers in this period were the radio comic Jack *Benny (born Benjamin Kubelsky in Chicago, Illinois), who later became a pioneer of television comedy, and Julius Henry (Groucho) *Marx and his brothers Chico (Leonard), Harpo (Adolph), Gummo (Milton), and Zeppo (Herbert) whose wild antics in films like *Animal Crackers* (1930) and *Duck Soup* (1933) quickly made these sons of German Jewish immigrants a household name. Younger Jewish aspirants, including Jerry *Lewis who in the 1940s would get his start doing vaudeville sketches in the Catskills and go on to become a major comic celebrity in the 1950s and 1960s, followed in their wake. Meanwhile, George *Gershwin's American operetta *Porgy and Bess* (1935) appeared in the same year as the virtuoso clarinetist Benny *Goodman (born Benjamin David Gordon), the son of poor East European Jewish immigrants in Chicago's Maxwell Street neighborhood, established himself as the "King of Swing." The stage was now set for the future participation of Jews in American culture on a major scale.

THE GREAT DEPRESSION. The Great Depression which began in 1929 and did not fully end until World War II struck Jews and other Americans very hard. Mass unemployment severely affected the Jews with their distinct economic stratification, although precise statistics are not available. Thousands of small Jewish businesses, many established a few years earlier by ambitious immigrants, were ruined, and established businessmen and Jewish communal leaders often fared no better. One result of these economic disasters was the abandonment by Jewish philanthropies of the claim that "Jews take care of their own," for the numbers requiring relief were far too great for any but governmental support. Against this background of unemployment and business crisis, the Jewish community suffered severely as the income of its institutions drastically

declined. Saadia Gelb, a Labor Zionist youth leader, later recalled the impact of these uncertain times on left-leaning Jewish youth like himself:

> It is difficult to conceive what a sense of helplessness engulfed the country after the crash. Not only the headlines of tycoons turned paupers, news of millionaire suicides, confusing government statements, but gnawing doubts about the very foundation of our society upset every American. Those of us who were then in the Young Poalei Zion had the answers. We knew that Zionism would solve the Jewish problem; socialism the problem of society as a whole.

During the Depression, the income of charitable institutions dropped by more than half, campaigns for overseas aid were virtually given up from 1930 to 1935, and synagogues and schools fell far in arrears of pay to their employees. The occupational distribution of the Jews at this time was summarized by Benjamin M. Selikman:

> Jews are not widely represented on the farms or in manual jobs. The needle trades have employed large numbers, although even here other nationalities have been supporting them in recent decades. The heavy industries engage few Jews either among employers or workers. Banking, stock brokering, moving pictures and other forms of amusement, real estate and the distributive trades account for most of our Jewish wealth. The professions, small business, and white-collar occupations yield our large Jewish middle class.

Earlier discrimination against Jews in employment became much sharper as jobs became fewer. Many Jews entered expanding governmental service, which offered extensive employment to professional and technically trained Jews on terms of equal opportunity. Widespread Jewish communal concern that under conditions of depression and antisemitism American Jewry would presently consist of a few large businessmen, many independent salesmen, a large proletariat drifting unwillingly into factory labor, and an element of restless, bitter intellectuals prompted much talk and a few efforts to "balance" Jewish occupational distribution, none of which came to anything. Jewish youth, aided by their often impoverished families, continued to go to free colleges, especially in New York City, and to somewhat more costly state universities, while the prosperous went to private institutions. Proportions in this regard continued to be far higher among Jews than the general population. For example, in the mid-1930s approximately 49 percent of all college students in New York City were Jewish, while the 105,000 Jewish college students in the entire country were just over nine percent of total college enrollment. Student ambitions were toward business and the professions, and this foretold the Jewish economic future in the 1950s more accurately than the predictions of the sociologists and economists of the 1930s.

From the New Deal to the Rise of the State of Israel, 1932–1948

POLITICAL ACTIVITY. As the Democrats became the party of urban-oriented reform, exemplified in 1928 by the presidential candidacy of Alfred E. Smith, Jews moved into its ranks en masse and away from their earlier Socialist or Republican affiliation. The New Deal and its leader, President Franklin D. *Roosevelt, attracted enthusiastic Jewish loyalty. Roosevelt, who had strong ties with New York City reformers, many of them Jews, was greatly admired. Throughout his presidency (1933–45) 85 to 90 percent of Jewish votes were cast for him and candidates who supported him. In this period, Jews appeared in politics with unprecedented prominence: one cabinet member (Henry *Morgenthau, Jr. who served as secretary of the treasury), three United States Supreme Court justices (Louis D. Brandeis, Benjamin *Cardozo, and Felix *Frankfurter as Brandeis' successor), five governors (Ernest *Gruening of the Alaskan territory, Herbert H. *Lehman of New York, Arthur Seligman of New Mexico, Julius L. *Meier of Oregon, and Henry *Horner of Illinois), and several hundred assistant secretaries, mayors, judges of lower courts, and high appointive officials. Such New Deal legislation as bank deposit insurance, the protection of trade unionism, work relief, establishing wage and hour standards, and social security, directly benefited the mass of working-class and lower-middle-class Jews. In the final analysis, however, vigorous Jewish support for Roosevelt and the unprecedented number of elite Jewish officials – antisemites spoke of the "Jew Deal" – yielded very little governmental aid for Jews imperiled abroad beyond sympathetic presidential statements.

In addition to the overwhelming support among Jews for the New Deal, the vogue of "popular front" Communism during this period attracted many Jews. Troubled by seemingly insoluble economic crisis and menaced by antisemitism, the security of employment in Soviet Russia and its "prohibition" of antisemitism made that country appear a utopia to thousands. Communism appealed especially to some segments among garment workers and to professionals, like teachers and social workers, who were sensitive to social ills and encountered great difficulty in establishing themselves. Outside the Communist Yiddish enclave, the movement was indifferent to Jewish needs and problems. In fact, it was favorable to the Arab cause in Palestine. Communists claimed that their triumph would solve all Jewish problems. A rapid deflation of their popularity occurred with the Hitler-Stalin pact of 1939.

If the liberal American Jewish *Weltanschauung* of the 1930s and 1940s was buoyed by the twin visions of the Roosevelt administration in the United States and the Zionist movement in Jewish public affairs, it is also true that the social realities in both instances tested American Jewry's political resolve and the durability of its attachments. Like Roosevelt's New Deal coalition (in which American Jews played an important role), the Zionist Organization's prevailing Labor-led coalition (in which American Zionist groups played a crucial part) consolidated its power and authority around grand strategies and the global *Realpolitik* of the 1930s. Roosevelt persuaded the country to accept the proposition that the national government is responsible for the welfare of its citizens and that the New Deal would provide social and economic secu-

rity for all Americans. Meanwhile, David Ben-Gurion, who emerged as Labor Zionism's undisputed leader in 1935, articulated a similar set of priorities: "Zionism means the growth of a state, and a state does not build itself, nor is it built by those who seek their own interests and survival. Only through mobilization of mass strength and movement, with pioneer training and a readiness for self-sacrifice can this be made a reality." In sum, the Labor-Centrist coalition that dominated Zionist politics in Palestine and world affairs from the mid-1930s onward – and which came to power as a result of the achievements in Palestine of the Histadrut, a countrywide socio-economic infrastructure organized along cooperative and nationalist lines – also captured the hearts and minds of broad array of American Jewish socialists, progressives, and liberals. This remained true even after the outbreak of World War II, when both Roosevelt and Ben-Gurion led their respective nations into the international arena as part of the Allied fight against the Nazi Germany.

IMPACT OF NAZI GERMANY AND ANTISEMITISM. American Jews were profoundly shocked and frightened by Germany's turn to Nazism in 1933 and its unprecedented treatment of the Jews, and to a lesser degree by official antisemitism in lands such as Poland and Romania. Against this backdrop, antisemitism in the United States was therefore particularly disturbing, although its major sources were Catholic and populist rather than Nazi in origin and focused in the person of the notorious "radio priest," Father Charles E. Coughlin. Probably more significant, however, was that every political leader and virtually every intellectual and cultural figure opposed antisemitism, led by President Franklin D. Roosevelt who earned strong Jewish support in part for his unconcealed detestation of Nazism and antisemitism.

The Nazi regime drove increasing numbers of its Jewish victims to the United States. However, owing to severe economic conditions, a rise in xenophobia, the hostility of the State Department, and the intransigence of United States consuls empowered to grant visas, total Jewish immigration to the United States, most of it from Germany, did not exceed 33,000 from 1933 through 1937. With the extreme worsening of the situation, 124,000 refugees arrived from 1938 through 1941, mostly from Germany and the lands conquered by the Nazi regime. Refugee immigrants encountered great difficulty in adjustment owing not only to the trauma of their readjustment but also to Depression conditions. Indeed, most Jewish refugees experienced significant downward mobility and had to start and long remain at a socio-economic level beneath that which they enjoyed in Europe. They concentrated in New York City, focusing on particular neighborhoods, and tended to establish their own congregations, welfare organizations, and social clubs. A coordinating body, the National Coordinating Committee for Aid to Refugees and Emigrants Coming from Germany, was established 1934, and in 1939 it became the National Refugee Service, a functional agency.

Several thousand of these refugees were scientists and academic intellectuals. Their symbolic leader was Albert *Einstein, who received the Nobel Prize in physics in 1921 for his work on the photoelectric effect of quantum mechanics and who now assumed a post at Princeton University. A few hundred of these refugee scholars wielded tremendous intellectual influence on research and teaching in the United States in such fields as music, art history, psychiatry and psychoanalysis, history, sociology, and incomparably in nuclear physics. This intellectual migration, nearly all Jewish, ensured the transfer of much of the world's intellectual leadership from Europe to the United States, including many well known figures such as the composers Arnold *Schoenberg and Kurt *Weill, the conductors Otto *Klemperer and Bruno *Walter, the writer Stefan *Zweig, the piano virtuoso Artur *Rubinstein, the theatrical producer Max *Reinhardt, and the architect Erich *Mendelsohn.

RELIGION AND EDUCATION. Few of the 3,728 known congregations flourished financially or spiritually. Synagogue membership and contributions sharply declined, and many congregations were burdened by mortgages on buildings erected during the 1920s. Reform Judaism became quite vigorous in its espousal of liberal political program, emphasizing trade unionism and international peace, and the Conservatives spoke likewise. The Orthodox were disorganized and inarticulate, losing strength as their immigrant constituents passed on without leaving replacements. Jewish education was hit hardest, as enrolled students failed to pay tuition and communal sources of funds dwindled and disappeared. Large arrears were owed to teachers, especially in traditional Hebraic and Orthodox schools. About 1940 communal interest began to rise as the Jewish Education Committee of New York was founded to improve schooling in that metropolis and the American Association for Jewish Education was established in 1939.

COMMUNAL ORGANIZATION. The Jewish communal structure was profoundly shaken by the Great Depression as the mood of Jewish life changed. The old leaders, many of them of German Jewish origin, were dying out and their children were for the most part disinterested in the Jewish community. Many leaders' personal wealth and status declined sharply. The Depression, the New Deal, and the Jewish crisis in Germany and Europe shook established Jewish values and practices and opened the way for communal restructuring and a newer leadership, drawn from East European immigrant origins, which was strongly pro-Zionist. Jewish labor and socialist groups decisively joined the community after decades of abstention on account of class differences.

The Jewish Labor Committee, established in 1934 to combat totalitarianism and aid labor refugees, collaborated with other Jewish bodies. Many of them gave up their anti-Zionism on account of the socialist character of Jewish Palestine and disillusion with international socialist brotherhood. The Zionist movement was weak during the 1930s. The combined income of its two fundraising arms, the Keren Hayesod

(Palestine Foundation Fund) and the *Jewish National Fund (Keren Kayemet), dropped as low as $339,000 in 1933. The raising and allocation of philanthropic funds was in fact the key issue in American Jewish communal life. Zionists waged a prolonged campaign to increase the proportion given to Palestine from the welfare fund drives conducted in most cities. In their attempt to increase the allocations to Palestine, Zionists encountered consistent opposition from the controlling oligarchy of large givers who generally favored European relief and distrusted Zionist projects. In 1939 the United Palestine Appeal (UPA) began independent national campaigns with Rabbi Abba Hillel Silver as its principal tactician and orator. In 1939 it reached an agreement with the Joint Distribution Committee and its allied National Refugee Service, which led to the creation of the United Jewish Appeal (UJA). The UJA raised $7,000,000 in 1939 and $14,500,000 in 1940, but the diminishing allocation to Palestine caused a rupture in 1941 which was healed by a 63:37 division of funds. During the 1940s, the UJA raised $638,000,000, and ultimately as much as 75 percent of its income went to Palestine. These sums established the UJA as one of the greatest voluntary fundraising organizations ever known.

These developments at the national level were made possible in many cities by the newly founded Jewish community councils. (There was a General Jewish Council of Jewish defense organizations from 1938 to 1941 which subsequently became the National Community Relations Advisory Council.) Synagogues, B'nai B'rith lodges, and Zionist societies were heavily represented and the tone was decidedly pro-Zionist. The Jewish community councils were heavily involved in the overseas philanthropic campaigns, or Jewish welfare funds as they were known locally, in addition to their functions of promoting Jewish education, settling internal disputes, and watching over Jewish rights in their cities. They thus became the representative local Jewish organizations during the 1940s and strongly influenced philanthropic allocations toward Palestine.

WORLD WAR II AND ZIONISM. Well before the outbreak of World War II, American Jewish public support crystallized around the anti-Nazi movement, which was organized in 1935 and among whose earliest and most outspoken leaders was Stephen S. Wise. The anti-Nazi boycott served as an organizational hub for American Jewry in the years leading up to the war and America's fateful decision to enter the fray. On the eve of the Japanese bombing of Pearl Harbor on December 7, 1941, for example, Wise gave one of his many anti-Nazi addresses to the Inter-American Jewish Conference meeting in Baltimore, Maryland. The conference included delegates from Diaspora Jewish communities in North, Central, and South America. Anticipating the sea change in the postwar composition of world Jewry, Wise called for unified action by the free Diaspora Jewish communities of the Americas.

> We are gathered in part in order to bethink ourselves touching the infinitely mournful fate of our fellow Jews, who have dwelt in European lands. Addresses other than my own will deal with the oceanic tragedy which has befallen the peaceable and loyal populations of many European lands, who were the first and will be the last victims of Nazism until the day of liberation from the monstrous calamity of Nazism. And that day is not far off…
>
> But even though, not if, Hitlerism or Nazism is to be banished from the earth… there will still remain a number of the most difficult and taxing Jewish problems. The economic basis of Jewish living has been willfully destroyed by Nazism. Jews who, like you and like us, are free must give to the succor of Jews who for nearly a decade have been enslaved and dispossessed. Even though after the war, inter-governmental programs must have special reference to a people in many lands deprived of the basic possibilities of self-support, the fate of our brother Jews in European lands cries out to us for immediate succor. When peace shall have come, as it will, demands will be made for ultimate and permanent redress from the nations which will have it in their power to bring about the organization of a new world.
>
> Woe betide us, if amidst the comparative plenty and prosperity of American life, we forget our brother Jews, whose agonies and suffering have come about largely, if not solely, because they are Jews…

Another outstanding expression of American Jewish idealism as well as fidelity to the United States was Irving *Berlin's "God Bless America." Written and composed by Berlin (born Israel Baline in Russian Siberia) – a gifted secular Jewish musical artist who also wrote the wildly popular "White Christmas" – and first broadcast on Armistice Day in November 1938, "God Bless America" swiftly attained the elevated status of a secular national prayer.

> While the storm clouds gather far across the sea,
> Let us swear allegiance to a land that's free,
> Let us all be grateful for a land so fair,
> As we raise our voices in solemn prayer.
> God bless America, land that I love.
> Stand beside her and guide her,
> Thru the night with a light from above.
> From the mountains to the prairies,
> To the oceans white with foam,
> God bless America, my home sweet home.

In the public debates that raged over American foreign policy between September 1939, when Nazi Germany invaded and conquered Poland, and December 7, 1941, when the Japanese bombed the American naval base located at Pearl Harbor, Hawaii, American Jews were generally found on the side favoring maximum foreign and military aid to England and France, and later Russia. American Jewish sympathies were less with Great Britain per se, whose imperialism and White Paper of 1939 essentially brought to a halt European Jewish immigration to Palestine and whose anti-refugee policies were deeply resented. But as American Jewry's fear and loathing of Nazi Germany increased, so too did its growing sympathy (along with mainstream American society) for the Allied cause in general, including the besieged British Isles. Quite apart from this consensus stood the America First Committee, which at-

tracted a large following of antisemites and even some Jews. As late as 1941, the America First Committee sponsored a speech by Charles A. Lindbergh charging that Jews were attempting to draw the United States into war. The coming of World War II ended the debate over isolation and also proved a blow against such antisemitism, which was now identified with the Nazi enemy. Jews served in all branches of the United States armed forces, their numbers reaching approximately 550,000. About 10,500 lost their lives, 24,000 were wounded, and 36,000 were decorated for gallantry. Jewish refugees from Germany furnished many American soldiers, while refugee scientists played an indispensable role in the development of atomic and other advanced weapons. Jewish soldiers in the American armed forces were served by 310 Jewish chaplains holding military rank, and the National Jewish Welfare Board provided for some social and religious needs.

While battles raged throughout the world, European Jewry was being systematically murdered by Nazi Germany. Information about the destruction of European Jewish life became public during the fall of 1942, and subsequent stages in the Nazi "final solution" were widely known. Notwithstanding private and public efforts by various Jewish leaders and groups, including the vigorous public criticism of the right-wing Zionist Bergson group, American Jewry as a whole, uncertain of its own situation and fearful of appearing to ask for "special treatment" or of encouraging propaganda that the country was engaged in a "Jewish war," shied away from demanding direct United States intervention to save Jews under Nazi rule. In general, the prevailing view was that early victory was the sole means to rescue European Jewry. Nevertheless, public controversy abounded and many American Jewish leaders expressed despair of the powerlessness of American Jews to alter the Allies wartime priorities. Among the most poignant statements in this regard was a speech delivered by the Labor Zionist leader Ḥayyim Greenberg in February 1943. His summation, reprinted at length below, illustrates the profound anguish, self-recrimination, and anger of the American Jewish leadership in this cataclysmic period.

> The time has come, perhaps, when the few Jewish communities remaining in the world which are still free to make their voices heard and to pray in public should proclaim a day of fasting and prayer for American Jews. No – this is not a misprint. I mean specifically that a day of prayer and of fasting should be proclaimed for the five million Jews now living in the United States. They live under the protection of a mighty republic governed by democratic laws. They move about freely through the length and breadth of the land. The vast majority of them have enough food to eat, clothes to wear and roofs over their heads. And if any wrong is committed against them, they are free to protest and to demand their rights. Nevertheless, they deserve to be prayed for. They are not even aware what a misfortune has befallen them, and if they were to look at themselves with seeing eyes they would realize with shock how intolerable this misfortune is. This misfortune consists of the vacuity, the hardness and the dullness that has come over them; it consists in a kind of epidemic inability to suffer or to feel compassion that has seized upon the vast majority of American Jews and of their institutions; in pathological fear of pain; in terrifying lack of imagination – a horny shell seems to have formed over the soul of American Jewry to protect and defend it against pain and pity.
>
> At a time when the American Jewish community is the largest and most influential in the world, at a time when the eyes of millions of Jews in Europe who are daily threatened with the most terrible and degrading forms of physical extermination are primarily turned to American Jewry, this American Jewish community has fallen lower than perhaps any other in recent times, and displays an unbelievable amount of highly suspect clinical "health" and "evenness of temper." If moral bankruptcy deserves pity, and if this pity is seven-fold for one who is not even aware how shocking his bankruptcy is, then no Jewish community in the world today (not even the Jews who are now in the claws of the Nazi devourer) deserves more compassion from Heaven than does American Jewry…
>
> The basic fact is evident to any Jew who has the courage to look at the situation as it is: American Jewry has not done – and has made no effort to do – its elementary duty toward the millions of Jews who are captive and doomed to die in Europe!…
>
> Quite some months have passed since representatives of Jewish organizations have even met to engage in earnest discussion whether and what can still be done for European Jewry. The President made his statement, and then came the declarations of some governments of the United Nations regarding the punishment to be meted out to the guilty *after the victory*, and most, or is it all, the Jewish organizations were satisfied and appeared to be calmed by it… Everyone knew that this declaration had little effect on the situation. And now we are informed that both Warsaw and Vienna are completely *Judenrein*….
>
> The murder of two million Jews with the most inhuman methods of torture and degradation which sadistic fantasy has ever devised, still has not sufficiently impressed those among us who have donned the *shtreimels* of Jewish guardianship, those who have assumed responsibility for Jewish interests so that they could sit down around one table and look into each other's eyes and together try to do something to rescue at least one percent of the doomed millions. There have even appeared some Zionists in our midst who have become reconciled to the thought that it is impossible to stay the hand of the murderer, and therefore, they say, it is necessary "to utilize this opportunity" to emphasize to the world the tragedy of Jewish homelessness and to strengthen the demand for a Jewish National Home in Palestine. (A Home for whom? For the millions of dead in their temporary cemeteries in Europe?) And there have arisen *sages* in our midst who have reached the profound conclusion that the sole response to the mass extermination of our people should be the earliest possible opening of a second front. The delegation of the Bund in America has satisfied the demands of its conscience both as Jews and as human beings, by organizing a protest conference of European socialist leaders, and is now boastfully claiming "sole credit" for its own little clique for this great achievement. And only some days ago the Revisionist-controlled Committee for a Jewish Army, succumbing to its own ambitions and hunger for prestige, has put other Jewish organizations in an uncomfortable position by publishing huge ads in the newspapers – ads which also seek "to utilize the opportunity" – calling for the establishment of

> a Jewish armed force of 200,000, knowing very well that this is a mythical figure concocted for purposes of cheap and irresponsible propaganda…
>
> Every "Committee" cherishes its own committee-interests, its sectarian ambitions, its exclusively wise strategy and its "power position" in the teapot of Jewish communal competition…
>
> No less characteristic is the fact that such a highly reputable organization as the American Jewish Committee could hold its annual conference one week ago, at the end of which there was issued a declaration dealing with all the bakers' dozen areas in which they differ from the Zionists or from other Jews, but not mentioning with even a single word the extermination of the Jews in Europe and what the American Jewish Committee proposes to do now, today, without delay, so that after the victory there should remain someone across the ocean whom the Committee could defend in accordance with its own program and ideology, someone whose rights and human dignity they could protect.
>
> The only Jewish organization which, formally at least, remained on guard and tries to create the impression that it does something, is the American Jewish Congress. But it would be criminal negligence to conceal from the public the fact that at a time when the Angel of Death uses airplanes, the American Jewish Congress employs an oxcart-express…
>
> I confess that I am unable to draw concrete, practical conclusions from the above. If it is still objectively possible to do anything, then I do not know who should do it and how it should be done. I only know this, that we are all – all five million of us, with all our organizations and committees and leaders – politically and morally bankrupt. And I refuse to understand how and why all of us here have fallen to such a state of shameful degradation.

In all, roughly a year and a half elapsed until in 1944, following a direct approach by Treasury Secretary Henry *Morgenthau, Jr., who was profoundly disturbed by State Department's ongoing indifference and hostility to all rescue proposals, President Roosevelt established the *War Refugee Board. The board energetically attempted, with some success, to work through neutral countries and third parties to prevent further Nazi murder of Jews and others. The efforts in this regard were ultimately realized in the rescue of some 100,000 Jews. Within the American Jewish community, the American Zionist Emergency Council, the Va'ad ha-Hazzalah (Rescue Committee) under Orthodox leadership, and other Jewish and Zionist groups also worked to rescue as many Jews as possible, mainly by ransom. By this point, the sole remaining community of any significant size was that of Hungarian Jewry.

In the spring 1942 Zionist leaders, headed by David Ben-Gurion and Chaim Weizmann, set their postwar program as Jewish control over immigration to Palestine, leading to the founding of a Jewish commonwealth. This vision was embodied in the *Biltmore Program of May 1942 (named after the New York City hotel where the conference was held) and it gradually won over American Jewry by vigorous Zionist public relations efforts, and above all by the widening realization of the full fate of European Jewry. Under Rabbis Stephen S. Wise and Abba Hillel Silver, the American Zionist Emergency Council, which conducted Zionist political affairs in the United States, continued the traditional method of winning sympathy and good will from American political, religious, and intellectual leaders. Wise was supplanted in 1944 by Silver and more aggressive tactics of converting American public opinion to the Zionist program and applying continuous pressure to the makers of American foreign policy were adopted.

The representative *American Jewish Conference in 1943, swayed by Silver's oratory, rejected a compromise demanding only free Jewish immigration to Palestine and adopted the Biltmore Program. The scales were tipped when Silver gave an unexpected address during the general debate on Palestine. By all accounts, his forceful argument reversed the moderate trend of the Conference. His speech laid the groundwork for the final resolution on Palestine. "There is but one solution for national homelessness," Silver declared. "That is a national home!"

> Not new immigration opportunities to other countries for fleeing refugees, for new colonization schemes in other parts of the world… The only solution is to normalize the political status of the Jewish people in the world by giving it a national basis in its national and historic home…
>
> …The reconstitution of the Jewish people as a nation in its homeland is not a playful political conceit of ours, a sort of intellectual thing of ours calculated to satisfy some national vanity of ours. It is the cry of despair of a people driven to the wall, fighting for its very life…
>
> I am for unity in Israel, for the realization of the total program of Jewish life: relief, rescue, reconstruction and the national restoration in Palestine. I am not for unity on a fragment of the program, for a fragment of the program is a betrayal of the rest of the program and a tragic futility besides. We cannot truly rescue the Jews of Europe unless we have free immigration into Palestine. We cannot have free immigration into Palestine unless our political rights are recognized there. Our political rights cannot be recognized unless our historic connection with the country is acknowledged and our right to rebuild our national home is affirmed. The whole chain breaks if one of our links is missing…

Silver's eloquent case for an immediate political solution based on wartime realities and his assertion of the critical role to be played by the Zionist enterprise in any plans for postwar reconstruction cut across ideological and philosophical lines. The Palestine vote was carried with only four dissenting votes. The delegates resoundingly called for "the fulfillment of the Balfour Declaration" and the reconstitution of Palestine as the Jewish Commonwealth. Next, the assemblage spontaneously "rose, applauded, and sang Hatikvah [The Hope]."

By contrast, on three other occasions – early in 1944 and late that year as well as early in 1945 – the U.S. House of Representatives Foreign Affairs Committee stood poised to pass resolutions endorsing the Jewish commonwealth. Nonetheless, despite every prospect for early passage in both houses of Congress, the War Department, at the request of the State

Department, succeeded in having the legislative proposals tabled as "prejudicial" to the war effort.

As American Jewish support for Zionism and the Yishuv intensified, anti-Zionist views became more isolated and aggressive. The American Council for Judaism was founded late in 1942 upon an ideology of classical Reform opposition to Jewish nationalism. It conducted an assiduous anti-Zionist propaganda campaign that was vigorously countered by Zionists. The American Jewish Committee turned in a similar direction and advocated free Jewish immigration to Palestine under a rather vague international trusteeship. However, much of its once great influence and public stature was lost over this issue.

The American Jewish community's domestic affairs remained in relative suspense during the war. Jews shared in American prosperity as unemployment almost vanished, charitable aid became superfluous, and business flourished. However, antisemitism continued in sectors of public opinion and manifested itself in petty street molestations of Jews, especially in Boston and somewhat in New York. President Roosevelt's alleged remark to "clear it with Sidney [Hillman]" was used with special malice by antisemites against him during the 1944 election. A strong wave of postwar antisemitism was expected, especially if there were an economic depression, during the difficulties of conversion from wartime to peace.

During the five years following the war's end in 1945, American Jewish communal life was dominated by developments among Jewish refugees in Europe and by the Jewish struggle in Palestine. Mass public meetings were frequently convened, while gentile political and religious leaders were won over by persuasion or pressure, and funds raised for overseas needs reached levels previously unknown. Thus, the Zionist Organization of America (ZOA) raised its membership from 49,000 in 1940 to 225,000 in 1948, while Hadassah numbering 81,000 in 1940, multiplied more than threefold. As the United States exercised a dominant position in international affairs, American Zionist leaders became important in framing world Zionist policy and played an increasingly important role vis-à-vis the Palestinian leadership on the international scene. Several thousand American Jewish volunteers participated in Aliyah Bet efforts, the Jewish Agency's clandestine immigration scheme, some helping to navigate *illegal immigrant ships across the Mediterranean, and eventually many joined the *Haganah and fought in Palestine in 1948–49. With the founding of the State of Israel in 1948 and its War of Independence until 1949, American Zionism reached an organizational peak that quickly declined. Membership in Zionist organizations dropped drastically, in the case of the ZOA to less than 25,000 in the mid-1950s, and monies raised, as well as the proportion of them actually allocated to Israel, slid slowly downward. Paradoxically, the development and security of Israel now became a pervasive philanthropic, political, and cultural concern of American Jewry as a whole.

In common with American citizens generally, Jews enjoyed an era of prolonged prosperity during the post-World War II years. Homecoming soldiers found jobs or attended college en masse under the liberal terms of the "GI Bill of Rights." Antisemitism in the United States all but disappeared from public view. Father Charles Coughlin had been silenced by his church, and a few agitators, notably G.L.K. Smith, were practically ignored. Active and largely successful efforts were made by American Jewish defense organizations to root out antisemitic and every other form of religious and racial discrimination in employment, housing, and higher education. Legislation to these ends in many states was spearheaded by the Jewish community, often in alliance with African American bodies such as the National Association for the Advancement of Colored People (NAACP), the Urban League, and a variety of church organizations. On the other hand, efforts to eliminate the exclusion of Jews from upper-level social clubs and from the management of major banks and corporations proved less successful. The basic trend for two decades following the end of World War II was the decline of antisemitism to the point where its disappearance was widely predicted. Even the feverish atmosphere of the anti-Communist fright from about 1947 to 1954 and the hunt for alleged Communists in government and strategic positions, during which a high proportion of the accused were Jews, did not significantly stir antisemitic sentiment.

The Cold War Era, 1950s–1980s

THE POSTWAR SETTING. For American Jews, the Cold War era centered around a paradox: The astonishing success and rapid upward mobility of the American Jewish community in the post-World War II era was accompanied by America's growing fear of the Soviet Union and potentially subversive anti-American elements, including instances in which Jews played a highly visible role. On the one hand, the postwar decades, as historian Lucy Dawidowicz has noted, were something of a "golden age" in which Jews became thoroughly acculturated, Americanized, economically prosperous, and professionally successful in virtually all quarters of American society. The self-confidence of organized American Jewry was perhaps nowhere more apparent than in the 1954 commemoration of the 300th anniversary of Jewish settlement in North America. The tercentenary committee deployed the inoffensive and patriotic branding message of "Man's Opportunities and Responsibilities under Freedom." Indeed, there was nothing particularly Jewish about this theme which (after months of deliberation and counsel with a variety of Jewish communal leaders and scholars) was noteworthy for its scrupulous neutrality. Rather, as the tercentenary committee explained, the anniversary was intended to celebrate the presumed congruence of American ideals and Jewish values:

> The theme should express the outstanding fact of the past 300 years of our participation in America; that it should describe the significance of the present day for American Jews, and that it should express the hopes and aspirations and objectives of the future for ourselves and for all Americans – indeed, for all human beings throughout the world.

Despite the note of triumphalism sounded by the committee – a recurring feature of the American Jewish experience termed the "cult of synthesis" by historian Jonathan D. Sarna – American Jewish society was in fact also shaped by the discordant social, cultural, and political realities of the Cold War era, including the Red Scare. Joseph McCarthy's persecutorial anti-Communist witch hunt, FBI director J. Edgar Hoover's ruthless subversion of numerous left-leaning American individuals and groups, and the widespread fear of Communist insurgency in American society leavened the American Jewish experience. Thus was Jewish communal success tempered by collective anxiety about the group's social status, lingering doubts about the promise of acculturation, and fear for the fragility of the liberal political enterprise.

Some outstanding examples help to illustrate this paradox. The case of communal leader Philip M. *Klutznik, for instance, is in many ways emblematic of American Jewish success in this period. Rising through the ranks of B'nai B'rith to become the fraternal organization's national president, Klutznik's professional career in public service led him from commissioner of Federal Public Housing under Presidents Franklin D. Roosevelt and Harry S. *Truman, to United States representative to the United Nations in the *Eisenhower, *Kennedy, and *Johnson administrations, and finally to the position of secretary of commerce under President Jimmy *Carter. Likewise, Henry *Kissinger, a refugee from Nazi Germany and Harvard-trained scholar, rose to become President Richard M. *Nixon's national security advisor in 1969 and was appointed secretary of state in 1975. The ending of the war in Vietnam, the normalization of relations with China, the conclusion of the Yom Kippur War, and the attempt to find a Middle East settlement were among the activities that made him the most iconic holder of this office in recent times. Speaking at a farewell luncheon given in his honor in 1977 by the Conference of Presidents of Major American Jewish Organizations, Kissinger declared, "I have never forgotten that thirteen members of my family died in a concentration camp." His authority in the realm of foreign affairs was enhanced not only by his negotiating skill but also by the fact that for many months Nixon was entangled in the Watergate Affair. His authority was reaffirmed when Gerald Ford, on succeeding Nixon, retained him in office. The meteoric trajectory of Klutznik, Kissinger, and other Jewish figures – for which there are precious few equivalents among other ethnic minorities in mid-20th century American society – was truly astonishing.

Meanwhile, a darker side of American society is reflected in the spectacle of three widely publicized episodes of anti-Communist activity in the United States in the 1950s, all of which centered on Jewish protagonists. First, the arrest in 1950 of Julius and Ethel Rosenberg, Jewish Communists alleged to have passed on atomic secrets to the Soviets, their highly controversial trial, and subsequent execution for treason in 1953 sent shock waves through the American Jewish community. Second, the vigorous campaign conducted by the Atomic Energy Commission to strip the credentials of German Jewish physicist J. Robert *Oppenheimer, the "father of the atomic bomb" and first director of the Los Alamos National Laboratory, garnered considerable public notoriety. In the event, Oppenheimer aroused the ire of scientists and politicians alike with his outspoken concern about the bomb's potential for mass destruction. Lewis L. Strauss, who served as chairman of the Atomic Energy Commission and was himself a prominent Republican and national leader of the American Jewish Committee, spearheaded the effort to discredit Oppenheimer as a Communist sympathizer and opponent of plans to develop the hydrogen bomb. The Oppenheimer affair proved to be a high water mark of the Red Scare; Oppenheimer's reputation was tarnished and Strauss resigned under fire. Subsequently, when President Dwight D. Eisenhower nominated Strauss to be secretary of commerce, his appointment was narrowly rejected in a Congressional showdown between U.S. Senate Democrats and Republicans. Finally, an excellent example of the complexity of this period is the case of *The Goldbergs*, a comedy about an American Jewish family that aired over radio from 1929 to 1947 and became a nationally popular television program from 1949 to 1956. Starring the actor Philip Loeb as Goldberg, the show became a target of the McCarthy witch hunt when Loeb was blacklisted after the right-wing anti-Communist magazine *Red Channels* accused him of being a Communist. Loeb denied the accusation, but the climate of fear induced by the McCarthy era and the hearings conducted by the House Committee on Un-American Activities caused him to lose his job and the CBS network soon dropped the show. Although Loeb continued to eke out a living as an actor thereafter, he succumbed to depression in 1955 and committed suicide.

Suspended between the antipodes of success and marginalization, American Jews faced the Cold War with a mixture of self-congratulatory confidence and well-founded anxiety. The ensuing decades would be marked by these themes, even as American Jews continued to develop and strengthen the infrastructure of their communal life.

POPULATION, DEMOGRAPHY, AND ECONOMIC ACTIVITY. The size of the American Jewish population increased rather slightly in the decades immediately following World War II. However, Jewish population estimates, while comparatively accurate for many cities, were unreliable for the country as a whole. The Jewish population, probably overestimated at 5,000,000 in 1950, stood at close to 5,500,000 in 1960, and then peaked at approximately 6,000,000 in the 1970s and 1980s. In comparison, the general American population numbered 140,000,000 in 1950 and rose to over 250,000,000 by the 1990s. In other words, Jews comprised slightly more than 3.5 percent of the American population at mid-century, but barely more than 2 percent by the close of the century. The reasons underlying the small Jewish population increase are strongly suggested by the median Jewish household size and the mean number of children born per 1,000 women, both

lower than that of other religious or ethnic groups. With no more than about 12 percent of Jewish families having four or more children, Jewish natural increase was well below that of the U.S. as a whole.

Prior to the collapse of the Soviet Union in the late 1980s, immigration provided little of the Jewish increase in this period. From the end of World War II through the 1950s, for example, over 191,000 Jews settled in the United States, of whom nearly 120,000 arrived between 1947 and 1951. The large majority were Holocaust survivors, over 63,000 of whom entered under the provisions of the Displaced Persons Act of 1949. Otherwise, the quota system of the Johnson-Reed Act and its successor McCarran-Walter Act of 1952 remained intact until practically abolished by new legislation in 1965. In the late 1950s and 1960s about 73,000 Jewish immigrants arrived, most of whom tended to be Israelis (frequently of European birth), Cubans leaving the Castro regime, and Jews from Islamic lands. The United Service for New Americans, a descendant of the previous National Refugee Service together with the *Hebrew Immigrant Aid Society (HIAS), and local community organizations aided the immigrants. Some "new Americans" were professionally trained, but most tended to enter traditional Jewish occupations, such as garment cutters, salesmen, or shopkeepers.

Until the close of the 1960s, American Jewry retained a largely metropolitan character. Approximately 40 percent of American Jews dwelled in the New York City area, as had been the case since 1900. Meanwhile, the sum total of Jews living in the greater New York City region, northeastern New Jersey, and the nine next largest communities (Los Angeles, Chicago, Philadelphia, Boston, Miami, Washington, Cleveland, Baltimore, and Detroit) comprised 75 percent of American Jewry. The most notable demographic phenomenon in these and other urban centers was movement to the suburbs. As income and aspirations rose, large numbers of Jews quit the ever more congested and aging cities seeking greater space, more relaxed living, and a more affluent social environment. By the 1960s, 85 percent of Cleveland Jews lived beyond the city boundaries, and the same happened to virtually the entire Jewish population in Detroit, Newark, and Washington, D.C., within the decade. Every large city saw a considerable proportion of its middle class, including the Jewish community, relocate to the suburbs, while African American migration to many formerly Jewish neighborhoods precipitated formidable social tensions and problems between Jews and blacks.

Coincidental with the suburban movement, was the migration of large numbers of Jews within the United States. The increase of the Los Angeles Jewish population from 150,000 at the end of World War II to over 500,000 in the 1970s, and of Miami from 40,000 in the late 1940s to roughly 150,000 in 1970, was almost wholly the result of internal migration. Much of it came from the Middle West whose Jewish population failed to increase after the 1920s. Thus, Chicago, with 333,000 in the city at the end of World War II, actually declined to 285,000 for its metropolitan area by the 1970s. Milwaukee also lost – 30,000 to 24,500 – and centers such as Cleveland and Detroit did not increase. Boston's Jewish population increased from 137,000 in 1948 to over 176,000 in the 1970s, apparently owing to heavy Jewish participation in that area's scientific and technological growth.

In the decades following World War II a new occupational pattern of American Jewry also became evident. No systematic nationwide surveys were conducted until the 1970s, but until then many studies of individual communities made clear that employment in the professions was rising greatly, and proprietorship and management somewhat less so; skilled, semiskilled, and unskilled labor was sharply decreasing, and clerical and sales employment somewhat declining. Forestry, mining, and transportation in all forms hardly employed any Jews, as in the past, and the small contingent of Jewish farmers slowly decreased in size. The ascent of Jewish professionals in these decades was also a general phenomenon. In addition to the continuing prominence of Jews as physicians, lawyers, accountants, and teachers, they were prominent as scientific professionals in such new industries as electronics. Earlier occupational patterns lasted longer in New York City where a concentration of skilled and unskilled workers comprised about 28 percent of the Jewish labor force until the early 1960s.

In such professions as law, medicine, dentistry, and teaching Jews formed a clear majority of those employed. Industries in which they had once been the labor force, especially the garment industry, remained Jewish only at the higher levels of skill and in entrepreneurship. As entrepreneurs, Jews were extensively represented in urban retail trade, the building of homes and shopping centers, and in metropolitan real estate. The same could be said of such mass media areas as television, films, and advertising, and of cultural enterprises like book publishing, art dealing, and impresarioship in music and theater. Stock brokerage and other spheres of finance continued to involve Jewish firms and brokers, setting the stage for the return to prominence in subsequent decades of Jewish financiers, as was previously the case in the late 19th and early 20th centuries.

In sum, for the country as a whole the "baby boom" of the post-World War II era was followed by a steep decline in the birthrate. The American Jewish community shared generally in this trend. Ḥasidic Jewish communities were an exception in this regard; traditional values and attitudes prevailed and large families with an average of 6.5 children were the norm. Nonetheless, reinforcement of American Jewish life in this period came from unexpected sources. Estimates of the number of Israelis who settled in the United States in the 1970s and early 1980s vary between 300,000 and 500,000. Meanwhile, 70 percent of the Jews allowed to leave the Soviet Union between 1972 and 1981 chose to immigrate to the United States – more than 75,000 – and an additional 100,000 Jewish immigrants arrived from other countries in these years. By the end of the Cold War era, American Jews comprised 43 percent of world Jewry and 60 percent of diaspora Jewry.

COMMUNAL STRUCTURE. Economic prosperity, the gradual neutralization of once sharp internal ideological differences, the diminution of antisemitism, the waning of the cultural rift that once separated native-born and immigrant Jews, and growing social homogeneity resulted in a lengthy period of Jewish communal consensus that extended from the post-World War II years to the 1970s. In this period, the State of Israel became a unifying rather than divisive force. Funds were ample for generally agreed communal purposes in the United States and overseas. Communal interests focused primarily on local matters as Jewish suburbia built its institutions, while in older urban areas they had to struggle to survive or relocate. Nearly every city, except New York and Chicago, conducted a combined campaign for overseas and domestic needs and had some form of central Jewish community organization. The Jewish community councils, founded during the 1930s, generally merged with the older federations of Jewish philanthropies and were governed by an executive board and a none too potent community assembly of representatives from organizations. In some cities, however, contributors to the combined campaign above a minimal level (usually $10) were enfranchised to vote for a fixed proportion of the delegates to these assemblies. These central Jewish communal bodies promoted equal rights through their community relations committees, which coordinated the local efforts of the leading American Jewish membership organizations – e.g., American Jewish Committee, American Jewish Congress, B'nai B'rith, Hadassah, Jewish Labor Committee, Jewish War Veterans, and the National Council for Jewish Women. They also sponsored the local bureaus of Jewish education, settled intra-communal disputes, in some communities supervised *kashrut* (Jewish dietary law), and generally functioned as the recognized Jewish spokespersons in the general community. The social service agencies affiliated with the antecedent federations enjoyed far-reaching autonomy. The most important activity by far was the annual campaigns, whose proceeds were allocated, after negotiations, by carefully devised formulas.

At the national level, ideological groupings and specialization of activities evolved, but no stable central body developed. The aforementioned organizations coordinated some of their activities in the National Community Relations Advisory Council. The American Zionist Council did likewise for Zionist groups, especially on political issues related to Israel and the Middle East, and the Synagogue Council, with little power or religious authority, obtained occasional consensus among the denominational federations of synagogues. The military functions of the National Jewish Welfare Board were largely replaced by its peacetime activity of providing coordination and program assistance to approximately 300 Jewish community centers, and their 645,000 members, affiliated with it by 1960. The Council of Jewish Federations and Welfare Funds guided and counseled its constituents by means of nationwide meetings, through intensive studies of Jewish philanthropic policy, of the role of government in education and social service, and through the activities of various beneficiaries. In 1954 the Conference of Presidents of Major American Jewish Organizations (the "Presidents' Club") was established to consult informally in matters concerning Israel and overseas Jewish problems. By virtue of its age, size, prestige, and non-partisan Jewish character, B'nai B'rith tended to play a central role in such efforts. In 1963, in response to grass roots activity and pressure, the *National Conference of Soviet Jewry was established. With some variation, these groups and agencies defined the infrastructure of American Jewish life for the remainder of the 20th century.

SOCIAL AND CULTURAL LIFE. By mid-century the Jews as an overwhelmingly native-born group, extensively college-educated, and heavily concentrated in the mercantile and professional classes, with widespread social and cultural interests, began to assume a remarkable degree of prominence in American society. Their previously notable position as physicians, scientists, lawyers, psychoanalysts, and musicians not only continued but increased exponentially. As well, Jews began to excel in fields once closed or inaccessible to them. General estrangement from the American academy's longstanding preoccupation with British literature and the relative inattention of American Jews to the thematic content of American literature had tended to make Jewish writers in English very few. But beginning in the 1950s and 1960s a considerable number of American Jewish writers attained importance and true distinction. In this period, significant works were produced by the writers Saul *Bellow, Meyer *Levin, Norman *Mailer, Bernard *Malamud, Tillie *Olsen, Cynthia *Ozick, Grace *Paley, Chaim *Potok, Philip *Roth, Isaac Bashevis *Singer, Leon *Uris, and Elie *Wiesel, the playwright Arthur *Miller, the poets Delmore *Schwartz, Allen *Ginsberg, and Karl *Shapiro, and the critics Lionel *Trilling, Leslie *Fiedler, Alfred *Kazin, and Irving *Howe. (Interestingly, Kazin, originally an East European Jewish immigrant, helped to define the field of American literature with *On Native Grounds* (1942), one of the first systematic and comprehensive studies of literature by native-born American writers.) The wave of post-war literary creativity opened the door to many other successful American Jewish writers in the 1970s and 1980s including the poets Allen *Grossman, Joseph *Heller, Robert *Pinsky, and Adrienne *Rich, the novelists E.M. *Broner, Melvin Jules *Bukiet, E.L. *Doctorow, Howard *Fast, Allegra Goodman, Marge Piercy, Kate *Simon, and Art *Spiegelman, the playwrights Tony *Kushner and Wendy *Wasserstein, and the critic Harold *Bloom.

As Jewish subjects surged to the forefront of literary interest, novels and short stories of extremely varied quality on themes including the Holocaust, Israel, and middle-class American Jewish life, sold in the millions to gentiles as well as Jews. Plays and television programs on Jewish themes attracted vast audiences and were eventually produced on nationwide television. Many of the writers mentioned above contributed to this movement, and "Jewish" became a literary genre that now competed commercially with the "South-

ern" and "Middle Western" genres in popularity. Occasional voices, questioning its integration into American literature and even alleged domination by a New York Jewish circle, surfaced in *Commentary*, *Partisan Review*, and the *New York Review of Books*. Whether literary politics or legitimate criticism, there was no doubt that Jews were among the principal purveyors of American culture – as impresarios of music, theatrical producers, editors, book publishers, and film and television producers.

Another major trend was that of Jews into the arts and sciences on university faculties. During the 1930s and earlier only a few hundred Jews held academic positions, mainly in the municipal colleges of New York City, but at the close of the 1960s an estimated 30,000 Jews composed about one-tenth of all college faculty members. They were distributed in all fields, although physics, sociology, and psychology particularly attracted a high proportion of Jews. No field of study, however, lacked notable Jewish contributors. Jewish professors could be found in almost all colleges, but especially in public research universities and in the "Ivy League."

By and large, Jewish contributors to American cultural life, at least until the middle 1960s, continued to be the liberal left, with echoes of earlier radicalism. To the wider Jewish community its Jewish public intellectuals were somehow a source of concern. Could they be made to demonstrate positive interest in established American Jewish life and American Judaism, and why did most of them shy away from participation in the communal infrastructure of American Jews? A symposium on "Jewishness and the Younger Intellectuals," published in *Commentary* in 1961, strongly suggested that under the cultural consensus and religiosity of the 1950s lay the alienated restlessness of many of the highly acculturated, talented younger generation.

Especially visible in the postwar decades was the rise of an elite cohort of Jewish artists around whom the world of American musical theater grew and flourished. It is difficult to overstress the profound impact in this period on American culture of musical figures Leonard *Bernstein, Marvin *Hamlisch, Oscar *Hammerstein II, Sheldon *Harnick, Larry *Hart, Jerome *Kern, Alan Jay *Lerner, Frank *Loesser, Jerome *Robbins, Richard *Rodgers, Stephen *Sondheim, and other lesser known figures. Like Irving *Berlin, Aaron *Copland, George *Gershwin, and Ira *Gershwin before them, whose impact on the decades prior to mid-century was profound, the second-generation of American Jewish composers, conductors, lyricists, and choreographers left an indelible imprint on the Broadway musical tradition with such classics as *South Pacific* (1949), *Guys and Dolls* (1950), *The King and I* (1951), *My Fair Lady* (1956), *Gypsy* (1959), *The Sound of Music* (1959), *Camelot* (1960), *West Side Story* (1961), *A Funny Thing Happened on the Way to the Forum* (1962); *Fiddler on the Roof* (1964), *Company* (1970), *A Chorus Line* (1975); *Sweeney Todd* (1979), and *Into the Woods* (1987).

Parallel to the Broadway musical tradition was the arena of American popular music, whose ranks swelled throughout these decades to include a variety of influential Jewish musical artists and record producers. Even a cursory review in this regard illustrates the diverse wealth of American Jewish talent that helped shape this dynamic aspect of American culture. Some singers and entertainers openly identified with American Jewish life while others, like the diva Beverly *Sills (born Belle Miriam Silverman), one of America's greatest opera sopranos, did not and remained virtually indistinguishable from the larger canvas of American popular music. Any list in this regard must include artists as diverse as band leader Herb *Alpert, the singer-entertainers Sammy *Davis, Jr. (a convert to Judaism), Eydie *Gorme, Bette *Midler, Allan *Sherman, Dinah *Shore, and Barbra *Streisand, the singer-songwriters Neil *Diamond, Art *Garfunkel, Billy *Joel, Carole *King, Barry *Manilow, Linda *Ronstadt, Neil *Sedaka, Carly *Simon, and Paul *Simon, and the folk singers Theodore *Bikel, Bob *Dylan, Arlo *Guthrie, Janis *Ian, and Phil *Ochs.

Likewise, the world of modern American art was enriched and shaped by an array of Jewish artists including the painter-sculptors Boris *Aronson, Leonard *Baskin, Judy *Chicago, Helen *Frankenthaler, Marc *Rothko, George *Segal, Richard *Serra, Ben *Shahn, Raphael *Soyer, and Max *Weber as well as the influential art critic Clement *Greenberg and even the comic book creators Jack *Kirby and Stan *Lee.

As noted previously, Hollywood, too, played an increasingly central role in the complex relationship between Jews and American culture. Among the most visible and important Jewish actors, television stars, and film makers from mid-century forward were Woody *Allen, Alan *Arkin, Milton *Berle, Matthew *Broderick, Adrien Brody, Mel *Brooks, George *Burns, Sid *Caesar, Billy *Crystal, Tony *Curtis, Kirk *Douglas, Michael *Douglas, Richard *Dreyfuss, Peter *Falk, Marty *Feldman, Tova *Feldshuh, Harvey *Fierstein, Fyvush Finkel, Harrison *Ford, Jeff *Goldblum, Elliot *Gould, Harold Gould, Joel *Grey, Charles Grodin, Goldie *Hawn, Judd Hirsch, Dustin *Hoffman, Madeline *Kahn, Danny *Kaye, Alan *King, Jack *Klugman, Harvey Korman, Lisa *Kudrow, Hal Linden, Jackie *Mason, Walter *Matthau, Zero *Mostel, Jerry Orbach, Sarah Jessica *Parker, Mandy *Patinkin, Gilda *Radner, Tony *Randall, Carl *Reiner, Rob *Reiner, Adam *Sandler, Roy *Scheider, Jerry *Seinfeld, Peter *Sellers, Joan Micklin *Silver, Ron *Silver, Steven *Spielberg, Ben *Stiller, Barbra *Streisand, Chaim *Topol, Gene *Wilder, and Henry *Winkler.

The broad range of Jewish participation in American culture and, likewise, the integration of American themes, rhythms, and modalities into the work of Jewish artists in the 20th century, defies easy explanation. Reflecting on the complexity of this phenomenon, the historian Stephen J. Whitfield has observed that "like religion, culture should not be regarded as the stable expression of a people with an immutable set of attributes. The features that are more evident are borrowing, adaptation, and inventiveness as well as continuity." In the process of negotiating the dynamic and creative tensions that link their Jewish and American identities, Jewish artists from all

walks of the contemporary scene – music, sculpture, painting, theater, and literature – have imbued American society with important and unparalleled cultural achievements.

WOMEN. In the 1960s and 1970s, against the backdrop of the counter-culture movement that spread across the country, there emerged a wave of feminism that sought to refashion the place of women and introduce new ways of considering gender in American society. Among the outstanding early leaders of the feminist movement were two Jewish activists, the theorist Betty *Friedan (born Bettye Naomi Goldstein in Peoria, Illinois) and political maverick Bella *Abzug. Friedan's book *The Feminine Mystique* (1963), which depicted the repressed domestic lives of middle-class American women in the decades following World War II, became a national bestseller and is often credited with energizing the women's movement in this period. Abzug, a daughter of poor Russian Jewish immigrants, who grew up in the Bronx where she joined the socialist Zionist youth group Ha-Shomer ha-Ẓa'ir as a teenager, went on to become active in New York State and national Democratic politics. In 1970 Abzug garnered countrywide attention while campaigning for election to the U.S. House of Representatives with the statement, "This woman's place is in the House – the House of Representatives." Friedan, a cofounder of the National Organization for Women in 1966, and Abzug were both outspoken advocates for the passage of the Equal Rights Amendment and public opponents of the Vietnam War. In 1979 they were among the founders of the National Women's Political Caucus.

A figure of equal importance to the emergence of American feminism in this period was Carol (Friedman) *Gilligan, who single-handedly transformed the field of psychology with the publication in 1982 of her pathbreaking study *In a Different Voice: Psychological Theory and Women's Development*. Gilligan, who as a child participated actively in the Reconstructionist movement's flagship Society for the Advancement of Judaism in New York City, has described herself "a Jewish child of the Holocaust era." Her strong moral and political convictions, which soon found expression through her participation in the civil rights movements, were ultimately manifest in her scholarship. In 1964 she completed a Ph.D. in psychology at Harvard University. After teaching at the University of Chicago, she returned to Harvard, where she worked closely with Erik Erikson and Lawrence Kohlberg, two eminent psychological theorists. At this juncture, Gilligan began to closely examine the ways female identity and experience were virtually ignored by mainstream psychology. *In a Different Voice*, which stemmed from research conducted at the Emma Willard girls school in Troy, New York, provoked a national debate and catapulted Gilligan to the forefront of the American feminist movement and utterly revolutionized the fields of education, psychology, and women's studies. Subsequently, Gilligan was named "Woman of the Year" in 1984 by *Ms.* magazine and in 1996 *Time* magazine named her one of the 25 most influential figures in American society.

While Jewish female activists such as Friedan, Abzug, and Gilligan swiftly became household names in wider American society, an equally explicit albeit more subtle Jewish brand of feminism emerged in this period, too – with profound implications for the future of American Jewry. The burgeoning of American Jewish publications in these years throws light on this trend as well as a pervasive desire to reorient perceptions of women in modern Jewish life generally. Consider, for example, a few disparate works that illustrate significant shifts on the American Jewish scene. First, *The Jewish Catalog* (1973), an enormously popular do-it-yourself guide to Judaism and Jewish life in American society, contained a chapter on Jewish women emphasizing "consciousness-raising" and suggesting new "areas of priorities for interested Jewish women." Second, *Women in the Kibbutz* (1975), a controversial multi-generational study by the sociologists Lionel Tiger and Joseph Shepher, focused attention on the unique experiment of Israeli communal living and, in the words of the publisher, raised "new questions about the goals of the Women's Liberation Movement." Third, Anne Lapidus Lerner's "'Who Hast Not Made Me a Man': The Movement for Equal Rights for Women in American Jewry," published in the *American Jewish Year Book* of 1977, accurately pointed to the vitality and durability of feminism in contemporary American Jewish life. The sentiment of the period was summed up in Lerner's bold assertion that "Queen Esther no longer reigns supreme in the hearts of young Jewish women. More and more of them are admiring Vashti's spunk instead." In the final analysis, she optimistically intoned, as "the image of Queen Esther is becoming less persuasive … the new Jewish feminism must be confronted and accommodated to ensure the survival of American Jewry."

As participants and observers alike created a new literature and public arena about Jewish women and for feminist discourse – e.g., Trude *Weiss-Rosmarin's "The Unfreedom of Jewish Women" (1970); **Lillith* magazine, established in 1976 by Susan Weidman Schneider and Aviva Cantor; Blu Greenberg's *On Women and Judaism* (1979); etc. – some female scholars turned to history in order to discern "models from [the] past." "From them we learn," explained Elizabeth Koltun in *The Jewish Woman: New Perspectives* (1976), "that we are not the first Jewish women discontent with 'women's place' and that, concomitantly, Jewish feminism does not, in fact, represent the total break with our past which our critics would have us believe."

It was not by chance that of the four role models featured in Koltun's anthology, two were Zionists: Henrietta Szold, the American founder of Hadassah and head of Youth Aliyah, and Raḥel Yanait Ben-Zvi, a Labor Zionist leader and founder of the *Ha-Shomer self-defense organization in the Yishuv (prestate Israeli society). Likewise, a bibliographic "Guide to Jewish Women's Activities" in *The Jewish Catalog* begins with five autobiographical works written and edited by Zionist women activists: Raḥel Yanait Ben-Zvi, Geula *Cohen, Irma L. Lindheim, Raḥel *Katznelson-Shazar, and Ada *Maimon. It also

contains numerous references to women in the Zionist movement, the Yishuv, and contemporary Israel. In another instance, a slim volume titled *Sisters of Exile* (1974), published by the American Zionist youth movement *Habonim, focused on the lives of significant women in Jewish history and elevated Zionist activists to the pantheon of modern Jewish heroes. It also found its way into many Jewish studies classes on American college campuses in an era when such information was still largely ignored and inaccessible. Finally, it is worth noting Golda *Meir's bestselling autobiography, *My Life* (1975), which enjoyed a mass distribution in the United States.

Viewed historically, the developments described above are not surprising. As sociologist Sylvia Barack Fishman has observed, the close identification of Jewish women with Zionism and Israel in the 1970s and 1980s – despite the checkered track records of both vis-à-vis the equality and empowerment of women – was a self-defining characteristic of American Jewish feminism in this period. In fact, despite external pressures many Jewish feminists refused to sever their links to Zionism. The scholar Paula *Hyman explains the strong similarities between Jewish feminism and Zionism from a historical perspective:

> Like Zionism, Jewish feminism emerged from an encounter of Jews who were deeply concerned with the fate of their group with secular Western culture… Jewish feminism, too, did not spring in an unmediated way from Jewish tradition… It took secularized Jews, influenced by the rise of feminism in America in the 1960s, to establish a Jewish feminist movement that provided a radically modern form to strivings for gender equality.

The profile of American Jewish feminism in this period reveals a *mélange* of secular, spiritual, modern, radical, and feminist impulses as well as a broad range of perspectives on women, Judaism, Zionism, and Israel. In the words of historian Judith R. *Baskin, "expanding our knowledge of Jewish women not only enlarges what we know about Jewish history and the Jewish experience but redefines our very conceptions of what Jews and Judaism were and continue to be about."

RELIGION. American Jewish religious life broadened considerably in the decades following World War II as Judaism was all but officially recognized as the third religion of American society. Will Herberg's celebrated polemic *Protestant, Catholic, Jew* (1960) and the widespread use of the term "Judeo-Christian" illustrate this trend. Public commissions habitually included a Jewish member alongside Protestants and Catholics, and official ceremonies, including presidential inaugurations, arranged for Jewish as well as Christian clerical participation. The 1950s was a period of unprecedented interest in Jewish religious life and thought, as part of the "revival of religion" in American culture during those years. The writings of such figures as philosopher Martin *Buber and theologian Abraham J. *Heschel received widespread attention. Numerous interfaith institutes and assemblies were held. It is no accident that among the ideologues who had the most impact on the various denominations of American Judaism – Abraham J. Heschel, Joseph *Soloveitchik, Menachem *Schneersohn, and Emil *Fackenheim – all, with the exception of Fackenheim, were scholars with deep roots in Eastern Europe who spent some of their most formative years pursuing higher education in Western Europe, primarily, Berlin, and then emigrated to the United States where they quickly emerged as the most creative authorities for their disciples on how to relate to the Jewish religious tradition in a pluralistic, technological, and open society.

Although it is customary to divide American Judaism in this period according to the tripartite model of Reform, Conservative, and Orthodox synagogue movements, each with central institutions and recognized leaders, the reality resembled more a spectrum in which the membership, beliefs, and practices, and even the rabbinate of one group shaded into the next. The number of denominationally identified congregations grew rapidly. In the early 1950s there were nearly 500 Reform congregations, 100 more than in the previous decade, while the Conservative movement added more than 150 synagogues in the same period and rose beyond 500 congregations. (Many had been Orthodox and evolved into Conservatism.) There were more than 700 affiliated Orthodox congregations, but many were inactive leftovers from immigrant days. The increase continued, so that in the 1960s the congregations numbered more than 550 Reform, 600 Conservative, and 700 Orthodox. The organized American rabbinate in 1955 counted 1,127 men in the two large Orthodox professional bodies, 677 Reform, and 598 Conservative. In 1960 the U.S. Bureau of Labor Statistics reached similar conclusions when it identified 2,517 congregational rabbis, 944 in "specialized Jewish community service," and 148 at temporary work or unemployed. To these 3,609 rabbis the Bureau of Labor Statistics added some 650 retired or out of the profession, and there were probably others privately ordained not functioning as rabbis. A 1950 estimate placed total synagogue membership at a maximum of 450,000 families, besides about 250,000 persons who occupied seats in the synagogue on the High Holy Days. Perhaps 1,485,000 Jews were thus synagogally affiliated, and this figure apparently increased during the 1950s. Thus around 1960 there were over 450,000 families in Conservative and Reform congregations. The number of Orthodox Jews could not be properly determined, but a 1965 study suggested 300,000 committed Orthodox individuals. Altogether, the largest institutional and membership growth was found in the Conservative movement, which counted over 800 congregations affiliated with the United Synagogue of America in 1970 as compared with some 700 in the Union of American Hebrew Congregations in that year.

A wave of synagogue construction illustrated this increase of affiliation, as did the burgeoning of Jewish communities in new suburban districts. In the decade following World War II an estimated $50–60 million was spent on synagogue building, and the ten-year period that followed may have seen twice that amount expended. Many synagogues, especially in

the suburbs, accommodated not only worship and study but also quite elaborate social functions and even sports and social recreation. The tendency of synagogues to act as Jewish community centers sometimes brought them into rivalry with non-synagogal Jewish centers and Young Men's Hebrew Associations and Young Women's Hebrew Associations, which were professionally equipped for such work. The latter were engaged in reorienting their outlook and activities toward a more explicit Jewish program, as recommended in the influential Jewish Welfare Board survey (1948) directed by Oscar I. *Janowsky. The synagogue-Jewish center rivalry had some ideological basis: synagogal claims to primacy as the embodiment of Jewish religion and tradition, versus the centers' emphasis on their broadly Jewish character accommodating secular as well as religious members.

Notwithstanding great material growth, Jewish religious life hardly became more intensive. Although American Jews in surveys tended to describe themselves as "conservative," this no doubt indicated a general preference for traditional religious rituals rather than actual Conservative religious belief or synagogue affiliation. There was widespread well-documented interest in Judaism on college campuses, and numerous instances occurred of young people adopting traditional religious life and beliefs. Altogether, however, only small minorities, estimated variously between 10 and 20 percent, observed the Sabbath scrupulously, maintained the dietary laws in full, and observed daily prayer. Reform, Conservative, and Orthodox religious groupings were found in every Jewish community of any size, but some were strong in particular cities. Thus, the centers of Orthodoxy in the 1950s and 1960s were in Boston, Baltimore, and above all New York City. Philadelphia and Detroit were strongholds of Conservative Judaism, while Cincinnati, Cleveland, San Francisco, and Milwaukee were especially favorable environments for the Reform movement.

The denominations had their struggles over internal issues. The Reform majority, now pro-Zionist, moved toward increased ritual and traditionalism, over the opposition of a vigorous "classical Reform" minority, and congregations leaned in either direction. The majority of Reform rabbis attempted to utilize the classic sources of Jewish law in religious problems. Among the Conservatives differences tended to be muffled in loyalty to the central institution, the Jewish Theological Seminary of America and its profoundly traditionalist faculty. The main issue was Jewish law and the extent to which it could be modified and by whom. Yet while Conservative rabbis and scholars debated the *halakhic* problems of change, the lay membership proceeded in its own un-*halakhic* way of life.

Orthodoxy meanwhile shed its status as the Judaism of Yiddish-speaking East European immigrants after the number of acculturated, middle-class congregations with modernist American-trained rabbinic leadership sharply increased. There was also a large accretion to Orthodoxy from post-1945 immigration, among whom ḥasidic and yeshivah leaders were prominent. Tensions arose between these two segments for the latter tended to be non-Zionist or anti-Zionist and considered the secular world and non-Orthodox forms of American Jewishness to have improperly influenced American Orthodoxy. As well, Orthodoxy became intellectually active and vibrant in this period as religious and philosophic writing was produced, including American reprintings of the Talmud and nearly the entire corpus of rabbinic classics.

Nonetheless, the *National Jewish Population Survey* of 1970 revealed that American Jewish life was marked by substantial acculturation among young people and the break up of family cohesion. These findings aroused considerable concern among American Jewish leaders from across the social, religious, and political spectrum and reinvigorated the long-standing public debate over the maintenance of a separate Jewish identity and the wholehearted acceptance of the Jews by a society that stands for the elimination of barriers based on race or creed.

The prospective decline of American Jewish religious life prompted some rabbis and congregational lay leaders to call on the synagogue movements to review their traditional reluctance to accept proselytes. Small groups encouraging converts had been at work for some time but the idea took on a new dimension in 1978 when Alexander *Schindler, president of the Union of American Hebrew Congregations (UAHC), proposed that American Judaism (or at any rate its Reform wing) actively seek converts from among the religiously unaffiliated: "I believe that it is time for our movement to launch a carefully conceived Outreach Program aimed at all Americans who are unchurched and who are seeking roots in religion." The UAHC board of trustees responded positively to Schindler's proposal.

Renewal efforts were manifest in other areas of the Reform movement as well. The most dramatic illustration in this regard was the ordination in 1972 by the Hebrew Union College – Jewish Institute of Religion of America's first woman rabbi, Sally *Priesand.

> As I sat in the historic Plum Street Temple [in Cincinnati, Ohio], waiting to accept the ancient rite of *smikhah* [ordination], I couldn't help but reflect on the implications of what was about to happen. For thousands of years women in Judaism had been second-class citizens. They were not permitted to own property. They could not serve as witnesses. They did not have the right to initiate divorce proceedings. They were not counted in the *minyan* [quorum]. Even in Reform Judaism they were not permitted to participate fully in the life of the synagogue. With my ordination all that was going to change; one more barrier was about to be broken.

Priesand's ordination represented not only a major departure from Reform's institutional culture but also portended a sea change in the American rabbinate and, in time, American Judaism as a whole. Meanwhile, Reform liturgical innovations resulted in a triad of new prayer books: *Gates of Prayer* (1973), the *Union Haggadah* (1974), and *Gates of Repentance* (1978). In direct line of succession to the *Union Prayer Book*

(1892), the volumes retained traces of Reform's earlier radicalism, but exhibited in style and content important theological changes and an emphasis on ceremonial tradition. Likewise, *Shaare Mitzvah* (Gates of Observance) (1979) encouraged Reform Jews to "return" to personal observances. Moreover, as a consequence of the rise of intermarriage, the CCAR called upon its members not to participate in such ceremonies. The New York Board of Rabbis subsequently resolved to bar those who did so from membership. In 1975 the Rabbinical Council of America passed a similar resolution.

Conservative Judaism underwent a significant paradigm shift in this period. In 1972 the Rabbinical Assembly published a new High Holiday *maḥzor* (prayer book). It departed from earlier versions in its modern translation and the incorporation of new material, including an alternative to the silent *amidah* (personal recitation). The martyrology for Yom Kippur was revised considerably to include non-liturgical texts and commemorative material related to the Holocaust. The question of women's rights, which for opposite reasons excited no significant discussion in either Orthodoxy or Reform, was a matter of vigorous debate in the Conservative movement. In 1972 the Rabbinical Assembly of America determined it should be left to individual congregations whether or not to include women in the *minyan* (religious quorum). The ordination of women to the Conservative rabbinate also came under discussion at the Assembly's 1974 convention, where it was rejected. The issue caused deep division within the seminary faculty and the Conservative rabbinate. In the meantime, however, one Conservative congregation appointed Sandy Eisenberg *Sasso, who was ordained by the Reconstructionist Rabbinical Seminary.

A survey of Conservative movement members presented to the 1979 biennial convention of the United Synagogue of America generated pessimistic conclusions as to the future of that body. The findings were based on age composition, the low proportion of members among third-generation American Jews, and the failure to bring about a commitment to Conservative Judaism among the majority of the children of Conservative synagogue members. Moreover, despite the enthusiastic efforts of a group of young Israel-oriented activists, the United Synagogue of America refused to endorse the establishment in 1977 of Mercaz (Hebrew for "Center"), a Conservative Zionist group that claimed an enrollment of 10,000 members. Ironically, the American Zionist Federation accepted Mercaz as an affiliate. In 1979 Mercaz announced plans for the creation of a moshav (collective settlement) in Israel. On the eve of Rosh Hashanah 5740 (September 1979) the chief rabbis of Jerusalem issued a statement vigorously denouncing Conservative Judaism. In connection with this it was revealed that there were 29 Conservative congregations in Israel.

The twinning of the Reform and Conservative movement's positions vis-à-vis Israel became apparent in this period. In 1977 Reform and Conservative representatives together met Israeli Prime Minister Menahem *Begin and sent a deputation to the Jewish state in an effort to prevent an alteration in the *Law of Return called for by the Orthodox. In addition they worked together in 1978 to secure from the Twenty-Ninth World Zionist Congress a resolution calling for equal rights for all quarters of Jewish life. The determination of the Orthodox to resist any encroachment on their special status in Israel generated a strong counterforce among American Jewish leaders, and the ambiguities of Reform in the matter of *halakhah*, particularly as related to marriage and conversion, made cooperation with the Conservative movement problematic.

Orthodoxy, too, increased its assertiveness in this period within and beyond the organized American Jewish community. The growth of Orthodoxy conformed to the climate of the times. Throughout the 1970s liberal churches in the United States lost support while fundamentalist Christianity (which developed a distinct political thrust) gained in strength. Of the several strata of Orthodox Judaism, the ḥasidic sector became the most conspicuous. Among the Ḥasidim those adhering to the Lubavitcher *rebbe* became the most widely known because of the missionary work they conducted among the non-Orthodox.

Ḥasidic strength was centered in Brooklyn, where identifiable groups settled in specific sections of the borough – the Satmar (see *Teitelbaum) in Williamsburg, the Lubavitcher (see *Chabad) in Crown Heights, and the *Bobover in Borough Park. In 1977 the serious differences between the Lubavitcher and Satmar sects deteriorated to the extent of an inter-ḥasidic riot in Brooklyn. In 1979 differences between the *Belzer and Satmar Ḥasidim in Jerusalem spilled over in violence between them in New York. Though they maintained complete independence of the organized American Jewish community, the ḥasidic leaders developed an important web of contacts in the world of politics. An expanding group of followers (owing to a high birthrate and proselytism), well-defined communal goals, and high voter turnout gave them considerable political leverage, resulting in increased government aid for their projects.

EDUCATION AND CULTURE. The relation between church and state, especially in the field of education, was a sensitive issue in this period. The Jewish community maintained its historic opposition to religious observances in governmental functions and particularly in the public school system. This stand was put to the test, especially over Catholic demands for government aid to their parochial school system. A series of United States Supreme Court decisions that permitted private schools to receive school buses, lunches, and textbooks from the government was generally regretted, while decisions that barred school prayers and any active role for schools in sponsoring outside sectarian religious instruction were widely applauded by Jews. The passage of the Education Act of 1964 and subsequent legislation, providing limited federal aid for private schools, tended to quiet the issue.

American Jews also opposed school programs that aimed to inculcate "moral and spiritual values" in children. Local dis-

putes frequently erupted, typically in predominantly Christian suburbs to which a substantial number of Jews had moved, due to Jewish opposition to Christmas observances in the public schools; combined Christmas-Hanukah observances were a syncretistic "compromise." Thus, the American Jewish community continued its historic affinity for the public schools provided they were religiously neutral. Among Jewish organizations the American Jewish Congress took the most rigorous separationist position, while the American Jewish Committee leaned toward a more pragmatic acceptance of the prevailing public policy. Orthodox Jewry, which had few children in the public schools, opposed rigorous church-state separation in education, partly in hopes of securing public funds for their hard-pressed day schools.

After 1950 Hebrew literary creativity in the United States nearly vanished as Israel increasingly monopolized talent and provided a mass audience for writers. Yiddish letters also continued their decline, largely on account of linguistic assimilation. Significant Yiddish writers continued to publish, however, including Chaim *Grade and Isaac Bashevis Singer, who in English translation became an American literary celebrity during the 1960s. Yiddish was no longer the language of the Jewish masses. In 1971 the *Tag-Morgen Zhurnal* (Day-Morning Journal) one of the two remaining Yiddish dailies in New York City ceased publication while the *Forverts* (The Forward) remained afloat only through philanthropic support. Only the *Allgemeine Journal*, a Yiddish weekly newspaper close to the Lubavitcher movement, enjoyed a measure of success. The remaining publications of note were the monthly *Zukunft*, scientific literature produced by the *YIVO Institute for Jewish Research, and various organizational periodicals. Ironically, as the prestige of Yiddish seemed to peak in the 1970s, Irving Howe's celebrated *World of Our Fathers* (1976), an epic history of East European Jewish immigration to the United States, became a national bestseller, and in 1978 Isaac Bashevis Singer was awarded the Nobel Prize for literature. In short, Yiddish as a living language – except among ḥasidic Jews – all but disappeared.

By contrast, American Jewish cultural activity in English surged throughout this period. The mainstay of the weekly Anglo-Jewish press, whose news came from the *Jewish Telegraphic Agency, were Jewish monthlies and quarterlies like *American Jewish Congress Monthly*, *Commentary*, *Hadassah Magazine*, *Jewish Frontier*, *Judaism*, *Midstream*, *Moment Magazine*, the *Reconstructionist*, *Shma*, and *Tikkun* – some of which were of the highest standard. Nor was it longer unusual to read of Jewish affairs in the general press, and television and general magazines also frequently presented Jewish material from which unpleasant stereotypes had long been eliminated.

University presses and commercial publishers issued serious works on Jewish subjects, in addition to the best-selling novels. Jewish scholarship, while still concentrated in seminaries and yeshivot, slowly began to find a place in universities with the establishment of academic chairs in Jewish studies and the rise to national prominence under its founding president Abram *Sachar of *Brandeis University, a Jewish-sponsored non-sectarian university which was established in 1948. To the generation of mature, European-trained scholars was added a new one educated in the United States and frequently in Israel. Learned studies of outstanding merit in Bible, theology, and homiletics, medieval and modern Jewish languages and literature, and Jewish philosophy, history, political science, sociology, anthropology, and folklore were produced by elder scholars and their younger American-born colleagues. Notwithstanding a new, respectful attitude toward Jewish scholarship, the relatively low Jewish educational level of much of American Jewry often made such works inaccessible.

Meanwhile, participation in Jewish educational institutions surged as school enrollment increased, owing particularly to the post-1945 "baby boom" from some 268,000 in 1950 to over 589,000 in the 1960s. In this period, an estimated 80 percent of American Jewish children received Jewish education at some time during their school years. Over half went to Sunday schools, which were generally attached to Reform congregations, and perhaps one-third to weekday congregational schools, usually branches of Conservative synagogues. A striking and somewhat controversial increase was that of day schools, most of them under Orthodox auspices, which enrolled approximately 80,000 children in 1970. The lesser expansion of yeshivah high schools and of yeshivot for full-time talmudic study was also conspicuous. As these schools grew the communally supported Talmud Torahs of earlier decades sharply declined owing to changing religious trends within the Jewish community and the change of urban neighborhoods. In this climate, secular Yiddish education barely survived. Local Jewish welfare funds began to appropriate more for Jewish education, mainly toward central bureaus and specialized services. Notwithstanding financial improvement and the desire of most parents to send their child to some Jewish school, Jewish education remained brief and superficial for most pupils, and was severely handicapped by a seemingly insoluble shortage of qualified teachers.

At the beginning of the 1970s, the *National Jewish Population Survey* reported that more than 80 percent of Jewish males received some Jewish education at some time in their lives, and about the same percentage of Jewish boys celebrated their bar *mitzvah*. For females the proportion receiving some Jewish education was less. Within this general framework, the picture of Jewish education exhibited some marked contrasts. A survey undertaken in 1979 by the American Association for Jewish Education estimated total student enrollment in Jewish educational institutions to be 357,107. Furthermore, the study noted the growth of the Jewish day school movement. Whereas in 1946 there were 69 Jewish day schools with 10,000 pupils, in 1979 there were 378 with 90,675 pupils. Total enrollment figures showed that 35.6 percent of all pupils attended Reform schools, 29.5 percent Conservative, 24.1 percent Orthodox, 7.1 percent communal, 3.6 percent independent, and 0.1 percent Yiddish. The proportion of Orthodox schools in greater New York was greater, amounting to 53.6 percent.

THE CONVULSIONS OF THE 1960S. Toward the end of the 1960s, the American Jewish position seemed stable. Population held to predictable rates, immigration was minimal and readily absorbed, and demographic and occupational trends continued as they had from approximately 1950. Meanwhile, Israel attracted considerable political and financial support and tourism, and the institutions of the Jewish community were generally well financed and seemed capable of dealing with most of the problems coming up on their agendas. Late in the 1960s, however, quite unanticipated matters and issues arose which stirred unusual interest and anxiety.

The accession of Pope *John XXIII in 1958 and the Vatican II Ecumenical Council, which he convened, inaugurated sweeping changes in the Roman Catholic Church. These included a major attempt to rectify the ancient anti-Jewish record of the Church and to meet belated worldwide criticism of the generally passive and indifferent attitude of Pope *Pius XII during the Holocaust. The movement within the Church to "exonerate" the Jews collectively of the charge of "deicide" and to formally recognize the theological legitimacy of Judaism was highly active in the United States, and stirred considerable American Jewish participation and enthusiasm. A period of Catholic-Jewish theological conversation and inter-faith dialogue commenced, in which Cardinal Augustine Bea and American prelates were leaders. The most prominent American Jewish spokesman in this regard was the theologian Rabbi Abraham J. Heschel. The final document issued by Vatican II in 1965 disappointed high hopes. While Catholic silence (as well as that of Protestants) during the Arab preparations to annihilate Israel in May 1967 was very disillusioning, Catholic-Jewish dialogue continued, but in a subdued key.

The acquisition of equal rights by African Americans had long been a goal of legal and political action, as well as philanthropic endeavor, by Jews. Not only did such Jewish organizations as the American Jewish Committee and the American Jewish Congress possess considerable track records as supporters of legislation and litigants in court in order to secure black rights, but individual Jews since the days of Louis Marshall, Julius Rosenwald, and others had long been a source of activists and funds in these struggles, dating back to significant charitable gifts to historically black colleges in the South. During the Civil Rights era of the mid-1960s young Jews constituted, by some reports, as high as 50 percent of all the white student youth who participated in grassroots political activity aimed at the enfranchisement and improvement of the African American community's socio-economic conditions, particularly in the southern United States. A particularly cogent expression of the American Jewish perspective was voiced in 1963 by Rabbi Joachim Prinz, president of the American Jewish Congress, at the March on Washington, where he stood together with the Rev. Martin Luther King and Rabbi Abraham Joshua Heschel before the Lincoln Memorial:

> I speak to you as an American Jew.
>
> As Americans we share the profound concern of millions of people about the shame and disgrace of inequality and injustice which make a mockery of the great American idea.
>
> As Jews we bring to this great demonstration, in which thousands of us proudly participate, a twofold experience – one of the spirit and one of our history.
>
> In the realm of the spirit, our fathers taught us thousands of years ago that when God created man, He created him as everybody's neighbor. Neighbor is not a geographic term. It is a moral concept. It means our collective responsibility for the preservation of man's dignity and integrity.
>
> From our Jewish historic experience of three and a half thousand years we say: Our ancient history began with slavery and the yearning for freedom. During the Middle Ages my people lived for a thousand years in the ghettos of Europe. Our modern history begins with a proclamation of emancipation.
>
> It is for these reasons that it is not merely sympathy and compassion for the black people of America that motivates us. It is above all and beyond all such sympathies and emotions a sense of complete identification and solidarity born of our own painful historic experience.
>
> When I was the rabbi of a Jewish community in Berlin under the Hitler regime, I learned many things. The most important thing that I learned under those tragic circumstances was that bigotry and hatred are not the most urgent problem. The most urgent, the most disgraceful, the most shameful and the most tragic problem is silence.
>
> A great people which had created a great civilization had become a nation of silent onlookers. They remained silent in the face of hate, in the face of brutality, and in the face of mass murder.
>
> America must not become a nation of onlookers. America must not remain silent. Not merely black America, but all of America. It must speak up and act, from the President down to the humblest of us, and not for the sake of the Negro, not for the sake of the black community but for the sake of the image, the idea, and the aspiration of America itself.
>
> Our children, yours and mine in every school across the land, each morning pledge allegiance to the flag of the United States and to the republic for which it stands. They, the children, speak fervently and innocently of this land as the land of "liberty and justice for all."
>
> The time, I believe, has come to work together – for it is not enough to hope together, and it is not enough to pray together – to work together that this children's oath, pronounced every morning from Maine to California, from North to South, may become a glorious, unshakable reality in a morally renewed and united America.

An especially tragic illustration of the youthful Jewish commitment to this idealistic vision was the murder in 1964 of Andrew Goodman and Michael Schwerner (along with other voting rights activists) in Mississippi by members of the Ku Klux Klan. Against this backdrop, the passage of the Civil Rights Acts of 1964 and 1965, and the legal and judicial prohibition of racial segregation in all forms, were viewed by American Jews with deep satisfaction.

After these victories, the black-Jewish alliance was gravely strained and broken at many points, largely owing to dynamic social, economic, and political trends. The presence within African American areas of numerous Jewish merchants and slum landlords – many of who were holdovers from earlier

years when such districts were heavily Jewish – was a source of major friction. The whites with whom the masses of southern black migrants to northern cities came in contact were also disproportionately Jewish, including social case workers, communal service professionals, and, especially in New York City, public school teachers. The wave of riots that swept African American communities in northern cities between 1964 and 1968 compelled the departure of most of their white businessmen, including Jews, and violently shook the fragile urban setting. Militant groups espousing "black power," separatism, and nationalism denounced whites and repudiated their assistance in terms that were sometimes antisemitic. Proposals for social policy from some black and establishment white sources stirred deep Jewish fears that the economic and social gains of African Americans were to be at the expense of American Jews, with Jewish opportunities in higher education and broad areas of professional employment reduced to make room for African Americans. Other American ethnic groups shared similar fears.

A strike by New York City teachers in 1968, most of them Jews, arose from the intention of "school decentralization" to ease Jews out or reduce their opportunities for advancement in order to advance African Americans (and Puerto Ricans, in that city's situation) in the school system. Serious eruptions of antisemitism accompanied the strike, and the Jewish community was disturbed at white intellectual and upper-class indifference to them. Deep cleavages appeared within the American Jewish community as feelings emerged, especially among urban-working and lower-middle-class Jews, that the established Jewish organizations with their prosperous, suburban supporters were unconcerned with their plight and heedless of rising antisemitism. The rapid growth of the militant Jewish Defense League in New York and other cities, with its tactics of physical defense, public demonstrations, and retaliation, was, in part, an expression of this fear.

The Middle East crisis of May 1967 brought American Jewish concern for Israel to a peak. Some volunteers were able to leave for Israel before June 5, 1967, but the escalating political anxiety and subsequent astonishing military triumph by Israel in the Six-Day War found its main outlet in unparalleled charitable contributions – $232 million to the United Jewish Appeal and $75 million in State of Israel bonds. Hardly had the euphoria of victory dissipated when the New Left in shaky combination with militant black elements vigorously espoused the Arab cause. Like Soviet Russia and Poland, they used the term "Zionist" as an epithet and synonym for "Jew" in attempting to obscure the antisemitic character of their propaganda. Together with numerous Arab students on American campuses, they propagandized vigorously for their cause. The American Zionist movement – largely quiescent for almost 20 years as the vast majority of American Jews expressed their pro-Israel convictions outside its framework – somewhat revived after 1967. This was particularly noticeable at many colleges and universities, especially those swept by campus disturbances and the militant tone of leftist and black demands. Jewish students spontaneously founded Zionist organizations, which they named (in contemporary parlance) as "radical" and "liberation" groups, e.g., the Jewish Activist League (Boston), the Jewish Liberation Project (New York City), the Jewish Radical Community (Los Angeles), Jews for Urban Justice (Washington, D.C.), the Radical Zionist Alliance (New York City), etc. At a more sedate level, American business investment in Israel as well as tourism, both overwhelmingly Jewish, greatly increased despite the danger to Israel's security. *Aliyah* (Jewish immigration to Israel), long debated in American Zionist and Jewish circles, enjoyed a relative surge as approximately 17,000 American Jews settled in Israel between July 1967 and the end of 1970.

Antisemitic discrimination and the near-suppression of Jewish life in the Soviet Union, together with the Soviet regime's refusal to permit Jewish emigration, furnished the main cause for agitation and protest by American Jews at the end of the 1960s. The American Conference on Soviet Jewry, the Academic Council on Soviet Jewry, and especially the Student Struggle for Soviet Jewry were the major organizers in this regard. The continued threat to the existence of Israel, urban problems weighing heavily on an overwhelmingly urban community, and the surge of antisemitism, anti-Zionism, and anti-Israel sentiment, together with the well-publicized glorification of violence by some militant black demagogues and white followers, angered American Jews and tended to stimulate a siege mentality. Assertions were common that Jewish communal life and institutions were "useless" and "irrelevant," and the supposed revolt of American youth stirred concern. Nevertheless, American Jews continued to support liberal political programs and candidates and played a prominent role in American cultural and economic life.

THE INSECURE 1970S. The 1970s brought many changes as well as insecurity and anxiety to the fore of American society. The Vietnam War's conclusion was as humiliating as its pursuit and the scars took time to heal. The Arab oil embargo of the period and subsequent price increases exposed the vulnerability of the world's most advanced technological society to Middle Eastern oil supplies. The Watergate scandal revealed a corruption of power that had eaten into the political structure and weakened public respect for government. Scarcely had this receded when the overthrow of the Shah of Iran again threatened oil supplies, and the humiliation of the prolonged detention of the occupants of the Teheran embassy underscored the extent to which the giant economies of the West did not control their own destinies. The manner in which their appetite for oil continued, despite the warning of the earlier crisis, made the West dependent on the whim of a handful of Arab countries, whose control over substantial portion of the world's oil reserves portended dramatic changes in the balance of Cold War geo-political power – in the Middle East and worldwide. All this was driven home by a background of seemingly unbeatable inflation, accompanied, as the decade drew to a close, by a depressed American

economy – the effects of which provided the context for the work of Simon *Kuznets, a leading American economist of Ukrainian Jewish origins who won the Nobel Prize in 1971 for his empirical studies of economic growth and the socio-economic structure of society.

The impact of the economic and political climate on American Jews was complicated by the shock of the Yom Kippur War, and the ensuing concern that – quite apart from its decisive 1967 victory – Israel's long-term survival was far from certain. American Jews responded to the crisis of the Yom Kippur War almost reflexively and immediately undertook a dizzying campaign to lobby American policy-makers, coordinate a massive fundraising campaign on Israel's behalf, and activate local American Jewish communities to support Israel's war effort. Within hours of the outbreak of hostilities, American Jewish leaders mobilized to secure political support for Nixon's request for a $2.2 billion Congressional appropriation that allowed Israel to purchase American military supplies. Meanwhile, the United Jewish Appeal pledged to raise $900 million, while the Israel Bond's organization and a plethora of Jewish and Zionist groups initiated emergency fund raising initiatives. The Conservative movement alone raised a total of $82 million. Finally, some 35,000 prospective American Jewish volunteers barraged the offices of the Jewish Agency including a disproportionate number of doctors whose prior experience in Vietnam made them ideal candidates for service. Of the tens of thousands who offered their services, only a couple thousand were actually sent to Israel in the first weeks following the outbreak of the war. Most of the volunteers paid for their own passage to Israel.

The flurry of negotiations that followed the Yom Kippur War provided exhilaration and depression, satisfaction and resentment in quick succession, as did the involved discussions that followed Anwar Sadat's historic visit to Jerusalem. For in spite of Israel's hard won victory and Egypt's momentous policy change, the majority of the Arab world remained implacably determined to crush Israel. Meanwhile, the 1975 United Nations resolution condemning Zionism as racism resounded like a thunderclap. The United States condemned the vote, but its impact on the American Jewish community and militant left-wing anti-Israel elements was significant.

Against this backdrop, two major ideological debates underscored a significant shift in the trajectory of American Jewish life. One centered on the role of pluralism in the American Jewish community. The other was, in effect, a political conflict waged in print, at the ballot box, and through various forms of activism, between Jewish liberals and conservatives who took sides over a variety of social, economic, and foreign policy issues. The net result proved to be a widespread trend toward communal decentralization, the increasing demand by constituents and donors for accountability on the part of local Jewish Federations and the agencies they supported, and the creation of new educational, cultural, political, and philanthropic institutions that arose alongside the American Jewish Joint Distribution Committee, B'nai B'rith, the Council of Jewish Federations, Hadassah, and other venerable institutions of American Jewish life.

POLITICS. The visibility of Jews in the American political process grew in the 1970s not merely by virtue of being openly courted in presidential elections but through their appointment to high office. Under the Nixon administration Herbert *Stein became chairman of the president's Council of Economic Advisors, Arthur *Burns chairman of the Federal Reserve Board, and Walter *Annenberg ambassador to Great Britain. Edward H. *Levi, president of the University of Chicago and descendant of a well-known rabbinical family, was appointed attorney general in 1975. The most noteworthy Jewish figure in the Nixon administration was Henry Kissinger. A refugee from Nazi Germany, he became the president's national security advisor in 1969 and was appointed secretary of state in 1975. Kissinger's authority was apparent not only in the critical diplomatic and foreign affairs role he played vis-à-vis the Soviet Union, Vietnam, the Middle East, and China but also by virtue of the fact that he was for many months the administration's most effective senior official as Nixon himself became deeply entangled in the Watergate Affair. Kissinger's authority was sustained and reaffirmed when Gerald Ford, on succeeding Nixon, retained him in office.

Although the Republican Party labored under the handicap of the Watergate scandal in the presidential election of 1976, it was clearly no longer the case that a liberal viewpoint crystallizing into support for the Democrats could be predicted of Jews. For example, despite a heavy concentration of Jewish voters in New York's Democratic primary, Jimmy Carter captured only 4 percent of the Jewish vote and succeeded in winning only 33 delegates as compared to 90 for Senator Henry M. Jackson, a conservative Democrat who was an ardent supporter of aid to Israel and the right of Soviet Jews to emigrate. Indeed, one report published after the presidential election estimated 54 percent of the Jewish vote going to Carter, as against 45 percent to Ford; another gave the proportion as two to one. Even this figure falls far short of the 83 percent preference for the Democrats reported in 1968.

In the Carter administration Stuart *Eisenstadt and Mark *Siegal were appointed to responsible positions on the White House staff, and Marvin Warner became ambassador to Switzerland. Two converts from Judaism became members of the cabinet – W. Michael *Blumenthal, as secretary of the treasury, and James Schlesinger, as secretary of the Department of Energy. Both retired in 1979 when Carter reorganized his administration. Subsequently, Neil *Goldschmidt, mayor of Portland, Oregon, and a practicing Jew, was appointed secretary of transportation, and Philip M. Klutznick, long an active figure in Jewish affairs, was appointed secretary of commerce.

Despite the historic Israel-Egypt peace treaty of 1978 brokered by President Jimmy Carter, the administration's open criticism of Israeli policy, which reached a climax in 1980 with support for a United Nations resolution calling on Israel to dismantle Jewish settlements in the West Bank and Gaza Strip,

alienated many American Jewish voters. In the end, the presumed Jewish disposition to support Carter's bid for reelection in 1980 did not materialize. It was estimated that Carter won approximately 40 percent of the Jewish vote and Ronald Reagan about 35 percent, with the balance going to independent candidate John Anderson. Because of the concentration of Jewish voters in large urban areas, the effect of the Jewish vote in the election remained disproportionate to its size in the body politic. This explained the attention drawn by even minor political shifts within the American Jewish community. A Gallup poll taken after Reagan's landslide reelection to a second presidential term revealed that while the number of Jewish Republicans had doubled to 16 percent, the number of Jewish Democrats was 50 percent.

Some observers viewed the American Jewish community's steadfast support for Israel as evidence of its parochial and increasingly conservative interests. This support was repeatedly demonstrated in public opinion polls. Meanwhile, an active, articulate, well funded, and growing conservative minority proved to be a force to be reckoned with in American Jewish life. The most popular forum for Jewish neo-conservative ideas was *Commentary* edited by Norman *Podhoretz and originally founded in the 1930s by Elliot *Cohen. It swiftly proved to be the most significant Jewish-sponsored intellectual journal of the period and featured many of the country's leading Jewish and non-Jewish neo-conservatives in its pages – a group dubbed the "New York intellectuals" that over the course of a few decades included political journalists Midge *Decter, *Irving Kristol, and Gertrude *Himmelfarb, literary critics Diana *Trilling, Lionel *Trilling, Leslie *Fiedler, Philip *Rahv, and William *Phillips, social scientists Daniel *Bell, Sidney *Hook, Seymour Martin *Lipset, and Nathan *Glazer, art critics and historians Hannah *Arendt, Clement *Greenberg, Harold *Rosenberg, and Meyer *Schapiro, and the novelist Saul *Bellow. This group also had a major impact on the quality and vitality of other influential political and literary journals including *Dissent*, *Partisan Review*, and *The New York Review of Books*. But it was *Commentary* in particular that emerged as an intellectual laboratory for neo-conservatism. It served as a training ground for many of the American right's most important thinkers and policymakers in the 1970s and eventually blossomed with the "Reagan revolution" in the 1980s. In the final analysis, however, as the voting behavior of American Jews demonstrated, neo-conservativism within the Jewish community, no matter how articulately formed, remained a minority view. The liberalism associated with the Roosevelt-Kennedy-Humphrey branch of the Democratic party was simply too much a part of the American Jewish ethos.

DISCRIMINATION IN REVERSE. The decline of antisemitism since World War II and the lowering of the residential, occupational, educational, and social barriers that previously cast a shadow over Jewish life in the United States helped to sustain American Jewry's liberal orientation in the second half of the 20th century. Used to regarding themselves as "outsiders," Jews were surprised and dismayed to find that other minority groups regarded them as "insiders" whose entrenched position was standing in the way of their own legitimate aspirations. This turn in inter-group relations took place against a background of urban decay in areas in which important Jewish communities had lived for decades. In addition to crime and violence in the streets, Jews found themselves plagued by the wider problems of school integration, quotas, low-income housing, ethnic rights, and inter-group relations, as well as by antisemitism.

This situation faced the Jews with contradictions that made them highly uncomfortable. Their traditional liberalism had made them accustomed to the posture of strong supporters of the underdog; they were now suddenly forced to defend their own status, their neighborhoods, their safety and the adequate education of their children. Having fought for a society from which discrimination would be eliminated, they now found that society proposed to discriminate in favor of other less privileged groups. Now the priority given to the African American and Latino populations (along with other minority groups), forced them to reconsider their status as a minority, albeit, a neglected one. There were strong feelings of anger, of being at a disadvantage, of frustration, of a new insecurity.

These feelings were much more intense among the lower middle and working class than among the more affluent Jews, among those whose homes or whose occupations remained in the decaying cities than among those who lived in the suburbs under entirely different conditions. Whatever kind of pressure had been built up was felt much more directly by the poor shopkeeper, the schoolteacher, the Orthodox Jew whose life centered on his synagogue. They suffered from the changed composition of their neighborhoods. In many instances, they had to face the violence brought into formerly quiet, homogeneous areas by ethnic groups who had moved into what used to be Jewish territory. While the sheltered suburbanites, not exposed to these pressures to the same degree as the poorer Jews, tended to maintain their traditional liberalism, those in violence-prone neighborhoods began to feel less sympathy for those minorities who, while struggling to better themselves, were bringing a good deal of hardship into the lives of lower-middle-class Jews. The continuing migration from the city to the suburb by the more affluent contributed to the creation of a vicious circle: Jewish neighborhoods became poorer, and more space became available to minorities and low-income whites, exacerbating the already existing problems.

In addition to crime, the priority treatment of minorities and the quota system, both in education and employment, was a cause of concern. The necessity to provide blacks and members of other minorities with jobs, and giving them preference apart from their qualifications affected the rights of Jews as part of the white population. Still more important were the consequences of this preferential treatment in the field of education, especially higher education. Even where no

discrimination against Jews was intended, any quota system prescribing an increased number of minority students without increasing the overall number of students meant that qualified white students, particularly high achieving Jewish students, were not admitted. In the event, many of those admitted under quotas did not meet the regular qualifications and the standards of higher education had to be lowered.

In 1978 the United States Supreme Court considered the issue of "discrimination in reverse" in the case of Allan P. Bakke, a white engineer who claimed the minority admissions of the University of California Medical School denied him his equal rights. The court ruled that the school's special admission program was illegal, though the university could consider race as one factor in choosing among applicants for admission. Jewish groups favored the ruling, while black and Hispanic groups were against it.

ZIONISM AND ISRAEL. Throughout the 1970s and 1980s Israel-related matters held a critical place in American Jewish life. In 1977 the national conference of the United Jewish Appeal was held in Israel for the first time, with the participation of some 3,000 American Jewish leaders. Tourism to Israel continued at a high level and contact with a new generation of young people was fostered through participation in kibbutz volunteer programs and study at Israeli universities. Notwithstanding Arthur Hertzberg's statement that Zionism and Israel had become the "religion" of American Jewry, immigration to Israel actually declined during this decade. When Pinḥas *Sapir, chairman of the Jewish Agency, toured the United States in 1974 in order to draw attention to the need for American immigrants, he received a lukewarm reception. The figure for 1970 was 7,658 American Jewish immigrants; by 1975 it had fallen to 2,964.

Occasionally voices were heard suggesting a desire to tone down the popular emphasis on the primacy of Israel. In 1973, for example, Jewish Theological Seminary chancellor Gerson D. *Cohen called for an equal partnership between the Jews of Israel and the diaspora. "The legitimate place of the Jewish people, of Jewish culture and Jewish religion," he asserted, "is not limited to a single geographic location." Meanwhile, however, so active politically and economically had American Jewry become in its support of Israel that it registered from afar every disturbance and challenge to Israel's situation. Scarcely a day passed but that the *New York Times* and other major American newspapers, by way of articles, news items, editorials or correspondence, did not contain information and discussions concerning Israel. At every level the engagement of the American Jewish community was demonstrated – from meetings of organizational delegations with the president, the secretary of state, senators and members of Congress to contacts with local politicians and news outlets. Financial aid to Israel, the supply of arms, economic aid given to neighboring Arab countries, recognition of the Palestine Liberation Organization, diplomatic support for Israel's position on the occupied territories and Jerusalem, possible overtures to the Arab states, the involvement of American business in the Arab boycott of Israel – all drew vigorous responses from the American Jewish community.

Some viewed the flurry of American Jewish Israel-oriented activity as political maneuvering devoid of substantial impact, others as involving unusual danger and genuine opportunity to advance Israel's interests. The Yom Kippur War of 1973, which demonstrated the singularity of United States as Israel's chief ally, was recognized in the community as belonging to the latter category. Unremitting preoccupation with Israeli concerns brought into prominence the Conference of Presidents of Major American Jewish Organizations. Thus, in 1974 Secretary of State Henry Kissinger met the leaders Conference no less than six times within a period of seven months. Another instance in this regard was the United Nations resolution of 1975, condemning Zionism as a form of racism, which raised the ire of Jewish groups across the country and provoked a storm of organized lobbying activity. The American Jewish community responded similarly a year earlier when PLO chairman Yasser *Arafat was invited to address the United Nations General Assembly.

The general standpoint of the organized American Jewish community in this period was one of unqualified support for Israel's foreign policy. This was exemplified in an emphatic way by Hadassah president Charlotte Jacobson who in 1977 condemned Jewish personalities who criticized Israeli policies publicly because such criticism was used by anti-Israel factions to weaken support for Israel. Indeed, notwithstanding the criticism of groups like the American Council for Judaism on the one side and the Satmar Ḥasidim on the other, which stood far beyond the American Jewish mainstream, unqualified acceptance of the Israeli point of view was difficult to controvert in the atmosphere of deliverance that followed Israel's hard won victories in the Six-Day War of 1967 and Yom Kippur War of 1973. The policy of standing firm, based on the bargaining power of Israel's territorial gains, received general acceptance among American Jews. But even under the shock of the Yom Kippur War, questions began to be raised as to the validity of Israel's policies – particularly with respect to the treatment of the Palestinian Arabs and the continued occupation of the West Bank, Gaza Strip, Golan Heights, and Sinai peninsula – that American Jews were being called upon automatically to support. The procedures of the organized American Jewish scene, which aimed at maximum publicity for lobbying purposes, but provided minimum access for arriving at community decisions – and the absence of an open Jewish press – meant there was no channel for the ventilation of these misgivings.

Against the backdrop of growing leftist Jewish political activity on college campuses across the country, including open questioning by student leaders of the American Jewish establishment and Israeli policy makers, this conflict surfaced in 1977 when the venerable Anti-Defamation League attacked a small organization known as Breira (Alternative). Established in 1973, the left-leaning Breira obtained considerable

press coverage for its views and it was rumored that Nahum *Goldmann was helping to finance it. It advocated the creation of an independent Palestinian State in the West Bank and the Gaza Strip and negotiations with any Palestinian who would renounce terrorism and recognize Israel's right to exist. The attacks on Breira not only criticized this policy, but impugned the motives of its advocates. The Anti-Defamation League sought to prevent B'nai B'rith staff members from associating with Breira, especially rabbis associated with the *Hillel Foundation who were among its supporters on American college campuses. Shortly thereafter, Breira disappeared from the scene almost as quickly as it had attracted attention, due, it was said, to difficulty in raising funds. However, the countercurrent of disquietude it represented did not disappear.

In 1977 the electoral victory in Israel of the *Likud party, led by Menahem Begin, was received by leaders of the American Jewish community with surprise tinged with consternation. The rule of the Labor-led coalition, dominated by the elite founders of the Jewish state, had come to be regarded as one of the fixities of the Israeli scene, and their Likud opponents had been dismissed as extremists in whose hands such possibilities of peace as existed between Israel and her neighbors would be cast away. In short order, most American Jewish organizations publicly adjusted themselves to Israel's new right-wing political order. Begin's personality contributed to the smoothness of the transition. He related well to the rank-and-file members of the American Jewish community; his stubbornness and pertinacity quickly established his image as a fighter for whom no power was too formidable where the curtailment of Jewish rights was involved; and within six months of his accession to power Anwar *Sadat's visit to Jerusalem demonstrated his capacity for political leadership and compromise.

The news of Sadat's intention to visit Jerusalem was received by American Jews with elation, and they watched closely the diplomatic moves which led to the historic signing in 1979 of the Israel-Egypt peace treaty on the White House lawn and the three-way handshake of President Jimmy Carter, Sadat, and Begin. Meanwhile, one policy move foreshadowed by the Begin government created grave discomfort within the American Jewish community. To win the support of Israel's Agudat Israel party for support of the peace treaty, Begin promised an important extension to the privileges enjoyed by Orthodox Jews under Israeli law – namely, that for the purposes of the Law of Return only conversions to Judaism conforming to the requirements of Orthodoxy would be recognized. This proposal aroused concern on the part of the Reform and Conservative organizations in the United States, who promptly met with Begin and dispatched rabbinic delegations to Israel to interview the chief rabbis. No accommodation to the non-Orthodox viewpoint was announced, and more urgent matters supervened to delay the taking of decisive steps.

Many elements within the American Jewish community felt misgivings over the Begin government's announced policy to expand Jewish settlements in the occupied territories. Since 1967 successive Labor-led governments had implemented the unofficial "Allon Plan," which called for limited Jewish settlement in the Jordan Rift Valley, Golan Heights, and along the borders of the Gaza Strip. The settlements – deemed strategic expedients in the absence of a comprehensive peace agreement with Israel's Arab neighbors – were intended to secure Israel's border and ensure its safety. The Begin government's explicit policy of creating a durable Jewish presence throughout "Greater Israel" resulted in the establishment of scores of new Jewish outposts and communities in the West Bank and Gaza Strip. Even as prominent leaders sought privately to persuade Begin to adopt a more moderate policy, others publicly voiced their support of Israel's growing "*Peace Now" movement, which called for an end to Israeli occupation of the territories and recognition of Palestinian Arab rights.

In the interim, a highly publicized struggle occurred in 1979 when the organized American Jewish community vigorously opposed the Carter administration's plan to sell $4.8 billion worth of jet warplanes to Egypt, Saudi Arabia, and Israel. In the event, much to the dismay of American Jewish leaders and the community's pro-Israel lobbyists, the United States Senate approved the sale. The importance attached to the Jewish vote is illustrated by the application of emolients in the aftermath of the struggle. Carter and several members of his administration telephoned and met American Jewish leaders to inform them of Washington's continued support for Israel. At the same time expressions of satisfaction were heard in Washington that the pro-Israel lobby had sustained a defeat.

HOLOCAUST-RELATED MATTERS. As early as 1949, the Jewish community had been aware of the presence of Nazi war criminals in the United States. However, interest in the subject remained generally low until the mid-1970s and the beginning of the 1980s. As a result of document research and field investigations performed by the *Office of Special Investigations, established in 1979 as a special unit within the Criminal Division of the United States Justice Department, it was revealed that in the years following World War II over 1,000 Nazi war criminals or collaborators had found refuge in the United States. Many were actually brought to the United States through the efforts of the State Department, the intelligence branches of the Army, Navy, and Air Force, the FBI, and the CIA, having been recruited to serve as agents and consultants in anti-Communist operations during the late 1940s and the 1950s.

By the beginning of 1980, the Office of Special Investigations had collected documentation on 413 war criminals residing in the United States. Among the high profile cases prosecuted during this period were Valerian Trifa, a Romanian, who was expelled by the United States in 1983 and made his way to Portugal where he died; Feodor Fedorenko, a Pole, who was deported to the Soviet Union in 1984 and executed in 1987; Andrija Artukovic, a Croatian, who was extradited to Yugoslavia in 1986 and sentenced to death; Karl Linnas, an

Estonian, deported to the Soviet Union in April 1987 where he died three months later in a hospital; and Ukrainian-born John *Demjanjuk, alleged to have been "Ivan the Terrible" of Treblinka, who in 1986 was stripped of his naturalized American citizenship and extradited to Israel to stand trial.

A major controversy erupted over President Ronald Reagan's 1985 visit to the military cemetery in *Bitburg, West Germany. The visit was planned to commemorate the 40^{th} anniversary of Nazi Germany's surrender and to symbolize the spirit of reconciliation between the United States and Germany. The controversy, which provoked an international response, lay in the fact that among the 2,000 dead soldiers interred were 47 members of the Nazi Waffen SS. Furthermore, at the time the president's itinerary was first announced, it included no visit to Bergen-Belsen, a nearby concentration camp. In spite of growing criticism and pressure, Reagan proceeded with his planned visit to the cemetery where he laid a wreath. He, however, also visited the site of Bergen-Belsen where in his speech he addressed the feelings of Holocaust survivors.

Holocaust Revisionism succeeded in drawing increased attention during the 1980s. The most active revisionist organization in the United States during this period was the California-based Institute for Historical Review (IHR), founded in 1978 by Willis Carto, a known antisemite. Other known Holocaust revisionists operating in the United States included Arthur Butz of Northwestern University, author of *The Hoax of the Twentieth Century: The Case Against the Presumed Extermination of European Jewry* (1976); David McCalden, a co-founder of the IHR; Bradley Smith, publisher of *Prima Facie*, a racist and antisemitic monthly newsletter; and Charles E. Weber of the University of Tulsa and author of *The Holocaust: 120 Questions and Answers* (1983).

One significant response to the pressing need for Holocaust education in the United States was the creation in 1988 of the bi-annual March of the Living program. The program was organized to bring together thousands of American and Israeli high school students in a week of workshops and lectures about the Holocaust, culminating in a procession beginning at the Auschwitz concentration camp in Poland and ending nearly two miles away at the Birkenau crematoria. From Poland, participants flew to Israel in time to celebrate Israel Independence Day. The march recreated the first steps of the infamous Forced March of January 1945 toward Germany of 60,000 Jews who were still alive near the end of the war, of whom only some 6,000 survived. The results of social scientific surveys of Jewish teenagers who participated in the March of the Living indicated that by the 1990s the program was having a strong positive effect on all markers related to Jewish identity and identification with Judaism and Israel.

SOVIET AND ETHIOPIAN JEWRY. An historic demonstration on behalf of Soviet Jewry was held in Washington, D.C., during the first week of December 1987. This mass rally, co-sponsored by some 50 national Jewish organizations and 300 local Jewish federations from throughout North America, brought over 200,000 demonstrators together on the eve of the Reagan-Gorbachev summit. It also marked a rare display in organizational unity. The Soviet Jewry movement in the United States had been split for years between the more moderate National Conference on Soviet Jewry, on the one hand, and the more confrontational Union of Councils for Soviet Jews and the Student Struggle for Soviet Jewry on the other.

With the advent of *glasnost* in the late 1980s, Soviet Jewish emigration figures soon began to climb. The American Jewish community now found itself confronted by two major issues, one ideological, but with very pragmatic implications, the other material. As the emigration of Soviet Jews continued, the American Jewish community found itself in a confrontation with the State of Israel over the émigrés' destination. The United States was willing to accept a fixed number of Soviet Jewish immigrants as refugees and was by far the émigrés' most popular destination. But Israel argued that its willingness to accept unconditionally all emigrating Soviet Jews belied their refugee status. Israel wanted cooperating authorities to direct virtually all emigrating Soviet Jews to its shores. During the first year of the Soviet Union's more liberal emigration policy, the monthly dropout rate, a figure that referred to those Soviet Jewish emigrants who changed their destination from Israel to another country (usually the United States) while in transit, often reached over 90 percent.

Most American Jews supported the policy of "freedom of choice." The Union of Councils for Soviet Jews and the Student Struggle for Soviet Jewry criticized Israeli pressure on American Jewish organizations and the United States. The National Conference on Soviet Jewry and other major Jewish organizations, while upholding the principle of "freedom of choice," accepted a dual track compromise whereby the large backlog of Jews already holding Israeli visas would emigrate to Israel through Romania, while those as yet without visas and seeking to emigrate to the United States would have to apply for an American visa in Moscow.

The number of Soviet Jews who applied for and received exit visas grew significantly. In September 1988, as a result of the new dimensions of Soviet Jewish emigration, the United States became more selective in awarding refugee status to applicants. This status was now meted out on a more selective basis, so that by August 1989, nearly one quarter of all applicants for U.S. immigrant visas were being refused. In July 1989 the United States announced that its immigration budget for Eastern European refugees was exhausted and temporarily stopped processing visa applications for the thousands of Soviet Jews who were by now languishing in transit centers in Ladispoli, near Rome, and in Vienna.

In the fall, following negotiations with American Jewish groups, the administration of President George H.W. Bush announced that it was fixing a new annual immigration quota for Soviet Jews at 43,000 with priority extended to those with immediate, or first degree, family members already residing in the United States. It was also allocating $75 million to re-

settlement programs. As a result of this new policy, which also involved closing down the transit centers and requiring applicants to apply for immigrant visas in Moscow, the majority of Soviet émigrés gave up trying to seek entry to the United States. Even with the new, more stringent quota on Soviet Jewish immigration, the American Jewish community was faced with the huge task of resettling tens of thousands of new arrivals. In the last quarter of 1989, some 18,000 Soviet Jews arrived in the United States. The funds set aside by the American government for total Soviet resettlement were insufficient. In order to insure that the Soviet Jews coming to the United States were provided with all the means and opportunities for successful resettlement, defined to mean their material resettlement as well as their religious, cultural, and educational integration into the Jewish community, the Council of Jewish Federations (CJF) and the United Jewish Appeal (UJA) launched a $75 million voluntary campaign called "Passage to Freedom," but its national goal was never reached. By the end of the year, only about two-fifths of the money had been collected.

The combination of stricter American immigration laws and the difficulties involved in resettling Soviet Jews locally gradually influenced American Jewish leadership to heed the government of Israel's calls for receiving the bulk of émigrés. In 1990 the UJA and CJF announced "Operation Exodus," a $420 million campaign, whose goal was to bring directly to Israel and resettle the overwhelming majority of Soviet Jews seeking to emigrate. Operation Exodus was a financial success and 95 percent of the goal was reached within ten months, the majority pledged by the biggest givers in the largest Jewish communities. "Exodus II," the worldwide campaign in 1991 to raise an additional $1.3 billion, was launched when the number of Soviet Jews coming to Israel turned out to be more than double the original estimate. From the results of the Exodus II campaign, it became clear that the desire of American Jewry lay in assisting the emigrating Soviet Jews to resettle in Israel.

By the end of 1990 it was reported that over 181,000 Jews had left the Soviet Union. In response to this new situation, President George H.W. Bush, in December 1990, waived key agricultural restrictions of the Jackson-Vanik Amendment, which since 1974 stood as a symbol of American Jewish opposition to the Soviet Union's disregard for human rights.

American Jews played an active role in bringing Ethiopian Jewry to Israel. The major airlifts in 1984–85 and 1991 were largely made possible by behind-the-scenes diplomacy by the United States government and through funds raised by the American Jewish community. The American Association for Ethiopian Jews was established in 1969 and the North American Conference on Ethiopian Jewry in 1982. The objectives of these activist groups included raising the awareness of Jews and the world to the condition of the Jews of Ethiopia and visiting Jewish communities in Ethiopia to demonstrate solidarity and to provide material assistance. The subsequent cost of resettling the Ethiopian Jews in Israel was absorbed into the United Jewish Appeal's Operation Exodus campaign.

These humanitarian activities on behalf of Soviet and Ethiopian Jews were representative of the efforts by American Jews on behalf of distressed Jewish communities worldwide. The International Coalition for the Revival of the Jews of Yemen, based in New York, was established in 1989 to offer assistance to Yemen's remaining Jews. The Syrian Jewish community of Brooklyn continued its own efforts to secure the emigration of kinsmen remaining in the Jewish centers of Damascus, Aleppo, and Qamishli. Other organizations, such as the American Jewish Joint Distribution Committee, continued their contacts with these communities or remained otherwise involved on their behalf throughout the 1990s.

The Contemporary Period, 1980s to 2000s

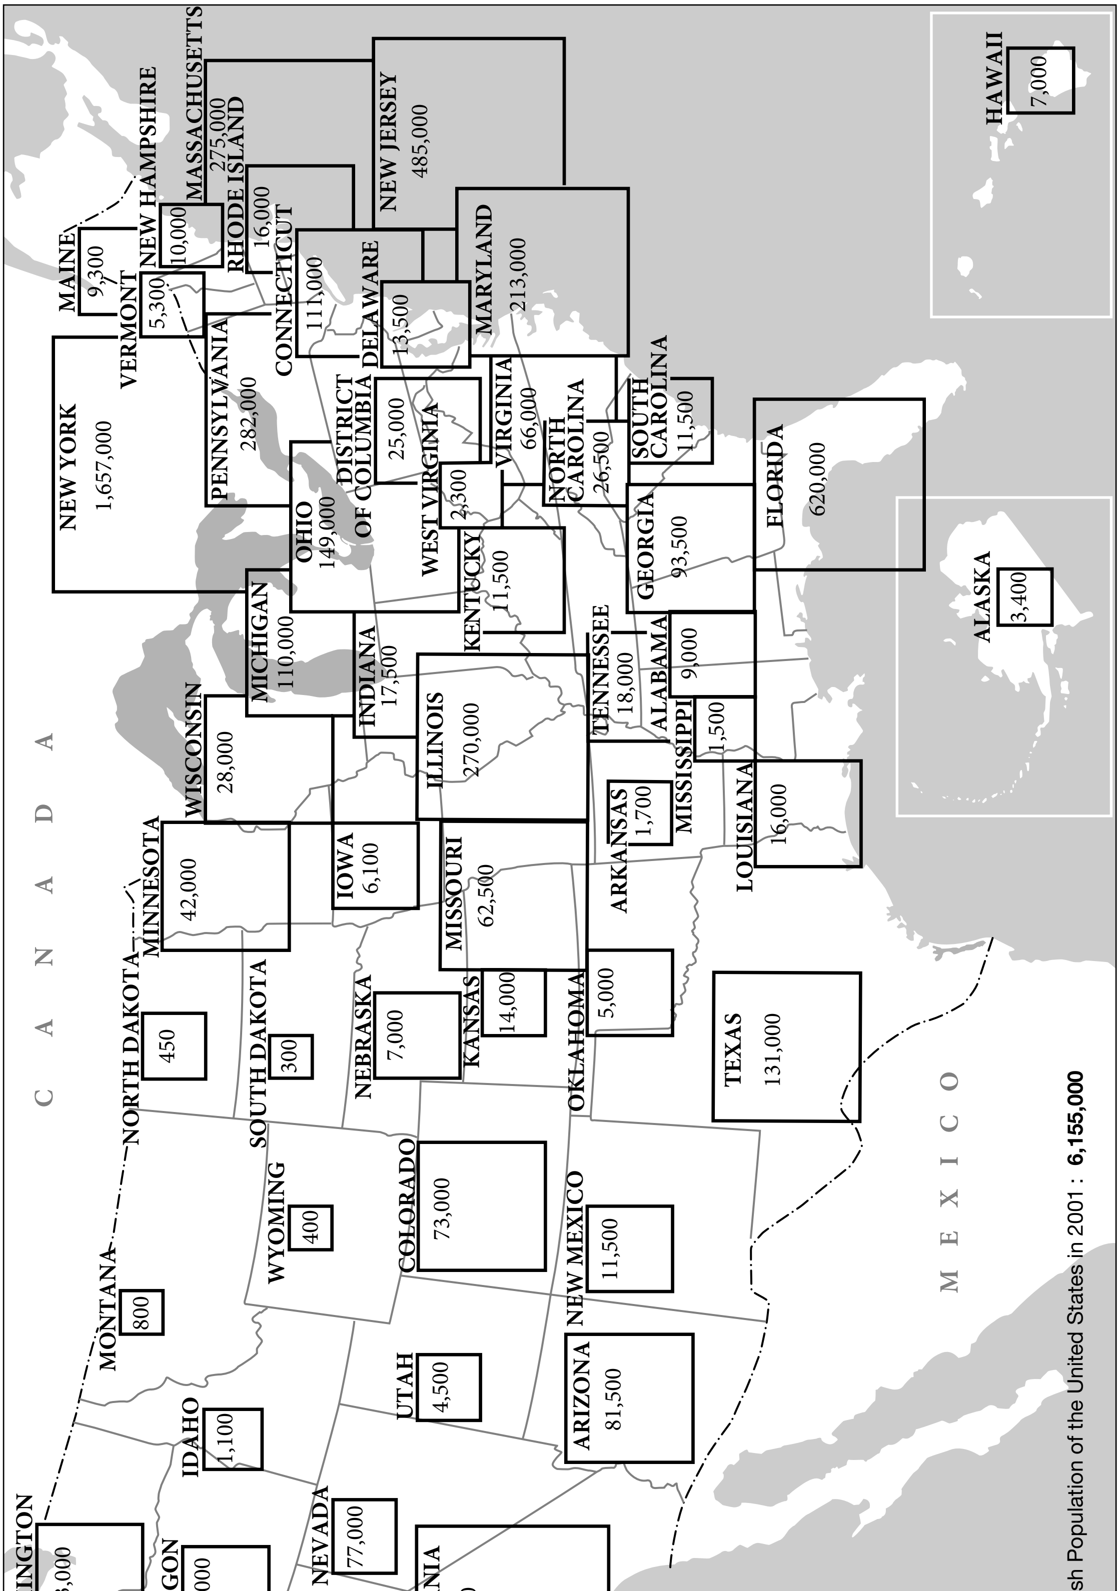
THE FUTURE OF AMERICAN JEWRY. American Jewish life in the decades spanning the 20th and 21st centuries has been marked by a high degree of self-awareness, economic success, political engagement, institutional innovation, and globalization. Responding to a variety of social, cultural, and political changes and challenges, both internally and externally, the organized American Jewish community continues to display a remarkable capacity for adaptability and elasticity within an ever-changing and dynamic American setting. Even so, American Jewry's belief in pluralism and the promise of a free and open Western society has over time become intertwined with deep concern about the community's ultimate survival, its cultural vitality, and its ability to sustain itself into the future. All of the statistical data gathered since the start of the 1980s points to the Jewish community's heightened Americanization *and* a general weakening and diminution of its tribal identity. The astonishing success of Jewish life in the American setting, an experience without precedent in modern history, is in many ways a mixed blessing. Absent the binding forces of history that have sustained Jewish life in a variety of settings – namely, religious faith, antisemitism, ethnic cohesion derived from a shared immigrant past, or the social and political activism characteristic of American Jews in the 20th century – what will be the glue that holds American Jewish life together in the 21st century? Arthur *Hertzberg, a rabbi, scholar, and veteran observer of American Jewish scene, has argued "the essential crisis of the American Jewish community" stems from the fact that "it has essentially defined its Jewish experience without classic texts." Given the community's general affluence, he proposes:

> The American Jewish community is capable of deciding to create a network of elite boarding schools and day schools which would educate many more, perhaps even most, of the American Jewish young. It is at least conceivable that American Jews might decide that activism and togetherness are running down as forces of cohesion and as sources of meaning. It is conceivable that American Jews might decide that they cannot be the only Jewish community in all of history in which Jewish learning is not a prerequisite for Jewish belonging and Jewish leadership.

Many analysts, scholars, and communal leaders share Hertzberg's perspective and concur with his diagnosis of the crisis

facing contemporary American Jewish society. To this end, the organized Jewish community has in recent decades generated billions of dollars to support Jewish community centers, educational and communal training programs, highly subsidized Israel trips for high school and college students, and various academic and experiential models aimed at infusing future generations of American Jews with meaningful and substantive content. A handful of Jewish philanthropists led by Edgar M. *Bronfman, Sr., Charles and Andrea Bronfman, Harold Grinspoon, Ronald *Lauder, Felix Posen, Lynn and Charles *Schusterman, and Michael and Judy *Steinhardt have been especially influential in this dynamic and evolving project.

An alternate assessment, one decidedly more optimistic about the trajectory of the American Jewish experience in toto, has been offered by Jacob Rader *Marcus, the dean of American Jewish historians. "Most frequently the future is but an extension of the past," Marcus wrote in 1996. "Throughout the 19th century amateur prophets suggested that the Jew [in the United States] had no future. They were wrong…" Taking a long view of history, Marcus further argued:



> Jewry in the twenty-first century will not experience substantial growth. Intermarriages eventuate in loss for the Jewish body politic, but then numbers are not really important: in the first quarter of the 20th century German Jewry counted but some 600,000 souls, yet it exercised spiritual hegemony over world Jewry, some 15,000,000 strong. From all indications – statistical surveys made in the 1990s – American Jewry is surviving and prospering in an open society. Jews are Jewish because they prefer to remain Jewish; they are blending Americanism and Jewishness. Because of the fusion of these two cultures they are content, if not happy; they strive to become enlightened human beings. For them, patently, the United States is still "the land of unlimited opportunity."

As the positions staked out by Hertzberg and Marcus illustrate, observers of American Jewish life in the contemporary period have engaged in an escalating debate over whether the proverbial glass is half full or half empty. This highly complex and sensitive issue, which in the 1990s quickly assumed the catchphrase "Jewish continuity," continues to dominate the board rooms, meetings, and conferences of a wide variety of American Jewish organizations, groups, and academics. Critics point to an unprecedented rise in the rate of intermarriage, an ominously low Jewish birth rate, the migration of younger professionals away from Jewish population centers, increasing Jewish cultural illiteracy, and the rise of anti-Zionism and militant Palestinian nationalism. Viewed from this perspective, it indeed appears that American Jewish communal life is fractured and its future is in jeopardy. On the other hand, optimists see a Jewish community that is the most materially secure in history, fully integrated into the surrounding society, and well represented in all branches of American science, art, academia, government, and commerce.

DEMOGRAPHY AND POPULATION. The study of the contemporary American Jewish scene has benefited enormously in the last quarter of the 20th century from a veritable cottage industry of demographic analysis based at leading universities in the United States and Israel. In general, this effort is sponsored by the major Jewish communal agencies and philanthropies. Though not without controversy, the studies have nonetheless become central to the work of a wide variety of professionals, communal leaders, policy analysts, and scholars. Demographic, social, and attitudinal data gathered throughout 1980s and 1990s in several national surveys have had a profound impact on organized American Jewry's countrywide agenda and the implications of such studies for future of the community as a whole are considerable.

The generally accepted figure for the number of Jews in the United States in the present era varies between an estimated 5.5 million "core" Jewish population and approximately 6 million, making it the largest Jewish community in the world. (The global Jewish population is estimated to be approximately 13 million.) A 1993 report issued by Israel's Ministry of Education determined that while the largest concentration of Jews continues to reside in the Northeast (43.5 percent), the trend in population movement during the 1980s and 1990s continued to be away from the Northeast and Midwest (11.3 percent) to the South (21.8 percent) and West (23.4 percent). By comparison, in 1970 the *National Jewish Population Survey* had found 64 percent of the Jewish population living in the Northeast, 17 percent in the Midwest, and only 19 percent, combined, in the South and West. Other demographic studies produced in this period also noted the greater distribution of American Jews among smaller urban areas than in the past. The migration was characterized by Jews who had moved from the largest Northeastern and Midwestern cities, such as New York, Philadelphia and Boston, to smaller urban areas in the South and West such as Atlanta and Phoenix. As a result, the Jewish population in the New York metropolitan area had decreased since mid-century from about 2.6 million to 2.2 million. Likewise, Chicago's Jewish population decreased from 378,000 to about 250,000. By the mid-1980s the Jewish communities of Philadelphia, Pittsburgh, Cleveland, Detroit, and St. Louis had all declined. By the 1980s there were six Jewish communities west of the Rocky Mountains whose populations had grown to over 100,000. Consequently, Los Angeles, with an estimated 604,000 Jews became the second largest Jewish community in the United States, followed by Miami/Ft. Lauderdale metropolitan region, with an estimated 367,000 Jews. The historian Deborah Dash Moore has examined this phenomenon and concludes:

> In many ways, the Jewish worlds of Los Angeles and Miami and other Sunbelt cities can be seen as the offspring of the large urban Jewish settlements of New York, Chicago, Philadelphia, and Boston, and of the more modest communities of such cities as Omaha, Milwaukee, Cleveland, and Detroit. As Jewish New York, Chicago, and Philadelphia represent continuity with a European past because they were created by immigrants from cities and towns of Eastern Europe, so Jewish Miami and Los Angeles are the creations of the Midwestern and northeastern

Map 4. Jewish population of the U.S., 2001. Based on American Jewish Year Book.

> cities, representing continuity with an American past. American Jews produced in the postwar era a second generation of cities, offspring of the first generation.

The findings of the *National Jewish Population Survey* in 1990 bear out Moore's assessment. The survey demonstrates that between 1985 and 1990, some 700,000 respondents, or 23.5 percent of the American Jewish population had migrated to at least one new out of state residence. Many of the migrants sought a residential area that included or was in proximity to a synagogue, Jewish school, or a Jewish community center. However, nothing comparable to the highly concentrated Jewish neighborhoods or post-World War II suburbs were being recreated.

With respect to income, the aforementioned 1993 Israeli Ministry of Education study indicated that some 35 percent of American Jews were reported to have earned more than $40,000 a year, compared to only 17 percent of the general American population. About 40 percent of the United States' 400 richest families were reported to be Jewish. The study also revealed that more than half of the American Jewish population under the age of 65 had graduated college, while some 85 percent of young Jews were active in higher education programs, either as students, teacher or researchers. At the other end of the economic spectrum were American Jews living below the poverty line. In the 1980s it was estimated that approximately 250,000 Jews in New York City were living on annual incomes of less than $3,500. In Chicago, where the estimated number of poor Jews was thought to be around 35,000, the Jewish Federation during the mid-1980s created Project Ezra, an umbrella project that coordinated the skills and resources of its various agencies. The majority of the Jewish poor were elderly.

"The High Cost of Jewish Living," a report commissioned by the American Jewish Committee, examined the costs of an active Jewish lifestyle in the 1990s. It estimated that a family of four would have to spend between $18,000 and $25,000 in order to pay for enrollment in a Jewish day school, retain synagogue and Jewish community center membership, cover the cost of a Jewish summer camp or travel to Israel, and make respectable charitable donations to various Jewish philanthropic causes. Other expenses, such as kosher food, regular Sabbath and holiday observance, dues to one or more additional organizations, the purchase of Jewish books and a subscription to one or more Jewish magazines, necessitate "an annual income of $80,000 to $125,000, depending on the region of the country."

A 2001 *Census of United States Synagogues* sponsored by the United Jewish Communities (the umbrella organization formed in 1999 by the Council of Jewish Federations, the United Jewish Appeal, and the United Israel Appeal) revealed that at the close of the century American Jews remained a primarily urban population. "A remarkably high 50 percent of American Jews live in the top three metropolitan areas," it concluded, "and 94 percent in the top 50. Their synagogues are almost as concentrated, with 43 percent in the top three metro areas and 82 percent in the top 50." The study also suggested "Orthodox synagogues are highly overrepresented relative to the Orthodox population."

The 2001 study pointed to 11 regions which sustained communities with Jewish populations of over a hundred thousand: New York-Northern New Jersey-Long Island (2,051,000); Los Angeles-Riverside-Orange County (668,000); Miami-Ft. Lauderdale (331,00); Philadelphia-Wilmington-Atlantic City (285,000); Chicago-Gary-Kenosha (265,000); Boston-Worcester-Lawrence (254,000); San Francisco-Oakland-San Jose (218,000); West Palm Beach-Boca Raton (167,000); Baltimore (106,000); and Detroit-Ann Arbor (103,000). The study also identified eight regions with Jewish communities of over 50,000 inhabitants: Cleveland-Akron (86,000); Atlanta (86,000); Las Vegas (75,000); San Diego (70,000); Denver-Boulder-Greeley (67,000); Phoenix-Mesa (60,000); St. Louis (54,500); and Dallas-Ft. Worth (50,000). There are currently (2001) five regions with Jewish communities of over 40,000 inhabitants (Houston-Galveston-Brazoria; Tampa-St. Petersburg-Clearwater, Minneapolis-St. Paul, Pittsburgh, and Seattle-Tacoma-Bremerton); nine with Jewish communities of over 20,000 inhabitants (Hartford, Portland-Salem, Cincinnati, Rochester, Columbus, Sacramento-Yolo, Milwaukee-Racine, Orlando, and Tucson); 12 regions with Jewish communities ranging from 10,000 to 19,000 inhabitants; and five regions with greater than 8,000 Jewish inhabitants. In all, some 5,806,500 Jews (82.5 percent of the total American Jewish population) resides in the top 50 metropolitan areas in the country. Meanwhile, approximately 348,500 Jews (or roughly 17.5 percent) reside elsewhere in the United States.

CHANGES IN AMERICAN JEWISH IDENTITY. Notwithstanding the wealth of data collected in the past 30 years, the results of various surveys offered analysts, at best, an imperfect picture of the American Jewish scene. The difficulty associated with measuring ethnic identification reflects, at least in part, the ambiguity of the surveys themselves. For example, synagogue affiliation or membership, a standard survey item, did not necessarily accurately reflect a respondent's attitude toward matters of religious observance. Nor was it at all certain that useful assessments could be made on the basis of tabulating behaviors such as attendance at Sabbath services, participation in a Passover *seder*, or the observance of dietary laws, since such practices meant different things to different respondents. The complexity in this regard is illustrated by the following figures, which compare responses to five religious observance survey items that appeared in national surveys undertaken in 1981 and 1990: (1) attend a Passover *seder* – 1981, 77%; 1990, 86%; (2) light Ḥanukkah candles – 1981, 67%, 1990, 77%; (3) belong to a synagogue – 1981, 51%, 1990, 41%; (4) light Sabbath candles – 1981, 22%, 1990, 44%; (5) maintain dietary laws – 1981, 15%, 1990, 17%. At best, the data show that, in general, infrequently practiced activities were more likely to be adhered to than those involving more regular participation.

Global measures of Jewish identification, a concept even more abstract than religious observance, were also evaluated in such surveys. The following comparison of three standard survey items suggests certain trends, namely: (1) most/all friends are Jewish – 1981, 61%; 1990, 45%; (2) contribute to UJA/Federation – 1981, 49%, 1990, 45%; (3) have visited Israel – 1981, 37%, 1990, 31%. Although these items do not define the parameters of Jewish identity, it is significant that responses to all of these items in the 1990 survey had fallen to below 50 percent. Results such as these, combined with additional information from the *National Jewish Population Survey* of 1990, which indicated that only 28 percent of all intermarried couples were raising their children as Jews and over 70 percent were raising their children with no religion or as Christians, intensified expressions of pessimism. Another important trend that came into view by the beginning of the 1980s was that the postponement of marriage, high geographic mobility, a preference for small families, and a growing divorce rate, traits that typified the American middleclass, were now all becoming characteristic of American Jewish life. Indeed, a major finding of the *National Jewish Population Survey* of 1990 was that only 17 percent of all households containing a "core Jew" (a born Jew or a convert) reflected the stereotyped nuclear family consisting of two Jewish parents and children. Thus, the "alternative household," referring variously to a single parent household, a non-married, including same sex couple raising children, a couple that has chosen to remain childless, or a remarried couple raising the offspring of previous marriages together as siblings, was becoming more normative as American Jews continued marrying later, divorcing more frequently, and having fewer children.

The *National Jewish Population Survey* of 1990, the most comprehensive study of American Jewry undertaken since 1970, revealed not only that one-third of all American Jews were married to non-Jews, but among those who had married since 1985, the intermarriage rate had reached an unprecedented 52 percent. The *National Jewish Population Survey* study also reported that the American Jewish community had lost more members (210,000) through conversion than it had gained (185,000). Additional findings of the study, including an increasing divorce rate, greater geographic dispersion, decreasing ritual observance, minimal Jewish education, infrequent synagogue attendance, decreasing formal affiliation among college students and adults, and a decline in Jewish charitable giving, pointed to the further erosion of Jewish communal life. However, for most people it was the revelation regarding high intermarriage rates and low fertility rates that raised the fear of group extinction.

As speculation abounded about the future size of the Jewish community, "assimilationists" argued that the American Jewish community could soon lose the ability to biologically replace itself. To counter these fears "transformationalists" asserted that American Jewish women were openly following the trend of American women in general, who were registering a sharp increase in marriage and fertility between the ages 30–39. This, they argued, combined with an appreciable number of converts to Judaism, would contribute to the stabilization and subsequent growth of the Jewish population, assuming the American Jewish community maintained the minimum replacement average of 2.1 children per couple.

Such concerns about the future of American Jewish life did not dissipate in any appreciable way in the ensuing decade. Furthermore, studies like Charles E. Silberman's *A Certain People: American Jews and Their Lives Today* (1985), Jack Wertheimer's *A People Divided: Judaism in Contemporary America* (1993) and Samuel G. Freedman's *Jew vs. Jew: The Struggle for the Soul of American Jewry* (2000) garnered considerable public and scholarly attention and helped to define and sharpen the parameters of the discussion about the future of American Jewry. After nearly three decades of systematic study and examination by social scientists, communal leaders, and policy makers, the chances for Jewish survival in the shape of ongoing acculturation resulted in a vigorous debate between two camps. The "transformationalists," as the first group became known, posited that American Jews were not abandoning Judaism, Jewish identity, and Jewish communal life, but were instead transforming the concepts associated with Jewish practice and affiliation. They tended to view American Judaism and the American Jewish community as being inclusive rather than exclusive in responding to the challenges of modernity. By contrast, the "assimilationists" interpreted contemporary trends as signifying an ongoing process of assimilation, i.e., the eventual integration beyond recognition of Jews into the general society, a process which, assuming similar ongoing social and economic conditions, they felt was likely to continue.

Among the most cited indicators of this process by analysts and scholars was the rate of intermarriage. By the start of the 1980s the national rate of intermarriage, estimated at roughly 30 percent, was becoming a serious concern within the organized American Jewish community. Studies showed that intermarriage was more common both among younger Jews marrying for the first time and among divorcees who had married for a second or third time. A Council of Jewish Federations/North American Jewish Data Bank report indicated that for the years 1982–87 the percentage of intermarriage among American Jews was 14 percent for first marriages and 40 percent for second marriages. In all studies on the subject, a significant difference was found between men and women in every age group with Jewish men constantly demonstrating a higher rate of intermarriage.

Concern over the high rate of intermarriage was compounded by evidence of the growing number of Jews who had either never married or had not begun a family by the time they had reached their mid-thirties. A 1983 survey of American Jews by the *American Jewish Year Book* estimated that 38 percent of the adult Jewish population of the United States was single. Twenty-one percent reported never having been married. The growing phenomenon of single Jews served as an impetus for the proliferation of Jewish dating

services throughout the country. The venerable tradition of Jewish matchmaking was transformed during the 1980s and 1990s into a nationwide industry. Some services, established mainly in large urban areas, were operated on a private commercial basis. Others were run under the non-profit auspices of community agencies such as B'nai B'rith, the Jewish Community Centers, or a local synagogue. With the boom in internet usage, several Jewish dating services went on-line, where they became highly popular and accessible to Jewish singles across the country.

Coupled with gender, denomination was also found to play a role among Jews who had intermarried. While studies showed the intermarriage rate among Orthodox Jews to be negligible, the estimated intermarriage rate among Conservative Jews is about 10 percent and among Reform Jews it is roughly 30 percent. As pointed out by the *American Jewish Identity Survey* of 2001, those calling themselves secular Jews, humanist Jews, or "just Jews," had the highest rate of all groups, with an intermarriage rate of over 50 percent. The findings also indicated that the longer a Jewish family had been in America, the greater the chance that the youngest generation of that family would intermarry.

Another manifestation of such trends was the diminution in strength of several venerable American Jewish organizations. With the notable exception of traditionalist Orthodoxy, the synagogue movements and most of the national Jewish organizations suffered a considerable decline in membership. Zionist organizations that 50 years earlier boasted tens of thousands and even hundreds of thousands of members saw their memberships virtually erode and vanish. This did not necessarily mean that American Jews had become less concerned about Zionism and Israel, but rather that fewer American Jews found it necessary to join a Zionist organizations when they could just as easily express their loyalty to the Zionist cause through contributions to their local Jewish Federations, Israel Bonds, voting for political candidates who support Israel, Israeli tourism, alternative charitable groups like the New Israel Fund, and, in some instances, even urging their children and grandchildren to settle in Israel.

Another indication of increasing acculturation was the growth in the number of reported cases of Jews involved in gambling, alcoholism, drug abuse, and domestic violence, such as incest and rape. The rise in public awareness to these problems could be attributed either to a true increase in the number of incidents or more assiduous documentation by professionals and community officials. Estimates were that between five and ten percent of American Jews could be classified as alcoholics. A smaller percent suffered from drug addiction. The origins of these problems appeared to be unrelated to background, profession, or position in the community. As the seriousness of alcohol and drug addiction within the Jewish community became better appreciated, Jewish support groups were established as an alternative to the Christian-oriented Alcoholics Anonymous.

Cases of domestic violence in the Jewish community, although relatively atypical, became reported more frequently. In 1988 B'nai B'rith women began sponsoring events in chapters across the country geared toward heightening awareness of domestic violence within the Jewish community. The chapters also sponsored the establishment of kosher safe-houses for women in different parts of the country. Meanwhile, social workers reported the tendency of some rabbis to dismiss reports of domestic violence in their congregations because of the difficulty they had conceptualizing this phenomenon within a Jewish household. Nationally, the problem was estimated to affect from one-quarter to one-third of the community. Reported incidents involved physical, emotional, and sexual abuse as well as neglect of spouses, children, and older parents. Until the 1980s little was written about the occurrence of incest among Jewish families. As a result of greater openness and support for victims, the reporting of incidents became more frequent. Instances involving Jewish families were found to be without any relationship to socio-economic or denominational background.

A critical point in social and demographic analysis was reached with the publication of the results of the *National Jewish Population Survey* of 2000–01, which emphasized that "a continuing low Jewish fertility rate, the consequent aging in population composition, and continuing erosion in the willingness to identify with Judaism among the younger age groups [was] apparently [leading] to a significantly lower total core population size" of American Jews. Such findings were generally corroborated by the independent *American Jewish Identity Survey*, sponsored by the Posen Foundation and published in 2001 by the Center for Cultural Judaism. But the latter also went further than any previous study in its assessment of non-religious forms of American Jewish life. In fact, it determined that roughly half of the American Jewish population self-identified as "secular" in its orientation. "America's Jews are divided, perhaps as never before," the report explained, "over a question that would surprise most other Americans who are not familiar with the Jewish heritage or the Jewish community in any way. That question is, quite simply: 'Who is Jewish?' At a more subtle level, the questions asked are, 'What does 'Jewish' mean?' and 'Who gets to decide?' or 'How are those who call themselves 'Jewish' or are labeled as such by others signify that identity or social status to themselves and others?'" Deploying the "dispassionate tools of modern social science," the *American Jewish Identity Survey* analyzed these questions on the basis of a data set comprising a broad spectrum of individuals "who describe[d] themselves as Jewish when asked about their religious adherence or who might be reasonably labeled as Jewish by virtue of their family origins." In the final analysis, the survey produced the following profile of American Jewry:

- Nearly 4% of America's 105 million residential households have at least one member who is Jewish by religion or is of Jewish parentage or upbringing or considers himself/herself Jewish.

- The number of such households has increased since 1990 from about 3.2 million to about 3.9 million.
- The number of persons living in a household that has at least one member who is Jewish by religion or parentage or upbringing or considers himself/herself Jewish has increased since 1990 from about 8 million to nearly 10 million.
- About 5.5 million American adults are Jewish by religion or of Jewish parentage or upbringing or consider themselves Jewish.
- About 3.6 million American adults (or just 65% of the 5.5 million total) have a Jewish mother.
- More than 1.5 million American adults have only one Jewish parent.
- The number of persons who regard themselves as Jewish by religion or say they are of Jewish parentage or upbringing but have no religion (the "core Jewish" population) has declined from about 5.5 million in 1990 to about 5.3 million in 2001.
- The number of persons who are either currently Jewish or of Jewish origins has increased from about 6.8 million in 1990 to nearly 7.7 million in 2001.
- The majority (73%) of America's adults who are Jewish by religion or of Jewish parentage or upbringing but say they have no religion believe that God exists. But nearly half of this population regards itself as secular or somewhat secular in outlook.
- About one million American households report affiliation with a Jewish congregation (synagogue, temple, or an independent havurah). That number represents an increase of some 15% over the 880,000 households reporting congregational affiliation in 1990.
- About 44% of America's adults who are Jewish by religion or say they are of Jewish parentage or upbringing report membership in a Jewish congregation (synagogue, temple, or an independent havurah).
- The Reform branch of Judaism is the largest in terms of the number of adult adherents: about 1.1 million or 30% of America's Jewish-by-religion adults or adults of Jewish parentage or upbringing identify with it.
- The other branches of Judaism in size order are Conservative Judaism with about 940,000 adult adherents (24% of the total), Orthodox Judaism with about 300,000 adult adherents (8% of the total), Secular Humanist Judaism with about 40,000 adherents, and Reconstructionist Judaism with about 35,000 adherents (about 1% each).
- Nearly one million American adults who are Jewish by religion or are of Jewish parentage or upbringing but say they have no religion are affiliated with some noncongregational Jewish community organization such as a Jewish community center or a Jewish fraternal organization.
- Nearly a third of America's adults who are Jewish by religion or say they are of Jewish parentage or upbringing but have no religion have visited Israel. That figure represents a modest increase from the roughly 28% reporting visiting Israel in 1990.
- Nearly 60% of adults who are Jewish by religion are married; of those who report being of Jewish parentage or upbringing but of no religion, just 45% are married. More of the latter group is likely to be separated or divorced or living in a non-marital couple relationship (cohabiting).
- Of all adults married since 1990, who say they are Jewish by religion or of Jewish parentage or upbringing, just 40% are married to a spouse who is also of Jewish origins; 51% are married to a spouse who is not of Jewish origins and an additional 9% are married to a spouse who is a convert to Judaism.
- Of all cohabiting adults who say they are Jewish by religion or of Jewish parentage or upbringing, 81% are living with a partner who is not of Jewish origins.

While observers and scholars of American Jewish society widely agree on the veracity of the *American Jewish Identity Survey*, there is considerable debate about the implications of its findings. It remains for different quarters of the organized American Jewish scene to come to terms with the trends underscored by the survey and develop policies that address the American Jewish community's short- and long-range needs. In the final analysis, although it is impossible to predict the future, a general observation drawn from an overview of American Jewry's past makes clear at least the general contours of future American Jewish policy: Rooted in a historical context shaped by a unique and open liberal environment, the American Jewish community's future very much depends upon its ongoing capacity for innovation, inclusion, and pluralism even as it faces new challenges and seeks new ways for strengthening the bonds of Jewish communal life.

RELIGION. The polarization of American Judaism's denominational groups became a major communal issue at the turn of the 20th and 21st centuries. A chief reason was that by the 1980s Orthodoxy in America had undergone a process of completely unanticipated revitalization. Its growth resulted in greater resources, new and bigger institutions, and subsequently more influence and greater assertiveness within the wider Jewish community. American Orthodoxy's new confidence was bolstered by its ties to the Orthodox establishment in the State of Israel. Traditional American Orthodoxy, in contrast to the modern, or moderate, Orthodoxy associated with New York's *Yeshiva University, was openly committed to reinstituting the type of religious Jewish community life that had flourished in Europe until the eve of World War II. Its leaders reviled American society's emphasis on individualism and pluralism. They recognized as legitimate only their own interpretation of Judaism, which was based on the strict rigid interpretation of *halakhah*.

The historic 1983 decision by the Reform movement's Central Conference of American Rabbis to accept the child of a Jewish father and non-Jewish mother as Jewish without need of conversion; its religious outreach program to families of mixed religions or the unchurched; the decision by the Jewish Theological Seminary in 1983 to ordain Conservative

women rabbis; and the announcement in 1987 to graduate women as Conservative cantors all served to exacerbate existing tensions within American Judaism. Although united with Reform Judaism over the legitimacy of religious pluralism, the Conservative movement's understanding of *halakhah* forced it to reject the Reform position on patrilineal descent. The decision by the Reform movement to recognize patrilineal descent was so controversial as to prompt the appearance in 1985 of Alexander Shapiro, president of the Conservative Rabbinical Assembly, before the Central Conference of American Rabbis. Addressing his Reform colleagues, Shapiro cautioned that "if patrilinealism remains in place, then Conservative rabbis might have to question the Jewish status of someone from a sister movement," resulting in "a cleavage in Jewish life which would threaten the survival of the Jewish people."

Orthodox leaders were also outspoken on this issue. Haskel *Lookstein, a moderate Orthodox spokesman and president of the New York Board of Rabbis, characterized Reform's adoption of patrilineal descent as "a wedge… that fosters polarization, anger, resentment, bitterness, and divisiveness." Traditional Orthodox leaders went further and denounced what they viewed as the continuing erosion of Jewish life in America. In 1986 America's Agudat Israel and its Council of Torah Sages attacked Reform and Conservative Judaism, refusing to sanction any form of dialogue with any of its representatives.

The ongoing ferment within Conservative Judaism over the flexibility of Jewish law, especially controversy over the status of women, led to a major ideological fracture. In 1984 a breakaway organization calling itself the Union for Traditional Judaism (UTJ) succeeded in drawing rabbis and lay people who were disgruntled over the Rabbinical Assembly's 1983 decision to ordain women rabbis. In 1992 the UTJ incorporated the approximately 100 rabbis belonging to the Fellowship of Traditional Orthodox Rabbis. The latter group constituted the more liberal wing of the Orthodox rabbinate concerned about the growing strength and influence of its more right-wing elements. By the mid-1990s the UTJ had grown to include some 8,000 families and approximately 350 rabbis.

The increasing polarization between Orthodoxy's modern and sectarian streams beset communities throughout the United States and was both ideological and pragmatic. Modern Orthodoxy defended the legitimacy of combining the ethos of contemporary society and traditional Judaism. The more conservative, sectarian Orthodox, generally referred to as the "ultra-Orthodox," rejected this approach, preferring to minimize communication and social interaction with those outside their own groups. By the early 1990s, traditional Orthodox circles came to dominate Orthodox community life. Among younger Jews in particular, the religious stringencies associated with traditional Orthodoxy became more normative.

In the early 1990s the Chabad-Lubavitch Ḥasidim, based in the Crown Heights neighborhood of Brooklyn, received considerable media attention following the physical incapacitation of their leader Menachem Mendel Schneersohn. Lubavitch openly split between those who believed Schneersohn had the potential to be the messiah and those who were certain he had already been anointed. As Schneersohn's physical condition continued to deteriorate, a power struggle ensued over the control of the worldwide Lubavitch empire. Schneersohn's death in 1994 left Chabad-Lubavitch Ḥasidim all over the world stunned and uncertain. His New York funeral was attended by tens of thousands of Ḥasidim and other admirers, including dignitaries from the United States and abroad.

Although the majority of American Jews shunned formal synagogue affiliation in the 1980s and 1990s, some sought religious expression in alternative settings. In 1992 the Reconstructionist movement, a branch of Conservative Judaism established in 1934 by Mordecai M. *Kaplan, claimed about 2 percent of American Jews and some 70 congregations. In 1994 the *American Jewish Year Book* called *Seek My Face, Speak My Name* by Arthur *Green, president of the Reconstructionist Rabbinical College, "the first serious attempt to arrive at a contemporary understanding of Judaism based not on rationalism, ethics, or *halakhah*, but on the Jewish mystical tradition." Green's personal interest in mysticism permeated the Reconstructionist movement. This paralleled the interest in mysticism and New Age philosophies expressed by many young Jewish adults. Though inconsistent with Kaplan's rational philosophical approach, Green's orientation reflected the movement's incorporation of current social and cultural trends.

While many "New Age" Jews turned to Reconstructionism for spiritual fulfillment, others opted for community-based havurot (Jewish fellowships). These groups, which spread throughout the country in the 1980s and 1990s, functioned either independently of or in association with a synagogue. Though not always spiritual or even prayer-focused (some centered on text study, politics, culture, or Jewish cuisine), havurot represented the informal and intimate Jewish community experience thought to be lacking in most established synagogues. Still other Jewish seekers after spirituality cultivated an interest in Jewish meditation. In 1993 the Jewish Telegraphic Agency reported that "for many meditators who were estranged from the Jewish community and traditional practices, and who have little Jewish education, contemplation has provided a port of re-entry." Among centers of practice were the Jewish Meditation Circle of Manhattan, the School of Traditional Jewish Meditation in Los Angeles, and a mountaintop retreat center located some 40 miles northwest of Boulder, Colorado.

In some cases, Jewish meditation served as a bridge back to Jewish practice for many Jews who had been involved with cults. Although the actual number of Jews in cults was not known, it was estimated that as many as 70 percent of participants in Buddhist and Hindu groups in North America were Jews. Among the cults in which Jews were believed to be disproportionately represented were Sun Myung Moon's Unification Church (Moonies), Hare Krishna, the Oregon-based fol-

lowers of Bhagwan Shree Rajneesh, Synanon, and Scientology. Contemporary observers attributed the latter phenomenon to (1) the openness of liberal minded Jews to alternative political and theological ideas; (2) the strong presence of Jews on college and university campuses where cults invested heavily in recruitment; and (3) the difficulty many young Jews had in forming independent adult identities as a result of coming from nurturing and secure families.

WOMEN. Surveying the dynamic role of women in American Jewish life and the impact of Jewish feminism on the American scene, the scholar Sylvia Barack Fishman offered the following perspective on the period under investigation:

> Remembering that women comprise, after all, at least one-half of the Jewish people, it seems appropriate for Jewish survivalists of all denominations to reconsider the validity of feminist goals case by case and to search for constructive ways in which to reconcile Jewish feminism with the goals of Jewish survival. It is hard to imagine what communal good could be served by adhering to an automatic anti-feminist stance. On the other hand, it seems appropriate for Jewish feminists, to the extent that they are serious about Jewish survival, to weigh carefully the repercussions of proposed changes and to consider their responsibility to the community as a whole. Indeed, it is one of the achievements of American Jewish feminism that women are now in a position to examine these issues – and to make choices.

Of particular note in this period was the greater role of women in almost every area of communal leadership. In 1986 Peggy *Tishman became head of New York City's United Jewish Appeal-Federation, the largest in the country, while Shoshana *Cardin became chair of the Council of Jewish Federations and Welfare Funds. In general, however, Jewish women professionals working for the Jewish community found themselves victims of the "glass ceiling" phenomenon. At a Women's Economic Summit convened in 1993 by the National Jewish Community Relations Advisory Council and the American Jewish Congress, a number of speakers suggested that Jewish communal agencies should begin addressing women's economic inequity by evaluating their own hiring, promotion, pay and benefits patterns and policies.

In a survey of 42 national Jewish agencies, including the American Jewish Congress, the Council of Jewish Federations, the Hebrew Immigrant Aid Society, and the Jewish Telegraphic Agency, it was discovered that 37 were run by men. Similarly, out of the 157 Jewish federations with paid professional leadership, the 30 run by women executive directors were almost all small or mid-size. Only the Jewish Federation of Hartford, Connecticut, one of 23 federations categorized as larger intermediate-size, was directed by a woman. In spite of the fact the 60 percent of employees at federations were female, none of the 18 largest federations employed a woman as executive director. A separate Council of Jewish Federations survey revealed that about one-third of the campaign directors in large and intermediate-size federations were women. While entry-level positions in Jewish federations offered equal remuneration to men and women, senior-level female staff earned between 67 and 92 percent of what men in comparable positions were earning; 80 percent of the respondents to an internal survey of senior professional women at federations cited the "old boys" network as the primary factor behind hiring and advancement discrimination.

In a parallel vein, although the Reconstructionist, Reform, and Conservative synagogue movements opened the doors of their respective seminaries to growing numbers of women, this did not mean that women in these streams of Judaism were free of harassment and sexism. The results of a survey conducted in 1992 by the American Jewish Congress revealed that 73 percent of the 142 women rabbis who responded claimed to have been sexually harassed by congregants and other rabbis; 54 percent claimed to have experienced sexual discrimination consisting of denial of equal pay, benefits, or differential treatment in hiring, firing or job responsibilities. The women reported that only one in five of the synagogues, organizations or institutions at which they worked maintained a sexual discrimination policy.

Even as traditional and mainstream Orthodoxy remained firmly opposed to the notion of women rabbis, a few voices from within the movement called for dialogue on the issue. The most vociferous advocate in this regard was author and community leader Blu Greenberg, who pointed out the extensive learning and erudition among American Jewish women, which, if they were men, would qualify them for Orthodox rabbinical ordination. "I believe the ordination of Orthodox women is close at hand," she wrote in 1993. "The cumulative impact – of a critical mass of students of Talmud and *halakhah*, a plethora of rising-star teachers, the support of educational institutions and the presence of respected women rabbis in the liberal denominations – will be to transform the expectations of Orthodox women. This will be a powerful agent for change." To this end, womens' *tefillah* (prayer) groups were organized in a number of Jewish communities in the United States. The groups followed an Orthodox prayer service, without men, that included a full Torah reading. In 1993 over a hundred women from around the country met in New York for the third Women's Tefillah Conference.

Additionally, Jewish women continued to play significant and visible roles in wider American society. A striking example in this regard is the case of the scientist Gertrude B. *Elion, who in 1988 won the Nobel Prize in medicine. The daughter of Polish and Lithuanian immigrants and descended from a line of distinguished rabbis, Elion's family immigrated to the United States before World War I. She graduated in 1937 from Hunter College in New York City, but was rejected by fifteen graduate school programs and research institutes owing to discrimination against women in the sciences in the 1940s and 1950s. After working as an unpaid lab assistant in order to acquire further research experience, she was hired by a pharmaceuticals company to work with nucleic acids. Her pathbreaking medical research led to the discovery of the drug, azathioprine, used to facilitate kidney transplants and treat rheumatoid arthritis, and the development of thiogua-

nine and mercaptopurine, which is used in chemotherapy to treat children with leukemia. Her name is attached to some 23 honorary degrees and 45 patents, including a drug that can be used to treat chicken pox, genital herpes, encephalitis, and shingles. By the time of her death in 1999, she was regarded as one of America's most eminent scientist.

HOMOSEXUALITY. Homosexuality drew increased communal attention during this period as the different denominations either proclaimed or debated their official position on the subject. The position of Orthodoxy remained that such activity under any circumstances constituted, as stated in the Torah, a moral abomination. Abstinence in combination with therapy or medication was the only prescribed treatment. Nonetheless, by the end of the 1980s approximately 20 gay and lesbian congregations existed around the country.

In 1990 the Reform movement's Central Conference of American Rabbis endorsed a resolution accepting the view that "all rabbis, regardless of sexual orientation, be accorded the opportunity to fulfill the sacred vocation which they have chosen…" and that "all Jews are religiously equal regardless of their sexual orientation." Although the Reform rabbinate officially accepted homosexuality, including homosexual rabbis, it continued to affirm heterosexual relations as the ideal. This sent something of a mixed message, not only to Reform congregants, but also to the movement's clergy. As a consequence, some gay rabbinical students chose not to reveal their sexual orientation. Likewise, homosexual pulpit rabbis were confronted with the dilemma of "coming out" with the support of their colleagues while possibly offending their congregations.

It was the Reconstructionist movement that went the farthest in embracing homosexuality. In 1992 the Federation of Reconstructionist Congregations and Havurot issued a formal statement calling for an end to all distinctions between heterosexuals and homosexuals in Jewish life. Homosexual Jews, of both genders, were welcomed into the Reconstructionist rabbinate. The Reconstructionist position was that since homosexuality is a fundamental component of an individual's psychological makeup and not subject to change, it was natural and acceptable in the eyes of God. Same-sex relationships were considered as holy as those between a man and a woman and could, in the same manner, comprise a legitimate and stable Jewish family. To solemnize these relationships, Reconstructionist clergy performed "commitment" ceremonies. The Reconstructionists encouraged gay and lesbian Jews to develop their own rituals, to celebrate their own special lifecycle events, and to introduce the stories of gay and lesbian Jews into Jewish history.

Participants at the 1992 annual meeting of the Conservative movement's Rabbinical Assembly voted to allow their colleagues to be employed by gay and lesbian congregations. In addition, a commission was created to study human sexuality and to develop a Conservative perspective on the issue. That same year, the Jewish National Fund (JNF) and the World Congress of Gay and Lesbian Jewish Organizations resolved a dispute that had been ongoing for 13 years. The JNF agreed to affixing a plaque bearing the words "Fourth International Congress of Gay and Lesbian Jews" at Lahav in southern Israel. Members of this organization had planted a 3,000 tree forest at the site in 1979.

The May 1993 New York City Israel Day Parade was clouded by the controversy over the request for formal participation by Manhattan's Beth Simchat Torah, the nation's largest gay and lesbian synagogue. The main opponents were the heads of Orthodox primary and high school yeshivot whose pupils traditionally comprised at least half of the parade's marchers. The schools' principals would not allow their students to participate if the gay synagogue marched as an identifiable unit, reasoning this would sanction its legitimacy. In spite of protracted negotiations over a compromise formula, none was found and the parade's sponsor, the American Zionist Youth Foundation, excluded the gay synagogue from the event.

PHILANTHROPY AND COMMUNAL ORGANIZATION. During the 1980s and 1990s, there developed a complex web of regional agencies and institutions. The swift expansion of local bureaus of Jewish education, Jewish day schools and yeshivot, and the growing number of departments and programs of Jewish studies in colleges and universities across the country underscored a deepening commitment to matters of Jewish education and scholarship. In addition, the Jewish Welfare Board became the national umbrella group for the Jewish community center movement, providing guidance, personnel and other resources to the growing number of community centers, many of which expanded to include adult education programs, summer camps, Israel trips, and elaborate health clubs as well as other services of a recreational nature. In short, regional Jewish communities became, in many respects, autonomous. They no longer necessarily looked to New York or Chicago for leadership, but now set their own agendas and turned to local Jewish agencies, philanthropists, and scholars for support and guidance. A parallel phenomenon was the diminished role of volunteers and increased importance of permanent professionals in most organizations and philanthropic agencies.

The remarkable successes of American Jewish philanthropy in this period underscore the extent to which community affairs revolved around campaigns for charitable funds. By far, the Council of Jewish Federations, the United Jewish Appeal, and the United Israel Appeal – brought together in 1999 under the banner of the "United Jewish Communities" – was the single most effective vehicle for collecting funds for a variety of institutions, local, national, and overseas. In 1980 the United Jewish Appeal reported pledges amounting to $528 million; cash collected amounted to $301 million. Of this sum $245 million went to the United Israel Appeal. The United Jewish Appeal's Israel Emergency Fund, originally launched in 1967 in response to the Six-Day War, in 1970 re-

ceived pledges amounting to $124 million, in addition to cash receipts of $180 million for its regular campaign. Again a crisis in the Middle East had its effect on the level of American Jewish giving. Following the outbreak in 1973 of the Yom Kippur War, the United Jewish Appeal results for 1974 (including the Israel Emergency Fund) rose to $481 million. In the 1980s and 1990s, the national trend was toward a decrease in the proportion sent to Israel. Thus, in 1983 national United Jewish Appeal received approximately 48 percent of the combined federation campaign, domestic needs received 29 percent, and the remaining 23 percent went to other overseas causes. By comparison, in 1991 the national United Jewish Appeal received 40 percent, 36 percent was retained for local agencies, and 24 percent was allocated overseas.

The Chronicle of Philanthropy ranked the United Jewish Appeal first in fundraising contributions in 1992, "more than any other non-profit organization." The $668.1 million reported was not based on total income because government grants and other earning (such as income from endowments and investments) were not included. The death of billionaire Baltimorian Harry *Weinberg in 1991 resulted in the largest Jewish-oriented foundation in the world. With assets of $762.8 million, it ranked as the 22nd largest foundation in the United States. A quarter of its annual grants were reserved for Jewish groups, another 25 percent for non-Jewish causes, and the remaining 50 percent was not earmarked for any particular group.

Fund raising efforts for Israel outside the United Jewish Appeal or the Federation structure are also noteworthy. Sales of State of Israel Bonds in the United States which, when inaugurated in 1951 amounted to $52 million, reached $175 million in 1970, $295 million in 1978, and in excess of $350 million in 1981. By 2000 the leadership of Israel Bonds reported that over $20 billion in investment capital for the development of every aspect of Israel's economic infrastructure had been raised in the previous 50 years.

Further solidifying its role as the "central address of the Jewish community" during these years, the United Jewish Communities proved its ability to respond to various emergencies and natural disasters. At the turn of the 20th century, the organization developed a close working relationship with the Federal Emergency Management Agency (FEMA), the American Red Cross, the Salvation Army, and other aid groups. Together with these agencies, it provided hundreds of millions of dollars in emergency relief to communities in the Miami area devastated by Hurricane Andrew in 1992, to the victims of the earthquake that shook Los Angeles in 1994, to the families of victims killed in the Al Qaeda terrorist attack of September 11, 2001, and to the communities of Louisiana, Mississippi, Texas, Alabama, and Florida devastated in 2005 by Hurricanes Katrina, Rita, and Wilma. While a sizable quotient of these monies specifically targeted Jewish communal needs, substantial sums were also raised for general rescue and relief purposes. Nonetheless, critics charged the United Jewish Communities – which by this period had a combined income of $2.2 billion – with exploiting crises affecting American society and the Jewish people in order to meet the organization's predetermined fundraising goals and solidify its centralized control of community resources. Allegations of impropriety were also raised concerning the United Jewish Communities' dependency upon political consensus as well as the generous salaries and benefits enjoyed by high-ranking Jewish Federation executives, especially some who earned six-figure salaries akin to America's leading corporate executives.

Parallel to the framework of the organized Jewish community, American Jews generally continued to be active on behalf of a wide variety of social, political, and philanthropic causes that exceeded the orbit of the community's specifically Jewish interests, including considerable grassroots support for the civil rights of homosexuals, assistance for the victims of the AIDS virus and support for medical research to find a cure for the disease, abortion rights, the struggle against apartheid in South Africa and militant regimes around the globe, the nuclear freeze movement, protecting the environment, the feminist movement, support for the homeless, and putting an end to worldwide poverty and hunger. While many Jews comfortably opted for membership in social and humanitarian organizations at large, others felt the need to establish alternative organizations comprised solely of Jewish membership since they viewed their commitment to these causes as an expression of their Jewish identity. Specific examples of the latter included the Jewish Fund for Justice, which provided grants to fight poverty in America; the American Jewish World Service, which funded environmental development programs in the Third World; Mazon: A Jewish Response to Hunger, which supported anti-hunger programs among Jews and non-Jews in the United States and abroad; the National Jewish AIDS Project, an educational body created to raise the consciousness of Jewish communal leaders and organizations about the AIDS virus; the Jewish Fund for Justice, which disbursed money to both Jewish and non-Jewish housing and community revitalization projects; the Shefa Fund, which supported projects related to social and economic justice, the impact of gender and the arts; and the New Israel Fund, which disbursed money to a wide range of programs in Israel dedicated to social change, including civil rights, women's rights, and Israeli-Palestinian coexistence. Together these groups raised hundreds of millions of dollars.

American Jewish commitment to the commonweal was also exemplified by the Jewish Volunteer Corps (JVC), which sent Jewish professionals to assist in developing countries. The JVC, established in 1993, grew out of the American Jewish World Service, another worldwide relief organization operating under private Jewish auspices. Like the more established American Jewish World Service, the JVC dedicated itself exclusively to providing grass-roots level assistance to non-Jews in Third World countries. Participants were trained and dispatched for up to six months to remote areas of Nepal, Mexico, Zimbabwe, Tanzania, Senegal, Bangladesh and Honduras, as well as other countries. Modeled on the American Peace

Corps, JVC volunteers were assigned to agricultural projects, rural medical clinics, nutritional programs, small business development schemes, environmental preservation and soil conservation efforts, and basic literacy programs.

By contrast, mainstream Jewish organizations suffered a serious decline in membership during this period. B'nai B'rith, the oldest national Jewish membership organization in the United States, saw its membership drop from a post-World War II era high of some 200,000 in the 1960s to about 136,000 in the 1980s and then to under 100,000 in the 1990s. With an accumulated deficit of over $4 million, a largely middle-class and working-class membership whose average age was in the mid-60s, and a membership shrinking at an average rate of 9 percent a year, B'nai B'rith president Kent E. Schiner acknowledged in 1995 that the fraternal order had become "irrelevant to a new generation of successful, more assimilated Jews with no need or desire for their own private club." Likewise, the growing involvement of professional Jewish women in the workplace during this period made it more difficult for organizations like Amit, Hadassah, the National Council for Jewish Women, ORT, and Naamat USA (formerly Pioneer Women), to recruit new members. As noted previously, the synagogue movements were also threatened by steadily declining membership and all studies pointed to the inescapable conclusion that in this period the majority of third- and fourth-generation American Jews were even less likely to join a congregation than their parents or grandparents.

A handful of national Jewish organizations experienced significant growth and development in the 1990s. The most successful was the Los Angeles-based *Simon Wiesenthal Center. By the end of 1992, it reported approximately 385,000 contributors, an annual budget of about $12 million, and a professional staff of 100. Another organization which grew in popularity toward the end of this era was American Friends of Peace Now (renamed Americans for Peace Now in 1989). Throughout most of the 1980s, American Friends of Peace Now was on the margins of American Jewish life, but its credibility was firmly established with the ascendancy of the Labor-led coalition government in Israel after the 1992 election. It reported 10,000 members divided among 21 chapters throughout the United States, and was accepted for membership in the Conference of Presidents of Major American Jewish Organizations.

Both as individuals and through the auspices of various organizations, American Jews continued to play a role in causes beyond the borders of the Jewish community. Some national Jewish organizations increased their Middle East activities. In 1992, for example, American Jewish Congress leaders made an unprecedented trip to Saudi Arabia for talks with King Fahd and senior Saudi officials. That same year, the American Jewish Joint Distribution Committee (JDC) was asked by the United States government to assist in the distribution of aid in the new republics of the Commonwealth of Independent States. This included an agreement that the JDC signed with the U.S. Department of Agriculture to distribute $7 million worth of food. The escalating inter-communal turmoil in Bosnia-Herzegovina took on special significance for many American Jews who reacted with alarm to reports of "ethnic cleansing" by Serbian troops. Television news coverage of skeletal figures languishing in Serbian prisoner-of-war and concentration camps evoked painful memories of the Holocaust. Against this backdrop, all the major American Jewish organizations adopted the cause of the former Yugoslavia. The JDC organized the rescue in 1993 of some 350 Jewish, Muslim, Serbian, and Croatian refugees under siege in Sarajevo. Such philanthropic and humanitarian activity continued unabated over the course of the decade. In 1999–2000 the JDC spearheaded a concerted effort by several leading American Jewish groups, including the American Jewish Committee, the American Jewish World Service, the Hebrew Immigrant Aid Society, ORT, and the Simon Wiesenthal Center in Los Angeles, to provide assistance to hundreds of thousands of Kosovar refugees who fled to Albania and Macedonia following the NATO air strikes. In this period, the JDC also raised over $500,000 for the victims of the calamitous earthquake that struck Turkey.

EDUCATION AND CULTURE. At the midpoint of the period under review, the 1990 *National Jewish Population Survey* reported that 3,350,000 of those surveyed were estimated to have received some form of Jewish education at some point in their lives. Even so, fewer women than men were the recipients of formal Jewish education. The survey also reported the median years of Jewish education for this age group to have been 6.2 for males and 4.6 for females.

Jewish education was not restricted to formal classroom education. Particular effort was devoted to developing and marketing "the Israel experience." Research confirmed that "the short-term summer-time Israel experience very often profoundly influences how youngsters relate to Israel and to their Jewishness." At the General Assembly in 1993, the CRB (Charles R. Bronfman) Foundation of Montreal announced an "Israel experience" incentive program. The foundation would commit one dollar towards sponsoring the participation of a Jewish youth in one of many Israel experience programs for every three dollars contributed by a local Jewish federation and other community resources. Its objective was to make a trip to Israel affordable to every Jewish North American high school student so that by the turn of the century 50,000 Jewish teenagers would visit Israel each year. (In fact, in 2006 the program reported a total of over 100,000 participants.) As conceived, the Israel Experience was intended to complement, if not replace, the more conventional American Jewish summer camp experience. Over the years the latter had a demonstrable positive effect on the Jewish identity of youth.

In spite of the availability of adult or continuing Jewish education classes in synagogues, community centers, and Jewish community colleges around the country, outside of the Orthodox community Jewish education remained primarily a part-time activity associated with Jewish childhood.

The quality of American Jewish education varied greatly from one communal context to the next. An attempt to improve the quality of Jewish education nationally came in 1981 when the Federation movement established the Jewish Education Service of North America (JESNA). JESNA was founded "to improve the quality and strengthen the impact of Jewish education by providing leadership and a broad range of services and informational resources locally, throughout North America, and in relationships with Israeli and world educational institutions." Despite such efforts, there was a clear impression by the end of the decade that Jewish education as a nationwide communal enterprise was not succeeding.

In an attempt to remedy this situation, a private, interdenominational and non-partisan body consisting of noted Jewish educators and top philanthropists calling itself the Commission of Jewish Education in North America was created in 1988. Unofficially it was known as the Mandel Commission, having been spearheaded by Jewish community leader and philanthropist Morton L. Mandel of Cleveland. In 1990 the commission produced a major report, "A Time to Act," which analyzed the condition of Jewish education in North America and offered a concrete plan of action whose goal was to "significantly improve the effectiveness of Jewish education (within) a coalition of community institutions, supplemented with continental institutions and resources."

The question of state aid to parochial schools continued to divide the American Jewish community. It was long axiomatic for the major Jewish organizations to uphold the strict separation of church and state, thus precluding anything in the nature of state support, but in the 1976 American presidential election the Orthodox community made it clear that it would welcome government subsidies to its Jewish day schools. As the debate intensified in the 1990s over the place of Jewish day schools in the American setting, an increasing number of organizations, agencies, and communal leaders acceded to the agenda set out by the Mandel commission. In 1999, the Jewish Educational Service of North America (JESNA), a branch of the United Jewish Communities whose stated goal is "to make engaging, inspiring, high quality Jewish education available to every Jew in North America," announced that "No Jewish family that desires to send its children to a Jewish day school should be prevented from doing so due to financial reasons." As part of this ideological trend and in response to growth of the Jewish day school movement countrywide, many major metropolitan Jewish Federations increased the size of their allocations to local Jewish day schools. Notwithstanding mixed assessments over the effectiveness of many of these schools, the day school movement continued to spread while supplementary afternoon and Sunday schools declined in importance everywhere. In 2000, a study released by the Avi Chai Foundation revealed that the number of students enrolled in Jewish day schools had in fact risen by 25,000 since 1990, reaching a nationwide total of approximately 185,000. This figure cut across all denominational categories and included student enrollments in hundreds of Orthodox schools, more than 70 Conservative movement-sponsored schools (e.g., Solomon Schechter schools), 22 Reform movement-sponsored schools, and a growing number of pluralistic nondenominational community day schools. The success of the Jewish day school movement alarmed some critics, who worried openly that it might result in a weakening of Jewish support for the American public education system. In the context of this debate, it was observed that the proportion of Jewish children in public schools had declined from roughly 90 percent in 1962 to 65 percent in 2000. Some voiced concern about non-Jewish perceptions of the Jewish day school movement and the continued integration of Jews in American life. Others called for a reassessment of American Jewry's time honored liberal tradition of support for public education and proposed the community as whole embrace the concept of government vouchers for private education.

In this period, studies also revealed that an estimated 80 to 85 percent of American Jews received some college or university education, with more than 50 percent earning at least a bachelor's degree. It was also during these years that about 350 colleges and universities, excluding seminaries and divinity schools, undertook the teaching of Judaica in one form or another. The Association for Jewish Studies, composed of scholars and academicians in the field, grew to over 900 members. Courses in Hebrew and Yiddish language and literature, the Holocaust, and Zionism and Israel were among those garnering the most substantial student interest. By the end of the 20th century, more than half of all American Jews under the age of 65 were college graduates. A disproportionate number of Jewish college graduates went on to graduate studies in pursuit of a professional career. It was further estimated that some 85 percent of young Jews were active at colleges and universities either as students, teachers, or researchers.

Among areas of educational and cultural life that experienced a swift revival in this period was Yiddish. The establishment of the *National Yiddish Book Center, located at Hampshire College in Amherst, Massachusetts, signaled the dramatic growth of interest in Yiddish among college students. By 1994, according to center founder and director Aaron Lansky, the center had managed to collect 1.2 million Yiddish books and managed an annual operating budget of $1.2 million.

Meanwhile, the 70-year-old national Jewish student organization *Hillel generally attracted no more than 15 percent of the local Jewish student body. With few exceptions, Hillel's ostensibly parochial agenda proved unattractive to a majority of Jewish students otherwise engaged in the open and liberal American campus environment. To complicate matters, Hillel's parent organization, B'nai B'rith, experienced severe financial difficulties and was forced to cut its support to less than 1 percent of Hillel's annual budget. In 1992 Hillel determined to expand and offer a more sophisticated array of Jewish cultural and social programs. To accompany its new image, the organization's name was officially changed to "Hillel: The Foundation for Jewish Campus Life." Under the leadership of

Hillel's new international director, Richard Joel, the organization set out to secure private endowments in order to pay for new outreach, leadership, and professional development programs. A major source of support was Edgar M. Bronfman, Sr.'s Fund for Jewish Campus Life. Additional funding came from the Council of Jewish Federations (the predecessor of the United Jewish Communities). In previous years, Jewish student leaders and activists had vigorously criticized the Council of Jewish Federations for neglecting to allocate sufficient support to campus programs. Now, in response to an organized student lobbying effort, the Council of Jewish Federations agreed to double its previous annual contribution of $8.5 million to the Hillel organization. The reinvigoration of Hillel as a national organization was only partly successful. Meanwhile, another strategy for strengthening the identity of young American Jews was designed and led by a small group of philanthropists. In 1998 Michael Steinhardt and Charles Bronfman launched Birthright Israel, a program created to ensure that every American Jew between the ages of 15 and 26 would have – as his/her "birthright" – the opportunity for a free ten-day visit to Israel. Despite the program's success, the concept as a whole yielded mixed results. It was hampered in part due to the complex interplay between, on the hand, the American Jewish philanthropists who created it and, on the other, the regional Jewish Federations and Israeli government which pledged to support it but who were reluctant to assume responsibility for its long-range support.

The area of the arts in American Jewish life advanced in this period, too, as evidenced by the productions of Jewish theater groups across the country including San Francisco's "Traveling Jewish Theater," the establishment of annual Jewish art and film festivals in major cities, and the success of the American Jewish Theatre in New York City, Theatre J in Washington, DC, and the Martin Steinberg Center for the Arts, an American Jewish Congress affiliate. Three forms of Jewish music, choral, klezmer, and contemporary liturgical, contributed to the cultural revival of the period. The former was especially well represented by the highly accomplished Boston-based Zamir Chorale. Originally founded in New York in 1960 under the direction of Stanley Sperber, by the 1980s there were similar choral organizations in Boston, Washington, D.C., Connecticut, Chicago, and Los Angeles. The proliferation of Jewish choirs was sufficient for the creation of the American Hebrew Choral Festival whose annual performances drew capacity audiences. Klezmer music, a form of popular Jewish music based largely on the wedding melodies used in Eastern Europe and songs from the golden age of Yiddish theater, experienced a remarkable revival in the United States after having become virtually extinct. The rise of klezmer bands began in the 1970s but experienced the greatest growth during the 1980s and 1990s. Virtually every major American city became home to at least one klezmer ensemble – with colorful and playful names such as Brave Old World, Beyond the Pale, the Chicago Klezmer Ensemble, the Klezmatics, the Klezmer Conservatory Band, the Maxwell Street Klezmer Band, and the Sabras Klezmer Band – and as a result klezmer music garnered considerable recognition and popularity among young audiences. Finally, contemporary Jewish liturgical and folk music, especially the recordings and performances of singer-songwriter Debbie *Friedman, but also the work of other artists including Rachel Cole, the Zmiros Project (Frank London, Lorin Sklamberg, and Rob Schwimmer), and Paul Zim, became widely popular.

Handcrafted Judaica developed into a major form of Jewish artistic expression in the latter decades of 20th century. Jewish ritual objects and symbols such as the *ḥanukkiyyah* (Ḥanukkah *menorah*), the wine goblet, the *mezuzah*, the spice box, and the prayer shawl, found new forms of expression in various media, including wood, metal, precious metals, fabrics, plastic, and glass. The *ketubbah* (marriage contract) was developed into a sophisticated form of artwork. The legal text was hand-written calligraphy, often on genuine parchment and embellished with Jewish and Israeli motifs and themes.

The largest single event for Jewish youth in North America was the Maccabi Youth Games, organized every two years under the auspices of the Jewish Community Centers of North America (JCCA), in association with the United States Sports Committee for Israel, Maccabi Canada, and Maccabi World Union. The games attracted some 2,500 participants between the ages of 13–16. Represented at the games were some 70 American Jewish communities, as well as Canada, Mexico, Australia, Great Britain, and Israel. An Olympic-style event featuring athletic competition in more than 12 different sports, regional games are held every other year.

Unprecedented growth also took place in the area of Jewish children's literature. It has long been the case that American children's literature has been enriched and shaped by the infusion of well-produced creative fiction and non-fiction by American Jewish authors, including early popular works such as Sydney Taylor's *All-of-a-Kind Family* (1951), Joanne Greenberg's (pseud. Hannah Green) *I Never Promised You a Rose Garden* (1964), Maurice Sendak's *Where the Wild Things Are* (1964), Elaine L. Konigsburg's *From the Mixed-Up Files of Mrs. Basil E. Frankfurter* (1967), Judy Blume's *Are You There God? It's Me, Margaret* (1970), Barbara Cohen's *The Carp in the Bathtub* (1972), Judith Viorst's *Alexander and the Terrible, Horrible, No Good, Very Bad Day* (1972), and Bette Greene's *Summer of My German Soldier* (1973). The 1980s and 1990s witnessed a veritable surge in children's literature produced by American Jewish authors as well as a plethora of works of specifically Jewish content including, for example, the following wide array of books: Sandy Asher's *Summer Begins* (1980), Anita and Arnold Lobel's *On Market Street* (1981), Fran Arrick's *Chernowitz* (1981), Hazel Kranz's *Henrietta Szold* (1987), Chaya Burstein's *A Kid's Catalog of Israel* (1988), Patricia Polacco's *The Keeping Quilt* (1988), Jane Breskin Zalben's *Beni's First Chanukah* (1988), Ann Morris and Lily Rivlin's *When Will the Fighting Stop? A Child's View of Jerusalem* (1990), Laurie and Ben Dolphin's *Neve Shalom-Wahat Al Salaam: Oasis of Peace* (1993), Susan Goldman Rubin's *Emily Good as Gold*

(1993), Lois Ruby's *Miriam's Well* (1993), and Sylvia Rouss' popular children's series of Sammy Spider Jewish holiday stories (1993–2006).

Jewish educational software for computers, which entered the commercial market a decade earlier, reached the stage where many classic Jewish texts, from the Bible and Prophets to the Talmud, including the Soncino English translation as well as later works from Maimonides, Rashi and the Zohar, as well as self-teaching courses in modern Hebrew language, were now available on CD-ROM. In the 1990s both the medium of electronic mail (e-mail) and the Internet, the world-wide network of computer communication, experienced a sudden large rise in use by the Jewish community. The immediacy of communication provided by e-mail and the myriad Internet "sites" was a boon to the organized Jewish community, particularly for organizational activities and Jewish education. Internet enthusiasts pointed to the benefits of this technology to Jews living alone or at a distance from established Jewish community life. Through the use of e-mail, mailing lists, newsgroups, or message boards, Jewish individuals and groups readily and regularly communicated with one another. The developing "communications superhighway" was used to facilitate discussion around issues of common Jewish interest, pose and respond to questions, exchange information, and even for teaching and study. While some expressed concern that over-reliance upon this medium would result in the loss of a "sense of shared cultural experience" and other attributes of traditional community life, most American Jews viewed such activities with enthusiasm.

POLITICS. On virtually all the key social issues at the turn of the 20th and 21st centuries, which included protection of the environment, guaranteeing the rights of homosexuals, support for the Equal Rights Amendment, nuclear freeze, handgun control, federal spending for social programs, abortion rights, and opposition to prayer in public schools, American Jews as a whole, in public opinion surveys and at the ballot box, overwhelmingly and consistently supported the liberal position. A series of surveys demonstrated the positive relationship between youth and education and liberalism, i.e., the younger and better educated the respondent, the higher was his/her score on the survey's liberal public opinion index. Contrary to popular assumptions, young Jewish leaders in the 1980s and 1990s did not turn to the right in large numbers. The majority remained both Democrats and liberals on a broad range of social and economic issues.

On church-state matters involving court cases or proposed legislation, the Jewish community frequently split between Orthodox and more liberal non-Orthodox groups. As they had since the late 1940s, most American Jews continued to support the strict separation between state and religious matters as guaranteed by the United States Constitution. This guarantee, referred to as the "establishment clause" of the First Amendment, provides that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." However, throughout the 1980s and 1990s right-wing Christian and Jewish groups, notably Chabad-Lubavitch and Agudath Israel of America, mounted a series of legal challenges to the establishment clause centered on the issues of religious activity in public schools and government assistance to parochial schools. These and other attempts to blur church-state separation through legislation favoring sectarian interests, or by facilitating sectarian activities on government-owned property, were vigorously opposed by liberal organizations such as the American Jewish Committee, the American Jewish Congress, the Anti-Defamation League, the National Jewish Community Relations Advisory Council, and the Union of American Hebrew Congregations. The latter postulated the denial of government assistance, in any form, to any religious group to be the most fair and effective way to preclude religious discrimination and avoid religious favoritism within American society.

A distinctive feature of this period was the open concern shown by the Democratic and Republican parties to win the favor of American Jews. As Jews constituted slightly less than 2.5 percent of the total United States population and 5 percent of American voters, this concern was not due solely to the size of the Jewish vote. Rather, given the Jewish community's concentration in six important states – New York, Florida, California, Ohio, Pennsylvania, and Illinois – where historically they voted in large numbers and earned a reputation of being generous to liberal causes, it was believed that a swing on the part of the Jewish electorate might have important results. On the Jewish side, a consciousness of their own common political interests heightened the disposition to be wooed. Concern for the State of Israel, the plight of Soviet Jewry, fear of "discrimination in reverse" and urban violence, and the example of political assertiveness set by other minorities, provided the scope and inducement for American Jews to scrutinize candidates and their parties in the light of their record on matters of cardinal importance to the organized Jewish community.

Meanwhile, certain ideologues of the left, Jewish and non-Jewish, argued that there was an intrinsic conflict between being liberal and supporting Israel. These critics declared that Israel was guilty, inter alia, of a series of human rights violations in the West Bank and Gaza Strip, had engaged in secret nuclear testing and weapons sales to the apartheid government of South Africa, and had played a key role in the Iran-Contra (Irangate) affair. While most American Jews rejected such views, some Jewish leftists found an outlet in 1986 with the birth of *Tikkun*. Founded by 1960s activist Michael Lerner, *Tikkun* was a reaction to the "over-materialism and lack of spirituality in Jewish life." Pragmatically, it challenged the conservative interests of *Commentary* and defended Jewish liberalism against allegations by those on the far left. Like Breira in the 1970s and, to a certain extent, the New Jewish Agenda in the 1980s, *Tikkun* adopted the mandate of formulating a progressive political agenda for the American Jewish community. It gained immediate prominence because of the

noted intellectuals, Jewish and non-Jewish, whose articles and interviews it published and because of the outspoken dovish opinions of its editor, especially with regard to Israel's treatment of the Palestinians in the West Bank and Gaza Strip.

The image of the Reagan White House as a bastion of Republican, white, Christian values encouraged political assertiveness among fundamentalist church groups. This resulted in an unprecedented effort on the part of national Christian fundamentalist organizations such as the Moral Majority to align themselves with the conservative New Right political movement in attempting to influence both the electoral and legislative processes. The difficulty the Jewish community had with these groups went beyond their opposition to its own positions on most social issues. By 1990 discontent with the Republican administration of George H.W. Bush, Reagan's successor and former vice president, helped return the number of Jewish Democrats to just under 60 percent, although the number of Jewish Republican voters remained at 15 percent. According to a 1992 University of Michigan study, American Jews remained an active political force, since about 90 percent of the Jewish population was spread among only 12 states, namely, New York, New Jersey, Massachusetts, Pennsylvania, Illinois, California, Florida, Maryland, Connecticut, Ohio, Texas, and Michigan. But the voter apathy which came to characterize the general American population had its effect on the number of American Jewish voters which declined from 92 percent in 1952 to 67 percent at the time of the study. As a result, the Jewish community stood at risk of losing the high-voter-turnout edge that had been the source of its national political influence.

As the country prepared for the 1992 presidential election, the Jewish community took stock of its relationship with the Republican Administration. During Bush's tenure, hundreds of thousands of Jews from the former Soviet Union, as well over fifteen thousand Jews from Ethiopia, arrived in Israel with the active support of the United States government. Bush also ended Saddam Hussein's aggression in the Middle East by enlisting and leading a military coalition in the 1991 Gulf War's Operation Desert Storm. American military personnel and equipment were stationed in Israel for the first time to assist in its defense against Iraq's SCUD missiles. At the same time, Bush stayed Israel's hand during the height of the war and prevented the Israel Defense Force from carrying out retaliatory air strikes against Western Iraq. This policy engendered much resentment among American Jews. After intensive and sensitive negotiations, the Bush Administration succeeded in establishing the first face-to-face peace talks between Israel and most Middle East Arab states. Still, Bush maintained his policy of linking Israel's request for $10 billion in loan guarantees, intended for the resettlement and absorption of immigrants from the former Soviet Union, to a freeze by the Israeli government of Yitzhak *Shamir on all construction in the West Bank. In response, the Jewish community mounted a concerted campaign in Washington to reverse Bush's opposition, or if need be, to persuade the Congress to grant the loan guarantees in spite of it. Bush revealed his ire at these efforts in 1991, when he said in a press interview, "…I'm up against some powerful political forces, but I owe it to the American people to tell them how strongly I feel about deferral [of the loan guarantees]… I heard today that there were something like a thousand lobbyists on the Hill working the other side of the question. We've got one lonely guy down here doing it." His remark, implying the exercise of undue political influence by American Jews, engendered great consternation throughout the Jewish community. After being made aware of the effect of his words, he offered clarification and an apology.

Bush's attitude toward Israel and appeal to the Christian Right troubled American Jews deeply. In contrast to Bush's public endorsement of the importance of religion and Christian values within American society, Democratic presidential candidate Bill Clinton and his party represented the more liberal domestic tradition that American Jews had supported since the New Deal Administration of Franklin D. Roosevelt. Clinton, who was personally known to be a friend of the Jewish state, made it clear to the Jewish community that he would be a much more unequivocal ally of Israel in its search for peace than had the Bush Administration. At the party's national convention in 1992, the Democrats drafted the strongest pro-Israel platform in recent decades. Its Israel plank affirmed the "special" U.S.-Israel relationship, criticized the Bush administration for not being an "honest broker" in the peace process, recognized Jerusalem as the capital of Israel, condemned antisemitism, and called upon the United States to further assist in the absorption of immigrants in Israel. When the election was held, Jewish voters overwhelmingly supported Bill Clinton and the Democratic Party. A combination of exit polls indicated that Clinton received approximately 80 percent of all Jewish votes. Incumbent George Bush received between only 10–15 percent and independent candidate H. Ross Perot between 5–10 percent. Analysts attributed American Jews' disproportionate support for Clinton to a tradition of voting Democratic, dissatisfaction with the Bush Administration's treatment of Israel, and a feeling of alienation from Bush's patrician background. These factors appeared to outweigh speculation that more Jews, feeling confident and secure in their socio-economic position, might abandon the Democratic Party in 1992 and vote Republican.

In 1993 President Clinton announced his nomination to the U.S. Supreme Court of Federal Appeals Court Judge Ruth Bader *Ginsburg, 60, to replace retiring Justice Byron White, considered a moderate. For 25 years, the so-called "Jewish seat" on the Supreme Court remained unoccupied. Beginning in 1916 with the appointment of Louis Brandeis, this seat was held consecutively for over a half-century by justices Benjamin Cardozo, Felix Frankfurter, Arthur *Goldberg, and finally Abe *Fortas, who resigned in 1969. The matter of filling the "Jewish seat" on the Supreme Court was dealt with cautiously among Jewish groups. No Jewish organization ever actively lobbied for this cause. While there was little doubt that most

American Jews looked forward to the appointment of another Jewish justice and were personally pleased over Ginsburg's nomination, the community's traditional and ardent public opposition to filling any position on the basis of religion, race, or ethnicity resulted in constrained enthusiasm. Steven Freeman of the Anti-Defamation League summarized the Jewish position by saying: "The criteria (sic) should be merit, the best qualified person for the job. We would not recommend that the person be chosen by ethnicity. By the same token, we would be pleased if the best qualified person happened to be Jewish." Most public commentary on Ginsburg's nomination emphasized her feminist, not her Jewish, interests. Ginsburg had won five out of six womens' rights cases which she had argued before the Supreme Court. In announcing her nomination, Clinton noted: "Many admirers of her work say that she is to the Women's moment what former Supreme Court Justice Thurgood Marshall was to the movement for the rights of African Americans." Ginsburg had served as a law professor at Columbia and Rutgers universities.

In 1984, as a presiding justice, Ginsburg indicated support for the right of a Jewish Air Force Captain, Dr. Simcha Goldman, to continue wearing a yarmulke while in uniform in spite of this constituting a technical violation of the military dress code. A Federal District Court ruled in favor of Goldman, but this ruling was later reversed by the Circuit Court of Appeals. Ginsburg was also one of the judges who rejected convicted spy Jonathan *Pollard's 1992 appeal against his life sentence. Pollard's attorneys argued that his 1987 life sentence constituted a miscarriage of justice since the government had violated its plea bargain agreement and implied to the court a preference for a maximum sentence. Ginsburg and Laurence Silberman, also Jewish, rejected Pollard's argument, while the only non-Jew on the three-judge panel, Judge Stephen Williams, dissented.

Ginsburg's appointment was confirmed 96–3 by the U.S. Senate. The only senators to oppose Ginsburg were conservative Republicans Jesse Helms of North Carolina, Robert Smith of New Hampshire, and Don Nickles of Oklahoma. They expressed concern over Ginsburg's support for abortion rights as well as her opposition to any form of discrimination against gay men and lesbians. Earlier, however, the Senate Judiciary Committee had unanimously approved her nomination. In her testimony before the committee, Ginsburg spoke of her strong distaste for discrimination which she related to her grandparents fleeing of pogroms in Eastern Europe as well as her personal experience with antisemitism in the United States. On August 10, Ginsburg, standing alongside President Clinton and her husband, and using a Hebrew Bible, was sworn in by Chief Justice William Rehnquist, thereby becoming the first female Jewish U.S. Supreme Court Justice in history.

After a quarter of a century without a Jewish justice, one year later there were two. Initially passed over by President Clinton in 1993, Gerald Stephen *Breyer was appointed by the president to the Court in 1994. His appointment came following the resignation of Justice Harry A. Blackmun.

Other significant American Jewish appointees who rose to national prominence during the Clinton administration were Secretary of Labor Robert *Reich, Secretary of the Treasury Robert *Rubin, Secretary of State Madeline Albright (who was raised Episcopalian by converted parents), Secretary of Defense William *Cohen, and National Security Advisor Sandy *Berger. Under Clinton, Alan *Greenspan continued his term as chairman of the Federal Reserve. (Greenspan's successor, Ben Bernanke, who was appointed by President George W. Bush, is also Jewish and active in Jewish communal life.)

Jewish mayors, at least in large cities, remained a rare commodity for much of the 1970s and 1980s. An important exception in the earlier phase of this period was the election in 1975 of Abraham D. *Beame as mayor of New York City. This was the first time New York, which long boasted the largest Jewish community in the world, elected a Jewish chief magistrate. Beame's term of office coincided with a fiscal crisis that threatened New York with bankruptcy and he consequently failed to secure the Democratic nomination for reelection. In 1978 Democrat Edward Koch, an especially colorful and outspoken figure, became the city's second Jewish mayor; he was elected to three consecutive terms. In 2001 the influential investment advisor Michael *Bloomberg, a Jewish Democrat-turned-Republican, prevailed over a field of opponents, including another popular Jewish Democrat, and was elected mayor. Bloomberg handily won reelection in 2005, garnering considerable of support from a plurality of the city's ethnic constituencies.

By contrast, American Jews succeeded in being elected and reelected to Congress in numbers disproportionate to their percentage of the general population, even in districts with an insignificant number of Jewish voters. Some of the most prominent figures in this regard were Senators Barbara *Boxer (California), Russell *Feingold (Wisconsin), Diane *Feinstein (California), Herb *Kohl (Wisconsin), Frank *Lautenberg (New Jersey), Joseph *Lieberman (Connecticut), Charles *Schumer (New York), Arlen *Specter (Pennsylvania), and Paul *Wellstone (Minnesota), and Ron *Wyden (Oregon). Noteworthy Jews elected to the U.S. House of Representatives included Bella *Abzug (New York), Barney Frank (Massachusetts), Holocaust survivor Tom *Lantos (California), the socialist Bernie *Sanders (Vermont), and Henry Waxman (California).

The presidential election of George W. Bush in 2000 marked a turning point for the country and was greeted cautiously by the American Jewish community. Memories of the previous Bush administration's anti-Jewish sentiment – former Secretary of State James Baker was reported to have once said, "F—k the Jews, they don't vote for us anyway" – and the younger Bush's evangelical Christian orientation prompted widespread suspicion in American Jewish circles. On the other hand, the excitement that accompanied the unprecedented selection by former Vice President Al Gore of Senator Joseph Lieberman, a modern Orthodox Jew, to be his running mate was palpable in American Jewish circles. For

a majority of American Jews, the Gore-Lieberman ticket was an ideal combination – moderate on economic policy, liberal on social policy, and activist with respect to foreign policy. A Gore administration also virtually guaranteed a continuation of Clinton's Middle East diplomacy. In the event, fewer than 20 percent of American Jews cast their ballots for the Republican standard bearer. Furthermore, many American Jewish voters were deeply disappointed when, owing to voting irregularities, the U.S. Supreme Court decided the presidential election in favor of Bush.

Despite the wide gap between the Bush administration's conservative views – its opposition to abortion and church-state separation – and American Jewry's moderate liberalism, the president himself reached out to the American Jewish leadership. He was aided in this regard by Ari Fleischer, the White House press secretary. In addition to modest efforts like hosting the first Ḥanukkah celebration at the White House, Bush displayed unequivocal, open, and even warm support for Israel and its leaders, while pointedly denying Yasser Arafat and the Palestinians similar treatment. This was markedly different from the support Clinton had shown to the Arab parties.

In the wake of the terrorist attacks of September 11, 2001, American Jews, like other American constituencies, closed ranks behind the president. But the American Jewish community soon found itself at odds with the Bush administration's views on the necessity of invading Afghanistan to hunt the Al-Qaeda terrorist group and its leader Osama bin Laden as well as its concomitant determination to curtail civil liberties in order to fight the "War on Terrorism." What emerged in 2001 as concern over the broadly construed USA-Patriot Act, which critics feared could lead to egregious violations of the constitutional rights of law-abiding citizens, reached a pivotal juncture with the imprisonment of noncitizens at Guantanamo. Captured by American forces in Afghanistan and deemed "unlawful combatants" by the American government, they were denied the procedural safeguards customarily afforded prisoners of war and held indefinitely. Meanwhile, U.S. Attorney General John Ashcroft issued a series of directives aimed at elevating surveillance activities among the prisoners and across the country generally.

The American Jewish community was divided over what, if any, public response might be warranted under the circumstances. For example, the annual conference of the Jewish Council for Public Affairs (JCPA), meeting in 2002, passed a resolution criticizing the administration for undermining civil liberties in the name of national security. But to satisfy a split between the groups opposed to the Bush policies – led by the Reform movement's Religious Action Center and the National Council for Jewish Women – and the moderates who believed such a resolution to be "premature" – the American Jewish Committee, the Anti-Defamation League, B'nai B'rith, and Hadassah – a supplementary statement was issued that the JCPA supported "strengthening domestic antiterrorism measures that enhance law enforcement capabilities" without infringing upon "basic constitutional rights." Next, the passage of the Homeland Security Act, which created a new cabinet-level department, gave the U.S. government unprecedented surveillance powers over "federal government, state and local government agencies (including law enforcement agencies), and private sector entities." The widespread unease displayed by American Jewish groups over such an open-ended mandate was tempered, at least temporarily, by the assurances of Congressional leaders like Senator Arlen Specter who, in a speech to the American Jewish Committee in 2002, announced his intention "to craft a new bill that maintained the law's core provisions while ameliorating the problematic civil liberties issues." Two notable exceptions in this regard were Senators Russell Feingold and Paul Wellstone, who vigorously opposed the war from the beginning.

Over the course of several months, the Bush administration continued to make the case for isolating and invading Iraq. It alleged the totalitarian regime of Saddam Hussein possessed "weapons of mass destruction" and that Iraq was linked to the 9/11 terrorist attacks on the U.S. Though the charges remained unproven, approximately 65 percent of Americans supported the president's position when in March 2003 the U.S. launched a massive offensive against Iraq. Within weeks, an American-led military coalition succeeded in toppling the Hussein regime and occupying the country. While it was widely presumed the American Jewish community supported the war, owing especially to Iraq's profile as one of Israel's most dangerous foes, polls revealed that 54 percent of American Jews disapproved of Bush's handling of the conflict. Still, antisemitic and anti-Israel groups as well as some antiwar activists accused the Jews of fomenting the war to further Zionist aims. In reality, however, although a poll sponsored by the American Jewish Committee on the eve of the 2004 presidential election discerned strong American Jewish backing for the Bush administration's Israel policy, including the president's tacit endorsement of Israel's unilateral withdrawal from the Gaza Strip and the establishment of the West Bank security barrier, antiwar sentiment among American Jews persisted at high levels. The poll also found that American Jews backed the Democratic candidate Senator John F. Kerry (Massachusetts) by a nearly 3-to-1 margin and that disapproval of the Iraq war among Jews had risen to 66 percent. David Harris, executive director of the American Jewish Committee, suggested the poll gave a "bird's eye view of where American Jews are on the important issues of the day." The data painted a picture, he explained, of a community that was "very supportive of Israel, very multilateralist, skeptical of the Bush administration's policy in Iraq, and domestically very liberal." Following Bush's reelection to office in 2004, it was determined that Kerry won 77 percent of the Jewish vote and Bush received 22 percent. While this pattern was consistent with past Jewish support for Democratic candidate, Bush actually made modest gains among younger American Jewish voters since he was first elected in 2000.

In the ensuing months, as the Iraq war continued and revelations emerged of abuses by American military person-

nel at the Abu Ghraib prison, American Jewish opposition to the war increased to 70 percent. This figure was no doubt influenced by the growing death toll of American soldiers and Iraqi civilians which rose, respectively, to over 2000 and approximately 35,000 in 2005. Meanwhile, according to Pentagon estimates, the cost of the war grew to more than $5.8 billion per month.

BLACK-JEWISH RELATIONS. Relations at the community level between blacks and Jews were troubled and strained in the period under review. American Jewish Committee leader Murray Friedman's assertion that "the black-Jewish alliance of the civil rights days is simply gone" was borne out in various surveys that reflected a growing resentment of Jews by blacks, especially among younger blacks on college campuses. A handful of black leaders gained notoriety for their anti-Jewish sentiments, which were accompanied by anti-Israel and pro-Palestinian statements. Less frequently reported were examples of cooperation taking place among black and Jewish leaders in Congress, in city halls, and in inter-communal dialogues around the country.

Undoubtedly, some of the outstanding issues between the two communities were rooted in the past. But the issues themselves were current. For example, prominent black leader the Rev. Jesse Jackson had made himself anathema to many American Jews in 1979, the year he embraced PLO Chairman Yasser Arafat in front of the press, called for the establishment of an independent Palestinian state, and criticized the Jewish community for the dismissal by President Jimmy Carter of Andrew Young, American ambassador to the United Nations, after his unauthorized contact with Yasser Arafat.

During the 1980s Jackson continued to be critical of Israel for its relationship with South Africa, and called Zionism a "kind of poisonous weed that is choking Judaism," while he continued to support Palestinian demands for an independent state. However, the nadir of Jackson's relationship with American Jews came in 1984 when in a private conversation with a black *Washington Post* reporter, Jackson referred to Jews as "Hymies" and to New York as "Hymietown." The Jewish community, aghast at the candidate's remark, subsequently received an apology by Jackson during a speech made at a synagogue. By the beginning of the 1990s, Jackson had made attempts to improve his relationship with the Jewish community, initially by condemning antisemitism at the 1992 World Jewish Congress on antisemitism in Brussels and later by spearheading efforts of black-Jewish cooperation.

By far the nation's most controversial black personality, known for his direct attacks upon the Jewish community, was Chicago-based Louis Farrakhan, head of the black Muslim sect Nation of Islam. Farrakhan frequently made derogatory and insulting statements about Jews, Judaism, and the State of Israel. In his sermons he referred to the "lying and deceit" of Jews, and the "tyranny of Jewish shopkeepers and landlords who swarmed the ghetto communities to prey upon our people." In a 1984 radio broadcasts he declared Hitler a "great man" and referred to Judaism as a "gutter religion." He also accused Jewish doctors of injecting the AIDS virus into black babies. Furthermore, the Nation of Islam published and sold two antisemitic tracts, *The Protocols of the Elders of Zion* and *The Secret Relationship between Blacks and Jews*. While Farrakhan's vituperative statements strained black-Jewish relations, within the black community he was criticized by the NAACP, the Urban League, and many church groups.

A third black personality to have stirred controversy with his statements about Jews was Leonard Jeffries, founding chairman of the black studies department at the City College of New York. In a 1991 speech at a black culture festival in Albany, New York, he defended New York State's multi-cultural education reform plan and attacked Jews in particular for opposing the plan. Among his most controversial statements, Jeffries accused Jews of dominating the slave trade and "conspiring for the destruction of black people" through control of Hollywood. After being removed as department head for making statements, Jeffries brought suit against CCNY, claiming his First Amendment rights had been violated. In May 1993, a U.S. district court, agreeing with Jeffries, awarded him $400,000 in damages, an amount reduced by the judge to $40,000. The judge noted Jeffries' behavior to be "repugnant, hateful, poisonous, and reprehensible," but instructed City College to return him to the chair of the Afro-American Studies Department.

An eruption broke out in the Crown Heights section of Brooklyn in 1991 when a station wagon driven by a ḥasidic Jew careened out of control and crashed into a sidewalk, killing a seven-year-old black boy and badly injuring a black girl. When the driver stepped out of the car, he was attacked and robbed by angry black bystanders. Before police and medical personnel reached the scene, the crowd broke up into smaller groups and turned in different directions throwing rocks and bottles at people, cars, and homes. One of these frenzied groups came upon 29-year-old Yankel Rosenbaum, an ultra-Orthodox Jew from Australia who was visiting New York City. Rosenbaum was severely beaten and stabbed to death. Though 17-year-old Lemrick Nelson, Jr. was arrested for Rosenbaum's murder, he was acquitted by a mostly black and Latino jury.

The episode was followed by three days and four nights of rioting by blacks in Crown Heights, a community variously estimated to include 12,000 to 25,000 mostly ḥasidic Jews and 100,000 to 180,000 blacks. The New York Police Department and the city's first black mayor David Dinkins were criticized for not being able to control the riots. The Crown Heights affair acted as a catalyst for additional rioting by blacks in other large cities around the country over the next few days. Although well-intentioned community leaders initiated attempts at inter-community dialogue, the development of the case and the coverage it received in the press exacerbated tensions between blacks and Jews.

Following federal and state investigations, which criticized the mayor, the police, and even the courts for mishandling of the Crown Heights affair, Dinkins lost the 1993

mayoral election to Republican candidate Rudolph Giuliani. Giuliani became the first Republican elected mayor of New York since 1965. Exit polls conducted determined that only 4 percent of all those questioned were influenced by Dinkins' handling of the Crown Heights riots. Jewish – especially ḥasidic – neighborhoods, however, voted overwhelmingly for Giuliani. Meanwhile, a Roper Organization poll demonstrated the persistence of ethnic rivalry, with almost half of New York City residents, 47 percent, answering that Jews had "too much influence" in city life and politics. Among African Americans, the figure was 63 percent and among Hispanics 66 percent. A hopeful but provocative response to this rivalry was a *New Yorker* cover drawn by Art Spiegelman, author/artist of *Maus: A Survivor's Tale*, a popular comic book-style rendering of the history of the Holocaust and its impact on American Jews. Spiegelman's wish for reconciliation took the metaphoric form of an ḥasidic man kissing a black woman. Both the Jewish and black communities expressed ire over this illustration.

In the 1990s Jesse Jackson took determined steps towards rapprochement with the Jewish community. Speaking at a conference on antisemitism convened by the World Jewish Congress in Brussels in July 1992, he condemned "racism and antisemitism (as) scientifically and morally wrong." In marked contrast to his previous public position on the subject, he also praised Zionism as a "liberation movement." In 1993, he met with Israel's foreign minister Shimon *Peres and pledged to help seek freedom of emigration for Syria's Jews. Jackson also played a constructive mitigating role in the controversy that erupted that year over the nomination by President Bill Clinton of Lani Guinier, a black legal studies scholar, to the position of assistant attorney general for civil rights in the U.S. Department of Justice. The Jewish community reacted critically to her nomination and expressed concern over Guinier's support for an interpretation of the Voting Rights Act favoring blacks and other minorities. In the event, President Clinton withdrew his nomination and the black community was angered by what it viewed as the successful torpedoing of its candidate by Jewish interest groups. Meanwhile, Jewish groups sought to downplay their influence over the president's decision.

These tensions dissipated over time – at least among the leaders of both communities – and within the space of a few years black-Jewish relations exhibited noticeable improvement. A turning point was signaled in 2000 when the New York-based Foundation for Ethnic Understanding, originally established in 1989 by Rabbi Marc Schneier and Joseph Papp, launched a Web site devoted to supporting the improvement of dialogue between African Americans and American Jews. The Web site, which promoted the collaborative efforts of Jewish and black leaders and organizations, announced: "We are committed to the belief that direct, face-to-face, dialogue between leaders of ethnic communities is the most effective path toward the reduction of bigotry and the promotion of reconciliation and understanding." That same year, Jesse Jackson gave a keynote address to a World Jewish Congress-sponsored meeting focused on the question of black-Jewish relations. Jackson called the relationship "better than ever," but also emphasized that "we still have unfinished business." Jackson's rehabilitation in the eyes of American Jews was completed later that year when he publicly and actively devoted himself to securing the release of thirteen Iranian Jews detained by the Iranian regime on charges of spying for Israel.

CHRISTIAN-JEWISH RELATIONS. On the whole, relations between the Jewish community and most Christian denominations were positive in this period. However, one serious area of contention between American Jewish leaders and mainline Christian churches was the Middle East. In 1992, these groups continued to express their objection to Israel's presence in the Occupied Territories, by publicly opposing Israel's request to the United States for $10 billion in loan guarantees. "An Open Statement of Religious Leaders to President George Bush," proffered by the National Council of Churches (NCC), called upon the president to "oppose housing loan guarantees to Israel until it halts construction and expansion of settlements in the West Bank, Gaza, and East Jerusalem." It was signed by representatives of the Presbyterian Church (U.S.A.), the Lutheran Council, the Episcopal Church, the Mennonites, the American Baptist Church, the United Church of Christ, the Reformed Church of America, and the Unitarian-Universalist Association. An even stronger tone was used in a resolution debated by the United Methodist Church; it failed to pass for technical reasons. In general, criticism of Israel by these bodies continued until the 1993 signing of the Israel-PLO Declaration of Principles in Washington, D.C.

In the areas of social and economic justice, Protestant and Jewish groups shared concern over the growth of the Christian Right. *The Religious Right: The Assault on Tolerance and Pluralism* (1994), published by the Anti-Defamation League, analyzed the ongoing and well-funded effort by evangelical Christian groups to blur the traditional separation between religion and politics in America and initiate new legislation, both at the local and national level, reflecting their anti-pluralistic, fundamentalist religious values. It pointed to efforts led by Pat Robertson and the Christian Coalition, preacher Jerry Falwell, and activist Time LaHaye as well as those of organizations with innocuous-sounding names like CARE (Citizens Advocating Responsible Education) and CEE (Citizens for Excellence in Education) who promoted candidates for school board seats, local Republican party committees, water commissions, and real estate zoning boards. These forces, it was argued, sought control of the Republican party by the year 2000 and constituted a threat to American democracy. They were thus to be regarded as a special threat by American Jews and other non-Protestant and non-white groups. Nonetheless, because of many issues on which the Religious Right coincided with Jewish concerns, including active and loyal Evangelical support of Israel, the relationship between the groups remained complicated.

There were also important developments in Catholic-Jewish relations in this era. The most significant breakthrough occurred in 1993 when Israel and the Vatican signed an agreement establishing full diplomatic relations between the Holy See and the Jewish state. Against this backdrop, a joint American Jewish-Catholic delegation visited Poland in order to address a number of issues in Polish-Jewish relations. Foremost was the progress on the construction of a new Carmelite convent and education-prayer center in the town of Oswiecim, not far from the Auschwitz/Birkenau death camp site. The new facility was an alternative to the existing convent situated nearer the entrance to the camp, over whose presence Jewish organizations long objected. In 1993, the office within the Church that oversees Catholic orders, with the support of the Pope, directed the nuns to relocate. On the other hand, Jewish groups expressed ambivalence about the Catholic Church's Catechism for the Universal Church (1992), which noted Christianity's Jewish roots and rejected the charge of deicide, but stopped short of an explicit condemnation of antisemitism. The catechism "gives final authority to what we have worked on for thirty years," stated James Rudin of the American Jewish Committee, "but [it] doesn't break any new ground." Next, in 1994 the Synagogue Council of America and the National Conference of Catholic Bishops issued a joint statement condemning pornography and asking communities and parents to exercise greater vigilance to prevent its exposure to young people.

Toward the end of the decade, a highly sensitive aspect of Catholic-Jewish relations emerged into a full-blown controversy. The matter concerned a panel of historians appointed in the late 1990s to investigate the role of Pope Pius XII during World War II and the Holocaust era. The panel had been assembled, in part, to address questions and assuage tensions resulting from Pope John Paul II's plans for the beatification and sainthood of Pius XII, who was alleged by many historians and Jewish community leaders to have been indifferent to the fate of European Jewry and even culpable within the wider context of the Nazi regime's plans to exterminate the Jews. When the panel was denied access to the Holy See's archives for "technical reasons," it disbanded and protested to the Vatican's Commission for Religious Relations with the Jews that "we cannot see a way forward at present to the final report you request, and believe we must suspend our work." The matter heated up further when Cardinal Walter Kasper, the senior figure charged with responsibility for the Vatican's relationship with the Jewish community, accused the Jewish members of the panel of "indiscretion" and making "polemical remarks to the press." The Jewish scholars responded that they had been "singled out for blame" and should be allowed unfettered access to the Vatican's historical documentation. The imbroglio prompted some Jewish historians to resign from the panel and historian Robert S. Wistrich of the Hebrew University called the episode "the lowest ebb in Catholic-Jewish relations since the 1960s." The matter remained an open source of contention, but the strained relations were eased somewhat in the spring of 2001 when the pontiff, together with the chief rabbi of Ukraine, paid a visit to Babi Yar, where thousands of Jews had been killed in 1941 by the Nazis.

HOLOCAUST-RELATED MATTERS. In the 1980s and 1990s, Holocaust memorialization efforts on the part of American Jewry developed into a major activity and social psychological phenomenon. Faced with the reality of Holocaust survivors succumbing to natural attrition and aided by the retrospective vision of two generations, American Jews focused considerable resources, including time, money and skills, on producing an unprecedented number of Holocaust projects to serve as testaments and memorials for posterity. This was expressed in everything from the creation of artwork, books, films, school curricula, events and conferences for survivors and their children to organized tours to Eastern Europe to visit the sites of former Jewish communities and Nazi death camps. A number of Jewish communities, among them Baltimore, Boston, Chicago, Miami, New York, Pittsburgh, San Francisco, and St. Louis, established regional Holocaust monuments, museums, and educational centers. Furthermore, many states adopted new statutes and mandated the teaching of the Holocaust in middle and senior high school across the country. Most American Jews supported these efforts and responded favorably to the commemoration and normalization of the Holocaust in American Jewish life. Support was also manifest in the countrywide growth of Holocaust studies as an academic field and the convening of scholarly meetings such as the annual conference of the Holocaust Education Foundation.

Two major efforts in this period were the opening in 1993 of the Beit Hashoah-Museum of Tolerance in Los Angeles and the *United States Holocaust Memorial Museum in Washington, D.C. Although funding for the institutions was raised mainly through private donations, both were surrounded by controversy even before they opened their doors to the public. Five million dollars for the Wiesenthal project came from the State of California and the land upon which the U.S. Holocaust Memorial Museum in Washington stands was donated by the federal government. In both cases, questions arose over whether these donations violated the constitutional principle of separation between religion and state. The Wiesenthal museum's many state of the art high-tech educational exhibits also aroused controversy because, as critics charged, they detracted from the solemnity of the subject. Repeated changes in its design and plans resulted in it taking six years to complete at a cost of $55 million instead of two years and $15 million.

The U.S. Memorial Holocaust Museum, built at a cost of $168 million, faced a controversy of a different nature. Since its founding in the 1970s under the Carter administration, the U.S. Holocaust Memorial Council, the body charged with the planning and development of the project, was split over the issue of which message the museum was to communicate. The Council was divided into two camps, one which wished to emphasize the specifically Jewish aspect of the Holocaust, the other which sought to convey a more universal theme it

thought would increase its relevance to non-Jewish visitors. Less than a month before its opening, Harvey Meyerhoff and William Lowenberg, chairman and vice chairman of the council respectively (and both aligned with the universal camp), were forced to resign under pressure from the new Clinton administration. Meyerhoff and Lowenberg, appointed by former President Ronald Reagan, had opposed extending an invitation to speak at the opening ceremony to President of Israel Chaim Herzog. President Bill Clinton wanted the participation of Herzog, and saw the disagreement as an opportunity to relieve the two Republicans. They were replaced by Miles Lerman and Ruth Mandel. The two new heads sought to place more a Jewish emphasis on the institution that included its closing on Yom Kippur, in addition to Christmas.

The dedication ceremony for the museum in 1993, attended by President Clinton, was marred by controversy over the presence of Croatian President Franjo Tudjman. Tudjman, author of *Wastelands – Historical Truth* (1988), in which he attributed the accounting of six million Jews murdered by the Nazis to "too much on both emotional, biased testimonies and on exaggerated data in the postwar reckonings of war crimes," was also known to have made antisemitic remarks in public, including the statement that Jews are "selfish, crafty, unreliable, miserly and underhanded." The author and Nobel laureate Elie Wiesel publicly criticized Tudjman's participation in the event. The controversy was partially tempered by the visit to the museum of His Holiness the Dalai Lama, who was, in fact, the institution's first official visitor.

A third major American Holocaust center, New York City's A Living Memorial to the Holocaust – *Museum of Jewish Heritage, opened in 1994 on a plot of land situated on the waterfront in Battery Park City, directly opposite the Statue of Liberty and Ellis Island. Construction of the museum had been postponed for many years, partly due to complicated lease negotiations with the municipality. This long-term project was initiated in 1981 when then Mayor Edward I. *Koch appointed a Holocaust Memorial Task Force (later a commission) to begin work to create such an institution.

Next, five years after a Jerusalem court sentenced John Demjanjuk (alleged to be "Ivan the Terrible" of Treblinka) to death and placed him in solitary confinement, the Israeli Supreme Court ruled in 1993 there was not enough evidence to convict him. Demjanjuk subsequently returned to the United States, where a lengthy judicial process produced "clear, unequivocal, and convincing evidence" of his service in Nazi death camps and in 2005 the 6th U.S. Circuit Court of Appeals ruled he could be stripped of his American citizenship. Demjanjuk's lawyers appealed the court's decision, arguing that "having marked Mr. Demjanjuk with blood scent, the [United States] government wants to drop him into a shark tank." Chief U.S. Immigration Judge Michael J. Creppy asserted there was no evidence, however, to substantiate Demjanjuk's claim he would be mistreated if deported to his native Ukraine. Assistant Attorney General Alice S. Fischer stated: "The chief immigration judge's decision reaffirms the important principle that the United States will continue to track down and remove individuals who assisted the Nazis in their brutal campaign of terror, and secure a measure of justice on behalf of the Nazis' victims."

In 1994 *Schindler's List*, a feature film about German industrialist Oskar *Schindler, who was personally responsible for saving the lives of over a thousand Jews by employing them in his factory, opened to American audiences. The $23 million film production, conceived of and directed by Steven *Spielberg, was based on a book by Thomas Keneally. The worldwide critical and financial success of *Schindler's List* was unprecedented. The film won seven Oscar awards and generated revenues estimated at $300 million. Spielberg used some $50 million from the film's profits to establish The Righteous Persons Foundation. A second project was the creation of the *Survivors of the Shoah Visual History Foundation, with assets of over $30 million, which developed a state-of-the-art multi-media archive comprising in-depth interviews with Holocaust survivors as well as educational materials such as books, documentary films, and CD-ROMS.

In stark contrast to the widespread success of *Schindler's List* and the highly visible projects sponsored by Spielberg, throughout the 1990s Holocaust denial, the propagation of the argument and the dissemination of information minimizing the degree to which the Nazis persecuted the Jews during World War II, including the denial of the Nazis' systematic mass murder of European Jewry, continued unabated in a variety of public arenas. For example, Holocaust denial activists made a special effort to target college campuses throughout the United States. The Committee for Open Debate on the Holocaust (CODOH), led by Bradley R. Smith, succeeded in placing full-page advertisements and op-ed pieces in dozens of college newspapers. One ad was entitled "The Holocaust: How Much is False? The Case for Open Debate." A second, published in the spring of 1992 was called "Falsus in Uno, Falsus in Omnibus… the 'Human Soap' Holocaust Myth." A widely reprinted essay that first appeared in 1993 was "A Revisionist's View on the U.S. Holocaust Memorial Museum in Washington, D.C.," which argued that the homicidal Nazi gas chambers never existed. The appearance of these materials engendered great media attention followed by an immediate backlash of criticism from students, faculty, the local Jewish community and national Jewish organizations. The scholar Deborah E. Lipstadt documented the extent of this campaign in *Denying the Holocaust: The Growing Assault on Truth and Memory* (1993). Meanwhile, as part of its "Confronting Antisemitism Project," the Anti-Defamation League launched a Web site titled "Holocaust Denial: An Online Guide to Exposing and Combating Anti-Semitic Propaganda," which aimed to make available information to counter Holocaust denial claims and expose the activities of "career antisemites" including Willis Allison Carto, David *Irving, Ingrid Rimland, Bradley R. Smith, Mark Weber, and Ernst Zundel.

The explosion of interest in Holocaust history reached something of a fever pitch with the publication in 1996 of

Daniel Goldhagen's *Hitler's Willing Executioners*. In this highly provocative work, Goldhagen advanced the argument that ordinary Germans not only knew about the Hitler regime's efforts to exterminate the Jews but were predisposed to accept the Nazi worldview owing to a unique and virulent "eliminationist" strain of antisemitism endemic to German culture. The book generated a firestorm of controversy in academic circles and, at the same time, became an international best-seller. Virtually overnight, Goldhagen became a familiar figure on national television and on the lecture circuit throughout the United States and Europe. He was also attacked by many established Holocaust scholars who challenged his findings and questioned his research, including Yehuda *Bauer, Christopher *Browning, Saul Friedman, and Fritz Stern.

Critics of American Jewry's seemingly inexhaustible fascination with the Holocaust charged that the success of phenomena like the film *Schindler's List*, the Goldhagen volume, and even the opening of Holocaust museums and memorials in different parts of the country illustrated American Jewry's base impulses and lack of a substantive grasp of world and Jewish history. They further argued the Holocaust itself was being exploited by many American Jews for contemporary political and social purposes, including shielding Israel from public criticism and offering a temporary salve to those who feared the weakening of American Jewish identity. The historian Peter Novick articulated this view in a controversial book titled *The Holocaust in American Life* (1999). Novick's detractors, however, averred that although *The Holocaust in American Life* was painstakingly researched, its scholarly value was undermined by the author's "evident distaste for the idea of Jewish distinctiveness and his commitment to a universalistic political agenda."

Parallel to the public debates described above were the highly visible Holocaust restitution efforts which began in the early 1990s and assumed special intensity between 1995 and the turn of the centuries. Concerted efforts were made during these years to address the restitution and compensation claims of Holocaust survivors worldwide, a group estimated to be as high as 935,000 individuals. The main actors in the drama surrounding compensation for survivors of the Holocaust were the Claims Conference, the World Jewish Restitution Organization, and the World Jewish Congress. As a result of varied legal efforts that emanated from different corners of the globe, this triad was quickly enlarged to include a broad range of American and European officials as well as class action lawyers. Stuart *Eizenstat represented the U.S. government for much of the period in question. Working closely with Israel Singer and Edgar M. Bronfman, Sr., of the World Jewish Congress as well as other American Jewish leaders, Eizenstat sought to navigate a complex array of legal, diplomatic, economic, and political issues while negotiating competing claims made by European governments, insurance companies, and banks – particularly Swiss banks – and even Bank Leumi, the Israeli successor to the Anglo-Palestine Bank, and the Jewish National Fund. Between 1998 and 2001, more than $6.5 billion in restitution settlements were concluded for Jewish and non-Jewish victims of the Nazi regime. Even so, there remained considerable debate about the status of formerly Jewish-owned individual and communal properties in central and eastern Europe as well as works of art plundered by the Nazis. The relative success of the aforementioned compensation and restitution efforts could not, of course, erase or dim the impact of the catastrophic destruction of European Jewry by the Nazis during World War II. Speaking before the third international conference on the Holocaust in Stockholm in 2000, which focused on the theme of Holocaust education and remembrance, Eizenstat emphasized the enduring importance of efforts to come to terms with the Holocaust:

> We have been dealing heavily with the restitution of assets, trying to bring some measure of justice to surviving victims in everything from communal property to art to Swiss bank accounts to German slave and forced labor and insurance. These are all important and we are making progress in each of those areas. The significance of this historically important conference is that it begins, as we enter a new century, to move us away from what is important and immediate – money and assets – to what is enduring and lasting – memory and education. Financial restitution, while critical, cannot be the last word on the Holocaust. This conference assures [that] education, remembrance, and research will be.

Fifty years after World War II and the Holocaust, the issues and controversies outlined above surfaced with dramatic intensity and had a profound impact on American Jewry. In part, the flurry of American Jewish commemorative, artistic, scholarly, and restitution activity, which followed in the wake of the Soviet Union's collapse and the end of the Cold War, signaled the end of an era. Hitherto inaccessible archives in eastern and central Europe poured forth information about the assets of hundred of thousands of Holocaust victims, including survivors and their heirs who now lived in the United States. The turn of the centuries also proved to be a juncture for widespread communal and national introspection – in Europe and America. As the generation of war-era survivors began to fade, American Jews vigorously pursued avenues for preserving the memory and legacy of European Jewry and securing material compensation for Holocaust survivors worldwide.

Many of the controversies highlighted here have yet to dissipate; some of the disputes will probably never be resolved. Meanwhile, popular and scholarly interest in Holocaust studies, literature, films, documentaries, museums, memorials, and financial restitution continues unabated. According to the directory of the Association of Holocaust Organizations, by the year 2005 dozens of institutions in the United States were officially classified as Holocaust museums and the organization itself had a combined membership of over a hundred affiliated agencies, institutes, and educational operations. In addition, numerous resource centers, libraries, and archives, from Maine to Hawaii, offer seminars and workshops, operate speakers bureaus, collect and categorize historical documents, record and classify oral histories, organize commemo-

ration ceremonies, and sponsor academic research and essay contests on the subject of the Holocaust. Many of the latter were established under Jewish communal auspices, with support from local and state government agencies. Some are also the beneficiaries of funding recovered as a result of Holocaust restitution efforts.

SOVIET JEWRY. Immigrants from the former Soviet Union constituted a distinct sub-population within the American Jewish community. According to the 1994 *American Jewish Year Book*, over 280,000 Jews from the former Soviet Union had immigrated to the United States since the mid-1960s. The waves of Russian Jewish migration generally fell into two periods: 1976–79 and 1989–92. A high point was reached in the years 1992 and 1993, for which the Hebrew Immigrant Aid Society (HIAS) reported the number of Russian Jewish immigrants to be 45,888 and 35,581, respectively. This movement was the immediate result of the breakdown of the Soviet regime, which also saw the emigration over half a million Jews to the State of Israel. The 1989 Lautenberg Amendment, named after Democratic Senator Frank Lautenberg of Pennsylvania, had eased the evidentiary requirements for refugees applying from certain countries. It permitted entry to the United States to individuals based on "persecution or a well-founded fear of persecution based on race, religion, nationality, membership in a particular social group, or political opinion." The Refugee Act of 1980, reauthorized in 1991, facilitated employment training and job placement, as well as English-language training, "in order to achieve economic self-sufficiency among refugees as quickly as possible." This law, combined with other legislation, made possible a variety of resettlement services to be offered to new Soviet Jewish immigrants. These services were primarily administered through the national network of Jewish organizations, including HIAS, local federations, and other local agencies.

The New York Association for New Americans (NYANA), for example, was responsible for resettling over 30 percent of the Soviet Jewish immigrants to have arrived in the United States since 1990. The second largest community of former Soviet Jewish immigrants resided in Los Angeles, with other large new immigrant groups settling in Chicago, San Francisco, Boston, and Miami. While short-term resettlement programs for former Soviet Jews won recognition both inside and outside the Jewish community, the immigrants' social and cultural integration into American Jewish life proved to be more of a challenge. After officially completing the resettlement process, relatively few sought affiliation with the Jewish community at large.

Unlike Russian Jewish immigrants from the former Soviet Union, Israelis residing permanently in the United States had, as a group, never been eligible for the package of resettlement services made available by the local Jewish community. Although seeking the bounty of America, Israelis were not recognized as refugees. Residing mainly in New York and Los Angeles, they succeeded in developing their own vibrant, Hebrew-speaking community life, separate from American Jews. While a number continued working for the organized Jewish community as supplementary, Sunday school, and day school teachers, in Jewish community centers, and summer camps, the majority found employment throughout all sectors of the economy. Many did not live in Jewish areas, and their children attended local American public schools.

A controversy with implications for Jewish philanthropy that arose within the social service field in this period concerned the large and increasing proportion of the Jewish émigrés from the Soviet Union who chose to settle in the United States rather than in Israel. The Hebrew Immigrant Aid Society (HIAS) extended to them the usual assistance it gives to Jewish immigrants. To this the Jewish Agency took exception on the ground that it was discouraging settlement in Israel. The two bodies reached an agreement as to procedure to be followed in Vienna, the principal staging point, whereby HIAS would deal with the émigrés only after they had declined the Agency's persuasions to proceed to Israel. Still the majority opted to settle in the United States, and the Jewish Agency continued its pressure on HIAS to withhold assistance. Meanwhile, the controversy reached back to the local Federations, and in a few cases they were reported to have declined to assist Russian Jews settled in their midst. Ultimately, Israeli Prime Minister Menahem Begin in 1980 presented a compromise plan to the directors of the Council of Jewish Federations (CJF). The CJF accepted the greater part of the plan but rejected a directive to HIAS that it assist only those émigrés with close relatives in the United States. Twelve months later HIAS acceded to further requests from the Jewish Agency to curtail its assistance to Russian émigrés, but by this time the flow from Russia had diminished to a trickle.

ZIONISM AND ISRAEL. The 1980s was a period in which the relationship between American Jews and Israel underwent measurable change, characterized by the disenchantment on the part of many American Jews with Israel's image and a willingness to publicly criticize Israel for adopting policies and actions perceived to be detrimental to itself or the Jewish people. Many identify the ascendancy of Begin and the rightwing Likud-led coalition government in 1977 as the beginning of this change. Begin's ideology and rhetoric, especially his desire to secure the borders of "Greater Israel," were viewed by many American Jews as jingoistic and provocative. His successor, Yitzhak Shamir, bore the same political ideology.

After nearly a decade of unflagging admiration and support, the aura surrounding the State of Israel began to dim. Research findings from this period indicate a steady decline in interest in Israel among American Jews, particularly among individuals under the age of 40. Nevertheless, it was also apparent that despite external circumstances, which could and did alter the American Jewish landscape in important ways, American Jewry's fundamental attitude to Israel was one of unconditional support. Put another way, the erosion of Arab intransigence over making peace with Israel, which exac-

erbated rifts in Israeli society, weakened the disposition of American Jews to sublimate or mask criticisms of Israeli policy. As the scholar Melvin I. Urofsky observed in this period, despite "deep divisions… over the wisdom of [the Begin government's] diplomatic and settlement policies" relations between American Jews and Israel were "strained yet still intact." Such an assessment could hardly have been made in the 1970s when it appeared the divisions referred to obtained mainly in intellectual circles but were not reflected in the alignment of organizations. With the passage of Israel's Golan Heights law, however, a new juncture was reached. Now, as Rabbi Alexander M. Schindler, chairman of the Conference of the Presidents of Major American Jewish Organizations reported, there was "no unanimity… among American Jewish leaders" on matters of Israeli policy.

In addition to the Likud government's extensive settlement program in the West Bank and Gaza Strip, other issues and events that led to this change included Israel's bombing of Iraq's atomic reactor in June 1981, the extension of Israeli law to the Golan Heights in December 1981, the bombing of Beirut and Israel's indirect role in the Sabra and Shatilla refugee camp massacres during the 1982 Lebanon War, the sale of arms to Iran prior to the Irangate scandal, Israel's military and commercial ties to South Africa's apartheid government, the emergence of the still unresolved and highly charged "Who is a Jew?" issue, and Israel's role as portrayed in the media during the Palestinian Intifada. Certain American Jewish intellectuals were among the most critical of Israel's policies and actions.

Especially upsetting from the point of view of American Jews, and the only issue to have brought about a direct confrontation between the American Jewish community and the government of Israel, was the revival of the "Who is a Jew?" controversy. Although the roots of the argument lay in internal Israeli political developments going back to the beginning of the state, a string of events reignited the crisis at the end of 1988 and brought about the direct involvement of American Jewish leaders. The two contenders for the Israel premiership, Yitzhak Shamir and Shimon Peres, after the general elections were angling for the support of ultra-religious parties who stipulated the condition that Israeli law would be changed to recognize as Jews only those who underwent conversion under the auspices of an Orthodox rabbi in accordance with *halakhah* (traditional Jewish law).

Employing a Washington, D.C.–style lobbying effort, American Jews flew to Israel and met personally with government ministers, members of the Knesset, academicians, heads of industry, and the arts. The professional and lay heads of federations and other major American Jewish organizations came to state emphatically that any change in Israeli law would bring about the spiritual and possibly the physical alienation of American Jews from the State of Israel. In exchange for other concessions, the religious parties demanding this amendment agreed not to insist on their demand. A new government led by the Likud party was formed and the "Who is a Jew?" law was not amended.

In a controversial March 1987 op-ed article that appeared in the *Washington Post* the Judaica scholar Jacob *Neusner wrote: "It's time to say that America is a better place to be a Jew than Jerusalem." In addition to concern over the general instability of the region and Israel's external and internal political dilemmas, Neusner was disappointed that the Jewish State had not proven to be the world center of Jewish spirituality, scholarship, art, or literature. The Jewish community in the United States, he felt, had equal claim to that title.

The psychological gap between American and Israeli Jews was experienced in both directions, particularly during the 1991 Gulf War. While American Jews identified with the threat posed to Israel to the point of experiencing personal anguish, Israelis reported feeling abandoned by American Jews. As noted in the *Jerusalem Report* in 1992: "From August 1990, when Iraq invaded Kuwait… through March 1991, Israel lost a full 500,000 tourists, as compared to the year before… most of the drop was among American Jewish visitors; tourism from Europe and Christian America remained more or less stable."

The start of large-scale immigration from the U.S.S.R. in 1989 and its continuation after the breakup of the Soviet Union in 1991 increased Israel's population by some 400,000 by 1992 and gave a significant boost to Israel-Diaspora relations. Many of the new Russian immigrants were academicians and scientists with backgrounds in applied research, as well as a number of other professionals and entrepreneurs. As a result of initiatives taken by Israel, attempts at economic partnership between both private and communal American Jewish sources and the Jewish state began to develop alongside traditional philanthropic projects. Sensitive to the negative effects on Israel-diaspora relations which would inevitably result from a string of business failures, American Jewish investors developed a broad range of carefully researched investment opportunities, from startup incubator schemes, to the privatization of government-run concerns, to creating new partnerships within large, established corporations. One example was the "strategic alliance model" developed by the Jewish community of Boston. This program was based on the principle of allocating about 20 percent of funds raised for Israel to help create partnerships between Israeli hi-tech firms and their Massachusetts counterparts.

At the outset of 1992, pro-Israel activists were torn over how to respond to the President George H.W. Bush's insistence on linking approval of Israel's request for $10 billion in loan guarantees from the United States to a complete freeze on the construction and expansion of Jewish settlements in the West Bank. Israel was requesting the guarantees in order to secure $10 billion of credit on the international loan market needed for the absorption of the recent large wave of immigrants from the former Soviet Union. Meanwhile, Israel's Prime Minister Yitzhak Shamir declared that none of the money secured through the loan guarantees would be used to support settlement expansion. However, as Shamir's detractors pointed out, including those within the American Jewish community, the

money would most likely be used to free funds from Israel's own treasury for support of West Bank settlement.

Liberal organizations, such as the American Jewish Congress, the Union of American Hebrew Congregations, and the Jewish community relations councils of Milwaukee and Detroit, supported the idea of a total freeze. Conservative groups, such as Americans for a Safe Israel and the Union of Orthodox Jewish Congregations of America, felt that to back the U.S. administration's demands would jeopardize Israel's future security. While Americans for Peace Now and the Jewish Peace Lobby condemned "the settlements" and publicly advocated a two-state solution to the Israeli-Palestinian controversy, other Jewish organizations such as the National Council of Jewish Women and the Zionist Organization of America, stood behind Israeli government policies and its application for the loan guarantees. AIPAC implemented a particularly vigorous public relations campaign over the issue. It was not until mid-August 1992, after Labor leader Yitzhak Rabin had succeeded Shamir as prime minister and announced a gradual halt to the construction of new West Bank settlements, that Israel and the United States announced an agreement on the basic principles that would allow the loan guarantees to proceed. Next, in a speech before B'nai B'rith, Bush announced he would recommend to Congress that it approve Israel's $10 billion loan guarantee request.

Jewish opinion of the Bush administration's overall record on Israel was mixed. On the one hand, the United States played a vital role in the May 1991 airlift operation of nearly 14,200 Ethiopian Jews to Israel in Operation Solomon. On the other hand, some American Jews resented the constraints placed on Israel by the United States during the Gulf War, which prevented Israel's air force from retaliating against Iraq for bombarding Israel with SCUD missiles. The relationship between the American Jewish community and the Bush administration ended rather poorly, mainly because of the loan guarantees struggle.

The return to power in 1992 of Israel's Labor party under the leadership of Yitzhak Rabin and the election that November of Democratic presidential candidate Bill Clinton ushered in a new era in Israel-American relations. As a result of these twin victories, American Jews were faced with a new situation. The government of Israel was now dovish instead of hawkish. Israel's new leaders were willing to negotiate for a settlement in far reaching terms, something their predecessors would never consider. Second, Israel's position towards the PLO confused many American Jews, who for decades knew the organization to be a ruthless terrorist group. One American Orthodox rabbi described the dilemma as a "psychological issue." "People have been told for twenty years the PLO is out of bounds," he explained. "You can't expect them to turn on a dime." Meanwhile, Clinton, who lacked George H.W. Bush's patrician background, was closer to the Jews generally and warmer to the Jewish state. The Clinton administration immediately embraced the peace process undertaken by the Rabin government, and it was felt that the tensions and strains that characterized recent American-Israel relations would now cease. Even so, a small but influential group of American Jewish public intellectuals spoke out against the policies of the new Rabin government and Clinton administration. These included, among others, *Commentary* editor Norman Podhoretz and former *New York Times* editor A.M. *Rosenthal. Podhoretz saw the peace process as a trap that, sooner or later, would lead Israel into a war in a diminished capacity.

Although the number of active pro-Israel American Jews was but a small percentage of the total Jewish population, both the Likud and Labor parties maintained supporters in the United States. The Labor party established a new organization, the Israel Policy Forum, to promote its policies. Its American-based Friends of Labor Israel, was set up outside the umbrella American Zionist Federation to raise funds for the party. Likud also had an American Friends organization and but continued to rely especially on the support of the mainstream Zionist Organization of America. Polls showed that over 60 percent of American Jews were more optimistic about the chances for peace in the Middle East as a result of Rabin's election.

Like most of the world, American Jews were surprised to hear in 1993 that secret talks taking place in Oslo between representatives of his government and the PLO had resulted in an historic agreement. According to its terms, Israel would hand over Gaza and Jericho where the Palestinians would create the first two autonomous self-rule areas. According to the *New York Times*, most American Jews reacted to the news with "a kind of hard-headed optimism, a feeling that recognition of the PLO and establishing relations with its leader, Yasser Arafat, [was] risky but promising." A minority felt that recognizing the PLO and its leader in spite of its record of terror was wrong.

On September 13, 1993, Rabin and Arafat were brought together on the White House lawn by President Bill Clinton to sign an accord of mutual recognition between Israel and the Palestinian Liberation Organization (PLO). A community survey conducted by the American Jewish Committee found that in the weeks following, some 90 percent of American Jews felt the Israel-PLO agreement to be a "positive development from Israel's point of view," with 57 percent favoring the establishment of a Palestinian state and 30 percent opposed. That summer, Rabin urged American Jewish leaders to complete the $1.2 billion Operation Exodus campaign intended to underwrite the resettlement costs of Jews from the former Soviet Union. No longer perceived as vulnerable or besieged, American Jews deployed the "Israel's Risks for Peace" campaign.

One of the most shocking news items of 1994, while ostensibly an internal Israeli affair, had a distinctively American Jewish angle. Early in the morning on the holiday of Purim, which fell on February 25, a Jewish physician and resident of the community of Kiryat Arba, entered the Cave of the Patriarchs in the adjacent city of Hebron and opened fire with an automatic rifle on a large group of Moslem worshipers. Twenty-nine Muslims died from their wounds and the phy-

sician, Dr. Baruch Goldstein, was killed on the spot by the enraged crowd. The fact that Goldstein was an American Jew was strongly emphasized in all media coverage of the event. American Jewish organizations, who swiftly and unconditionally condemned the massacre, took pains to distance Goldstein from the mainstream Jewish community. Nevertheless, Goldstein's deed raised the issue, both in Israel and the United States, of the seemingly disproportionate number of American-Jewish immigrants in Israel involved in extremist political groups such as Kach and Kahane Chai.

Israel's Deputy Foreign Minister Yossi *Beilin surprised Jews around the world, but particularly American Jews, with remarks he made before a WIZO convention held in Jerusalem in January 1994. Beilin claimed that the State of Israel was financially self-sufficient and no longer dependent on charity from Diaspora communities. Diaspora fundraising efforts, he argued, would be better directed towards local Jewish education. In reacting to Beilin's remarks, Rabin characterized them as "brainless," noting: "If Israel could not ask diaspora Jews for money, how could it ask the [non-Jewish] American taxpayer?"

In 1994, after more than four years, the absorption of 500,000 new immigrants, and nearly $900 million in aid, the United Jewish Appeal's Operation Exodus officially came to a close. Funds from Operation Exodus were used to help Jews immigrate to Israel from the former Soviet Union and Ethiopia. The campaign was launched in 1990, with an original three-year goal of $420 million needed for an estimated 200,000 immigrants. When 185,000 new immigrants arrived in 1990, the goal of the campaign was doubled. The $910 million actually raised, fell just short of the campaign's declared goal of $1 billion.

American Jews were shocked in 1995 by the assassination of Prime Minister Yitzhak *Rabin, who was murdered by Yigal Amir, a right-wing zealot, at a peace rally in Tel Aviv. Rabin's murder led to a series of major political shifts, including the election in 1996 of a Likud coalition under Binyamin *Netanyahu, an opponent of the Oslo process. The Netanyahu government agreed in principle to fulfill Israel's negotiated commitments, starting with the redeployment of Israeli troops from Hebron, but meanwhile insisted on the Palestinian Authority's full compliance with the terms of the Oslo agreement. As a result, the peace process now entered a period of protracted stagnation. Accusations of non-compliance were compounded by sporadic Palestinian violence and ultimately led in 2000 to a second Intifada (Palestinian uprising). The rapid deterioration in Israel-Palestinian relations resulted in widespread despair among the Israeli public and dampened the spirits of the American Jewish community. The crisis resulted in yet another dramatic shift on the Israeli political scene and the consequent victory in 2000 of Labor leader Ehud *Barak, a highly decorated war hero and former chief of staff. Despite the country's overwhelming support for Barak and his commitment to advancing the peace process, he lacked the political experience and steady hand of Rabin, his predecessor and role model. Moreover, the Palestine Authority under Yasser Arafat proved powerless if not unwilling to stem the tide of Palestinian terrorist violence directed at Israel, including the seemingly endless cycle of suicide bombings aimed at border checkpoints and Israel's major urban centers – much of which was clandestinely financed and supported by hostile Arab regimes in the region and the militant Hamas organization. Following a series of delicate and unsuccessful negotiations brokered by the Clinton administration between Israel and Syria, Barak turned his full attention to reaching a swift and final agreement with the Palestinians. Owing to numerous obstacles, Barak's efforts were, in practice, stillborn and he quickly lost his public support and his hold on power.

At the turn of the 20th century, the context for the Israel-Palestinian conflict underwent a shift to the right and a major sea change. Against the backdrop of the election of President George W. Bush in the United States, the landslide victory of Likud leader Ariel *Sharon in Israel, and the 9/11 attacks, Israel publicly adopted a new three-pronged strategy vis-à-vis the Palestinians. First, the new Sharon government sought to increase pressure on the Palestine Authority and drive forward its signed commitments to peace and security by exerting economic and political pressure on the Palestinian leadership, including the isolation of Yasser Arafat. Second, the Likud coalition, with the support of the Labor party, unilaterally initiated the redeployment of Israeli troops from the West Bank and Gaza Strip and, where necessary, forcibly removed Jewish settlers from settlements in the occupied territories. Finally, the government built a separation wall between Israel and the Palestinian lands – some of which was reconfigured after the Israeli Supreme Court determined certain sections of the barrier to be in violation of Palestinian rights – and in this way sought to ensure Israel's territorial integrity while safeguarding the country from further terrorist attacks and strengthening its hold on borders established since the June 1967 war, including its sovereignty over Jerusalem and the surrounding metropolitan region.

A striking result of this process was the transformation of American Jewry's attitude toward Sharon himself, once vilified by those on the American Jewish left and even many centrists as a dangerous right-wing fanatic, and now rehabilitated as a warrior-turned-elder statesman – much like Rabin before him. Indeed, American Jews proved largely supportive of Sharon's policies and diplomatic maneuvers, a combination that was, in essence, a continuation and extension of the semi-transparent strategy first implemented under Rabin a decade earlier. Having closely followed the waxing and waning of Israel-Arab relations in the recent past, a majority of American Jews responded favorably to Sharon's pragmatic and bold leadership which seemed to vouchsafe Israel's interests while neither ignoring the reality of the Palestinian situation nor extending the reach of the Jewish state in a way that exceeded its grasp. As noted in the memoir of Middle East envoy Dennis *Ross, chief peace negotiator in the presidential administrations of

George H.W. Bush and Bill Clinton and arguably the most significant American Jewish figure in U.S. diplomacy since Henry Kissinger, Sharon's approach was a pro-active and rational response to an ineluctable and historic dilemma faced by Israel which had evolved since the very establishment of the Jewish state in 1948.

> Partition was bound to happen at some point. For Yitzhak Rabin, who understood both the demographic and security arrangements for partition, his preference was to produce it through agreement with the Palestinians. But he was prepared to "separate" from the Palestinians if agreement was not possible. Prime Minister Sharon, though a pronounced opponent of building a separation fence when Yitzhak Rabin first proposed it in 1995 and Ehud Barak reintroduced it after the outbreak of the Intifada, has now become a proponent of both the fence and the concept of disengagement. Partly, he has been driven by the security reality: The fence around Gaza has proven effective in preventing suicide attacks into Israel from Gaza… Small wonder, therefore, that 83 percent of the Israeli public favors the building of a comparable fence or barrier on the West Bank… For Sharon and other leaders [on the Israeli right], the issue is no longer whether to build the fence, but where to do so… That is why Ehud Olmert has spoken about withdrawing from 80–85 percent of the West Bank unilaterally…

The congruence of the Rabin and Sharon pragmatic policies helps to explain why the Anti-Defamation League's *2005 Survey of American Attitudes toward Israel and the Middle East* found that 67 percent of Americans generally supported the Sharon government's policy of disengagement. As well, the American Labor Zionist group Ameinu conducted a separate poll in the same year which demonstrated that 62 percent of American Jews supported Sharon's plan for disengagement. "In the context of a peace agreement," the Ameinu report explained, "42 percent thought Israel should be willing to withdraw from most Jewish settlements in the West Bank – even though only 24 percent believe most Palestinians are willing to live in peace next to the Jewish state, and 70 percent believe the Palestinians will continue terrorist attacks even if a peace agreement is reached."

Since the Persian Gulf War of 1991, American Jews watched anxiously as Israel, the Palestinians, and the neighboring Arab countries entered new and uncharted territory. What was once unthinkable in the Middle East barely a few decades ago has become a matter of established precedent and each hopeful episode in the troubled Arab-Israeli peace process has in general been accompanied by an upswing in American Jewish support for Israel's bold diplomatic and political moves. Starting with the Madrid Peace Conference in 1991, where Prime Minister Yitzhak Shamir participated in unprecedented direct negotiations with Jordan, Lebanon, Syria, and the Palestinians and continuing with the Declaration of Principles in 1993, the Israel-Jordan peace treaty in 1994, and Interim Agreement with the Palestinians in 1995, and the Wye River Memorandum of 1998, American Jews have consistently supported the emergent Rabin-Sharon strategy-in-the-making. Following Sharon's sudden illness and departure from the political scene, it appears that Ehud *Olmert and a new generation of Israeli political leaders will continue on this path. To be sure, Israeli policies and methods frequently provoke considerable controversy among diverse American Jewish circles and American Zionist groups. Nonetheless, since the 1990s the majority of American Jews have consistently responded favorably to Israel's notion of "land for peace" and the ensuing prospects for a comprehensive solution to the Arab-Israel conflict. Today, it is widely believed that the issue of Israel's survival, which dominated much of the American Jewish agenda from 1967 to 1991, will soon be consigned to the past, like the Cold War itself.

Conclusion

> "American Jewish history weds together two great historical traditions: one Jewish, dating back to the Patriarchs, the prophets, and the rabbis of the Talmud, the other American, dating back to the Indians, Columbus, and the heroes of the Revolution. Bearing the imprint of both, it nevertheless forms a distinctive historical tradition of its own, now more than three centuries old. It is a tradition rooted in ambivalence, for American Jews are sometimes pulled in two different directions at once. Yet it is also unified by a common vision, the quest to be fully a Jew and fully an American, both at the same time. It is closely tied to Jews worldwide, and just as closely tied to Americans of other faiths. It is perpetuated generation after generation by creative men and women, who grapple with the tensions and paradoxes inherent in American Jewish life, and fashion from them what we know as the American Jewish experience – a kaleidoscope of social, religious, cultural, economic, and political elements that makes up the variegated, dynamic world of the American Jew."
>
> Jonathan D. Sarna, *The American Jewish Experience* (1986).

It is, perhaps, a commonplace observation that almost any statement made about the Jewish condition in North America and its opposite are both true. On the one hand, much of the data collected on American Jews in the past quarter century reveals high levels of apathy, assimilation, and indifference to Jewish values and observance. At best, no more than 50 percent of the American Jewish population in this period has been directly involved in any form of organized communal or religious life. At the same time, the general opening up of American society since the mid-20th century for all minorities contributed significantly to the opening up of American Jewish life. Merit and achievement have generally taken precedence over other factors and enabled Jews to rise quickly in a variety of professions, especially those requiring advanced academic training. In fact, never before in the history of Jewish civilization has there been a Jewish community with more affluence, influence, and access to the highest levels of government, business, and the professions. Virtually, no barriers exist at the present time to the most elite levels of American business, law, or government. Nor have there ever been so many American Jews involved in such a variety of well funded Jewish-sponsored communal frameworks, including hospitals, social welfare agencies, retirement homes,

day schools, summer camps, Israel programs, college-level studies in Judaica, and so on. In a word, American Jewish life is arguably one of the most robust voluntary and self-sustaining ethnic-communal frameworks in contemporary American society.

Today, the American Jewish community covers a continent with numerous major communities of substantial numbers as well as hundreds of smaller-sized communities consisting of from a handful to several hundreds of families. The last one hundred years have witnessed the wide scale migration of the American Jewish population from inner city ghettos to vast sprawling suburban areas and back again to many center-city now-gentrified neighborhoods. From the Northeast, where almost half the total Jewish population once resided in New York City, there has been a massive relocation to the sun belt, where communities such as southern Florida and southern California now boast populations of more than half a million Jews each, most of whom have settled there in the past 50 years.

With tap roots in centuries of Jewish history and top roots in the American experience, contemporary American Jewry presently stands at a crossroads. Free to participate in the social, religious, and political fabric of American life as no other western Jewry before it, American Jews – individually and collectively – can decide to strengthen their communal bonds or loosen them, to shore up the larger community's sense of cohesion or allow it to dissipate. As the historical record suggests, the antipodes of engagement and disengagement have long demarcated much of the American Jewish experience. But it is also evident that American Jewry has emerged from its history in the New World largely intact and enriched. In each phase of its development, American Jewry has discerned possibilities and created opportunities for negotiating the delicate balance of modern life in an open society – that is, calibrating oneself and one's community to the requirements of living as a Jew *and* as an American. This tension is arguably a fundamental component of life in a pluralistic democratic society.

It is not the task of this study to predict "Wither American Jewish life?" or determine whether it is "good for the Jews or bad for the Jews" to sustain their tribal identity in America of the 21st century. These are, to be sure, vitally important questions and they have been raised here owing to their centrality in the American Jewish public arena. But the "answers" to such questions, which surely warrant serious and thoughtful deliberation, go well beyond the scope of an historical analysis such as this. It is clear, however, that American Jewry is a dynamic and multidimensional creature with considerable intrinsic talents and material resources. Possessed of the capacity to enrich Jewish life even as it enlarges America's bounty, American Jewry boasts a remarkable history of success and legacy of achievement. How present and future generations of American Jews will be informed and shaped by this inheritance and will, in turn, seek to determine their destiny remains to be seen.

American Antisemitism in Historical Perspective

In 1811 Rabbi Gershon Mendes Seixas of New York wrote that "The United States is, perhaps, the only place where the Jews have not suffered persecution, but have, on the contrary, been encouraged and indulged in every right of citizens." While it is true that American antisemitism never attained the virulence and baneful consequences of European antisemitism, it is equally clear that an undercurrent of anti-Jewish prejudice, sometimes open, more often subtle, has existed throughout the history of the United States.

The early colonial settlers in America brought with them the old stereotype of the Jew as the mysterious outsider, heretic, and despoiler. These prejudices, however, were rarely translated into direct anti-Jewish actions. The very first Jewish settlers in New Amsterdam in 1654 did face an immediate threat when Peter Stuyvesant, the Dutch governor, attempted to expel them. Overruled by the Dutch West India Company, Stuyvesant was forced to grant them the right of residency, and by 1657 they were granted the status of burghers. Nevertheless, the Jews remained in effect second-class burghers even after the British took control of New York. Although economic rights were secured by the end of the seventeenth century, political rights were not fully granted throughout the colonial period.

The need for immigrants, particularly those with economic skills, and the growing ethnic and religious diversity of the American colonies were powerful factors counteracting traditional prejudices. Still, each colony had an established church and, consequently, Jews, Catholics, and Protestant dissenters were all subject to discrimination. In 1658 Jacob Lumbrozo, a physician, the first Jewish settler in Maryland, was charged with blasphemy in that colony, but the prosecution was never completed. In no colony, however, were Jews physically harmed for religious motives, as were Quakers and Baptists, and no 18th-century law was enacted for the sole purpose of disabling Jews. Colonial American Jewry achieved a considerable degree of economic success and social integration, and intermarriage was frequent by the mid-18th century.

Anti-Jewish prejudice during the period from independence until the Civil War, while present in the form of the persistent Shylock image and related stereotypes, did not seriously impinge on the rights of the relatively small Jewish community. The 1840s and 1850s saw a fairly large immigration of German Jews, but by 1860 there were still fewer than 200,000 Jews in a population of 30,000,000. The invisibility of the Jews, the availability of other targets of discrimination, the all-absorbing slavery issue, and the rapid economic growth of the country combined to reduce the possible development of any real group antagonism based on latent prejudice. The Know-Nothing movement of the 1850s and other nativist phenomena of the pre-Civil War era concentrated their ire on Catholics, not Jews.

Still, there were occasional outbursts of antisemitism. The political strife between Federalists and Republicans at the turn of the 18th century produced a noticeable outpouring of

slurs upon Jews who were Jeffersonian partisans. A Federalist in New York condemned the local Democratic-Republican Society by saying that they all seemed to be "of the tribe of Shylock." In 1809 Jacob Henry was at first refused a seat in the North Carolina House of Commons to which he had been elected, but was eventually seated by a legal subterfuge. Mordecai M. Noah, one of the outstanding Jewish figures of this period, was recalled in 1815 by Secretary of State James Monroe from his post as U.S. consul in Tunis because his faith allegedly interfered with the performance of his duties. In 1820, the editor of a prominent magazine, the *Niles Weekly Register*, wrote that the Jews "create nothing" and act "as if they had a home no where." Uriah P. Levy, an officer in the United States Navy, was subjected to several courts-martial, partly due to anti-Jewish prejudice. Jews were concerned also with questions of church-state relations, including the vexing problem of public school education. Yet these incidents and remarks cannot be construed as evidence of significant antisemitism; Henry was seated, Levy was acquitted and restored to rank, and the editor of the *Niles Weekly Register*, while critical, urged equal rights for Jews.

The first substantial and open antisemitic agitation in the United States was evidenced during the Civil War (1861–65). The economic dislocations and frayed tempers of this critical period released prejudices that had slumbered below the surface. Both in the North and in the South, Jews were accused by some newspapers and political leaders of aiding the enemy, smuggling, profiteering, draft dodging, and speculating. Almost every political opponent of Judah P. Benjamin, the Confederate secretary of state, made unflattering references to his Jewishness. Among the prominent figures who displayed antisemitic tendencies were Generals William T. Sherman and Benjamin F. Butler, Parson William Brownlow, Congressman Henry S. Foote, and Senator Henry Wilson. The major antisemitic incident of the war originated with General Ulysses S. Grant. In what has been called the most sweeping anti-Jewish regulation in all American history, Grant, in his General Order No. 11, December 17, 1862, ordered the expulsion of all Jews "as a class" within 24 hours from the Department of the Tennessee, comprising parts of Kentucky, Tennessee, and Mississippi. However, President Abraham Lincoln directed the revocation of Grant's order.

The unpleasant episodes of the Civil War years should not obscure the fact that the Jews of the United States were perhaps freer than Jews had ever been since their dispersion from Palestine. No price had been exacted from them in return for complete political emancipation, and the community flourished economically and religiously. Official or governmental discrimination on the European model was absent and systematic antisemitism did not exist. Beginning with the 1870s, however, antisemitism in the form of social discrimination was increasingly evident, and was accompanied by the development of ideological antisemitism. The refusal of accommodations to Joseph Seligman, a prominent New York Jewish banker, at the Grand Union Hotel in Saratoga Springs in the summer of 1877 drew widespread adverse comment in the public press, but it symbolized a growing tendency toward the exclusion of Jews from areas involving leisure-time facilities. Summer resort advertisements including statements such as "We prefer not to entertain Hebrews" were common after the 1880s. From the resorts, social discrimination worked back into the cities. Important social clubs, such as the Union League Club, barred Jewish members. Private schools were closed to Jewish children, and, in general, Jews were not welcome at any institution or association that conferred prestige and status. Behind the groundswell of social discrimination lay the profound social changes of the "Gilded Age" of the late 19th century. The older, elite white Protestant groups faced a growing struggle for their social status and power as their security was threatened by rapid industrialization and the rise of new middle- and upper-class elements, whom they regarded as crass nouveaux riches. Social discrimination thus served the dual purpose of keeping Jews "in their place" while enhancing and defining the social status of the older elite and the newer non-Jewish wealthy class.

During the turbulent and xenophobic decades that spanned the 19th and 20th centuries, an ideological antisemitism began to appear as a by-product of American nativism and in response to the perceptible cultural gap between the older population and the massive numbers of Jewish immigrants from Eastern Europe. Men like Henry Adams, representing Eastern patrician intellectuals, and Ignatius Donnelly, representing Western agrarian radicals, while far apart in basic orientation, both viewed the Jew as conniving and grasping, and as the cause and symbol of their discontent. The anti-Jewish stereotype which emerged clearly during this period contained elements of the earlier Christian antisemitism, the Shylock image, the wielding of undue power through manipulation of gold, and an identification of Jews with the hated, feared city.

From 1881 to 1910, over 1,500,000 East European Jews arrived in the United States, and by 1925 there were close to 4,000,000 Jews in the country. Their very presence, the competition engendered by their rapid rise in economic status, and their pressure to achieve social integration lent credence to the anti-Jewish stereotype, sharpened antisemitic feelings, and confirmed a widespread system of social discrimination. For their part, Jews did not accept antisemitism without protest, especially when it appeared to involve public matters. Led by the older German Jewish community, American Jewry formed self-defense organizations, including the American Jewish Committee in 1906, the Anti-Defamation League of B'nai B'rith in 1913, and the American Jewish Congress in 1920.

One of the most serious issues faced by the Jewish community during the first quarter of the 20th century was the movement for restriction of immigration to the United States. Although there was no direct antisemitism reflected in the legislation resulting from restrictionism, it was clear that the intellectual fathers of the movement, such as Henry Cabot Lodge, Prescott Hall, John R. Commons, Henry Pratt Fair-

child, and Edward A. Ross, considered Jewish immigration deleterious to the welfare of the nation. Ross, for example, predicted "riots and anti-Jewish legislation" if unrestricted immigration continued. Madison Grant, a thoroughgoing racist, condemned the Jews in his book *The Passing of the Great Race* (1916) for mongrelizing the nation. The campaign for immigration restriction reached its height after World War I when the nation reacted with horror at the prospect of unlimited immigration. Burton J. Hendrick, a well-known journalist, while disclaiming antisemitism, wrote a widely publicized attack on Jewish immigration in 1923, as did Kenneth Roberts, a popular novelist. The ultimate result of the restrictionist movement – the U.S. Immigration Act of 1924 – established a national origins quota system that discriminated heavily against South and East European immigration. Although antisemitism was not the primary motivation for restrictionism, it was a useful propaganda weapon and, subtly, became enshrined in American legislation for over 40 years.

The first-class citizenship of American Jews was indirectly challenged during the late 19th and early 20th centuries by the general refusal of Tsarist Russia to issue visas to American Jews and its mistreatment of those who did receive them. American Jewry, led by Jacob H. Schiff and Louis Marshall of the American Jewish Committee, argued that tacit acceptance of this situation by the U.S. government constituted a slur on its full citizenship. Diplomatic pressure having failed, a determined and successful campaign was instituted in 1911 for the unilateral abrogation of the Russo-American Treaty of 1832. To Louis Marshall the victory symbolized "the removal of the last civil disabilities to which the Jews of this country have been subjected."

In 1913, however, American Jews were shocked when Leo Frank, a New York Jew who had relocated in Atlanta, Georgia to become manager of a pencil factory, was convicted of the slaying of one of his female employees. The evidence against Frank was flimsy and the trial, which unleashed fantasies of Jewish ritual murder and garnered widespread public attention, showcased the darkest racist and antisemitic tendencies of white southern Christian society. In the event, the circumstances surrounding Frank's trial and conviction reflected came to be viewed as a transparent example of mob antisemitism. In 1915, after the governor of Georgia stayed Frank's death sentence, a lynching party abducted Frank from jail and hanged him.

The emergence of overt antisemitism in the Frank case was a harbinger of an upsurge of anti-Jewish feeling, expression, and actions during the 1920s. The hatred of Jews was rooted both in older stereotypes and renewed economic antisemitism which was an element in the outlook of some of the Populists, the movement of protest against capitalism and monopoly that prevailed in southern and western states at the turn of the century. Jewish capital was identified with Wall Street financiers and oppression by the financial system of farmers and small businessmen. Some of the then young Populists, such as the later Senator Burton K. Wheeler from Montana, were to remain anti-Jewish on such economic grounds into the 1930s. Antisemitism did not involve all of Populism, but what there was of such prejudice represented its only appearance in American history within an important left-wing movement.

The artificially stimulated unity of World War I cracked under the impact of postwar disillusionment, and a sense of imminent danger from internal and external subversive forces seized the nation. The old way of life appeared to be disappearing under the onslaught of the foreign born, the city, the new moral relativism, and liberal religion. Many Americans adopted ideologies stressing coercive political and religious fundamentalism and sought scapegoats for the ills, real and imaginary, that beset them. Antisemitism was part of this reaction. Although incidents of antisemitism during America's participation in World War I were sporadic, a new wave of nativist nationalism gripped the land. Many German Jews, including America's elite Jewish patricians of Austrian and Bavarian extraction, outwardly disassociated from their central European past. Meanwhile, foreign radicalism, often associated with East European Jews, became the chief target in the postwar Red Scare of 1919–20. This alleged Jewish-Bolshevik nexus remained a permanent part of antisemitic propaganda.

The concern of Jews over these charges was heightened considerably by the appearance of an American edition of the spurious *Protocols of the Elders of Zion* in 1920, followed by a work based on it, *The Cause of World Unrest*. The basic message of these volumes was that the Bolshevik Revolution was Jewish in origin and part of an international Jewish conspiracy to destroy Christendom and dominate the world. Discredited by serious investigators, these libels nevertheless remained alive. In May 1920 The *Dearborn Independent*, a magazine owned and published by Henry Ford, the automobile magnate, launched an antisemitic propaganda campaign without precedent in the United States which lasted, with varying intensity, for almost seven years. Charging American Jews with a plot to subvert traditional American ways, Ford's propaganda found acceptance in rural areas and small towns, but met a negative reaction in the large urban areas and among leading American policy and opinion makers. Notwithstanding such condemnations as that of January 16, 1921, when a declaration, signed by 119 leading Americans, headed by President Woodrow Wilson and former president William Howard Taft, denounced the anti-Jewish calumnies, Ford's campaign continued unchecked until in 1927, under pressure of an unofficial consumer boycott and several lawsuits, Ford issued a public apology through Louis Marshall, head of the American Jewish Committee. However, the *Protocols* and *The International Jew* persisted as staple items in the arsenal of American antisemitism in succeeding decades. The stereotype of the international Jewish banker-Bolshevik had been superimposed on the earlier stereotype of anti-Christ, Shylock, and Rothschild.

The most significant expression of American nativism during the 1920s was the spectacular revival of the Ku Klux

Klan which, at its height in 1924, counted over 4,000,000 members in all parts of the country. Although its primary targets in the defense of "one hundred percent Americanism" were Catholics and blacks, Klan leaders in their propaganda also included Jews as one of the chief obstacles to the preservation of the "real America." Thus, the Klan of the 1920s was the first substantial, organized mass movement in the U.S. that utilized antisemitism. Politically ineffective except as an adjunct to the immigration restriction movement, the Klan never proposed a specific anti-Jewish program, but sporadic boycotts of Jewish merchants and similar harassments did occur before the collapse of Klan power in the late 1920s.

Social discrimination reached new heights in the 1920s as Jews continued to be the most swiftly rising ethnic group in American society. Although Jewish leaders had obtained passage of a civil rights statute applying to places of public accommodation in New York in 1913, and subsequently in other states, exclusion of Jews from summer resorts and hotels continued unabated. Particularly galling to upper-class Jews was their exclusion from social clubs, both of the city and country types. As Jews began to leave the crowded immigrant quarters of the large cities, they tended to settle in concentrated areas, partly in response to residential discrimination. Jews with high incomes found themselves unwelcome in the fashionable sections of the cities and in many suburban developments.

The form of social discrimination that concerned Jews most directly occurred in higher education, which they sought in larger numbers and earlier than any other immigrant group as the key to economic and cultural advancement. Eastern colleges in particular were faced with increasing waves of Jewish students and reacted by establishing quota systems under a variety of guises. Once admitted, Jewish students often faced social aloofness and resistance, and responded by the formation of Jewish fraternities. Educational discrimination became a national issue in June 1922 when A. Lawrence Lowell, president of Harvard College, announced that Harvard was considering a quota system for Jewish students. Jewish leaders reacted strongly to this open evidence of prejudice, and Lowell's proposal was rejected by a Harvard faculty committee in April 1923. Defeated in its most blatant form, the quota system survived at Harvard and at most other leading colleges indirectly through various underhanded techniques. In the meantime, Harvard itself would nonetheless come to boast a distinguish cohort of Jewish alumni who later assumed national prominence as jurists, physicians, scholars, and business leaders including Louis D. Brandeis, Felix Frankfurter, Horace M. Kallen, Walter Lippman, Julian W. Mack, and Harry Wolfsohn.

Jews encountered considerable resistance as they attempted to move into white-collar and professional positions. Employers increasingly specified that Christians were preferred for office, sales, and executive positions. Banking, insurance, and public utilities firms were in the forefront of anti-Jewish prejudice. In medicine, the most ardently desired profession for Jews, there was a steady decline in the proportion of Jewish applicants accepted to medical schools during the 1920s and 1930s. In addition, Jewish doctors faced considerable difficulties in securing internships and staff positions in hospitals. Law schools did not discriminate against Jewish applicants, but Jewish lawyers were generally not accepted into large, well-established firms. Jews increasingly entered the teaching profession, especially where open, competitive examinations were required, but they were virtually excluded from faculty positions in American universities until after World War II.

Antisemitism in the form of social discrimination continued during the 1930s, but the chief distinction of this decade was an upsurge of ideological and politically motivated antisemitism. The combined impact of the Great Depression, the hysterical hatred of opponents for President Franklin D. Roosevelt, and the triumph of Nazism in Germany produced an outpouring of antisemitic propaganda and scores of antisemitic organizations in the United States. The major themes of this agitation were drawn from reprints of *The Protocols* and Henry Ford's *The International Jew: The World's Foremost Problem*, repeating the old charges of a Jewish international conspiracy, to which was added alleged Jewish responsibility for the depression and Jewish control of the Roosevelt administration. Nazi-inspired antisemitism was disseminated by such groups as the Friends of New Germany and the German-American Bund. The latter never achieved wide membership and was discredited when its leader, Fritz Kuhn, was convicted of embezzlement. More serious was the revival of native American antisemitism of the fundamentalist, pseudo-agrarian type. Among the major figures were William Dudley Pelley, organizer of the Silver Shirts, Gerald Winrod, Gerald L.K. Smith, Gerald Deatherage and the Knights of the White Camelia, and Major General George van Horn Moseley.

The most potentially dangerous antisemitic leader of the 1930s was Charles E. Coughlin, a Roman Catholic priest and an opponent of the New Deal. Coughlin, whose weekly radio broadcasts reached millions of listeners, launched an open antisemitic campaign in 1938. His magazine, *Social Justice*, reprinted *The Protocols* with Coughlin's commentary placing responsibility for the world's plight on the Jews. Street riots and disturbances occurred when vendors sold his publication in the large cities. Coughlin was supported in his efforts by some official Catholic publications, including the *Boston Pilot* and the *Brooklyn Tablet*. The organizational expression of this predominantly Irish Catholic version of antisemitism was the Christian Front, led by Joe McWilliams, which held street-corner meetings and sponsored boycotts of Jewish merchants.

The approach of World War II in the late 1930s saw the formation of a powerful isolationist movement in the United States. The America First Committee, organized in 1940, attracted antisemites to its banner. At an America First rally, on September 11, 1941, Charles A. Lindbergh, hero of American aviation, called the Jews the most dangerous force pushing the United States into war. Although his speech was followed by the protest resignation of the more liberal members

of the committee, Lindbergh and the conservative faction persisted in their propaganda. Similar remarks were heard on the floor of Congress from such isolationist senators as Burton K. Wheeler and Gerald Nye. After the attack on Pearl Harbor and the entrance of the United States into the war, open antisemitic agitation declined. The tensions of the war years, however, stimulated a considerable amount of antisemitic sentiment. In 1944, for example, a public opinion poll showed that 24 percent of the respondents still regarded Jews as a "menace" to America and one-third to one-half would have supported a hypothetical countrywide antisemitic campaign. The fate of European Jewry appeared to have little impact on the prejudices of the American public.

The noisy antisemitism of the 1930s did not seriously endanger the American Jewish community, although it created much anguish and discomfort. The prevailing political traditions, the participation of the Jews in the New Deal alliance of ethnic groups, the inability of the antisemites to unite, self-defense and interfaith activities, and the intellectual discrediting of racism were all factors in preventing a potentially dangerous situation from materializing.

After 1945 antisemitism in the United States did not assume the ideological strength it had achieved in the preceding decades. Direct anti-Jewish agitation after World War II was limited, for the most part, to isolated fringe groups that were declining in number. Among the active exponents of antisemitism were such individuals and groups as the Columbians, the miniscule but vociferous American Nazi Party, the National Renaissance Party, and such publications as Gerald L.K. Smith's *The Cross and the Flag* and Conde McGinley's *Common Sense*. Much more threatening from the Jewish viewpoint was the persistence and growth of ultraconservative groups that officially denied antisemitic proclivities but provided a rallying point for many who were inclined to antisemitism. Significantly, however, the anti-Communist crusade initiated by Senator Joseph McCarthy in the early 1950s, while receiving widespread popular support, never attacked Jews as such.

Political antisemitism has shown few signs of strength in the post-World War II period and there have been only sporadic antisemitic episodes. There has been a noticeable decline in the system of social discrimination that prevailed in the United States between the 1880s and the 1950s. Notwithstanding a series of bombings of synagogues in the American south in the early 1950s, American Jewry in the 1950s and 1960s attained a high degree of behavioral acculturation, economic affluence, and educational achievement. The declining hostility to the Jews, their absorption into the dominant middle-class suburban society, the disreputability of openly avowed prejudice, continued economic prosperity, and the role of government in fostering major civil rights legislation have combined to produce a diminution in social antisemitism. In 1945 the president of Dartmouth College openly admitted and defended a quota system against Jewish students; 20 years later Jewish students comprised 25 percent of the student body at the prestigious Ivy League universities. Discrimination in admission of Jews to medical schools ended in the 1950s. In the same decade, Jewish students increasingly choose careers in such fields as engineering, architecture, science, which in the 1930s were highly discriminatory. By the late 1960s Jewish professors constituted over 10 percent of the faculties in the nation's senior colleges. At this juncture, surveys of discrimination by city and country clubs and by resorts showed a marked decline in the proportion excluding Jews. Nevertheless, subtle forms of social antisemitism persisted, especially in what came to be known as "executive suite" discrimination. Thus, in the 1970s, while Jews constituted 8 percent of the college-trained population in the United States, they comprised less than ½ percent of the executives of America's major companies or presidents of American colleges.

The American Jewish community was deeply concerned with problems of church-state relationships at mid-century. Occasionally, as in the strong public reaction to the Supreme Court's decision in the Regents prayer case of 1962 in which public school prayers were declared unconstitutional, antisemitic overtones were apparent.

Jewish participation in the civil rights movement of the 1950s and early 1960s brought charges from Southern extremists of attempts to "mongrelize" and "Communize" America. In the late 1960s the shift in the black community to greater militancy, the growth of black nationalism, and the emphasis on "black power" generated considerable friction in black-Jewish relations. Although surveys indicated that antisemitism among the mass of black Americans was no greater, and perhaps less, than that existing among white Americans, and although moderate black American leaders condemned antisemitism, continued inter-group conflict seriously disturbed American Jewry and influenced black-Jewish relations in the late 1960s.

Despite conflicting evidence, public opinion surveys conducted in the United States during the decades after World War II generally documented a substantial decline in antisemitic attitudes. Whereas 63 percent of the American public attributed "objectionable traits" to the Jews as a group in 1940, only 22 percent felt this way in 1962. A continuation of this trajectory was ascertained in surveys conducted by the Anti-Defamation League in the mid-1980s, including a 1986 study in which 82 percent of respondents characterized their attitude toward Jews as "favorable and warm." Meanwhile, four Roper polls in the 1980s demonstrated that only 7 or 8 percent of Americans believed Jews possessed "too much power." Further evidence of antisemitism's decline – apparently a reflection of a larger generational and societal pattern – was discerned in a 1992 Anti-Defamation League study that found a correlation between the intensity of antisemitism and access to formal education. Thus in comparison to one-fifth of survey respondents under the age of 39, two-fifths of those over 65 scored high on the survey's antisemitic index. This contrast was amplified by the finding that among those possessed of such attitudes 17 percent were college graduates

compared with 33 percent who had only a high school education or less.

For most of the 1970s antisemitism in the more restricted sense was a matter of apprehension as much as of actuality; but by 1981 the feeling was general among those active in community relations that antisemitic incidents were on the increase. Fears that the oil embargo imposed by the Arab states after the Yom Kippur War would lead to anti-Jewish feeling did not materialize. Propaganda directed against Jews as such has continued all along, but it has been the work of a lunatic fringe. The lifting of barriers that at one time prevented the advancement of Jews was exemplified in the public sector by the appointment in 1973 of Henry Kissinger as secretary of state and in the private sector by the appointment in 1974 of Irving Shapiro as chairman of Du Pont.

On the other hand, American Jews viewed attacks on Zionism in the 1970s by the New Left and militant blacks as a new manifestation of antisemitism. Added to the turbulence and demoralization of the inner cities in this period, which frequently pitted Jews and blacks against each other on the local scene, anti-Zionism on college campuses exacerbated inter-communal tensions. The situation reached a climax in 1979 when Andrew Young was forced to resign his office as U.S. Ambassador to the United Nations because of contacts with the Palestine Liberation Organization and leaders of important black organizations made a pilgrimage to the Middle East, during the course of which they met with the leaders of the PLO.

One incident from this period may be singled out as an illustration of the tenacity of antisemitism. Speaking to the Duke University Law School in 1974, General George S. Brown, chairman of the Joint Chiefs of Staff, spoke about an alleged Jewish influence in the U.S. and said: "It's so strong you wouldn't believe it … We have the Israelis coming to us for equipment. We say we can't possibly get the Congress to support a program like that. They say 'Don't worry about Congress. We'll take care of the Congress.' Now this is somebody from another country, but they can do it. They own, you know, large banks in this country, the newspapers, you just look at where the Jewish money is in this country." The reaction was strong and President Gerald Ford personally reprimanded the general. Brown himself apologized, but there were continued calls for his removal. The Senate Armed Services Committee rejected a proposed enquiry into General Brown's fitness for office and he was retained.

Events during the 1980s seemed to indicate that antisemitism in America was operating at two levels. In 1981 a public debate arose over the sale of AWACS planes to Saudi Arabia, to which Israel strongly objected. A public opinion survey at the time reported a substantial increase in negative feeling towards the Jews on two issues: 23 percent of Americans (as opposed to 13 percent in 1964) thought that Jews had "too much power in the U.S."; 48 percent (as opposed to 39 percent in 1964) believed that "Jews are much more loyal to Israel than to America." Nonetheless, it also found a general decrease in discriminatory antisemitism in comparison to previous decades. This type of antisemitism was based on discriminatory practices in the workplace, in schools, especially colleges and universities, at country clubs and in upper-class communities. In July 1981, a survey conducted on behalf of the American Jewish Committee reported that antisemitism of this nature had in fact declined significantly over a 17-year period.

The success of Jews within American academia, at one time a domain known for restrictions against Jews and other ethnic minorities, was equally impressive. In the 1980s, Jews became increasingly visible as the presidents of Ivy League and other elite American universities and colleges. By the decade of the 1990s Richard Levin, Harold T. Shapiro, and Neil Rudenstine had become the presidents of the American academic pantheon, Yale, Princeton and Harvard, respectively. Interestingly, the latter had at one time in the 20^{th} century maintained a strict quota on Jewish student enrollment. For many, all of this was indisputable proof that previously unbreachable social barriers in America had finally been torn down.

Such achievements notwithstanding, antisemitism in America had not disappeared. In 1987, after a five-year downward trend, the Anti-Defamation League's annual "Audit of Antisemitic Incidents" reported an increase in isolated incidents of antisemitic vandalism. The latter threat was realized in the 1984 machine-gun slaying of Denver radio talk show host Alan Berg by a white supremacist organization calling itself "The Order." However, most antisemitic acts in this category were expressed through vandalism and damage to property, including swastika daubings on synagogues, Jewish homes, storefronts, and Jewish cemetery headstones, the slashing of automobile tires, the breaking of windows, threatening telephone calls, arson, and bombings. Not until 1992 did the Anti-Defamation League report an 8 percent drop in antisemitic incidents, the first decline in six years. A report issued by the Anti-Defamation League stated that 20 percent of American adults are "hard-core" antisemites and an additional 39 percent "mildly" antisemitic, a group equaling approximately 100 million Americans.

From approximately the middle of the 1990s additional attention was paid by the media to groups whose statements and activities threatened the sense of well-being and security of American Jews, blacks, and other minorities. These included certain Christian fundamentalist groups, racist organizations such as neo-Nazis groups, skinhead gangs, the Aryan Nation, and The Order. Anti-Jewish statements or activities disguised as politically legitimate anti-Israel expressions originated in either politically far left circles, the Arab American community, or black Muslim groups.

Election campaigns focused the country's attention on two formerly relatively unknown personalities, Lyndon La Rouche and David Duke. La Rouche was a local left-wing politician in the 1970s and 1980s who changed his world outlook and ran three times as a marginal right-wing presidential candidate, a purveyor of Communist and antisemitic con-

spiracy theories. In 1989, La Rouche was sentenced to 15 years in federal prison for fraud and tax evasion. David Duke was a former grand wizard of the Knights of the Ku Klux Klan and the leader of the National Association for the Advancement of White People. In 1988, Duke ran as a presidential candidate on the slate of the neo-Nazi Populist Party. At the beginning of the following year he narrowly won a seat in the Louisiana state legislature. In December he announced his intention to run as a Republican for the U.S. Senate. He was strongly denounced by both the Republican Party and President George Bush. Although Duke lost the election, his relative popularity among Southern white voters and others raised considerable concern among Jews and non-Jews alike.

To the surprise of many observers, the well-publicized Wall St. "insider" scandals of 1986, among whose key figures were extremely wealthy Jewish businessmen, did not result in an appreciable rise in antisemitic or anti-Israel feelings among the American public. The principle figures included Ivan Boesky and Michael Milken, both of whom received prison sentences.

Nor was there any general rise in antisemitism attributable to the Jonathan Pollard affair. This dramatic real-life spy episode, which stunned the American Jewish community, and had direct, albeit short-term, implications for U.S.-Israel diplomatic relations, went almost unnoticed by most Americans. It served as the most dramatic and poignant example to date of the dual loyalty issue to which the organized American Jewish community is sensitive. Pollard, who served as a civilian intelligence analyst for the U.S. Navy, was arrested by the FBI in 1985 and charged with providing Israel with classified security information involving "scientific, technical and military" data, specifically intelligence information on Arab and Soviet weapons development. Pollard's spying and the punishment he received, a life sentence in a U.S. federal prison, aroused widespread and heated debate, but the controversy was mainly limited to Jewish circles.

Nor did the 1986 Irangate, or Iran-Contra, Affair result in any perceptible increase in antisemitism. The possibility arose from the role Israel played in this U.S. government scandal. In response to a secret request from the Reagan administration, Israel's government under then Prime Minister Shimon Peres supplied American-made arms to Iran. The profit from the sale was diverted through a Swiss bank account belonging to Contra rebels fighting the leftist Nicaraguan government. Israel officially denied handling the funds for this covert operation that was illegal according to U.S. federal law.

American Jews remained relatively sheltered throughout the 1980s from acts of international terror related to the conflicts in the Middle East, but there were two dramatic exceptions. The first was the hijacking in 1985 by members of the Palestine Liberation Front of the Italian pleasure ship *Achille Lauro* traveling between the ports of Alexandria and Ashdod. During the episode the terrorists, who were led by Palestine Liberation Organization faction head Mohammed Abu al-Abbas, killed a 69-year-old disabled American Jewish tourist, Leon Klinghoffer, who was shot and thrown overboard along with his wheelchair. The second exception was the assassination of Rabbi Meir Kahane on American soil. Kahane, founder of the American Jewish vigilante group the Jewish Defense League (JDL), immigrated in 1975 to Israel where he established the extreme right-wing anti-Arab political party Kach. He was elected to Israel's Knesset, serving from 1984 to 1988, and in 1990 was shot dead at close range inside a Manhattan hotel minutes after addressing an audience.

According to survey findings, antisemitism during the first years of the 1990s appeared to be declining. One Anti-Defamation League survey reported antisemitism among Americans having reached a low 20 percent in 1992. At the same time, a Roper survey conducted on behalf of the American Jewish Committee indicated that 47 percent of New York City residents felt Jews had "too much influence in New York City life and politics." Among blacks this figure rose to 63 percent. The poll also revealed that Jews were admired for intelligence and for not being prone to violence. In 1993 an Anti-Defamation League report noted that neo-Nazi "skinheads" posed an increasing threat in the United States. The report noted the seven states with the greatest number of skinheads to be New Jersey, Texas, Oregon, and Colorado, Florida, Michigan and Virginia, each with approximately 200–400 members. A 1994 Anti-Defamation League report titled "Armed and Dangerous: Militias Take Aim at the Federal Government" summarized the activities of right-wing paramilitary organizations in thirteen states. The report noted the informal but close ties, including overlap in membership, between many of these militias and local neo-Nazi groups or the Ku Klux Klan.

Polls conducted by the Anti-Defamation League in the mid-1990s showed that roughly 35 percent of blacks, in contrast to about 15 percent of whites, fell into the "most antisemitic" category, i.e., those who answered "Yes" to six out of 11 possible Jewish stereotypes. Similar polls over the years showed that blacks, in fact, share mixed positive and negative attitudes towards Jews.

Two separate incidents involving antisemitic comments by public figures received significant media coverage toward the end of 1992. First, at a press conference in Yugoslavia held prior to a major championship match, American chess master Bobby Fischer, a controversial recluse, blamed the Jews and Israel for many of the world's present problems, including persecution of Palestinians. Second, Marge Schott, owner of the Cincinnati Reds major league baseball team, caused a stir with her racist remarks including the word "nigger" and the phrase "money-grubbing Jews." Major league baseball suspended Schott for eight months from the day-to-day operation of the team and fined her $25,000.

Among the many acts of antisemitism reported in this period was the defacing of some 100 grave markers at a New Jersey Jewish cemetery, and the spray-painting of swastikas and hate slogans on the side of the home of Sandra Klebanoff, the Jewish mayor of West Hartford, Connecticut, and her husband Howard Klebanoff, a former state legislator.

According to the Anti-Defamation League, incidents of antisemitism also rose on college campuses in the 1990s. Antisemitic activities, often couched in anti-Israel terms, typically took place surrounding the appearance on campus of well-known controversial speakers, such as City College of New York professor Lionel Jeffries or Nation of Islam speaker Khalid Abdul Muhammad, or in conjunction with the celebration of Israel Independence Day or Palestinian student-sponsored events. *The Jewish Onslaught: Despatches from the Wellesley Battlefield*, was a virulently antisemitic tract published in 1994 by Anthony "Tony" C. Martin, a tenured professor of Africana studies at Wellesley College in Massachusetts. In his book, Martin accused the Jewish people of masterminding the black slave trade in the 17th century, blocking the economic advancement of African Americans, and controlling American banking, media, and politics. The book engendered a storm of protest from students, faculty, and a number of Jewish organizations.

In a similar vein, the Russian ultranationalist Vladimir Zhirinovsky visited the United States in 1994 and angered American Jews by blaming the Jewish people for the Bolshevik Revolution and the breakup of the former Soviet Union.

Holocaust denial, which became a virtual cottage industry in the late 20th century owing to the unprecedented reach of the World Wide Web, gave renewed energy to such antisemitic canards. A loose coalition of Arab American groups, for example, exploited the complexity of the Middle Eastern political arena and promoted overt and hostile antisemitic agendas on many internet sites. Nor were such polemics limited to the flickering screen. In 1998, the American Muslim Council, the American Muslim Alliance, and the Council on American-Islamic Relations held a rally at Brooklyn College in New York City where militant speakers described the Jews as "pigs and monkeys" and urged listeners to adopt the path of *jihad*. Together with the Muslim Public Affairs Council, these groups sponsored a rally the following year in Santa Clara, California, at which one speaker explicitly called for the murder of Jews. These groups and others were emboldened by the invective of militant Arab groups abroad. Such was the case in 2000, for example, when, following the third international conference on the Holocaust, held in Stockholm, Hamas spokesmen in Palestine issued a statement denouncing Zionist efforts "aimed at forging history by hiding the truth about the so-called Holocaust, which is an alleged and invented story with no basis…" This statement resonated and was picked up by anti-Israel activists in the United States, including opportunistic supporters of the anti-globalization movement on the far right and far left of the American political spectrum.

Against this backdrop, many American colleges, including the mainstream institutions Columbia University, Florida Atlantic University, the University of Michigan, the University of Pennsylvania, and the University of South Florida, became flashpoints for hosting and, in some instances, even serving as the home institutions of scholars who openly professed vigorous anti-Israel and antisemitic views. Such trends prompted Harvard University's president Lawrence Summers, a former secretary of the treasury under President Bill Clinton, to publicly decry calls for economic divestment from Israel as "antisemitic in result if not intent" and denounce the "profoundly anti-Israel views [which] are increasingly finding support in progressive intellectual communities" in American higher education. He was joined in this stance by Columbia president Lee Bollinger and Barnard president Judith Shapiro. Bollinger called the comparison of Israel to South Africa at the time of apartheid a "grotesque and offensive" analogy.

In the final analysis, a nationwide *Survey of American Attitudes Towards Jews in America* released by the Anti-Defamation League in 2005 showed a slight overall decline since 2002 in the number of Americans holding antisemitic views. Based on a national poll of 1,600 American adults, the survey noted the persistence of antisemitic attitudes, especially with regard to issues of "Jewish power," and determined the number of Americans with "hardcore antisemitic beliefs" fluctuated from 20 percent in 1992 to 12 percent in 1998 to 17 percent in 2002 and finally to 14 percent in 2005. These findings support the assessment of scholars Seymour Martin Lipset and Earl Raab who contend that although "the cultural reservoir of antisemitism [in the United States] is variable," a long view of the historical record indicates that American antisemitic attitudes "soared in the 1930s, then declined sharply in the 1950s, and have slowly fallen further since."

Antisemitism in the United States, while far from extinct, is usually no longer expressed openly. In fact, over time the American political system has acted as a brake on antisemitism and the civil position of Jews in the United States has never been fundamentally endangered. Nevertheless, latent anti-Jewish stereotypes are persistent and their history has demonstrated that prejudice is translated into open discrimination when social conflict and tensions are severe.

United States-Israel Relations

The interest of the American people in the return of the Jews to the Land of Israel long precedes the establishment of the Jewish state. It was influenced partly by faith in biblical prophecy and partly by revulsion at the persecution of the Jews in tsarist Russia and other lands. A high point was the Blackstone Memorial to President Benjamin Harrison, signed by more than 400 leading Americans in 1891 – six years before the First Zionist Congress. However, America did not become involved with Palestine until World War I, when the British government consulted and gained the approval of President Woodrow Wilson before issuing the Balfour Declaration of 1917. Wilson's endorsement encouraged American Zionist groups to engage in a large-scale lobbying effort. This campaign concluded successfully with the U.S. Congress' unanimous adoption of the 1922 Lodge-Fish Resolution, an official call for a Jewish national home, signed by President Warren G. Harding. Next, in 1925 a treaty on Palestine was signed by the U.S. and British governments. Subsequently, however, America remained aloof from Middle East problems. The re-

gion was regarded as a British and French sphere of influence, although many Americans were actively engaged in the search for oil and in educational and missionary activities.

In the 1930s, the United States was disinclined to intervene when the British Mandatory regime yielded to Arab pressure and restricted Jewish immigration and settlement. Like their British colleagues, American diplomats feared that support for Zionism might facilitate fascist and Nazi propaganda among the Arabs. Meanwhile, the disunity of American Jews on the Palestine question was exploited by Washington diplomats, who tried unsuccessfully to dissuade the American Jewish Conference of 1943 from demanding the establishment of a Jewish commonwealth in Palestine after World War II. (The conference nevertheless voted overwhelmingly in favor of it.) With that resolution as their platform, American Jews undertook a campaign to win the support of the American people, the U.S. Congress, the national political parties, and the media. Rabbis Stephen S. Wise and Abba Hillel Silver spearheaded Zionist efforts in the United States as mass meetings, protest rallies, letter writing and telegram campaigns, publications and the press were utilized countrywide in the struggle for Jewish statehood. The American Palestine Committee, chaired by Senator Robert F. Wagner, played a key role in winning substantial public support for a Jewish state in Palestine.

When World War II ended, there was a power vacuum in the Middle East. Britain and France, weakened in the great struggle, were in retreat and under pressure to surrender their mandates and bases in the Mediterranean area in Syria, Lebanon, North Africa, Iraq, Egypt, and Palestine. The Soviet Union, for its part, was pushing into Iran, and Communist guerrillas were attempting to subvert Greece and Turkey. Washington promulgated the Truman Doctrine to block the Soviet thrust. Disregarding the opinion of State Department advisers, President Harry S. Truman sent Earl G. Harrison into the Displaced Persons camps in Europe to investigate the plight of the Jewish survivors of the Holocaust. After he urgently recommended that they be allowed to go to Palestine, the British proposed that the United States join in a new Anglo-American Committee of Inquiry. This committee unanimously voted to recommend the immediate admission of 100,000 displaced Jews into Palestine and the deferment of a political settlement. President Truman enthusiastically supported the committee's recommendations and declared that the U.S. would be ready to finance the settlement of the refugees. He rejected the proposal to establish autonomous Arab and Jewish regions in Palestine under British rule. The British then turned to the United Nations to end the impasse.

The 11-nation United Nations Special Committee on Palestine (UNSCOP) recommended the termination of the British Mandate in Palestine and the partition of the country into a Jewish and an Arab state and a *corpus separatum* consisting of Jerusalem and its environs as an international enclave. The United States delegation supported the proposal in accordance with Truman's instructions who overruled the position of his State Department. Veteran American diplomats were unreconciled, however. Soon after the partition resolution was adopted, supporters of the Arab cause – missionaries, oil lobbyists, and Arabists – organized a powerful committee to demand its nullification, assisted by key State and Defense Department officials. Their campaign seemed to succeed, and the United Nations Security Council proved impotent to cope with Arab pressure and belligerence. The United States then proposed that the General Assembly be convened in special session to recommend the establishment of a United Nations trusteeship in Palestine. But this attempt to block the establishment of the Jewish state failed. Events in Palestine moved faster than diplomacy. The British withdrew their forces in anticipation of the termination of the mandate, and the Haganah forces in combat with Arab armies and irregulars secured well-organized Jewish political authority over a substantial part of the country.

On May 14, 1948, at 6:00 P.M. eastern standard time, Israel was established as a state and, 11 minutes later, Truman granted de facto recognition by the United States, much to the dismay of the State Department. By quickly recognizing Israel, Truman overcame internal opposition from the State Department, maintaining that Congress' passage of the Lodge-Fish Resolution in 1922 affirmed the principles of the Balfour Declaration. Two days later the Soviet Union granted it *de jure* recognition. In the ensuing United Nations debates, the Soviet Union and the United States both supported Israel, while the British delegation remained aligned with the Arab states.

After a grueling year of war in which Israel suffered more than 6,000 fatalities (roughly 1 percent of Israel's Jewish population at the time), the Jewish state finally initiated efforts toward building secure territorial borders. The task would first involve the absorption of two large-scale waves of immigration. The first group comprised Holocaust survivors from Europe as well as returnees from British detention camps, primarily in Cyprus. The second wave comprised refugees from Arab countries in the Middle East and North Africa, who had been persecuted in revenge for the creation of the Jewish state. In all, Israel's Jewish population doubled in less than three years with the arrival of some 700,000 new immigrants.

In this period, the United States also provided Israel with significant economic support. In 1949 the U.S. Export-Import Bank extended a $100,000,000 loan to help Israel develop her agricultural economy. Two years later, Congress urged the administration to provide Israel with economic aid and amended the administration's Mutual Security Act to include a grant of $65,000,000. This was the first of many economic grants and loans, most of it in loans or the sale of surplus commodities. All loans were repaid on time. During most of the 1950s, however, the United States declined to make arms available to Israel.

U.S. policy toward Israel and the Arab-Israel conflict was deeply affected by other major conflicts in the area: the traditional, centuries-old conflict between East and West, with the Soviet Union and the United States emerging as the contemporary principals; enmity in the Arab world between the con-

servative, western-oriented states some of them oil-rich and the nominally socialist-oriented, which gradually turned to the Soviet Union. As a consequence, the United States, though explicitly committed to support Israel's existence and security, tended to be restrained in its day-to-day attitude. In part, this was due to the influence of American diplomats, missionaries, and businessmen who had cultural, religious, and economic interests in the Arab world. Above all, the United States was sensitive to the dynamic Soviet policy in the area.

After 1948, and particularly from 1955, the Soviets steadily increased their influence throughout the area, putting the West very much on the defensive. By adopting a policy of absolute hostility to Israel as a major card in winning Arab friendship, the Soviet Union left Israel no option but to become increasingly dependent on the West and particularly on the U.S. In this way it also endeavored to establish Israel's reputation as a "satellite" of the U.S., whereas Israel and the U.S. understood the relationship as one of overlapping interest in limiting hostile Soviet influence in the area. American diplomacy feared the region would become polarized, with all Arab states eventually oriented toward Moscow and the United States isolated as a kind of protecting power of Israel. Moreover, American diplomats were concerned that oil concessions might be nationalized by radical Arab governments, adversely affecting the strategically important flow of oil to Europe, as well as oil dividends and bank deposits to the West. The gradual growth of Soviet power in the area during the 1950s and 1960s posed grave problems, as the U.S.S.R. sought substantial control of the Mediterranean communication lines and sources of intelligence, thus furthering its basic aims of disorganizing NATO and weakening U.S. voting strength in the United Nations.

The American reaction to the Soviet expansionist trend in the Middle East was inconsistent, sometimes swinging from one extreme to the other. As early as 1945 the United States insisted that the Soviets quit Iran. Two years later, the Truman Doctrine helped to bolster Greece and Turkey. In 1950 the United States joined Great Britain and France in a Tripartite Declaration that included a vague commitment to maintain a balance of armaments between Israel and her Arab neighbors and prevent the change of the armistice lines by violent means. Shortly afterward the United States and Great Britain attempted to rally the Arab states in defense arrangements to "contain" the Soviet Union, which would have permitted the West to retain the bases in Egypt and in Iraq that were being politically vacated by the British. This eventually led to the Baghdad Pact, which the United States cemented with arms shipments to Iraq. Israel, as well as Nasser's Egypt, opposed the pact, and Nasser even accepted the Soviet offer of arms and large-scale economic aid, thus upsetting the balance of power with Israel precariously maintained by the Tripartite Declaration. Soviet expansion into the Middle East now gained a firm foothold, while the Baghdad Pact itself exploded in the antimonarchist coup in Iraq in 1958, which left Turkey, Iran, and Pakistan in it, in addition to British and American backing.

The United States then swerved to another extreme. It sought to win Nasser's Egypt and the other radical Arab states by an attempt to persuade them to adopt a pro-Western attitude. As a result of East-West competition, they were able, in accordance with Nasser's positive neutralism, to secure aid from both the United States and the Soviet Union, to the increasing military disadvantage of Israel. Washington was still maneuvering to freeze the Soviets out of the Middle East long after they had penetrated the area but was slow and indecisive in its actions. Preoccupation with the cold war competition was reflected in the U.S. attitude to many aspects of the Arab-Israel conflict. On such issues as military aid, boundaries, utilization of water resources, the resettlement of refugees, navigation through international waterways, the Arab boycott, terrorism, and retaliation, U.S. diplomacy was often vacillating and undecided so as not to offend Arab sensitivities.

On the question of Jerusalem there were also considerable divergences of opinion between the United States and Israel. While in 1950, the United States supported the Swedish proposal at the United Nations for a functional internationalization of the holy places, thereby abrogating the former decision for territorial internationalization as a *corpus separatum*, after the defeat of the proposal the United States steadfastly refused to recognize Jerusalem as Israel's capital and even used its influence on other states to desist from establishing or transferring their diplomatic missions to Jerusalem. This attitude was suspended by many nations only in the early 1960s, after strong Israeli protests.

Meanwhile, the United States strongly supported Israel on the question of international navigation. Since the 1949 Armistice Agreement, Egypt insisted that it was in a state of war with Israel and closed the Suez Canal to Israel and Israel-bound shipping. In 1951 the United Nations Security Council upheld Israel's complaint and ordered Egypt to keep the canal open, but Egypt ignored the decision and later in 1954, when Israel renewed its complaint to the Security Council, the Soviet Union, already closely linked to Egypt, used its veto to block enforcement of the council's order. The council was thenceforward powerless to force an end to Arab belligerence against Israel.

In 1953 the American administration and Israel clashed over Israel's irrigation program, and President Dwight D. Eisenhower dispatched Eric Johnston as special envoy to the Middle East to devise a plan for the sharing of the water resources in the Jordan Valley. Agreement was reached with U.S. mediation between Israel and Arab experts on the technical level, but the Arab states refused to approve the plan for political reasons, and water development had to proceed unilaterally. Israel completed its national water carrier in 1964, with the discrete but efficient backing of the United States.

There was a sharp controversy between Israel and the United States over the U.S. proposal to send arms to Iraq in 1954 in the framework of the Baghdad Pact. Later, when the Soviet Union began to arm Egypt, Israel appealed to Washington for arms, but Secretary of State John Foster Dulles referred

Israel to the French. Growing Soviet support emboldened the Egyptians, who barred Israel from the Straits of Tiran as well as from the Suez Canal. The crisis deepened as Arab *fedayeen*, based mainly in the Egyptian-held Gaza Strip, increasingly attacked Israeli settlements and population centers. Late in 1956, Jordan and Egypt entered into a military alliance against Israel, which now became virtually surrounded by aggressive enemies. This was one of the main causes of the Sinai Campaign in which Israel won a swift victory. The United States and the Soviet Union then joined diplomatic forces to press Israel to withdraw from the occupied areas. During this period, relations between Israel and the U.S. were greatly strained and many American Jewish bodies and individuals made representations in Washington in support of Israel's position. A United Nations Emergency Force (UNEF) was stationed in the Gaza Strip and at Sharm el-Sheikh to prevent the recurrence of terrorist attacks, and the United States and most other maritime powers gave Israel assurances about the maintenance of free passage through the Straits of Tiran.

In 1957 Israel acceded to the Eisenhower Doctrine, aimed at guaranteeing the independence of states and governments in the Middle East against Communist oppression or subversion. The doctrine was effectively implemented during the Lebanon crisis of 1958, but later disintegrated. In 1958, the American administration launched a new initiative to win the friendship of Egypt through economic aid, and this policy continued when President John F. Kennedy took office in 1961. During this period, the United States tried to work out an elaborate proposal for the solution of the Arab refugee problem, which would have obliged Israel to absorb a substantial number of refugees. This attempt came to naught due to the Arabs' refusal to enter into any substantial negotiations. Another diplomatic issue that divided Israel and the Kennedy administration was U.S. opposition to Israel's insistence that a solution to the Arab-Israel conflict could be achieved only by direct Arab-Israel peace talks. When the Soviet Union provided Egypt with long-range bombers, MIG planes, and other modern arms, Israel renewed its appeal for U.S. arms. In 1962 Kennedy lifted the American arms embargo and approved the sale of U.S. Hawk anti-aircraft missiles to Israel. This was the first important arms deal between the U.S. and Israel, which incidentally, was the first country outside NATO to receive this weapon. In the words of historian Warren Bass, Kennedy's was thus the "pivotal presidency" – it laid the groundwork for a new close U.S.-Israeli relationship in the latter decades of the 20th century. In 1965 President Lyndon B. Johnson and his administration deepened the U.S.-Israel relationship by assisting Israel in maintaining its military strength through the sale of American warplanes to Israel for the first time.

A new crisis erupted in the Middle East in 1966–67 when the Soviet Union encouraged Syria and Egypt to take a more belligerent attitude toward Israel and the West. Anti-Israel terrorism mounted and the United Nations was unable to curb or even censure attacks against Israel, which came largely from Syria by the newly established al-Fatah organization and Syrian artillery. In addition, Soviet and Arab confidence was bolstered by the belief that the United States would not intervene in an explosive Middle East conflict because of heavy commitments in Southeast Asia and growing unrest and isolationist sentiment at home. This led in May 1967 to the dispatch of heavy Egyptian forces into Gaza and the Sinai Peninsula, the blockade of the Straits of Tiran, and the sudden withdrawal of the United Nations forces from the area.

At the end of the Six-Day War (June 1967), the United States did not repeat its 1956–57 attitude. It was largely instrumental in blocking in the United Nations various Soviet-Arab initiatives to brand Israel as an aggressor and demand the unconditional withdrawal of its forces from the occupied territories (i.e., the West Bank, Gaza Strip, Golan Heights, and Sinai peninsula). The United States insisted that Israel should not be required to withdraw from occupied territories until there was agreement between the parties on "recognized and secure boundaries," according to the Security Council resolution of Nov. 22, 1967. Nonetheless, there were substantial differences between the United States and Israel. In 1969 President Richard M. Nixon's administration agreed to Four Power talks to draw up guidelines for a settlement, and Secretary of State William Rogers publicly outlined a plan that entailed Israel's withdrawal to the lines of June 4, 1967, with little emendation, in exchange for a peace agreement with Egypt and Jordan. Israel feared that the United States was again joining with the Soviet Union in an attempt to impose a settlement. A difference also arose because of protracted delays on responding to Israel's urgent request for arms.

Until 1970 any military equipment Israel obtained from the United States represented hard currency dollar purchases. In the Military Assistance Act of 1970, the U.S. government provided credits up to $500 million for military aid to Israel. This represented a major change in U.S.-Israel relations. Over the years, Israel obtained a variety of loans from the U.S. government-owned Export-Import Bank. This bank's principal function was to provide financing for U.S. exports. However, assistance from the private sector, including public institutions, was of greater importance to Israel's growth than U.S. government programs. Transfers through the United Jewish Appeal and similar public institutions and sales of Israel Bonds totaled over $2 billion from 1948. Philanthropic transfers were used predominantly for social welfare and development purposes, while the proceeds of bond sales, which were initiated in 1951, were used for economic development as well as current account purchases. In addition, loans to Israeli companies and the government by private American banking institutions were substantial. Even more important was the development of U.S.-Israel trade. From 1949 to 1959, imports from the United States averaged $100 million per year. During the next ten years, this amount doubled. Imports from the United States in 1969 were $310 million, 24 percent of Israel's total imports. Exports from Israel to the United States averaged $13 million from 1949 to 1959 and $60 million during the next ten years. In 1969, exports to the U.S. were $136

million, 19 percent of Israel's total exports. There was thus an annual balance of payments of approximately $175 million in favor of the United States.

In 1970 it became clear that the Soviet Union and Egypt were determined to increase their military power in the area and weaken Israel by a "war of attrition" in the canal zone in contravention of the cease-fire order of the Security Council of June 1967. Israel's counteraction against Egyptian military targets proved highly effective, and the United States continued to slow down delivery of arms to Israel in the hope that the Soviet Union would join in a program of arms limitations in the conflict area. It made repeated efforts to bring about a cease-fire and peace negotiations, and in August 1970, American initiative brought about a new cease-fire agreement between Egypt and Israel, which entailed a complete "standstill" of military installations on both sides of the canal as well as the renewal of indirect Israel-Arab peace talks through United Nations representative Gunnar Jarring. In an effort to make Egypt's skies impenetrable and shift the balance of power, the Soviet Union and Egypt violated the "standstill agreement," introducing new missiles in the canal area. This was not only a threat to Israel but a challenge to U.S. prestige and power. Washington then moved to sell weapons to Israel, including modern and sophisticated equipment, and Congress voted large-scale credits to enable Israel to buy them. This decision was a major development in U.S.-Israel relations, as it constituted the decisive element in strengthening Israel's capacity to withstand Soviet-Arab pressure. On the other hand, the United States also induced Israel to agree to a resumption of the Jarring talks in January 1971. It soon emerged, however, that there was still a wide divergence between Israel and U.S. views on the contents and aims of the talks. Israel emphasized the principle of new, secure, defensible, agreed, and recognized borders, substantially different from the pre-June 4, 1967 lines, while the U.S. attitude still seemed to be guided by the Rogers plan of 1969.

In determining its policy throughout the 1960s and 1970s, the U.S. sought to balance its efforts to retain a maximum role within Arab states and the desirability of maintaining a militarily and economically strong Israel as a counter to Soviet penetration into the Arab neighboring countries. Israel's military successes, although performed by Israel for the sake of its own security, had the effect of checking the extension of Soviet influence. Certain Washington circles consequently favored (especially after the Six-Day War) the maintenance of a strong Israel in order to maintain the balance of power that had been achieved in the area, uneasy as it was.

However, these Washington circles were countered by elements in the State Department that emphasized maintaining the friendship of pro-Western Arab regimes and thus winning a measure of influence in those states where the Soviet Union was largely dominant. The latter argued that a too blatantly pro-Israel policy could endanger other U.S. footholds in the Middle East, especially Saudi Arabia, Jordan, and Lebanon, and that by appearing as Israel's backer, the U.S. could drive these countries into the Soviet orbit. Strongly advocated by certain State Department officials, this line of thinking was massively backed by the powerful oil lobby which represented a major group of U.S. capital that had heavily invested in the Arab lands. The oil lobby was active not only in Washington but in financing pro-Arab activities and pressure groups throughout the U.S.

A further factor that U.S. policy makers had to take into consideration was the Jewish reaction in the U.S. Although the strategic issues frequently might have led to differences of opinion in the American administration, resulting from differing assessments of the global consequences of policies, the ultimate decisions of the politicians had also to take into consideration the demands of the oil companies, on the one hand, and the Jewish vote on the other. The last factor became of particular significance as major election periods approached.

On March 26, 1979, the Camp David accords were formalized in the Egypt-Israel peace treaty signed by Prime Minister Menahem Begin and President Anwar Sadat and witnessed by President Jimmy Carter. The peace treaty marked a turning point in the history of Arab-Israel relations. It held out the hope for peaceful coexistence between Israel and other Arab countries as well as a resolution of the Palestinian Arab problem. "The critical importance of the agreement with Egypt," Prime Minister Begin declared, "lies in the fact that this time we undertook to sign a peace treaty…"

> No more interim agreements… It means complete normalization of relations [between Israel and Egypt]… The basis for the framework agreement concerning Judea, Samaria and Gaza is our autonomy plan… The military government and its civilian administration will be withdrawn.

The peace treaty with Egypt did indeed lead to a complete Israeli withdrawal from Sinai in 1982. In the meantime, however, the Likud-led government annexed the Golan Heights in 1981. The Golan legislation demonstrated the Begin government's commitment to the concept of territorial maximalism and defused right-wing and religious criticism that crystallized around the Gush Emunim settlers and the "Stop the Withdrawal" movement.

In 1981 controversy erupted when the sale of five AWACS aircraft to Saudi Arabia was announced. As in the recent past, the arms sale was opposed by the State of Israel and American Jewish organizations lobbied intensively against it. Although the U.S. House of Representatives voted overwhelmingly against the sale, the Senate voted to permit it. On this occasion emolients were less in evidence. Apparently alluding to the efforts by Israel and its supporters, President Ronald Reagan observed: "It is not the business of other nations to make American foreign policy." An additional critical statement by ex-President Richard M. Nixon brought an angry response from leaders of the American Jewish community.

The public relations damage caused by the AWACS sale receded in 1981 when Israel and the United States entered into

a strategic pact directed against Russian intervention in the Middle East. However, the sudden adoption by the Knesset in December 1981 of a bill extending Israeli law to the Golan Heights drew a sharp rebuke from Washington and aroused considerable misgiving in American Jewish circles. In response to the new Golan Heights law, the American government suspended the strategic pact. In due course, Begin replied by addressing to the U.S. ambassador to Israel a series of complaints, including the charge that the Reagan administration's effort to ratify the AWACS sale was "accompanied by an ugly antisemitic campaign."

The political horizon was also clouded in this period by the Palestine Liberation Organization, which over the years established itself as a virtual state-within-a-state in southern Lebanon and amassed a considerable arsenal. It now possessed the capability of shelling much of the Upper Galilee. Syria, too, escalated tensions by installing sophisticated long-range missiles in the Beqaa Valley that threatened Israeli aircraft and violated the longstanding cease-fire agreements reached after the Yom Kippur War.

In June 1982, on the heels of an attack by Palestinian Arab extremists against Shlomo Argov, Israel's ambassador to Great Britain, Israel launched major air strikes against PLO bases in southern Lebanon and in Beirut. The PLO responded by shelling Israeli settlements in the Galilee. These events prompted the Israeli invasion of Lebanon known as "Operation Peace for Galilee." The operation, intended to be a limited initiative with precise military objectives, brought a rapid Israeli victory. It successfully pushed PLO artillery outside the range of settlements and towns in northern Israel. At the same time, however, the Israel Defense Forces failed to destroy or capture most of the PLO forces in southern Lebanon. Moreover, the Israeli public was shocked by the Sabra and Shatilla massacres of September 1982.

Following the Lebanon War, Reagan announced his administration's intention to advance the peace process within the framework of the Camp David accords. Reagan acknowledged the rights of the Palestinian Arab people but emphasized that "America's commitment to the security of Israel is ironclad." American diplomatic initiatives notwithstanding, tensions between Israel and the Palestinian Arabs continued to escalate. In 1983 the United States and Israel signed a Memorandum of Understanding for strategic cooperation, and in 1988 Israel became a major non-NATO ally of the United States. The two countries next became involved in joint research and development efforts on high technology projects such as the Arrow and anti-ballistic missile system. A generous program of American economic and financial aid eased Israel's defense burden and allowed Israel to invest in its economic and social infrastructure and focus on the absorption of Jewish refugees. Moreover, the United States was an instrumental player in the struggle to ensure the emigration of 750,000 Jews from the former Soviet Union, Ethiopia, and other countries to Israel. Through loan guarantees granted in 1992, Israel was able to finance the mammoth task of absorbing, since 1990, approximately one-fifth of its total population. Additional cooperation between Israel and the United States took the form of a Free Trade Agreement (1985) and the establishment of the U.S.-Israel Science and Technology Commission (1993).

October 1991 marked a significant milestone on the road to Mideast peace when following the Persian Gulf War, the United States cosponsored, with the Soviet Union, the Arab-Israeli Peace Conference in Madrid. As a result of the negotiations that followed, Israel signed a peace treaty with Jordan (1994) as well as a Declaration of Principles (1993) and an Interim Agreement (1995) with the Palestinians. In these years, Israel also expanded its relations with many other Arab countries. Like Egyptian President Anwar Sadat before him, Israeli Prime Minister Yitzhak Rabin made the ultimate sacrifice for Mideast reconciliation. On November 4, 1995, Yigal Amir, a right-wing zealot assassinated Rabin at the end of a peace rally in Tel Aviv. Following Rabin's murder the peace process continued fitfully under his successor Shimon Peres and then stalled under the Likud government of Benjamin Netanyahu, despite the potential breakthrough represented by the Wye River Memorandum (1998). Diplomatic momentum was renewed in 1999 when Ehud Barak handily won Israel's general election and brought a new Labor-led government to power. Vowing to continue Rabin's approach to securing Israel's borders and a negotiated settlement for Palestinian self-government, Barak embarked on an ambitious plan to "conclude all Middle East peace negotiations within 15 months." At this juncture, President Bill Clinton invested considerable energy and political capital in an effort reinvigorate the peace process, pressing for both a Syria-Israel peace treaty and a final resolution to the Israel-Palestinian negotiations. Despite high hopes and great expectations, the process was ultimately stymied by a recalcitrant Assad, a reluctant Arafat, a brash Barak, and a lame-duck Clinton administration. Before leaving office, Clinton brought the Israeli and Palestinian negotiators together in 2000 and outlined the parameters of possible agreement that addressed the issues of Israeli and Palestinian territorial sovereignty and security, the status of Jerusalem, the question of the Palestinian refugees, and an end of claims to be implemented through the United Nations. He concluded his presentation with the following statement:

> I believe this is the outline of a fair and lasting agreement. It gives the Palestinian people the ability to determine their future on their own land, a sovereign and viable state recognized by the international community, al-Quds as its capital, sovereignty over the Haram, and new lives for the refugees.
>
> It gives the people of Israel a genuine end to the conflict, real security, the preservation of sacred religious ties, the incorporation of 80 percent of the settlers into Israel, and the largest Jewish Jerusalem in history, recognized by all as your capital.
>
> This is the best I can do. I would ask you to brief your leaders and let me know if they are prepared to come for discussions based on these ideas. I want to be very clear on one thing. These are my ideas. If they are not accepted they are not just off the table. They go with me when I leave office.

Clinton's proposal came to naught, but it did anticipate the subsequent approach adopted by the Israeli government under Likud leader and veteran military strategist Ariel Sharon. Sharon, who was elected in 2001 following the Labor party's humiliating defeat after only a brief period in power, implemented a strategy that was in practice an extension of the hard-headed and pragmatic policy first introduced by Yitzhak Rabin a decade earlier. Meanwhile, the election of George W. Bush as president – who defeated Democratic standard bearer Al Gore and his running mate Senator Joseph Lieberman of Connecticut (the first Jewish candidate for vice president of a major political party) – brought about a dramatic shift in American policy vis-à-vis the Middle East peace process. In stark contrast to Clinton, whose close personal engagement with Israeli and Arab leaders was well known, the Bush administration remained relatively remote from week-to-week and month-to-month affairs of Israeli and Palestinian diplomatic activity. Moreover, with the tacit support of Bush himself, Sharon moved swiftly to isolate Yasser Arafat, unilaterally redeploy Israeli troops from areas of the occupied territories, build a separation fence around the Gaza Strip and the West Bank, and remove Jewish settlers from the former area, if necessary, by force. Notwithstanding some minor criticisms, particularly with respect to the impact of the separation barrier on the Palestinian economy, the Bush administration staunchly supported the Sharon government. The U.S. government signaled its continued support of Sharon's policies even after a sudden stroke in 2006 resulted in the latter's abrupt departure from the political arena. Ehud Olmert, Sharon's heir apparent and immediate successor, now appeared determined to stay the course. Thus the torch was passed from the generation of Rabin and Sharon – warriors-turned-peace makers who succeeded the founding generation of Zionist leaders – to a younger generation, Olmert and others who had come of age in the era of the Six-Day War of 1967 and the Yom Kippur War of 1973.

As the historical record demonstrates, American foreign policy in the Middle East over the decades did not steer a consistent course because of the conflicting and even contradictory interests involved. Developments must be viewed against the background of both global strategy and internal pressures. In large measure, certainly until the late 1980s, American decisions were made within the framework of the ongoing rivalry between the U.S. and the U.S.S.R. (with the rise of Communist China a constant background consideration). The Middle East as a whole served as a flashpoint for the American and Soviet governments, each of which exerted considerable efforts to control the region while avoiding a direct confrontation. It continues to be a key area culturally and geographically – as one of the world's critical geo-political arenas, a gateway to Africa, and because of the immense oil deposits possessed by the Arab world.

Apart from all this, United States policy makers had to take into consideration a widespread sympathy for Israel among the general American public – despite the extensive efforts made by hostile elements to blacken this image – based among other things on a Christian appreciation for the Jews' attachment to the Holy Land, a sense of horror at Jewish suffering in the 20th century, Israel's support of American efforts to check Soviet expansionism during the Cold War, and an affinity for the democratic nature of the State of Israel. In the wake of the 9/11 attacks and the Iraq War, the United States and Israel have stepped up joint efforts to combat international terrorism. Although the special relationship between the two countries has deepened over time and Israel is today one of the United States' closest allies, support for the Jewish state is not unconditional. Indeed, the United States has exerted considerable pressure on Israel at the turn of the 20th and 21st centuries in the quest for a comprehensive solution to the Israel-Arab conflict. For its part, since the breakthrough of the Oslo peace talks, Israel has gradually implemented a phased withdrawal from the territories it captured in the Six-Day War of 1967, with the exception of Jerusalem, and cautiously supported plans for the creation of an independent Palestinian state in the West Bank and Gaza Strip. It is against the background of this canvas that the ongoing development of U.S.-Israel relations must be assessed. The factors and considerations outlined here are also critical to the historic decisions that will determine the future of the Jewish state.

BIBLIOGRAPHY: There is a voluminous body of scholarly literature on the history of the Jews of the United States. What follows here is a selected bibliography of significant and representative works. For references on various cities, organizations, and individuals, see their respective articles in the *Encyclopaedia Judaica*. A number of scholarly journals publish material specifically related to the history of American Jews. UNITED SYNAGOGUE (Heb. ק״ק כְּנֶסֶת יִשְׂרָאֵל), association of Ashkenazi congregations in London – originally formed by the Great Synagogue, Duke's Place (c. 1690), and four other constituent synagogues – which was established by Act of Parliament on July 14, 1870. The project, apparently inspired by Michael *Sachs' model federation in Berlin, was initiated by Chief Rabbi Nathan Marcus *Adler in 1866 and the organizational work developed under his son and successor, Hermann *Adler. The United Synagogue (popularly known as the "U.S.") rapidly became one of the most powerful centralized bodies of its type in the Jewish world, and its name was later borrowed by Solomon *Schechter for the Conservative synagogue body in the U.S. The United Synagogue was arguably at its peak in the half-century from about 1920 until 1970, when it was, generally, the synagogue of choice of England's second generation immigrants as they moved into the middle class. During this time it opened many new venues in north and northeast London and elsewhere. Its ambiance emphasizes decorum, conservatism in behavior, and British patriotism. Before 1948, while not anti-Zionist, it was seldom associated as a rule with the extreme supporters of a Jewish state. Since the establishment of the State of Israel, it has become a loyal supporter of the Jewish state, although recent chief rabbis have occasionally been critical of some Israeli actions. It is the bastion of the British chief rabbinate and of the London *bet din* and all its synagogues accept the religious authority of the Chief Rabbi. By 1971 there were 23 constituent synagogues (with some 20,000 members), a further 23 district synagogues, and 35 affiliated congregations; about 40,000 families, representing half the Jewish population of Greater London, were United Synagogue members. After World War II, these activities were expanded to include new congregations in a few provincial centers such as Peterborough and Worcester. Income is paid into a common pool so that poorer synagogues can be supported by wealthier ones and a number of general communal services can be supported.

United Synagogue congregations in Greater London. Constituent synagogues in boldface. Prepared by G.E. Silverman.

Although the United Synagogue has long claimed to preserve and represent traditional Judaism in Great Britain, its Orthodoxy had been so diluted by the early 20th century that it came near to emulating the French Central *Consistory. There were also religious and organizational conflicts and rivalries with the more right-wing Federation of Synagogues (1887) founded by Lord Swaythling and the Union of Orthodox Hebrew Congregations (Adath Yisroel) established by Victor (Avigdor) *Schoenfeld in 1926. Its dominating figure in the mid-20th century was its president, Sir Robert Waley *Cohen. With the emergence of a more staunchly Orthodox lay leadership after World War II, and especially following Sir Isaac *Wolfson's election as president in 1962, the United Synagogue swung to the right. The United Synagogue's centenary celebrations in 1970 were attended by Queen Elizabeth. In recent years it has been repeatedly challenged from both the theological right and left and has diminished somewhat in popularity – as measured, for instance, by the marriages it performs – compared with either Strict Orthodoxy or non-Orthodox strands. In the mid-1960s, the rise of the Masorti movement, led by Rabbi Louis Jacobs and linked with the American Conservative movement, represented a significant challenge to the "U.S." Both recent chief rabbis, Immanuel *Jakobovits and Jonathan *Sacks, have engaged in high-profile disputes with other strands in Anglo-Jewry, especially with the Progressive movement. In 2004 there were 46 member synagogues of the "U.S." in London, together with another 20 London synagogues affiliated to it and several dozen outside of London. Aubrey Newman's *The United Synagogue, 1870–1970* (1977) is a history of the group's first century.

UNITED SYNAGOGUE OF CONSERVATIVE JUDAISM (formerly **United Synagogue of America**), association of Conservative synagogues in the United States and Canada. The United Synagogue of America was founded by Solomon *Schechter, president of the Jewish Theological Seminary, on February 23, 1913. The 22 synagogues that constituted the original membership of the organization had reached well over 700 congregations by 2006.

In creating the United Synagogue, Schechter hoped to tie together those congregations that supported the seminary's goal, to strengthen "historical Judaism" in North America. Although his dream of unifying the entire Jewish community did not materialize, Schechter's labors created a major instrumentality for preserving and fostering traditional Jewish religious life across the continent.

The United Synagogue has sought to provide its affiliated congregations with help in fulfilling their religious and educational responsibilities. The United Synagogue Commission on Jewish Education has conducted many studies on the operation of congregational religious schools, which led eventually to the formulation of standards and curricula for Conservative schools. The commission has also produced hundreds of textbooks in Hebrew and English, school administration materials, and audio-visual aids. Since the late 1950s, it has spurred a system of Conservative day schools. Today, the Solomon Schechter Day School Association represents a network of more than 80 elementary and high schools.

Through the National Academy for Adult Jewish Studies, the United Synagogue has stimulated the development of adult education programs. To make prayer responsive to contemporary needs, the United Synagogue has published from time to time revised versions of the prayer book both for adults and children; its most recent is the revised *Siddur Sim Shalom*, which uses updated language and deals sensitively with issues of language and gender.

In 1952 the United Synagogue took an important step to raise standards of conduct for synagogues by adopting its "Guide to Standards for Congregational Life," and in 1959 the organization adopted the "Statement of Standards for Synagogue Practice," which became binding upon its affiliated congregations. In cooperation with the Rabbinical Assembly and the National Women's League, it also established the Commission on Social Action. The commission's purpose was to bring the wisdom of Judaism to bear on the burning social issues of the day.

Into the 21st century, United Synagogue's Social Action and Public Policy Committee still takes on that mandate; it also responds to emergencies with financial and other forms of help, and lobbies Congress to support issues of concern to the Jewish community.

In 2006 United Synagogue supported offices in 14 regions, which spanned the United States and Canada. Each region had an executive director and a network of regional officers, who met in regional councils and who were represented by their presidents on the national level. Presidents and past presidents share ideas and information with each other over the Presidents' List, a listserv run out of the national office. New leaders, on the congregational, regional, and international levels, are provided through retreat programs Sulam and Imun.

United Synagogue is particularly strong in informal education for teenagers and young adults, both in North America and in Israel. In North America, its network of United Synagogue Youth groups, for high-school students, covers the country, and often is the entry point to an independent Conservative Jewish life for teenagers. Kadimah, for middle-schoolers, is an active group that successfully feeds into USY; Koach, for college-students, operates on many campuses and holds regional gatherings for the Sabbath. On the other end of the life cycle, Hazak, provides classes, trips, discussion groups, and a range of other services for people 55 and older.

The United Synagogue of America has been committed to the cause of Israel and world Jewry generally since it was founded. As far back as 1926, it was instrumental in creating the Yeshurun Synagogue in Jerusalem as a gift to the Jews of what was then Palestine.

United Synagogue now has a six-building campus in Israel, the Fuchsberg Jerusalem Center of the United Synagogue of Conservative Judaism. The change of name is an indication of the reality that the organization stands for a movement and not for the entirety of the synagogues of America. The center houses the Conservative Yeshivah, an institution dedicated to high-level study for Jews who wish to take weeks, months, or even a year out of their lives to study for its own sake. It also provides headquarters for Nativ, the United Synagogue program for young adults who spend a year in Israel between high school and college, and often houses high-school students in Israel for USY's extremely successful Israel Pilgrimage trips.

UNIVERS ISRAÉLITE, French-language periodical which was published in Paris from 1844 to 1940. In its first issue it was described as a "monthly religious, moral, and literary journal," but from January 1846, it adopted as a subtitle "journal of the conservative interests of Judaism." Then a bimonthly publication, it proposed to consider all political or social events that might have some direct or indirect bearing on the Jewish community. From 1896 it appeared as a weekly until the fall of France in May–June 1940. For decades it had been the organ which published the principal statements of the chief rabbis of France. The chief editors were S. Bloch (1844–78), Lazare *Wogue (1879–93), Israel *Lévi (1894–95), Maurice *Liber (1919–34), and Raymond *Lambert (from September 1934).

UNIVERSITIES. Jewish interest in education, including its advanced forms, goes back to the early history of the people. Specialists in the history of education, both Jewish and non-Jewish, have long recognized that the *academy of ancient Judea and Babylonia was an institution of advanced instruction and research in theology and in other subjects as well. According to Lewis J. Sherrill, the academy was "a university," in which "learned scholars" pursued "the most advanced studies" and instructed those who were capable of learning.

In the Middle Ages

The advent of Christianity, with its opposition to Judaism, made impossible any Jewish identification with the learning represented by such institutions as the University of Constantinople. However, Jewish scholars were welcome in the University of Jundishapur during the reign of Nurshirwan the Just, the renowned sixth-century monarch of Sassanid Persia. In this, "the greatest intellectual center of the time" (George Sarton), Jews, Christians, Hindus, Greeks, and others furthered study and research in philosophy, science, and *medicine. Jews also played an educational role in the House of Wisdom (Bayt al-Ḥikma), the research and translation center founded in Baghdad by Caliph Abdallah al-Mamun (813–833). At this institution, alchemy, astronomy, mathematics, law, philosophy, philology, and other learned subjects were promoted by the combined efforts of Jews and Christians under the aegis of al-Mamun.

The study of medicine drew many Jews to medieval and Renaissance universities. During the latter half of the 14th century Abraham Avigdor studied medicine at the University of Montpellier. He was apparently one of the earliest Jewish students of note at a Christian institution of higher learning. In later times Jewish names were not rare in the medical faculties of European universities, especially at those in Italy.

During the 15th and 16th centuries there were several recorded instances of Jews' affiliation with universities, as a rule in connection with science, medicine, and Hebrew. Elijah Levita, the Hebrew grammarian, invited by Francis I to accept the professorship of Hebrew at the University of Paris, refused because other Jews were not permitted to live in Paris at that time. Elijah b. Shabbetai (Sabot) taught at Paris in the 15th century.

At most, the contacts between the Jews and the European universities were sporadic and tenuous. The desire for higher education could not be satisfied through such arrangements. Hence it is not surprising that the desire for advanced learning led to the formation of plans for the establishment of an institution under Jewish auspices. In 1466 King John of Sicily gave formal permission to the Jews to organize a university of their own with faculties of medicine and law, and possibly also philosophy. It appears likely that the aim of this university was to prepare young Jews for the medical and legal professions. In any event, nothing came of this proposal, especially since the Jews were expelled from Sicily in 1492 by order of the Spanish crown.

An echo of the drive for university education came a century after the Sicilian plan. In a publication in 1604, R. David *Provençal of Mantua and his son Abraham called for the establishment of a Jewish college to teach Jewish religious and secular subjects. This plan evidently anticipated a bull by Pope Pius IV prohibiting the admission of Jews to examination for doctoral degrees. With the aid of his son, a doctor of philosophy and medicine, R. David presented a suitable program of study, "so that anyone who wishes to become a physician need not waste his days and years in a university among Christians in sinful neglect of Jewish studies." Owing to the intolerance of the times, the Provençals were not able to open this yeshivah-university, but only a talmudical institute instead.

If there was discouragement from without, there can be little doubt of opposition from within regarding secular education for Jews. Opposition to secular learning arose repeatedly, on the grounds of safeguarding the integrity of Judaism against alien ideology. However, despite such disapproval, there were

always traditional Jews who made an effort to combine the sacred with the secular.

Whatever the case, some Jews in the 16th century managed to obtain doctoral degrees from several Italian universities – Bologna, Ferrara, Pavia, Perugia, Pisa, Rome, and Siena. The University of Padua conferred 228 doctorates upon Jews from 1517 to 1721. Aiding the Jews in their quest for higher learning in Italy was the Senate of Venice, which bypassed the papal ban on degrees by empowering an official to grant degrees without regard to religion, thus safeguarding academic freedom at the University of Padua.

The attitude of the Catholic Church toward study by Jews changed with the times. According to the 24th canon of the Council of Basle, Sept. 7, 1434, a ban was placed upon conferring any university degree upon Jews. However, even churchmen found it advisable to ignore this decree. Thus, Pope Julius III ordered the University of Padua (on Jan. 9, 1555) to examine a Jewish student, Simon Vitale, for the doctorate. The pope's motivation was neither religious tolerance nor academic freedom, but rather the hope that conversion of the candidate and, consequently, of other Jews would be facilitated.

Even when admitted to a university, Jewish students were faced by special problems and difficulties, some originating from their religious principles and others from discriminatory treatment. An example of the former was when students had to resort to various devices to avoid desecration of the Sabbath and holidays in connection with examinations. Jews had to pay larger graduation fees than did the Christian students, and in the 15th century they were required to invite all the students to dinner. If the Jewish students were excused from wearing the Jewish cap, they were also prohibited from practicing medicine on Christians. Jewish physicians of the 16th century had few, if any, opportunities for medical research and teaching or for admission to the leading hospitals.

17th and 18th Centuries

During the 17th and 18th centuries, the barriers to Jewish study were still very firm. No doubt taking their cue from traditional Catholic practice (as well as from Luther), European universities, hospitals, and official bodies carried on a boycott of Jewish physicians (generally identified as "Italian doctors," since it was impossible for a practicing Jew to get a doctoral degree outside of Italy). Johann Jakob *Schudt, the Lutheran theologian and Orientalist from Frankfurt and author of *Juedische Merckwuerdigkeiten* (1714–1717), was distressed at the Catholic Italians' disregard for the canon law of the Council of Basle. He accused the Italian universities, particularly the University of Padua, of permitting "every ignoramus and even the despised Jews" to take their degrees because of their pecuniary greed. Johann Heinrich Schuette provided proof in 1745 that conferring a medical doctorate upon a Jew was "contrary to the Christian religion." Under these circumstances, it is clear that Jews were separated at this time from the universities of virtually all of Europe by a formidable iron curtain.

However, here and there were chinks in this curtain. The philosopher Baruch *Spinoza, who had been excommunicated in 1656 by the Amsterdam Jewish community, but who was still identified as a Jew, was offered a professorship at the University of Heidelberg in 1673. Spinoza turned this invitation down because he feared losing his independence of thought and expression.

The usual association between medicine and higher education is also evident in the early history of the Jews of Poland. In their society talmudic and rabbinic studies were predominant, the physicians alone obtaining secular learning at universities. The earliest Jewish physicians in Poland were Spanish exiles and alumni of the University of Padua. They were seeking a place of refuge and hoped to practice the arts forbidden to them elsewhere. It was probably their example that influenced some Polish Jews (e.g., R. Moses Fishel of Cracow) to study medicine at the University of Padua in the early 16th century. From the second half of the century to the 18th, an increasing number of Polish Jews enrolled as students of medicine at Padua.

Interesting case studies are provided by R. Tobias *Cohn and Gabriel Selig or Felix of Galicia, who succeeded in getting their doctorates in medicine and philosophy at Padua in 1683. Both had succeeded in 1678, with the intervention of the great elector Frederick William of Brandenburg, in gaining admission to the University of Frankfurt on the Oder in the face of strong opposition on the part of the faculty. Only when the Lutheran faculty, citing the Catholic Council of Basle in 1434, refused to admit Jewish students to doctoral examinations, did Jewish students go to study in the south.

Once the barrier was broken, it became less difficult for Jewish students to enter German universities. Those whom the University of Cracow refused in the 18th century ventured to study medicine (and sometimes other disciplines) not only at Frankfurt on the Oder, but also at the University of Heidelberg. Only Padua exceeded the number of Jewish students at Frankfurt. It was most difficult for a Jew in the 18th century to obtain an appointment as a university lecturer in Europe, even on a temporary basis and in a subject such as the Hebrew language. The experience of Isaac Abraham *Euchel at the University of Koenigsberg in 1786 illustrates this. Euchel, who was an observant Jew, applied to the rector, Immanuel Kant, but was rejected by the university senate (minus Kant's signature) on the ground that he lacked the master's degree and that he was not a Christian.

During the 18th century, Jews studied at Harvard, Yale, the University of Pennsylvania, Columbia, and Brown University (where they were excused from attendance on Saturday). Moses Levy, who graduated from Pennsylvania in 1772, became a lawyer and judge; Isaac Abrahams (A.B., Columbia, 1774) practiced medicine; and Sampson Simson (B.A., Columbia, 1800) was the first Jewish lawyer in New York. A Jew in higher education was Rabbi Gershom Mendes *Seixas of the Spanish-Portuguese Congregation of New York, who became a regent of the University of the State of New York

when it was founded in 1784, and who served as a trustee of Columbia College (1785–1815).

Enlightenment

The change in the European attitude toward opening higher education to the Jew, originating in the Enlightenment, was evident in the "Patent of Tolerance" (1782) issued by Emperor Joseph II of Austria. By this Jews could enroll their children at public schools and their young men at universities. In general, however, the change was more apparent than real, in actual practice. Nonetheless, during the course of the 19th century, young Jews began to attend European universities, at first slowly and then increasingly.

The reforms in 1812 of Karl von Hardenburg, Prussian minister of state, and of Wilhelm von Humboldt, minister of education, opened the universities to Jews. The closed door policy of the universities of Oxford, Cambridge, and Durham, which restricted entrance to Anglicans only, led to a movement for a secular university in England. The opening in 1827 of University College, the foundation school of the University of London, resulted in the admission of dissenters (Catholics and Jews). Finally, a parliamentary law in 1871 abolished the religious tests for Cambridge, Oxford, and Durham. The admission of Jewish faculty members followed that of Jewish students.

In the United States slow but perceptible change was made during the 19th century. Early in the century Joel Hart, possessor of a medical degree from the Royal College of Surgery in London, became a founder of the New York Medical Society and of the College of Physicians and Surgeons in New York. David Levi Maduro *Peixotto received an M.D. from the College of Physicians and Surgeons in 1819 and became professor of medicine at Willoughby College. Lorenzo *da Ponte (Emanuele, son of Geremia and Rachele Conegliano), a convert to Christianity, was appointed in 1830 to the professorship of Italian language and literature at Columbia College. As a poet and famous librettist of Mozart's opera he became one of the early contributors to the development of the teaching of foreign culture at American universities.

The 19th-century Russian policy of repression of minorities, especially the Jews, as well as that of reactionary political philosophy, was instrumental in the exodus of young Jews to universities in Germany and other countries. A Jewish scholar could become a faculty member at a Russian university only at the cost of conversion to the Russian Orthodox Church. The outstanding example of this was Daniel *Chwolson, professor of Hebrew and Syriac at the University of St. Petersburg.

The professional rosters of the German universities indicate the presence of a significant number of Jewish scholars in the 19th century. Jews also made their mark as scholars in Oriental studies in Germany.

The establishment of the first real university in the U.S., the Johns Hopkins University, in 1876, led to the appointment of several Jewish scholars, James J. *Sylvester and Fabian Franklin in mathematics, and Maurice *Bloomfield in Sanskrit and comparative philology. The Hopkins atmosphere was one of learning and research, rather than one of Christian piety. By the end of the 19th century, with the gradual growth of secularism, the spread of science, and the impact of industrialization and business, Jews attended Columbia and other universities in various parts of the United States.

The situation in imperial Russia regarding university attendance by Jews changed somewhat for the better under Czar Alexander II. However, the liberal privileges were severely curtailed under his successor, Alexander III, with the result that only a small percentage of Jews could receive a higher education in Russia during the late 19th century. The Jewish drive for higher education, stimulated by the Haskalah movement, but somewhat inhibited by the anti-secularist influence of the yeshivot, found an outlet in the universities of Germany, Switzerland, and other countries.

Modern Period

The forces which operated during the last decades of the 19th century to liberalize opportunities for Jews as professors and students in higher education were even stronger during the advancing decades of the 20th. The interest by young Jews in new fields of knowledge, such as psychology, sociology, experimental physics, and linguistics, brought about calls for their services when universities expanded their areas of teaching and research. The multiplication of the media of publication brought Jewish research scholars to the attention of academic audiences everywhere.

The growth of democratic sentiment in some countries opened the doors wider to Jewish students. On the other hand, Poland, Hungary, and Romania introduced the *numerus clausus* to limit Jewish enrollment. In Poland, particularly, Jews were relegated to the "ghetto benches" in university lecture halls, while periodic riots were organized by antisemitic students. During the later years of the Weimar Republic, German university students began to harass Jewish students and put pressure on Jewish professors, thus preparing for the academic repression characteristic of the Nazi regime. The opening of the Hebrew University (Jerusalem, 1925) and of the Yeshiva College (now Yeshiva University; New York City, 1928) served notice that Jews were now determined and prepared to undertake an active, leading role in the world of higher education. They would not now merely wait for Christian benevolence and for the vicissitudes of scientific and intellectual development. As time went on during the 20th century, it became evident that in universities in various parts of the world Jewish professors and students were common in virtually all fields of study. Although one cannot say that antisemitic restrictions had been abolished universally, it is clear that in the 1960s it was not at all difficult for capable Jews to make progress as students, professors, and even as administrators in higher education.

A special factor of significance during the 20th century was the impact of the policies of Nazism in Germany and elsewhere in Europe. With the application of the Nazi racial

doctrines to the universities, there took place a migration of professors, research workers, and students to other countries, especially to the United States, Canada, England, and Palestine. As a result, higher education all over the world became enriched, even as the university systems of Germany and Austria became impoverished.

Of special interest is the situation in the U.S.S.R., where large numbers of Jews have been enrolled in institutions of higher education, and where professors and research workers have won signal recognition in the universities, institutes, and academies. During Stalin's "black years" (1948–53), however, a drastic reduction of their number took place, when Jewish scholars were dismissed in great numbers from their posts and many of them arrested or exiled. After Stalin's death the situation improved, but the complete absence of discrimination prevalent in the early post-revolutionary period was not restored.

In addition to teaching and scholarship, Jews have made growing contributions, in recent decades, to the administration of higher education (see below). Apart from heading institutions such as Yeshiva University (Bernard Revel, Samuel Belkin) and Brandeis (Abram L. Sachar and Charles Schottland), Jews have served as deans, vice presidents, and presidents of various institutions of higher learning. Among the rectors and presidents are Samuel Steinberg (Prague), Vittorio Polacco (Padua), Paul Klapper (Queens College), Martin Meyerson (University of Pennsylvania), Edward H. Levi (Chicago), Edward J. Bloustein (Rutgers State University of New Jersey), Maitland Steinkopf (Brandon University, Canada), Marvin Wachman (formerly at Lincoln), David N. Denker (New York Medical College), Maurice B. Mitchell (Denver), Jacob I. Hartstein (formerly at Kingsborough Community College, Brooklyn, N.Y.), and Jerome B. Wiesner (MIT). Samuel B. Gould, a convert to Christianity, was president of the State University of New York. David H. Kurtzman, formerly a professor of political science, served as acting chancellor of the University of Pittsburgh. Also to be mentioned are Abraham Flexner, director of the Institute for Advanced Study (Princeton), and Simon Flexner, former professor at Johns Hopkins and Pennsylvania, and director of the Rockefeller Institute for Medical Research (now Rockefeller University).

[William W. Brickman]

In the U.S.

STUDENTS: DATA AND TRENDS. Since the end of the 19th century, the number and proportion of Jewish students in American colleges and universities has increased rapidly, parallel to the growth of the Jewish community and of the American university population in general. In 1890 general enrollment in American colleges and universities was 157,000; it passed a million in 1934–35, reached 2,100,000 in 1946, increased to 3,570,000 in 1960, and virtually doubled once again by 1968, when it reached 7,571,636. The number of institutions of higher learning grew from 998 in 1890 to 2,008 in 1960.

The growth in Jewish enrollment has been equally rapid. By the beginning of the 20th century Jewish university students were numerous enough to permit the founding of Jewish fraternities and Zionist societies and especially of Menorah chapters at several universities. A survey by the Menorah Association between 1911 and 1913 reported 21 Jewish students at Colorado, 400 at Cornell, 160 at Harvard, 100 at Minnesota, 75 at Missouri, 62 at Ohio State, 325 at Pennsylvania, 50–60 at Penn State, 50 at Rutgers, and 70 at Wisconsin.

Prior to World War I, only scattered data about Jewish campus life are available. The first statistical survey of Jewish student enrollment, in 1915, found 7,300 Jewish students, or 3.1 percent of the total student population, at 534 institutions. Subsequent studies showed 14,837 Jewish students (9.7 percent) at 108 institutions in 1919, 104,906 (9.3 percent) in 1,319 institutions in 1953, 200,000 (7.5 percent of the total college population) at 1,610 institutions in 1955, 275,000 (6.5 percent) at 850 institutions in 1963, and 375,000 Jewish students (5 percent) at 840 institutions in 1968. A survey of 59,707 college seniors of the class of 1961 by the National Opinion Research Center found that 8.4 percent were Jews; of these 62 percent were male and 38 percent female, as compared with 67 percent and 33 percent respectively in the non-Jewish student population.

Although the number of Jewish students has increased continually since 1900, the Jewish percentage of the total American college population dropped from 9.3 percent in 1935 to about 5 percent in 1968 as the overall growth of college enrollment moved at a faster pace than the Jewish enrollment. Less than 40 percent of the U.S. college-age population was in college in 1968; the Jewish percentage attending college was nearly 80 percent. More than half of all Jewish students (51.3 percent) attended public institutions, 41 percent were at privately supported colleges, and denominational institutions accounted for 7.7 percent.

New York City continued to have the largest number and proportion of Jewish college students in the world, reflecting its large Jewish population and the city's unique system of tuition-free city colleges. Nevertheless, New York City declined as a center of higher education for Jewish students after 1935, when 53 percent of all Jewish collegians in the United States studied in New York City institutions, to 50 percent in 1946, 38 percent in 1955, and 27.6 percent in 1963. The decrease was due to several factors: growing affluence enabled more parents to give their children a college education away from home; the growth of the State University of New York opened additional opportunities for study at colleges outside the metropolitan area. The liberalization of admissions policy by private colleges, mainly but not exclusively in the east, and the steady movement of the Jewish population from the inner city to the suburbs contributed further to these tendencies.

The distribution of Jewish students by professional fields of study showed 23.6 percent (as compared with 16.5 percent of all students in business administration), 18.9 percent (compared with 28 percent) in education, 17.6 percent (19.8

percent) in engineering, 8.2 percent (3.3 percent) in law, 7.6 percent (3.4 percent) in medicine, and 5.2 percent (1.7 percent) in pharmacology. Other professional fields in which Jewish students were highly represented were dentistry, optometry, psychology, and philosophy; they were proportionately underrepresented in agriculture, nursing, home economics, physical education, and physical therapy (data for 1964).

RESTRICTIVE ADMISSIONS PRACTICES. Jewish students, however, did not always gain admission to the colleges and professional schools of their choice. While admission to institutions of higher learning was, in theory, open to all students who had the necessary scholastic and financial qualifications, many institutions restricted the admission of members of minority groups, including Jews. The use of quotas was rarely admitted, but they were a persistent feature in numerous private institutions, usually reflecting the social prejudices and desire for social homogeneity of the university community, its alumni, and its supporters. In 1922, Harvard president A. Lawrence Lowell defended the existence of a 10 percent quota for Jews at Harvard by expressing concern about "the large and increasing proportion of Jewish students in Harvard College," and his policy was supported by Harvard undergraduates who claimed that "Jews do not mix [and] they destroy the unity of the college" (in: *Harvard Graduates' Magazine*, Sept. 1922). In 1945, Dartmouth president E.M. Hopkins justified a quota for Jewish students by emphasizing that "Dartmouth is a Christian college founded for the christianization of its students." In 1947, President Truman's Commission on Higher Education charged that quota systems and policies of exclusion had prevented young people of many religious and racial groups, but particularly Jews and blacks, from obtaining a higher education and professional training. A study by the American Council on Education (1949) showed that the average Jewish applicant for college admission had considerably less chance of acceptance than a Catholic or Protestant of comparable scholastic ability. In the same year, application forms of 518 colleges and universities and of 88 schools of medicine and dentistry were still found to contain at least one and usually several potentially discriminatory questions.

Restrictive admissions and social practices at universities began to yield to concentrated public criticism after World War II. Many veterans returning to the campus under the GI bill vigorously objected to discriminatory practices in civilian life as incompatible with the mandates of democracy for which the war had been fought. Reports and studies by federal agencies and educational associations criticized restrictive policies. Several states outlawed discriminatory practices in education and employment. As a result, scholastic merit gradually became the major criterion for admission to private institutions, although other factors – geography, preferential treatment of children of alumni, the extracurricular activities of the applicant, the desire for a balanced student body – remained operative. As a result, Jewish enrollment at private institutions rose substantially between 1940 and 1968 (at Princeton from 2 percent to 12 percent, at Harvard to 21 percent, in the Ivy League colleges as a whole to 20 percent).

At the same time, however, many state universities began to restrict their enrollment of out-of-state students. In 1969, 73 (more than one-half) restricted the admission of nonresidents. Inasmuch as New York and New Jersey constituted a major Jewish population center of the United States and both states consistently "exported" large numbers of students because their own college systems could not accommodate all applicants, this restriction grew as an obstacle to the admission of Jewish students in the rest of the country. The demands for the admission of more black students to American universities, especially to tax-supported institutions, also caused increasing concern that such redistribution would cut down Jewish admissions.

FACULTY MEMBERS AND ADMINISTRATORS. While Jewish student enrollment, despite restrictions, rose steadily after the turn of the century, the number of Jewish faculty members remained proportionately small. Before World War I, the supply of qualified American-trained Jewish college teachers was small; but even after the supply increased, restrictive policies continued to bar many Jews from academic appointments until the late 1930s, when burgeoning student enrollment and the demands of enlarged or new institutions created a growing need for additional academic staff. The way was smoothed further by federal and state legislation, especially after World War II, prohibiting discriminatory employment practices. Virtually no ethnic restrictions in faculty appointments have remained. According to a 1968–69 survey, 10 percent of more than 60,000 faculty members of all ranks and from all types of institutions (94.4 percent white) indicated they had been reared as Jews, though only 6.7 percent still gave their present religion as Jewish at the time of the survey. (A similar drop in religious identification was found among non-Jews; the percentages for Protestant faculty members were 64 percent and 45.3 percent; for Catholics, 15.4 percent and 11.8 percent.) At the same time, some leading universities, such as California, Chicago, Columbia, Harvard, Michigan, Pennsylvania, Princeton, the City University of New York, were estimated to have 15–20 percent Jewish faculty. Few Jews could, however, be found among college presidents and other top-echelon university administrators. A 1966 survey found that, although Jews constituted 10–12 percent of the student body at the 775 nonsectarian senior colleges and universities in the United States at that time, only 5 of 397 private and one of 378 publicly supported institutions had Jewish presidents (less than 1 percent). Of the 1,720 deanships at the same institutions, 45 (2.6 percent) were held by Jews; two-thirds of them were, however, concentrated in half a dozen institutions. Eleven (42.3 percent) of the 26 deans of the City University of New York were Jewish in 1966. Jewish deans could be found mainly at graduate schools of social work and schools of government

and international affairs. While anti-Jewish restrictions had largely disappeared on the professional level, they seemingly continued to exist on the top level of academic administration. See also *Students' Movements.

By the early 2000s 85 percent of American Jews received some college or university education, and more than 50% received at least a bachelor's degree. In all, it was estimated that more than half the Jews in America under the age of 65 were college graduates.

Jewish Studies

Jewish studies, defined as the systematic study of Judaism and Jewish life and experience through the ages, began to emerge in the American university curriculum to a significant degree only in the late 1930s. The Old Testament and Hebrew had long been taught, but only insofar as a knowledge of the Hebrew Bible was considered necessary for an understanding of Christianity and the training of Christian clergymen.

The first courses in post-biblical Judaism were introduced into the curriculum of American universities only toward the end of the 19th century. The development led to the appointment of the first Jewish scholars to American university posts in Judaica or related subjects. Despite persistent efforts by interested individuals and groups in the Jewish community, the number of institutions offering Judaic studies remained small; in 1945, full-time teaching staff in Judaica could be found only at Berkeley, Chicago, Columbia, Harvard, Iowa, Johns Hopkins, Missouri, New York University, Pennsylvania, and several New York City colleges. The number began to increase rapidly in the 1950s; by 1969, nearly 80 Jewish scholars were teaching full-time in American universities, and courses in Judaica were taught part-time at nearly 200 additional institutions in the country. By 2005 the number of Jewish scholars in the *Association for Jewish Studies (AJS), founded in 1969, was more than 1,500, most of whom were faculty teaching some area of Jewish studies in an institution of higher education, while 20% of the membership consisted of graduate students.

A variety of factors contributed to the growth of Judaic studies, among them the articulation of a growing demand for such studies arising from increased Jewish self-awareness generated by the impact of the Holocaust and the creation of the State of Israel; the democratization of academic policies and admission practices which, together with the increased social mobility and affluence of the Jewish population, led to substantial increases in Jewish enrollment and greater Jewish visibility throughout the United States; the climate of greater acceptance of Jews and Judaism by the general and academic communities, especially after World War II; the growing recognition and acknowledgment of Hebrew as a living language and of Judaism as an essential component in the fabric of Western civilization deserving of serious academic interest and study; and the postwar growth of specialized area studies and of courses and departments of religious studies.

The efforts aiming at the introduction of new or the enlargement of existing programs of Judaic studies were usually spearheaded by Jewish students, faculty members, and Hillel directors, frequently joined by other groups or agencies. Although some of there efforts may also have been stimulated by pressure for the introduction of black studies, university responses were generally based on recognition of the significance of Judaism as a major matrix of Western civilization and of its rightful claim as an authentic field of study. Some Jewish studies programs offered a major for undergraduates either in departments of religion or in departments of Near Eastern studies; others were interdepartmental.

The funds required for the support of Judaic studies came from a variety of sources. About two-thirds of the support for full-time staff was provided by university budgets; 10 chairs of Judaic studies were fully endowed; others were supported by various Jewish communal or private sources. Numerous individual courses were taught by Hillel directors (at 40 institutions) and by visiting staff provided by the Jewish Chautauqua Society, the National Foundation for Jewish Culture, and similar groups.

The number of undergraduates majoring in Judaica was estimated to be about 600 in 1969. A 1972 survey (by the Hillel Foundation) listed more than 350 institutions, not including seminaries and divinity schools, which offered at least one and usually several courses in some area of Jewish studies. Graduate studies leading to an advanced degree could be undertaken at 25 institutions as well as the major rabbinical seminaries and some Hebrew Teachers Colleges. The expansion of programs of Judaic studies in American universities was, at that time, slowed by a shortage of competent academic personnel. By 2005, more than 70 institutions had degree-granting programs of one kind or another in Jewish studies.

UNIVERSITY OF JUDAISM, THE (UJ). The University of Judaism was founded in 1947 in Los Angeles, California, based on the vision of Dr. Mordecai *Kaplan who called for an institution that would further Jewish education by advancing the thought and culture of "Jewish Civilization." In his article, "A University of Judaism – A Compelling Need," he outlined the basic elements of his proposed university. He called for a

rabbinical school, a school of education, a school of the arts, a research institute, a school of democracy, and a junior college. His paper also called for a school of social service to train Jews, already committed to social work, to view their occupation through the lens of Jewish culture.

In writing his article, Kaplan did not intend to create a west coast institution. Rather, he hoped to convince his *alma mater*, the Jewish Theological Seminary (JTS) to refashion itself in the image he proposed. However, JTS used his blueprint to create a west coast outpost for itself in cooperation with the Los Angeles Bureau of Jewish Education. Initially, an attempt was made to include the leadership of the Orthodox and Reform communities in this effort, but this effort was unsuccessful. Shortly afterward, the Hebrew Union College opened its own branch school, and some years later, Yeshivah University followed suit.

From the very beginning, the University of Judaism had a dual constituency. As the west coast branch of the Jewish Theological Seminary, it had links to the various arms of the Conservative movement, and much of its professional leadership was drawn from the ranks of JTS graduates. At the same time, Kaplan's vision impelled the university to offer broad-based programs geared toward the entire Jewish community. So although the professional leadership was decidedly Conservative, the programs themselves were nondenominational in character and often emphasized the cultural aspects of Jewish life.

The community leadership for the UJ was initially drawn from the entertainment community. The first two chairmen of the UJ's board of directors were writer-producer, Dore Schary, followed by Milton Sperling. The UJ's first president was Dr. Simon Greenberg who also served as vice chancellor of the Jewish Theological Seminary.

Although the university did not implement all aspects of Kaplan's vision, many of its programs reflected the realization of his plan. In the 1950s and 1960s the University of Judaism served primarily as a Hebrew teachers college that also provided adult education courses for the community. David Lieber followed Greenberg as UJ's president in 1963 and began a 29-year tenure. During these early years the university relied almost entirely on part-time faculty and full-time administrators who also taught. Nevertheless, the UJ was able to attract prominent guest faculty including Martin *Buber, Abraham Joshua *Heschel, Leo *Strauss, and Mordecai Kaplan.

Much of Lieber's presidency was marked by a partnership forged with his vice president, Dr. Max Vorspan. While Lieber occupied himself with the academic side of the institution, Vorspan, a devoted Kaplanite, emphasized the growing adult education and cultural programs. Under Vorspan's direction, the UJ launched the first Jewish Elderhostel program in the United States. And although Vorspan retired in 1993, by 2005 the UJ had the largest and most comprehensive Jewish adult education program outside of Israel. In 1956, the UJ also established Camp Ramah in Ojai, California, which still serves both as a summer camp for children and as a retreat center for the UJ.

In the first few years of its existence, the UJ held classes at the site of Sinai Temple in downtown Los Angeles. Later the UJ moved to the former site of the Hollywood Athletic Club where it remained until moving in 1977 to its present 27-acre campus in the suburb of Bel Air.

In 1973 the University of Judaism took its first steps toward independence from JTS when its board of directors, under Jack M. Ostrow, assumed full responsibility for the financial welfare of the institution. The UJ board of directors undertook to finance and build the new Bel Air campus, which was finally completed in the mid-1980s.

During David Lieber's administration, the first full-time faculty members were hired including Bible scholar Ziony Zevit, philosopher Elliot Dorff, educator Ron Wolfson, and historian Steven Lowenstein. Lieber also established a two-year pre-rabbinic program, the Fingerhut School of Education, a graduate school of nonprofit management, and an undergraduate college. At the same time, Vorspan continued to focus on community education and culture by creating programs in the plastic arts, dance, music and theater. His part-time faculty included dancer Bella Lewitsky, actor Benjamin Zemach, and sculptor Max Finkelstein.

With the establishment of its undergraduate College of Arts and Sciences in 1982, the UJ made the transition from Hebrew college to a small university. Since the undergraduate program included majors in areas such as political science, psychology, bio-ethics (pre-medical), and literature, the institution began to hire its first faculty members in scholarly areas outside of Jewish studies. The UJ underwent an academic reclassification, such that it became recognized as an independent liberal arts institution rather than as a type of religious seminary.

In 1991, David Lieber announced his intention to retire from the presidency. Although the University of Judaism had already been functionally independent from the Jewish Theological Seminary for almost 20 years, it was felt that the time had come to transform a *de facto* relationship into a *de jure* one. Lieber negotiated an official separation agreement before stepping down as president in fall 1992.

Lieber was succeeded by Robert Wexler. Wexler had been a member of the UJ faculty and staff since 1978 and was himself a graduate of the University of Judaism having attended there from 1969 to 1973. Although Wexler received his rabbinical ordination at JTS, he also had personal connections to the Reform and Orthodox movements and was an ardent Zionist. These facts shaped his approach to the future growth of the university.

Almost immediately, Wexler began to guide the UJ toward a nondenominational status that he believed to be consistent with the initial vision of Mordecai Kaplan. This realignment meant that the UJ would no longer be formally identified as an institution of the Conservative movement.

The new chairman of the UJ board, Francis Maas encouraged Wexler's efforts.

During the 1990s and early 2000s, the University greater improved its financial position. After many years of deficits, the operating budget was brought into balance. Additionally, the UJ's endowment, which stood at $5 million in 1992, grew to more than $50 million by the end of 2005. The university also undertook to expand its facility by adding a student union and conference center; in 2006, it began construction on its new Ostrow Library.

In 1995, the UJ opened the first American rabbinical school in the western United States, the Ziegler School of Rabbinic Studies. Despite the UJ's nondenominational status within the Jewish community, it was felt that an American rabbinical school should be affiliated with a specific religious movement, and it was determined that the Ziegler School would become an official constituent of the Conservative Movement.

The university continued to expand with the establishment of the Ziering Institute which examines the ethical and religious implications of the Holocaust. A Center for Israel Studies was also created with the purpose of increasing the knowledge of Israeli history, politics, culture, and society among American Jews.

UNJUST ENRICHMENT.

The Concept

The law of *obligations deals with obligations arising from both contract and tort, i.e., those undertaken by the party or parties concerned of their own free will and those imposed by law on a person – against his will – in consequence of damage resulting from an act or omission on his part. There is a further group of cases which fall under a branch of the law known as unjust enrichment and relate to a person's liability which arises neither from his undertaking nor delictual act, but from the fact that he has derived a benefit to which he is not entitled, at the expense of another.

A general exemplification of this class of obligations in Jewish law is the discussion in the Mishnah of the matter of a person who hires from his neighbor a cow, which dies of natural causes after the hirer has lent it to a third party (BM 3:2). One opinion is that the hirer is not liable to the owner for the value of the cow – since the death of the cow is attributable to **ones* and the hirer has no liability for loss resulting therefrom – but the borrower must compensate the hirer (i.e., the person from whom he received the animal) – since the borrower is liable for loss resulting from *ones* (see **Shomerim*). However, R. Yose differs, questioning the hirer's right to "traffic with his neighbor's cow," i.e., it is inconceivable that the hirer shall enrich himself at the expense of the owner of the cow, who is the real loser, without any color of right thereto, and the hirer must therefore restore to the owner the value of the cow received from the borrower. R. Yose's opinion was accepted as *halakhah* (BM 36b; Yad, Sekhirut 1:6; Sh. Ar., ḤM 307:5). The same principle is enunciated by R. Johanan: "it is forbidden for a person to benefit [without authority] from another's property" (BM 117b), and the *halakhah* was decided as follows: "similarly, whenever a person performs an act or benefit in favor of another, the latter may not say, 'you have acted for me gratis since I did not authorize you' but he must give such person his reward" (Rema, ḤM 264:4; see also Ran on Rif, Ket. 107b). The problems of unjust enrichment are treated in Jewish law under the following five headings: (1) rescue of another's life; (2) rescue of another's property; (3) payment of another's debt; (4) improvement of another's property; (5) deriving benefit from another's property.

Rescue of Another's Life

The duty to rescue the life of another when endangered is enjoined in the Pentateuch: "Thou shalt not stand idly by the blood of thy neighbor" (Lev. 19:16). This duty includes the obligation to hire other persons against payment in order to rescue the person in danger (Sanh. 73a), who must refund to his rescuer all the expenses thus incurred by the latter: "For it is not a person's duty to save the life of his fellow with his own money when the person saved has money" (*Piskei ha-Rosh* 8:2; Sanh. 73a; Sh. Ar., ḤM 426:1, Sma and Siftei Kohen ad loc.). It was likewise decided that the heirs of the deceased must refund the expenses incurred by a third person in connection with the medical treatment of the deceased, even if not expended at the latter's request, since a person who of his own accord seeks a cure for the sick must not lose inasmuch as it is a matter of *pikku'aḥ nefesh* ("saving life") and whoever hurries to do so is praised (Resp. Rosh no. 85:2). This too is the law as regards the rescue and ransom of a Jewish prisoner in the hands of a gentile, and the latter – if he has the means thereto – must refund the ransom money to his rescuer (Rema, YD 252:12), since it is inconceivable that such a person "shall enrich his children while being a burden on the community" (Resp. Maharam of Rothenburg, ed. Cremona, no. 32; *Mordekhai* BM sec. 59).

Rescue of Another's Property

Under this heading are included cases in which a person knowingly, and without being requested to do so, acts to the benefit of another in a manner whereby the rescuer does not add to the other anything he did not have before but prevents the latter from suffering pecuniary loss. The basic laws concerning the duty to rescue another's property are expressed in two pentateuchal enjoinders, relating respectively to the duty of restoring lost property (Ex. 23:4; Deut. 22:1–3) and that of releasing an animal lying under its burden (Ex. 23:5; Deut. 22:4). In both cases the duty carries no return consideration (as regards restoring lost property, see Sh. Ar., ḤM 265:1; as regards releasing an animal, see BM 32a; Yad, Roẓe'aḥ 13:7; Sh. Ar., ḤM 272:6). However, the duty to provide aid gratuitously exists only as long as the rescue activities cause no loss to the rescuing party, but when he is likely to suffer loss therefrom he will not be obliged to act gratuitously (BM 2:9; Yad, Gezelah 12:4; Sh. Ar., ḤM 265:1; Tur. ḤM 272:2). The result is that even

in cases where the very act of beneficence toward another is imposed as a duty of the Torah, the beneficiary will be obliged, whenever the benefactor has suffered pecuniary loss, to compensate the latter on account of the benefit derived by himself. It was similarly laid down (BM 93b) that a paid herdsman must take precautions against possible circumstances of *ones*, for instance by hiring others to guard against beasts of prey, and that the owner of the herd must pay the herdsman for such expenses. This too is the law as regards any person, who hires people to protect another's herd from the threat of harm, and even though he has acted without being requested to do so by the owner of the herd, is entitled to receive from the latter his expenses and remuneration (Tos. BK 58a).

As regards the duty to compensate the rescuer for a loss he has suffered, a distinction is drawn as illustrated in the following two examples. The Mishnah mentions the case where one person has a jar of wine and another a jar of honey; because of a crack in the honey jar, the owner of the other jar spills his wine and rescues the honey by pouring it into his own jar (the honey being the more expensive) and the Mishnah holds the latter is entitled "to his remuneration [*sekharo*] alone" (BK 10:4, and the further example there cited). According to this Mishnah the beneficiary has to remunerate the rescuer for his efforts alone and is not obliged to refund the latter the cost of his wine. On the other hand, in the Talmud in like circumstances it is stated in the name of R. Ishmael, the son of R. Johanan b. Beroka, that the person pouring out the wine "receives his wine out of the honey of his fellow" (BK 81b; 114b), i.e., that the owner of the wine is entitled to payment of the value of the wine spilled in order to rescue his fellow's honey. The contradiction between the two cases was reconciled on the basis that in the former case the owner of the rescued property was present at the place and time of the rescue but the rescuer, not having sought express consent for his action, is not entitled to a full refund of his expenses or the value of his wine, but only to his remuneration; in the latter case, however, the owner of the rescued property was not present as aforementioned and therefore the rescuer is entitled to a full refund of his expenses (for an explanation of this distinction, see Tos. BM 31b; *Piskei ha-Rosh* BM no. 28; *Mordekhai* BK no. 57).

In contrast to the above cases, the Talmud quotes the case of rescue of another's property (*mavri'aḥ ari* – one who chases away a lion from another's property) without the knowledge of the beneficiary, in which the latter is exempt from making any payment whatever to the rescuer (Ned. 33a; BK 58a; BB 53a). The Talmud mentions two elements which characterize the category of *mavri'aḥ ari* cases in which the rescuer is not entitled to remuneration. First, that the rescuer acted as he did of his own initiative; secondly, that he suffered no loss whatever as a result of such action. Some of the *rishonim* were of the opinion that this category of *mavri'aḥ ari* includes only those cases in which both the above elements operate and that the absence of one of them renders the beneficiary liable to payment for the benefit derived by himself (Tos. Ket. 107b; *Mordekhai* BK no. 57). Others held that this category includes also cases in which only one of the two elements is present and that there is no need for both to operate together (Tos. BK 58a; Rosh, loc. cit.). The *rishonim* added a further requisite for the beneficiary's exemption from payment in *mavri'aḥ ari* cases, namely, that the loss which the rescuer sought to avoid was of doubtful contingency. That is, when it may reasonably be accepted that even without the rescuer's intervention no loss would have occurred, as for instance in the case where the lion was far from the beneficiary's herd. Hence the rescuer will be entitled to payment of his remuneration if the beneficiary, but for the intervention of the former, was certain to have suffered loss (Tos. BK 58a; Rosh and *Mordekhai*, loc. cit.). Yet another material requirement (for the beneficiary's exemption from liability) is that the rescuer's action was not calculated to enrich the beneficiary in any way but merely to have prevented him loss (Tos. Ket. 107b; Tos. BK 58a).

Payment of Another's Debt

This question is discussed in the Mishnah (Ket. 13:2) in relation to the obligation of maintenance, in the case of a person who supports a wife whose husband has gone abroad – without being requested to do so by either the wife or her husband. Some of the *tannaim* hold the benefactor to have "put his money on the horn of a deer" and to have no claim, neither against the wife nor her husband, since he acted as he did of his own accord. Other *tannaim* take the view that the benefactor may deliver an oath as to the exact amount expended on the wife and recover this amount from her husband. The *halakhah* was decided according to the former opinion (Yad, Ishut 12:19; Sh. Ar., EH 70:8).

As regards debts arising from other causes, there is a difference of opinion among the scholars. In the Jerusalem Talmud (Ket. 13:2; 35d) two opinions are quoted. One is that the dispute concerning a debt for maintenance extends also to the case of any other regular debt paid on behalf of another and without the latter's knowledge; the other opinion is that the dispute relates solely to payment of a debt owed by the husband for the maintenance of his wife, but with regard to a regular debt paid on behalf of the debtor, the opinion of all is that it may not be reclaimed from the debtor since it cannot be said that the latter received an absolute benefit because of the possibility that his creditor may have granted a waiver of the debt, and therefore the person who has paid it is in the position of a *mavri'aḥ ari* (see above). From the Babylonian Talmud (Ned. 33a–b; Ket. 108a) it may be concluded, according to most of the commentators, that the dispute relating to a maintenance debt extends also to regular debts. Some of the commentators (R. Hananel and R. Tam) interpreted the statements in the Babylonian Talmud to mean that a debt not arising from maintenance and paid by another may, in the opinion of all, be reclaimed from the debtor because of the certainty of the benefit caused the latter (Tos. Ket. 108a). The majority opinion of the *posekim* is that a person who has paid another's debt of any kind whatever may not recover payment from

the debtor (Yad, Malveh 26:6; Sh. Ar., ḤM 128:1; some scholars also explain the debtor's exemption on the grounds that it is a matter of *gerama – Tos. Ket. 108a).

Improvement of Another's Property

This category includes cases in which a person knowingly, and without being requested thereto, acts so as to confer an actual benefit on another by affording him a gain or increment which he did not previously have. The classic example is the case of a person who "goes down" to another's property to plant it or erect a building thereon, without any request from the owner to do the work or undertaking on his part to pay for it (analagous to the Roman law *negotiorum gestio*). Thus, for instance, if a hired worker should work in the field of a third party, whether in error or because he was directed thereto by his employer, the owner of the field will have to pay for the benefit derived, even though he did not request the work, for otherwise he will be in the position of having been enriched without right at another's expense (Tosef. BM 7:7; BM 76a).

In the case where a person plants another's land without permission, Rav's opinion is that "an assessment is made and he is at a disadvantage," whereas Samuel holds, "an estimate is made of what a person would pay to plant such a field." In the Talmud it is stated that there is no dispute between Rav and Samuel but that Rav refers to a field which is unsuitable for that which has been planted thereon, while Samuel refers to a field which is suitable for such planting (BM 101a). The scholars disputed the meaning of the expression "an assessment is made and he is at a disadvantage." R. Hai Gaon (*Sefer ha-Mikkaḥ ve-ha-Mimkar*, 7:33) and R. Zerahiah ha-Levi (*Ha-Ma'or ha-Gadol* to Rif BM 101a) held it to mean that the planter is only entitled to payment on the basis of the lowest price at which cheap workers can be hired to execute the same work; according to Rashi (BM 101a), Rosh (ad loc.), and others, the expression means that if the planter's expenses exceed the gain derived by the owner of the field then the former is only entitled to the value of such gain, but if the other way round then the planter is only entitled to the sum of his expenses. The *halakhah* was decided that a person who plants another's field without permission is at a disadvantage when the field is unsuitable for such planting, but if it is so suitable an estimate is made of how much one would be prepared to pay for planning that field (Yad, Gezelah 10:4).

Another example is the case where a person whose property surrounds the property of another on all sides fences the interior borders of his property, thereby enclosing at the same time also the surrounded property – without the authority of its owner. In the Mishnah (BB 1:3) there is a difference of opinion as regards the measure of liability of the owner of the surrounded property to pay toward the cost of the fence by which he too is served, and in the Talmud these divided opinions are interpreted in various ways (BB 4b and Codes; Rashi BK 20b; *Ha-Ma'or ha-Gadol* (see above) to Rif BB 4b; cf. Tos. BK 20b; Maim., Comm. to BB 1; *Yad Ramah* BB 4b; Ramban, Nov. BB 4b; *Milḥamot ha-Shem* thereto, etc.). All opinions agree that the owner of the surrounded property has liability for payment toward the costs of the fence from which he benefits, even though he has neither requested its erection nor undertaken to bear the costs thereof; the dispute – even among the *posekim* – centers on the varying measure of his liability, according to the factual circumstances. Liability for payment derives from the consideration that the "enclosing owner" (the *makkif*) is caused special expenses by the surrounded property since it causes a lengthening of the boundaries of the surrounding property and because the owner of the surrounded property benefits without right on account of the special expenses caused to the other (see BK 20b; for a further example, see BK 9:4; BK 101a; Yad, Sekhirut 10:4; Sh. Ar., ḤM 306:3, 6).

The *posekim* did not fail to observe that the consequence of the above law was to submit everyone to the constant danger of being placed in the position where he might be caused a benefit from and become obligated to pay for expenses incurred by his fellow in which he is not at all interested. Hence it was decided that such a beneficiary was to be exempted from liability if he had declared in advance that he had no interest in the proposed benefit and was not prepared to make any payment whatever in connection therewith (*Maggid Mishneh* Shekhenim 3:3; *Beit Yosef* ḤM 155:13).

Deriving Benefit from Another's Property

This category includes the cases in which a person benefits without authority from another's property, the benefit taking the form of a saving of expenses or the prevention of harm. The classical case discussed in the Talmud is the matter of a person who lives on another's property without the latter's knowledge or consent (BK 20a). Four possibilities are discussed: (a) If the premises are anyhow not available for letting and, in addition thereto, it is clear that even without such premises the occupier, for whatever reason, would not have hired some other residence for himself, then the latter is absolved from payment; the explanation for this is that he has neither caused a loss to the owner of the premises nor enjoyed any benefit himself since a benefit is expressed in some measure of monetary gain – nonexistent in this case. (b) If the premises are for hire and the occupier, but for his occupation thereof, would have hired some other residence, he will be liable for payment since he has derived a benefit at the cost of the owner's loss. (c) If the premises are not for hire and the occupier, but for his occupation thereof, would have hired some other residence, he will be absolved from payment since the benefit he has derived is not at another's expense, the owner having lost nothing; however, if enjoyment of the benefit should involve any measure of loss to the owner, the benefit will be at another's expense and the occupier liable for the full value of his benefit (BK 20a–b; Yad, Gezelah 3:9; Sh. Ar., ḤM 363:6–7). (d) Opinions are divided as regards the case where the premises are for hire but the occupier, even without his occupation thereof, would not hire other premises. Some of the *rishonim* held that the occupier, because he

derives no benefit, need make no payment at all on account of enrichment at another's expense and that the loss suffered by the owner is in the nature of *gerama* only, for which there is exemption (Tos. BK 20a, R. Perez, quoted in *Mordekhai* BK 16). The majority of the other *posekim* took the view that there is room for holding the occupier liable on account of causing a loss to the owner (Rif, *Halakhot* BK 21a; Yad, Gezelah 3:9; Sh. Ar., ḤM 363:6); that even if it be true that the occupier enjoys no benefit – since he might find some other residence free of charge – he is nevertheless the one who eats up that which is the loss of his fellow (*Piskei ha-Rosh*, BK 2:6).

A person who benefits unawares must pay for the benefit. The laws of *tort prescribe that the owner of an animal is absolved from paying for the produce of another which the animal has eaten up while grazing in a public domain; however, "if you have benefited, you must pay for the benefit" (BK 2:2), i.e., if the owner should derive benefit from the fact that his animal has fed in the aforementioned manner (by saving himself the cost of the animal's feed for that day), he will be liable to the owner of the devoured produce for the value of the benefit, lest he enjoy an undue gain at another's expense (BK 20a and Codes, *Nimmukei Yosef* thereto, TJ, BK 2:4, 3a; see also the difference of opinion there quoted concerning the manner of assessing the value of the benefit; for a further illustration of this class of case, see BK 6:2).

[Yechezkel Rottenberg]

Services Benefiting Another Person Without His Knowledge

As stated, a person who "goes down" to another person's field and plants it is the prototype for cases in which one person benefits another by improving his property in a manner for which a fee is normally charged. However, dicta of halakhic authorities indicate that the service does not necessarily relate to unsolicited improvement of property in the simple sense, and may relate to any service performed for the benefit of others. One of Rashba's responsum (Resp. Rashba vol. 4, no. 125) discusses the case of a person who brought clients to his neighbor's shop. Rashba awarded him a fee, for "What is the difference between a person who goes down… and someone who enters his shop and improves his business, in a place where it is customary to pay a fee for such things."

Another example that engaged the halakhic authorities is that of brokerage or matchmaking without the other person's advance knowledge. A person notified his fellow about a suitable woman whom he then married, or about an appropriate apartment which the latter bought, without any advance contract between them. Some of the *posekim* awarded him a fee on basis of the precedent of "one who goes down to another person's field" (see *Bi'ur ha-Gra*, ḤM 87:7 & 185:3). In another case the *posekim* were divided: Thus, Rema writes (Sh. Ar., ḤM 331:5): "A person who teaches his friend's son without the father being aware, some rule that he is obliged to pay him, by analogy to the law of a person who goes down to another person's field without his knowledge, …while others disagree." There are a two possible rationales for the view of those who disagree: it might be argued that the service rendered is not regarded as a real benefit, similar to the case of improvement of property, either in general or in those particular circumstances; or, that teaching is deemed as a *mitzvah* that ought to be performed *gratis* (see *Taz*, ad loc.). There is also a discussion of whether a judge who has adjudicated between two adversaries without a prior contract is entitled to a fee on the basis of the law of "goes down to another person's field" (see Sh. Ar., ḤM 9:5, *Sema* and *Taz*, ad loc.). It was suggested that this law applies to a service that enhances the financial situation of another person. However, with respect to a service that simply saves the other from incurring a loss, the relevant analogy is to that of a person who saves another's property by chasing away a lion, who is not entitled to remuneration; hence, a bailiff (*shomer*) who protects another person's property without his knowledge is generally not entitled to reimbursement (see *Shenaton ha-Mishpat ha-Ivri*, 13, p. 95).

Indeed, if the insured property was damaged and the insurance company paid its value, there is extensive discussion on the question of who should receive the money: the insurer who paid the premium, or perhaps it could be claimed that "a person should not do business with his neighbor's cow" (BM 35b), and the owner of the property is entitled to the money after he pays the premium to the insurer (see N. Rakover, *Osher ve-Lo be-Mishpat*; M. Slae, *Ha-Bitu'aḥ ba-Halakhah*, ch. 6–7; E. Bazri, *Teḥumin*, 2, p. 449).

UNNA, PAUL GERSON (1850–1929), German dermatologist. Born in Hamburg, Unna served in the German army during the Franco-Prussian war. He was discharged after being severely wounded, continued his studies and later moved to Vienna where he worked under two famous dermatologists, Moriz *Kaposi and Ferdinand von Hebra. He returned to his native city where he started a private clinic and later a hospital for skin diseases. In 1919 he was appointed professor of dermatology at the University of Hamburg.

Unna is considered a pioneer in applying biological and physical sciences to dermatology. He made studies of the chemical aspects of the skin and by using staining methods he demonstrated changes in the structure of the epidermal cells. He was the first to describe various skin diseases such as sebarrhoic eczema, erythema acneformis, etc. He discovered the Ducrey-Unna bacillus.

[Suessmann Muntner]

UNRRA (abbreviation of **United Nations Relief and Rehabilitation Administration**), international organization (1943–47) founded to give economic and social aid to countries that were under German occupation during World War II. UNRRA, a division of the *United Nations, was actually founded before the establishment of the United Nations, by an agreement signed by the delegates of 44 countries at a White House ceremony on Nov. 9, 1943. The UNRRA Council, its governing body, was convened for the first time in Atlantic City, New Jersey the next day, and elected Herbert *Lehman as its director general; he was succeeded by Fiorello *La Guardia in 1946. The United States contributed the bulk of its budget and the organization received significant support from Britain, the Soviet Union, and China, which provided 75% of its budget and formed its central committee. It was later expanded to include other countries, including France, Canada, Australia, Brazil, and Yugoslavia. The relief activities of UNRRA encompassed the liberated countries of Europe, with extensive aid provided for the Soviet Union, Poland, and the Balkan countries. Relief was also given to Far Eastern and Middle Eastern countries. The services supplied amounted to almost $3 billion and included food supplies amounting to over $1.2 billion, medicines and medical services, clothing, and machines and materials for agricultural and industrial rehabilitation.

Another prominent function of UNRRA was care for *Displaced Persons, for which it assumed responsibility in October 1945. It was overwhelmed by the task at first – no one had prepared for the scope of the problem – but later it geared up to perform the task. At its peak, in the summer of 1946, UNRRA cared for some 850,000 persons. During this period, it operated with a staff of about 25,000 people and was also assisted by many voluntary agencies. About one-quarter of the Displaced Persons under the care of UNRRA in the summer of 1946 were Jews. Voluntary Jewish organizations active within UNRRA and attached to it included the American Jewish *Joint Distribution Committee, the *Jewish Agency, the Jewish Committee for Relief Abroad, *Ort, and the Va'ad Haẓẓalah. UNRRA activities ended in the summer of 1947, when its role in the care of DPs was transferred to the new International Refugee Organization (IRO).

[Chaim Yahil / Michael Berenbaum (2nd ed.)]

UNSCOP, abbreviation of the United Nations Special Committee on Palestine, appointed by the General Assembly of the United Nations at a special meeting convened in April 1947 at the request of the British government. The committee consisted of 11 members, representing the governments of Australia, Canada, Czechoslovakia, Guatemala, India, Iran, The Netherlands, Peru, Sweden, Uruguay, and Yugoslavia. In their report, published in August 1947, the majority recommended the partitioning of Palestine into an independent Jewish state, an independent Arab state, and an internationalized "*corpus separatum*" for the city of Jerusalem. This recommendation was approved by the General Assembly of the United Nations on November 29, 1947.

UNTERMAN, ISSER YEHUDA (1886–1976), Ashkenazi chief rabbi of Israel. Born in Brest-Litovsk, Belorussia, he studied at the Maltash, *Mir, and *Volozhin yeshivot and was ordained by R. Raphael Shapiro. At the age of 24 he was appointed *rosh yeshivah* in Vishova, Lithuania, and served subsequently as rabbi of various Lithuanian communities. His last position there was as rabbi of *Grodno during 1921–24. Possessing oratorical and expository talents of a high order, he attained a distinguished record during World War I as a communal leader after representing the community before the authorities, and in the postwar period he displayed outstanding organizational gifts in the reconstruction of the Lithuanian yeshivot. In 1924 he was appointed rabbi of *Liverpool, England, and, rapidly mastering English, soon made his influence felt. A fervent Zionist, he became president of the British Mizrachi Organization and appeared before the Anglo-American Committee of Inquiry on Palestine in 1946. He championed the rights of aliens and was a member of the Council of Christians and Jews.

In 1946 Rabbi Unterman was elected Ashkenazi chief rabbi of Tel Aviv-Jaffa in succession to Rabbi M.A. *Amiel, and in 1964, Ashkenazi chief rabbi of Israel, succeeding Rabbi I. *Herzog. During his period of office in Tel Aviv he organized the rabbinic courts, making them a model of efficiency. He founded two *kolelim* (graduate talmudical academies) – Shevet mi-Yhudah in Tel Aviv and Shevet u-MeḤokekim in Jerusalem – where he introduced a systematic method of Talmud study, based on the practical *halakhah*, for select students preparing for the rabbinate and for service as religious functionaries and teachers in advanced yeshivot. While he insisted on unflinching loyalty to the minutiae of the *halakhah*, he approached public issues with moderation and understanding. In 1952 he toured the U.S. on behalf of the United Jewish Appeal and helped to strengthen the relationship between the American and Israel rabbinates. Rabbi Unterman wrote *Shevet mi-Yhudah* (1952), on problems of *halakhah*. He contributed to many rabbinical periodicals and made valuable additions to the *Oẓar ha-Posekim*, the digest of responsa literature. Many of his responsa appear in the works of others and are a model of lucidity.

[Jacob Goldman]

UNTERMEYER, LOUIS (1885–1977), U.S. poet, author, anthologist, editor, and translator. The son of a New York jewelry manufacturer, Untermeyer entered his father's firm as a designer and rose to be its vice president. Largely self-educated, he was chiefly interested in literature and in 1923 retired from business to devote himself to poetry. A prolific writer and skilled editor, Untermeyer published more than 70 volumes of prose and verse, short stories, travel books, parodies, essays, and critical anthologies. His earliest collection of lyrics, *First Love* (1911), was composed under the influence of *Heine and Laurence Housman; his second, *Challenge* (1914), showed greater maturity. His other collections were *These Times* (1917), *The New Adam* (1920), *Roast Leviathan* (1923), *Burning Bush* (1928), *Food and Drink* (1932), and *Long Feud: Selected Poems* (1962). His humorous verse includes *Collected Parodies* (1926).

Untermeyer's lifelong interest in Heine found expression in a volume of translations, *The Poems of Heinrich Heine* (1917), and in the two-volume biography, *Heinrich Heine: Paradox and Poet* (1937). He reproduced the spirit of the dying Heine with much pathos in the poem "Monolog From a Mattress." *The Firebringer and Other Great Stories: Fifty-Five Legends That Live Forever, Newly Written by Louis Untermeyer* appeared in 1968. His fictional works include the biblical novel *Moses* (1928). It was, however, with his interpretations and anthologies of English and American poetry that Untermeyer was most influential. Outstanding among these were his *Lives of the Poets* (1961) and the *Britannica Library of Great American Writing* (1960). Another of his anthologies was *The World's Great Stories* (1964). Two volumes of autobiography, *From Another World* (1939) and *Bygones* (1965), portrayed not only his own development but also the period in which he lived. *The Letters of Robert Frost to Louis Untermeyer* appeared in 1963.

JEAN STARR UNTERMEYER (1886–1970), also a poet, was Louis Untermeyer's wife from 1907 until 1923. Born in Zanesville, Ohio, she became a singer in Vienna and London, taught literature in various schools and colleges, and wrote several books of verse, including *Growing Pains* (1918), *Steep Ascent* (1927), *Love and Need* (1940), and *Later Poems* (1958). She published her autobiography, *Private Collection*, in 1965.

[Sol Liptzin]

UNTERMYER, SAMUEL (1858–1940), U.S. lawyer and civic and communal leader. Untermyer, born in Virginia and raised in New York City, graduated from Columbia Law School in 1878. A member of the prestigious firm of Guggenheimer, Untermyer and Marshall, he engaged in a varied legal practice, including corporate, civil, criminal, labor, family, and international law. He achieved national prominence as counsel for the Congressional Committee known as the Pujo Committee which in 1912 investigated the "money trust." Untermyer's contribution to the drafting and passage of such legislation as the Federal Reserve Act, Federal Trade Commission Act, and Clayton Anti-Trust Act was substantial. A political liberal, he exerted considerable influence on Democratic political affairs, especially in New York City. His participation in Jewish affairs included service as attorney for Herman Bernstein who sued Henry Ford in 1923 following antisemitic attacks in Ford's *The Dearborn Independent*; vice president of the American Jewish Congress; president of the Palestine Foundation Fund; and, during the 1930s, president of the Non-Sectarian Anti-Nazi League and leader in the boycott of German goods.

[Morton Rosenstock]

UR, one of the largest towns in Sumer and later in Babylonia. Today it is a wide expanse of ruins in which stands a high tell, the ruins of the Ziggurat of Ur, known as al-Muqayyar. Ur developed on the bank of a large canal, which carried water from the Euphrates to the area and served as an important trade route, through which trade boats passed to Ur's two ports. In present times the canal is silted up and the entire region is desolate.

The origin of the name Ur is not clear. Some maintain that it is the Sumerian word *uru*, meaning "town." Some point to the group of cuneiform symbols in which the Sumerian name is written, and translate the name as: "the place of the dwelling of light." In the Bible, the city is referred to as Ur of the Chaldeans (Heb. אוּר כַּשְׂדִּים), since in the biblical period it was included in the area occupied by the Chaldeans.

According to the legendary tradition of Sumer, Ur was settled even before the flood and was the center of a dynasty of rulers, each of whom reigned for thousands of years. In later periods too the rule of Sumer and Akkad was in the hands of a dynasty of kings, whose capital was Ur. The English scholar Taylor was the first to undertake excavations on the site (1854), and it was he who identified the tell of Ur, on the basis of an inscription from the time of Nabonidus king of Babylonia. At the end of the 19th century, an expedition on behalf of the University of Pennsylvania excavated at Ur, but the results of this excavation were not published. In 1918, the English scholar Campbell Thompson conducted an experimental excavation on behalf of the British Museum, and a short while later (1918–19), the English scholar Hall excavated, on behalf of the same institution, at Ur, Eridu, and el-Ubaid, near Ur. A joint expedition on behalf of the University of Pennsylvania and the British Museum led by Sir Leonard *Woolley excavated at Ur for 12 consecutive seasons (from 1922 to 1934). Although only a small section of the area of ruins was excavated, the reports of the last expedition make it possible to know the history of the town and its cultural development from its beginnings to its final destruction. It began in the Chalcolithic Era (beginning of the fourth millennium B.C.E.).

At the end of the fourth millennium B.C.E. there are sudden signs of a new culture. After a long period there was a great flood that (according to Woolley) wiped out most of the settlements in an area of 100,000 sq. km, in the region of the lower reaches of the Euphrates and the Tigris. Only the towns located on high places, including Ur, were saved. Outside the wall of Ur, in its lower environs, Woolley found a layer of red soil without any archaeological remains, about 2.5 m. deep, which separated the early remains (below) from the later ones (above). According to Woolley it is possible that a reference to this terrible tragedy is reflected in the Sumerian-Babylonian flood mythology. However, his theory is not accepted by other scholars.

Above this "barren" layer from the time of the flood is a large cemetery from the time of the first dynasty of Ur (26^{th}–25^{th} centuries B.C.E.) with which the historical period of Sumer and Akkad begins. Here were found the tombs of several kings and queens. Later, Ur was transferred from one conqueror to another. Among these, mention should be made of Eannatum king of Lagash, Lugal-zagge-si king of Umma and Erech (Uruk), and Sargon of Akkad, all of whom left sacred vessels in the temple at Ur. In the 22^{nd} century, Ur was apparently again ruled by a dynasty of local independent rulers. However, Ur reached its peak of power and development during the "Third Dynasty of Ur" (c. 22^{nd}–21^{st} centuries B.C.E.). Ur-Nammu, founder of this dynasty, was at first the governor of Ur on behalf of Utu-hegal of Uruk. After freeing himself from the domination of Uruk, he apparently succeeded in extending his rule to all the towns of Sumer. He also called himself "king of Sumer and Akkad," though the extension of Ur's domination outside the boundaries of Sumer occurred primarily in the time of his son and heir Shulgi, who called himself, like the kings of Akkad, "king of the four corners of the earth." During his reign, which lasted 47 years, Shulgi extended the borders of his kingdom and conquered Assyria. However, at the end of Shulgi's time the danger of the Amorites was already threatening Ur from the northwest. In the time of his successors there was an additional danger from the northeast: the consolidation and expansion of Elam. In the time of Ibbi-Sin, the last king of the third dynasty of Ur, the Sumerian and Akkadian monarchy of Ur was defeated in its battles against the invading Western Semites (Amorites) and Elam (in the northeast). Ur never recovered from this blow, although it did enjoy some additional periods of religious or economic flourishing, such as in the middle of the second millennium B.C.E. (in the time of Kurigalzu I, of the Kassite dynasty of Ur) and the beginning of the seventh century B.C.E. (in the time of Essarhaddon's active governorship). From the 11^{th} century B.C.E., the area was occupied by the nomadic tribes of the Chaldeans; hence the biblical combination Ur of the Chaldeans. The numerous architectural changes made in the time of Nebuchadnezzar II (beginning of the sixth century B.C.E.) in the religious sphere of Ur attest to this king's attempt to infuse a new spirit into the cult of Sin in Ur. This too, however, did not help Ur. Similarly unhelpful were the attempts of Nabonidus (in the middle of the sixth century) to encourage this cult. From that time on there is no mention of Ur in the historical sources. The latest commercial document discovered in Ur is from 400 B.C.E., i.e., from the time of Persian rule. It may be assumed that not long afterward the town was destroyed and abandoned, although a Hellenistic tradition from the second century B.C.E. can be interpreted to mean that during that period the place still served as a kind of center for nomadic Arab tribes.

According to biblical tradition, Ur was the place of origin of the Patriarchs (Gen. 11:28, 31). Indeed, the first quarter of the second millennium B.C.E., with the economic decline of Ur after the downfall of the third dynasty and the emergence of the Amorites from the west, was a fitting time for the migration from Ur of various families who were not tied to Ur as were farmers who were enslaved to the soil. From there the Patriarchs wandered to Haran; this wandering too is explained by the special ties between these two centers of the moon-cult.

[*Encyclopaedia Hebraica*]

URBACH, EPHRAIM ELIMELECH (1912–1991), Israeli researcher in talmudic and rabbinic literature. Urbach, who studied in the Breslau Rabbinical Seminary and at the universities of Breslau and Rome, served as lecturer at the Breslau Rabbinical Seminary from 1935 to 1938. After immigrating to Ereẓ Israel in 1938, he subsequently served as a teacher and headmaster of grammar schools in Jerusalem. During the years 1950–53, he was an inspector and head of a department in the Ministry of Education and Culture. From 1953 he taught *aggadah* and subsequently rabbinical literature at the Hebrew University and in 1958 became professor of Talmud. During the years 1956–60, he served as head of the Institute for Jewish Studies and in 1960/61 he was prorector. In 1962 he was elected chairman of the section of Jewish affairs of the Israel Academy of Sciences and Humanities and from 1980 to 1986 was president of the Academy.

Urbach's studies cover practically every branch of research in the Talmud and in rabbinic literature. His most important work is the *Ba'alei ha-Tosafot* (1956 and later editions), for which he was awarded the Israel Prize. This deals with the history of the *tosafists and their creations and, at the same time, illuminates both their Jewish and gentile historical, social, and ideological background, and analyzes their methods of study, their methodological theories, and their contribution to the development of the *halakhah*. In this large work that touches on all the problems connected with its field, Urbach shed light on one of the most neglected sections of Jewish history in general and rabbinical literature in particular. He also

published the *Arugat ha-Bosem* (vols. 1–4, 1939–63) of *Abraham b. Azriel, with notes and a comprehensive introduction. Urbach's interest also turned to the religious and theological principles of rabbinic Judaism. He contributed several important articles in this field to various *festschriften* and periodicals. He has incorporated his researches in this field in an important book, *Ḥazal: Pirkei Emunot ve-De'ot* ("The Rabbis: Doctrines and Beliefs"; 1969) in which he outlines the views of the rabbis on the important theological issues such as creation, providence, and the nature of man. In this work Urbach synthesizes the voluminous literature on these subjects and presents the views of the talmudic authorities. In addition he published numerous articles (in Hebrew, English, French, and German) discussing, among other topics, the history of the *halakhah*, the ideological world of the rabbis, the aggadic Midrashim, and medieval polemical literature. Great importance is attached to those studies in which he proved the close connection between the *aggadah* and Christian-Jewish polemic. From 1970 Urbach was the editor of *Tarbiz*, and president of *Mekiẓe Nirdamim. In 1966 Urbach was a founder of the *Tenu'ah le-Yahadut shel Torah* ("Movement for Torah Judaism"), one of whose aims was to bring about basic and progressive changes in the politics and values of religious Jewry in Israel.

[Moshe David Herr]

URBINO, town in central Italy, formerly capital of an independent duchy. The earliest record of Jews dates from the beginning of the 14th century, when Daniel of Viterbo was authorized to trade and open a loan bank. His family long continued to head the community. Other loan bankers, ultimately eight in number, received authorization to operate later. However, in 1468 a monte di *pieta was established in Urbino in order to restrict Jewish activities. In the 15th century the dukes of the house of Montefeltro favored Jewish scholars and were interested in Jewish scholarship; Federico II collected Hebrew manuscripts. When the duchy passed to the Della Rovere family in 1508, they enacted a more severe policy, not rigidly enforced. Hebrew books were burned in Urbino in 1553 and in 1570 the ghetto was introduced, with all the accompanying indignities. The degraded status of the Jews was confirmed when the duchy of Urbino passed under papal rule in 1631. At this time there were 369 Jews (64 families) in the town, a number that steadily decreased thereafter. In 1717 they were mostly poverty-stricken; many houses in the ghetto were empty, and the synagogue itself was partly owned by non-Jews. There was a temporary improvement with the invasion of the French revolutionary armies, but during the reaction of 1798 anti-Jewish excesses took place. Papal rule, with the accompanying degradation, was reestablished with intervals from 1814 to 1860, when Urbino was annexed to the kingdom of Italy and full emancipation automatically followed. Nevertheless the community continued to decline in number and now is virtually extinct.

[Cecil Roth]

URI, PIERRE EMMANUEL (1911–1992), French economist. Uri was born in Paris. From 1936 to 1940, he taught in the U.S. In 1944 he entered public service, with the Institut de Science Economique Appliquée. From 1947 to 1951, he taught at the École Nationale d'Administration concurrently serving with the United Nations Experts Committee on Employment. In 1952 he became chief economist with the European Coal and Steel Community and left in 1959 to join *Lehman Brothers as their adviser on European affairs (1959–61).

Among his numerous publications were the following: *La Réforme de l'enseignement* (1937); *Le Fonds monétaire international* (1945); *La Crise de la zone de libre échange* (1959), published under the pseudonym "Europeus"; *Dialogue des continents* (1963, 1964²; *Partnership for Progress*, 1963); and *Une politique monétaire pour L'Amérique latine* (1965).

[Joachim O. Ronall]

URIAH (Heb. אוּרִיָּה), the name of four biblical figures (in one case in the variant form Uriahu). The most important of these is Uriah the Hittite, listed as one of David's "heroes" in II Samuel 23:39. While Uriah was away on one of David's campaigns (II Sam. 11), the king noticed his young wife *Bath-Sheba bathing on the roof of her house. He had the young woman brought to him and lay with her. When Bath-Sheba informed him that she was pregnant, David had Uriah recalled from the front in an attempt to cover his sin, but the attempt failed because Uriah felt bound by a vow or a general taboo to shun conjugal relations for the duration of the war. David then sent Uriah back to the very thick of the battle in the hope that he would be killed, which is what occurred. David then married Bath-Sheba and incurred the rebuke of the prophet *Nathan for his behavior.

There have been many attempts by scholars to explain the origin and name of Uriah. H. Gunkel dismissed the whole story as a legend having no historical basis. However, the story may have been well based and Uriah could have been one of the original Jebusite inhabitants of Jerusalem. This people, from whom David conquered the city, were probably of Hittite origin. A. Gustavs identified the name as a Hebrew folk etymology of the Hurrian name Ariya. The name would then mean something like king or ruler. B. Maisler (Mazar) suggested that the name could originally have been a compound of the Hurrian element *ur* plus the name of a pagan god, which then received an Israelite form. S. Yeivin compared the name Uriah with the other Jebusite name mentioned in the Bible, *Araunah (perhaps from the same root), and suggests that Uriah may have been a high official or perhaps the intended successor of that last Jebusite ruler of Jerusalem.

[Daniel Boyarin]

In the Aggadah

Uriah was not a Hittite; the name merely indicates that he dwelt among them (Kid. 76b). It was Uriah who revealed to David how the various suits of armor of Goliath were joined together so that David could remove them and cut off the head of the giant. Uriah did this on condition that David secure him a Jewish wife. David kept his promise and thus it was that Uriah married Bath-Sheba (unknown Midrash quoted by Moses Alshekh on II Sam. 13). Uriah had incurred the death penalty by his refusal to take his ease in his own house in accordance with the king's command (Shab. 56a); this amounted to an act of rebellion. However, the sin of David was that he did not put him to death, but let him be killed by the sword of the Ammonites (II Sam. 12:9) which was an abomination (Zohar Ex. 107a).

The other bearers of the name Uriah in the Bible include a priest in the reign of Ahaz (Isa. 8:2; II Kings 16:10f.), a priest in the time of Nehemiah (Ezra 8:33; Neh. 3:4, 21; 8:4), and with the slightly variant form of the name, Uriahu (אוּרִיָּהוּ no doubt understood as "YHWH is fire [or light]"), a prophet killed by Jehoiakim (Jer. 26:20–23) for prophesying doom like Jeremiah

URI (Phoebus) BEN AARON HA-LEVI (also called **Uri Witzenhausen** or **Witmund**; 1625–1715), Hebrew printer. Uri's father was *ḥazzan* of the Neveh Shalom congregation, Amsterdam, and his grandfather Moses Uri ha-Levi, rabbi of Emden and one of the founders of the Portuguese Jewish community in Amsterdam. Uri established his first press in Amsterdam in 1658 and was active there until 1689. He published numerous rabbinical and religious works, some of them in Yiddish, including the first Yiddish translation of the Bible by Jekuthiel Blitz (1679); the *Josippon* (1661); and the *Bava Bukh* (1661) by Elijah Baḥur *Levita. Uri also published the first Yiddish newspaper, which appeared every Tuesday and Friday (*Dienstagishe un Freytagishe Kurant* 1680–87). The greater part of the works he printed were for distribution among the Jews of Poland. In 1692 he moved to *Zholkva where he was reportedly invited by the Polish king John Sobieski to print Hebrew books, which previously were imported from abroad. At the sessions of the Council of the Four *Lands in Jaroslaw in 1697 and 1699, Uri obtained rabbinical backing against business competitors in Lublin and Cracow. His press was continued by his children and their descendants for some time after his death. His descendants include the author and poet Meir ha-Levi *Letteris whose father Gershon was still printing in Zolkiev in 1828, including those works written by his son.

URI BEN SIMEON OF BIALA (second half of the 16th century), emissary of Safed to Europe. Uri was born in Biala, Poland, and immigrated to Ereẓ Israel, settling in Safed. From there he was sent as an emissary of the Ashkenazi congregation of the city to Italy, Germany, and Poland. In 1575 he was in Verona, as well as Venice, where he published, one year on each page, a 40-year calendar, and *Yiḥus Avot*, a description of the holy places and the graves of the righteous in Ereẓ Israel. He took these pages, which served to publicize his mission, with him to Germany, where they were reprinted many years later by Christian theologians.

The calendar was reprinted in 1594 in Frankfurt by Jacob Christmann, and *Yiḥus Avot* was reprinted twice in a Latin translation by Johann Heinrich Nottinger, under the title *Cippi Hebraici*, with drawings (Heidelberg, 1659 and 1662). This list of holy places and graves of the righteous in Ereẓ Israel served emissaries of succeeding generations as a pattern for similar lists called *Iggeret Mesapperet Yeḥusta de-Ẓaddikei de-Ara de-Yisrael* ("A genealogical tree of the righteous of the Holy Land," Venice, 1626, 1640, 1646, 1649; Verona, 1646, 1647; Mantua, 1676; Frankfurt, c. 1700).

URIEL, one of the four angels of the Presence first mentioned in I Enoch 9:1. Together with Michael, *Gabriel, and *Raphael he addressed a prayer to God requesting Him to bring to an end the rule of violence and bloodshed which the *Nephilim had brought to the earth. In His reply God charged Uriel with announcing to Noah the "end of all flesh" which would be brought about by the flood. Along with the other angels of the Presence, Uriel served as a guide to Enoch in the upper heavens (I En. ch. 19ff.), but his particular function was to govern the army of angels and the *Netherworld, Sheol (20:1). It would appear that this same function is mentioned in I Enoch 75:3ff.: "[Uriel], whom the Lord of glory hath set for ever over all the luminaries of the heaven, in the heaven and in the world, that they should rule on the face of the heaven and be seen in the earth, and be leaders for the day and the night." A special function is assigned to Uriel in IV Ezra (II Esdras), where he replies to Ezra's questions on the state of the world and the divine plan for the world and the people of Israel. By means of visions, he reveals to Ezra the course and duration of the present age and the conditions of life and the place of the people of Israel in the new world to come (II Esd. 4ff.).

According to *Midrash Rabbah* (Num. 2:10), Uriel is one of the four angels whom God placed around His throne. In the Kabbalah (including the Zohar), these angels of the Presence are identified with the four holy beasts which *Ezekiel saw in the *Merkabah and the figure of Uriel with that of the eagle, and sometimes with that of the lion. These four angels shed their light on the four winds of heaven, and the light which is shed over the west, the most perfect light, is that of Uriel. The Zohar (I, 6b; III, 32b, 211a) ascribes to Uriel a special function in connection with the sacrifices at the time of

the First Temple. The altar, which is called *Ariel (Isa. 29:1–2), is thus named because of Uriel, who descended in the likeness of a lion to crouch on the altar and devour the sacrifices. At his descent, the hearts of the priests and the children of Israel were gladdened for they recognized thereby that the sacrifices had been accepted with favor. The appearance of Uriel in the altar fire caused all those who could see the flames to suffer a change of heart and repent. Yet for Israel's sins Uriel's primary strength was taken from him, and instead of the fire containing divine inspiration a strange fire descended on the altar, which took the form of a [demonic] dog. In several passages of the Zohar, Uriel and Nuriel are the same angel, seen under different aspects. He is called Uriel under the aspect of mercy, but Nuriel under the aspect of rigor and severity.

URIM (Heb. אוּרִים; "Lights"), kibbutz in Israel's western Negev 7½ mi. (12 km.) W. of Ofakim, affiliated with Iḥud ha-Kevuẓot ve-ha-Kibbutzim. Urim was founded as one of the 11 settlements established on the same night in the South and Negev (Oct. 6, 1946). Its members included Israeli-born settlers and immigrants from Bulgaria and the United States. Its farming was irrigated in part by water from the National Water Carrier and was based on field crops, citrus groves, poultry and dairy cattle. Noam Urim Enterprises Ltd. was the largest nonwoven needle punch processing plant in the Middle East. Its products included finished wipes and rolled fabrics and waddings for different industries. In 1970 the kibbutz had 384 inhabitants; in the mid-1990s the population rose to 545, but then dropped to 413 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

URIM AND THUMMIM (Heb. אוּרִים וְתֻמִּים), a priestly device for obtaining oracles. On the high priest's *ephod (an apronlike garment) lay a breastpiece (חֹשֶׁן) – a pouch inlaid with 12 precious stones engraved with the names of the 12 tribes of Israel – that held the Urim and Thummim (Ex. 28:15–30; Lev. 8:8). By means of the Urim, the priest inquired of YHWH on behalf of the ruler (Num. 27:21; cf. Yoma 7:5, "only for the king, the high court, or someone serving a need of the community"); they were one of the three legitimate means of obtaining oracles in early Israel (Urim, dreams, prophets; I Sam. 28:6). Owing to the oracular character of the Urim, the breastpiece is called "the breastpiece of decision" (חֹשֶׁן הַמִּשְׁפָּט). (The concept evokes "the Tablets of Destiny" in Babylonian mythology – the symbol of supreme authority that lay on the breast of the chief god; Pritchard, Texts, 63, 67, 111.) The right to work this oracle was reserved for the levitical priests (Deut. 33:8).

Occasionally the term ephod is used with reference to the Urim-oracle associated with it (I Sam. 14:3, 18 [according to LXX]; 23:6, 9; 30:7). The latest period for which there is evidence of use of the ephod-Urim is that of David (but cf. Hos. 3:4); subsequently, oracles are conveyed exclusively by prophets. In postexilic times, when the Urim oracle was extinct, difficult questions were reserved "until a priest would appear with Urim and Thummim" (Ezra 2:63; Neh. 7:65; cf. Sot. 9:12: "After the former (i.e., pre-exilic) prophets died, the Urim and Thummim became extinct"; and Josephus (Ant. 3:218), who avers that the oracle ceased 200 years before his time).

There is no biblical information on the appearance of the Urim, the material out of which they were made (the Samaritan text of Ex. 28:30; 39:21 adds a command to manufacture the Urim and tells of its execution), or the technique of their use. The most illuminating passage is the Greek of I Samuel 14:41, whose underlying Hebrew is mutilated in the received texts: הָבָה תָמִים, conventionally rendered "Give a perfect answer":

> Saul said: "O YHWH God of Israel, why have you not answered your servant this day? If the guilt be in me or in my son Jonathan. O YHWH God of Israel, give Urim (הָבָה אוּרִים). But if this guilt is in your people Israel, give Thummim (הָבָה תֻמִּים)."

(For a defense of the received Hebrew, however, see M. Tsevat. in *Sefer Segal* (1955), 78–84.)

From the use of the verbs *hippil* and *nilkad* in connection with the Urim (verses 41–42), it appears that they were a kind of lot ((marked) stones or sticks?), since these verbs occur in connection with the casting of lots (Isa. 34:17; I Sam. 10:20). They were suitable for indicating which of two alternatives was right; hence inquiries to be decided by them were designed to elicit "yes" or "no" answers (I Sam. 23:10–12;30:8).

The etymology of the terms is obscure. From the Greek passage adduced above, it seems that the two terms are the names of two objects. Hence the conjecture that Urim derives from *ʾarar*, "curse," and Thummim from *tammam*, "be whole," indicating negation and affirmation respectively. Tradition has connected the first term with light (*ʾor*) or instruction (Aram. *ʾoraita*). Thus both Greek δήλωσις καὶ ἀλήθεια, "declaration/revelation and truth," and Vulgate *doctrina et veritas*, "teaching and truth," treat the pair as a hendiadys meaning true instruction – with reference to the oracle. (An apparent derivative with this meaning is the novel coinage אורתום, found in the Qumran Thanksgiving Psalms Scroll with reference to divine illumination (4:6, 23; 18:29; see J. Licht's commentary to 4:6)). A talmudic interpretation finds an allusion to the unequivocalness of the oracle in two words: "They cause their message to be lucid [מאירין]… and carried out [משלימין]" (Yoma 73b).

The earliest speculation on the technique of the oracle is reflected in Josephus (Ant. 3:217), who states that victory was forecast by the shining of the stones in the breastpiece. The talmudists fancied that the oracle was spelled out by the miraculous protruding of letters out of the tribal names engraved on the stones (Yoma 73b; Maim. Yad, Kele ha-Mikdash, 10:11). Rashi takes account of the separate existence of the Urim by making them a document bearing the tetragrammaton, whose presence inside the breastpiece insured the clarity and perfection of the oracle (comment to Ex. 28:30 and Yoma 73a; cf. Samuel b. Meir, who calls the Urim a kind of conjuration by

divine names). Naḥmanides (at Ex. 28:30) combines the various strands of interpretation: the Urim was a text bearing divine names placed inside the breastpiece, by virtue of which various letters out of the tribes' names lit up; the Thummim were other divine names by whose virtue the priest was able to combine the letters perfectly into the divine message.

[Moshe Greenberg]

In the Aggadah

To the names of the 12 tribes engraved on the breastpiece were added those of the three Patriarchs, together with the word *shevet* ("tribe") so as to encompass the whole alphabet (Yoma 73b). Interpreting Urim to mean "those whose words give light" and Thummim as "those whose words are fulfilled," the rabbis explain that the oracle was effected by rays of light shining on the letters, or protruding from them and forming themselves into groups (Yoma 73b), so that the high priest could read them. Only priests speaking by means of the holy spirit and upon whom the *Shekhinah* rested could invoke them. The inquirer had his face directed toward the high priest, who directed himself to the *Shekhinah.* One did not inquire either in a loud voice or silently in his heart, but like Hannah, who muttered her prayer (I Sam 1:13). Only one question was to be put at a time, and if two were asked, only the first was answered. However, if the occasion required two questions, both were answered. Unlike the decrees of a prophet, those of the Urim and Thummim could not be revoked. Only a king or a head of the Sanhedrin could inquire from the Urim and Thummim (Yoma 73a–b). The division of the land was effected by means of the Urim and Thummim (BB 122a). Saul and David consulted them (Mid. Ps. 27:2). The Urim and Thummim ceased to give oracular answers immediately after the death of the first prophets (Sot. 9:12), i.e., the destruction of the First Temple (Sot. 48b). However according to the Jerusalem Talmud (Sot. 9:14, 24b), the "first prophets" refers to Samuel and David and according to this view the Urim and Thummim did not function in the First Temple period either.

URIS, family of U.S. builders and philanthropists. Percy Uris (1899–1971), who was born in New York City, entered the investment building business in 1920 with his father Harris Uris (1870–1945), a Lithuanian immigrant and previously an ornamental iron manufacturer. Uris Brothers eventually became one of the largest building companies in the United States, and when its various real estate and building holdings were merged into the Uris Buildings Corporation in 1960, Percy Uris became president. His brother Harold Uris (1905–1982), who was born in New York, entered the building business with his father and brother in 1925, and he became chairman of the board upon the firm's amalgamation in 1960. A patron of the arts, he served on the board of the New York City Center for Music and Drama. He also served as a trustee of the New York Federation of Jewish Philanthropies for many years.

In 1957 Percy and Harold founded the Uris Brothers Foundation as a means to "give something back" to the city that had been so accommodating to their father and to their own entrepreneurial endeavors. The foundation has donated millions of dollars to New York City charities, especially those that deal with education and housing.

URIS, LEON (1924–2003), U.S. novelist. Born in Baltimore, Uris joined the U.S. Marines at the age of 17 and participated in the campaigns on Guadalcanal and Tarawa Islands in the Pacific. On his return to the U.S., he worked for a San Francisco newspaper and then used his war experience in writing his first work, *Battle Cry* (1953), which was acclaimed as a major war novel. For another book, *The Angry Hills* (1955), Uris drew on the war diary of an uncle who was a member of the Palestine Brigade that fought in Greece. Two of his novels, *Exodus* (1958) and *Mila 18* (1961), dealt exclusively with the momentous events of recent Jewish history. Uris' other works include *Armageddon* (1964), on the Berlin airlift; *Topaz* (1967), a novel about Soviet anti-NATO espionage in France, with some savage satire against General De Gaulle; and *QB VII* (1970; made into a drama for television, 1974), about a libel suit brought by a doctor against an author who had written that the former had conducted medical experiments in a concentration camp during World War II.

Exodus, one of the greatest fiction sellers in American history, depicts the establishment of the State of Israel. Before writing it, Uris read 300 books on Israel and the Middle East, traveled throughout Israel, and interviewed 1,200 people there. *Mila 18* deals with the Jewish community in the Warsaw Ghetto and describes how the Jews finally revolted against the Nazis. Like *Exodus*, it was read by millions and enhanced Uris' reputation as a novelist, although both books were criticized for their awkward prose. Several of Uris' novels were made into motion pictures, the film version of *Exodus* by Otto Preminger being released in 1960. Uris also wrote a photo essay, *Exodus Revisited* (1960). Uris was also a screenwriter for *Battle Cry* (1955) and *Gunfight at the O.K. Corral* (1957).

He collaborated with his wife Jill, a photographer, in *Ireland: A Terrible Beauty: The Story of Ireland Today* (1975) and *Jerusalem, Song of Songs* (1981). His later works include *Trinity* (1976), *Redemption* (1995), and *O'Hara's Choice* (2003).

BIBLIOGRAPHY: M.M. Hill and L.N. Williams, *Auschwitz in England* (1965). **ADD. BIBLIOGRAPHY:** K. Cain, *Leon Uris: A Critical Companion* (1998); Gale Literary Databases/Contemporary Authors Online, "Leon Uris" (2004).

[Harold U. Ribalow]

URMAN, DAN (1945–2004), Israeli archaeologist and historian. Born in Haifa, Urman completed his military service (1963–65), and began studying archaeology and history at the Hebrew University in Jerusalem. Between 1965 and 1968, Urman made a countrywide investigation of the archaeological

remains within abandoned Arab villages. Following the 1967 war, Urman was appointed the staff officer for the antiquities of the Golan Heights, and in the following years he studied many ancient sites there, notably at Rafid, including salvage excavations at some of them. On completing his M.A., Urman undertook his doctoral studies at New York University. His Ph.D. dissertation was completed in 1979 with distinction and published in 1985 as *The Golan: A Profile of a Region During the Roman and Byzantine Periods* (BAR Int. Series, Oxford). In 1979 Urman joined the faculty of the Ben-Gurion University of the Negev at Beersheba. Urman conducted numerous excavations, but he is best remembered for his excavations at the Byzantine site of Nessana in the Negev between 1987 and 1995. Among his numerous publications, one should note his books *Ancient Synagogues: Historical Analysis and Archaeological Discovery* (1995, co-edited with P.V.M. Flesher) and *Jews, Pagans and Christians in the Golan Heights* (1996, co-authored with R.C. Gregg), and, just before his death, the first volume of his excavation report *Nessana* (2004).

[Shimon Gibson (2nd ed.)]

URUGUAY, South American republic, general population: 3,080,000; Jewish population: 24,200.

The Beginning

There are few documents relating to Jewish history during the colonial period in Uruguay. In 1726 the governor of *Montevideo, Bruno Mauricio de Zabala, still adhered to the accepted Spanish formula when he stipulated that the first settlers be "persons of worth, of good habits, repute and family, so that they be not of inferior nor of Moorish or Jewish race," and in 1760 Pedro Lago, a clergyman from Colonia del Sacramento, expressed to the Inquisition his suspicions regarding the existence of Jewish life in his city. More reliable sources, however, are lacking. With the demise of the Inquisition in 1813, the political and legal system prevailing in Uruguay, together with its tolerant population, provided the viable foundation for Jewish residence during the modern period.

The Modern Period

BASIC DATA. Geographically Uruguay is the smallest country in South America. The last official estimate of Uruguay's area is 186,925 km^2 (instead of the former estimation of 187,500 km^2). Of its 3,080,000 inhabitants, 1,200,000 (40%) live in the capital Montevideo.

Prof. Sergio DellaPergola of the Hebrew University of Jerusalem concluded that the number of 50,000 Jews in Uruguay often mentioned in different publications is unfounded and exaggerated. Instead he concluded that the number of Jews between 1936 and 1992 was as follows:

1936–1940: 25,000
1945–1946: 37,000
1990–1992: 24,200

Some 13,000 former Uruguayan Jews live in Israel. This is the highest proportion of *aliyah* from the Free World.

MODERNIZATION. The independent Uruguayan Republic was definitively established in 1830. In more recent times, the Constitution of 1918, championed by José Batlle y Ordóñez, established the principle of separation of church and state and defined the legal status of aliens, as well as their role in the political life of the country. The generally liberal-minded public, as well as the constitution, which accords social and economic equality to native and alien alike, provided the conditions for a successful Jewish community from the 1920s. The constitutions of 1934 and 1952, which altered the composition of the government, did not affect the prevailing legislation. The earliest available information about Jewish immigration to Uruguay dates from 1898; a 1909 report indicates that there were 1,700 Jews in the country, 75% of whom were Sephardim, the rest of them Russian, Romanian, Polish, and of Alsatian origin. Other reliable sources based on first-hand documentation from the first communal institutions, consistently report about a 50–50 parity between Sephardim and Ashkenazim from the beginning until the 1920s.

Immigration increased notably between 1925 and 1928, when Uruguay also served as a transit point – in some cases for illegal transit – to Argentina, which at that time had stringent immigration regulations. In 1933 there was again an increase in immigration, although just prior to World War II new limitations were imposed. In 1939 2,200 Jews entered the country, while in 1940, only 373.

KEHILLOT, ZIONISTS, AND ANTI-ZIONISTS. The Zionist movement began in 1911, when Dorshei Zion was founded, initially as an extension of the Argentinean Zionist Federation. The events affecting world Jewry and the activities of the Zionist movement evoked sympathy and support from the Jewish populace. During World War I, mass demonstrations acclaimed the Balfour Declaration, members of the community joined the Jewish Legion, protests were registered against the pogroms in Central Europe during the 1920s, and campaigns were staged to protest the Arab riots in Palestine in 1928–29. The Zionist movement was divided into the separate organizations of General Zionists, Po'alei Zion, Mizrachi, Revisionists as well as to WIZO and later on smaller women's organizations. For many years there was a "key" for the distribution of functions in the Consejo Central Sionista (later Organizacion Sionista del Uruguay), in the KKL, and in the KH: president – General Zionists; vice president – WIZO; secretary general – Po'alei Zion (Mapai); treasurer – Mizrachi, and so on. In 1945 the Zionist movement began to gain great momentum. The Consejo Central Sionista, comprising representatives of all the institutions, including the Federación Juvenil Sionista, was formed, and in 1960 the Federación Sionista Territorial Unificada, renamed in 1963 Organizacion Sionista del Uruguay (OSU), was founded as a central body of all Zionist parties and organizations as well as the Jewish Agency in charge of *aliyah* and other Zionist

endeavors, including youth, pioneer, women's institutions, etc.

In 1970 the Montevideo Jewish community comprised four *kehillot*: Comunidad Israelita de Montevideo (Ashkenazi, founded in 1932), with 4,000 members; Comunidad Israelita Sefaradí (founded in 1932), with 1,500 members; Nueva Congregación Israelita (German-speaking, founded in 1936), with 1,500 members; and the Sociedad Israelita Hungara – SIHDU – (founded in 1942), with 200 members. The cemeteries of Ashkenazim and Sephardim, both on the outskirts of Montevideo, together with the respective *ḥevra kaddisha* funeral associations, were established a short time after World War I. As a matter of fact, the *kehillot* in Uruguay (and also in Argentina) evolved from a *ḥevra kaddisha* to a more diversified communal structure. Later on, the Yiddish-speaking communist sector established its own secular cemetery. The four *kehillot* noted are united under the umbrella organization Comité Central Israelita (CCI), which is affiliated with the *World Jewish Congress. The presidency of the CCI alternates between representatives of the four communities. Established in 1940 as the overall representative of the Jewish community vis-à-vis the government, the CCI played a pivotal role in combating antisemitism, especially during World War II, during subsequent sporadic resurgences of neo-Nazism, and at the time of Adolf *Eichmann's capture and trial. The vast majority of the leadership of the communities was Zionist. Consequently, the CCI usually maintained pro-Zionist positions and policies.

One of the former presidents of the CCI, professor of criminal law Nahum Bergstein, was later a senator, deputy minister of education and culture, and a member of the House. He introduced in the Uruguayan Parliament important resolutions concerning human rights, antisemitism, and solidarity with Israel in its struggle against terrorism.

Parallel to growing identification with Zionism among most Jewish inhabitants of Uruguay, there were also during the second and third decades of the 20th century isolated expressions of syndicalism; militant anti-Zionist Yiddishism; a small but very active Bund, especially in the cultural field through the I.L. Peretz Association; and a large, well organized Yiddish-speaking communist sector, self-defined as "progressive Jewry" as opposed to "national (Zionist) Jewry." The most important organization for the latter was the Asociación Cultural Jaim Zhitlowsky (founded around 1935), which also had a youth organization consisting of 300 members. Members of the Asociación received medical benefits provided by the Mutualista Israelita del Uruguay (founded 1940), and the Asociación maintained the above-mentioned separate, secular (non-religious) cemetery. Partisan discord characterized relations between the Zionist and "progressive" blocs, particularly during the 1930s. In the face of steadily increasing antisemitism, in 1938 an attempt was made to forge a united front through the short-lived Comité Contra el Nazismo y el Antisemitismo in order to defend the community and represent it vis-à-vis the government. Nevertheless, the confrontation between both sectors continued and deepened particularly after the Hitler-Stalin agreement of August 1939, openly backed by the Jewish "progressive" local daily *Unzer Fraint,* and the bankruptcy of the "progressive"-dominated "Banco Israelita," which badly affected the savings of recently arrived refugees from Germany and annexed Austria. After the establishment of the State of Israel and during the Stalinist persecutions of 1948–52, some "progressives" joined the ranks of the Zionist-oriented community; the majority, however, maintained their pro-Communist affiliations. The situation was not the same among their younger generation: part of them assimilated and another part went over to the Zionist youth movements and their presence in Israel, especially in kibbutzim and academic life, is visible and successful.

ECONOMY. At first the Jews in Uruguay engaged primarily in minor commerce (food, clothing, used articles), peddling, light industries (needles, leather, furs, textiles), independent or salaried crafts (tailors, hairdressers, watchmakers, printers), and salaried jobs (construction, factories). During the 1929–33 economic crisis, the Jewish community suffered severely, but it regained prosperity with the economic revival. At the same time, the German immigration of the 1930s gave impetus to commerce and minor crafts, and the economic upswing continued during World War II. In 1970 industry, commerce in textiles, furs, furniture, pharmaceutical products, plastics, metallurgy, and electronics were well established. Members of the professions occupied intermediate positions on the economic ladder, and a small number of Jews were partners in agricultural corporations that dealt in rural land and its products.

Attempts at Jewish agricultural settlement in Uruguay proved abortive. The first was the "19 de Abril" settlement, founded in Paysandú by 38 families that had previously tried to settle in the ICA settlements in Brazil. They received 9,880 acres of land from the Institute de Colonización of the Uruguayan Republic. Overcoming a difficult beginning, the settlers met with success after a ten-year period, but the settlement gradually lost its Jewish members; during the 1930s, five Jewish families remained, and in 1950 there was only one. Another Jewish colony founded in 1924 in Mercedes failed shortly afterward. The third, the "Tres Árboles" settlement (1938–39), was a Communist-inspired Jewish venture, but it failed primarily because of the bankruptcy of the Banco Israelita del Uruguay, on which it depended. Its collapse in 1939 precipitated a chain of bankruptcies among small merchants and industrialists and brought about the failure of the agricultural settlement "Tres Árboles." The bank managed to reopen and resume operations, however. The Centre Commercial e Industrial Israelita del Uruguay (1933), known from 1950 as the Banco Palestino-Uruguayo, was a well-established institution with branches even outside the country. In Israel it worked in particular with Bank Leumi. Later on, it was acquired by other general, non-Jewish financial enterprises. Two well-established commercial cooperatives, originally peddlers cooperatives, were the Corporación Comercial SA (pro-Zionist,

founded in 1930) and the Cooperative Comercial del Uruguay (progressive, founded in 1936), which closed with the collapse of the Banco Israelita and recommenced activities in 1945 under the name La Amistad. There are still, here and there, some Jewish peddlers, but with large shopping centers and the extensive use of credit cards, this is undoubtedly an outmoded and old-fashioned source of "parnose" (livelihood), classical among Jewish immigrants in the whole American continent. The predominantly labor, artisan, and small business class of the 1920s gradually gave way to a social group of middle class merchants, industrialists, salaried employees, and professionals, with few laborers and few wealthy individuals.

In the early 21st century, the younger generation of Uruguayan Jews includes a very high proportion of professionals. People tried to reach upper class or upper middle class standards of living even when their wealth was in many cases more apparent than real, at least by international Western criteria. At the same time the remaining lower middle class Jews (such as small merchants or employees in small businesses or factories) were in a very unsure and weak economic situation. Even when they arrive in Israel when making *aliyah* or immigrate to other countries, their adaptation to different languages and present-day technological requirements is far from easy.

ANTISEMITISM. In January 1919, under the pretext of repressing revolutionaries and Bolsheviks and as a result of the events during Argentina's "Tragic Week," punitive measures were taken against workers and certain elements of the lower class. Eighty percent of the Jewish population was investigated by the police and there were many instances of imprisonment and expulsion.

During the 1930s "anti-alien" campaigns were organized, posing a serious threat to the Jewish community. Their instigators were radical nationalists and local and foreign Fascists (Vanguardia de la Patria), but large numbers of traditionally liberal elements also participated. Familiar forms of racial discrimination were invoked in sidewalk demonstrations, in the press, and on the radio. The alien character of the Jews was underscored, and demands were voiced for a ban on Jewish immigration and for the exclusion of Jews from commercial activities and other sources of income. The community organized itself in self-defense. Measures against the rise of Fascism were adopted by the administration of General Alfredo Baldomir (inaugurated 1938), and during World War II the community enjoyed the protection of the government. During the Eichmann trial (1961) serious antisemitic disturbances were provoked by local neo-Nazi associations linked to foreign cells. The Jewish community, supported by certain branches of the government and liberal political and intellectual groups, organized its defense once again. In the 1960s there were sporadic antisemitic outbursts associated with nationalist-radical and neo-Nazi-affiliated groups, some of them originating in Argentina.

EDUCATION, YOUTH, RELIGIOUS LIFE, AND JEWISH MEDIA. Since their inception, both the Ashkenazi and the Sephardi communities have maintained religious studies. In 1929 the Ashkenazi *ḥevra kaddisha* established an educational network in collaboration with ICA. The most prominent educational institutions were the Zionist Herzl School founded in 1928; the Talmud Torah Eliezer ben Yehuda, founded in 1928 by the Sephardi *ḥevra kaddisha;* the Scholem Aleichem School founded in 1941 by the left Po'alei Zion; the Mizrachi school and Yeshivah ha-Rav Kook, founded in 1945, which added the Ma'aleh secondary school in 1956; and the ultra-Orthodox *talmud torah* and *ḥeder* Adat Yere'im, founded in 1948. In the early 21st century Jewish education was concentrated in three big integral schools (day schools): the Integral School, the Ariel School (which includes the former schools Scholem Aleichem and Ivriah), and the Yavne School (religious Zionist). All of them include kindergarten, elementary school, and secondary school, and all are Zionist – their Jewish program is handled by Israeli teachers and local teachers who complete one year of pedagogical studies in Jerusalem. The curriculum includes in general subjects, in addition to Spanish and Hebrew, and also English. The so-called "workers' schools," active from 1925 to the 1950s, followed the Yiddishist, leftist, non-Zionist ideology. The only remaining school of this trend is the Jaim Zhitlowsky school (founded in 1930). The Jewish ORT School, specializing in hi-tech, is recognized as a university. Even though a large proportion of its students are not Jews, the curriculum also includes a program of Jewish studies. The educational network is coordinated by the Vaad-Hachinuch, the "Education Ministry" of Uruguayan Jews.

Informal education is given by the Zionist and pioneer youth groups, including Bnei Akiva, Dror, Ha-Shomer ha-Ẓa'ir, Ha-No'ar ha-Ẓiyyoni, Israel ha-Ẓe'ira, and Betar. Local youth organizations include the Hebraica-Macabi (social and sports activities); Juventud Sefaradí; and the youth section of the Nueva Congregación Israelita. A pivotal function was filled in the past by the student organization Union Universitaria Kadimah (founded in 1940), later continued by the Association of Professionals "Jaim Weizman." The activities of all Zionist-oriented youth-organizations are coordinated by the Federación Juvenil Sionista (founded 1941). The "progressive" youth is organized in the Federación Juvenil Jaim Zhitlowsky, which has two centers. Its membership declined in the post-Stalin period.

In view of the predominantly secular trends in the community, there is little religious extremism. Basic tradition is observed, and the communities assume responsibility for the fulfillment of ritual. There are small groups of extreme Orthodox Jews who came from Hungary and Transylvania in the 1950s and formed the Kehillah Adat Yere'im. But they are members of the Ashkenazi community and submit to its decisions. An interfaith organization made up of Catholics, Evangelists, and Jews is active in promoting inter-religious harmony and engages in social work.

Cultural life is predominant and is integrated into the program of the majority of the communal social, political, and

educational institutions, such as B'nai B'rith. For the most part, the cultural activities are of an informative character on subjects of both Jewish and general interest and are usually carried on in Spanish. Among members of the older Ashkenazi generation, Yiddish continues to be spoken. A small number of Hebraists tried on different occasions to establish a Moadon Ivri. A few authors among the first generation wrote original literary works on Jewish philosophical, religious, and historical themes in Yiddish and Hebrew. Authors of the second generation wrote essays and literature of a general nature in Spanish. *YIVO has a branch in Uruguay with an archive and a library, and the Jewish writers and journalists had, in the recent past, their own association.

The Jewish press in Uruguay was at first closely linked with the Argentinean press. Starting in 1920 with the Spanish *Voz Hebrea* through the dailies *Der Tog* and *Morgentsaytung* of the 1930s, the Uruguayan Jewish community still had three dailies in the 1960s: *Folksblat* (founded in 1934), *Haynt* (founded in 1957), and the Communist *Unzer Fraynt* (founded in 1935). All of them closed. The only surviving publication in the early 21st century was the Spanish weekly *Semanario Hebreo* (founded in 1954). In the past a Zionist religious weekly *Der Moment* (founded in 1940) also appeared. There were several other periodicals, the most prominent being the *Gemeindeblatt* (founded in 1938), a weekly of the German-speaking community.

There are 14 Orthodox and one Conservative synagogues, with two Orthodox and two Conservative rabbis. The Chabad Center, with its own rabbi, has no communal affiliation. The Jewish schools are attended by 40% of the Jewish children. Nearly all of Uruguay's 24,200 Jews live in the capital, Montevideo. About one hundred families live in Paysandu. Many Jews – particularly Argentineans – come to the Punta del Este summer resort for the summer and even for weekends during the rest of the year. As a result, there are four synagogues functioning in the summer and one year-round.

In the past an important function was performed by the Jewish radio broadcasts. The most important were "Hora Cultural Israelita" continued later by "Voz de Sion en el Uruguay." Both of them transmitted daily except Yom Kippur from 12 to 14:30. They began in the 1930s and the last broadcast of "Voz de Sion" was in 2000. Another daily program, called "Hora Israelita Polaca," was transmitted two hours daily until the 1960s. All of them were Zionist-oriented and used Spanish and Yiddish alternatively. The German-speaking Jews have two daily broadcasts in German, one at lunchtime and one in the evening, even though both of them try to define themselves as "international and interconfessional." There were also weekly broadcasts.

The official government TV station included a once-a-week, one-hour transmission (on Sunday morning) dedicated to Jewish matters and to the relationship with Israel. The program was halted, but there is a similar program today (2005). Jewish institutions intensively use the Internet. For example, the German-speaking community, instead of its former German weekly *Gemeindeblatt*, now disseminates information and comments in Spanish through the Internet.

Relations with Israel

Immediately after the Balfour Declaration of Nov. 2, 1917, promising British backing for the establishment of a Jewish National Home in Palestine, the Uruguayan government initiated a clear-cut policy in favor of the Zionist aspirations. The main champion of that policy, Dr. Alberto Guani, was Uruguay's delegate at the 1920 *San Remo Conference of the League of Nations establishing the British Mandate on Palestine, specifically destined to foster the realization of the Balfour Declaration.

The same Dr. Guani was President Alfredo Baldomir's foreign minister in 1940, valiantly facing very direct and crude threats from Adolf Hitler during the *Graf Spee* affair: the giant battleship *Graf Spee*, described by Churchill as "the terror of the South Atlantic," was badly mauled by three small British destroyers near the Uruguayan summer resort of Punta del Este. The ship reached the neutral port of Montevideo and Dr. Guani decided that by international law the ship would be permitted to bury the dead, leave the wounded in hospitals, and repair its engines but not its guns. Berlin pressed strongly but Dr. Guani did not yield. The *Graff Spee* left Montevideo and sank itself. At that time Uruguay was an honorable exception, since the rest of the Latin American countries oscillated between a pro-Nazi or pro-fascist position or – at least – a kind of neutrality. Instead, Uruguay was openly anti-Nazi.

In April 1947, Uruguay was among the nations that voted for the establishment of the United Nations Special Committee on Palestine (UNSCOP), one of whose members was Prof. Enrique Rodriguez Fabregat of Uruguay. Rodriguez Fabregat, together with the delegate of Guatemala, Dr. Jorge Garcia Granados, was the architect of the partition plan approved by the UN General Assembly on Nov. 11, 1947, including the establishment of a Jewish state in Palestine.

Friendly relations between the two countries began with the enthusiastic support of Uruguay for the new state. Two successive Uruguayan presidents, Tomas Berreta and Luis Batlle Berres, strongly favored the policy advocated by Rodriguez Fabregat who was advised by the historian of the Near East, Prof. Oscar Secco-Ellauri, future Uruguayan foreign minister and president of the Uruguay-Israel Institute of Cultural Relations.

Uruguay was also the first Latin American country, and the fourth country in the world, to recognize the State of Israel (May 19, 1948). Montevideo was the first Latin American capital and the fourth city in the world in which an Israeli diplomatic representation was set up (Nov. 1, 1948). On May 11, 1949, Uruguay stood out in its negative vote on the question of international administration over Jerusalem. The Uruguayan legation established in Tel Aviv in 1951 was transferred to Jerusalem in 1956. After the Six-Day War (1967), Uruguay was among the states that abstained in the UN vote against

the union of Jerusalem. Later on, under strong international pressure the diplomatic representation was transferred from Jerusalem to Herzliyyah.

Streets in the capital of each country have been named in honor of the other, and parliamentary delegations have exchanged visits. The two countries have signed a trade and maritime agreement, and a forest has been planted in the Judean Mountains honoring the Uruguayan national hero, Artigas (1958). A forest named "Uruguay" was also planted in the hills of Western Galilee. Also in 1958, the diplomatic representations in Montevideo and Jerusalem were raised to the status of embassies, and the foreign ministers of each state exchanged visits at different opportunities. A visit by the president of the State of Israel to Uruguay and the reciprocal visit of Uruguayan ministers, members of parliament, scientists, authors, and artists have been dear expressions of the friendly relations between the two states. When the then foreign minister of Israel, Moshe Sharett, visited Uruguay in 1953, he signed a cultural agreement with the government. The Uruguay-Israel Institute for Cultural Relations has been set up there. In 1968 the export from Israel to Uruguay was $214,000 and in 1969 it was $212,000. Israel imported $3,360,000 worth of goods from Uruguay in 1968 and $4,433,000 worth in 1969. Israel exports mostly minerals and chemicals to Uruguay and imports meat and wool. A trade agreement was signed between the two countries on June 13, 1968, and an agreement for scientific and technical cooperation was signed at the same time. Uruguay is one of the most important exporters of meat to Israel and during various periods Israel was the number one client for Uruguayan meat. An agreement for cooperation in the field of atomic development was signed on June 23, 1966. Israel had provided Uruguay with scholarships in such fields as agriculture, cooperative living, social work, and education. Years ago, a post-graduate scholarship in medicine was awarded to the present-day (2005) Uruguayan president, Dr. Tabare Vazquez.

The state of the relations between Uruguay and Israel as of 2005 can be summed up as follows:

1) Excellent bilateral relations.

2) As far as the Middle East conflict is concerned, Uruguay is no longer the idealistic "Don Quixote" backing Zionism for idealistic reasons. Uruguay has continued to be more friendly to Israeli positions and more responsive to issues such as terror and open antisemitism than other countries, but under pressure from various international parties, its voting record vis-à-vis anti-Israel proposals is not positive – at best its representatives abstain.

Cordial relations between the two peoples, on the non-governmental level, were fostered from the mid-1980s on by the Asociacion de Amistad Israel-Uruguay. The Uruguayan embassy cooperates intensively with the association and, in addition, some cultural initiatives are undertaken by the embassy through the framework of a foundation specifically dedicated to that type of activity.

URY, ELSE (1877–1943), bestselling German author. Born in Berlin into a upper-middle-class Jewish family, Ury first received recognition for her story "Studierte Maedel" ("Academic Girls," 1906), which touched on a controversial topic, as women gained access to universities in Prussia only in 1908. Later she became famous for her children's book series *Nesthaekchen* (1918–1925) in ten volumes; she wrote a total of 39 books.

Else Ury was murdered in Auschwitz-Birkenau in January 1943.

URY, LESSER (1861–1931), German painter. Ury, who was born in Birnbaum, Prussia, went to Berlin at the age of 12 and two years later was apprenticed to a clothing merchant. When he had saved enough money, he began to study art, first in Duesseldorf and then in Brussels and Paris. A prize from the Berlin Academy enabled him to train further in Italy. Although he was something of a vagrant, Ury made his headquarters in Berlin from 1886 and there led a poverty-stricken, asocial life until he was over 60. It was only then that his melancholy paintings of city streets in stormy weather began to sell for high prices. He was a versatile artist and some of his earlier works, particularly his landscapes and his flower studies, achieved a glow of color that anticipated the goal of the expressionists. He produced drawings, lithographs, and etchings, but his finest works were his pastels. Ury repeatedly attempted ambitious subjects on a monumental scale, some of them suggested by events in contemporary Jewish life. His *Jerusalem* is a study of refugees from czarist Russia at the turn of the century sitting aimlessly on a bench, staring into nothing. The most

famous of his somewhat theatrical biblical paintings, *Jeremiah* – the brooding prophet reclining under a vast, star-studded sky – is in the Tel Aviv Museum. Ury's fame had spread far beyond Germany. The retrospective exhibition arranged by the Berlin National Gallery to celebrate his 70th birthday turned into a memorial exhibition. After World War II, West Germany tried to repair the damage done to his reputation in the Nazi era with several comprehensive shows.

[Alfred Werner]

U.S. ARMY AND THE HOLOCAUST. On April 5, 1945, units from the American Fourth Armored Division of the Third Army were the first Americans to discover a camp with prisoners and corpses. Ohrdruf was a Buchenwald sub-camp, and of the 10,000 male slave inmates, many had been sent on death marches, shot in pits, or their corpses were stacked in the woods and burned. The Americans found the camp by accident – they did not set out to liberate camps, they happened upon them – and found starved, frail bodies of hundreds of prisoners who had managed to survive, as well as the corpses. In Nordhausen, on the 11th, the American Timberwolf Division found 3,000 corpses and 700 starving, ill, and war-wounded survivors who were slaves in the V-2 rocket factories.

An Austrian-born Jewish U.S. soldier, Fred Bohm, helped liberate Nordhausen. He described fellow GIs as having "no particular feeling for fighting the Germans. They also thought that any stories they had read in the paper, or that I had told them out of first-hand experience, were either not true or at least exaggerated. And it did not sink in, what this was all about, until we got into Nordhausen."

When the American Combat Team 9 of the 9th Armored Infantry Battalion, Sixth Armored Division were led to Buchenwald by Russians, the camp contained 30,000 prisoners in a pyramid of power, with German Communists at the top, in the main barracks, and Jews and gypsies at the bottom, living in Little Camp, in an assortment of barns.

Buchenwald barrack prisoners were reasonably healthy looking. The Little Camp had 1,000 to 1,200 prisoners in a space meant for 450. Witnesses described prisoners as "emaciated beyond all imagination or description. Their legs and arms were sticks with huge bulging joints, and their loins were fouled by their own excrement. Their eyes were sunk so deep that they looked blind. If they moved at all, it was with a crawling slowness that made them look like huge, lethargic spiders. Many just lay in their bunks as if dead." After liberation, hundreds of prisoners died daily.

Generals George Patton, Omar Bradley, and Dwight Eisenhower arrived in Ohrdruf on April 12, the day of President Franklin D. Roosevelt's death. They found 3,200 naked, emaciated bodies in shallow graves. Eisenhower found a shed piled to the ceiling with bodies, various torture devices, and a butcher's block for smashing gold fillings from the mouths of the dead. Patton became physically ill. Eisenhower turned white at the scene inside the gates, but insisted on seeing the entire camp. "We are told that the American soldier does not know what he was fighting for," he said. "Now, at least he will know what he is fighting against."

After leaving Ohrdruf, Eisenhower wrote to Chief of Staff General George Marshall, attempting to describe things that "beggar description." The evidence of starvation and bestiality "were so overpowering as to leave me a bit sick," Bradley later wrote about the day: "The smell of death overwhelmed us." Patton, whose reputation for toughness was legendary, was overcome. He refused to enter a room where the bodies of naked men who had starved to death were piled, saying "he would get sick if he did so," Eisenhower reported. "I visited every nook and cranny." It was his duty, he felt, "to be in a position from then on to testify about these things in case there ever grew up at home the belief … that the stories of Nazi brutality were just propaganda." (Seemingly, he intuited then that these crimes might be denied.)

Eisenhower issued an order that American units in the area were to visit the camp. He also issued a call to the press back home. A group of prominent journalists, led by the dean of American publishers, Joseph Pulitzer, came to see the concentration camps. Pulitzer initially had "a suspicious frame of mind," he wrote. He expected to find that many of "the terrible reports" printed in the United States were "exaggerations and largely propaganda." But they were understatements, he reported.

Within days, Congressional delegations came to visit the concentration camps, accompanied by journalists and photographers. General Patton was so angry at what he found at Buchenwald that he ordered the Military Police to go to Weimar, four miles away, and bring back 1,000 civilians to see what their leaders had done, to witness what some human beings could do to others. The MPs were so outraged they brought back 2,000. Some turned away. Some fainted. Even veteran, battle-scarred correspondents were struck dumb. In a legendary broadcast on April 15, Edward R. Murrow gave the American radio audience a stunning matter-of-fact description of Buchenwald, of the piles of dead bodies so emaciated that those shot through the head had barely bled, and of those children who still lived, tattooed with numbers, whose ribs showed through their thin shirts. "I pray you to believe what I have said about Buchenwald," Murrow asked listeners. "I have reported what I saw and heard, but only part of it; for most of it I have no words." He added, "If I have offended you by this rather mild account of Buchenwald, I am not in the least sorry."

It was these reports, the newsreel pictures that were shot and played in theaters, and the visits of important delegations that proved to be influential in the public consciousness of

the still unnamed German atrocities and the perception that something awful had been done to the Jews.

Then the American forces liberated Dachau, the first concentration camp built by the Germans in 1933. There were 67,665 registered prisoners in Dachau and its subcamps; 43,350 were political prisoners; 22,100 were Jews, and a percentage of "others." As Allied forces advanced, the Germans moved prisoners from concentration camps near the front to prevent their liberation. Transports arrived at Dachau continuously, resulting in severe deterioration of conditions. Typhus epidemics, poor sanitary conditions, and the weakened state of the prisoners worsened conditions further and spread disease even faster.

On April 26, 1945, as the Americans approached Dachau about 7,000 prisoners, most of them Jews, were sent on a death march to Tegernsee. Three days later, American troops liberated the main camp and found 28 wagons of decomposing bodies in addition to thousands of starving and dying prisoners. Then in early May 1945, American forces liberated the prisoners who had been sent on the death march.

After World War II, the Allies were faced with repatriating 7,000,000 *displaced persons in Germany and Austria, of whom 1,000,000 refused or were unable to return to their homes. These included nationals from the Baltic countries, Poles, Ukrainians, and Yugoslavs who were anti-communists and/or fascists afraid of prosecution for collaborating with the Nazis and Jews. The Allies were forced to service citizens of 52 nationalities in 900 DP camps, under the aegis of the United Nations Relief and Rehabilitation Administration (UNRRA). Lack of trained personnel, absence of a clear policy, and poor planning and management prevented the agency from fulfilling its role properly. Private relief organizations were gradually permitted to operate in the camps, but at best could provide only partial aid. Consequently, the United States Army, with a shrinking budget and inexperienced personnel, assumed major responsibility for the DPs. It was not a responsibility they anticipated or they welcomed but they had no other choice.

Each national group and religious denomination demanded recognition of its own problems. In order to avoid charges of discrimination, the American army adopted a policy of evenhandedness toward all the DPs, a policy that adversely affected Jewish DPs housed in the same camps with Poles, Baltic nationals, and Ukrainians. In those camps, the Jews who survived the Holocaust remained exposed to antisemitic discrimination. They were living among antisemites who had hostility toward them. Furthermore, only after liberation could survivors begin to feel, to sense what had been lost. Others could return home, Jewish survivors had no homes to which to return.

The American army was beleaguered. Trained for war, they had to juggle multiple assignments: the occupation, the Cold War, and the problems of survivors who were naturally distrustful of all authority and in need of medical and psychological attention.

Short-term problems, such as housing, medical treatment, food, and family reunification, were acute. The army had no long-term strategy. The survivors had nowhere to go. Britain was unwilling to permit Jewish immigration to Palestine and the United States was not ready to receive refugees.

Homosexuals continued to suffer, even with the end of the war. Paragraph 175 of the German legal code stated that male homosexuality, but not female lesbianism, was punishable by imprisonment. After 1943, male homosexuals had been forced to wear a pink triangle and were sent to the death camps. After the liberation, the Americans did not repeal Paragraph 175 and sent homosexual inmates liberated from the camps to other prisons.

Preferential treatment to Jews was denied on the ground that this would be a confirmation of the Nazi racial doctrine, which differentiated between Jews and others. The Jews were therefore dealt with according to their country of origin; Jews from Germany, for example, were classified as "enemy aliens," just like the Nazis.

American troops who liberated the concentration camps felt sympathy for the Jewish DPs, and many Jewish GIs and officers went out of their way to assist the survivors. But that sympathy did not extend to men who arrived on following troop rotations. Unfamiliar with history and facts, they had little or no sympathy for the Jews. It did not help that concentration camp survivors mistrusted people, were hypersensitive, and had acquired habits that did not compare favorably with the local German and Austrian population. Some objected to the fact that they took care of their biological needs in hallways and outside; one officer provided a simple solution of latrines and the problem ceased.

Americans' contacts with antisemitic Germans stirred up innate personal prejudices held by troops. Some American commanders suspected that the DPs from Eastern Europe included Soviet agents, and that Jews had a predisposition to communist beliefs. The Army also treated the DPs as if they stood in the way of the pre-Cold-War rush to rehabilitate Germany. By June 1945, conflicts were heated enough for President Truman to send Earl G. Harrison to the American Zone on a fact-finding mission. His visit was complete with political overtones and his report was a bombshell.

His conclusions were harsh, even overstated:

> We appear to be treating the Jews as the Nazis treated them except that we do not exterminate them. They are in concentration camps in large numbers under our military guard instead of SS troops. One is led to wonder whether the German people seeing this are not supposing that we are following or at least condoning Nazi policy.

His recommendations were equally dramatic:

> Jews must be recognized as Jews. They should be evacuated from Germany quickly. One hundred thousand Jews should be admitted to Palestine. President Truman endorsed the Report, rebuked the army, and intensified pressure on Britain. He opened up the United States for limited immigration.

After the pogrom by Polish fascists that killed 60–70 Jews in *Kielce, Poland, on July 4, 1946, more than 100,000 Jews fled to the American Zone aided by *Beriḥah, overcrowding the camps and straining the Army's budget, but when the administration tried to close the borders, the American Jews pressured them to reopen them. Twice the American government kept the borders open.

From April 1945 to the summer of 1947, the Jewish DP population in the American Zone exploded from 30,000 to 250,000 as the Jews fled the Soviet Bloc. The Jews had no place else to go, since no one would take them in. As their needs grew, and U.S. Army charged with caring for them was being restricted by budget cuts, the U.S. tried to transfer control of the Jews to the local German governments, which the Jews refused to accept under any circumstances.

On April 19, 1947, General Lucius Clay, commander of the American forces in Germany closed the borders to the American Zone and denied UN aid to newcomers, but 12,000 Jews from Romania and Hungary managed to enter. The American Army usually closed their eyes to illegal immigration, especially when the immigrants were Jews. But as time went by, and troops were replaced, the communication, tolerance, and relationships deteriorated between the Americans and the Jews, especially in matters concerning the black market, which led to raids and even violence.

When Israel was established in May 1948 and Congress passed the Wiley-Revercomb Displaced Persons bill allowing 100,000 DPs to come to America, the situation changed again. The camps were essentially empty and changed the Army's attitude to those who remained behind.

At the end of the day, the Army has been praised by some historians and scholars, and reviled by others. Typical are Abraham Hyman who calls the postwar period and the Army's treatment of the Jewish DPs the Army's finest hours. Leonard Dinnerstein, a historian, criticized the Army for being insensitive and unduly harsh.

[Jeanette Friedman (2nd ed.)]

USHA (Heb. אוּשָׁה).

(1) Town in Lower Galilee mentioned in the annals of Sennacherib (a, 40). An ancient Hebrew seal found there attests to the existence of an Israelite settlement on the site in biblical times; one side reads Elzakar b. Yehoḥil and the other side Shobai b. Elzakar.

The place was of importance in mishnaic and talmudic times. In about 140 C.E., at the end of the period of persecution following the suppression of Bar Kokhba's revolt, the surviving scholars gathered there, reestablished the Sanhedrin (see next entry), and instituted the regulations known as the "Enactments of Usha" (Song R. 2:5, no. 3). For some time, it was the seat of R. Simeon b. Gamaliel; R. Judah ha-Nasi studied there under R. Judah b. Ilai, an inhabitant of the town (Tosef., Meg. 2:8). R. Isaac Nappaḥa owned five courtyards there (Tosef., Er. 7:7). It is the present-day Hūsha, a small ruin. Remains of a splendid building, perhaps a synagogue, were uncovered on the site.

[Michael Avi-Yonah]

(2) Kibbutz in Lower Galilee in the Haifa Bay area, near Kiryat Ata, founded in 1937 by a group of Ha-No'ar ha-Ẓiyyoni originating from Galicia. The kibbutz was based on irrigated field and fodder crops, avocado plantations, citrus groves, and dairy cattle. It operated a factory producing lenses for eyeglasses. In 2002 the population was 354.

USHA, SYNOD OF, convention of sages reviving the Sanhedrin held at *Usha at the close of the period of persecution following the Bar Kokhba revolt, i.e., about the middle of the second century C.E.

During the rule of *Antoninus Pius (137–161), the restrictive decrees of Hadrian were abrogated, and in consequence a renewal of Jewish spiritual and communal life became possible. This renewal found its main expression in the convention of sages at Usha, described as follows: "When the persecution ended, our teachers convened at Usha, these being R. Judah, R. Nehemiah, R. Meir, R. Yose, R. Simeon b. Yoḥai, R. Eliezer son of R. Yose ha-Galili, and R. Eliezer b. Jacob. They sent the following message to the elders of Galilee: Let everyone who has learned come and teach and everyone who has not learned let him come and learn – they convened and learned and took all necessary steps" (Song R. 2:5, no. 3). Thus the synod inaugurated all the activities of the Sanhedrin: the teaching and study of Torah as well as legislative and judicial functions referred to by the phrase that there they took "all necessary steps." The scholars who convened at Usha included men like *Meir who had fled abroad, and others who had concealed themselves in the country during the persecutions, like Simeon b. Yoḥai. The designated *nasi*, Rabban *Simeon b. Gamaliel, who was apparently still in hiding because of a pending death sentence against him, is not mentioned. The parallel tradition in the Babylonian Talmud (Ber. 63b) states that the convention took place in *Jabneh and not in Usha, but this does not seem to be correct, either in the light of historical circumstances and the conditions in Judea at that time, or from the context in the Babylonian Talmud itself, according to which R. Judah, who lived in Usha, was the host of the convention.

Together with the Sanhedrin the office of nasi was also revived and Rabban Simeon b. Gamaliel was appointed to this post with R. *Nathan ha-Bavli as *av bet din* and R. Meir as *ḥakham*. It is difficult to determine how the functions of leadership were divided between these three, but clearly the division indicates the growth of the importance of the Sanhedrin against that of the nasi in comparison with the situation existing in the period of Rabban *Gamaliel of Jabneh. It is possible that the limitation of the power of Rabban Simeon

b. Gamaliel resulted from his not having participated at the initial convention of the scholars in Usha. In the course of time, Simeon b. Gamaliel strengthened the status of the nasi once more, penalizing Nathan and Meir for their unsuccessful attempt to unseat him.

The tradition in tractate *Rosh Ha-Shanah* of the ten migrations of the Sanhedrin includes the following stages: "And from Jerusalem to Jabneh, and from Jabneh to Usha, and from Usha [back] to Jabneh, and from Jabneh [back] to Usha, and from Usha to Shefaram" (RH 31b). The problem of the repeated moves between Jabneh and Usha has been the object of considerable study: some scholars believe that the Sanhedrin came to Usha for the first time in the era preceding the Bar Kokhba revolt, partly basing their opinions on the tradition "who are meant by the travelers to Usha? R. Ishmael" (BB 28b); others consider that this source proves that following the convention of Usha in the middle of the second century, an attempt was made to renew the Sanhedrin at Jabneh, which came to grief because Judea lacked a sufficient basis of population, and the Sanhedrin returned to Usha; still others hold that the tradition itself is corrupt or that the wanderings of the Sanhedrin were artificially rounded out to the number ten, particularly as the addition "and from Usha to Jabneh, and from Jabneh to Usha" does not occur in the versions and manuscripts of the Babylonian Talmud (see Dik. Sof.), nor does this addition appear in the parallel tradition in *Genesis Rabbah* (97; Theodor-Albeck, p. 1220). Whatever the truth, however, it is clear that the Sanhedrin of Usha which is of historical significance is the convention of scholars that took place there after the end of the persecutions following the Bar Kokhba revolt.

The *tannaim* of Usha occupied themselves to a great extent with *halakhah*, and the "Usha period" constitutes an important stage in the compilation and codification of the Mishnah. The scholars of Usha applied themselves particularly to the laws of ritual purity and it may be assumed that some of them adopted the principles of the *Ḥasidim, which included eating ordinary food in a state of ritual purity. Despite this, Buechler's view that the concepts of **am ha-areẓ* and **ḥaver* – which were much discussed by the scholars of Usha – came into historical existence in the period of Usha and were confined solely to Galilee cannot be accepted.

There exist several *takkanot* which are called "*takkanot* of Usha" in talmudic literature. A substantial number of them are connected with the laws of the home and family life, one being "that a man must maintain his young children" (TJ, Ket. 4:8, 28d). The urgent need for this *takkanah* becomes evident when it is viewed against the background of the great poverty that prevailed after the Bar Kokhba revolt. Another such *takkanah* states: "It was enacted at Usha that a man must support his son until he is 12 years old: from then onward "יורד עמו לחייו", which apparently means "helps him in his trade." Another historically important *takkanah* was "not to excommunicate an elder" (TJ, MK 3:1, 81d), which may be regarded as extending the rights of scholars, enlarging their independent status, and preventing the possibility of a repetition of such incidents as the excommunication of Eliezer b. Hyrcanus in the time of Rabban Gamaliel of Jabneh.

Some scholars believe that a number of these *takkanot* are of a later date than the synod of Usha. Thus G. Alon thinks there was another meeting of scholars presided over by the *nasi* (apparently Gamaliel b. Judah ha-Nasi), which met only once toward the end of the rule of the Severi dynasty (c. 230 C.E.), and a section of "the *takkanot* of Usha" should be attributed to this synod. Mantel considers that some of them are local *takkanot* of the *bet din* of Usha headed by Judah b. Ḥanina, some of which became generally accepted in the course of time.

[A'hron Oppenheimer]

USHPIZIN (Aram. אֻשְׁפִּיזִין; from the Lat. *hospes*, "guest"), according to kabbalistic tradition, the mystical seven "guests" – Abraham, Isaac, Jacob, Moses, Aaron, Joseph, and David – who visit the *sukkah* during the seven days of Tabernacles (cf. Zohar, 5:103b). According to the Zohar, Joseph comes after Moses and Aaron, but in most Ashkenazi *maḥzorim* and prayer books the order is chronological. The spiritual guest of each day is invited before the meal and the text of this invitation, "Enter, exalted holy guests…," is found in several Ashkenazi and Sephardi prayer books. The custom was adopted by the Ḥasidim and many pamphlets entitled *Seder-Ushpiz*, including liturgy based upon the practices of certain *ẓaddikim* (e.g., the rabbis of Belz, Zanz, etc.), began to be published in the 19th century. Decorating the *sukkah* wall with a plaque which bears an inscription including the names of the seven guests has also become an accepted practice. Moroccan Jews have a special compilation of prayers in honor of the *ushpizin*, called *Ḥamad Elohim*, from which special sections are recited each day of the festival.

ʿUSIFIYYĀ (**Isfiya**), Druze and Arab village, with municipal council status, on Mount Carmel, 5.5 mi. (9 km.) S.E. of Haifa. The village is spread over an area of about 20 sq. mi. (50 sq. km.). Remnants of a fifth- or sixth-century synagogue with a mosaic floor depicting a seven-branched *menorah, etrogim, lulav, shofar,* grapevines, a peacock, and other birds and bearing the inscription *Shalom al Yisrael* have been found in the village. The antiquities give substance to ʿUsifiyyā's identification with Ḥusifah, mentioned in an ancient *kinah* lamenting the destruction of its Jewish community. Although S. Klein (see bibl.) dates this event to the fourth century C.E., Y. Press assumes that it may be connected with the Byzantine reconquest of the country from the Persians under Heraclius

at the beginning of the seventh century. Due to its proximity to Haifa, ʿUsifiyyā, which had about 1,100 inhabitants in 1947, progressed well under Israeli statehood, attaining a population or 4,000 in 1969 and 9,530 in 2002, of whom 75.5% were Druze, 16% Christians and 7.5% Muslims. The village's economy was based on hill farming (vegetables, field crops, fruit orchards, cattle, sheep, etc.) with a tourist industry bolstered by the beautiful surroundings. Together with neighboring *Daliyat al-Karmil, it constituted one of Israel's major Druze centers. In 2003 it was united with the latter as the city of Karmil. In the 1950s a Greek Catholic church was built there.

USOV (Ger. **Maehrisch-Aussee**; in Jewish sources אויסא) town in N. Moravia, Czech Republic. The first mention of a Jew in Usov was in 1564, and by 1600 Jews were living in nine houses. The community suffered during the Thirty Years' War but recuperated to build a synagogue in 1690. It was one of the 15 communities of the "supreme [northern] district" in Moravia. On the Day of Atonement 1721, a Catholic priest who had profaned the prayers and ceremony was ejected from the synagogue: After complicated legal proceedings, the supreme court in Vienna overruled the lower instances of Brno and Prague and in 1722 ordered the synagogue to be destroyed and prohibited the holding of any public services. The *dayyan* of the community, Abraham Broda Leipniker (1690–1774), a respected merchant, succeeded in obtaining permission to build two prayer houses in 1753 and recorded the proceedings in his *Megillat Sedarim*, to be read yearly on *Simḥat Torah (published in 1895 by Emanuel M. *Baumgarten). At that time, there were 59 heads of families, 35 of them engaged in peddling and five sailors. The community numbered 10 Jewish families in 1657 and 59 in 1753. By the end of the 18th century, 110 Jewish families were permitted to reside there.

In 1830 there were 110 families (656 persons) in Usov, out of 5,200 permitted Jewish families in the whole of Moravia. The community continued to grow until 1848 but declined thereafter, both as a consequence of the right of free movement and of the general decline of the town. In 1890 the Jewish population had declined to about 150, and the community was unified with the growing community of Sumperk (Maehrisch Schoenberg). In 1900 there were 101 Jews. In 1929, there was only one Jewish family left. In 1930 there were 30 Jews. Today there are no Jews in the town, which numbered 1,114 inhabitants in 1961.

One Usov Jew survived the Holocaust. While there was no Jewish community in Usov after World War II, a well-preserved Jewish quarter recalls the Jewish existence in Usov. The synagogue built in 1784, the third one in a row, was renovated after the war and is used as a house of prayer by the Czech Brethren Protestant Church.

[Oskar K. Rabinowicz / Yeshayahu Jelinek (2nd ed.)]

USQUE, ABRAHAM, Marrano printer. Born in Portugal and known there as Duarte Pinel (Pinhel), Usque fled from the Inquisition shortly after 1543, established himself at Ferrara, and became associated with the press established by the Spanish ex-Marrano, Yom-Tov ben Levi Athias (Jerónimo de Vargas). He followed Athias' plan of publishing Jewish liturgies in the vernacular, as well as other texts intended to facilitate the Marranos' return to Judaism. Usque's name first appears in connection with the famous Bible translation of 1553, the so-called Ferrara Bible. This Bible was published in two forms: one intended for a Jewish audience, bearing a Hebrew date (14 Adar 5313) and a dedication to Doña Gracia *Nasi, and listing the Hebrew names of the printer and publisher (Usque and Athias); the other for the Christian world, dated March 1, 1553, with a dedication to Duke Ercole d'Este of Ferrara and the names of Duarte Pinel and Jerónimo de Vargas. Books published by Usque also include the enigmatic *Menina e Moça*, by Bernardim *Ribeiro, Samuel *Usque's *Consolaçam as tribulaçoens de Israel* (1553), and various works in Hebrew. The fury of the Counter-Reformation gradually halted Usque's printing activities. He published no books in Spanish or Portuguese after 1555 and continued the publication of Hebrew books only to 1558.

Solomon *Usque may be identical with Usque's son and assistant Solomon, but his relationship to Samuel Usque is impossible to determine.

BIBLIOGRAPHY: C. Roth, in: *Modern Language Review*, 38 (1943), 307–17; M.A. Cohen (ed. and tr.), S. Usque, *Consolation for the Tribulations of Israel* (1965).

[Martin A. Cohen]

USQUE, SAMUEL (16th century), Portuguese Marrano. All that is known about Usque comes from his *Consolaçam as tribulaçoens de Israel* ("Consolation for the Tribulations of Israel", Ferrara. 1553; second ed., Amsterdam, 1599). This unusual work reveals that the author was a man of unusually broad culture and of Spanish descent – his family having emigrated from Spain in 1492. He knew many languages, including Hebrew; he was versed in classical literature, in the Bible, and in Jewish and Christian postbiblical literature. There is no evidence that he is to be identified with Solomon *Usque, the poet-playwright, or with Abraham *Usque, who printed the first edition of the *Consolaçam*, or with the Portuguese belletrist, Bernardim *Ribeiro.

Written in limpid Portuguese prose, the *Consolaçam* was dedicated to the great patroness of Jewish art and culture, Doña Gracia *Nasi. Its avowed purpose was to persuade Marrano refugees from Spain and Portugal, and perhaps also those Marranos who were still in those two countries, to re-

turn wholeheartedly to Judaism. To this end the author, in a sweeping review of Jewish history, based upon traditional Jewish apologetics, demonstrated that the Jews, despite their centuries of hardship and persecution, had not been abandoned by God; they were rather, he declared, standing on the threshold of the golden messianic age.

The *Consolaçam* takes the form of a typically Renaissance pastoral dialogue between three shepherds, Zicareo, Numeo, and Ycabo – the names being thin disguises for those of the prophets Zechariah (the "Recaller"), Nahum (the "Comforter"), and Jacob, the eponymous hero of the Jewish people, who narrates the history of the Jews in the first person. The three sections of the book, dealing respectively with the eras of the First Temple, the Second Temple and subsequent Jewish history up until Usque's own day, form an integrated work which yields numerous insights into the mind of Usque's generation. Furthermore, the third dialogue contains invaluable accounts and impressions of events which the author experienced personally.

The first edition of the *Consolaçam* was, for the most part, destroyed by the Inquisition shortly after its publication. The second edition, also rare, marks the beginning of Sephardi literature in the Netherlands. The work is regarded as a major contribution to Jewish historiography, and as a classic of Portuguese prose. An English translation by M.A. Cohen appeared in 1965.

[Martin A. Cohen]

USQUE, SOLOMON (c. 1530–c. 1596), Portuguese poet of Marrano descent; probably born in Portugal, he spent most of his life in Italy and later in Turkey. It is believed that he was the son of Abraham *Usque, who printed the Ferrara Bible. In collaboration with Lazzaro di Graziano Levi, Solomon Usque wrote the earliest known Jewish drama written in the vernacular – a Purim play in Spanish entitled *Esther*, first staged in the Venice ghetto in 1558. Leone *Modena, a nephew of Lazzaro Levi, was responsible for an Italian version of the play early in the 17th century. Usque published a much-admired Spanish translation of the final part of Petrarch's sonnets (Venice, 1567); many copies appearing under the contracted pseudonym of Salusque Lusitano (i.e., Solomon Usque the Portuguese). This edition, which did much to spread Petrarch's fame abroad, was dedicated to Alexander Farnese, duke of Parma. Usque also wrote some Italian verse, including a poem on the Creation entitled *Canzone sull' opera de' sei giorni*; this was included in an anthology compiled by Cristoforo Zabata (Genoa, 1572). Usque was also active in Constantinople, where he is known to have engaged in Hebrew printing in collaboration with Abraham Ashkenazi in 1560–61. In 1595 at the request of the English ambassador, Usque wrote a report on events in Turkey after the death of Sultan Muted III which was closely studied by Queen Elizabeth's ministers in London.

USSISHKIN, ABRAHAM MENAḤEM MENDEL (1863–1941), Zionist leader, member of Ḥovevei Zion, and the president of the *Jewish National Fund (JNF). Born in Dubrovno in the district of Mogilev, Russia, Ussishkin moved to Moscow with his family in 1871. From 1878 he became an enthusiastic reader of the works of contemporary Hebrew writers, and from then the revival of the Hebrew language became one of his guiding principles. The 1881 pogroms shocked Russian Jewry and led to the emergence of the *Bilu movement. At a meeting of Jewish students at Moscow University, Ussishkin and his friend Jehiel *Tschlenow founded a Society of Pioneers to Ereẓ Israel. In 1882 he entered the Technological Institute in Moscow, where he immediately founded a Jewish students' society. In August 1884 the Benei Zion society, which nurtured many Zionist leaders, was founded in Moscow. Ussishkin was elected to the society's committee and in 1885 was chosen secretary of all the Ḥovevei Zion groups in Moscow. From 1887 on he published reports and articles in *Ha-Meliẓ*. Together with M.L. *Lilienblum, he was elected secretary of the Druzkieniki Conference (1887). A clash took place at the conference between the Orthodox faction of Samuel *Mohilewer and Leon *Pinsker's liberal Ḥovevei Zion faction, but Ussishkin managed to bring about a reconciliation. The practical proposals made by him at the conference were early signs of his Zionist pragmatism. He viewed agricultural settlement in Ereẓ Israel as the essence of the whole.

When *Aḥad Ha-Am founded the *Benei Moshe society in 1889, Ussishkin became one of its active members. In the same year he qualified as a technical engineer at the Technological Institute. In 1890 he participated in the founding meeting of the *Odessa Committee. Ussishkin visited Ereẓ Israel for the first time in 1891 and described his journey in a booklet (written in Russian and later translated into Hebrew) that made a considerable impression. Upon his return from Ereẓ Israel, he settled in Yekaterinoslav, where he remained for 15 years (1891–1906). At first he was active in Hebrew educational work as well as in Zionist propaganda and fund raising; he was instrumental in founding the modernized Hebrew-speaking *ḥeder* (*ḥeder metukkan*) and a Hebrew library, became a member of the board of the publishing house Aḥi'asaf, etc. The publication of Theodor *Herzl's *Der Judenstaat* in 1896 and his meetings with Herzl and Max *Nordau in Paris and in Vienna on the eve of the First Zionist Congress made a deep impression on Ussishkin, despite his reservations regarding a concept of Zionism based exclusively on political activity, to the neglect of settlement and cultural work. He was elected Hebrew secretary of the First Zionist Congress (1897) and took an active part in the debate centered on the formulation of the first, political article of the *Basle Program. He expressed his fear that too explicit a formulation of Zionist aims might

rouse the Turkish government against the existing *yishuv.* His opposition to pure political Zionism at the First Congress precluded his election as the leader of Russian Zionism, but at the Second Congress (1898) he was elected to the Zionist General Council and served on it for the rest of his life. When Russia was divided into districts for the purpose of Zionist activities at the Third Congress (1899), he was chosen to head the Yekaterinoslav district, which included all of southern Russia and the Caucasus. Under his direction, this district became one of the most active in Russian Zionism, both in its cultural and in its practical activities.

At the Fifth Congress (1901) Ussishkin delivered the address on the "United Organization," in which there was no room for separate "groups" and "societies," and proposed the establishment of the Anglo-Palestine Company in Ereẓ Israel as a branch of the *Jewish Colonial Trust. On his return from the Congress, he convened a conference of Zionists in the Caucasus, thus introducing Zionist activities into the non-Ashkenazi communities there. In the same year he was a member of a delegation that approached Baron Edmond de *Rothschild protesting the "paternalistic" methods of his officials in Ereẓ Israel. Rothschild rejected the delegation's demands, and when Aḥad Ha-Am insisted that the demands be accepted – even if it meant withdrawal of Rothschild's support of the settlements – Ussishkin's opposition to Aḥad Ha-Am's intransigence saved the situation. In 1902 at the *Minsk Conference of the Russian Zionists, he delivered an address that exerted a great influence on the future development of the Zionist movement. The call to recruit youth for pioneer work in Ereẓ Israel was then heard in the movement for the first time.

After the Kishinev pogrom in April 1903, Ussishkin went to Kishinev and was profoundly shocked. He was moved to call for action, which for him meant primarily the organization of the Jewish population of Ereẓ Israel – the embryo from which the future Jewish state would develop. After he traveled to Vienna and received Herzl's approval for his plan, Ussishkin set out for Ereẓ Israel for the second time and remained there for four months (July–September 1903). Immediately upon his arrival in Jaffa, he published a leaflet on the need to "organize the *Yishuv*," and in August 1903 the Great Assembly (Ha-Keneset ha-Gedolah) of the Jews of Ereẓ Israel was held in Zikhron Ya'akov under his direction. It lasted for three days and aroused great enthusiasm and hopes, but this atmosphere was shattered by the subsequent controversy in the Zionist Movement over the *Uganda Scheme. The only practical outcome of the convention was the founding of the Teachers' Association at a meeting in Zikhron Ya'akov immediately following the Great Assembly (Sept. 28, 1903). Upon his return from these two meetings, Ussishkin was confronted with the news that Herzl had received a proposal from the British government to establish an autonomous Jewish colony in Uganda, East Africa. He bitterly opposed the Uganda Scheme and became one of the leaders of the opposition to Herzl. He was the initiator and the moving spirit behind the *Kharkov Conference (1903), which demanded that Herzl abandon the scheme. At the beginning of 1905, Ussishkin convened a conference of the anti-Uganda Zionists, called Ẓiyyonei Zion, in Vilna. The second conference of this faction, also organized by him, took place in Freiburg three days before the Seventh Congress (July 1905) and was instrumental in influencing the congress to abandon the Uganda Scheme and concentrate wholeheartedly on settlement activities in Ereẓ Israel. During the conflict over the Uganda Scheme, Ussishkin published *Our Program* (at first in Russian and later in Hebrew, German, and English translations), which laid the five-point foundation for "synthetic Zionism": political action, acquisition of land, *aliyah*, settlement, and educational and organizational work among the people. This approach thereafter dominated the Zionist Movement. In this pamphlet, he spoke for the first time of farms and of settlements in which Jewish workers would cultivate the land acquired by the JNF "with their own hands, without help from hired laborers." This was the earliest form of the idea of the moshav ovedim. *Our Program* became the platform of practical Zionism, which gave rise to the Second Aliyah.

While engaged in the great debate over the Uganda Scheme, Ussishkin was fighting the tide of assimilation prompted by the first Russian Revolution (1904–05). He struggled to promote the Zionist Movement in general and the Hebrew language in particular. In 1906 he was elected head of the Odessa Committee and retained this post until the committee itself was abolished by the Soviet regime (1919). Under his leadership, the committee supported the establishment of the settlements Ein Gannim, Be'er Ya'akov, and Naḥalat Yehudah. Ussishkin also proposed support for the training farm at *Kinneret and for all the existing educational and cultural institutions in the young *yishuv.*

During the revolution of the Young Turks in 1908, Ussishkin went to Constantinople in an attempt to promote the Zionist cause with the help of influential Sephardi Jews. In 1913, after his third visit to Ereẓ Israel, he published in a pamphlet his "general survey" (translated into Hebrew under the title *Massa Shelishi le-Ereẓ Yisrael*), which discussed the various problems of the *yishuv.* In the winter of 1912, at the eighth conference of Ḥovevei Zion, he spoke of the need for a Hebrew university and put through a resolution in the committee to allocate the sum of 50,000 gold francs for the purpose of acquiring land on Mount Scopus. At the 11th Zionist Congress in Vienna (1913), he reported together with Chaim *Weizmann on the idea of the Hebrew University. During World War I, in February 1915, the Copenhagen office of the Zionist Organization was established, and a secret Zionist conference, attended by delegates from all the warring countries, was held in that city. Despite the danger involved (for the Czarist government regarded every contact with enemy subjects as an act of treason), Ussishkin attended the conference. Upon his return to Odessa, he was informed that there was a deportation order against him and was obliged to flee to Moscow, where he remained until the situation in Russia had changed. During

the days of the February Revolution (1917), he waged a bitter struggle against the Yiddishists, who wished to eliminate Hebrew as the recognized national language of the Jewish people, and against all those who thought that the granting of equal rights to Russian Jews had made Zionism obsolete.

Ussishkin organized a mass demonstration in Odessa to celebrate the *Balfour Declaration that was attended by 200,000 people, Jews and non-Jews alike. At the invitation of Weizmann and Nahum *Sokolow, he attended the Paris Peace Conference, and on Feb. 27, 1919, he stood before the assembled representatives of the nations of the world as the representative of the Jewish people and addressed them in Hebrew.

In November 1919 Ussishkin settled in Palestine and was the head of the *Zionist Commission. For more than three years (1919–23) he guided the *yishuv* in its first and difficult steps toward the materialization of the national home. He was instrumental in organizing the Hebrew school network in Palestine and in establishing the settlement Kiryat Anavim near Jerusalem. In the spring of 1921 he left for the United States with Albert *Einstein to promote the fund-raising campaign for *Keren Hayesod. At the 13th Congress in Karlsbad (August 1923), Ussishkin's election as chairman of the Zionist General Council was prevented by his disagreement with Weizmann's moderate policy toward the Mandatory regime in Palestine. However, he was chosen to head the JNF and retained this position for nearly 20 years (1923–41). He devoted himself completely to the idea of acquiring land as the property of the nation, making trips to Europe (1924) and Canada (1927) to raise funds. Due to his tireless efforts, large tracts of land in the Jezreel Valley (1921), Ḥefer Plain (1927), Haifa Bay area (1928), Beth-Shean (1930), and other parts of the country were purchased. He increased the landed property of the JNF from 22,000 to 561,000 dunam and its income from £70,000 to £600,000.

Ussishkin played an important role in the establishment of the Hebrew University and was among those who officially inaugurated it on April 1, 1925. He was elected to both the Board of Trustees and the Executive Committee of the university and took an active interest in its affairs until he died. He was elected chairman of the Zionist General Council at the 19th Congress in 1935. When the Arab riots broke out in Palestine in 1936 and the Royal Commission (the Peel Commission) proposed the partition of the country, he fought against the proposal at the 20th Congress in Zurich (August 1937) and participated in the Round Table Conference in London in 1939. He fought against the British White Paper of May 1939 that forbade Jews to purchase land in most areas of the country.

Ussishkin's activities were widely admired. In 1939, when the JNF purchased land in Upper Galilee, north of the Ḥuleh Valley, it was decided to found a series of settlements there called Meẓudot Ussishkin ("Ussishkin Forts") – moshavei ovedim and kevuẓot in which all sections of the nation and members of all Zionist parties would participate. For 60 years no Zionist or Jewish national activity took place in which he had not participated and on which he had not left his own unique stamp. Ussishkin's writings have been collected in two volumes (which also include appreciations): *Sefer Ussishkin* (1933) and *Devarim Aḥaronim* (1946).

USSISHKIN, DAVID (1935–), Israeli archaeologist, expert on the Iron Age of the Land of Israel. Born in Jerusalem, Ussishkin studied archaeology at the Hebrew University of Jerusalem (1955–66) after completing his army service. In 1961 he obtained his M.A. with distinction, writing a thesis on Macalister's excavations at Gezer. Ussishkin received his Ph.D. in 1966 and his thesis "The Neo-Hittite Monuments, Their Dating and Style," was written under the supervision of Y. Yadin. From 1966 Ussishkin taught archaeology at Tel Aviv University, and from 1996 was the incumbent of the Austria Chair in Archaeology of the Land of Israel in the Biblical Period at the Institute of Archaeology. Ussishkin's excavation experience spans close to 50 years, with his first experience in the field as a staff member on the Chalcolithic Beersheba digs (1956–65); Hazor (1958); Azor (1958); Kültepe, Turkey (1959); Megiddo (1960, 1965); Judean Desert, Cave of Letters (1960–61); En Gedi (1961–62); Masada (1964–65). His own directorial experience began with the work at Tel Eton and Beth Yerah (1967–68) and the Silwan Village survey (1968–71) and continued with the major project conducted at Tel Lachish between 1973 and 1994, which has been fully published. Following smaller excavations conducted at Bethar (1984) and at Tel Jezreel (1990–1996), Ussishkin was a co-director of the renewed excavations at Tel Megiddo from 1992. Ussishkin took on many different administrative duties over the years, including the directorship of the Institute of Archaeology at Tel Aviv (1980–84), serving also as a member of various councils (the Israel Exploration Society, the Israel Archaeological Council) and as editor of the journal *Tel Aviv* (1975–2004). Ussishkin was a prolific writer of scientific papers and research articles (more than 100). His books include *The Conquest of Lachish by Sennacherib* (1983) and *The Village of Silwan – The Necropolis from the Period of the Judean Kingdom* (1993), and he is the main author and editor of the five-volume final report on the Lachish excavations (2004).

[Shimon Gibson (2nd ed.)]

USTEK (Czech **Úštěk;** Ger. **Auscha**), small town in N. Bohemia, Czech Republic. The local lord received permission in 1327 to allow Jews to settle on his domains, but documentary evidence for the presence of Jews dates only from the 16th century, when the Serymas were lords of the town. There

were ten Jewish families in 1570. After the Thirty Years' War, Ustek became a possession of the Jesuit order. The number of Jewish families was limited to eight. In 1794 a synagogue was built (rebuilt in Reform style in 1851). There were 42 Jews (eight families) in the town in 1745, 60 in 1830, 172 in 1880, 108 in 1910, and only 54 in 1930. At the turn of the century, 12 Jewish firms dealt in the export of hops. At the time of the Sudeten crisis (September 1938) the Jews left Ustek; the synagogue was destroyed on Nov. 10, 1938. After World War II the community was not reestablished.

[Jan Herman]

USTI NAD LABEM (Czech **Ústí nad Labem**; Ger. **Aussig**), town in N. Bohemia, Czech Republic. Isolated Jewish families may have settled in the town in the 16th century, but later the German burghers did not permit Jews to live there. Jews returned to the town after 1848. In 1880 there were 30 Jewish families in Usti; 95 families in 1863; and 985 persons in 1930. The first prayer room was established in 1863 and *Kultusgemeinde* in 1866. A formal congregation was established in 1869 which, in 1888, hired its first rabbi.

In the years before World War II, Usti was one of the centers of the Nazi Party (Sudetendeutsche Partei), and Jews were subjected to violence. In the summer and fall of 1938, most Jews left Usti for Prague and other localities. In November 1938, after the Munich agreement, the few Jews that remained in Usti were sent to extermination camps. In 1945–48, most of the German inhabitants were expelled to Germany. After the Soviet annexation of Carpatho-Rus, local Jews opted for Czechoslovakia; many of them settled in the depopulated Suden region. A new Jewish congregation was established in Usti. In 1948 it totaled 800. The congregation continued to exist in the early 21st century.

Usti is the native town of artist Ernst Neuschul-Norland (1895–1968), who painted the portrait of the first Czechoslovak president. Another Usti native, Ignatz Petschek, owned the north Bohemian lignite mines.

USURY.

Biblical Law

SOURCES. "If thou lend money to any of My people, even to the poor with thee, thou shalt not be to him as a creditor (*nosheh*), neither shall ye lay upon him interest" (Ex. 22:24). "And if thy brother be waxen poor and his means fail with thee… Take no interest of him or increase; but fear thy God; that thy brother may live with thee. Thou shalt not give him thy money upon interest, nor give him thy victuals for increase" (Lev. 25:35–37). "Thou shalt not lend upon interest to thy brother: interest of money, interest of victuals, interest of anything that is lent upon interest. Unto a foreigner thou mayest lend upon interest; but unto thy brother thou shalt not lend upon interest; that the Lord thy God may bless thee in all that thou puttest thy hand unto…" (Deut. 23:20–21). The prohibition on taking interest in Exodus and Leviticus seems to be confined to the poor in straits and not to extend to moneylending in the normal course of business, but the deuteronomic prohibition clearly applies to all moneylending, excluding only business dealings with foreigners.

DEFINITION. The biblical term for interest is *neshekh* (Ex. 22:24; Deut. 23:20), but in the levitical text it occurs alongside *tarbit* or *marbit* (25:36–37). In the Jewish Publication Society translation (1962) *neshekh* is rendered as "advance interest" and *tarbit* or *marbit* as "accrued interest" – the one being deducted in advance, the other being added at the time of repayment. This is only one of many interpretations that were made of the terms *neshekh* and *tarbit* from the time of the Mishnah (BM 5:1) onward and by no means the best one. One commentator regards *neshekh* as accumulating interest and *tarbit* as a fixed sum of interest that never increases (Ramban to Lev. 25:36). The most authoritative view is that of Rava, that there is no difference in meaning between *neshekh* and *tarbit* (BM 60b); but while Rava maintains that the Torah used two synonyms in order to make the prohibition of interest a twofold one (*ibid.*), the better explanation etymologically would be that *neshekh*, meaning bite, was the term used for the exaction of interest from the point of view of the debtor, and *tarbit* or *marbit*, meaning increase, was the term used for the recovery of interest by the creditor (Solomon Luntschitz, *Keli Yakar*, Be-Ḥukkotai, Lev. 25:36).

The prohibition on interest is not a prohibition on usury in the modern sense of the term, that is, excessive interest, but of all, even minimal, interest. There is no difference in law between various rates of interest, as all interest is prohibited.

LEGAL CHARACTER OF PROHIBITION. It has been said that the prohibition on interest rests on two grounds: firstly, that the prosperous ought to help the indigent, if not by gifts, then at least by free loans; and secondly, that interest (or excessive interest) was seen to lie at the root of social ruin and was therefore to be outlawed in toto. Both these considerations would apply only internally: there could be no obligation to help foreigners, nor was public policy concerned with their wellbeing. Moreover, moneylending transactions with foreigners were motivated solely by the legitimate desire to make profits, while the internal economy was eminently agrarian and had no money markets of any importance. It follows from the charitable nature of the prohibition on interest that its violation was not regarded as a criminal offense to which any penal sanctions attached, but rather as a moral transgression; in other words, while taking interest would not entail any punishment, granting free loans and refraining from taking in-

terest would lead to God's rewards and blessings (Deut. 23:21 and Ramban thereto). It was only in the prophecies of Ezekiel that usury came to be identified with the gravest of crimes: it is mentioned in the context of larceny, adultery, homicide, and other such "abominations" that are worthy of death (18:11–13). The threat of death for usury was later interpreted as the divine sanction against irrecoverable and illegitimate self-enrichment (BM 61b). "He that augmenteth his substance by interest and increase" is listed among the "evil men" (Prov. 28:8); while "He that putteth not out his money on interest" is among the upright and righteous (Ps. 15:5).

IMPLEMENTATION. The prohibition on taking interest does not appear to have been generally observed in biblical times. The creditor (*nosheh*), far from giving free loans, is often described as exacting and implacable (cf. I Sam. 22:2; II Kings 4:1; Isa. 50:1; et al.); and the prophet decries those who have "taken interest and increase" and forgotten God (Ezek. 22:12). Nehemiah had to rebuke the noble and the rich for exacting interest, "every one to his brother" (Neh. 5:7); and he had formally and solemnly to adjure them to abstain from levying execution (12–13). From the *Elephantine papyri it appears that among the Jews in Egypt in the fifth century B.C.E. it was a matter of course that interest would be charged on loans: not only did they disregard the biblical injunctions as far as the taking of interest was concerned, but they made no recourse to any legal fictions in order to evade the prohibition (R. Yaron, *Mishpat shel Mismekhei Yev* (1961), 136).

Talmudic Law

EXTENSION OF PROHIBITION. It is not only the creditor who takes interest who is violating the biblical prohibition, but also the debtor who agrees to pay interest, the guarantor who guarantees the debt that bears interest, the witnesses who attest the creation of an interest-bearing debt, and even the scribe who writes out the deed (BM 5:11; BM 75b; Yad, Malveh 4:2). This is one of the very rare cases in which accessories to the offense are held responsible (see *Penal Law). "Although the creditor and debtor transgress these biblical prohibitions, there is no flogging for it, as the interest must be repaid" (Yad, Malveh 4:3). The *Ḥinnukh* (no. 74) says further that none of the accessories is flogged "for since even the creditor is not flogged… it would not be right that those who are mere accessories should be liable for flogging."

The most far-reaching extensions of the prohibition relate, however, to the nature of the "interest" prohibited. Interest is no longer only the lending of four dinars for five, or of one bushel of wheat for two (BM 5:1), but is extended to all benefits that smack of interest or might look like it. Thus, the borrower may not let the lender live on his premises without payment of rent or at a reduced rent (BM 5:2), and if he had resided there without paying rent before borrowing the money, he must now be charged rent (BM 64b). The prohibition of lending one bushel of wheat for two was also extended to the lending of one bushel of wheat for one, since it was possible that the value of the wheat might increase between the date of the loan and the date of the return, and such increase in value would amount to prohibited interest (BM 5:9; TJ, BM 5:7); but the rule does not apply where seeds are lent for sowing and not for consumption (BM 5:8), and where the borrower possesses even the smallest quantity of the same species, he may borrow any quantity (BM 75a; Yad, Malveh 10:1–5). Where two men agree to do work for each other in turn, they may agree only on the same kind of work for each, as otherwise the work of one might be more valuable than that of the other and thus amount to prohibited interest (BM 5:10; Yad, Malveh 7:11). Gifts that one man may send to another in view of a forthcoming request for a loan, or in gratitude for a loan granted and returned, fall within the prohibition on interest – as are also "words," conveying to the lender, for instance, any valuable information (BM 5:10), or even greetings, where they would not otherwise have been exchanged (BM 75b; Tosef., BM 6:17). A mortgagee, even if he is in possession of the mortgaged property, is not allowed to take its produce; if he has taken it, he must either return it or set it off against the capital debt (BM 67a–b; Yad, Malveh 6:1–8; see also *Lien; *Pledge).

Interest in the guise of *sale was also prohibited. Fruit and other agricultural produce may not be sold unless and until its market price is established (BM 5:7), for otherwise the purchaser might, by paying in advance a price below the eventual market value, receive interest on his money; such advance purchases amounted in effect to financing the farmers, and were thus in the nature of loans rather than sales. But there is nothing to prevent the farmer from selling below the market value, once that value has been established: this would no longer be a disguised loan but a genuine if ill-advised sale (BM 63b; Yad, Malveh 9:1), subject always to the seller's remedies for **ona'ah* (BM 4:4). Sales of products without current market values would be recognized as such, and not be invalidated as disguised loans, only where the goods sold were actually in the hands of the seller at the time of the sale (Tosef., BM 6:2–5), or, where they had to be processed or manufactured, were almost completed at the time of the sale (BM 74a; Yad, Malveh 9:2).

Any payment is prohibited interest that compensates a party to any transaction for money being left, for any length of time, in the hands of the other party, although it should, according to law or custom, have already been paid over (BM 63b). Thus, as rent is legally due only at the end of the period of lease, a discount may be given for rent paid in advance (see *Lease and Hire); but as the purchase price for goods or land sold is payable at the time of the sale, any price increase for later payment would amount to prohibited interest (BM 5:2; BM 65a; Yad, Malveh 8:1).

A further notable extension of the prohibition on interest relates to contracts of *partnership. An arrangement by which one partner finances a business and the other manages it, and losses are borne by the managing partner only while the profits are shared between them is illegal, for it comes within the prohibition on interest (BM 70a; BM 5:6; Yad, Malveh 8:12). Where the financing partner bears or shares the losses, such

an arrangement is valid only if the managing partner is being paid a salary for his work instead of, or in addition to, a share in the profits (BM 5:4; Yad, Malveh 5:9).

All these talmudic extensions of the prohibitions on interest are known as *avak ribbit*, i.e., the dust of interest, as distinguished from *ribbit keẓuẓah*, i.e., interest proper in an amount or at a rate agreed upon between lender and borrower (BM 61b, 67a, et al.). The difference in law between *avak ribbit* and *ribbit keẓuẓah* is that the latter, if it has been paid by the borrower to the lender, is recoverable from the lender, while the former, once paid, is not recoverable, though a contract tainted with the dust of interest will not be enforced (BM 61b; Yad, Malveh 4:6; Sh. Ar., YD 161:1–2; see also *Contract).

EVASION OF PROHIBITION. It has been said that the evasion of the prohibitions on interest reflects the conflict between law and life (Globus, see bibl., p. 39). It is remarkable how the talmudic jurists extended the prohibition on interest so as to cover, and invalidate, transactions far removed from the loans to which the biblical prohibition had attached, and at the same time sought ways and means to validate transactions clearly or conceivably falling within that prohibition. This phenomenon can only be explained by the change of economic conditions: it was in the amoraic period in Babylonia that the prohibitory laws against interest proved to be no longer compatible with the economic needs of the community; and ever since the necessity of finding legal subterfuges to evade those laws has persisted. The prohibition of price increase for payment that is made after a time lapse was practically abolished by the provision that any price may be agreed upon and recovered so long as the increase involved is not expressly but only tacitly stipulated (BM 65a; YD 173:1). The mishnaic rule that a managing partner must be paid a salary in order to validate the partnership agreement was set at nought in practice by the provision that such a salary need be nominal only (BM 68b). Profit-sharing partnerships were validated by regarding the investment of the financing partner as half loan and half deposit. While the borrower is responsible for the loan, the bailee is not responsible for the loss of the deposit; thus, the financing partner (as bailor) will also bear his share in the losses, and the partnership is legal (BM 104b). Even where the financing partner's share in the profits is redeemed in advance by a down payment, the agreement is upheld, provided that the business could reasonably be expected to be profitable (TJ, BM 5:8); and, later, deeds were formulated in which a pre-estimate of the expected profits was stipulated in advance as a fixed sum (BM 68a).

A farmer who had received a loan was allowed to make a formal conveyance of his lands (or part of them) to his creditor and still remain on his lands as his creditor's tenant; the creditor would be entitled to the produce of the land, not as interest on the loan but as income from his property (BM 68a). One jurist even held that it was permissible to let money on hire, like chattels, against payment of rent, as distinguished from giving a loan against payment of interest (BM 69b). A vendor may sell goods on credit at a price of 100 units payable at a future date, and immediately repurchase the goods at the price of 90 units payable cash down: each of the two contracts of sale would be valid (BM 62b).

Another form of evasion was to lend money on interest to a non-Jew, in order that the non-Jew might relend the money to the intended Jewish debtor; both lending transactions are valid (BM 61b).

Some of these forms of evasion, though practiced in talmudic times, have not become the **halakhah* (BM 68a per Rava; Yad, Malveh 5:8; 5:16; 6:4–5); others, though recognized as legally valid and feasible, were deprecated as reprehensible and forbidden (BM 61b–62b; Yad, Malveh 5:15) because of the stratagem involved in the device (*ha'aramah*).

SANCTIONS. Originally, courts appear to have been empowered to fine the creditor for taking interest by refraining from enforcing even his claim for the repayment of the capital (Tosef., BM 5:22), but the rule evolved that taking interest did not affect the creditor's enforceable right to have his capital debt repaid (BM 72a; Yad, Malveh 4:6). Where a bill, however, includes both capital and interest without differentiating between them, the bill is not enforceable (YD 161:11; Sh. Ar., ḤM 52:1), and "whoever finds a bill which includes interest, shall tear it up" (Tosef., BM 5:23; see also *Contract). Moneylenders who take interest are disqualified as *witnesses and are not administered oaths (Sanh. 3:3), and even the borrower who pays interest is disqualified (Sanh. 25a). In their moral turpitude, moneylenders who take interest are likened to apostates who deny God (Tosef., BM 6:17) and to shedders of blood (BM 61b); and they have no share in the world to come (Mekh. Sb-Y 22:24). They are doomed to lose all their property and go bankrupt (BM 71a; Sh. Ar., YD 160:2).

LEGALITY OF INTEREST. While biblical law allowed the taking of interest from foreigners, excluding alien residents (Lev. 25:35), talmudic law extended the exemption: "One may borrow from them [foreigners] and lend them on interest; similarly in the case of an alien resident" (BM 5:6, 70b–71a). However lawful interest transactions with foreigners were, they were looked upon with disapproval: some jurists held that they were permissible only when no other means of subsistence was available (BM 70b); others would allow them only to persons learned in the law, as the uneducated might fall into the error of believing that interest is permissible in general (BM 71a). The psalmist's praise of the man who would not lend his money on interest (Ps. 15:5) was interpreted to apply to the man who would not take interest from a foreigner (Mak. 24a).

Post-Talmudic Law

TRANSACTIONS AMONG JEWS. The talmudic evasions of the prohibition against interest served as precedents for the legalization of transactions involving interest. Thus it was deduced from the evasions reported in the Talmud that it would be permissible for a lender to lend 100 units to a businessman

for him to use in his business; when it had increased to 200, the lender would be entitled to the 200, provided that he had paid the borrower some salary in consideration of his work (*Piskei ha-Rosh* BM 5:23; *Mordekhai* BM 319). Rashi is reported to have ruled that you may send your friend to take a loan on interest from another for you, or you may send your friend to give your money on interest to another; for interest is prohibited only as between lender and borrower, but not as between their respective agents. The general rule that a man's agent is like himself (see *Agency) would not apply here, as the taking of interest is a criminal offense, and in criminal matters no man can be made responsible for the deed of another (see *Penal Law; *Mordekhai* BM 338).

In time, a standard form of legalization of interest was established, known as *hetter iskah*, meaning the permission to form a partnership. A deed, known as *shetar iskah*, was drawn up and attested by two witnesses, stipulating that the lender would supply a certain sum of money to the borrower for a joint venture; the borrower alone would manage the business and he would guarantee the lender's investment against all loss; he would also guarantee to the lender a fixed amount of minimum profit. The deed would also contain a stipulation that the borrower would be paid a nominal sum as a salary, as well as an agreement on the part of the lender to share the losses. In order to render this loss-sharing agreement nugatory, provision would normally be made for such loss to be proved by particular, mostly unobtainable, evidence (*Naḥalat Shivah*, no. 40; cf. *Terumat ha-Deshen*, Resp. no. 302). The amount of the capital loan plus the guaranteed minimum profit would be recoverable on the deed at the stipulated time it matured.

In the course of the centuries this form of legalizing interest has become so well established that today all interest transactions are freely carried out, even in compliance with Jewish law, by simply adding to the note or contract concerned the words *al-pi hetter iskah.* The prohibition on interest has lost all practical significance in business transactions, and is now relegated to the realm of friendly and charitable loans where, indeed, it had originated.

TRANSACTIONS WITH NON-JEWS. In 1179 the Church decreed that the taking of interest was forbidden by Scripture as well as by the laws of nature, and that all Christian usurers would be liable to excommunication. As canon law did not apply to Jews, this decree did not prevent them from lending money on interest, and moneylending soon became a typically Jewish business. The Jews were practically forced into it by the severe restrictions placed upon them in the pursuit of any other trade or profession in most countries of Europe. From the point of view of Jewish law, the taking of interest from non-Jews was permitted; and the talmudic restriction that it should not be done unless there were no other means of subsistence was duly held to be complied with: "If we nowadays allow interest to be taken from non-Jews, it is because there is no end to the yoke and the burden king and ministers impose on us, and everything we take is the minimum for our subsistence, and anyhow we are condemned to live in the midst of the nations and cannot earn our living in any other manner except by money dealings with them; therefore the taking of interest is not to be prohibited" (Tos. to BM 70b s.v. *tashikh*). With the renewed change in circumstances, the prohibition on taking interest would apply to Jews and non-Jews alike (YD 159:1).

For nonlegal aspects see also *Moneylending.

[Haim Hermann Cohn]

The Rabbinical Period

The history of the prohibition of usury, in the sense of taking interest on loans, during the rabbinical period is the history of an ideal succumbing to the dictates of reality. The talmudic prohibition on taking interest, to which there was a plethora of lenient exceptions, fell into almost total desuetude as a result of socioeconomic circumstances. The trend toward erosion of this prohibition was identical in all of the Jewish Diasporas, although the means used to limit or evade it varied.

Many halakhic decisors permitted the charging of interest pursuant to judicial decision, insofar as it did not involve a credit transaction (Resp. *Sho'el u-Meishiv Tanina*, vol. 4 no. 123). The charging of interest as an arrears fine was also permitted by many authorities, even though they were aware that this was a means of circumventing the prohibition (Resp. Ribash 335; *Haggahot Mordechai* BM, no. 454). The authorities were also lenient regarding the prohibition of interest with regard to charitable and educational institutions, both as borrowers and as lenders (Resp. *Ha-Maharit*, YD, 45).

The halakhic sages also needed to deal with new kinds of financing arrangements resulting from economic developments. Thus, for example, the first maritime insurance contracts, which were a mixture of financing the shipment and insuring it, in consideration for a certain percentage of the value of the merchandise, was legitimized (Resp. Radbaz, Pt. 6, 2290). The granting of credit through the sale of promissory notes at a discount even before the time of repayment was permitted, notwithstanding the clear element of interest in such transactions (Sh. Ar., YD, 173:4).

The transition from consumer-oriented credit to business credit, that produced income for the borrower, and the finding of ways to permit interest-bearing loans led to the creation of general financial doctrines intended to protect the lender from a borrower who attempted to evade repayment of the loan under the pretext that he does not wish to transgress the proscription against interest. Rabbinical law provided that, in any transaction that may be interpreted as legal, even if the claim is far-fetched, there is an irrefutable presumption that the transaction was indeed carried out legally. This is consistent with the talmudic expression that "a person does not eat forbidden food and leave permitted food untouched" (Responsa Maharam 2: 80; Tosafot at Gittin 37b, s.v. *la shavik heteira*).

Moreover, it frequently occurs that merchants and businessmen may take interest-bearing loan from others on the basis of a factual presentation that enabled such a loan. After trading with the money, when the time comes for repayment of the loan, the borrower may become overly righteous and deny the original presentation of facts by claiming that he does not want to transgress the prohibition of interest.

The halakhic sages were morally outraged by such an argument and recognized that accepting such an argument would close the door upon potential borrowers in the future. The solution they found was that, at the time of the litigation between borrower and the lender, the borrower was not allowed to claim that at the time of the transaction he was a "transgressor." The borrower would be barred from raising a factual claim, even if it might be correct, if it conflicted with the facts presented at the time the transaction was entered into and of its result would be the invalidation of the transaction and his exemption from paying interest. This doctrine is similar in its mechanisms and results to the English equitable doctrine of estoppel that developed several hundred years later.

This doctrine was given a halakhic basis through the "civil" application of the well-known talmudic rule that "no man may call himself a wrongdoer." This rule was originally used in criminal law and precluded conviction of a person on the basis of self-incrimination. The transference of this rule to the area of civil law leads to obligating the defendant to repay on the basis of the irrefutable presumption that the borrower, who was a party to the transaction, did so with permission and not as a transgressor (Resp. Rosh, Rule 108,12:32; Sh. Ar., YD 177, and *Taz* and *Shakh* ad loc.; Resp. *Iggerot Moshe*, YD 66; ibid., ḤM 22).

Linked Loans

The steep inflation that has become a relatively common economic phenomenon has given rise to a new financial instrument: loans whose values are linked to the inflation index. This financial instrument is intended to protect the lender from a decrease in the value of his loan in terms of its buying power. In a linked loan, the borrower undertakes to repay the amount of the loan linked to the value of a foreign currency, to the cost of living index, or to the building price index, as agreed between the parties. The issue of linked loans is problematic vis-à-vis the prohibition on interest and remains complicated and convoluted.

The central problem regarding this context is the tension existing in defining the meaning of money: should it be defined in nominal terms, or should it be defined in real terms (i.e., its real value)? During a period of inflation, the borrower will insist on repaying the loan according to the specified, nominal amount of the loan, while the lender will argue that what is of importance is not the nominal value of the loan, but rather its actual value, that is, the purchasing power of the money in the marketplace of goods and services. It is clear that, if the nominal value is the criterion, any nominal addition will be considered as prohibited interest.

The governing principle in the talmudic *halakhah* was that of nominalism. An extreme expression of this principle is the prohibition of loaning (*seah be-seah*) "a bushel for a bushel [of grain]" (Mishnah, BM 5:9).The Mishnah prohibits loaning a bushel of grain in return for the future payment of the same amount, even if the lender received no additional payment. The rationale of this rule is that the criterion for defining "addition" is exclusively monetary. In as much as the value of the *se'ah* to be returned on the date of payment may exceed its value at the date of the loan, the result is that the lender receives a prohibited addition, which is defined as interest, even though in real terms, the lender did not receive more than the same *se'ah*. The basis of this prohibition is the sharp distinction drawn between "*tebea*" (currency) and "*pera*" (products and services) in which the latter is defined as the entirety of goods, merchandise, and services that are assessed in monetary terms. Currency, on the other hand, is regarded as an absolute and stable entity of unchanged value, while only the "fruits" become more or less costly. In practice, the prohibition became eroded and emptied of all content. The *amora* R. Isaac ruled that if a borrower had a *se'ah* "he may borrow against an unlimited amount of bushels" (BM 75a), while at a later time a legal fiction was created stating that there is no person who does not own at least one bushel (Tur, *Beit Yosef*, YD 162). Paradoxically, Jewish law in the Middle Ages relied on the fiction of "bushel for bushel (*se'ah be-se'ah*)" as a central instrument for permitting linked loans. It was done in a manner that circumvented the prohibition of *se'ah be-se'ah*: The nominal subject of the loan was bushels or gold, and this form of loan was permitted on the basis of a legal fiction that any borrower owned at least a minimal amount of grain or gold, and on this basis he could borrow a large amount of the same product, when, and despite that fact that the loan was actually a monetarily linked loan (*Bet Yosef*, Tur, YD 172; Resp. Ribash no.19). At the same time, loans that were formally referred to as linked loans continued to be prohibited.

Talmudic *halakhah* based on the formal, nominalistic doctrine based on the "bushel for bushel" prohibition was confronted by the realistic approach to monetary changes initiated by the government, as opposed to market based currency fluctuations. Jewish law distinguished between price rises as a result of market forces and price rises as a result of government-initiated reduction of the value of currency. Regarding the devaluation or revaluation of the currency itself, which had an immediate effect on the price of goods and services, Rav Ashi ruled that the question of whether or not the lender received an additional sum would be answered not on the basis of the nominal test, but rather through a comparative examination of the purchasing power at the time of the loan and at the time of repayment (BM 94b; *Sefer ha-Terumot*, [1586], Pt. 8:3). This conservative trend, of distinguishing between currency fluctuations resulting from governmental initiatives as distinct from changes in the actual buying power of money due to *existing market forces*, persists even today. While the *posekim* require valuation of the debt in the event

of changes in the value of the currency initiated by the government, they forbid such valuation as usurious if the change is the product of market factors. One of the leading *posekim* of the 20th century, Rabbi Karelitz, was well aware that the value of money – like that of any other merchandise – rises and falls in relation to the quantity available, but nevertheless adhered to the original talmudic law according to which money is an absolute value to which the concepts of expensive and cheap do not apply (*Hazon Ish*, YD 104b). Rabbi Moshe Feinstein, who uses a realistic criterion when it comes to the obligation to tithe money from inflationary profits, also prohibits linked loans (Resp. *Iggerot Moshe*, YD, Pt. 2:104). This doctrine reflects the accepted approach taken by contemporary rabbinical authorities and of rabbinical court rulings in Israel (Responsa *Yaskil Avdi*, Pt. 5, YD, sec. 18; *Berit Yehudah* 20:20). Nevertheless, the high rate of steep inflation in Israel in the 1970s led to movement in a more realistic direction (thus Rabbi Goren in PDR 11:235).

Hetter Iskah

Global economic development has changed the general function of credit, from being a means of assisting the poor to serving primarily as a business tool. This change in the nature of credit has led halakhic scholars to seek moral justifications for circumventing the prohibition of interest. From the beginning of the period of the *aḥaronim* (ca. 15th century) until today, the accepted means for legitimizing the free flow of interest bearing credit has been the *hetter iskah*. The basic idea underlying this financial tool is the distinction drawn by the *halakhah* between a loan and a deposit.

A loan is defined in *halakhah* as a transfer of ownership from the lender to the borrower against the borrower's commitment to return assets similar to those borrowed upon a particular date. A deposit, by contrast, is defined in *halakhah* as transfer of possession without transfer of ownership.

The promulgation of the *hetter iskah* by the Sages during the talmudic period was not necessarily to avoid the prohibition of interest. The Sages intended to create a uniform model for partnership of capital and labor (whether for manufacture, trade, or enterprise). The legal structure of the *iskah* is that half of the money invested is considered as a deposit, over which the one "giving" continues to be the owner, while the other half of the sum is treated as a loan, over which the one "engaged" in business (i.e., the borrower) is considered the owner. He is the sole party to absorb losses from that half and he is the only one entitled to any revenue from it. The practical result is a division of both opportunities for profit and of risk between the owner of the capital, on the one hand, and the entrepreneur, manufacturer or merchant, on the other hand. In order to avoid transgressing the prohibition of interest, talmudic *halakhah* provided that the owner of the capital should pay wages, even if only a symbolic sum, to the one receiving the capital for his handling of that part of the capital that is considered as a pledge.

The first *hetter iskah* document is attributed to Rabbi Menachem Mendel of Cracow, known as the Maharam (*Naḥalat Shiva,* 40), at the end of the 16th century. The *hetter* received the halakhic approval of the sages of Ashkenaz and even attained legislative status (*Kuntres ha-Ribbit* by the author of *Me'irat Einayim,* and the decision of the Council of the Four Lands at the Kremnitz fair in 1607). This *hetter* became popular and many of the loan agreements incorporated this classic formulation, which was accepted by all of the halakhic decisors of Ashkenaz, by way of reference – that is, that a provision was made that all transactions between parties be in accordance with the *hetter iskah* as promulgated by the Maharam (Rabbi Jacob Blau, *Brit Yehudah,* chap. 41.8). During this time similar *hetteirim* were fashioned by the Sephardi authorities (*Ginat Veradim*, YD, *klal* 6, no. 4), which have long been accepted by all Jewish communities.

The legal structure upon which the *hetter iskah* rests involves three basic components: (1) *iskah* (the transaction); (2) the investor (the lender); and (3) the one intended to use the money (the borrower).

Every loan or credit transaction is considered as a partnership between the investor (i.e., the lender) and the one intended to use the money (the borrower). On the basis of the Talmudic model of *iskah*, the investor is entitled to a portion of the revenue because of that portion of the loan that is considered as a "deposit." There are also *hetterim* based upon the classical talmudic model, i.e., a partnership between the "deposit" portion of the capital and that portion which is a "loan" throughout the period of the credit. There are other *hetterim*, such as that of the Maharam, based upon a deposit which, once it realizes an agreed-upon level of profit, is turned into a loan.

Given that the parties are free to make conditions, the lender can protect his investment by including in the agreement a condition that the loan may only be used for solid, profitable businesses – a condition making it difficult for the borrower to claim that he suffered a loss, one that even obligates him to pay profits.

Essentially, the *hetter iskah* is based upon the freedom to make conditions in laws of evidence. The lender/"investor" is entitled to receive a detailed report of the objectives of the investment, profits, losses, etc. He is entitled to set forth stringent means of proof regarding all these subjects in the loan/"partnership" agreement. Along with these stringent means of proof, there is also a clause exempting the borrower/"business user" from the requirements of reporting, in exchange for payment of a predetermined percentage of the value of the loan.

In practice, the borrower "acquires" from his partner the potential profit and the need to provide proofs in exchange for payment of a fixed amount or percentage agreed-upon in advance. Thus, the "interest" is paid as a waiver fee for the loaner's right to accounting and proof ("compromise fee"), and not as an addition to the principal of the loan. In this way, the prohibition of interest is circumvented.

These *hetterei iskah* were accepted by all of the later decisors and there is no one who questions their validity. This is the accepted manner of entering into credit agreements where the parties observe *mitzvot*. The use of *hetter iskah* for banking transactions is mentioned in the responsa literature at the end of the 19th century (Responsa Maharsham, Pt. I, no. 20). The banking industry in Israel has also adopted this device, and in many bank branches the accepted version of the *hetter iskah* is displayed in public. The classic *hetter iskah* has been expanded to include investments that do not realize profits, on the basis of the assumption that even consumer credit allows the borrower to invest time or money in other pursuits (Resp. *Sho'el u-Meishiv*, Pt. I, no. 137; Resp. Maharsham, Pt. II, no. 216). Decisions of Israeli civil courts have likewise recognized the *hetter iskah* as part of the contractual framework obligating the parties and has analyzed its provisions as part of the agreement between them (Motion 5317/86 *Bank Mizrahi v. Tishler et al.,* PSM 48(2) 353).

The *hetter iskah* as a valid contractual provision was also recognized in a decision of a New York State court (290 NYS 2D 997, *Leibovici v. Rawicki*). The positive attitude to the *hetter iskah* and its perception as a vital instrument for the capital market, which prevents doors being closed to borrowers, has also been recognized in contemporary rabbinical court decisions (File 17046/44, 16 PDR 74).

UTAH, Rocky Mountain state between Nevada and Colorado. The proposed State of Deseret, founded by members of the Church of Jesus Christ of Latter-day Saints, LDS, (Mormons), in 1847 and acknowledged as Utah Territory in 1850, became a state in 1896. Utah is the rare place on earth where the Jews are considered "Gentiles," in this case non-Mormons.

While the Mormon flight to the West was one of religious liberty, western Jewish migration was spurred by a sense of adventure, romance, economics, risk, and personal and religious freedom away from the stigma of antisemitism encountered in Europe.

As early as 1826, Jewish trappers traversed the territory. In 1854, Jewish daguerreotypist and writer Solomon Nunes *Carvalho traveling with Colonel John C. Fremont's mapmaking expedition yielded unparalleled images of the young Mormon community. That same year, Julius and Fannie Brooks became Utah's first Jewish family. Many Jewish entrepreneurs followed, establishing commercial shops and business ventures both large and small.

Believing themselves members of a lost tribe, Mormon theology maintains a special affiliation with Judaism, and at the same time identifies Jews as "Gentiles," non-Mormons. By the 1860s, increasing numbers of Gentiles in the Territory posed a threat to Mormon autonomy. LDS Church leaders adopted a resolution pledging its members to be self-sustaining and to boycott Gentile-owned businesses.

Bitterness between Gentiles and Mormons reached such heights that non-Mormons feared for their livelihood and

Jewish communities in Utah. Population figures for 2001.

safety. Rental property stood vacant, merchants forced into bankruptcy fled the Territory; others relocated to the railroad town of Ogden and the all-Gentile tent city of Corrine. When the transcontinental railroad (1869) and subsequent mining enterprises precluded all possibilities of Mormon seclusion, sanctions were lifted. (By 1930, 100 Jewish-owned businesses lined the downtown streets of Salt Lake City.)

Utah's early Jewish population was comprised of mostly middle-class and educated German émigrés (1857–1874) and pious Eastern European Jews (1890–1920).

Early on, people worshipped in their homes. In 1866 on property loaned by Brigham Young, the newly-formed Hebrew Benevolent Society dedicated the first cemetery in the Intermountain West. In Salt Lake City, 1881, Reform German members incorporated Congregation B'nai Israel. In 1889, Russian and Polish Jews held Conservative services in the home of Nathan Rosenblatt and in 1904 built Congregation Montefiore. The short-lived (1915–1930) but lively Shaarey Tzedek offered Orthodox services. In Ogden, Congregation Brith Sholem (formed in 1890 and built 1916), remains the state's oldest, continuously operating synagogue. In 1972, the two Salt Lake synagogues merged into Congregation Kol Ami. In 1990, the Chabad Lubavitch synagogue, Bais Menachem, opened its doors; earlier the Chavurah B'Yachad offered Reconstructionist programs; and in 1995, Reform Temple Har Sholem was founded in Park City.

In Clarion, 300 immigrant Jewish farmers (1911–1916) created a new chapter in western history with the last major attempt of Jewish colonization on land in the United States. Jews have contributed much to Utah history, including Senator Simon Bamberger (1903–1907), who became the first Democrat, first non-Mormon, and only Jewish Utah governor in 1916; Salt Lake City mayor Louis Marcus (1932–1935); Tooele mayor Sol Selvin (1942–1946); Toquerville mayor, Dr. David Dolowitz (1980); and in 2005, Patrice Arent, the highest-ranking woman in the Utah legislature, and Representative David Litvack. Jews have also been involved in higher education representing major Utah universities, medical schools, and colleges.

In a state of 2,400,000 people, an estimated 4,500 Jews reside in Utah (2001), primarily in Salt Lake City, but also in Park City and Ogden.

[Eileen Hallet Stone (2nd ed.)]

UTENA (or **Utyana**; Rus. **Utsyany**; Heb. and Yid. **אוטיאן**), town in E. Lithuania. One of the earliest Jewish communities in Lithuania, Utena had a Jewish cemetery with tombstones from the 16th century. In 1765 there were 565 Jews in Utena and the communities under its jurisdiction; in 1847 they numbered 1,416, increasing to 2,405 (75% of the total population) in 1897. During the period of Lithuanian independence (1918–39) the town developed considerably and its Jewish population increased; in 1935 their number was estimated at 5,000 (about 33% of the population). The major source of livelihood was trade in flax, skins, and boar bristles. The community supported both a *Tarbut and a Yiddish school. The Germans arrived on June 25, 1941. On July 14 they removed the Jews from the town and during the month of August murdered most of them in the Rzhech forest. After the war the community was not reconstituted. There were about 50 Jews in the late 1960s, and no synagogue. In 1963 the Jewish cemetery was completely destroyed and its land earmarked for a building project. A monument has been erected for the Jews murdered by the Nazis.

UTICA, commercial and industrial center in the Mohawk Valley in central New York State; population (2002) 59,684, estimated Jewish population 1,100. Both the city and its Jewish population have declined from the 1970s; the decline of Jews has been proportionately greater. Utica was first settled in 1786. The first Jew to make it his home was probably Abraham Cohen, who brought his family there in 1847 from Poland, the homeland of nearly all of Utica's early Jewish settlers. In 1848 the first synagogue, Beth Israel, was established with 20 families and by 1871 there were at least 225 Jewish family heads. Waves of Russian and Polish immigrants in the years after 1870 increased the number of Jews to 2,517 by 1920. Most of the early Jewish settlers were peddlers, while many of the post-1870 immigrants started out as manual workers. The peddlers generally went into wholesaling or branched out into new enterprises, and after 1915 Jews began to enter the professions. Not many Utican Jews became wealthy, but among those who did, several attained national prominence, such as Miles Rosenberg, president of the Miles Shoe Store chain, and David Bernstein, vice president of the Loew's theater concern. From the 1930s on, Jews began to take an increasingly active interest in local civic organizations. Between 1904 and 1958, 22 Jews held political office, including state judge H. Myron Lewis.

Utica's Jews have generally followed traditional Judaism. Congregation House of Jacob, founded in 1870, brought to Utica its first ordained rabbi, Moses Reichler, in 1897. An attempt to establish a Reform temple in 1903 ended in failure but in 1919 Temple Beth El, a Conservative synagogue, was founded with Rabbi Reuben Kaufman as its head. During the first quarter of the 20th century Jews served their social needs through fraternal lodges, a YMHA and YWHA and a Workmen's Circle (1892). Local chapters of several organizations such as Hadassah (1917) and the Zionist Organization of America (1938) were formed and Jews contributed to World War I relief funds, the United Jewish Appeal and other charities. Through the initiative of Rabbi S. Joshua Kohn of Temple Beth El a Jewish Community Council was organized in 1933 to supervise and unify the many functions of the Jewish community. A Jewish Community Center was founded in 1955 and after 1949 the community's affairs were recorded in the *Jewish Community News*. In the early 21st century the

community still supported three synagogues Temple Beth El, Temple Emanu-El (Reform), and Congregation Zvi Jacob which is Orthodox.

UTITZ, EMIL (1883–1956), philosopher. Born in Prague, Utitz was professor at Halle and Prague. From 1942 to 1945 he was interned in the German concentration camp at Theresienstadt. His principal fields of interest were (1) aesthetics, in which he used a phenomenological analysis to assert the autonomy of art: art and aesthetics are related but not identical, the latter being a branch of the philosophy of culture; (2) characterology, i.e., the scientific study of the drives of the human personality in its manifold manifestations. Utitz edited the *Jahrbuch fuer Charakterologie* (6 vols.); and (3) the philosophy of man and the philosophy of culture: culture is explained as man's attempt to overcome his finite limitations, hence its universality.

Utitz sought to expound the problem of time; he also wrote on the psychology of the concentration camp at Theresienstadt and on "Germany between yesterday and tomorrow." As a young man Utitz dissociated himself from the Jewish community, but the influence of Nazism brought about his return.

His principal works are *Grundlegung der allgemeinen Kunstwissenschaft* (2 vols., 1914–20); *Der Kuenstler* (1925); *Geschichte der Aesthetik* (1932); *Psychologie der Simulation* (1918); *Charakterologie* (1925); *Kultur der Gegenwart* (1922); *Ueberwindung des Expressionismus* (1927); *Mensch und Kultur* (1933); *Sendung der Philosophie in unserer Zeit* (1935); "Erinnerungen an F. Brentano", in: *Wissenschaftliche Zeitschrift der Universitaet Halle* (4 no. 1, 1954); and *Egon Erwin Kisch, der klassische Journalist* (1956). As a young man Utitz published (c. 1904) a book of poems under the pseudonym Ernst Limé.

[Samuel Hugo Bergman]

UTKIN, JOSEPH PAVLOVICH (1903–1944), Soviet Russian poet. Born in Manchuria, Utkin was the son of an employee of the Russian-owned Chinese Eastern Railroad and was raised in Irkutsk, far from the main centers of Jewish life. Nevertheless, he succeeded in learning enough about Jewish customs and traditions, and acquired a sufficient knowledge of Yiddish, to produce the most important long Russian poem on a Jewish theme yet to appear in Soviet literature. His adolescence was far from idyllic. In a poem sarcastically titled "My Beloved Childhood" (*Miloye detstvo*, 1933), he recalled his bossy aunt who wanted him to devote himself "to God and commerce." Utkin's rebellion led him to the fringes of the underworld and eventually prompted him to join Siberia's Bolshevik guerrillas. His first poems were militant exhortations to greater efforts for a Communist victory. Utkin's most famous poem, highly praised by such writers as Maxim *Gorki and Vladimir Mayakovski, was written in his early twenties. It was *Povest o ryzhem Motele* ("The Tale of Motele the Redhead," 1925). This was unique in its use of a mixture of Russian and Yiddish. The poem's hero, a humble tailor from Kishinev, is a typical *shtetl*-dweller. The proletarian Motele shaves off his side curls and sheds his kaftan to become a commissar, but the reactionary Rabbi Isaiah pines after the good old days. Most of Kishinev's Jews, however, are simply confused, and complain in the synagogue about food shortages. They forget that the fleshpots of Egypt were paid for with suffering and humiliation, and that the bread of affliction is also the symbol of freedom and of future happiness. "The Tale of Motele the Redhead," an original and striking poem. is now also a wistful monument to the great expectations awakened among pauperized Russian Jews by the Bolshevik Revolution.

Despite Utkin's unquestionable allegiance to the Soviet cause, orthodox Soviet critics began in the late 1920s to attack him for what they considered the dangerously individualistic lyrical and sentimental character of his verse. He was urged to mend his ways and to write about themes such as industrialization and the collectivization of agriculture. After resisting these pressures for some years, he finally gave in and promised to reform. He was never, however, entirely accepted as a Stalinist poet in good standing and continued to be hounded by the critics until the outbreak of the Nazi-Soviet war in the summer of 1941. His book *Ya videl sam* ("I Saw," 1942) described the German invasion of the U.S.S.R. Utkin's first war poem was written the day after hostilities began, and he continued to write patriotic verse for army newspapers until the end of his life. Severely wounded in action, he dictated his poems in an army hospital, and though an invalid, returned to active duty. He died in a plane crash a few months before the end of the war.

There is reason to believe that Utkin wrote poems inspired by the Holocaust that were never published.

[Maurice Friedberg]

°**UVAROV, SERGEY SEMYONOVICH** (1786–1855), minister of education in Russia (1833–49), and president of the Academy of Sciences. In 1846 he was granted the title of count. Uvarov originated the political slogan *Pravoslaviye, Samoderzhaviye, Narodnost* ("Orthodoxy [i.e., of the Eastern Church], Autocracy, Nationhood"), a slogan which was accepted by the Russian "Slavophiles," who adopted it as the catchword of their program. As the minister of education, along with his other duties, Uvarov concerned himself with Jewish education, considering it part of the Jewish problem in general. In a memorandum to Czar *Nicholas I, he noted that many governments who had tried for generations to solve the Jewish problem through persecution and coercion had finally abandoned these methods for an approach based on wield-

ing influence by reason. He concluded that it was incumbent upon the Russian government to adopt the latter method, and stated that nations could not be exterminated, especially a nation which during its modern history "stood at Mount Golgotha." The Jews were to be "reformed" and through education brought closer to the general population. In order to achieve this, Uvarov proposed the establishment of a network of Jewish government schools at various levels, in the *Pale of Settlement, to be maintained by the special taxes paid by the Jews. In 1841 he invited Max *Lilienthal to act as adviser and director of the program. Uvarov and Lilienthal planned to invite 200 teachers from abroad to assist them in their endeavors and also called upon Jewish scholars and intellectuals abroad (including I.M. *Jost, L. *Philippson, A. *Geiger, I.N. *Mannheimer, S.D. *Luzzatto, and others) to come to Russia to participate in the fulfillment of the program. In 1842 a "Committee of Rabbis" (or "Committee for the Education of the Jews") was convened in order to give an official cachet to the project; its members were R. Mendel *Schneersohn of Lubavich, R. Isaac b. Ḥayyim *Volozhiner, Y.Y. Halperin, a banker of Berdichev, and Bezalel *Stern, the director of the Jewish school in Odessa.

In 1844 the bill providing for the establishment of Jewish government schools was ratified. With certain amendments which were made during the 1870s, it remained in force until the end of the czarist regime. Uvarov considered that the Talmud was the source of all evil, and a corrupting influence on the Jews, and he attempted to minimize this by reducing the hours given to its instruction. He did not entirely prohibit the study of the Talmud so as not to turn the Jews against his educational endeavors. Uvarov sought to gain the sympathy of Moses *Montefiore and I.A. *Cremieux, and although he invited them to attend the above conference they did not do so. In 1846 Montefiore visited Russia and met Uvarov. Uvarov was anxious to prove to Montefiore that he intended only to promote the welfare of the Jews and he complained to Montefiore about the religious fanaticism and ignorance of the Jews of Russia. Uvarov's attitude toward contemporary Hebrew literature was, however, favorable, and the *maskilim* in Russia welcomed his program.

UVILLER, HARRY (1897–1973), U.S. trade union leader. Born in Brooklyn, Uviller joined the women's garment industry in 1915 as part-time bookkeeper and salesman in the coat trade, at the same time attending the evening division of the New York University School of Law, but after graduation he chose to remain in the garment industry. He organized the coat contractors and became general manager of the American Coat and Suit Manufacturers Association. In 1936, with the support of Mayor Fiorello H. La *Guardia and the International Ladies Garment Workers Union, Uviller became impartial chairman of the industry; concurrently, he held the post of chairman of the New York State Mediation Board from 1955 to 1958. Under his leadership, there was no market-wide strike in the industry from 1936 to 1958. In the garment strike in the latter year, Uviller and Senator Herbert H. *Lehman acted as mediators. As chairman of the New York State Mediation Board, Uviller mediated hundreds of labor disputes, earning a reputation for integrity and fairness with both labor and management. In 1961 the Harry Uviller Chair in Economics was established in his honor at Brandeis University, and in the same year he served as chairman of the Greater New York Histadrut Council.

UZ (Heb. עוּץ). The identification of the land of Uz, Job's home, is rendered difficult by the fact that two distinct locations are called Uz in the Bible. In Genesis 10:23; 22:21; and I Chronicles 1:17 Uz is clearly associated with Aram. However, in Genesis 36:28 and I Chronicles 1:42 it is, though less clearly, associated with Edom, and in Lamentations 4:21, "the land of Uz" seems to be a designation for an extensive region of which Edom is a part, or else a generic designation of Edom. S.R. Driver and G.B. Gray solve this contradiction by suggesting that Uz is the name of widely scattered Arab tribes, but in Job it refers to Aram. N.H. Tur-Sinai suggests that Job (and perhaps a tribe called Uz) once lived in Edom and then moved to Aram, and all other occurrences in the Bible placing Uz in Edom derive from this tradition. P. Dhorme, on the basis of clear association between the names of Job's friends and southern localities, placed Uz in Edom. M.H. Pope concludes that, "It seems impossible to reconcile the conflicting evidences and opinions as to the exact location of Uz."

[Daniel Boyarin]

UZAL (Heb. אוּזָל), a geographic designation in the Bible, appearing in two different and seemingly unrelated contexts.

(1) In the Table of Nations, Uzal is a descendant of Shem and son of Joktan (Gen. 10:27; I Chron. 1:21), and probably refers to Sanʿa, the capital of Yemen, since the family of Joktan represents the inhabitants of Southern Arabia and Azal is the pre-Islamic name of Sanʿa.

(2) The Uzal mentioned in Ezekiel 27:19 was, apparently, one of the places which traded with Tyre, Although the meaning of the text is uncertain, in the light of the Septuagint reading of *yayin* (יַיִן, "wine") instead of *Javan (יָוָן), it seems to be dealing with a wine-producing region comparable to that of Helbon (near Damascus), mentioned in the preceding verse. Now, wine from Izalla is compared to wine from Helbon in a lexical text from Nineveh. Accordingly, the Uzal of Ezekiel 27:19 is probably to be identified with the Izalla of cuneiform sources, which was located near the Upper Tigris (Izalla Mountain of Byzantine historians).

[Irene Grumach]

UZAN, family of North African origin. SOLOMON (d. 1812) was *dayyan* in the town of Sousse, *Tunisia. His family settled in Tunis, where many of its members became distinguished lawyers and physicians. In 1886 MICHAEL (d. 1889) was appointed head of Tunisian Jewry and given the title of caʿid. His grandson, also named MICHAEL (1881–?), was a chemist and agronomist as well as a diplomat and a philanthropist. VICTOR (1863–?), scholar and linguist, translated the poetry of several French poets into Hebrew. In 1885, together with M. Castro, he established a press in Tunis which published literary works in Judeo-Arabic. His recommendations on the personal status and the matrimonial law of the Jews were accepted by the courts of appeal of France and Tunisia.

[David Corcos]

UZAN, AHARON (1924–), Israeli politician. Uzan was born in *Tunisia and immigrated to Israel in 1948. Although a goldsmith by profession, he became a farmer and building worker in moshav Gilat in the Negev, where he remained. He was manager of the Negev Purchasing Organization (1957–65), secretary of Tenu'at ha-Moshavim (the moshav movement), and president of the Negev Economic Club. He became recognized as Israel's expert on the future of the Negev.

He was elected a member of the Sixth Knesset in 1965 as a representative of the Labor Alignment and served as deputy minister of agriculture from 1965 to 1969. He was appointed minister of communications in the government of Golda Meir in March 1974 and minister of agriculture in June of the same year, remaining in that office until the elections of May 1977. He was the first cabinet minister to be appointed from the members of the mass immigration from North Africa after the establishment of the State.

In the 1981 Knesset elections he joined with Aharon Abuhazeira in forming Tami and served in the Knesset as one of its representatives. He also served as deputy minister of absorption and subsequently as welfare minister and absorption minister.

UZBEKISTAN, one of the independent CIS republics from 1990, formerly a U.S.S.R. republic in Soviet Central Asia.

The Jews in Uzbekistan were affiliated with two communities: (1) the ancient one, the Jews of *Bukhara, who speak a Tajik-Jewish dialect; (2) the new one, of Eastern European origin.

According to their tradition, the Bukharan Jews emigrated from *Persia at the time of the persecutions of King Peroz (458–485), while some consider themselves descendants of the exiles of Samaria, on the assumption that "Habor" (II Kings 17:6) is Bukhara. Anthropological examinations undertaken by L.V. Usbanin in 1926–29 proved that they originated in the Middle East, although there is no information on their exact non-Jewish origin. Precise information on the spiritual works of the Jews of Uzbekistan is, however, available only from the 14th century onward.

Jews of Uzbekistan emigrated to Khazaria and *China because of their location at the crossroads of the caravans that traveled there. The principal traffic between the Muslim world and Itil (*Atil), the capital of Khazaria, passed through northern Uzbekistan, and the information on "many Jews who came to the king of the Khazars from the towns of the Muslims" (the author al-Masʿūdī, of the tenth century) and the Jews who came "from Khurasan and strengthened the hands of the inhabitants of the country" (the anonymous "Cambridge Document") refers essentially to the Jews of Uzbekistan, which was considered an annexed territory of Iranian Eastern Khurasan.

There is a tradition concerning another wave of Jewish emigration from *Iran to Uzbekistan as a result of the Mongolian conquests of the 13th century, and the surnames of the Jews of Uzbekistan show that even during subsequent periods emigrants from Iranian-speaking communities of the west and the south were integrated among them. In modern times, however, the fanatical Muslim domination severely prejudiced the growth and economic development of the community. The Russian conquest of the 19th century came as a blessing, especially in those regions subjected to direct Russian rule, where the local Jews were granted complete judicial equality with the native Muslims and enjoyed rights which the Russian government withheld from the Jews of Eastern Europe (such as the freedom to acquire real estate). A migration from Bukhara to *Tashkent continued through several generations. The economic progress of these Jews was also reflected in their considerable contribution to the Jewish settlement of Ereẓ Israel. The Soviet regime, which liquidated private commerce, brought about the transfer of the more than 200,000 local Jews into administrative positions, industry and agriculture.

The Soviet regime did not bring about any considerable emigration of East European Jews to Uzbekistan because of linguistic difficulties and the warring gangs of Muslim insurgents (Basmachi) of the 1920s and 1930s. World War II, however, suddenly converted Uzbekistan into an important Jewish center. The Jews of the western and central European U.S.S.R. found refuge there, and Tashkent accommodated some of the Jewish institutions of Moscow. Many Jews who had been deported by the Soviet regime between 1939 and 1941 from the annexed eastern parts of Poland and the Baltic states to labor camps or exile in Siberia because of "bourgeois" class origin or political affiliations (Zionist or socialist) also migrated to Uzbekistan upon their release from the camps or places of exile. Some succeeded in continuing on to Palestine through *Persia, either as Polish soldiers in General Anders' army or as orphaned children (the so-called "Teheran children"). With the retreat of the German army from Eastern Europe, many of the refugees and evacuees returned to their places of origin,

but a considerable number of East European Ashkenazi Jews settled in Uzbekistan and became integrated into administration, industry and education there. A certain rapprochement between them and the local Jews resulted from the propagation of the Russian language within both communities and the feeling of the common Jewish fate, which was emphasized by the events of the war. The census of 1959 registered 94,344 Jews (1.2 percent of the total population) in Uzbekistan; 50,445 of them lived in the capital of the republic, Tashkent. Only 19,266 of them declared Tajik to be their native language; about 27,560 Yiddish; and the remainder Russian. The 1970 Soviet census showed 103,000 Jews in Uzbekistan.

[Abraham N. Poliak]

In Independent Uzbekistan

In 1979 Uzbekistan had 99,900 Jews and in 1989 94,900, including 51,400 in Tashkent. A large proportion of Jews in the republic were Central Asian (Bukharan) Jews who mainly lived in Samarkand, Tashkent, and Bukhara and spoke the Jewish dialect of Tajik. They preserved their identity more than the local Ashkenazi Jews.

Emigration in 1989 was recorded at 4,358 Jews (with 2,379 from Tashkent, 218 from Fergana province, and 772 from Samarkand province). Emigration to Israel in 1990 totaled 20,192, with 9,786 from Tashkent. Emigration rose from Fergana province and Andizhan in the wake of the violent ethnic conflicts there. After the pogrom against Jews and Armenians in Andizhan in May 1990, emigration from that province jumped to 2,202. In 1991, 13,515 Jews went from Uzbekistan to Israel, including 7,179 from Tashkent and 1,220 from Andizhan. In 1992, 5,533 immigrants to Israel from this country constituted 9.1 percent of the entire immigration wave from the former U.S.S.R., and in 1993, Uzbekistan, with its 8,471 emigrants to Israel, contributed 14.0% to the whole "Soviet" *aliyah* of that year. At the end of the process of emigration during the 1990s around 5,500 Jews remained in Uzbekistan, mostly in Tashkent. Tashkent had a Jewish culture center. The monthly newspaper *Shofar* in Russian and Tajik began appearing in Samarkand in 1992. Two Jews were elected to the Supreme Soviet of the republic in 1990.

An air route from Tashkent to Israel via Varna was inaugurated in June 1991. The Jewish Agency has been operating openly since January 1992. Diplomatic relations were established between Uzbekistan, independent since 1991, and Israel in 1992.

UZHGOROD (Czech **Užhorod**; Hung. **Ungvár**), city in Transcarpathian district, Ukraine; part of Austro-Hungary until 1920, when it passed to Czechoslovakia; between 1938 and 1945 in Hungary; 1945–1991, in the Soviet Union. The Jewish community of Uzhgorod, probably dating from the 16th century, developed at the end of the 18th century (after the partition of Poland) and expanded further in the second half of the 19th century. Some of the outstanding rabbis of Hungary served in Uzhgorod, notably R. Meir *Eisenstadter (MaHaRaM Esh; officiated until 1852) who had great spiritual influence on Uzhgorod and Hungarian Jewry in general; and Solomon *Ganzfried, author of the *Kiẓẓur Shulḥan Arukh*, who served as *dayyan* in 1866. In 1864 Karl Jaeger established a Hebrew printing press with types bought in Vienna. The first book printed was M. Eisenstadter's responsa *Imrei Esh* (part 2). Printing continued until 1878. In 1926 another press was set up by M.S. Gelles and continued to be active until World War II. About 70 items were printed in Uzhgorod. In 1868 the community split to found a separate *Neolog community, whose first rabbi was M. *Klein, translator of Maimonides' *Guide of the Perplexed* into Hungarian. Subsequently the Neologists joined the status *quo trend, whereupon many joined the mother community.

Uzhgorod was a stronghold of the Orthodox as well as of Ḥasidism. From 1890 a Jewish elementary school, whose language of instruction was first Hungarian and later Czech, functioned there. Subsequently Hebrew schools were established. The community also maintained a *talmud torah* school and a yeshivah. In 1904 a central synagogue was established in a magnificent building. There was also a Jewish hospital and home for the aged. Between the two world wars Uzhgorod became a center of intense Jewish national and Zionist (Revisionist) activities. In 1930 the community numbered 7,357, about one-third of the total population. Following the Munich pact (1938), Uzhgorod was annexed by Hungary, which immediately implemented anti-Jewish legislation. In the winter of 1939/40, all Jews of Polish citizenship or Czech citizens originally from Poland were expelled to Poland, and many died under the severe conditions. The young were conscripted into forced labor and sent to the Russian front, never to return. On Passover (April 21–23) 1944, all the Jews of Uzhgorod and the surroundings (25,000 persons) were concentrated in a ghetto located outside the city (in a brick factory and a lumber yard), and three weeks later all were deported to *Auschwitz.

Following the war several hundred survivors returned to city, most of whom later went to Czechoslovakia.

By 2005, the Jewish community had a synagogue, a Jewish community center, a Jewish day school, and a magazine entitled *Gut Shabbos*, which covers Jewish activities in the region of the Carpathian Mountains. The Uzhgorod Jewish community oversees the nearby Jewish communities of Munkatch, Chust, Vinogradova, and Rachov.

[*Encyclopaedia Hebraica* / Ruth Beloff (2nd ed.)]

UZIEL (**Uzziel**), family of prominent Spanish exiles whose members were to be found in Salonika, Safed, Italy, and Fez. JOSEPH UZIEL BEN ABRAHAM (d. c. 1520) arrived in Fez immediately after the Expulsion. He was a disciple of R. Samuel Valenci and had many disciples in Spain. In a dispute over ritual with the old settlers in Fez, he supported the opinion of his disciple R. Ḥayyim *Gagin. JUDAH UZIEL (d. c. 1542), a leading *ḥakham* of his time, took an active part in the aforementioned controversy, together with his colleague Naḥman ibn Sunbal. He signed decisions and *takkanot* between 1526 and 1542 and wrote commentaries on the Bible. Abraham *Gavison (in *Omer ha-Shikhḥah*) and R. Vidal ha-Sarfati (in *Ẓuf Devash*) quote some of his commentaries, sermons, prayers, and *piyyutim*. R. ABRAHAM UZIEL (d. c. 1570) was a poet and pietist. His disciples included R. Vidal ha-Sarfati. A signatory to the *takkanot* of 1545, he engaged in halakhic discussions with Algerian *ḥakhamim* and is mentioned with esteem in the responsa of R. Solomon Duran (*Tashbeẓ*, pt. 4 (1959), ch. 41). He exchanged poems with the abovementioned R. Abraham Gavison. His son was Isaac *Uziel.

R. JUDAH UZIEL BEN SAMUEL (grandson of Judah; d. c. 1600) signed decisions and *takkanot* between 1584 and 1591. He wrote *Beit ha-Uzi'eli* ("House of Uziel," Venice, 1604), commentaries on the Bible and on Rashi's commentary to the Torah. He left two sons, R. SOLOMON (c. 1550–1610) and R. JOSEPH (c. 1555–1625), both of whom were rabbis in Fez. R. ḤAYYIM UZIEL (c. 1575–1646), who was possibly his third son, was a rabbi and *dayyan* in Fez. He signed decisions in 1626 and 1645. His synagogue was destroyed during the uproar caused in Fez by the chief of the Muslim brotherhood at Dila, in 1646. He died a few days later. R. JUDAH UZIEL (1620–1689), the son of R. Joseph, was rabbi and *dayyan* in Fez. A member of R. Saadiah ibn Dannan's *bet din*, he became the chief rabbi of Fez after the former's death in 1680. He was versed in Torah and in Kabbalah, and propagated Torah learning among the masses. R. Jacob b. Ẓur was his son-in-law. A number of his decisions were published in the works of Moroccan *ḥakhamim*. R. DAVID UZIEL BEN R. ḤAYYIM (c. 1626–1700) was rabbi in Fez and scribe of the *bet din*. He served under R. Judah Uziel (his uncle?) and R. Menahem Serero. His relative, R. Jacob b. Ẓur, said of him: "the great scribe of Israel … my teachers always relied on the traditions which he handed down from the earliest *ḥakhamim* in matters concerning *takkanot* and customs."

[Haim Bentov]

UZIEL, BARUCH (1900–1977), educator, lawyer, folklorist, and politician. Born and educated in Salonika, Uziel helped to found the youth organization "Maḥzikei Ivrit" whose goal was to spread the Hebrew language in the spirit of the *Haskalah. In his home, he published the first Hebrew newspaper in Salonika, *Ha-Teḥiyyah*. Sent to Palestine in 1913 to study teaching, he was caught there by World War I and as a Greek citizen was exiled in 1917 to Syria by the Turkish authorities. After the British conquered Palestine, he returned to continue his studies and remained in the country. He was among the organizers of the Sephardi faction in the *Va'ad Le'ummi. He taught in various places and also graduated in law and became involved in politics.

Uziel always maintained a close connection with Salonika and in the 1920s, helped the *aliyah* of Salonikan fishermen to Acre and later organized the immigration of Salonikan stevedores to Haifa port. He also helped to lay the foundations for research into Sephardi folklore, in particular from Salonika. He wrote stories about Judeo-Spanish life in Salonika, eventually published in *Be-sha'arei Saloniki, Novelot* (*1973*).

He initiated the founding of the "Haifa-Saloniki" committee, which eventually received the name Va'adat ha-Yam ("the sea committee"). This committee together with the Va'ad le-ma'an Haifa ("the committee for Haifa") organized and brought 300 Jewish Salonikan seamen and their families to Haifa. As secretary of Va'ad ha-Yam he coordinated their immigration and absorption and served as a liaison between the committee and the relevant bodies in Greece and Ereẓ Israel.

In 1931 he was elected a member of the executive of Maccabi in Palestine and was in charge of the department of culture and propaganda. He served as president of the Association of Greek Immigrants and after World War II went to Greece in order to release property confiscated by the Nazis in the Holocaust.

In 1959 he wrote *Berit ha-Periferiyyah-Haẓa'ah le-Mediniyyut Yisraelit* proposing non-Arabic people of the Middle East ally with Israel to curb Arab imperialism.

Active in the General Zionist party, he was elected to the Fifth Knesset in 1961 and was head of the Knesset Education Committee. He was re-elected to the Sixth Knesset.

Uziel was the chief editor of *Guinzaḥ Saloniki* (1961) and edited the Salonika commemorative memorial book *Saloniki lr va-Em be-Yisrael* (1967).

[Yitzhak Kerem]

UZIEL, ISAAC BEN ABRAHAM (d. 1622), rabbi and poet. Isaac was the son of Abraham Uziel, a rabbi of Fez where Isaac was born. In consequence of the famine in Morocco during 1604–05, he left Fez and settled in Oran, Algeria, where he served as rabbi. From there he went in 1606 to Amsterdam where he became a teacher in the community's *bet ha-midrash* and also engaged in business. In 1610 when Judah Vega, the first rabbi of the Neveh Shalom congregation, retired, Isaac was invited to succeed him. He was a very strong personality, and in his sermons inveighed against those who were lax in their observance and against the Marranos who had not completely abandoned Christian views. As a result many of the Marranos left his community and in 1618 established a separate congregation. Among his pupils were *Manasseh Ben Israel and Isaac Athias.

He wrote a large number of poems which have real literary value, but only a few were published, some of them in the festival prayer books of North Africa. Uziel also studied grammar, writing *Ma'aneh Lashon* (Amsterdam, 1627) on this subject. He translated from Spanish into Hebrew legends and fables of Indian origin well known throughout the world that were called in Latin *Historia Septem Sapientium* and in Hebrew *Mishlei Erasto.* These were first published in serial form by Abraham *Elmaleh in the periodical, *Mizraḥ u-Ma'arav.* Uziel appears to have been one of the Amsterdam rabbis who excommunicated Uriel da *Costa. As a result of his conservative extremism and excessively stern persecution of his opponents, relations between him and Leone *Modena became strained.

[Abraham David]

UZZA AND AZA'EL, heroes of a medieval tale based on the biblical story of the Nephilim (cf. Gen. 6:4), which was developed in the second century B.C.E. in the Book of *Enoch.

According to the medieval story, Uzza and Aza'el were two angels who set out to prove man's wickedness before God, and they sinned with mortal women. One girl, Istehar, succeeded in escaping by compelling them to reveal to her the sacred name which they invoked when they went up to heaven; and she used it and became a star. The two sons of Uzza and Aza'el, Ḥiwwa and Ḥiyya, died in the Flood; Uzza and Aza'el themselves were exiled by God but they are still alive, and are responsible for some of the evils of this world: they teach sorcery, and they show women how to make themselves beautiful to men.

The legend, which is part of the general revival of Second Temple period literature in medieval Hebrew prose, was adapted by the Kabbalah; the Zohar gives a long account of it, introducing in addition a number of special kabbalistic meanings. Some manuscripts of magic, the *Havdalah de-Rabbi Akiva* for example, use the names of the two angels in magical formulae.

[Joseph Dan]

UZZAH (Heb. עֻזָּה, עֻזָּא), the son of Abinadab (in, II Sam. 6:3; cf. I Chron. 13:7). When David brought up the Ark of the Lord from the house of Abinadab on the hill in Baalah (II Sam. 6:2) or Kiriath-Jearim (I Sam. 7:1; I Chron. 13:5–6), Uzzah and Ahio, the two sons of Abinadab, drove the cart upon which the Ark was borne. When they reached the threshing floor of Nacon (II Chron. 13:9, Chidon), the oxen stumbled, and Uzzah put out his hand to steady the Ark, whereupon he died. Apparently, he had violated the sacrosanct nature of the Ark. Because of this incident the place was called "Perez-Uzzah," meaning, "the breach of Uzzah." David diverted the Ark to the house of *Obed-Edom the Gittite (II Sam. 6:3–10; I Chron. 13:5–13), and did not venture to bring it into Jerusalem until three months later. According to Josephus (Ant., 6:18; 7:79), Abinadab and his sons were levites.

UZZIAH (Heb. עֻזִּיָּה), also called Azariah (Heb. עֲזַרְיָה, עֲזַרְיָהוּ), king of Judah; succeeded his father *Amaziah (II Kings 14:21–22; II Chron. 26). The name Uzziah derives from the stem עזז, whose meaning in Hebrew is similar to that of עזר, "to assist." He reigned over Judah for 52 years (c. 785–734 B.C.E.). When his father Amaziah was murdered by conspirators in Lachish, "all the people of Judah" (II Kings 14:21; II Chron. 26:1) chose Uzziah, who was then only 16 years old (II Kings 14:21–22), for their king. There is very little information on the reign of Uzziah in II Kings 15. Apart from phrases which occur in connection with every other king, there is only one additional fact – the "leprosy" (probably psoriasis, rather than true leprosy, Hansen's disease) which struck Uzziah, and his residence in "a house set apart," while his son *Jotham was appointed "over the household judging the people of the land." On the other hand, there is much information on the reign of Uzziah in II Chronicles, and the subject of his "leprosy" is enlarged upon. According to II Chronicles 26:16–21, Uzziah was struck with "leprosy" after he had entered the Temple of God and tried to burn incense on the altar without heeding the words of the priests who declared that the offering of incense on the altar of God was a prerogative of the priests.

Josephus (Ant., 9:223ff.) mentions a more detailed tradition concerning this "leprosy." According to this tradition, on an important festival day, the king put on the priestly garment and in spite of the priests' opposition, he attempted to bring the offering on the golden altar. While he was preparing to do so, the earth trembled, the Temple was split, and a ray of sun shone on the face of the king who was immediately struck with "leprosy." Uzziah's "leprosy," his attempt to offer incense on the altar, and the earthquake which occurred in Jerusalem during his reign (also recorded from additional sources) may be accepted as historical facts. An Aramaic burial inscription of the Second Temple period found on the Mount of Olives reads in Albright's translation: "Hither were brought the bones of Uzziah, king of Judah – do not open." This inscription proves that the bones of Uzziah were removed from their first grave. According to halakhic tradition, it was forbidden to move the graves of the House of David. It has thus been concluded that Uzziah was not buried in the graves of the House of David but "in the field of burial which belonged to the kings; for they said he is a leper" (II Chron. 26:23). Various biblical passages also testify that the kings of Israel and Judah carried out various ritual acts (I Sam. 13:9–10; II Sam. 6:14; 8:18; I Kings 3:15; Ps. 110:4) similar to those of the priests. The attempt of the priests to prevent Uzziah from offering the incense points to the struggle between the monarchy and the

priesthood for supremacy over the ritual of the Temple. It is quite probable that emboldened by his successes in his external and internal policies and his reliance on the merits of his ancestors, the king sought to demonstrate his authority in the Temple by offering the incense (II Chron. 26:16). Reports of the earthquake mentioned by Josephus (*ibid.*) are also to be found in Amos (1:1) and Zechariah (14:4–5). Thus, some believe that the data in the biblical tradition and in Josephus concerning the "leprosy" of Uzziah are historical, but that the connection between them is tendentious and folkloristic and not really historical. The story related in Chronicles and Josephus is based on a popular tradition around the rare phenomenon of the king's "leprosy."

The reign of Uzziah is described in historical sources, especially in Chronicles, as one of the golden eras of the kingdom of Judah. Uzziah appears as a firm and active king in both his interior and exterior policies. He pursued the policy of his father Amaziah for supremacy over the southern part of the land up to Elath, situated on the Red Sea coast. He returned Elath to Judah (II Kings 14:22) and built a line of fortifications and towers in the Arabah and the Negev in order to safeguard the transit routes from Jerusalem to Elath. The archaeological excavations of Tell al-Khalayfa (near Akaba) brought to light the renewed settlement of the locality (third stratum) in the days of Uzziah and his son Jotham, although opinions among archaeologists differ as to whether Tell al-Khalayfa is to be identified with Ezion-Geber and whether the findings are the installations of metallurgic works. At the same time, the fortresses and towers built by Uzziah in the Arabah and Negev served to protect the herds of cattle, the shepherds, the pasture lands, and the water sources from nomadic tribes, such as the Meunites and the Arabians (II Chron. 26:7). He also took measures for the economic development of the arid regions in the mountains, the lowlands, and the desert. In the west he fought against the towns of Philistia (Gath, Jabneh, and Ashdod) and expanded his territory at the Philistines' expense (26:6). Uzziah's objective was to break through to the west and secure a section of the "Via Maris." He also expanded eastward to the eastern bank of the Jordan and subjugated the Ammonites (26:8, but in LXX – Meunim). His successes in his foreign policies were preceded by an intensive strengthening of the economic and military power of the country. He fortified Jerusalem (26:9), reorganized the army (26:11–12), increased the number of soldiers, and prepared a great amount of weapons (26:13). The biblical author sums up the activities of Uzziah with the words: "his name spread abroad even to the entrance of Egypt; for he waxed exceedingly strong" (26:8). He may also have recovered from lsrael territory north of Jerusalem which had been lost by Amaziah.

Because of a faulty join of cuneiform tablets it was thought that "Azriyau māt Iaudaya" was mentioned in the annals of Tiglath-Pileser III (1:103–133). This led to some scholars identifying him with Uzziah, king of Judah. At present the Azriyau of the cuneiform text remains without a country. Na'aman has assigned the relevant tablets to Sennacherib. It is quite possible that Uzziah's status was equal to that of *Jeroboam son of Joash, about whom it is distinctly said that he subjugated Damascus and Hamath (II Kings 14:28). The expansion of Assyria marked the beginning of the decline of the kingdom of Judah, which reached its lowest ebb during the reign of Uzziah's grandson *Ahaz, when the armies of Damascus and Samaria invaded Judah and besieged Jerusalem, impelling Ahaz to become an Assyrian vassal. Even so, Judah was not directly harmed by Assyria during Uzziah's reign. The number of years during which Jotham reigned together with his father is one of the most difficult problems in biblical chronology. According to some opinions, the 52 years mentioned as being those of Uzziah's reign include the years during which he reigned together with his father, all the years of Jotham's reign, and even some of the years of the reign of Ahaz, son of Jotham.

Initial letter "V" for the word Verbum *at the beginning of the Book of Zephaniah in a 13th-century Latin Bible from France. The letter is formed by two figures wearing medieval Jewish hats, and wielding clubs against snakes, which represent the enemies of Judah. Boulogne, Bibliothèque Municipale, Ms. 21, fol. 239v.*

VA-VY

VAAD HA-HATZALAH, a body originally established to rescue rabbis and yeshivah students during World War II. Though originally focusing exclusively on rabbis and yeshivah students, it expanded its agenda to assist all Jews in the wake of the revelation of the Final Solution and became the representative relief agency of American Orthodox Jewry.

Established in mid-November 1939 by an emergency meeting of the *Union of Orthodox Rabbis of the United States and Canada, then the largest and most important association of Orthodox rabbis in North America, the Vaad was initially founded to rescue the Polish rabbis and yeshivah students who had escaped to Lithuania following the German and Soviet invasions of September 1939, including the *rashei yeshivah* and students of leading talmudic academies such as Mir, Kletsk, Radin, Kamenets, and Baranowitz. Initially dubbed the "Emergency Committee for War-Torn Yeshivos," its leadership, headed by Rabbi Eliezer *Silver of Cincinnati, originally envisioned the relocation of the refugee yeshivot to safe havens, preferably in Palestine or the United States, as its main goal, but found itself increasingly preoccupied with maintenance as emigration from Lithuania proved extremely difficult.

As the number of refugee Polish rabbis and students in Lithuania increased and the financial burden of supporting them grew, the Vaad, which upon its foundation declared that it would seek support exclusively from Orthodox sources, sought to expand its fundraising efforts to the entire American Jewish community. This development led to serious tension between the Vaad and the *American Jewish Joint Distribution Committee (and the Council of Jewish Federations and Welfare Funds) which bore communal responsibility for administering overseas relief to Jews in distress and had joined in creating the United Jewish Appeal in January 1939 to unify American Jewish fundraising for the first time ever. While ostensibly based on practical considerations affecting fundraising, the debates between the Vaad and the JDC and CJFWF also related to two extremely serious issues: rescue priority; i.e., who should be rescued first, and the attitude toward increasingly stringent U.S. regulations, which hampered rescue and relief efforts. While the leaders of the Vaad sought absolute priority for rabbis and yeshivah students, the JDC saw things differently. While the Vaad actively sought means of circumventing the spirit, and in some cases even the letter, of American regulations, which might adversely affect rescue and relief

initiatives, the JDC leadership refused to approve the slightest deviation from U.S. directives.

During the initial year and a half of its existence, the Vaad concentrated its efforts on assisting the over 2,600 Polish rabbis and yeshivah students who had escaped to Lithuania and trying to arrange their emigration overseas. (When the Soviet Union occupied Lithuania in June 1940, the Vaad also sought to facilitate the emigration of Lithuanian Torah scholars, yet in most cases they were barred from leaving by the Soviet authorities.) In the summer of 1940, for example, they sought to enlist communal support for the mass transfer of all the refugee scholars to the United States, but encountered stiff opposition from Rabbi Stephen *Wise and most of the American Jewish leaders and organizations. Ultimately, the Vaad helped obtain American visas for several leading *rashei yeshivah* and the members of their families in the framework of a special program to rescue the scientific and cultural elite of Europe.

When a possibility for large-scale emigration from Soviet Lithuania developed in the fall of 1940 based on visas to Curaçao and Japanese transit visas, the Vaad helped fund the rail and ship tickets for numerous Torah scholars, but the bulk of the funds for the project were provided by the Joint Distribution Committee. All told, of the approximately 2,300 Polish refugees who emigrated from Lithuania to the Far East from October 1940 until the German invasion in June 1941, some 650 were rabbis and yeshivah students; many of whom were assisted by the Vaad; among the refugees were such leading *rashei yeshivah* as Rabbi Aaron *Kotler of Kletsk, Reuben Grazowsky of Kamenets, and Abraham Yaphin of Bialystok and communal rabbis such as David Lifshitz of Suwalk and Moses Shatzkes of Lomza, all of whom reached the United States in 1941. Together with Rabbi Abraham Kalmanowitz of Tiktin, who had arrived in America a year earlier, several of these rabbis and especially Rabbi Kotler, were to play leading roles in the activities of the Vaad. The bulk of the refugee scholars who reached the Far East, however, were sent by the Japanese to *Shanghai, where – with the exception of 29 who immigrated to Canada in the fall of 1941 with visas obtained with the help of the Vaad – they remained for the duration of the war.

Following the American entry into World War II, the Vaad concentrated primarily on providing assistance to the refugee Torah scholars in Shanghai as well as to the group of several hundred rabbis and yeshivah students in Soviet Central Asia. Many of the latter were among the thousands of Polish citizens deported by the Soviets to Siberia or to prison camps prior to the German invasion, who were released in the wake of the Sikorski-Stalin Pact of August 1941. The Vaad provided funds for both groups and sent parcels of food and clothing to the latter, enabling them to maintain their unique life-style and continue their Torah studies despite the difficult physical conditions in both places.

Following the receipt by the Vaad of news from Switzerland concerning the scope of the mass murder of European Jewry, the rabbinic rescue organization began to play a more active role in political activities designed to facilitate the rescue of Jews from German-occupied Europe. Joining forces with the leaders of American Agudat Israel, the Orthodox activists tried to promote efforts to unite American Jewry and to make rescue the community's number one priority. Rabbi Israel Rosenberg, one of the key figures in the Vaad, was among the Jewish leaders who met with President Roosevelt on December 8, 1942, to urge him to take action to save European Jewry, and the Vaad's leadership initially participated in the attempts to establish the American Jewish Conference as a representative umbrella organization for American Jewry.

The highlight of these activities was the protest march of some 400 rabbis in Washington on October 6, 1943, the only public demonstration by Jewish leaders in the American capital during the war. The march was organized together with the "Emergency Committee for the Rescue of the Jewish People of Europe," a group headed by revisionist Zionists, which led the efforts to convince the American government to establish a special rescue agency, which ultimately led to the creation of the *War Refugee Board.

In early January 1944, the Vaad officially decided that henceforth it would attempt to rescue all Jews regardless of religiosity and/or affiliation. This decision was a product of two major developments – the dissolution of the Joint Emergency Council on European Jewish Affairs and the creation by the Vaad of practical means to transfer funds to rescue activists, headed by Rabbi Michael Dov *Weissmandl, in German-occupied Europe. The former had been the only framework which included representatives of all the major Jewish organizations and could have coordinated unified political action to promote practical rescue initiatives. The creation of the latter meant that for the first time ever, the Vaad could actively support rescue activities inside German-occupied Europe. From this point on, the Vaad channeled most of its resources to assist the Jews living under German rule, initiating several rescue projects primarily through its Swiss branch (the HIJEFS relief agency headed by Recha and Isaac Sternbuch), but also via its representatives in Turkey (Jacob Griffel), Tangiers (Renee Reichman), and Sweden (Wilhelm Wolbe). The culmination of these efforts was the release to Switzerland on the night of February 6–7, 1945, of a train with 1,210 inmates from the Theresienstadt ghetto/concentration camp, a product of negotiations conducted by Swiss politician Jean-Marie Musy on the Vaad's behalf with top Nazi leaders. During the same period, the Vaad continued to send considerable sums of money to the refugee scholars in Shanghai and Central Asia, which allowed these Torah scholars, who simultaneously received aid from other Jewish organizations, to continue their studies and maintain their life-style.

After World War II, the Vaad played an active role in the spiritual rehabilitation of the survivors, continuing its operations until the early 1950s. From its establishment in 1939 until the end of 1945, the Vaad spent more than three million dollars on relief and rescue activities and in the process helped

"Americanize" the American Orthodox leadership. While its insistence on according rescue efforts top priority and circumventing bureaucratic and legal obstacles has been favorably acknowledged by historians, its particularism and insistence on priority for Torah learning at the possible expense of rescue activities continue to be a source of debate and polemic in the Jewish community.

[Efraim Zuroff (2nd ed.)]

VA'AD HA-PEKIDIM VE-HA-AMARKALIM, an organization established in 1810 for the support of the *yishuv* in Ereẓ Israel. Until the 18th century, the majority of the Jewish community in Ereẓ Israel were Sephardim, who were supported by the *Va'ad Pekidei Ereẓ Israel be-Kushta. Toward the end of the 18th century and at the beginning of the 19th century, however, the Ashkenazi community grew in number and with it the contributions toward their upkeep from European countries. With the decline of the Turkish empire, the support coming from there diminished and the burden of the economic support of the Jewish community fell upon the communities of Europe, with Amsterdam becoming the center for the collection of the necessary funds. An additional factor was the growing interest of the European powers in Ereẓ Israel. The Va'ad was established by Western European Orthodox Jews for clearly defined ideological purposes. On the one hand there was the idea that the *yishuv* in Ereẓ Israel had to be supported by its brethren in Europe so that the former could study and pray for them, and on the other was the Va'ad's part in the struggle against *Haskalah and *Reform Judaism, which were spreading in Western Europe. It was based on the idea of the importance of the *yishuv* and the need to guard it against the spread of religious Reform.

The most prominent heads of the Va'ad were its founders, the *Lehren brothers, who headed it during the major part of the 19th century. They received authorization for their activities from the communities in Ereẓ Israel and from the Va'ad Pekidei Ereẓ Israel be-Kushta. Although their main activity was in Western and Central Europe, their influence spread to Eastern Europe. Among their activities was the incessant struggle to abolish the system of *shadarim* (emissaries) from the various communities in Ereẓ Israel and to concentrate the collection of funds in their own hands by improving the methods of collection. This concentration of funds gave them enormous influence. They intervened in the disputes between Sephardim and Ashkenazim as to the allocations of the **ḥalukkah*, establishing a key which changed every few years as a result of pressure by the various groups. Belonging as they did to the extreme Orthodox circles, they exercised their influence in this direction. They opposed every proposed innovation in the economic, social, or religious life of Ereẓ Israel, regarding it as the last stronghold of Judaism against the inroads of Haskalah and Reform, which might pose a threat to their powers. They even intervened in such matters as the appointment of the **ḥakham bashi* and came out in support of the Sephardim in their struggle to prevent the Moroccan Jews from establishing an independent communtity. Their main struggle, however, was against attempts to establish schools, hospitals, and new suburbs in Jerusalem. In their opposition to the establishment of a modern educational system, they clashed with Sir Moses *Montefiore and the enlightened Jews of Germany and Austria, and this struggle reached its peak with their campaign against the establishment of the Laemel school of Ludwig August *Frankl. Their opposition to the founding of the first hospitals was based on the fact that the initiative came from Reform circles in Germany, and they fought tenaciously against all attempts by enlightened Orthodox circles to abolish the *ḥalukkah* system.

These struggles must therefore be viewed in the perspective of what was happening in Jewish society in Europe during the 19th century. The special interest of the European powers in Ereẓ Israel, the establishment of consulates and the capitulations, the pluralism of the communities and *kolelim*, the penetration of new factors into the *yishuv* and finally the Zionist settlement all combined to bring about the weakening of the Va'ad's influence in Amsterdam, the Lehren brothers' deposition from the dominant position they maintained in Jerusalem, and the demise of the ideology of the *ḥalukkah*.

[Jacob Barnai]

VA'AD LE'UMMI (Heb. lit.: "National Committee"), the National Council of Jews of Palestine, which functioned from Oct. 10, 1920, until the establishment of the Provisional Government of the State of Israel in May 1948 as the executive organ of the Asefat ha-Nivḥarim (the Elected Assembly) of the *yishuv*. It was preceded by a "provisional committee" (Va'ad Zemanni), established at a conference of representatives of various bodies in the *yishuv*, including soldiers of the *Jewish Legion, in 1918, at the time when only southern Palestine was occupied by the British army. Though elected in 1920 by the first Asefat ha-Nivḥarim and recognized immediately as a representative body in a letter from the *high commissioner, Sir Herbert Samuel, the Va'ad Le'ummi achieved formal legal status only on Jan. 1, 1928, when *Keneset Yisrael, the organizational framework of the *yishuv*, was legally established under the Religious Communities Organization Ordinance, 1926.

The Va'ad Le'ummi elected a smaller body to conduct its day-to-day business and was headed by a chairman, or sometimes by a president assisted by a chairman. It cooperated closely with the Zionist or *Jewish Agency Executive, which was responsible for major policy on immigration, settlement, economic development, legal defense, etc. The Va'ad Le'ummi represented the *yishuv* in its relations with the Mandatory government and the Arab leaders and dealt with internal matters (such as the school system) which were delegated to it by the

Zionist Executive. It also cooperated closely with the Chief Rabbinate and the local community councils, which were part of the official framework of Keneset Yisrael. The Va'ad Le'ummi served as the main organ of the Jews of Palestine before the *League of Nations Permanent Mandates Commission and the numerous inquiry commissions into the "Palestine problem," up to the United Nations Special Committee on Palestine (*UNSCOP), which proposed partition in 1947.

Not all sections of the Jewish population in Palestine were represented in the governing bodies of Keneset Yisrael and, consequently, in the Va'ad Le'ummi. *Agudat Israel and the ultra-Orthodox circles of the old *yishuv* boycotted it, and from 1944 the Sephardi list, the *Revisionists, the *General Zionists, and the Farmers Union were not represented, because of their boycott of the elections to the fourth Asefat ha-Nivḥarim when their demands for a reform of the electoral system were rejected.

The Va'ad Le'ummi was headed from 1920 to 1925 by a presidium consisting of I. *Ben-Zvi, J. *Thon, and D. *Yellin; from 1925 by Yellin as chairman and Ben-Zvi and Thon as deputy chairmen; between 1929 and 1940 P. *Rutenberg twice served as president and Ben-Zvi served as chairman; from 1940 to 1944 by Ben-Zvi as chairman; and from 1944 to 1948 by Ben-Zvi as president and D. *Remez as chairman.

VA'AD PEKIDEI EREẒ ISRAEL BE-KUSHTA ("The Council of Representatives of the Land of Israel in Constantinople"), a body established to organize assistance for the Jewish community of Ereẓ Israel. It flourished in the 18th century, but continued to exist until the beginning of the 19th century.

The first stage in the organization of this body involved the need to assist the followers of Judah Ḥasid, the Shabbatean preacher who had died in Jerusalem in 1700 a few days after arriving there. His followers were disheartened by this tragedy, immersed in heavy debts, and suffering from the oppression of their creditors and from deaths through plague. Both the Jews of Constantinople and the communities of Europe took steps to assist them by intervening with the authorities and collecting funds. This effort was unsuccessful, however, and when the Ashkenazi synagogue in Jerusalem was set on fire by Muslim creditors in 1720, the group dispersed. The dominant Sephardi community also suffered in consequence, and many had to leave the capital and go into hiding. As a result, the Va'ad Pekidei Ereẓ Israel be-Kushta was reorganized during this decade with the aim of reconstituting the community. When they obtained a *firman* permitting the Ashkenazim to make good their debts by annual payments, the Sephardim returned, but the Ashkenazim were still fearful, and only a handful returned (their leader in the middle of the 18th century was *Abraham Gershon of Kutow, a brother-in-law of Israel Ba'al Shem Tov). The *Pekidim* reorganized the community, appointing representatives in Jerusalem and drawing up enactments with regard to taxation and expenditure. In 1727 the Va'ad Pekidei Ereẓ Israel became a permanent, well-organized body. They demanded that their representatives provide detailed reports of income and expenditure and organized regular contributions from the whole Jewish world, fixing the amounts which each community had to pay and renewing them every ten years. A special fund was also instituted called "Parah contribution" (the *parah* was a Turkish coin). Special collectors were appointed throughout the Ottoman Empire and in Europe, and the considerable proceeds were transmitted to Constantinople. Funds thus collected were applied mostly to repayment of debts and to taxes and bribery: the poor benefited only to a small extent, but the monies sent to them by relatives abroad were also administered by the *Pekidim*. The *Pekidim* reserved to themselves the sole right of appointing emissaries to the Diaspora. They established useful connections with the authorities in Constantinople, Damascus, and Jerusalem, bribing them heavily.

In a short time, sub-committees were established for each of the four "Holy Cities" of Ereẓ Israel – Jerusalem, Hebron, Safed, and Tiberias – of which the most important was Jerusalem, where there were seven *Pekidim*. As a result, during the 1730s the Jewish population of Jerusalem increased rapidly, and in the 1740s rose to some 3,000. The *Pekidim*, apprehensive of the economic and political effects of this rapid growth, enacted a *takkanah* allowing only immigrants above the age of 60 to settle in Jerusalem.

These activities made the *Pekidim* absolute rulers of the Jewish communities of Ereẓ Israel, particularly Jerusalem, which became to all intents a branch of the community of Constantinople, losing every vestige of autonomy. They appointed officials, intervened in the appointment of rabbis (sometimes even appointing the chief rabbi), and all enactments were subject to their approval. The *Pekidim* even organized pilgrimages to Ereẓ Israel by ship, imposed taxes on the pilgrims, and established yeshivot. They intervened in all the disputes between Sephardim and Ashkenazim over the question of distributing funds coming from Europe.

Their dictatorial attitude toward the communities in Ereẓ Israel could not extend to other Jewish communities, apart from Turkey and the Balkan states, and disputes arose with regard to the distribution of funds emanating from them, with the *Pekidim* more than once threatening to resign. They nevertheless maintained strong ties with leading European rabbis, such as R. Ezekiel Landau of Prague, who was the "representative of Ereẓ Israel" there.

The weakening of the Ottoman Empire and the decline of the community of Constantinople, the war between Turkey and Russia, and the growing *aliyah* of Ashkenazim brought about a decline in the importance of the institution toward the end of the 18th century. By the 19th century, it was virtually moribund, its place being taken by the "Va'ad Pekidim ve-Amarkalim" of *Amsterdam.

VAC (Hung. **Vác**; Ger. **Waitzen**), city in N. central Hungary. A Jewish community was organized in Vac after the publication of the law on free residence (1841). A permanent synagogue was erected in 1864. After the separation (1869), it retained its former orientation of status quo *ante. The elementary school of the community was established in 1857, and a secondary school for girls in 1922. The majority of the members of the community were merchants, contractors, and craftsmen. The first rabbi of the community was Anshel Neumann (1832–62) and its last rabbi was Sh.F. (Fülöp) Pollak (until 1944), who was deported together with the community. The Orthodox community had already been founded in 1868, and its synagogue and school were opened in 1882. Its rabbis were David Judah Leib *Silberstein (1876–84), his son Isaiah Silberstein (1884–1930), and his grandson Leib Silberstein (1935–44). In 1885 a yeshivah was established. D.Z. *Katzburg published the Torah periodical *Tel-Talpiyyot* (from 1892 to 1938) in Vac. There were five Jews in Vac in 1840; 139 in 1869; 2,131 in 1910; 2,059 in 1920; 1,854 in 1941; and 377 in 1946. After the German invasion (March 19, 1944), the Jews of Vac were deported to Auschwitz, and only a few survived.

[Baruch Yaron]

VADÁSZ, LIPÓT (1861–1924), Hungarian lawyer and politician. Born in Kisvárda, Vadász practiced law for a short time, and became a deputy in the lower house of the Hungarian parliament in 1910. In 1913 he was appointed undersecretary of state in the Ministry of Justice and was a close adviser of Count Stephan Tisza, the "strong man" of Hungary. During World War I Vadász was responsible for restrictive wartime legislation and the law on parliamentary prerogatives became known as "Lex Vadász." He also collaborated in preparing a new Hungarian civil code. Tisza's failure to obtain public support during the war led Vadász to retire from public life and return to private practice. He was active in Jewish communal affairs and president of the Hungarian Jewish Literary Society. Vadász gained a considerable reputation as an orator and his principal speeches were published under the title *Vadász Lipot Beszédei* (1925).

[Josef J. Lador-Lederer]

VAD RASHKOV, town in Bessarabia, on the Dniester, today Moldova. Under the Moldavians (up to 1812) the town was called Rashkov, the same name as the city facing it on the opposite bank of the river. In 1817 there were 88 Jewish heads of households there. As a result of Jewish emigration to Bessarabia during the 19th century, the community grew, and by 1857 it supported two synagogues and a house of prayer. In 1897 the community numbered 3,237 (69.7% of the total population), but in 1930 the number had decreased to 1,958 (49.2% of the total). Jews engaged in trade, crafts, and also in agriculture (mainly viticulture). Among 379 members registered in the local loan fund in 1925, 154 were tradesmen, 113 artisans, and 65 farmers. When the Germans and the Romanians invaded Bessarabia in July 1941, most of the Jews escaped to the Russian side of the Dniester River.

[Eliyahu Feldman]

VAEZ, ABRAHAM (d. 1694?), French Sephardi rabbi. Vaez was the earliest-known *ḥazzan* and *ḥakham* of the Nefuẓot Yehudah community formed by ex-Marranos at Bayonne and is probably to be identified with the R. Abraham "Davan" (a misreading of Da Vaez) who died there on July 29, 1694.

His works include *Arbol de Vidas* (Amsterdam, 1692), a handbook on Jewish religious law and practice in Spanish, followed by a sermon on human frailty, with a commendatory poem by Abraham Rodriguez Faro; *Discursos predicables y avisos espirituales* (Amsterdam, 1710), moral sermons, published after his death by his son, Jacob, with an introduction by Isaac (de Mattatia?) *Aboab. He also contributed a commendatory letter to the *Historia Sacra Real* by Isaac Acosta, who subsequently succeeded him at Bayonne.

[Cecil Roth]

VÁGÓ, JÓZSEF (1877–1947), Hungarian architect. Vágó was born in Nagyvárad (now Oradea, Romania) and completed his studies at the Polytechnicum in Budapest. As a student, he gained a prize for the plan of a synagogue in Budapest. He later became the associate of the leading Hungarian architect, Ö. Lechner. Vágó's style was modern with the clean uncluttered lines then in vogue. Many buildings in the Hungarian capital were designed by him. In 1919 he settled in Switzerland and later in Italy. He was co-recipient of first prize in a competition for design of the League of Nations headquarters in Geneva (1926), in the realization of which he also took part. He worked in partnership with his brother *László.

VÁGÓ, LÁSZLÓ (1875–1933), Hungarian architect. He worked in partnership with his brother József *Vágó. They worked in partnership until 1910. After setting up an independent firm, László specialized in the reconstruction of theater buildings. At the end of the 1920s he and his co-workers designed the Heroes' Synagogue and its arcaded courtyard adjacent to the Great Synagogue in Dohany street in Budapest.

[Eva Kondor]

VAJDA, GEORGES (1908–1981), French Arabist and Hebraist. Born in Budapest, a student of Bernard Heller, he went to Paris in 1928. From 1936 to 1960 he was a professor of Bible and theology at the Séminaire Israélite of France. He lectured at the École pratique des hautes études (EPHE) in 1937, and was appointed "directeur d'études" in 1954. In 1940 he founded the Oriental department of the Institut de Recher-

ches et d'Histoire des Textes (CNRS). He died on its premises in 1981. He directed (and wrote himself a large part of) the *Revue des études juives* from the end of World War II to 1980. In 1970 he was appointed professor at the University of Paris (Sorbonne). There and at the EPHE he proved himself an impressive, scrupulous, and paternal scholar, though a severe teacher. He wrote numerous works, notably on Arabic and Jewish philosophy, on the *Kabbalah, and on Arab manuscripts. He specialized in the study of the beginnings of Jewish philosophy and Kabbalah and of the relationship between these two disciplines. Gifted with a vast erudition, he also produced minute and precise analyses of a number of unknown or misconstrued works. He contributed to the second edition of the *Encyclopedia of Islam* (1960–2004), with articles concerning Judaism. His most important works include *Introduction à la pensée juive du Moyen Age* (1947); *La théologie ascétique de Bahya ibn Paquda* (1947; Spanish translation with additions, 1950); *Judah ben Nissim ibn Malka, philosophe juif marocain* (1954); *L'Amour de Dieu dans la théologie juive du Moyen Age* (1957); *Isaac Albalag, averroïste juif, traducteur et annotateur d'Al-Ghazali* (1960); *Recherches sur la philosophie et la Kabbale dans la pensée juive du Moyen Age* (1962); and *Le Commentaire d'Ezra de Gérone sur le Cantique des Cantiques* (1969). Among his last main concerns was the theology of Yûsuf al-Baṣîr (REJ, 128 (1969); 131 (1972); 134 (1975); 137 (1978); 140 (1981)). The catalogue of his works embraced no fewer than 1,657 items in 1991 (among which were more than 1,200 book reviews) to which can be added unpublished material (e.g., the catalogue of the Hebrew scientific and philosophical mss. at the Bibliothèque Nationale in Paris). His later books were the critical editions of Isaac Albalag's *Tikkun ha-De'ot* (1973) and an abridgment of R. Judah Ibn Malkah on *Sefer Yeẓirah* (1974), the *Catalogue des manuscrits arabes* [de la B.N.]. *Manuscrits musulmans*, vol. 2 (1978), to which may be added the posthumous *Catalogue… Mss. musulmans*, vol. 3 (1985), *Al-Kitâb al-Muḥtawi de Yûsuf al-Baṣîr* (1985), *Le commentaire sur le Livre de la Création de Dûnash ben Tâmîm… éd. revue et augmentée* (2002), and four volumes of *scripta minora*: G.E. Weil (ed.), *Mélanges G. Vajda* (1982); N. Cottard (ed.), *La transmission du savoir en Islam, VII^{e}–XVIII^{e} siècles* (1983); D. Gimaret, M. Hayoun, J. Jolivet (eds.), *Études de théologie et de philosophie arabo-islamiques à l'époque classique* (1986); and *Sages et penseurs sépharades de Bagdad à Cordoue* (1989).

[Charles Touati / Jean-Pierre Rothschild (2nd ed.)]

VAJS, ALBERT (1905–1964), leader of Yugoslav Jewry. Born in Zemun (Semlin), Vajs grew up in a mixed Serbo-Croat, German, and Hungarian cultural milieu, but from his youth he was a Zionist and was greatly influenced by Alexander *Licht and the Zemun rabbi H. Urbach. Until 1941 he was a barrister in Belgrade. During World War II he was a Yugoslav officer and was captured by the Germans. After the war he was a member of the State War Crimes Commission in Yugoslavia and the deputy head of the Yugoslav delegation to the International Military Tribunal in Nuremberg. From 1947 he was a professor in the faculties of law and philosophy at Belgrade and wrote numerous essays on legal matters and a book on the history of civilization.

In postwar Yugoslavia, Vajs devoted his energies to Jewish interests, mainly to the rehabilitation of the Jewish communities, becoming the president of their federation. He represented Yugoslav Jewry at world Jewish conventions, particularly of the *World Jewish Congress and its Executive. He was helpful in organizing the great *aliyah* to Israel of Yugoslav Jewry in 1948–49, which encompassed about 8,000 Jews.

VALABREGA, CESARE (1898–1965), Italian pianist, critic, and musicologist. Born in Pesaro, Valabrega studied piano and composition in Bologna. He took a diploma in piano at Pesaro conservatory (1916) and an arts degree at Bologna University. He toured as a concert pianist and critic in Italy and abroad and gave lecture recitals throughout his life. He founded in 1950 the Associazione Romana dei Concerti Storici and became its artistic director in 1953. He taught the history of music at Naples Conservatory (1953) and the University of Perugia (from 1954); he was head of music for the Associazione Nazionale per l'Educatione Artistica at Rome University. He published *Schumann arte e natura* (1934, 3/1956), *Il clavicembalista Domenico Scarlatti* (1937, 2/1957), and *Johann Sebastian Bach* (1950), and he edited in 1959–63 the historical anthology of 40 long-playing records, *Storia della Musica Italiana*, with explanatory booklet, sponsored by the Italian government, the International Council for Music, and UNESCO. He was awarded a silver medal by the government for his contribution to Italian music.

VALABRÈGUE, MARDOCHÉE GEORGES (1852–1930), French soldier. Born in Carpentras, he was commissioned as a high artillery officer in 1873 and in 1877 was appointed instructor at the military academy. He became secretary to the French army's High Committee on Methods of Warfare in 1881 and was assistant to the minister of war, General André, from 1886 to 1902, when he was made head of the French artillery academy. Subsequently, Valabrègue commanded the 12th infantry division with the rank of major general and following the outbreak of World War I was given command of a group of

two reserve divisions at the battle of the Marne. In the following year he was made a member of the French High Command and in 1917 inspector general of the Armed Forces.

[Mordechai Kaplan]

VALEA-LUI-VLAD, Jewish agricultural settlement in Bessarabia prior to World War II. It was founded on an area of some 934 acres which had been purchased in 1839 by approximately 350 Jews from Podolia. In 1899 there were 255 families (1,385 persons), including 82 landowners owning an average of 11.4 acres per family. The cultivated area amounted to 791 acres; of these 321 acres were set aside for crops and 430 for pasture. Because of a lack of agricultural implements – there was only one plow in the colony – plowing was hired out. In 1925 the 247 members of the local loan fund included 89 farmers, 56 artisans, and 79 tradesmen. In 1930 there were 1,281 Jews on the settlement (94.5% of the total population). The community was destroyed with the entry of the Germans and Romanians into Bessarabia in July 1941.

[Eliyahu Feldman]

VALENCE, chief town of the department of Dôme, S.E. France, part of the ancient province of Dauphiné. The establishment of the Jewish community in Valence does not go back earlier than 1323; however, the decision of the council held in the town in 1248 that prohibited all relations between Christians and Jews may lead to the assumption that isolated Jews were living there at the time. This decision appears to have been decreed in the wake of the accusation of ritual murder of *Valreas in 1247 as a result of which the high constable of Valence had all the Jews on his lands imprisoned and their possessions confiscated. In 1441, when the community numbered 18 families, the bishop recalled the obligation of the Jews to wear the distinctive sign so that "guests be not regarded as citizens." In 1463, 14 Jews of Valence were ordered to pay a severe fine to the dauphin "for having practiced excessive usury and having spoken evilly of His Majesty…." In 1476 the same dauphin granted the Jews of Valence a new letter of protection; however, at the close of the century this community disappeared, as did the other communities of Dauphiné. At the beginning of World War II, there were about 50 Jewish families in Valence, half of whom were refugees from *Alsace. In the early 1970s, there were about 800 Jews in Valence, mainly of North African origin.

[Bernhard Blumenkranz]

VALENCIA, city in Valencia province, E. Spain; it had the largest and most important community of the medieval kingdom of Valencia. The date of the first Jewish settlement is unknown, but there was already an important community during the Muslim period. Jews then engaged in crafts such as tanning and shoemaking and often bore the name of their craft. They also engaged in the marketing of agricultural products, a major occupation in Valencia, and maintained commercial ties with other Jewish merchants in Spain. There were few scholars in the Valencia community in this period. E. Ashtor (see bibliography) estimates that there were 162 Jewish families in Valencia, forming 6.5% of the total population, at the time of the Christian Reconquest in 1238. The fragment of a rewritten Hebrew marriage contract from Valencia, dating from the middle or late 11th century, was discovered in the Cairo *Genizah*. Solomon ibn *Gabirol died in Valencia between 1055 and 1058.

After the Christian Reconquest

In 1086 the Jewish emissary of King Alfonso VI of Castile arrived in Valencia and represented him there. The capitulation treaty is connected with el Cid, who captured Valencia in 1095; the treaty stipulated that Jews were forbidden to acquire Muslim prisoners of war, Jews who molested Muslims would be prosecuted, and Jews would not be appointed to functions of authority over Muslims and their property.

During the period of Muslim rule and after the final conquest of the town by King James I of Aragon in 1238, the Jewish quarter was situated on the eastern side of the Rahbat el-qadi and in its vicinity, on the site where the Santa Catalina church stands at present. In 1244 James I granted the Jews the whole quarter. A special gate, known as the Jews' Gate, led to the Jewish cemetery. James I granted the Jews of Valencia, and those who settled there, extensive rights. The community enjoyed a very wide autonomy and its judiciary could even deal with criminal offenses. In 1273 James I ratified the boundaries of the quarter. A special wall was erected around it a short while before the persecutions of 1391 (see below). There were many synagogues in the quarter. A number of them were destroyed in 1391 and others were converted into churches. The Jewish quarter of Valencia was one of the largest in the Iberian Peninsula, but nothing of it has survived. This was due to the urban development that began in 1412, two decades after the total destruction of the Jewish community in the massacres of 1391. However, thanks to the archival documents we know where the Jewish quarter was. Following the constant growth of the Jewish population throughout the 13th and 14th centuries, the city authorities decided in 1390 to enlarge the Jewish quarter. This decision barely one year before the complete destruction of the Jewish community aroused very strong opposition on the part of the Christian inhabitants.

The register of the apportionment of properties (*Repartirmiento*) after the Christian Reconquest gives much information on the period which followed. Jewish court favorites received land and properties. Among the Jewish settlers were several of the king's interpreters, including Baḥya and Solomon *Alconstantini, and Solomon Bonafos, who acted as treasurer of Catalonia. One hundred and four Jews received houses and estates in Valencia and the vicinity; these should be regarded as new settlers. In 1239 James I granted the Jews

of Valencia the same privilege as had been granted to the Jews of *Saragossa. Among other provisions, the Jews were granted the right to have lawsuits between them judged according to Jewish law; the king would adjudicate in matters of criminal law; in lawsuits between Christians and Jews, both Jewish and Christian witnesses were required; the form of the Jewish *oath was established (a version of it in Catalonian is extant); Jewish prisoners would be released to be in their homes on the Sabbath. In 1261 James I confirmed the right of the Jews to acquire farming and urban land from all the inhabitants of the country, including noblemen and clergymen – an unusual right in those days, which can perhaps be understood by the importance attached to Jewish settlement in this border region of the kingdom. One of these owners of land, cattle, and sheep was Don Judah de la *Cavalleria, who was appointed bailiff of Valencia after 1263. King Pedro III entrusted the Jews with additional functions in Valencia. When the revolt of the Muslims in the southern part of the kingdom was suppressed in 1277, Moses Alconstantini was appointed bailiff there. Among Jews appointed to administrative office were Muça de *Portella, Aaron ibn Yaḥya, and Joseph *Ravaya.

The authority of these Jews in Valencia was short-lived. Moses Alconstantini was deposed in 1283. The properties of the Ravaya family were confiscated after the death of Joseph, and Moses Ravaya was also dismissed. The anti-Jewish policy formulated at the time by James I was now enforced in Valencia: the laws on loans and interest and the regulations on oaths were reintroduced; Jews were forbidden to slaughter their animals in the abattoirs of the town, and they were ordered to wear a "cloak," as was the custom in Barcelona.

During the reign of James I, in 1271, the Jews of Valencia paid an annual tax of 3,000 solidus in the currency of the kingdom. In 1274 this amount was increased to 5,000 solidos. Pedro III imposed a special levy on the Jews of the town to cover the expenses of his wars, which amounted to 25,000 solidos in Jaca currency in 1282. The sum was collected by coercive and oppressive methods and Solomon b. Abraham *Adret (Rashba), then rabbi of the community, already pointed out (Responsa, vol. 1, no. 427) that the loans and contributions were destroying the foundations of the community's existence. The localities of *Jativa, *Murviedro (Sagunto), Alcira, and Gandia were incorporated in the tax district (*collecta*) of Valencia, and the annual tax raised generally amounted to 25,000 solidos. At the close of the 13^{th} century, about 250 taxpaying families lived in Valencia whose names have been recorded; they spoke Arabic. After the destruction of the community of Valencia in the persecutions of 1391, however, Ḥasdai *Crescas estimated its population to have been 1,000 "houseowners." This figure may be due to his own impressions or could have referred to the whole of the kingdom of Valencia.

Toward the close of the 13^{th} century, as a result of the activities of Jewish merchants, Valencia became an important center of maritime trade. These "seamen" traded with *Majorca, North Africa, and most of the Mediterranean ports. The merchants purchased raw materials, wool, wool products, and grain, and exported them through Valencia to other ports of the Mediterranean.

Another occupation of the Jews was brokerage, and in 1315 there were 43 Jewish brokers; evidently all those engaged in this occupation were Jews. Even after the destruction of the community of Valencia, the town remained a center of Jewish trade. Alfonso V issued letters of protection to Jewish merchants from Barbary who came to trade in Valencia.

The community administration of Valencia was similar in organization to that of the other large communities of Aragon. The community was headed by a council of 30 members, among whom five were chosen as *muqaddimūn* by lot (Solomon b. Abraham Adret (Rashba), Responsa, vol. 3, no. 417). The community was supervised by the bailiff-general, the representative of the king. A Jewish *mustaçaf* was appointed to supervise the market and its activities. In 1300, after members of the community had complained that the wealthy and prominent personalities were throwing the burden of taxation onto "the middle class and the little people," King James II ordered that all payments to the kingdom and the community, including debts of former years, were to be divided up by a system of "declaration," and that everyone should take the oath in the presence of three Jews (one each of the upper, middle, and lower strata). Many problems arose in the Valencia community as a result of disputes and informing (there was a special regulation against informing; *Isaac b. Sheshet Perfet, Responsa, no. 79). Many queries were addressed to R. Solomon Adret and R. Isaac b. Sheshet on these matters. In 1348 Pedro IV ordered the bailiff to arbitrate in community disputes concerning the methods of collecting the tax: whether it was to be imposed by assessment or by "declaration."

The Jews of Valencia suffered during the *Black Death in 1348, and the persecutions which broke out in the town in its wake. In 1354 the leaders of the Valencia community collaborated in the rehabilitation of the communities of the kingdom of Aragon. Each provincial delegate was offered a seat on the national administration. The regulations of the national organization were signed by the resolute *parnas* of the community of Valencia, Judah Eleazar, a wealthy merchant and landowner who had financial transactions with the crown but was not outstanding for his learning or piety. In 1363 Pedro IV imposed a tax of 50,000 solidos on him as a contribution toward the expenses of the war against Castile. A tax was also imposed on the community and its wealthiest members, totaling 152,000 solidos.

The adoption in 1364 of the regulations of the community of *Barcelona of 1327 may be regarded as a further attempt to reconsolidate the authority of the community. In 1369 Pedro IV authorized the burial society of the community of Valencia to collect interest from a certain income. The prohibitions issued by the community administration included one against gambling, for money or real estate, with Christians.

In 1385 Isaac b. Sheshet Perfet (Ribash) was appointed rabbi of Valencia, his native town, holding this position until the destruction of the community in 1391. He organized ac-

tivities in Valencia to restore the importance of Torah study and piety. Valuable historical material on the community is contained in his responsa (nos. 253–355).

The Persecutions of 1391

On July 9, 1391, the community of Valencia was attacked and destroyed by rioters who arrived from Castile and soldiers who were stationed in the port from where they were due to sail for Sicily with the infante Martín. In this assault 250 Jews died, while the remainder agreed to convert to Christianity or found refuge in the houses of the townspeople. Isaac b. Sheshet Perfet was among those who fled. Those who converted included distinguished personalities such as Don Samuel Abravalia (who took the name Alfonso Fernández de Villanova after his apostasy), the king's physician Omar Tahuel, who ranked among the *muqaddimūn*, and his relative Isaac Tahuel. According to some documents, it seems that R. Isaac b. Sheshet was also among the forcibly converted, before he fled. On July 16 the king ordered that Jews who had hidden in the houses of Christians should not be compelled to convert, but be taken to a place of safety. He also prohibited the conversion of synagogues into churches. However, on September 22 the king instructed that a list of the property of the Jews who had perished should be drawn up, in order to have it transferred to him. In November a pardon was granted to the Christian inhabitants of Valencia for the attack because, according to the city elders, the town was being emptied of its inhabitants who were fleeing in every direction. None of the synagogues of Valencia survived the 1391 massacres. The Jewish market, the *zoco,* which was just outside the Jewish quarter, was in Gallinas Street, at the beginning of Mar Street. The Jewish cemetery was outside the Jewish quarter but within the walls of the city. At the expulsion it was given by Ferdinand to the Dominicans. In its place today stands the El Corte Inglés department store.

After this destruction, the community proved unable to recover, even though in 1393 the king and the queen entrusted Ḥasdai Crescas and the delegates of the communities of Saragossa and *Calatayud with the task of choosing 60 families who would settle in Barcelona and Valencia. A year later John I ordered that their cemetery should be restored to the Jews of Valencia. A small community may have been reconstituted, because, according to Simeon b. Ẓemaḥ *Duran, there were Jews living in Valencia at the close of the century (Responsa, *Yakhin u-Vo'az*, pt. 2, paras. 14–15).

In 1413 Vicente *Ferrer is known to have endeavored to convert Jews in Valencia, but these may have been concentrated in localities in the vicinity. Only Jewish merchants continued to visit the town. In 1483 King *Ferdinand canceled the permission given to the Jews for prolonged stays in Valencia. He also abolished the privilege exempting Jews who came there from wearing a distinctive *badge.

The Conversos in Valencia

Files of those who were sentenced by the *Inquisition of Valencia within the framework of the Papal Inquisition during the 1460s are extant. In 1464 the Inquisition discovered that many *Conversos had sailed from Valencia port to the Orient, particularly Ereẓ Israel, in order to return to Judaism. A number were apprehended, including families who had arrived there from Andalusia. Numerous testimonies to the Inquisition reported that Conversos had returned to Judaism in all the towns in the area of the eastern Mediterranean.

The Conversos in Spain were seized by an overwhelming desire to leave the country, and many made their way to Valencia for this purpose. When apprehended, however, they were only condemned to expulsion from the region or fined. In 1482, when the Spanish national Inquisition was established and Cristóbal Gualves was appointed inquisitor, the Conversos of Valencia submitted a complaint to the pope against his acts of cruelty and his acceptance of invalid testimonies. Pope *Sixtus IV removed him from his position in Valencia, but King Ferdinand strongly protested against his intervention. In 1484 investigators of heresy were appointed in Valencia to act upon instructions by *Torquemada. It is evident that they had hesitations about their duties, for up to 1492 they issued "orders of grace" three times, a rare occurrence in those days. This may also have been because many Conversos had been hidden in the houses of noblemen and Muslims throughout the kingdom of Valencia.

Up to June 1488, 983 men and women in Valencia returned to the fold of the Church, while another 100 persons were burned at the stake. In the trials the accused were interrogated as to whether they had committed acts against the Christian religion, such as having struck crucifixes, etc. The trial proceedings reveal the overwhelming yearnings of the accused for anything Jewish and their profound adherence to the Jewish religion. Prayer books in the Valencia dialect were found in their possession, and many Jewish prayers were well known to them. The messianic agitation manifested in 1500 was also apparent in Valencia, and the Inquisition took severe measures to eradicate it. The tribunal of Valencia was a regional one, and it continued to function until the general abolition of the Inquisition during the 19th century.

Valencia was the port of embarkation for Jews who left for the Orient after the expulsion from Spain in 1492. The number who left from there is not known, although there is such information on the other Spanish ports. Isaac b. Judah *Abrabanel and his family embarked from Valencia in June 1492 by special permission granted to him by King Ferdinand.

There was a small Jewish population in Valencia in the 1970s, which had recently affiliated to the organization of Spanish communities.

[Haim Beinart]

VALENSI (**al-Valensi**, **Balansi**, **Valença**, **Valencin**, **Valencia**, **Valenciano**), family which originated in *Valencia (Spain). R. SAMUEL BEN ABRAHAM VALENSI (1435–1487), talmudist in Zamora, *Spain, was the disciple of R. Isaac Campanton and the teacher of several scholars, including R. Jacob *Ibn Ḥabib, the author of *Ein Ya'akov*. Of his works only a brief treatise, entitled *Kelalei Kal va-Ḥomer* (Venice, 1599), on the methodology of the Talmud, is extant. After the expulsion from Spain, his family took refuge in *Morocco. MOSES VALENSI and his son ABRAHAM VALENSI countersigned the first *takkanot* of the *megorashim* ("exiles") in Fez (1494, 1554). SAMUEL VALENSI, an inhabitant of Azemmour, distinguished himself by his military valor in the war near *Ceuta, where he led 1,400 Jewish and Muslim soldiers. He came to the assistance of the besieged *Safi with his ships and compelled the large army of attackers to abandon its campaign (1534). In *Marrakesh, JOSEPH VALENCIA was the private physician of three successive sovereigns from 1590 to 1628.

Some of the Valensis of Morocco settled in *Venice in about 1650. JOSEPH VALENSI was a rabbi there in about 1680. Several members of the family later settled in Leghorn, while others moved to *Tunis before 1690. The origin of the members of Valensi family in Tunis is France and not Leghorn. They came to Tunis at the end of the 18th century and during the 19th. In many documents, they appear as the leaders of the Grana community (the name of the community founded in Tunis by the immigrants from Leghorn) in Tunis and also as the representatives of the French nation ("Notables Français" and "Députés de la Nation française") from 1858 onward. They served the Grana community for a period of 100 years. In the minute book of the marriage contracts of the Grana community are recorded many members of this family from the end of the 18th century onward, many of them as bridegrooms and brides, and others as leaders and *dayyani*m. Many of the Valensi family members in Tunis were French citizens. The Valensis distinguished themselves especially as physicians, scholars, soldiers, and diplomats in Tunis, where the first known family member was GABRIEL DE MANUEL VALENSI (1686), a financier. JOSEPH VALENSI became involved in Franco-Tunisian political affairs between 1792 and 1812. His son SAMUEL VALENSI had a successful career in politics, and his grandson GABRIEL VALENSI, who was appointed official interpreter between the beys and the French sovereigns, was charged with diplomatic missions to Paris in 1867 and 1878. HAYYIM DAVIS VALENSI was a *dayyan* and signed many marriage contracts in the Grana community in Tunis between the years 1821 and 1824; GABRIEL BEN YA'ACOV VALENSI signed marriage contracts in the Grana community between 1806 and 1810; GABRIEL BEN REUVEN VALENSI was the treasurer of this community in 1815; MOSES VALENSI (1825–1909) was sent on a Tunisian government mission to the United States. GABRIEL VALENSI (1845–1915) was a lieutenant general in the army of the bey. He was involved in the charities of his sister Zodika, who dedicated property to the Eẓ Ḥayyim synagogue of the Grana community. He served also as the treasurer of this community and was a philanthropist. His signature appears on many regulations of his community from 1860 until 1893. In 1890 he was the opponent of the qa'id and chief rabbi Eliyahu Burgel and opposed him when Burgel wanted to diminish the autonomy and the property rights of the Grana community. The dispute broke out when the Jewish community in Tunis had severe economic difficulties, and Burgel took from the Grana community its 20 percent share in the new cemetery. Before this dispute Gabriel Valensi succeeded in achieving for his community a good new agreement with the Touansa community. In 1895 Gabriel Valensi wrote a letter to the chief rabbi of France, Rabbi Zadok Kahn, and to the *Alliance Israélite Universelle about the dispute with Burgel, and he was victorious in this struggle.

His son RODOLPHE VALENSI, linguist and engineer, wrote scientific works.

JOSEPH VALENSI (d. 1908) was the Austro-Hungarian consul and the chief administrator of the municipal services of Tunis. He was famous for his philanthropy. RAYMOND VALENSI (1847–1920) represented his country abroad, and his son JOSEPH VALENSI, professor of fine arts, was one of the architects of the Paris Exhibition (1925–31). THÉODORE VALENSI (1886–1954), philanthropist, novelist, painter, and barrister, was called to Paris, where he was a senior adviser in the ministries of Clémenceau and Briand and chief private secretary of the Cabinet du Ministre. VICTOR RAYMOND VALENSI (d. 1942) was the last member of the Valensi family who served the Grana community. He died at the age of 95. In 1881 he was appointed the head of the Alliance Israélite Universelle in Tunis and was its representative.

ALFRED VALENSI (1878–1944), philanthropist and barrister, contributed to leading European newspapers. He wrote on legislation and sociology and was an active Zionist. He founded the first Zionist organization in Tunis in 1910. He was seized by the Nazis and died during deportation. VICTOR VALENSI, a notable Tunisian architect in the 1920s and 1930s, published studies of the local architecture of northern Africa and is best known for designing the Grand Synagogue of Tunis in 1938. He died in Buchenwald. MAURICIO VALENSI was mayor of Napoli after World War II.

[David Corcos / Leah Bornstein-Makovetsky (2nd ed.)]

VALENTIN, GABRIEL GUSTAV (1810–1883), German physiologist, anatomist, and embryologist. Born and educated in Breslau, Valentin practiced medicine there and later moved to Berne, Switzerland, where he became professor of physiology and zootomy. Valentin, a pioneer in the study of physiology and embryology, investigated the blood circulation in the lungs, the electrical conduction in muscles and nerves, and the physiology of the senses.

Together with Czech physiologist J.E. Purkinje and F.G.J. *Henle, he laid the foundation for the cell theory of M.J. Schleiden and Theodore Schwann. He discovered the diastatic role of the pancreatic juice in the digestion of carbohydrates, and also found a method of improving microscope observations by applying polarized light. He was the author of *Handbuch der Entwicklungsgeschichte des Menschen* (1835); *Histiogenia Comparata* (1835), for which he received the Grand Prix des Sciences Physiques; and *Lehrbuch der Physiologie des Menschen* (1844; *Textbook of Physiology*, 1853).

[Suessmann Muntner]

VALENTIN, HUGO MAURICE (1888–1963), Swedish historian and Zionist leader. Born in Sweden, Valentin first served as a teacher of history at a high school in Falun, but in 1930 was appointed lecturer, and in 1948 professor, at the University of Uppsala. His main topics of research were European and particularly Prussian history of the 18th century, and the history of the Jews in Sweden. In 1925 he became a Zionist, and from then on dedicated himself passionately to spreading Zionism to Swedish Jews. He became president, and later honorary president, of the Zionist Federation and was respected and beloved by all. He died suddenly in the studio of Stockholm Radio as he was preparing to defend the case of Israel in a disputation with an anti-Zionist.

Among his works on Jewish topics are *Judarnas historia i Sverige* ("History of the Jews in Sweden," 1924), the standard work on the subject; *Anti-Semitism* (1925, Eng. tr. 1926), a historical and critical examination; *Kampen om Palestina* ("The Struggle for Palestine," 1940); "Rescue Activities in Scandinavia" (in: *YIVO Annual of Jewish Social Science* (1953), 22–51); and *Judarna i Sverige* ("The Jews in Sweden," 1964). For many years until his death, he was editor of the monthly *Judisk Tidskrift* ("Jewish Review"), originally established by Marcus *Ehrenpreis.

[Chaim Yahil]

°VALERIUS GRATUS, Roman *procurator of Judea, 15–26 C.E., appointed by the emperor Tiberius. Little is known of his administration, but his frequent replacement of the high priest is indicative of his attitude toward the Jews. After deposing Anan b. Seth, he appointed in turn Ishmael b. Phabi I, Eleazar b. Ananius, and Joseph Caiaphas. That his motive was bribery is hinted in the Talmud: "Because money was paid for the purpose of obtaining the position of high priest, [they]were changed every 12 months," and "Since they used to hire it [the office of high priest] out for money, their days were shortened" (Sif. Num. 131).

[Edna Elazary]

°VALERIUS MAXIMUS (first century C.E.), compiler of historical anecdotes in *Tiberius' reign. He mentions that Cornelius Hispalus expelled the Jews from Rome in 139 B.C.E. for corrupting Roman customs with their worship of Jupiter Sabazius (= Sabaoth?).

[Jacob Petroff]

VALERO, Sephardi family in *Jerusalem. JACOB (d. 1880) was a banker. Born in Constantinople, he settled in Ereẓ Israel in 1835. In 1848 he founded the first modern bank in Jerusalem to have contacts with European capitals. He was a leader of the Jerusalem Sephardi community. His son ḤAYYIM AHARON (1845–1923) was born in Jerusalem and from 1875 acted as the director of the bank his father had founded. He expanded the bank which became the agent for foreign royalty who visited the Holy Land. He was also the agent for the Russian government, which purchased the Russian Compound in the center of the Holy City. He contributed to the unification of the Sephardi and Ashkenazi communities in Jerusalem. His son JOSEPH MOSHE (1882–1945) was born in Jerusalem and studied law in Switzerland, where he was active in Zionist student groups. On his return to Palestine, he practiced law in Jerusalem and became a magistrate there. From 1929 he was a district court judge in Jerusalem. He was one of the three trial judges in the *Arlosoroff murder trial (1934), and he alone

vindicated the accused completely. He was also active in public institutions and the Sephardi community.

[Benjamin Jaffe]

VALLADOLID, city in N. central *Spain. As the chief city of the kingdom of Castile and the meeting place of the Cortes, Valladolid attracted many Jews to settle there; it is also connected with decrees and edicts issued there against both the local Jews and those in the kingdom as a whole. Jewish settlement in Valladolid is first mentioned in 1221. However, Jews probably already lived there during the Arab period, as well as immediately after the Christian Reconquest in the 11th century.

Information is extant from the second half of the 13th century concerning houses of the Jewish quarter bought from Christians and the butchery situated near the old synagogue. One of the landowners was Joseph b. Moses de Gerondi (perhaps the son of *Naḥmanides), who was a favorite at the court of *Alfonso x. In 1288 Sancho iv prohibited the Jews of Valladolid from acquiring land in its vicinity. The community appears to have consisted of 50 to 100 families; it was thus of average size in comparison with other Spanish communities.

In 1322 the municipal council prohibited Christians from attending Jewish and Moorish weddings and from receiving treatment from Jewish physicians. Jews were also excluded from holding public office. Nevertheless, the right to farm the *alcabala* tax of Valladolid were leased to Jews. as was the tax imposed on owning livestock. Details are known from the beginning of the 14th century about litigation brought before R. *Asher b. Jehiel (Rosh) between R. Menahem and the community administration of Valladolid, which had sold the right to farm tax collected from it to the community of Carrion. During that period the apostate *Abner of Burgos settled in the town. He was appointed sexton of the church of Valladolid, and even became known as Alfonso of Valladolid. In 1336, on the orders of *Alfonso xi, he engaged in a public *disputation with the Jews of Valladolid on the subject of the *Birkat ha-Minim*. His arguments were accepted by the king who ordered the removal of this prayer from the prayer books.

At the time of the civil war between the brothers Pedro the Cruel and Henry of Trastamara, the inhabitants of the town joined with Henry in 1367, and the local Jews were subsequently subjected to attacks in which eight synagogues were destroyed. The survivors had to receive assistance and support from the communities of the kingdom of Aragon. The community apparently recovered, however, for in 1390 John i granted the monastery of San Benito an income of 15,000 maravedis from the annual tax and service tax which the Jews of Valladolid had paid him. This income was again ratified in 1412, though granted to the monastery from other sources because the majority of the local Jews had by then converted to Christianity as a result of the anti-Jewish persecutions in Spain of 1391.

The community was then in the process of disintegration. At that time Vicente *Ferrer lived in the town. Through his influence, in conjunction with *Pablo de Santa Maria, a series of severe anti-Jewish laws was issued, known as the Laws of Valladolid. The legislation was intended to undermine the foundations of Jewish existence and bring the Jews to conversion. It abolished Jewish autonomy, the Jews' rights of independent jurisdiction, and their special tax administration, among other measures. Christian judges were appointed to administer Jewish law. A special decree prohibited the Jews and the Moors of Valladolid from leaving the town, in conformity with the prohibition forbidding the Jews to leave the kingdom. The local rulers were warned not to offer protection to the Jews.

In 1413 John ii authorized the erection of a new Jewish quarter in Valladolid. The representatives of the community leased land for the quarter from the San Pablo monastery for an annual payment. The contract stipulated that the lease would be annulled if the quarter was removed to another site, if the king ordered the expulsion of the Jews from the town, or if all the Jews converted to Christianity.

An attempt to restore community life in the kingdom, however, was made by an assembly of delegates of the communities of the kingdom of Castile; "scholars and good men" convened between April 4 and May 2, 1432, under the leadership of Don Abraham *Benveniste of Soria in the great synagogue of Valladolid in the Jewish quarter, where they discussed the organization of the communities and their rehabilitation. This meeting was significant since, in addition to the regulations issued there, it was held in the chief city, which was the seat of the "court rabbi" (**rab de la corte*), the leader of Spanish Jewry, and thus expressed the idea of a national Jewish organization. The assembly issued five unique sets of regulations aimed to restore the life of the communities to their former greatness. The Regulations of Valladolid promoted an internal revival of the communities by their own initiative and also demonstrated that it was the policy of the king to encourage their recovery.

In the tax registers of 1439, an annual tax assessment of 15,000 maravedis in old currency is still mentioned, but as few Jews by then remained in Valladolid, John ii reduced the payment to 11,400 maravedis of the same currency. In 1453 he further exempted the Jews and the Moors from various taxes, excepting the annual tax and the service tax. In 1474 the community paid a total of 5,500 maravedis in taxes.

The delegates of the communities met again in Valladolid in 1476. Apparently, a request was made by the communities to appoint R. Vidal Astori chief rabbi of the communities beyond the town of Burgos. Ferdinand agreed to the appointment, but later nominated Abraham *Seneor of Segovia chief rabbi of the whole kingdom in appreciation of his services. Ten years later in 1486, Ferdinand and Isabella took the part of the Jews of Valladolid against the decisions of the municipal council which tried to prevent Jews from settling there by prohibiting marriages of their children outside the town, with the intention of settling there after the marriage. In this period the delegates of the communities met in Valladolid under the

leadership of Abraham Seneor to discuss raising funds for the expenses of the war against Granada. The atmosphere of this period, shortly before the expulsion of the Jews from Spain, is reflected in the resolutions of the Christian craftsmen's guilds demanding that the Jews should leave the town because they did not wish to live beside them.

The relations between Jews and *Conversos and between Conversos and Christians by birth in Valladolid emerge in a satirical poem directed against the Converso poet Juan Poeta de *Valladolid, a native of the town. According to the poem, Juan intended to emigrate to Ereẓ Israel but fell into the hands of the Muslims in Fez and adopted Islam; his father, it is stated, sold rags in Valladolid. In 1485, after reports had been received that Conversos had returned to Judaism in Zamora, an investigation was carried out in Valladolid by the royal tribunal, although the *Inquisition tribunals were already active and one had been established in Valladolid that year. It is possible that the court intended thereby to suppress knowledge of the affair. After the expulsion of the Jews from Spain in 1492, Fernán Núñez Coronel (Abraham Seneor) and Luis de Alcalá were appointed to collect the unpaid debts which the Jews had left in Valladolid in favor of the crown.

Apparently because few Conversos returned to Judaism in Castile, the Inquisition tribunal in Valladolid did not develop large-scale activity, though its investigations were renewed in 1499. The tribunal was abolished in 1560 when the area of its jurisdiction was included in the tribunal of Toledo.

[Haim Beinart]

°VALLAT, XAVIER (1891–1972), French antisemitic politician. A member of the Chamber of Deputies from 1919, he changed his political affiliations several times, but always belonged to the extreme right and was an outspoken antisemite. He strove for de-emancipation of the Jews who were to be treated as strangers and in the Chamber (1936–40) "distinguished" himself by his fierce attacks on Leon *Blum. In July 1940 Pétain appointed him secretary general of the veterans' organization. The Nazi occupants suspected him because of his patriotism and dismissed him. However, when Darlan appointed him head of the Commissariat Général aux Questions Juives in March 1941, they did not object. Vallat enlarged the existing anti-Jewish legislation, thereby restricting the Jews' civil rights. He created the framework for the spoliation of Jewish property and founded the *Union Generale des Israelites de France (UGIF), a compulsory association over all Jews. He collaborated with the Nazi authorities but tried to safeguard French interests. Finally, in March 1942 the Nazis obtained his dismissal, but his organization served in the framework of the "Final Solution" in France (see *Holocaust, General Survey). Vallat, who afterward continued to serve Pétain in different offices, was condemned to ten years imprisonment in 1947, but released in January 1950.

[Yehuda Reshef]

VALLE, MOSES DAVID BEN SAMUEL (1696–1777), Italian physician and kabbalist. Valle was born in Padua. In his youth he wrote in Italian a book against Christianity entitled *I Sette Giorni della Verita*, but his major field was Kabbalah. He was considered to possess spiritual powers and receive mystical revelations. He is mentioned many times in documents relating to the circle of Moses Ḥayyim Luzzatto, of which he was one of the most important members. In this group, Valle seems to have been considered the Messiah. After Luzzatto left for Amsterdam, Valle became the leader of the Padua circle, which was not maintained for a long time. Most of his life he spent in seclusion, studying; he never occupied a rabbinic post, although he served as the cantor in the Sephardi synagogue. He wrote many disquisitions on kabbalistic subjects and other matters. From extant works found in his handwriting, it is possible to fix his date of birth and many details about his career. From all his works, only 70 kabbalistic interpretations on the last verse of the Torah were published (at the end of Luzzatto's **Megillat Setarim*, Warsaw, 1889). His rich legacy of nearly 20,000 pages is as yet unexplored.

[Gershom Scholem]

VALMASEDA, town in Vizcaya province, N. Spain. The beginning of the Jewish settlement dates back to the 15th century, in the days of King Henry IV. The Jews were brought here and protected by the constable of Castile, the count of Haro. The Jewish quarter was then situated near the old bridge in the present San Lorenzo quarter. The settlement owed its importance to its proximity to the ports of Cantabria from which wool, skins, and other goods were exported to France, Flanders, and England. The Jews in Valmaseda consequently engaged mainly in commerce, and also owned houses and vineyards. In 1474 they paid a total of 1,100 maravedis in taxes which were imposed on them by Jacob ibn Nuñez, court physician and tax farmer. Influenced by the local craftsmen's guilds, and in opposition to crown policy, the town council from 1483 on began to adopt a decidedly anti-Jewish attitude. In 1486 the council of the Basques, which convened in Guernica, decreed the expulsion of the Jews from the area. In 1487 the town council in Valmaseda agreed to negotiate with the local community concerning their voluntary departure.

[Haim Beinart]

VALONA (Vlor, Vlone, אבילונה), port city in S.W. Albania. The Jewish community is considered one of the most ancient in Europe. Its beginnings are garbed in legend, relating that a Roman ship with a cargo of Jewish slaves from Palestine was blown off course and landed on the Albanian coast. Travelers' narratives mention the presence of Jews in Valona selling salt and pitch and trading with Venice. After the blood libel in Apulia, Italy, in 1290, Apulian Jews settled in Valona. The Jewish situation there improved after the Ottomans captured the city from the Byzantines. Jews from Spain (Castille and Catalonia) and Portugal arrived at the end of the 15th century. Turkish documents show that in 1520 there a total of 945 families in Valona, of which 528 were Jewish. The Jews transformed Valona into a large commercial center trading with Italy, Istanbul, Vienna, and Poland. Practically all commerce in the port was in Jewish hands, and from 1541 to 1637 all the consuls of Ragusa (Dubrovnik) in Valona were Jewish. In 1512, to unite all the Jewish congregations (Byzantine, Italian, Spanish, and Portuguese), the renowned rabbi Messer David *Leon (from Italy) was invited to the city. His strict ways, however, alienated the Spanish and Portuguese and he had to leave. The community amalgamated in the mid-17th century under the *ḥakham* Moses *Albelda.

During the Venetian siege of Valona in their war against the Turks (1688), most of the Jews left the city and escaped to Berat, and later on dispersed to Ioannina, (Greece), Monastir, Bitalya, and Kastoria (Macedonia). The old Torah scroll "Sefer Avilona" – said to be 1,500 years old – was deposited in Salonika, where it was burned by the Nazis. The old synagogue was destroyed by the great fire of 1915.

In 1938 there were 15 Jewish families in Valona. During the Nazi period, the Albanians hid and saved not only all Valona Jews but also the Jewish refugees that reached the city. In 1991 almost all of Valona's Jews settled in Israel.

[Mordechai Arbell (2nd ed.)]

VALRÉAS, town in the department of Vaucluse, S.E. France. Evidence of the medieval Jewish community in Valréas is the result of the persecution to which it was subjected in 1247 in the wake of a *blood libel. A two-year-old child disappeared on March 26 before Passover; it was found on the next day with the traces of many wounds. The statements of two brothers, both young children, brought suspicion upon the Jews of the town. Three Jews who were imprisoned confessed, after seven days of torture, that they had perpetrated a ritual murder on the child. Six other Jews were then accused and subjected to torture; with the exception of one, they admitted all that their interrogators wished to hear. The cruel sentence that ensued appears to have struck an even larger number of the Jews of Valréas: some were quartered, others burnt alive; men were castrated, and women were mutilated by the ablation of their breasts. The bishop of Saint-Paul-Trois-Châteaux and the high constable of Valence confiscated all the possessions of the Jews under their administration and then imprisoned them. On the other hand, Pope *Innocent iv ordered the archbishop of Vienne to assure the protection of the Jews in two letters (May 28, 1247), two months after the beginning of the persecution. Some regard the decision of the Council of *Valence of 1248, which prohibited all relations between Christians and Jews, and the authorization which Pope Innocent iv granted to the archbishop of Vienne to expel the Jews from his diocese in 1253, as an aftermath of the Valréas affair. The assertion that the final expulsion of the Jews from Valréas took place in about 1570, which would imply that a new community was established, lacks documentary confirmation.

[Bernhard Blumenkranz]

VALUES OF A JEWISH AND DEMOCRATIC STATE. In Israel, in 1992, two Basic Laws were passed: "Basic Law: Human Dignity and Freedom," and "Basic Law: Freedom of Occupation." These laws have constitutional status, and enumerate a series of rights protected by the Basic Laws (see *Human Dignity and Freedom; *Rights, Human). Section 1a of the Basic Law: Human Dignity and Freedom, declares that "The purpose of this Basic Law is to protect human dignity and liberty, in order to establish in a Basic Law the values of the State of Israel as a Jewish and democratic state." Similarly, Section 2 of the Basic Law: Freedom of Occupation, contains a similar provision regarding freedom of occupation. These sections outline the interpretive principles of the Basic Laws, according to which the court is required to interpret and apply the values entrenched in them, and interpret Israeli legislation in a manner consistent with the constitutionally protected values of the Basic Laws. However, the key phrase, "a Jewish, and democratic state," has been interpreted differently by various jurists and justices.

Justice Aharon Barak holds that:

> The expression "Jewish and democratic" does not imply two opposites, but rather their being complementary and harmonious. The contents of the term "Jewish State" is determined in accordance with the level of abstraction assigned… It should be assigned a high enough level of abstraction to unite all members of society and seek out their common ground. It should be high enough that it is consistent with the democratic nature of the state. Indeed, the state is Jewish not in the religious-halakhic sense, but in the sense that Jews have the right to migrate there, and that their national being is reflected in the being of the state (the matter finds expression, inter alia, in language and in days of rest). The fundamental values of Judaism are the fundamen-

> tal values of the state – namely, love of man, the sanctity of life, social justice, doing what is good and right, preserving human dignity, the rule of law, etc. – values bequeathed by Judaism to the entire world. These values must be approached on a universal level of abstraction, befitting the democratic character of the State. Hence, the values of the State of Israel as a Jewish State cannot be identified with Jewish Law. One must not forget that a sizeable non-Jewish population lives in Israel. Indeed, the values of the State of Israel as a Jewish State are those same universal values that are common to democratic societies, which emerged from Jewish tradition and history. These values are accompanied by the selfsame values of the State of Israel, which spring from the democratic nature of the state. The combination and synthesis between the two are what have shaped the values of the State of Israel" (see bibliography, Barak, *Mishpat u-Mimshal*, I .30).

In contrast to the above position, Justice Menachem Elon holds that Justice Barak is employing disparate criteria in interpreting the terms "Jewish" and "democratic," notwithstanding that both terms are meant to describe the nature of the State of Israel. Such interpretation, he asserts, transforms the term "Jewish" into an unimportant, secondary addendum to the term "democratic," without any exegetical rationale or justification for doing so. According to Justice Elon, in setting out to interpret the values entrenched in the aforesaid Basic Laws, the court must have recourse to sources from Jewish Law dealing with the values anchored in these basic laws, in the same way as it has recourse to democratic sources for these values. All this is mandated by the directive set out by the legislator in the law's statement of purpose, according to which the aforesaid basic laws are intended "to establish in a Basic Law the values of the State of Israel as a Jewish and democratic state." The legislator's intent was to find the common ground between the world of Judaism and that of democracy, in such a way that the two worlds will complement one another:

> In coming to interpret the basic rights in the Basic Law: Human Dignity and Freedom with the goal of anchoring the values of the State of Israel as a Jewish and democratic state, we must examine the substance of every individual right that comes before us; we must deliberate on it and come to grips with its content. In addressing the fundamental values of the Jewish heritage with regard to the fundamental rights in The Basic Law: Human Dignity and Freedom, the legislator must relate to the body and content of these values. He must deliberate and examine their philosophical underpinnings and examine the rulings and responsa in the remarkable Jewish legal and philosophical heritage throughout the ages, just as the legislator's relation to the fundamental values of democracy must consist of his examining and analyzing their body and content, sources and rulings – as we judges indeed do when we sit in judgment of the cases that come before us. Only after such examination and analysis do we arrive at our judicial conclusion regarding any of the fundamental rights found within the Basic Law: Human Dignity and Freedom. The resulting synthesis, from the standpoint of the State of Israel being a Jewish and democratic state, is reached by the judge in accordance with his approach, understanding and interpretation. (See Elon, in *Iyyunei Mishpat,* 17 p. 670). See also CA 294/91 *Ḥevra Kaddisha Gachsha Kehillat Yerushalayim v. Kastenbaum,* PD 46(2) 464, 510ff; 506/88 *Shefer v. the State of Israel*, PD 48(1) 87,102ff., 167ff.).

An important source relied upon by Justice Elon in interpreting the term "Jewish and democratic state" was the comment made by the chairman of the Knesset Constitution Committee in the Knesset plenum, during the deliberations over the Basic Law: Human Dignity and Freedom:

> This law was prepared with the understanding that we must create a broad consensus of all parties in the house. We were aware of the fact that we cannot pass a basic law which fixes the values of the State of Israel as a Jewish, democratic state unless we reach a broad consensus of all the parties in the house…. The law opens… with a declaration that it is intended to protect human dignity and freedom so as to entrench in the law the values of the State of Israel as a Jewish, democratic state. In this sense, the law already determines in its first section that we view ourselves as committed to the values of the heritage of Israel and of Judaism, for the law positively and explicitly states "the values of the State of Israel as a Jewish and democratic state." The law defines several of the fundamental freedoms of the individual, not one of which contradicts the Jewish heritage or the values system that is widespread and accepted today in the State of Israel by all parties of the house (Knesset Session 125 (1992 – 5752) (3782–3783).

Section 1 of the Basic Law: Human Dignity and Freedom, and the Basic Law: Freedom of Occupation ("Fundamental Principles") constitutes an additional focal point in the controversy between Justice Barak and Justice Elon. According to these sections, which are identical in their wording, "Basic human rights in Israel are founded on recognition of man's worth, the sanctity of life and his being free, and they shall be respected in the spirit of the principles in the Declaration of Independence of the State of Israel." This section was inserted in the Basic Laws in the 1994 amendments, and it raised the question of the relationship between the new fundamental principles and the previous statement of purpose appearing in the original versions of the two Basic Laws. According to Justice Barak, "Every one of the paragraphs assists in interpreting the others. Thus, for example, the statement of purpose of the Basic Law: Human Dignity and Freedom should be assumed to espouse the appreciation of man's worth, the sanctity of his life and his intrinsic freedom. Moreover, wherever there is an irresolvable internal contradiction between the values of the State of Israel as a Jewish State and its values as a democratic state, that contradiction can be resolved in light of the fixed fundamental principles in the clause pertaining to such principles" (see Barak, *Parshanut Ḥukatit*).

Justice Elon, who criticized the hasty way in which, in his view, the sections of the fundamental principles were legislated, holds that these sections are declarative and no more, and that they bear no practical relevance. Justice Elon concludes this from the section's declarative wording, and from the fact that it is based on "principles in the Declaration of Independence of the State of Israel." According to Justice Elon, that declaration includes many topics, making it difficult to determine which of the principles in the Declaration are meant

to be the basis for respecting basic human rights in Israel (see Elon, *Meḥkerei Mishpat,* 12, pp. 289ff.).

The dispute between Justices Barak and Elon continues their earlier dispute regarding Section 1 of the Foundations of Law Act, 1980 (see: **Mishpat Ivri*, Jewish Law in the State of Israel; *Lost Property). According to that law, "Where the court, faced with a legal question requiring decision, finds no answer to it in statute law or case law or by analogy, it shall decide the issue in the light of the principles of freedom, justice, equity and peace of the Jewish heritage." According to Justice Barak's interpretation of this section, those cases in which a lacuna cannot be answered by way of statute law, case law, or analogy are very limited; hence, there are very few cases, if any, in which the court will "decide in light of the principles of freedom, justice, equity and peace of the Jewish heritage."

By contrast, according to Justice Elon, Section 1 implies *that wherever an uncertainty arises in the interpretation of a legal provision of statute in the Israeli legal system*, the Foundation of the Law directs the court to have recourse to Jewish Law, its source of inspiration and interpretation, except where the law in question explicitly contradicts Jewish Law. Justice Elon criticizes Justice Barak's interpretation of Section 1, which he sees as divesting it of all practical content since, according to Barak's approach, there is almost no chance of a lacuna being created that would direct the court to the principles of the Jewish heritage (see HC 1635/90 *Jerczewsky v. the Prime Minister*, PD 45(1) 749). Justice Elon holds that, once the aforementioned Basic Laws were passed, there was no longer a specific need for lacunae – which according to Justice Barak are almost nonexistent anyway – in order to have recourse in the values of the State of Israel as a Jewish state. Justice Elon criticizes Justice Barak's approach to interpreting "the values of the State of Israel as a Jewish and democratic state," as suffering from the same defects as does his interpretation of Section 1 of the Foundations of Law Act:

> His approach to interpreting the Foundations of Law Act… has led to… closing the door on recourse to the principles of the Jewish heritage. By those means the Foundations of Law Act was rendered essentially useless. Moreover, employing Justice Barak's approach to interpretation of the Basic Law: Human Dignity and Freedom precludes *a priori* ever having recourse to the sources of the Jewish heritage and the Jewish world. The Law and its purpose are thus stymied. (See Bibliography: M. Elon, *Iyyunei Mishpat* 17, p. 688.)

It should nevertheless be noted that in recent writings Justice Barak has attributed more weight to Jewish Law in the framework of the relevant sources for interpreting Basic Laws, and for the interpretation of legislation in general (see Barak, *Shofet be-Ḥevrah Demokratit*, pp. 156–159).

Justice Haim Cohn interprets the terms "Jewish and democratic state" differently. In his view, the interpreter must adopt, from within the principles of Jewish Tradition, only those principles befitting and appropriate to a democratic society. According to this approach, when the discussion concerns a universal, democratic value that also exists in Jewish Law, the particular notes and emphases found in Jewish Law should be applied, and these should be preferred over the interpretation given to the same value in other legal systems. In any case, according to Justice Cohen, "Jewish values will generally not have to conflict with democratic values. Yet when they do conflict, democracy must always take precedence" (see Cohn, *Ha-Praklit*, 50, 24).

Another one of the numerous interpretations offered for the term "Jewish and democratic" is that of Ariel Bendor. Bendor contends that according to the limitation clause of the Basic Laws, the constitutionality of a law that violates a right entrenched in the Basic Law is determined in accordance with its consistency (or inconsistency) with the "values of the State of Israel." The implied reference is to the State of Israel as a Jewish, democratic state, as appears previously in the law's statement of purpose. Accordingly, Bendor holds that the law in question must undergo a twofold examination: Is the law consonant with the values of the State of Israel as a Jewish state, and is it consonant with the values of the State of Israel as a democratic state? If it turns out that the law is inconsistent with one of these values, that law does not meet the conditions of the limitation clause, and the court is entitled to declare the law void.

Bendor emphasizes that, under certain circumstances, the principles of Jewish Law protect human rights more effectively than democratic principles. Thus, for example, under certain circumstances, rights afforded suspects and defendants on trial in Jewish Law, as emerged from a ruling by Justice Menachem Elon, are broader than those afforded suspects and defendants on trial according to democratic principles (see: *Detention; *Imprisonment; *Imprisonment for Debt). Where the law is inconsistent with the values of Jewish Law in these matters, the court is entitled, as noted, to declare a law void (see Bibliography: A. Bendor, *Mishpat u-Mimshal*, 2).

A striking example of the application of Justice Elon's interpretation of "Jewish and democratic state" was the Shefer case (CA 506/88 *Shefer v. the State of Israel*, 48(1) 87), in which the Supreme Court, inter alia, adjudicated the question of active euthanasia (see *Medicine and the Law: Euthanasia). Justice Elon examined the problem in accordance with the need to balance between the Jewish values of the State of Israel and its democratic values. He ruled that, according to *halakhah*, the point of departure of this question is:

> [T]he supreme value of the sanctity of human life. This supreme value has its foundation, as noted, in the supreme tenet of man's having been created in the image of God, with everything necessitated and implied by that. All this being so, there does not exist, nor can there exist, any way of measuring a man's value… This being the case, actively hastening death, actively shortening a man's life, even if it be labeled 'mercy killing,' is absolutely forbidden, even if performed at the patient's request. Our great duty under the circumstances is to ease the patient's pain and suffering in every possible way (page 144 of the ruling).

Justice Elon also discussed the position of the various demo-

cratic systems on this question, and then turned to discussing a synthesis of these systems:

> We are committed to finding a synthesis between the dual purposes of the Basic Law: Human Dignity and Freedom – namely, entrenching the values of the State of Israel as a Jewish and democratic state in its laws… One of the fundamental issues in the case before us is the possibility of actively hastening death. Jewish Law absolutely forbids this possibility, and there is no opinion or even a trace of opinion which permits this act, which in the world of *halakhah* is viewed as murder. Among democratic legal systems, American law prohibits actively hastening death. By contrast, in the Dutch legal system, active euthanasia is permitted and has even been legislatively regulated. It is clear and goes without saying that on this question synthesizing Jewish Law with that of a democratic country means accepting the common ground of Jewish Law and American law regarding the prohibition against actively hastening death, while absolutely rejecting the Dutch position that permits actively hastening death. Moreover, even if most of the democratic legal systems permitted, under certain circumstances, active euthanasia… A synthesis would be achieved through finding the common ground between Jewish Law and the legal system of any one country that still forbade it. Even more to the point, even if in actual fact not one democratic legal system forbade active euthanasia… since active euthanasia contradicts the essence of the State of Israel as a Jewish State, as we emphasized above, synthesizing the two concepts – "Jewish and democratic" – would mean preferring the conclusion necessitated by the values of a Jewish State and interpreting "democratic state" accordingly (pp. 167–68 of the ruling).

(For additional instances in which Justice Elon's approach to interpreting "Jewish and democratic state" was applied, see *Mishpat Ivri: Jewish Law in the State of Israel.)

In the topic under discussion, it would be appropriate to refer to points emphasized in the entry, "Law and Morality" regarding the instructive position of Jewish Law in terms of the role of the court, where appropriate, in compelling litigants to go "beyond the letter of the law." Toward the end of that discussion, Elon said:

> As written above, in rulings touching on these questions, and handed down before passage of the Basic Laws of the State of Israel, the court could only recommend going beyond the letter of the law. Yet in 1992, Basic Laws were enacted whose declared purpose was to establish in a Basic Law the values of the State of Israel as a Jewish and democratic state." In those laws, the term "Jewish" precedes the term "democratic," thereby according a preeminent role to Jewish Law within the values of the State of Israel as a Jewish State. In wake of these Basic Laws, it would seem appropriate for the issue of ruling beyond the letter of the law to emerge anew. The courts should adopt the approach of compelling litigants, under appropriate circumstances, to go beyond the letter of the law. A central sphere in the integration of Jewish and democratic values is the relationship between law and morality, and it is clear that Basic Laws need to have an influence on this sphere, and on the interpretation of associated legislation.

Examples of this from the realms of statute law and case law have been brought in our discussion of the topic, *Law and Morality.

[Menachem Elon (2nd ed.)]

VALYI, PETER (1919–1973), Hungarian statesman. Valyi was born in Szombathely, Hungary. His father, Emanuel, the owner of a brick factory, was for some time head of the local Jewish community. There was even a suggestion that Valyi should train for the rabbinate, and for this purpose, in addition to his secular studies at the local high school, he was taught Bible and Talmud privately. During the period of Nazi rule in Hungary in 1944, the Valyi family was exempted from transportation to Auschwitz in view of the fact that the head of the family had been awarded a gold medal for bravery in World War I.

Valyi graduated as an engineer at the Technion of Budapest. As soon as the Red Army entered Hungary, he joined the ranks of the Communist Party, gradually rising to a position of importance. In 1954, he was appointed deputy director of the planning organization of the Communist Party and continued in this office until 1967, when he was appointed minister of finance in the government of Hungary. In 1970, he was appointed deputy prime minister, and put in charge of economic planning. He was regarded as the father of the new policy which produced a remarkable growth of Hungary's economy. This policy, which included the establishment of strong economic ties with the West, was not viewed favorably by the Russians and it also met with internal opposition. As a result,

it was only in his last years that Valyi was elected to the Central Committee of the party, and he was never made a member of the Politburo. From the time that he rose to prominence, Valyi severed all relations with the Jewish community, and even with members of his family. He died in mysterious circumstances in 1973. According to reports, he fell into a furnace while inspecting the processes of steel manufacture at a factory.

VAMBERY, ARMINIUS (1832–1913), Hungarian traveler and Orientalist. He was born Hermann Vamberger (erroneously referred to as Bamberger) of Orthodox parents in Dunajska Streda on the island of Schütt, Hungary, Vambery, who was congenitally lame, worked to maintain himself from the age of 12 as a tailor's apprentice and later as a tutor. Possessed of an extraordinary capacity for languages and a phenomenal memory, he mastered numerous European languages and then turned to Arabic, Turkish, and Persian, achieving magisterial fluency and control in these.

In his early twenties, fired by the dream of exploring the putative homeland of the Magyars in Asia, he moved to Constantinople where he lived as a tutor of European languages and executed translations from Turkish history. He became a Muslim and entered the service of the Turkish government as secretary to Mehmet Fuad Pasha, five times foreign minister of Turkey. While in Constantinople he earned the esteem of Sultan Abdul-Hamid II.

During his six years in Constantinople, he published a Turkish-German dictionary (1858) and other linguistic works, acquired a variety of Oriental languages and dialects, and traveled extensively. In 1863–64 he undertook a long and arduous journey through Armenia, *Persia, and Turkestan, disguised as a Sunnite dervish under the assumed name Rashid Effendi. He journeyed across the Turkoman desert on the eastern shore of the Caspian to Khiva, *Teheran, Trebizond, *Bukhara, Samarkand, Herat, and back to Constantinople maintaining his disguise to the end despite many difficult tests, which might have cost him his life had the Muslim authorities known his identity. Said to have been the first European to make such a journey, the account of his exploits, *Travels and Adventures in Central Asia* (1864), aroused great interest throughout Europe. This was the case especially in England appearing as it did at a time of acute tension between Russia and England for the mastery of Central Asia. During his peregrinations in Persia he established contact with the British legation and his pro-British orientation combined with his masterful knowledge of the Near East and *India were to make him an important and useful advocate of British foreign policy.

After his return from the long trek in the spring of 1864, he visited London where he was lionized for his triumph as an intrepid adventurer and his impressive polyglot achievement. Then after a stop in Paris, Vambery, who had apparently become a Protestant, accepted an invitation from the University of Budapest to teach Oriental languages and in this capacity he served until 1905. Among his students were I. *Goldziher, B. *Munkacsi, and I. Kunos.

He produced a whole range of works on Oriental languages and ethnology and in addition, essays on political questions and popular accounts of his travels, one of which was a favorite boys' book. His books were translated into many languages but his autobiography, *Arminius Vambery, His Life and Adventures* (1883), and his memoirs, *The Story of My Struggles* (1904), were written in English. One of his scholarly contributions to Turkology was the discovery of the relation of Turkish and Magyar. He also contributed to the ethnology of Central Asia and India. A staunch protagonist of British dominance in the East he placed his vast knowledge of Central Asia at the disposal of Great Britain, serving as her adviser on Indian and Asiatic policy, executing various diplomatic missions in the Near East, and becoming a personal friend of the prince of Wales, later Edward VII. His preoccupation with the "Eastern question" is documented in various political essays, e.g., *The Coming Struggle for India* (1885).

Vambery supported *Zionism in its emergent stage by introducing Theodor *Herzl to Sultan Abdul-Hamid in 1901. After Herzl's death Vambery's counsel in respect of the Zionist cause was solicited by David *Wolfssohn. Vambery married Cornelia Aranyi (a niece of Joseph *Joachim, the violin virtuoso) and their son was the criminologist Rustem Vambery.

[Ephraim Fischoff]

°VANCE, ZEBULON BAIRD (1830–1894), North Carolina lawyer and politician who supported Jewish rights. Vance, a colonel in the Confederate army in the Civil War, served in his state legislature (1854–61) and was governor. He went on from there to the U.S. Senate (1879–94). Vance is known to the Jewish world primarily for a lecture, *The Scattered Nation* (1904, 1916), that he delivered many times. It is a tribute to the Jewish people, praising their love of learning and their having flourished despite a history of persecutions.

VANCOUVER, city in British Columbia and largest in Western Canada, with a population of nearly 2 million in 2001, including a Jewish community of 22,590.

Jewish life in Vancouver began in the early 1880s, when a small number of pioneers arrived at the town site of the future metropolis, drawn by the prospects of its deep-sea harbor on the Pacific Ocean and impending status as the terminus of the trans-Canada railway. One of the city's most prominent early builders was David Oppenheimer (1834–1897), a Jewish resident of German origins who served as Vancouver's second mayor from 1887 to 1891. During his term in office, Oppenheimer opened foreign trade and initiated the construction of Vancouver's water supply, sidewalks, bridges, transit, and lighting. He also donated large tracts of his personal property

for civic facilities and the promotion of local industry. Oppenheimer was popularly known as the "father of Vancouver," and his bust still stands at the entrance of Stanley Park, the world-famous green space that he procured for the city in 1888.

Until the beginning of the 20th century, Vancouver's Jewish population remained below 200, split between a small congregation (Temple Emanuel) of acculturated West European Jews living in the west end and an increasing number of East European newcomers. Most of the latter concentrated initially in Vancouver's immigrant district in the Strathcona and Chinatown areas, many working in the clothing trade or secondhand goods. By 1911, the East Europeans had swelled the Jewish community to 1,024, becoming the dominant element. In 1907 the Orthodox congregation B'nai Yehuda (Sons of Israel) was established under the presidency of Zebulon Franks (1864–1926), a merchant in whose store and home the first Orthodox services in Vancouver had been held 20 years earlier. The congregation opened its first synagogue in 1911 and changed its name to Schara Tzedeck (Gates of Righteousness) in 1917, building a much larger synagogue in 1921, when Vancouver's Jewish population had reached 1,376. For the next three decades Schara Tzedeck was led, for the most part, by Nathan Mayer Pastinsky (1887–1948), a qualified *shoḥet* who became the religious leader for the Jewish community, universally respected for his citywide welfare work and spiritual leadership.

As the Jewish community grew to 2,440 by 1931, a vigorous organizational life became the hallmark of Vancouver Jewry. The first secular group to form was a B'nai B'rith lodge in 1910. During the 1930s to 1950s, the lodge sponsored a highly successful interfaith "Goodwill Dinner" each year, honoring leading representatives from different areas of public life. A Zionist and Social Society was founded in 1913, the official beginning of the community's long history of support of a Jewish state. The first of numerous Hadassah chapters was organized in 1920, and for many years the group ran the largest annual bazaar in the city. The National Council of Jewish Women has also been very prominent in Vancouver since 1924, initiating a number of innovative social programs for children and the elderly. A women's B'nai B'rith section was formed in 1927 and Pioneer Women in 1933. Among the community's youth groups during these years were Young Judaea and Aleph Zadik Aleph, and slightly later, Hillel and one of the most active Habonim chapters in North America.

Early mutual aid organizations included a Hebrew Immigrant Aid Society, a Hebrew Free Loan Association, and an Achduth Society (credit union) established in 1927. A Jewish Community Chest was founded in 1924 to centralize the community's fundraising, later serving as the model for the Vancouver-wide Community Chest. In 1928, a Jewish community center was opened and began publishing a weekly newssheet, the precursor to the *Jewish Western Bulletin*, which has served as the community's newspaper since 1930. To coordinate these new institutions and organizations, a Jewish Administrative Council was established in 1932, superseded by an enlarged representative body in 1950, the Jewish Community Council and Fund. Internal community welfare work was also strengthened through the 1936 creation of a Jewish Family Service Agency, run for many years by social worker Jessie Allman, and the 1946 founding of the Louis Brier Home for the Aged.

In addition to a strong tendency toward institutional affiliation, since the end of World War II rapid growth has become a dominant feature of Vancouver's Jewish community. In 1951 the population was 5,467, and by 1971 it was 10,145. Although the majority of newcomers were Jews from other parts of Canada, particularly the prairie provinces, there were also several hundred Holocaust survivors and, later, refugees from Hungary and the Soviet bloc. Vancouver's generally high level of postwar prosperity allowed for considerable upward mobility and economic diversification in the Jewish community, marked by a residential shift away from the east end to the more affluent Oak Street corridor in the south-west part of the city. In 1948, a Talmud Torah day school was built in the area, as was the Schara Tzedeck's new synagogue. The Beth Israel, a Conservative congregation that had been incorporated in 1932, also opened a new Oak Street synagogue in 1948, eventually surpassing Schara Tzedeck in membership. Further cultural and religious diversity emerged with the revival of a Reform group in the 1960s, the incorporation of a Sephardi congregation in 1973, and the arrival of Lubavitch in 1974.

In the midst of this rapid expansion, the 1962 opening of an ambitious new Vancouver Jewish Community Centre created a focal point for communal activities, housing many of the Jewish community's organizations as well as providing cultural and athletic facilities. The Pacific Region of the Canadian Jewish Congress (CJC), which had become its own branch in 1949, also assumed a leading role in community public relations, advocacy for Israel, and a number of educational initiatives. Although antisemitism in Vancouver was never a serious threat, the CJC was particularly active in calling for anti-discrimination legislation, co-founding the Vancouver Civic Unity Council for this purpose during the 1950s. Congress also sponsored a number of Christian-Jewish dialogues in the 1970s, and during the 1980s helped found an umbrella organization known as the Committee for Racial Justice. Longtime Pacific Region Executive Director Morris Saltzman (1918–1988) was especially active in inter-ethnic outreach, and in tandem with Lou Zimmerman (1911–1987), the first and longest-serving Jewish community civil servant in Vancouver, provided much of the organizational leadership throughout the postwar decades.

In addition to several programs and facilities for the religious education of youth and adults, most recently the Community Kollel and the Pacific Torah Institute, a Vancouver Peretz Centre has been providing secular, humanist Jewish education since 1945, also maintaining a small Yiddish presence. Other Jewish cultural initiatives in Vancouver have included the establishment of a Judaica library and a program of Jewish Studies at the University of British Columbia. A Van-

couver-based Jewish Historical Society of B.C. has been in operation since 1971, with a museum devoted to local Jewish history scheduled to open. The very successful annual Jewish Film Festival and Jewish Festival of the Arts have also become part of the community calendar. Since the mid-1970s, Holocaust awareness has taken on increasing prominence as a vehicle for education, most notably through the 1976 inception of an annual symposium for high school students and the 1995 opening of a Vancouver Holocaust Education Centre.

Vancouver now has the third largest Jewish community in Canada, with its 2001 Jewish population of 22,590 just over 1% of the total population of the city. Although the Oak Street corridor remains home to approximately half of the city's Jews, considerable expansion has taken place into the suburbs, with new synagogues and Jewish community centers in Richmond, Burnaby/Coquitlam, North Vancouver, and Surrey. There are more than a dozen congregations across the metropolitan area, with affiliations ranging from Egalitarian to Chabad. To provide services to this increasingly dispersed community, a Jewish Federation of Greater Vancouver was established in 1987, assuming responsibility for the Combined Jewish Appeal campaign, which supports over 30 local agencies as well as Israeli and overseas Jewish causes. A Shalom B.C. welcoming center also provides newcomers with information about local Jewish life.

There have been many Vancouver Jews to have an important impact on both the Jewish and non-Jewish communities. Businessman Jack *Diamond (1910–2001) was an extremely prominent leader and benefactor, helping to found several major charities such as the local Variety Club, the B.C. Heart Foundation, and the Diamond Foundation. He also served as chancellor of Simon Fraser University (SFU), as did prominent businessman and philanthropist Joseph Segal (1925–). Morris Wosk (1917–2002) was one of SFU's greatest benefactors, particularly in the establishment of the downtown Harbour Centre campus. Judge Nathan *Nemetz (1913–1997) was the first Jewish chancellor of the University of British Columbia as well as the first Jewish chief justice of the B.C. Supreme Court and B.C. Court of Appeals. The first Jewish judge in Canada, Samuel *Schultz (1865–1917), was also a Vancouver resident. In politics, Dave *Barret (1930–) served as the provincial premier in 1972–75, while Harry Rankin (1920–2002) served on the Vancouver City Council for over 20 years and journalist Simma Holt (1922–) was the first Jewish woman to serve as a member of Parliament, representing the Vancouver-Kingsway district. Between 1969 and 1983, Muni Evers (1914–2002) was re-elected seven times as the mayor of New Westminster, part of Greater Vancouver.

[Barbara Schober (2nd ed.)]

VAN DAM, HENDRIK GEORGE (1906–1973), leader and recognized spokesman of the post-war Jewish community in Germany. Born in Berlin, Van Dam studied law, but his legal career came to an abrupt end with Hitler's rise to power. After spending several years in Holland and Switzerland, he emigrated to England, and in 1941 enlisted in the British Army, later serving in Holland and occupied Germany. After his release from the army in 1946, he volunteered for the Jewish Relief units and served as their legal adviser and later as director for the British Zone of Occupation in Germany. With the establishment of the Central Council (Zentralrat) of the Jews in Germany, he was appointed secretary general of the Council in October 1950, with residence first in Hamburg and later in Duesseldorf, continuing in that capacity until 1972. He participated in the negotiations between the *Conference on Jewish Material Claims against Germany and was a delegate of the German Government at The Hague in 1952, and became one of the foremost legal experts in the field of restitution and indemnification.

Van Dam's book, *Das Bundesentschaedigungsgesetz* ("The Federal Indemnification Law," 1953) became a classic and has been published in several revised editions. He also wrote *Die Haager Vertragswerke* ("The Hague Treaties," 1952), *KZ Verbrechen vor deutschen Gerichten* ("Concentration Camp Crimes before German Tribunals," 2 vols., 1962–66), and *Die Unverjaehrbarkeit des Voelkermordes* ("No Statute of Limitation for Genocide," 1969).

Early in 1950, Van Dam was asked by the Israel Ministry of Finance to prepare an opinion on the legal basis and prospects of a claim by the Government of Israel to inherit heirless Jewish property. In a memorandum submitted to the Ministry on July 1, 1950, Van Dam advised the Israel Government to enter into negotiations with the Government of the Federal Republic of Germany. His advice, though at that time premature from both the Israeli and German points of view, proved his foresight.

Van Dam was one of the chief protagonists of the reconstitution of a Jewish community in Germany. He believed that the reestablishment of the community was not only an inalienable right of the Jews but also in the interest of world Jewry. He maintained that the reemergence of a viable and strong German Republic was a world necessity, and that it was in the interests of the free world – and therefore also of the Jewish people – that the new Germany be integrated in the new world as a reformed and truly democratic component. Normalization of relations between the Jewish people and the new Germany, he felt, was unavoidable in the long run, and should therefore not be delayed, and in this process the Jewish community in Germany could and must play a decisive role. A large-scale German reparations program (in the sense of undoing the wrong; in German, *Wiedergutmachung*) would not only meet a justified Jewish claim, but also act as a catalyst in the process of normalization. Although Van Dam refused to advocate the return of Jews to Germany, he also refused to dissuade Jews from returning. Since the community existed and should exist, its voluntary dissolution would not serve the interests either of world Jewry or of the State of Israel. He coined the slogan: "We insist on existing" and maintained his view against the opposition of many Jewish leaders and movements.

Although he recognized the need for a Jewish State after the Holocaust and was always ready to lend his advice and active assistance to Israel, Van Dam emphasized that he was not a Zionist, believing rather in a polycentric world Jewish community. He died in Dusseldorf.

[Chaim Yahil]

VAN DER HOEDEN, JACOB (1891–1968), bacteriologist. Van der Hoeden was born in Utrecht, Holland, where he received his doctorate in 1922. From 1920 to 1930 he was senior bacteriologist in the medical department of the Dutch National Institute for Public Health and from 1930 to 1949 director of the bacteriological laboratory of the Hospital of the University of Utrecht. In 1949 he was invited by the government of Israel to advise on the organization of veterinary research and decided to settle there, heading the department of epidemiology of the Biological Research Institute in Nes Ẓiyyonah until 1955. In 1956 he was appointed clinical professor of bacteriology at the Medical School of the Hebrew University and was elected a member of the committee on zoonosis of the World Health Organization. He was awarded the Israel Prize for agriculture in 1961.

VÁNDOR, LAJOS (1913–1945), Hungarian poet. His wry and sophisticated verses were published in the 1930s and again in 1989 in a volume titled *Egy költö élt itt köztetek* ("A Poet Lived Here Amongst You"). Vándor was a victim of the Holocaust.

[Eva Kondor]

VANE, SIR JOHN R. (1927–2004), U.K. pharmacologist. Vane was born in Tardebigg, Worcestershire, the son of a father descended from Russian immigrants and an English mother. His family lived in Birmingham where he was educated at King Edward VI High School. Although he gained his B.Sc. in chemistry from the University of Birmingham University (1946), he realized that this subject of his boyhood fascination no longer interested him. He studied pharmacology at Oxford University, where he obtained his D.Phil. (1953) from the University's Nuffield Institute for Medical Research under the direction of Geoffrey Dawes. He was assistant professor in the department of pharmacology of Yale University (1953–55) before joining the Institute of Basic Medical Sciences of the University of London, eventually sited at the Royal College of Surgeons (1955–73) where he became professor of experimental pharmacology. He left to become Group Research and Development Director of the Wellcome Physiological Research Laboratories in Beckenham, Kent (1973–86). In 1986 he founded a new laboratory at St Bartholomew's Hospital Medical College, University of London which developed into the William Harvey Research Institute. Vane established a novel method for directly detecting and measuring unstable hormones and mediators in small blood samples from experimental animals. His main interest was the large and complicated group of substances called prostaglandins and the manner in which these regulate blood flow. He made major contributions to the discovery of the member of this group called prostacyclin clarifying its role in inhibiting blood clots. He showed that the therapeutic effects of aspirin and other anti-inflammatory drugs result from inhibiting the enzyme cyclo-oxygenase, also part of the prostaglandin group. For these discoveries, he was awarded the 1982 Nobel Prize in physiology or medicine, shared with Sune Bergström and Bengt Samuelsson. He also participated in and directed research that led to the introduction of drugs inhibiting angiotensin-converting enzyme (ACE), now routinely used to treat high blood pressure and some forms of heart disease. He also worked on the pharmacological regulation of the specialized cells lining blood vessels. He was deeply concerned with international scientific collaboration and especially with Polish scientists. His many honors included election to the Royal Society (1974), the Bunim Medal of the American Rheumatism Association (1979), and foreign membership in the American Academy of Arts and Sciences (1982) and the U.S. National Academy of Sciences (1983). He was also awarded the Lasker Award in Basic Medical Science (1977), a knighthood (1984), and the Polish Order of Merit (2003).

[Michael Denman (2nd ed.)]

VAN HODDIS, JAKOB (**Hans Davidsohn**; 1887–1942), German poet. Born into an assimilated family, Van Hoddis chose as a pseudonym an anagram of his surname, Davidsohn. He was among the founders of the "*Neue Club*" in Berlin, regarded as the heart of German expressionism. His poem "Weltende" ("End of the World"), published in 1911, made its author famous overnight, becoming "the Marseillaise of the expressionist rebellion" (J.R. Becher). Showing first symptoms of psychosis at the age of 25, van Hoddis received private foster care from 1915 on. Twelve years later, incapacitated, he was referred to psychiatric clinics in Tuebingen and Goeppingen. While the rest of his family immigrated to Palestine just after Hitler's seizure of power, van Hoddis – like all Jewish psychiatry patients – was taken to the "Israelite Convalescent Home for the Mentally Ill" in Bendorf-Sayn; from there he was deported in April 1942 and murdered in a Polish concentration camp (presumably Chełmno or Sobibor).

[Philip Theisohn (2nd ed.)]

VAN LEER, LIA (1924–), founder of the Jerusalem Cinematheque and Jerusalem Film Center. Van Leer was born in Bessarabia, Romania, and immigrated to Israel in 1940. In 1955 she established, together with her husband, Wim van Leer (who died in 1992), the Israel Film Club in Haifa. A year later the couple established film clubs in Tel Aviv and Jerusalem. In 1960 they founded the Israel Film Archive, in 1972 the Haifa Cinematheque, and in 1973 the Jerusalem Cinema-

theque. The latter screens quality films seven nights a week and houses the Jerusalem Film Center as well as the archive. It has a collection of 30,000 films and 50,000 negatives, including the world's largest collection of Jewish films, and 20,000 videos and cassettes, a library, and an education department. In 1983 Van Leer was a judge at the Cannes Film Festival and in 1984 she founded the annual Jerusalem Film Festival. In 1988 she hosted a large delegation from Russia at the Festival. She has also been a judge at the Berlin, Chicago, and Venice film festivals. In 1998 she was awarded an Israeli Film Academy Award. She also received the French Chevalier des Artes et Lettres award in homage to Israeli culture and art. In 2004 she received the Israel Prize for her special contribution to Israeli society.

[Shaked Gilboa (2nd ed.)]

VAN OVEN, English family of physicians and communal workers. The founder is said to have been an Italian Jew named Samuel Bassan who settled in Oven (Hoven, Holland). ABRAHAM VAN OVEN (d. 1778) settled in London in 1759 after graduating in medicine at Leiden, and became physician to the Great Synagogue in 1767. He translated into Hebrew R. Dodsley's *Oeconomy of Human Life* (London, 1778). His son, JOSHUA VAN OVEN (1766–1838), was also surgeon to the Great Synagogue and a leading figure in London communal life. His *Letters on the Present State of the Jewish Poor in the Metropolis* (London, 1802), in answer to the strictures of the magistrate Patrick Colquhoun, initiated a systematic attempt to grapple with the social problems of London Jewry. He was foremost among the founders of the Jews' Free School and published a *Manual of Judaism* in 1835 for school use. Van Oven served as the school's president for many years. He was the father of BARNARD VAN OVEN (1796–1860), physician to the Great Synagogue from 1827, who was active in the movement for Jewish emancipation in England and published some effective pamphlets. He was a founder of the Jews' Infant Schools in 1841. Barnard's son, LIONEL VAN OVEN (1829–1905), besides being active in Jewish communal work, was a pioneer in the oral instruction of deaf-mutes.

Black, *JFS: The History of the Jews' Free School since 1832* (1998).

[Cecil Roth]

°**VAN PAASSEN, PIERRE** (1895–1968), writer and journalist; among the most fervent non-Jewish Zionists. Born in Gorinchem, Holland, to a Calvinist family, Van Paassen was raised on the Bible and love for the people and the land of Israel. From 1914 he lived in Canada. He became a world-famous journalist, noted for his travel articles and interviews with leading personalities. His attachment to the Jewish people and land of Israel emerged after his first visit to Palestine in 1925, and from then on his books and articles reflected his enthusiastic attitude toward Zionism. In 1942 Van Paassen headed in the U.S. the Committee for a Jewish Army. His book *The Forgotten Ally* (1943) was a sharp indictment of British anti-Zionist policy; its Hebrew version was banned by the Mandatory government in Palestine in 1946. He also polemicized against Jewish and Zionist leaders whom he accused of a moderate, compromising stance toward anti-Zionist Britain.

Van Paassen published many books, some of them autobiographical (*Days of Our Years*, 1943; *To Number Our Days*, 1964). He was the author of *That Day Alone* (1941), *The Time is Now* (1941), and *Jerusalem Calling* (1950) and the editor (together with J.W. Wise) of *Nazism, an Assault on Civilization* (1934).

[Getzel Kressel]

VAN PRAAGH, WILLIAM (1845–1907), English educator. Born Wolf Saloman in Rotterdam, Van Praagh pioneered the lip-reading method for deaf-mutes in England. He received his training from D. Hirsch, director of the Rotterdam School for the Deaf and Dumb, who had introduced into Holland the German oral method of instructing the deaf and dumb. When Baroness Mayer de Rothschild established the Jews' Deaf and Dumb Home in London (1866), Van Praagh was appointed principal. His patience and kindness endeared him to his pupils, and his methods proved successful. In 1872 the Association for the Oral Instruction of the Deaf and Dumb, which the baroness had founded, established a college for training teachers in the oral method, and a nonsectarian school for the deaf and dumb. Van Praagh became director of the college and principal of the school. In 1894 he founded the Union of Pure Oral Teachers.

Van Praagh's publications include *Plan for the Establishment of Day-Schools for the Deaf and Dumb* (1871), *Lessons for the Instruction of Deaf and Dumb Children in Speaking, Lip-Reading, Reading, and Writing* (1884), and *Lip-Reading for the Deaf* (1900^6). Dame (Margaret) Peggy Van Praagh (1910–1990), the well-known ballerina and director of the Australian Ballet, was his granddaughter. She was knighted in 1970.

[Shnayer Z. Leiman]

VAN RAALTE, EDUARD ELLIS (1841–1921), Dutch lawyer and statesman. Born in The Hague, after his academic studies he became a solicitor in Rotterdam, where in 1877 he joined the city council as a Liberal member, serving as an alderman in the period from 1892 to 1897. From 1885 to 1901 he was a member of the Liberal Union Party, of which he became chairman in 1907. Twice he served as a member of Parliament, namely, in the periods 1897 to 1905 and 1913 to 1918. In the De Meester administration (1905–08) he was minister of justice; in 1907 he initiated the Labor Contracts Act that bears his name. That same year an attempt was made against

his life by a malcontent musician. Van Raalte was appointed Knight in the Order of the Dutch Lion.

[Peter Manasse (2nd ed.)]

VANUNU AFFAIR, case of an Israeli nuclear reactor technician who disclosed Israel's nuclear arms secrets to the London *Sunday Times*. Mordechai Vanunu (1954–) was born in Morocco to a Sephardi religious family and immigrated to Israel in 1963. In 1977 he began work as a technican at Israel's nuclear research reactor at Dimonah, attached to Machon 2, where plutonium is separated from uranium. In 1985 he was laid off, moving to Australia. Prior to leaving, he took 57 photographs inside the reactor. On October 5, 1986, the *Sunday Times* published a three-page disclosure drawing on Vanunu's information. According to the newspaper, Israel possessed 100–200 nuclear warheads, which was much higher than most earlier estimates of the country's nuclear arsenal. It was also claimed that Israel was developing neutron and thermonuclear capabilities. The newspaper arrived at its estimate of the number of warheads on the basis of Vanunu's description of the amount of plutonium produced. Given that the fact that Israel had never confirmed whether or not it possessed the Bomb, Vanunu became the first eyewitness to the nuclear program to speak without authorization. He was abducted to Israel from Europe by Mossad agents and stood trial for espionage and treason. He was sentenced to 18 years' imprisonment, 12 of which were served in solitary confinement. In 2004 he was released from prison but prevented from leaving the country. Vanunu, who studied philosophy at Ben-Gurion University while working at the reactor, and converted to Christianity in Australia, said that he leaked the information so that the Israeli public and the world community would know about the nuclear danger. Vanunu became an icon in the international anti-nuclear movement. While the disclosure lowered incrementally the ambiguity surrounding Israel's nuclear program, it generated little international pressure on Israel, most Western governments recognizing that Israel should not be pressured on the nuclear issue at the same time it was being pressured to make territorial concessions to the Palestinians. Moreover, while most foreign governments adjusted their estimates of Israel's nuclear capability upwards – strengthening Israel's nuclear deterrent posture – not all countries, including the United States, went so far as to accept the *Sunday Times*' estimates. Vanunu was awarded a number of prizes from organizations promoting anti-nuclearism.

VAN VRIESLAND, SIEGFRIED ADOLF (**Zadok**; 1886–1939), Zionist leader. Born in Haarlem, Holland, Van Vriesland practiced law in Rotterdam and joined the Zionist movement in 1910. He became secretary of the Dutch Zionist Organization before World War I and, in 1919, settled in Palestine, where he was appointed treasurer of the Zionist Executive and was later active in the Haganah. He was Dutch consul-general in Palestine from 1929 and a member of the Zionist Executive from 1923 to 1927. Van Vriesland served as treasurer of the Executive during the difficult period for the *yishuv* and tried to balance its budget despite the economic crisis. From 1929 he was a member of the board of directors of the Dead Sea potash company. In 1936 he became manager of the port of Tel Aviv, opened during the Arab riots of that year. Three years later he decided to retire from public life and devote himself to art.

BIBLIOGRAPHY: Tidhar, 2 (1948), 602–3.

[Eliezer Livneh]

VAN VRIESLAND, VICTOR EMANUEL (1892–1974), Dutch poet, literary critic, and journalist. Born in Haarlem, Van Vriesland first worked as a journalist on the staff of *De Nieuwe Gids* and *De Vrije Bladen*, became literary editor of the daily *Nieuwe Rotterdamse Courant* (1931–38), and in 1937 edited *De Groene Amsterdammer.*

After World War II Van Vriesland published several collections of poetry, some of which was collected in *Drievoudig verweer* ("Threefold Resistance," 1949). Ten years later he published another collection, *Tegengif* ("Antidote"). His only novel, *Het afscheid van de wereld in drie dagen* ("Farewell to the World in Three Days," 1926; shortened version, 1936), had little success. He also wrote short stories, collected in *De ring met de aquamarijn en andere verhalen* ("The Ring with the Aquamarine and Other Stories," 1939), and some plays, notably *De Havenstad* ("The Seaport," 1933).

Van Vriesland was one of the few Dutch critics who dealt with Jewish literature in Western Europe. In his essay *De cultureele noodtoestand van het Joodsche volk* ("The Jewish People's Cultural State of Emergency," 1915), he adopted an extreme Zionist view in rejecting a future for Jewish art in Europe. Just before World War II he wrote a study of Dutch verse, *Spiegel van de Nederlandsche poezie door alle eeuwen* ("Mirror of Dutch Poetry throughout the Centuries," 1939). A collection of his critical essays was published as *Onderzoek en Vertoog* ("Research and Exposition," 2 vols., 1958).

[Gerda Alster-Thau]

VARAŽDIN, town in the district of Zagorje, on the Drava River, Croatia; important communications center on the Vienna-Trieste line. Jews arrived there in the mid-1750s, coming from Hungary, Burgenland, and Moravia. They traded in cattle, a fact documented in the 1761 municipal decree debarring them from this source of income. Their settlement was slow and gradual, since each individual had to procure for himself an "*inkolat*," i.e., a residence permit, which was not easily accorded. Among the first Jews on record, two are

of note: Isaac the Jew and Moses Jacobsohn. In 1793 a prayer-house was built near the city's fortification. Jewish physicians and merchants suffered from robbery and plunder. Mirko Breyer, the first librarian and publisher in Croatia, originated from Varaždin.

Among rabbis who officiated, notable is Yekutiel Hirschenstein, who served the community for more than three decades; he advanced proto-Zionist ideas and during his term a Jewish school was established. A synagogue was erected in 1861.

In the 19th century the community grew to over 500 members, many of whom were active in free professions. They endured some antisemitic harassment. An expulsion was threatened but not carried out.

In the 1920s and 1930s, the leaders were Dr. Oscar Pulgram, Dr. Hinko Blau, and Hermann Herzer, along with Rabbi Rudolf Reuven Glueck. During the Holocaust almost all Jews perished soon after the Nazi and Ustashe (Croat fascists) took power. The survivors re-established the community in 1945 and the synagogue was nationalized and partially repaired in 1946. It is used as a movie theater.

[Zvi Loker (2nd ed.)]

VARDI, ARIE (1938–), Israeli pianist, educator, and conductor. Born in Tel Aviv, he studied with Ilona Vincze, beginning his artistic career at the age of 15. He won the Chopin Competition in Israel, appeared with the Israel Philharmonic Orchestra with *Mehta, won the George Enescu International Competition in Bucharest, and gave recitals throughout Europe. Alongside his studies at the Rubin Academy of Music, Vardi also obtained a law degree at Tel Aviv University. He continued his piano studies in Basel with Paul Baumgartner and his composition studies with Pierre Boulez and Karlheinz Stockhausen. He performed widely as soloist with major orchestras and leading conductors in Eastern and Western Europe, the United States, Latin America, the Far East, Australia, and Japan. In 1992 he had his first Russian tour, playing in Moscow, St. Petersburg, and other cities. Vardi performed regularly as soloist-conductor the complete Bach and Mozart concertos. In later years, he included in his repertoire the complete piano works of Debussy and Ravel. His extensive repertoire also includes various Israeli works, many of which were dedicated to him. His recordings for RCA won several prizes. Vardi received international acclaim as one of the country's foremost pedagogues. He was a professor of piano at the Hochschule fuer Musik in Hannover and at the Rubin Academy of Music, TeI Aviv University, having served as its director (1977–9) and chaired the Piano Faculty. He held master classes and presented lecture recitals in Israel, the Juilliard School of Music, the London Royal Academy of Music, and other leading music institutions. In 1999, he was invited to the Yale University School of Music as a visiting professor. Vardi was the artistic adviser and chairman of the jury of the Arthur *Rubinstein International Master Competition, and served as juror of other great piano competitions. Devoted to the task of simultaneously guiding students, he successfully taught a vast number of great pianists, among them Yefim *Bronfman and Li Yundi. From the 1970s Vardi was known throughout Israel for his television series *Master Classes* as well as the family series of the Israel Philharmonic Orchestra, which he conducted and presented, and for his series "Intermezzo with Arik." He received Israel's Minister of Education Award in 2004 for lifetime achievement. He supervised Open University publications on music (1978–2004, in Hebrew) and published articles in Israeli music magazines and periodicals (1988–9, 1992–3).

VARDI, MOSHE (1938–), Israeli journalist. Vardi was born in Tel Aviv, the son of Dr. Herzl *Rosenblum, editor of **Yedioth Aharonoth*. He studied international relations in London, and in 1962 was appointed London correspondent of *Ha-Boker*. In 1965 he joined *Yedioth Aharonoth* as news editor. (In order not to be identified as his father's son, he hebraized his last name.) Vardi possessed a finely tuned sense for evaluating the news value of events, and a skilled pen in newswriting. Against the growth of television news, Vardi widened the role of the newspaper to also provide background analysis to news events. In 1986 he left the newspaper after Dov *Yudkovsky was chosen as editor instead of him, following Rosenblum's retirement, and joined *Haaretz* as deputy editor. But after Yudkovsky's dismissal in 1989, Vardi was appointed editor. His editorship was interrupted in the 1990s when he stood trial in the so-called wiretapping affair involving *Maariv* and *Yedioth Aharonoth*. Vardi, along with *Yedioth Aharonoth's* assignments editor Ruth Ben-Ari, were convicted of tapping the phones of *Maariv* publisher Ofer *Nimrodi and editor Dov *Yudkovsky, though the court determined that Vardi did not know where the tapes had come from. Vardi was given a suspended sentence. When the trial over, *Yedioth Aharonoth*'s publisher, Arnon *Mozes, reinstated Vardi as editor, a post he held until his retirement in 2004. His son, Doron Rosenblum, was also a journalist.

VARGA, YEVGENI SAMOILOVICH (1879–1964), economist. Born to a poor family in Hungary, he became a shop assistant, studied in his free time, and obtained a degree. In 1906 he became associated with the Hungarian Social Democratic Party, and from 1914 was a member of its central executive. Appointed professor of economics at the University of Budapest during the 1918 revolution, he attached himself to the Communists and became finance commissar under Bela *Kun. After the regime's fall, he fled to the Soviet Union. In 1922 he was sent to Berlin as head of the Soviet Foreign Trade

Mission and from 1926 to 1932 he served as editor of *Inprekorr Internationale Presse-Korrespondenz*, where his analyses of the foreign economics attracted attention. On his return to the Soviet Union he took charge of the newly formed Institute of World Economy and World Politics, and after its merger in 1936 with the Academy of Sciences of the U.S.S.R., Varga headed the academy's department of law and economics. His main achievements were his analyses and forecasts on which the Soviet Government widely relied for their information and orientation. Despite his erudition and industry he did not make an independent contribution to economics, mainly because he frequently saw the need to adjust his theories to the political exigencies of the day. However, in 1946 he surprised the public when he warned that an imminent crisis in the Western world – similar to the slump of 1929 – was unlikely. The Stalin regime removed him from his post and virtually impounded his book, but he lived to see his views come true. The Khrushchev regime officially vindicated his opinions and used them as the basis for its policy of peaceful coexistence.

Besides his many monographs and his articles in *Inprekorr*, he published his major study in 1946 under the title of *Osnovnye voprosy ekonomiki i politiki imperializma posle Vtoroy mirovoy voyny* (1946; *Problems of the Post-war Industrial Cycle*…, 1957²).

VARLIN (**Willy Guggenheim**; 1900–1977), Swiss expressionist painter, born in Zurich. Varlin studied under Emil Orlik in Berlin and then went to Paris, where he worked as a caricaturist. The dominant mood of his expressionist paintings is one of loneliness and alienation. His favorite subjects are nudes, portraits, and public places such as deserted restaurants and hotel interiors. In the latter he expressed the loneliness of the individual in an impersonal environment.

VARMUS, HAROLD ELIOT (1939–), U.S. microbiologist and Nobel laureate. He was born in Freeport, New York to Beatrice Barasch and Frank Varmus, and graduated with a B.A. from Amherst College, an M.A. in literary studies from Harvard University, and an M.D. from Columbia College of Physicians and Surgeons (1966). After clinical training at Presbyterian Hospital, New York (1966–68), he received his research training with Ira Pastan at the National Institutes of Health (NIH), Bethesda (1966–68) where he became interested in basic research. He then joined the department of microbiology of the University of California, San Francisco (1970–93) becoming professor (1979–83) and American Cancer Society Professor of Molecular Virology (1984–93). He returned to NIH as director (1993–99) before his appointment as president of Memorial Sloan–Kettering Cancer Center, New York, from 2000. His early interest in gene regulation started at NIH. In San Francisco he and his colleagues studied the relationships between retroviral and cellular genes. They discovered that oncogenic (cancer-causing) viruses contain altered versions of growth regulating genes found in normal cells; mutation or inappropriate activation of these normal genes, now known as proto-oncogenes, was proposed to be an important step in malignant transformation even in the absence of viral infection and as the result of other factors. These observations fundamentally influenced the subsequent direction of cancer research. For these discoveries he received the Nobel Prize for physiology or medicine (1989), jointly with his close collaborator Michael Bishop. His subsequent research interests have included retroviruses, hepatitis B viruses, and the development of drugs that inhibit enzymes on which the growth of cancer cells is dependent. His honors include election to the U.S. National Academy of Sciences (1984) and the American College of Arts and Sciences (1988), the Lasker Award for Basic Medical Research (1982) and the Gairdner Award (1984) (both with Michael Bishop), and the National Medal of Science (2001). Varmus was an influential adviser to many academic, national, biotechnology, and international organizations including WHO, concerned with health and scientific education in the developed world and Third World. His highly regarded books on science include *Genes and the Biology of Cancer* 1992 (with Robert Weinberg) written for general readers. Varmus has retained his passion for literature and the arts, and also for outdoor pursuits.

[Michael Denman (2nd ed.)]

VARNA, major seaport on the Black Sea coast of Bulgaria; ancient **Odessus**; called **Stalin** 1949–1956). During the 1880s there were 300 Jews in Varna. The organization of the community was made possible by the Tedeschi brothers. In 1919 there were 1,500 Jews; in 1938, 2,000; and in 1943, 1,254. Besides the Sephardi community, there was also a small Ashkenazi community. The Alliance Israélite Universelle opened an elementary school for boys and girls in the town in 1880 and two vocational centers, one for boys in 1885 and one for girls in 1898. A newspaper in Ladino, *Il Judio*, which had at first been published in Constantinople, was published in Varna from 1922 to 1927 under the editorship of David Elnecavé. In 2004 there were 217 Jews in Varna, affiliated with the local branch of the nationwide Shalom organization.

[Simon Marcus / Emil Kalo (2nd ed.)]

VÁRNAI, ZSENI (1890–1981), Hungarian poet. Zseni Várnai's verse expressed her Socialist and pacifist outlook. The tone of her writing changed, however, under the impact of World War II, during which she was active in the anti-Nazi underground. Two of her prose works are *Mint viharban a falevél* ("Like Leaves in the Storm," 1943) and the autobiographical *Fényben, viharban* ("In Light and Storm," 1958).

VARNHAGEN, RAHEL LEVIN (1771–1833), German intellectual and salon host. The oldest daughter of a prosperous Berlin merchant, Rahel Levin was raised in a home with

only minimal elements of Jewish practice. In 1795, she welcomed the opportunity to escape from Jewishness and into aristocratic Germany through an engagement to Count Karl von Finckenstein. However, after four years she broke off the engagement. Levin was a person of culture and intellect; her home became an informal meeting place for the literary, intellectual, social, and political luminaries of the day, such as Prince Louis Ferdinand, Prince Radziwill, Alexander von Humboldt and Wilhelm von *Humboldt, Friedrich Schlegel, Ludwig Tieck, Jean Paul (Friedrich Richter), Clemens Brentano, Friedrich von Gentz, Friedrich *Schleiermacher, Adelbert von Chamisso, and F.H.K. Fouqué. Among them were Jews and former Jews, Protestants and Catholics, nobility and commoners. In 1801 Rahel became engaged to the secretary of the Spanish Legation, Don Raphael d' Urquijo, but the engagement ended in 1804. After many difficult years of financial privation during the Napoleonic wars, Rahel married her confidant and admirer, Karl August Varnhagen von Ense. Weeks before their marriage in September 1814, she became a Protestant. The ceremony took place in the home of one of her brothers, who also later converted. Varnhagen's diplomatic career ended in 1819, when his liberal views ran counter to the rising reactionary tide. In Berlin, at the couple's renowned salon, Heinrich *Heine, Ludwig *Boerne, Karl *Gutzkow, and other authors close to the Young Germany movement found a congenial, liberal, and intellectual atmosphere. Varnhagen maintained an extensive correspondence; after her death, her husband published a collection of her letters, *Rahel; Ein Buch des Andenkens fuer ihre Freunde* (1834). In recent years a reconstructed documentary archive at the Jagiellonian Library in Cracow, Poland, has illuminated aspects of her life and legacy. Although Rahel Levin never denied her Jewish origin, it was always a source of conflict for her. In 1795 she wrote: "I imagine that just as I was being thrust into this world a supernatural being plunged a dagger into my heart with these words: 'Now, have feeling, see the world as only a few see it, be great and noble; nor can I deprive you of restless, incessant thought. But with one reservation: be a Jewess.' And now my whole life is one long bleeding. By keeping calm I can prolong it; every movement to stop the bleeding is to die anew, and immobility is only possible to me in death itself."

°**VARRO, MARCUS TERENTIUS** (116–27 B.C.E.), Roman scholar. Varro mentions the date palms of Judea (*De re rustica* 2:1, 27). Augustine reports that Varro identified the Jewish God with Jupiter (*De consensu Evangelistarum* 1:30, 31, 42). Elsewhere he notes that Varro, in praising a bygone era when Romans did not use images in worshiping gods, points to Judaism as proof of the greater piety in such practice (*De Civitate Dei* 4:31, 2). If the citation is accurate, it indicates a rare appreciation of Judaism, in contrast to the anti-Jewish remarks usually found in Roman literature.

[Jacob Petroff]

VARSHAVSKI, ABRAHAM (1821–1888), Russian philanthropist and *railroad builder. Varshavski was one of the builders of the Moscow Brest-Litovsk-Poltava railroad. He went to St. Petersburg from Poltava province at the beginning of the 1860s and was a member of the *Society for the Promotion of Culture among the Jews of Russia. In his last years (1883–88), he acted as expert in the High Commission for the Revision of the Jewish Legislature (The Pahlen Commission).

VAS, ISTVÁN (1910–1991), Hungarian poet, playwright, and translator. Grandson of a rabbi but never an observant Jew, Vas converted to Christianity in 1938. Jewish themes are absent in his work, but Budapest, his home city, plays an important part in it. On his 70th birthday he was honored with the highest state award.

[Eva Kondor]

°**VAŠEK, ANTON** (1905–1946), lawyer and head of the department in charge of deportations in the Slovak pro-Nazi Ministry of the Interior under Sand Mach. Vašek was nicknamed "King of the Jews" (*Židovský král*). During the cessation of deportations in the autumn of 1942, he was bribed by the "Working Group" (see Gisi *Fleischmann). He wrote historical articles on the Jewish problem and a book, *Die Loesung der Judenfrage in der Slowakei* (1942), compiled with the aid of Jewish functionaries who meant to distract him from other activities. After the war he was hanged following sentence by the National Tribunal of Bratislava (1946).

[Livia Rothkirchen]

VASHTI (Heb. וַשְׁתִּי; perhaps "beauty" in Persian), queen of Persia and Media, wife of *Ahasuerus (Xerxes; 485–465 B.C.E.). When King Ahasuerus, in the third year of his reign, held a banquet "for all the people that were found in *Shushan" in the king's gardens, Queen Vashti also held a banquet in the palace. On the seventh day, when the king was drunk from all the wine, he ordered Vashti brought before him "to show the peoples and the princes" her beauty. Vashti refused to appear. At the advice of his counselors the king ordered her deposed from her position and proclaimed that "every man should be lord in his house" (Esth. 1:9–22). Later she was replaced by Esther (Esth. 2). Attempts to identify Vashti with known historical figures have not been persuasive. As a proper name, Vashti has survived in inscriptions.

[Yehoshua M. Grintz]

In the Aggadah

Vashti was the granddaughter of Nebuchadnezzar (Meg. 10a). She witnessed the Persian conquest of Babylon from her father, Belshazzar. On the night that the city fell, Vashti was so alarmed by the confusion that, unaware that Belshazzar had already been killed, she ran to his private quarters. There she was confronted by Darius who, out of compassion for her, betrothed her to his son, Ahasuerus (Yalk. Est. 1049). Her action in having her banquet for women "in the royal house which belonged to Ahasuerus" (Esth. 1:9) was that her guests would be hostages if their husbands should rise and rebel against the king (Est. R. 3:10). According to R. Abun, however, the location of the banquet was dictated by the consideration that "women would sooner have well-decorated rooms and beautiful clothes, than eat fatted calves" (*ibid.*). Vashti had low moral standards: it was not for reasons of modesty that she refused to comply with Ahasuerus' command to appear before his guests (Esth. 1:11) in the nude. She was as immoral as her husband (Meg. 12a). Her refusal was occasioned either by the fact that she was suffering from leprosy (*ibid.*), or by fear for Ahasuerus' life. She remonstrated with him: "If they consider me beautiful, they will want to enjoy me themselves, and will kill you; if they consider me plain, I shall be a disgrace to you" (Est. R. 3:14). When Ahasuerus nevertheless repeated his request, Vashti insulted him by reminding him of his lowly descent as servant to her father (cf. Song R. 3:5), Belshazzar, before he was murdered. According to one version, she exclaimed: "You used to be the stable boy of my father's house, and you were used to bringing naked harlots before you. Now that you have ascended the throne you have still not changed your habits" (*ibid.*). She was put to death on the Sabbath because, when she was queen, she would force the daughters of Israel to strip and work in the nude, on the Sabbath (Meg. *ibid.*).

VASILKOV, city in Kiev district, Ukraine. In 1648 Vasilkov was conquered by *Chmielnicki's Cossacks who massacred its inhabitants, Jews and Poles alike. Since Vasilkov was annexed to Russia in 1686, no Jewish community existed there until the second partition of Poland in 1792. There were 1,478 Jews in Vasilkov in 1799, 2,407 in 1847, and 5,156 (39.2% of the total population) in 1897. Vasilkov was a ḥasidic community and for some time David b. Nahum *Twersky of Chernobyl lived there. The Jews in Vasilkov engaged in crafts, small-scale business, and worked in local tanneries. In February 1919, S. *Petlyura's armies conducted pogroms in Vasilkov, massacring 50 Jews and 60 Russians suspected of being Communists; the Jewish community was forced to pay a special contribution. When the Soviet regime was established, Jewish communal life was discontinued. In 1926 the Jews in Vasilkov numbered 3,061 (14.4% of the total population). In 1941 the Jews of Vasilkov were exterminated by the Nazis.

[Yehuda Slutsky]

VASLUI, district capital in Moldavia, E. Romania. The oldest tombstones in the Jewish cemetery indicate that Jews settled there in the first half of the 18th century, most of them from *Bukovina and *Galicia, and from the 1850s many Jewish *Cantonists who fled from Russia. In 1851 two Jewish inhabitants were raised to the nobility (boyarhood) for service to Vaslui. The early Jewish population was joined later on by Jews expelled from villages in the vicinity of Vaslui (in 1867, 1889, 1901, and 1908). The Jewish population numbered 892 in 1839, 1,202 (25.3% of the total) in 1859, and 2,823 (41%) in 1889; in 1899 their number increased to 3,747. Difficulties were encountered in the organization of the community because the merchants and the artisans each had their own institutions, and even their own rabbis. In 1877 a primary school was founded, but the craftsmen had their own *talmud torah*. In 1904 an attempt was made to unite the community's institutions but this lasted only two years. The community was finally unified only in 1923.

Zionist activity began in Vaslui in the 1880s. Rabbis of the town included Alexander Taubes (1841–1913) and Benjamin Rabinovici. *Ẓaddikim* of the Ruzhin-Buhus dynasty lived in the town. On the eve of World War II there were in Vaslui eight prayer rooms, a hospital and clinic, an old-age home, a *mikveh*, a primary school, and a kindergarten. After the naturalization laws were passed (in 1919), two to six Jews were active in the local council. In 1947 the Jewish population numbered 3,200, decreasing to 2,400 in 1950. In 1960 there were about 70 Jewish families with one synagogue.

[Theodor Lavi]

VATICAN, residence of the *pope, who is the ruler of Vatican City in Rome.

The Vatican and Zionism

Theodor Herzl was the first Zionist leader to understand the political importance of the Catholic Church in the Middle East. He also realized the necessity for Zionists to come to terms with the Church and gain its support or at least try to neutralize its influence. The Vatican wished to safeguard Catholic rights in the holy places, and therefore Herzl was ready to propose an extraterritorial status for the holy places when he was received by the nuncio in Vienna, Msgr. Antonio Agliardi, on May 19, 1896, a short time after the publication of his book *The Jewish State*. Herzl repeated the idea of extraterritoriality to Secretary of State Cardinal Rafael Merry del Val on January 22, 1904, but Merry del Val answered that the holy places could not be regarded as entities separate

from the Holy Land. On January 25 Herzl was received by the pope, *Pius X, who told him: "We cannot prevent the Jews from going to Jerusalem but we could never sanction it. The Jews have not recognized our Lord, therefore we cannot recognize the Jewish people. If you come to Palestine and settle your people there, we will have churches and priests ready to baptize all of you."

During World War I new realities were changing the political situation in the Middle East. The Vatican was aware at a very early stage of the secret *Sykes-Picot Agreement dividing the region between France and Great Britain and putting the central part of Palestine under an international regime. France had been for centuries the protecting power for Catholics in the Ottoman Empire, but the Holy See hinted that the Vatican would not be averse to British patronage of the Holy Places. This is what Sir Mark *Sykes heard on April 11, 1917, from Msgr. Eugenio Pacelli, undersecretary for extraordinary affairs at the Secretariat of State, and a few days later from Pope *Benedict XV himself.

Following the advice of Sykes, Nahum *Sokolow of the Zionist Executive in London met Msgr. Pacelli on April 29, 1917, and Secretary of State Cardinal Pietro Gasparri on May 1, and was received by the pope on May 4, 1917. Pacelli wanted clear geographical boundaries acceptable to the Vatican to be demarcated, while Gasparri wanted the Church to have a "reserved zone" that would include Jerusalem, Bethlehem, Nazareth, Tiberias, and Jericho. The pope said: "The problem of the holy places is of extraordinary importance for us. The sacred rights must be protected. We will settle this between the Church and the Great Powers. You must respect those rights to their full extent."

Sokolow could well understand that the Holy See had clear territorial claims on the central part of Palestine. Furthermore the Holy See would not accept a solution giving extraterritorial status to the holy places, and would in any case negotiate with the Great Powers, not with the Zionists.

Despite the content of these talks, the Zionists were impressed by the positive manner of the Church's representatives. On the basis of Sokolow's reports Dr. Chaim *Weizmann could announce to a Zionist conference in London on May 20, 1917: "We have assurances from the highest Catholic circles that they will favor the establishment of a Jewish National Home in Palestine and from their religious point of view they see no objections to it and no reason why we should not be good neighbors." Nothing could have been further from the truth. By "good neighbors" the pope probably meant that the Vatican would maintain a presence in the central area of Palestine that was to be internationalized, while the Zionists would remain outside of it in the bordering areas.

At the end of the year 1917 two events dramatically changed the situation of Palestine: the Balfour Declaration of November 2, and the conquest of Jerusalem by British troops on December 9.

Cardinal Gasparri clearly expressed opposition to a Jewish state in Palestine when he said on December 18, 1917, to the Belgian representative, Jules Van den Heuvel: "The transformation of Palestine into a Jewish state would not only endanger the Holy Places and injure the feelings of all Christians, it would also be very harmful for the country itself."

A few days later, on December 28, the pope expressed his fear to De Salis, the British representative, that Great Britain might hand Palestine over "to the Jews to the detriment of the Christian interests."

In January 1919 the Peace Conference met in Versailles (France) but the Holy See was not admitted to it. The reason was that Italy had included Article 15 in the secret London Treaty, excluding the Vatican from the future conference, since the question of Rome was still open between them. On March 10, 1919, the pope convened a secret consistory in the Vatican and said that "it would be a terrible grief for us and for all Christians if infidels [in Palestine] were placed in a privileged and prominent position; much more if those most holy sanctuaries of the Christian religion were given into the charge of non-Christians." As Gasparri explained some days later to the Belgian representative: "The danger that we most fear is the establishment of a Jewish state in Palestine. We would have found nothing wrong in Jews entering that country, and setting up agricultural colonies. But that they be given the rule over the Holy Places is intolerable for Christians."

Three cardinals visited Palestine in those years: the British Francis Bourne, the Italian Filippo Giustini, and the French Louis Ernest Dubois. In January 1919 Cardinal Bourne sent a letter to the British prime minister and to the foreign secretary, writing that Zionism had not received the approval of the Holy See, and if the Jews would "ever again dominate and rule the country, it would be an outrage to Christianity and its Divine founder." In October 1919 Cardinal Giustini cabled the pope from Jerusalem asking for his intervention "to prevent the reestablishment of Zionist Israel in Palestine." Cardinal Dubois was reported in March 1920 to have said that Jewish immigration to Palestine and the establishment of a Zionist state should not be permitted. On July 20, 1920, the Latin patriarch of Jerusalem, Msgr. Luigi Barlassina, also published a pastoral letter strongly protesting against the Great Powers' decision to establish a Jewish national home in Palestine. He added: "Let Palestine be internationalized rather than someday be the servant of Zionism."

On May Day 1921, the Jewish workers in Jaffa organized a celebration and parade in the streets. The Arabs attacked them and about 50 Jews and the same number of Arabs were killed and many hundreds injured. Instead of condemning the aggressors, the *Osservatore Romano* (the Vatican daily) explained a few days later that the Bolsheviks had infiltrated Palestine thanks to the Zionist Organization. The paper also raised the question of whether the Bolshevik Revolution was coordinated with Zionism or whether Zionism had raised a Bolshevik viper in its bosom.

A few days later Pope Benedict XV attacked Zionism in his allocution to the cardinals of June 13, 1921. He said that the Jews were given a "position of preponderance and privi-

lege in Palestine"; that their activity is meant "to take away the sacred character of the Holy Places"; he admitted that no damage should "be done to the rights of the Jewish element" but "they must in no way be put above the just rights of the Christians."

Pope Benedict XV died in January 1922 and a month later, a new pope was elected, assuming the name *Pius XI. Dr. Weizmann, the leader of the Zionist Organization in London, met Secretary of State Cardinal Gasparri on April 2, 1922. Gasparri did not hide his antagonism to Zionism and gave voice to a series of objections to the draft text of the Mandate over Palestine concerning religious rights, the recognition of the Jewish Agency, and Article 14 on a commission for the holy places. Weizmann learned on this occasion that the Vatican's opposition to the Mandate would take the form of an official memorandum submitted to the League of Nations.

During Weizmann's second meeting with Cardinal Gasparri on April 20, 1922, Gasparri said that Zionist colonization work caused him no anxiety, but added: "It is your university that I fear."

On May 15, 1922, Cardinal Gasparri sent an official note to try to stop, at the very last moment, the assignment of the Mandate to Great Britain. The note sent to the League of Nations stated that the Holy See cannot agree to "the Jews being given a privileged and preponderant position in Palestine vis-à-vis the Catholics" or to "the religious rights of the Christians being inadequately safeguarded." The Holy See also opposed the recognition of the Jewish Agency, and the favoring of immigration and naturalization of Jews. Nevertheless a few weeks later, on July 22, 1922, the League of Nations approved Great Britain as the mandatory power and included the Balfour Declaration in the Preamble to the Mandate. The Vatican finally accepted the British Mandate as the lesser evil.

In the 1920s the Vatican opposed Zionism for a variety of reasons. They believed the Zionists were antireligious, that Zionist immigration would sweep the Christians out of Palestine and destroy the Christian character of the country, and that the Jews were causing radical changes in the traditional life-style of the local population and damaging moral values. During this period the Vatican was strongly opposed to Jewish statehood in the Holy Land. In August 1929 the Arabs attacked the Jewish quarters in Hebron, Safed, and other places. The daily *Osservatore Romano,* rather than blaming the Arabs for the attack, wrote that it was "the politics of Zionism, and not the religion of Israel, which lay at the root of the trouble."

In 1936 the Arabs started the Great Arab Rebellion which resulted in many acts of violence against the Jews. The British government sent the *Peel Commission, which published its proposal for partition in 1937, and on August 6 the Vatican sent a verbal note in which it expressed its objection to the principle of partition and requested that all Holy Places be included in the British zone.

In October 1938 the *Osservatore Romano* wrote that "only one of the two races which contended the hegemony in Palestine can live in the country." Along the same lines of thought, Msgr. Domenico Tardini, the Vatican undersecretary of state, told a British diplomat in 1938: "There was no real reason why [the Jews] should be back in Palestine. Why should not a nice place be found for them, for instance, in South America?"

In May 1939 the British government published the MacDonald White Paper, considered to be a betrayal by Weizmann. Land regulations prohibited or restricted land sales, Jewish immigrants were limited to 75,000 during the next five years and later would be subject to Arab consent. An independent Palestinian state would be created at the end of a transition period of 10 years.

The *Osservatore Romano* remarked with satisfaction that "the White Paper denied the historical basis of the Zionist claims."

During World War II, while the Holocaust was already raging and hundreds of thousands of Jews were being killed by the Nazis, anti-Zionist attitudes prevailed among Vatican diplomats.

Msgr. Domenico Tardini wrote in March 1943 that the Holy See "has never approved the project of making Palestine a Jewish home." Cardinal Maglione, secretary of state, wrote in May 1943 to his apostolic delegate in the United States, Cicognani, that it would not be difficult "if one wants to establish a 'Jewish Home,' to find other territories [than Palestine] which could better fulfill this aim, while Palestine, under Jewish predominance, would bring new and grave international problems."

Cardinal Maglione wrote in the same month that "Catholics would be wounded in their religious sentiments and would rightly fear for their rights if Palestine became the exclusive property of the Jews."

In August 1944 the secretariat of state of the Holy See wrote that they regarded Palestine "not as a Jewish home or a possible Arab home but also as a Catholic home and Catholic center."

On April 10, 1945, while the war was still going on in Europe, Moshe Shertok (later *Sharett) of the Jewish Agency was received by Pope *Pius XII. He hoped for the "moral support" of the Catholic Church for "our renewed existence in Palestine." But he did not receive any support; on the contrary the Holy See started a campaign for the internationalization of Jerusalem, supported by France. The Vatican considered Zionism to be an enemy, only suitable as a springboard for a new alliance between Christians and Moslems in Palestine.

In 1947 Great Britain decided to renounce the Mandate and to deliver the Palestine issue over to the United Nations. On November 29, 1947, the General Assembly approved Resolution No. 181 on the partition of Palestine and the creation of a corpus separatum for Jerusalem and its environs. The Holy See avoided interfering in the vote, probably in order not to jeopardize the internationalization of Jerusalem. The war that the Arab states opened against the State of Israel, and which made null and void the project of internationalization, started even before the state was proclaimed.

The Vatican and the State of Israel

The creation of the State of Israel in 1948 ran counter to certain theological ideas in the Catholic Church according to which the Jews were condemned to remain homeless because of the crime of deicide. Some believe that the Holy See did not oppose the partition plan of the United Nations in 1947 because it included Jerusalem in an international "corpus separatum." Pope Pius XII wrote three encyclicals on the question of the Holy Land. The first one, *Auspicia quaedam* of May 1, 1948, expressed hope "that the situation in Palestine may at long last be settled justly and thereby concord and peace be also happily established."

In the second, *In multiplicibus*, of October 24, 1948, the pope said that "it would be opportune to give Jerusalem and its outskirts, where are found so many and such precious memories of the life and death of the Savior, an international character which, in the present circumstances, seems to offer a better guarantee for the protection of the sanctuaries. It would also be necessary to assure, with international guarantees, both free access to Holy Places scattered throughout Palestine, and the freedom of worship and the respect of customs and religious traditions."

In his third encyclical, *In redemptoris nostr*, of April 15, 1949, Pope Pius XII advocated giving "to Jerusalem and its surroundings a juridical statute internationally guaranteed" and appealed that all rights of the Catholics "should be preserved inviolate."

Some Catholic states opposed the acceptance of Israel in the United Nations on May 11, 1949, because Israel had "failed to carry out the full internationalization scheme" for Jerusalem. The dispute on the war damages to churches and other properties in Israel was solved satisfactorily for the Holy See in 1955 when Msgr. Antonio Vergani received the final compensation for war damages to Catholic institutions. But even the name of the State of Israel was omitted by the *Osservatore Romano* in 1955 when a visit of the *Israel Philharmonic Orchestra to the Vatican was described as that of "Jewish musicians of fourteen different nationalities." The coronation of Pope *John XXIII in 1958 was attended by Ambassador Eliyahu *Sasson as a "special delegate of the State of Israel." This, it was later claimed by the Vatican, proved that the Holy See did recognize the State of Israel even if it did not establish normal diplomatic relations.

On January 5, 1964, *Paul VI became the first pope to visit Israel. He said in Megiddo, where he entered Israel: "We are coming as pilgrims, we come to venerate the Holy Places; we come to pray." He ended his speech with the Hebrew words "Shalom, shalom." But Paul VI never addressed President Shazar by his title; even when he sent a telegram with his thanks, it was sent to Tel Aviv, not to Jerusalem, the residence of the president of the State of Israel. Every effort was made to stress the non-recognition of Israel by the Holy See.

The Ecumenical Council Vatican II approved in 1965 an important declaration, *Nostra Aetate*, modifying the accusation of deicide and stating: "True, authorities of the Jews… pressed for the death of Christ; still what happened in His passion cannot be blamed upon all the Jews then living nor the Jews of today." The text was influenced by politics and it was watered down because of the violent protest of the Arab states.

After the liberation of Jerusalem in 1967, Pope Paul VI, on June 26, 1967, recalled that he had done his best "to avoid at least to Jerusalem the suffering and the damages of the war" and that he was very saddened by the conditions of the Palestinian refugees, and said that "the Holy City of Jerusalem should remain for ever a town of God, a free oasis of peace and prayer, with its own statute internationally guaranteed."

Thus the old formula for seeking the internationalization of Jerusalem and its environs was changed into one that spoke of an "internationally guaranteed statute."

In July 1967 Msgr. Angelo Felici, undersecretary for extraordinary affairs at the Vatican Secretariat of State arrived in Israel for talks with Prime Minister Levi *Eshkol. The pope in his allocution of December 23, 1968, had spoken of his wish to see "an internationally guaranteed agreement on the question of Jerusalem and the Holy Places."

On October 6, 1969, the pope received the Israeli foreign minister, Abba *Eban, and discussed the question of "the refugees, the holy places, and the unique and sacred character of Jerusalem."

On December 22, 1969, the traditional Christmas wishes for the Arab refugees and the special mention of the Christian communities in Palestine expressed a new preoccupation. "They have diminished and they are diminishing, the faithful of Jesus in that blessed earth," said the Pope. This was the first time that the pope had expressed publicly his concerns about the diminishing number of Catholics in the Holy Land, a preoccupation would manifest itself time and again in his subsequent speeches.

In January 1972, Deputy Secretary of State Msgr. Giovanni Benelli visited Israel and had several talks with Minister of Finance Pinḥas *Sapir, and Minister of Justice Ya'akov Shimshon *Shapiro on the question of the sale of the Notre Dame de France building to the Hebrew University. The assumptionist had sold the monastery but according to the Vatican the sale had to be considered null and void because Canon Law required authorization by the Vatican. A hearing in an Israeli court in Jerusalem was curtailed by the Israeli government's decision to cancel the sale, but no reciprocal gesture of goodwill was made by the Holy See. The Vatican transformed the building into a modern hotel and for years refused to pay municipal taxes "for services rendered." Finally, in 1987, the Vatican consented to pay the Jerusalem municipality a token sum.

On December 22, 1972, in his customary allocution to the Holy College on the eve of Christmas, the pope criticized "situations without a clear juridical basis, internationally recognized and guaranteed," referring to Jerusalem, where also the followers of Christ "must feel themselves full 'citizens.'" He spoke also of the sons of the Palestinian people waiting

for years "for an equitable recognition of their aspirations, not in opposition to but in necessary harmony with the rights of other peoples."

On January 15, 1973, Israeli Prime Minister Golda *Meir was received in a private audience by Pope Paul VI. It was the first official visit of this kind, and therefore an important one. The final communiqué recalled the suffering of the Jewish people; the pope in his humanitarian mission was interested in the Arab refugee problem and the problems of the Christian communities living in the Holy Land, while in terms of his religious mission he expressed concern about the Holy Places and the universal and holy character of Jerusalem.

At the end of the same year, after the Yom Kippur War, during which Israel was attacked by Syria and Egypt, the pope dedicated most of his yearly message of December 21, 1973, to the cardinals, to the Middle East. He expressed his approval of the Peace Conference convening on that same day in Geneva, but considered it incomplete in terms of representation, referring probably to the nonparticipation of the PLO. The Holy See was ready "to offer cooperation … in agreements that would guarantee to all parties concerned a calm and secure existence and the recognition of respective rights." The pope spoke of the hundreds of thousand of Arab refugees "living in desperate conditions"; even if their cause "has been endangered by actions that are repugnant to the civil conscience of people and are in no case justified, it is a cause that demands human consideration and calls with the voice of abandoned and innocent masses for a just and generous response."

On December 9, 1974, Msgr. Hilarion Capucci, the Greek Catholic archbishop (melkite) of Jerusalem and vicar of the Patriarch Maximos, was sentenced to 12 years' imprisonment; he was found guilty of smuggling arms and explosives for the Fatah organization from Lebanon into Israel, exploiting his diplomatic immunity. Some years later, on November 6, 1977, President Ephraim *Katzir, in response to a personal letter from the pope, commuted the sentence and Archbishop Capucci was immediately released. The written promise of the pope that Msgr. Capucci would not "bring any harm to the State of Israel," i.e., would no more indulge in political activity, was not respected and the prelate participated in many propaganda meetings organized by the PLO after regaining his freedom.

The foreign minister of Israel, Moshe *Dayan, was received in private audience by the pope on January 12, 1978. The pope stressed again his concerns about the question of Jerusalem, stating that the "well-known solution proposed by the Holy See for Jerusalem could satisfy the unique and religious character of the city." The Israeli side stressed what had been done "to guarantee the protection of the Holy Places of all religions and free access to them."

Paul VI died on August 6, 1978. His successor was Pope John Paul I, who had been patriarch of Venice and as such had good relations with the Jews. He died suddenly on September 28, 1978.

The new pope, *John Paul II, was born in Poland, so that for the first time in centuries the pope was not an Italian. An Israeli delegation participated in the funeral of the previous pope and the coronation ceremony of the new pope, whom it invited to visit Israel.

The permanent observer of the Holy See to the United Nations made a declaration on Jerusalem on December 3, 1979, in which he explained the meaning of a "special statute internationally guaranteed" for Jerusalem. The content of this statute would include two orders of guarantees: parity for the three religious communities regarding freedom of worship and access to the Holy Places; and equal enjoyment of rights by the three religious communities, with guarantees for the promotion of their spiritual, cultural, civil, and social life, including adequate opportunities for economic progress, education, and employment.

Pope John Paul II spoke about the State of Israel on October 5, 1980, in Otranto, saying: "The Jewish people, after tragic experiences connected with the extermination of so many sons and daughters, driven by desire for security, has established the State of Israel. At the same time, the painful condition of the Palestinian people was created, as a large part of it were extirpated from their land."

Yitzhak *Shamir, Israeli minister for foreign affairs, was received on January 7, 1982, by the pope, who stressed the importance of the Palestinian question, which should find a solution "taking into account also the problem of security for the State of Israel." The pope also spoke about "a just and agreed solution for the question of Jerusalem," a center for the three religions. Shamir emphasized the concessions made by Israel in order to reach the peace agreement with Egypt and his concerns about the arms race in the area and the serious problem of terrorism.

On September 15, 1982, the pope received Yasser *Arafat, who had just been forced to abandon Beirut, giving him a political victory after a military defeat.

Pope John Paul II dedicated an Apostolic Letter, "*Redemptionis Anno*," on April 20, 1984, to the question of Jerusalem and the Holy Land. The pope wrote: "Jews ardently love [Jerusalem] and in every age venerate her memory, abundant as she is in many remains and monuments from the time of David who chose her as the capital, and of Solomon who built the Temple there. Therefore they turn their minds to her daily, one may say, and point to her as the symbol of their nation."

After explaining why Jerusalem is holy also to the Christians and the Moslems, he recalled the Holy See's appeals for an adequate solution. He said: "Not only the monuments or the sacred places, but the whole historical Jerusalem and the existence of religious communities, their situation and future cannot but affect everyone and interest everyone."

Shimon *Peres, then prime minister, was received by the pope on February 19, 1985, and for almost an hour discussed the peace process. It was clear that Peres would not press for the establishment of normal diplomatic relations nor extend a formal invitation to the pope to visit Israel, leaving the initia-

tive to the Holy See. Seemingly in the conversation with Secretary of State Casaroli there was a discussion on the status of Jerusalem and the Palestinian question.

In the "Notes," a Vatican commentary to *Nostra Aetate* published in 1985, there is reference for the first time to the State of Israel. In this statement issued on the 20th anniversary of Vatican II declaration, Christians are invited to understand the religious attachment of Jews to the State of Israel, but "the existence of the State of Israel and its political options should be envisaged not in a perspective which is itself religious, but in their reference to the common principles of international law."

This was the way to overcome the theological obstacle to the recognition of Israel.

John Paul II was the first pope to visit a synagogue when on April 13, 1986, he went to Rome's Great Synagogue. In his speech he spoke of the Jews as "our elder brothers," a characterization that was changed in 2004 to "our dearest brothers."

In September 1987, when Jewish leaders were received in Castel Gandolfo, near Rome, sources close to the pope said that there was no longer any theological obstacle to full relations with Israel. This can be seen as an outgrowth of the line adopted in June 1985 denying that there was any temporal link between the Jewish people and the State of Israel. While such a view might serve to overcome theological obstacles, at the same time it denies the spiritual basis of Zionism and seeks to separate the Jews in the Diaspora from the State of Israel.

On April 10, 1989, Renato Martino, permanent observer at the UN, said: "For us the Holy Land is our homeland, our country of origin; Jerusalem is the Church hometown. The Holy See is not only interested in preserving the archaeology, artifacts and architecture of the historical Christian communities, but also those communities themselves. The lack of diplomatic relations does not imply denial of the existence of the State of Israel. That such recognition exists is clear from the constant contacts."

On January 25, 1991, during the first Gulf War, the Holy See published a long document on the issue of diplomatic relations with Israel. It stated that the lack of diplomatic relations is certainly not due to theological reasons, but to juridical ones. The three main juridical difficulties were the presence of Israel in the occupied territories, Israel's annexation of Jerusalem, and the situation of the Catholic Church in Israel and in the administered territories.

On March 6, 1991, Pope John Paul II, closing the synod of bishops from the Middle East, said: "We have spoken of the Holy Land where two peoples, the Palestinians and that of the State of Israel, have been engaged in conflict for decades; the injustice of which the Palestinian people is a victim demands engagement by all men."

After the opening of the Madrid Peace Conference in November 1991, Msgr. Michel Sabah, the Latin patriarch of Jerusalem, emphasized that the Holy See had not been invited to attend, saying: "The invitation we were waiting for did not arrive." Probably the Holy See understood that without establishing normal diplomatic relations with Israel it could not be associated with the peace process, where perhaps the status of Jerusalem could be discussed. As they themselves were engaged in a dialogue with Israel, the Arabs could not very well reproach the Holy See establishing a bilateral permanent commission with Israel in July 1992 to discuss outstanding questions and normalize relations. The status of Jerusalem, a multisided question, was not discussed there.

After the meeting between Prime Minister Yitzhak *Rabin and Chairman Yasser Arafat at the White House on September 13, 1993, the Holy See decided to sign a Fundamental Agreement with Israel. It was signed by Msgr. Claudio Maria Celli and Deputy Minister for Foreign Affairs Yossi *Beilin on December 30, 1993. Only after the Cairo Agreement between Israel and the PLO, on May 4, 1994, did the Holy See agree to an exchange of ambassadors. It also signed an accord in November 1997 on the juridical status of the Church and Catholic institutions in Israel, which grants the Church autonomy to handle its affairs while respecting Israeli laws.

In a detailed exposition in a Jerusalem lecture on October 26, 1998, Archbishop Jean-Louis Tauran, secretary for relations with states, presented the Holy See's position on Jerusalem. Tauran stated that the Holy See cannot accept any distinction between the question of the Holy Places and the question of Jerusalem. The Holy See is present "to ensure that it does not become, as is the situation today, a case of manifest international injustice. East Jerusalem is illegally occupied. It is wrong to claim that the Holy See is only interested in the religious aspect or aspects of the city and overlook the political and territorial aspect… Any unilateral solution or one brought about by force is not and cannot be a solution at all… There must be equality of rights and treatment for those belonging to the communities of the three religions found in the city… the simple 'extraterritoriality' of the Holy Places would not suffice… The Holy See believes in the importance of extending representation at the negotiating table."

On March 9, 1999, Msgr. Tauran described the main reasons of disagreement with Israel: "It must also be recognized that relations between the Holy See and the Jewish world – above all with the State of Israel – have hardly been helped by the failure to resolve the Palestinian problem, the lack of respect for certain UN Security Council Resolutions and duly concluded international agreements, without forgetting the annexation by force of a part of the City of Jerusalem."

On April 27, 1999, Foreign Minister Ariel *Sharon was received by Pope John Paul II. Sharon thanked the pope for his efforts in combating antisemitism and his relations with the Jews. "Israel will warmly welcome and ensure the security of the pilgrims who will come, including, first and foremost, the 'First pilgrim,' the Pope."

In December 1999, another item of disagreement between the Holy See and Israel was the project of building a new mosque in Nazareth just in front of the Basilica of the Annunciation.

The Catholic Church under the guidance of Msgr. Michel Sabah, the Latin patriarch of Jerusalem, reacted strongly to the government's authorization to build the mosque. Msgr. Sabah succeeded in closing down the Christian Holy Places in Jerusalem for two days in protest and managed to create a united front with other Christian communities. Sabah also accused the Israeli government of fomenting tension between Christians and Moslems, an accusation promptly re-echoed by the Holy See's spokesman, Joaquin Navarro-Valls. Some years later the Israeli government withdrew the authorization and the mosque was not built.

The official visit of Pope John Paul II to the Holy Land in March 2000 was undoubtedly an historical event. John Paul II arrived at Ben-Gurion Airport, where he was formally received by President Ezer *Weizman and Prime Minister Ehud *Barak on March 21, 2000. He visited the two chief rabbis, Israel Meir *Lau and Eliahu *Bakshi-Doron, at Hechal Shlomo in Jerusalem, and the president of the State in his official residence in Jerusalem on March 23, 2000.

The pope said to President Weizman: "Mr. President, you are known as a man of peace and a peacemaker. We all know how urgent is the need for peace and justice, not for Israel alone but for the entire region." On the same occasion the pope added: "It is my fervent hope that a genuine desire for peace will inspire your every decision."

There were two other highlights to the pope's visit to Israel: the encounter in Yad Vashem on March 23 with Holocaust survivors from his home town and the visit to the Western Wall. The Pope said at Yad Vashem: "Only a godless ideology could plan and carry out the extermination of a whole people." Thus all the responsibility fell upon a "godless ideology," unrelated to or even in opposition to the Church. Already in March 1998, the Holy See, in the document "We Remember: a Reflection on the Shoah," had stated: "The Shoah was the work of a thoroughly modern neo-pagan regime. Its antisemitism had its roots outside of Christianity."

In a crevice of the Western Wall, following the Jewish custom, the pope inserted on March 26 a note which reads: "God of our fathers, / you chose Abraham and his descendants / to bring your Name to the Nations: / we are deeply saddened / by the behavior of those / who in the course of history / have caused these children of yours to suffer, / and asking your forgiveness / we wish to commit ourselves / to genuine brotherhood / with the people of the Covenant."

This text is identical to that included in a ceremony of forgiveness in Rome on March 12, 2000, but it lacks the preamble in which the Church asked forgiveness from the Jews. Without the preamble, the Jews are not expressly mentioned.

In his meeting with Yasser Arafat in Bethlehem, the pope offered him 14 sea shells representing the 14 stations of the Way of the Cross and explained that this was a way to symbolize the Passion of the Palestinians. So again the pope made the comparison between the suffering of the Palestinians and those endured by Jesus.

In his speeches in Israel, the pope drew a parallel between antisemitism and anti-Christianity several times. Upon his arrival in Tel Aviv he said: "Christians and Jews together must make courageous efforts to remove all forms of prejudice. We must strive always and everywhere to present the true face of the Jews and Judaism as likewise of Christians and Christianity." Two days later at Hechal Shlomo, before the two chief rabbis, he said: "We must work together to build a future in which there will be no more anti-Judaism among Christians nor anti-Christian sentiment among Jews." At Yad Vashem the pope repeated: "No more anti-Jewish feeling among Christians or anti-Christian feeling among Jews."

This convenient symmetry between Jews and Christians is not supported by history.

During his visit in Israel the pope sent a letter protesting the approval given by the Israeli authorities to the building of the Nazareth mosque. This was a rather rare and strong act of censure.

On April 1, 2002, some 200 armed Palestinians entered one of the most important shrines and holy places in Christianity, the Church of the Nativity in Bethlehem – marking the place where Jesus was born – and remained inside until May 12, holding hostages. The *Osservatore Romano* wrote on April 2, 2002: "Palestinian terrorism is only a pretext," because the true objective of Israel is "to profane with fire and iron the land of the Resurrected." Msgr. Tauran, of the Secretariat of State, said that the Holy See's position included "an unequivocal condemnation of terrorism," "disapproval of the conditions of injustice and humiliation imposed on the Palestinian people, as well as reprisals and retaliations, which only make the sense of frustration and hatred grow."

Pope John Paul II in his Angelus message of August 11, 2002, said: "From 1967 till today, unspeakable sufferings have followed one upon another in a frightening manner: the suffering of the Palestinians, driven out of their land and forced, in recent times, into a state of permanent siege, becoming as it were the object of a collective punishment; the suffering of the Israeli population, who live in the daily terror of being targets of anonymous assailants. To this we must add the violation of a fundamental right, that of freedom of worship. In effect, because of a strict curfew, believers no longer have access to their places of worship on the day of weekly prayer."

Archbishop Renato Martino, permanent observer to the United Nations, wrote on November 2, 2002: "The Holy See renews its consistent call for internationally guaranteed provisions to ensure the freedom of religion and conscience of its inhabitants, in order to safeguard the special character of the City and of the sites sacred to Jews, Christians and Muslims."

On November 16, the pope said: "In this context I repeat my firm condemnation also of every terrorist action committed recently in the Holy Land. I must at the same time affirm that, unfortunately, in those places the dynamism of peace seems to have stopped. The building of a wall between the Israeli people and the Palestinians is seen by many as a new

obstacle on the road toward peaceful coexistence. In effect, the Holy Land needs not walls but bridges! Without reconciliation of the souls, there cannot be peace."

In autumn 2003, Msgr. Jean-Baptiste Gourion was named auxiliary bishop of the Latin patriarch of Jerusalem for the pastoral care of the Hebrew-speaking Catholics in Israel. The Holy See named on May 15, 2004, Fr. Pierbattista Pizzaballa as the new custos of the Holy Land. He had studied modern Hebrew in Jerusalem at the Hebrew University and was general assistant to Msgr. Gourion. Some observers saw in both appointments a sign of good will toward Israel.

Minister for Foreign Affairs Silvan *Shalom was received by Pope John Paul II on December 11, 2003.

In June 2004 Cardinal Dionigi Tettamanzi, archbishop of Milan, was the first bishop ever to be received in the Knesset and delivered a speech.

Pope John Paul II died in 2005 and was replaced by Benedict XVI, the German-born Joseph Ratzinger. The new pope began his pontificate with a visit to the Roonstrasse Synagogue in Cologne, the oldest in northern Europe, and spoke out there against "new signs of antisemitism," thus following the line of his predecessor. In 2006 he visited Auschwitz.

°**VATKE, WILHELM** (1806–1882), German theologian and biblical scholar. Vatke taught biblical studies at the University of Berlin from 1830. His scholarly work was profoundly affected by G.W.F. *Hegel, whom Vatke considered as a "philosophical messiah." He published only a few books and of these the most important was the first, *Die biblische Theologie wissenschaftlich dargestellt* (vol. 1, pt. 1 only, 1835), a critical description of the biblical religion. This was the first attempt to approach the Bible from the viewpoint of historical evolution based on the philosophy of Hegel. Thus, he was the first to argue that the priestly sections in the Pentateuch originated in the final phase of biblical history, i.e., the Babylonian exile. The scholar E. Reuss of Strasbourg reached a similar conclusion the previous year, but did not publish his theory until 1881 (in his *Die Geschichte der heiligen Schriften des Allen Testaments*). Vatke's book was also overlooked for about 30 years, and it was not until the 1860s, with the publication of the works of K.H. *Graf and A. *Kuenen, that it was recognized. Vatke divided the history of biblical religion and cult into three main phases; the primitive phase, which is reflected in the books of Former Prophets and the earliest layers of the Pentateuch; the phase of moral consciousness, as expressed in the prophetic writings and in Deuteronomy; and the institutionalized-ritual phase, as reflected in the priestly sections of the Pentateuch. This conception became widely accepted toward the end of the 19th century, and was especially developed by J. *Wellhausen, and through his work became axiomatic in biblical studies for a long time. Wellhausen himself admitted that he was indebted to Vatke for "the most and the best" of his own work.

VATRA DORNEI, town in Suceava province, N. Romania. Vatra Dornei was a way station on the trade route between Transylvania and Moldavia and was visited by Jewish merchants in the 14th and 15th centuries. Intensive Jewish settlement, however, did not begin until the late 17th century, when the city was still under Moldavian control. In 1774, under Austrian rule, census officials counted 45 Jews in the city. There were 494 Jews (12.4% of the total population) in 1880; 1,921 (12.3%) in 1910; and 1,737 (22.3%) in 1930. In 1908 the Austrian authorities expelled six Jews from the city, claiming that they did not contribute to its agricultural development. In the second half of the 19th century, Jewish hotel managers helped to develop Vatra Dornei as a therapeutic and vacation center. The Romanian annexation of Vatra Dornei in 1918 inaugurated a difficult period for the Jews. Riots were incited, one Jew was killed and Jewish homes were burned. From 1930 the city became the regional center for antisemitic activities. When the Goga-*Cuza regime assumed power in 1938, the Jewish situation became critical. In its religious life, the Jewish community was associated with that of Campulung, the previous capital of the region. In 1896 the Vatra Dornei community became independent. A large synagogue was built at the start of the 20th century. Vishnitz (*Vizhnitsa) Ḥasidim maintained a prayer house and had considerable influence in the community. Zionist organizations were founded in the city in 1900 and later organized a private elementary school associated with the government school. In 1941 the Jews of the region were concentrated in a ghetto in Vatra Dornei, and in October of that year they were deported to camps in *Transnistria. After 2,029 Jews were moved from the city, only 21 remained. About 1,500 Jews lived in the city in 1947, including refugees from areas annexed to the Soviet Union. Subsequent emigration to Israel and other countries depleted the Jewish population.

VAUGHAN, FRANKIE (1928–1999), English entertainer. Born Frank Fruim Abelson in Liverpool, he trained as a commercial artist before entering show business in 1952. He became one of Britain's most popular and successful entertainers and, as a singer and actor, appeared in cabaret, films (such as *These Dangerous Years*, 1957), and television programs. Vaughan supported Jewish causes, and worked mainly for

boys' clubs. Known as "Mr. Moonlight," he made many hit records in the 1950s, such as *The Green Door.*

°**VAUX, ROLAND DE** (1903–1971), biblical scholar and archaeologist. Born in Paris, he became a member of the Dominican Order in 1929. From 1945 to 1965 De Vaux served as director of the Ecole Biblique et Archéologique Française in Jerusalem, where he was professor of Palestinian archaeology from 1934. From 1938 to 1953 he was the editor of the *Revue Biblique*, in which he has written most of his articles, and from 1947 on he was editor in chief of the *Bible de Jérusalem.* Having played one of the leading roles in the Qumran discoveries, he was also the editor in chief of *Discoveries in the Judaean Desert* (1955–). De Vaux began his archaeological career at Maʿin (biblical BethBaal-Meon) in 1937 and successively carried out excavations at Abu-Gosh (1944); Tell el Farʿah (1946–1960), which he identified with biblical *Tirzah; Qumran and ʿAin Feshkha (1949–58); Murabbaʿat (1952); and Jerusalem (1961–63).

In his books as well as in his articles, he always sought to combine the rigorous use of the "internal criticism" of the biblical traditions together with the criticism of the "external evidence of the Bible." Thus, for him, as a biblical scholar, archaeology is primarily a tool of biblical investigation and will, occasionally, bring an "external confirmation" to the traditions recorded in the written sources. But as an independent discipline, archaeology purports only to study the material remains of the past, and its results do not always have a direct bearing on the Bible. His major work, *Ancient Israel: Its Life and Institutions* (trans. from French, 2 vols. 1961, 1965), is a good illustration of this methodology.

His books include: *Les Fouilles à Qaryet el-ʿEnab Abu-Gosh* (with M. Stève, 1950); *L'Archéologie et les Manuscrits de la Mer Morte* (1961); *Die hebraeischen Patriarchen und die modernen Entdeckungen* (1959; first appeared in French in *Revue Biblique*, vols. 53, 55, 56); *Studies in Old Testament Sacrifice* (1964); and *Bible et Orient* (1967). The first volume of his *Histoire ancienne d'Israël* (*Des origines à l'installation en Canaan*) was published posthumously along with the first five chapters of the uncompleted second volume (*La période des juges*).

[Jean Ouellette]

VAV (**Waw;** Heb. וָו ;ו), the sixth letter in the Hebrew alphabet; its numerical value is therefore 6. In the mid-second millennium B.C.E. proto-Sinaitic inscriptions the letter resembled a mace or a peg (= *vav)* ᛘ. Later the circular top opened and in the tenth century B.C.E., the letter had two variants: the Y-shaped *vav* Y and the 4-shaped one 𐤅. While the first form was accepted in the Hebrew script and was written Y → ⅄ → ⅄ → ⅄ (Samaritan ⅄), the Phoenician and the Aramaic scripts adapted the 4-shaped *vav* . In the Phoenician script it developed 𐤅 → 𐤅 → 𐤅, and in the Aramaic – 𐤅 → 7 → 7 → 𐤅. The Nabatean *vav* closed its top and hence the Arabic و evolved. The Jewish *vav* ו → ו basically preserved the Aramaic shape of the letter.

The old Phoenician *waw* is the ancestor of some Latin letters: the consonant *"F"*, which developed from the Archaic Greek *digamma; "Y"* (the Greek vowel (*upsilon*), which is the first of the five letters added by the Greeks to their alphabet and which the Romans turned into *"U"* and *"V"*. See *Alphabet, Hebrew.

[Joseph Naveh]

VÁZSONYI, VILMOS (1868–1926), Hungarian lawyer and politician who was the first Jew in Hungary to become minister of justice. When a law student in Budapest, Vázsonyi joined the extreme nationalist group which protested against the submerging of the Magyar nationality in the combined Austro-Hungarian army. He founded the club of Junior Democrats in Budapest of which he was lifelong chairman. This club was devoted to improving the living conditions of the petit bourgeoisie whom the socialists had previously ignored. In 1894 Vázsonyi was elected to the Budapest municipal council. He collaborated with the mayor István Bárczy in fighting municipal corruption and the result of his efforts was the transfer of transport and other public utilities from private ownership to city management. Vázsonyi was elected deputy to the lower house of the Hungarian Parliament in 1901 and continued his fight against graft in public life. During World War I, he became minister of justice and was made a privy counselor, but he retired from public life when his scheme to extend the franchise was rejected; later he went into exile. He returned to Hungary during Count Bethlen's counterrevolutionary regime of terror (1921–31) and helped to expose the counterfeiting of French banknotes which influential political circles had arranged for as part of their foreign policy. In his youth Vázsonyi fought for equal rights for the Jewish religious community in Hungary. His writings were published posthumously *Vázsonyi Vilmos beszédei és írásai*, 2 vols. (1927). His son, JÁNOS (1895–1944), continued his fight in Parliament against anti-Jewish discrimination at a time of growing Hungarian Nazism.

[Josef J. Lador-Lederer]

VECINHO, JOSEPH (end of 15th century), scientist and physician to King John II of Portugal (1481–95). A pupil of Abraham *Zacuto, he translated his teacher's tables into Spanish, and his translation, *Almanach Perpetuum*, published in Leiria in 1496 by Samuel d'Ortas, a Jew, became the basis for the Hebrew version of Zacuto's work. Along with the voyager and cosmographer Martin Behaim and the then court physician Rodrigo, he participated in a commission on navigation, concerned especially with improving the techniques for establishing direction and location at sea. Through his improvements in the nautical astrolabe, Vecinho gave a boost to Portuguese maritime activity. Vecinho sat on the commission when it rejected Columbus' request for a westward journey to the Indies

on the grounds that it was a chimera. However Vecinho gave Columbus a copy of his translation of Zacuto's tables, which the discoverer found useful and carried with him.

[Martin A. Cohen]

VEGETABLES. A distinction must be made between the two kinds of vegetables which the Mishnah calls respectively "garden vegetables" and "field vegetables," i.e., that grow wild in the field. Field vegetables were gathered from earliest times as is reflected in the curse upon Adam and Eve, "And thou shalt eat the herb of the field" (Gen. 3:18). A large number of field vegetables grow in Ereẓ Israel, particularly in the winter, and some are tasty and nutritious. There is a probable reference to them in Proverbs 15:17, "Better is a dinner of herbs where love is, than a stalled ox and hatred therewith." *Mallow leaves, *orach, and species of *maror were consumed by the indigent, and in times of famine they wandered about in search of wild vegetables such as *rocket. There must also have been many other varieties. The growing of garden vegetables developed from the wild variety, and there is no doubt that their cultivation dates from ancient times, both in Israel and neighboring countries, particularly Egypt and Babylon, which are rich in water (Deut. 11:10). In Israel, too, there were many gardens which received their water from wells, springs, and rivers by means of pumps (see *Agricultural Methods and Implements in Ancient Ereẓ Israel).

Vegetables were also served at royal tables; Ahab coveted Naboth's vineyard, "that I may have it for a garden of vegetables" (I Kings 21:2). Seasonal vegetables were served at royal tables all the year round; the Midrash states of Solomon's household that it was supplied with *beet (*teradin*) in the summer and with "chate *melons" (*kishu'in*; the *Cucumis melon var chate*) in the winter (Deut. R. 1:5). Similarly, it is related of the emperor Antoninus and Judah ha-Nasi, "that *lettuce, chate melon, and *radish were not absent from their tables either summer or winter" (Av. Zar. 11a). Vegetables in season were abundant and cheap. Opinions differed on the nutritional value of vegetables. Generally speaking, cooked vegetables were valued, although people were apprehensive about eating them raw (see Ber. 44b). Five garden vegetables are mentioned in one verse among the foods eaten by the Israelites in Egypt for which they yearned in the wilderness (Num. 11:5), these being chate melon, watermelon, *leek, *onion, and *garlic. In rabbinical literature, scores of species of garden and field vegetables are mentioned, and in addition to those on which separate articles appear, the following are important.

Artichoke

Called in the Mishnah *kinras*, it is the *Cynara scolymus*; a very similar species grows wild in Israel and several *halakhot* discuss this vegetable (Kil. 5:8; Uk. 1:6). The word *dardar* in the verse, "Thorns also and *dardar* ['thistles'] shall it bring forth to thee; and thou shalt eat the herb of the field," was explained to mean "artichokes," because it consists of rows (*darim*) upon rows (Gen. R. 20:10), referring to the leaves of the edible inflorescence.

Celery and Parsley

The *karpas* of rabbinical literature has been identified with celery – *Apium graveolens* – which grows wild in Israel in damp localities. Apparently it is the wild species which is called *karpas she-ba-neharot* ("celery of the rivers"; Shev. 9:1), which the Jerusalem Talmud (Shev. 9:1, 38c) identifies with *petrosilinon* – parsley. According to another view, "the graft of fennel with celery produces *petrosilinon*" (TJ, Kil. 1:4, 27a). These three plants belong to the family Umbelliferae and are alike in appearance also and slightly similar in taste. It should be noted that Ashkenazi Jews use parsley instead of celery for the *seder* of Passover.

Colocasia

The *Colocasia antiquorum*, whose large tuber is rich in starch, in rabbinical literature is called *kolkasyah* (TJ, Shev. 2:10, 34b) or *kolkas* (*ibid.*, Pe'ah 1:5, 16c). It appears to have been recently introduced into Ereẓ Israel in the time of the Mishnah and the question of its liability to tithing is discussed (Pe'ah, *ibid.*). The Mishnah calls it *karkas* (Ma'as. 5:8). Ginger lily (Black cola) – *Arum palaestinum* – belongs to the same family. It is often mentioned in rabbinical literature where it is called *luf*. Its leaves and tuber were eaten after cooking to remove its bitter taste, and it was highly regarded. There are many references to the methods of growing and preserving it (v. Kil 2:5; Shev. 5:2 and 4). It grows wild in Israel and to the present day is eaten by Oriental Jews. Wild ginger – *Arum dioscoridis* – called *lof ha-shotah* also grows in Israel, its leaves being used for human consumption and its tubers for animal fodder (Shev. 7:1–2).

Cress

Two species of cress are mentioned in the Mishnah. *Shiḥlayim*, garden cress – *Lepidium latifolium* – grew wild by the banks of rivers. Its pungent leaves were "sweetened" with salt or vinegar (Uk. 3:4). Purslane, the *Portulaca oleracea*, is a wild vegetable common during summer in gardens and fields. Its fleshy leaves are eaten raw as a salad or cooked. It is referred to in the Mishnah under two names, *ḥalaglogot* (Shev. 9:1) and *regelah* (Shev. 7:1, 9:5), and in the Talmud is called *porpeḥinah* (Meg. 18a). The Aramaic name *porpeḥinah* was current in the second century, and an interesting fact is recorded in connection with it. The rabbis did not know to what the Hebrew name *ḥalaglogot* referred until they learned from a maidservant of Judah ha-Nasi's household, where Hebrew was spoken, that it was *porpeḥinah* – purslane (*ibid.*).

Turnip and Rape

The turnip, *Brassica rapa*, called in the Mishnah *lefet*, was a common kitchen vegetable. It was eaten raw, cooked or ground (TJ, Ter. 2:3, 41c), and "improves with long cooking" (TJ, Ber.

6:1, 10a). It was mainly the food of the poor, and hence the statement. "Woe to the house where the turnip is common." It was used to improve the flavor of meat (Ber. 44b). Rape, *Brassica napus*, in Hebrew *nafos* or *nafoẓ*, is very similar to the turnip in shape and flavor. They were therefore not regarded as mixed species (Kil. 1:3; see *Mixed Species), whereas radish and rape, alike in shape but different in flavor, were regarded as different species (TJ, Kil 1:5, 27a; but see Maim. Yad, Zera'im 3:6).

VEIGELSBERG, LEO (1846–1907), Hungarian journalist. Born in Nagyboldogasszony, Veigelsberg studied medicine in Vienna, became a teacher in Hungary and contributed essays to the Prague newspaper, *Politik*. Later he joined the *Neuer Freier Lloyd*, then the *Neues Pester Journal*, and from 1872 was editor (later editor in chief) of the *Pester Lloyd*, the semiofficial newspaper of the Hungarian government. Veigelsberg's witty and well-informed articles became popular in the new Hungarian press of which he, and other Jewish journalists, were the founders. He died by his own hand.

VEIL, covering for the face. In the Bible there are several terms usually translated as veil. However, the exact connotation for these terms is not known, and they may refer to other garments used to cover the face as well. The term צָעִיף is used of Rebecca (Gen. 24:65) and Tamar (Gen. 38:14, 19). Other terms used in the Bible for veil – though the meaning is not always certain – are צַמָּה (Isa. 47:2; Song 4:1, 3; 6:7); רְדִיד (Isa. 3:23; Song 5:7) and רְעָלָה (Isa. 3:19); cf. Shab. 6:6, where Arab women are said to go out רְעוּלוֹת (veiled), which implies that Jewish women did not. The מַסְוֶה worn by Moses after descending from Mt. Sinai to screen his radiant face (Ex. 34:29–35) was some kind of mask; the leper had to cover his upper lip (Lev. 13:45), by pulling his head-cover over his face (cf. MK 24a).

The Talmud has no Hebrew word for veil except the Aramaic בייכא or בייבא (BB 146a) and the Persian-Arabic פדאמי or פרמי (Shab. 66b). The word הינומא (Ket. 2:1, and 17b; TJ, *ibid.* 26a; cf. the Greek ὑμέαιος) describes the bridal litter (see M. Petuchowski's note in Baneth-Hoffmann etc. *Mishnayot*, 3 (1933), 100f.), but is interpreted by Rashi as "a veil over her (the bride's) head, let down over her eyes, as is customary in our region"; see also *Ḥushi'el of Kairouan, who lived before Rashi (JOR, 11 (1898–99), 649). This custom for the bride to veil her face or, as it is done now, for the groom or the rabbi to cover her face before the marriage ceremony ("*bedecken*," see *Marriage), goes back at least to the early Middle Ages. In 15th-century Rhineland bridal veils were part of the groom's presents to his bride (*sivlonot*). In the late 17th and 18th centuries communal regulations (*takkanot*) forbade women to wear veils of gold or spun gold with gold or pearls or even braided (Metz, 1692), to visit the synagogues unveiled (Metz, 1697), or betrothed girls to appear in public without their faces covered (Amsterdam, 1747). In Muslim countries Jewesses had sometimes to wear distinctive veils, but Tunisian Jewish brides wore gold-embroidered veils in the 19th century. In certain ḥasidic circles brides have their faces completely wrapped and covered.

VEIL, LEWIS (**Daniel**) **COMPIÉGNE DE** (1637–?), convert and Hebraist. Veil was the son of a Metz scholar. With his brother Charles-Marie (1630–1685), he was baptized in 1665. Under Colbert, Louis XIV's minister of finance, he translated into French Maimonides' *Mishneh Torah*, part of which was published in Paris (1678), and he also translated into Latin Abraham *Jagel's Hebrew catechism (London, 1679). He became a Protestant, immigrated to England, and continued to translate Maimonides. His patron, Viscount Hyde, procured for him various payments from Charles II's secret services accounts (1679–81); the assumption that he was a spy appears unfounded, since these accounts were often used for purposes unconnected with espionage. His son was Sir Thomas de Veil (1684–1746), who became well known as a Bow Street magistrate.

[Vivian David Lipman]

VEIL, SIMONE (née **Jacob**; 1927–), French politician. Veil, the daughter of architect André Jacob, was born in Nice. Deported by the Nazis to Auschwitz – where all the members of her family perished – and Bergen-Belsen from March 1944 to May 1945, she survived, and resumed her studies and married Antoine Veil in 1946 on her return to France after World War II. She graduated in law and received the diploma of the Institute of Political Studies in Paris. She was appointed a magistrate in 1956. She was attaché titulaire to the Ministry of Justice (1957–59) and substitute detaché to the ministry (1954–65). Her first political steps came in 1969 when she joined the cabinet of René Pleven. Minister of Justice Veil represented France at the International Society of Criminology in 1959 and devoted herself to the reform of the laws concerning adoption, handicapped adults, and parental authority, and in conjunction with Professor Launay and Dr. Soule published *L'Adoption, données médicales, psychologiques et sociales.* She was appointed technical counselor in the cabinet of President René Pleven and was placed in charge of press relations, problems of civil law, and the judiciary. In 1970 she was appointed secretary to the Superior Council of the Magistracy. She is a chevalier of the National Order of Merit, and a member of the

Council of the French ORT and of the Fondation de France. She served as minister of health in the cabinet of Jacques Chirac (1974–76), minister of health and social security in the cabinet of Raymond Barre (1976–79), and state minister in charge of social affairs, health and life in towns in the cabinet of Edouard Balladur (1993–95). In her capacity of minister of health, she initiated the law legalizing abortion in France. Her courage and dignity during that period gained her immense popularity in the country, far beyond the limits of her political camp. In July 1979 she resigned from the cabinet to devote herself to the European Parliament which she entered on a centrist list; she was elected its president on July 17. She served as president of the parliament for three years (1979–82) and was a regular member until 1993. In March 1980 she was awarded the Athenae Prize of $100,000 from the Aristotle Onassis Fund for her contribution to the rapprochement of peoples and the respect of human dignity. Her husband was appointed director general of Air Transport of France in 1971.

Continuously active in organizations of former deportees and Shoah survivors, Veil enjoyed widespread respect in the field of World War II memorialization. In 2000, she was appointed the first president of the newly created Fondation pour la Mémoire de la Shoah.

VEINBERG (Weinberg), MOISSEY SAMUILOVICH (1919–1996) composer. Veinberg was born in Warsaw, where he studied piano at the conservatory and graduated in 1939. Soon after, he was forced to flee the oncoming German invasion to Minsk, where he studied composition at the Belorussian conservatory. In 1941, with the outbreak of the German Soviet war, he was evacuated to Tashkent. There he met the pianist Emil *Gilels, who became interested in him and performed his second piano sonata (1942) and his piano quintet with the Quartet of the Moscow Bolshoi Theater (1945). In 1943 Veinberg settled in Moscow. His marriage to the daughter of the actor *Mikhoels, a victim of Stalin's anti-Jewish purge, led to his temporary arrest; he was released through the intervention of Shostakovich. His compositions range over many media and are marked by deep emotion and dramatic expression. They include operas: *Passazhirka* ("The Passenger," 1967–68), *Madonna and the Soldier* (1970), *Lyubov' D'Artanyana* ("D'Artagnan in Love," 1972), *Congratulations* (after S. Aleichem, 1975), *Lady Magnesia* (after G.B. Shaw, *Passion, Poison and Petrification, or the Fatal Gazogene*), *The Portrait* (1980), and *The Idiot* (1986); a ballet, *The Little Golden Key* (1962); 25 symphonies written between 1942 and 1992; and many other orchestral works, including instrumental concertos; 18 piano sonatas; over 100 romances; and incidental music.

[Michael Goldstein / Marina Rizarev (2nd ed.)]

VEINER, HARRY (1904–1991), Canadian farmer, rancher, mayor. Veiner was born in Dysart, Saskatchewan, into a family of Jewish immigrant farmers. In 1930 he moved to Medicine Hat, Alberta, where he opened a retail hardware business. Soon a prominent local businessman, Veiner expanded his holdings by successfully investing in a series of ranches and farms in southern Alberta. With the outbreak of World War II, Veiner enlisted in the South Alberta Regiment. He rose to the rank of lieutenant colonel and was responsible for overseeing the logistics of prisoner-of-war camps in Canada. He was repeatedly elected mayor of Medicine Hat from 1952 to 1966 and again from 1968 to 1974. With 20 years in public office, he became the second longest-serving mayor of the city.

Regarded as one of Canada's most colorful small-town mayors and a tireless municipal booster, Veiner was something of a local folk hero with articles written about him in *Time*, *Life*, and *Maclean's* magazines and appearances on radio and television. Athletic and competitive, Veiner entered and won numerous competitions at fairs and rodeos and enjoyed challenging other mayors and officials to compete against him in skating, boxing, and racing.

Veiner's wife, Fanny, served as president of the local Hadassah and was involved with Youth Aliyah. Veiner visited Israel several times and was proud to have met the prime minister and other government officials. He was prominent in the sale of Israeli bonds in Alberta and, at the request of the agriculture department of the Hebrew University, he arranged for a shipment of sheep to be sent to Israel for research. Dedicated to communal service as well as Zionist ideals, Veiner was active in both the Medicine Hat Rotary Club and B'nai B'rith and participated in many fundraising events. In memory of his mother, in 1982 he donated 26 hectares of land valued at $1.1 million to build a branch campus of Medicine Hat College in Brooks.

[Aliza Craimer (2nd ed.)]

VEINGER, MORDECAI (**Mordkhe**; 1890–1929), Yiddish linguist. Born in Poltava and educated at the University of Warsaw, Veinger's first publications appeared before World War I, during which he served in the Russian army. In 1925 he became director of Yiddish linguistic research at the Institute for Jewish Culture of the Belorussian Academy of Sciences in Minsk. Veinger published studies that spanned syntax, historical phonology, ethnographic methodology, and dialectology, notably his *Yidishe Dialektologye* ("Yiddish Dialectology," 1929). He was the first Yiddish linguist to demonstrate variation in the realization of a phonological feature for a single speaker and for a given geographic location (*Tsaytshrift*, 2–3 (1928), 619–32). He was the proponent of a radical reform of Yiddish spelling, partly implemented in the official Soviet Yiddish orthography. His main achievement was the *Yidisher*

Shprakhatlas fun Sovetn-Farband ("Yiddish Language Atlas of the Soviet Union," 1931), published after his suicide by Leyzer Vilenkin.

[Menahem Schmelzer / Rakhmiel Peltz (2nd ed.)]

VEIT, family of German bankers active also in politics and arts. JUDAH VEIT (SINGER; 1710–1786), the son and grandson of rabbis, settled in Berlin in 1738. He married the daughter of Hirsch David, a Potsdam textile manufacturer, and himself went into the textile business. In 1780 three of his five sons – SOLOMON VEIT (1751–1827), DAVID VEIT (1753–1835), and SIMON VEIT (1754–1819) – established the banking partnership Gebrueder Veit. The business was a small one, specializing in money market and securities arbitrage, but it enjoyed the highest reputation both in Germany and abroad. It existed for 150 years, until the depression of 1931 forced its liquidation, but it was not until 1927 that anyone outside the family was admitted into the partnership. The eldest of the three founders of the firm, Solomon, represented the Berlin association of Bankers and Merchants of the Jewish Religion within the United Stock Exchange Corporation in 1803. He was a city councilor from 1809 to 1822, and an elder of the Jewish community. Simon married Moses *Mendelssohn 's daughter, Dorothea, but they were divorced. An older brother, JOSEPH (1745–1831), who worked as a clerk in the family enterprise, contributed German translations from the Bible to the Mendelssohn-inspired periodical, *Ha-Me'assef. Simon's sons, JOHANNES (1790–1854) and PHILIPP (1793–1877), both of whom were baptized, were artists of the Nazarene school, specializing in religious paintings and portraits. Another PHILIPP, the son of Joseph, looked after the Berlin interests of the brothers Joseph and Abraham Mendelssohn while they were residents of Hamburg between 1804 and 1811. In this same generation, one of Judah Veit's (Singer) grandsons, Moritz *Veit (1808–1864), was a publisher, liberal politician, and prominent communal leader. Three generations of Veit descendants served as board members and presidents of the Lehranstalt fuer die Wissenschaft des Judentums.

[Hanns G. Reisnner]

VEIT, MORITZ (1808–1864), German publisher, politician, and Jewish leader. A member of the wealthy Veit family of Berlin, Moritz studied philosophy, history, and philology at the University of Berlin (1825–32) and earned his doctorate at Jena in 1833. At the same time he wrote poetry and edited a literary journal, *Berliner Musenalmanach* (1831–31). In the publishing house he set up in 1834, his authors included L. von Ranke, J.G. Fichte, A. von Chamisso, and F.K. von Savigny. He was chairman of the German publishers' organization (Boersenverein) from 1853 to 1861. Veit also played an active part in public life. In 1847 he opposed the proposed Jewry Law which attempted to organize Prussian Jewry according to the corporatist-medieval ideas of King *Frederick William IV. He was elected to the 1848 Frankfurt Parliament, and after the revolution he was again one of the few Jewish representatives in the first chamber of the Prussian Parliament (1851); later, as a member of the Prussian House of Representatives (1858–61), he again raised his voice against attempts to infringe on Jewish rights. He was a member of the Berlin municipal council for 20 years. An elder of the Berlin Jewish community (1839–48), he was later chairman of its council. He was instrumental in the appointment of his close friend, Michael *Sachs, to the Berlin rabbinate, developed communal schools and institutions, and drafted the 1860 statutes of the community.

VEITH, JOHANN EMANUEL (1787–1876), writer, apostate Roman Catholic priest in Vienna. A native of *Chodova Plana (Kuttenplan), Bohemia, Veith received a medical degree in Vienna (1812), was baptized (1816), and became professor at the Veterinary School and its director (1819). At the time he came under the influence of the Catholic romantic philosopher Clemens Maria Hofbauer (1751–1820). Veith was ordained to the priesthood in 1821 and later played an important role in the Catholic revival. He became a popular preacher at St. Stephen's Cathedral (1832–45), and his sermons were often published. During the 1848 March revolution he founded the *Wiener Katholikenverein*, which edited a paper called *Aufwaerts. Ein Volksblatt fuer Glauben, Freiheit und Gesittung*. At the time of the *Damascus affair (1840), he publicly took an oath on the crucifix that there was no truth whatsoever in the *blood libel. This oath was much referred to in the apologetic literature of the 19th century. In the antisemitic propaganda of the 1880s, the truth of the incident was impugned; therefore, Ludwig August *Frankl secured a sworn deposition as to its veracity from Veith's baptized brother (1882); it appeared in *Die Neuzeit* (24 (1884), 441). Another brother, Joseph, was for many years secretary of the Vienna Jewish community and a contributor to *Kokhevei Yiẓḥak.*

VEKSLER, VLADIMIR (1907–1966), Soviet physicist. Born and educated in Moscow, Veksler specialized in the physics of X-rays, cosmic rays, and in high-energy accelerator theory. For his last ten years he was head of the High Energy Laboratory at the well-known Joint Institute for Nuclear Research at Dubna. He was a member of the U.S.S.R. Academy of Sciences. Veksler improved the performance of cyclotrons (the first atom-smashing machines), by showing how the speed of the "bullets" used to smash atoms could be increased by varying the magnetic field, or the frequency of the electrical surge. This led to the development of the synchrontons. In 1963, he shared with Edwin M. Millikan, who had suggested this independently, the United States Atoms for Peace Award of $75,000. He received the Lenin Prize in 1959 and contributed to the basic research for Sputnik I, the world's first manmade satellite launched in 1957.

[Maurice Goldsmith]

VELIZH, city in Smolensk district, Russia. A *blood libel which stirred up Russian Jewry during the first decade of the reign of Nicholas I (1825–55) took place there. In 1817 the czar, Alexander I, issued an edict according to which Jews were not to be accused of the murder of Christians "merely upon the basis of the ancient tradition that they required Christian blood": in each particular case an investigation of the murder was to be conducted according to those rules which applied to an accused of another religion. Six years later a blood libel occurred in the district town of Velizh (then in the province of Vitebsk). In April 1823 the stabbed body of the three-year-old child Feodor, who had disappeared three days before from the house of his parents, was found near the town. Rumors were immediately spread through the town that the child had been assassinated by the Jews for their Passover requirements. A drunken prostitute, Maria Terentyeva, testified that on the day of his disappearance she had seen the child being led away by a Jewish woman. The local tribunal decided that although the investigation had not revealed any conclusive proof against the Jews who were suspected of the murder, it was nevertheless to be assumed that they had perpetrated it "out of their hostile attitude toward the Christians." The verdict was then referred to the provincial tribunal in Vitebsk, which decreed that the accused were to be acquitted of all suspicion and that the witness Terentyeva was to receive an ecclesiastic penalty for the sin of "leading a life of prostitution." The tribunal also ordered a new investigation into the murder. but it did not produce any results.

Nevertheless, groups of antisemites in the town, who were headed by several Uniate clergymen and were supported by the chief governor of Belorussia, Count Khovanski, continued to stir up the blood libel. In the autumn of 1825, when Alexander I passed through the town, Terentyeva submitted a complaint to him against the local authorities, who had not brought the murderers of her son [sic], the child Feodor, to justice. Ignoring his edict of 1817, the czar ordered the chief governor Khovanski to reopen the investigation. One of Khovanski's officials, Strakhov, was sent to Velizh for this purpose. Terentyeva was arrested, and on this occasion she related that she herself had brought the child to the houses of the Jews, Zeitlin and Berlin, and had been present in the synagogue when he was put to death after having undergone much torture. His blood was then poured into barrels which were transported to Vitebsk and Liozno. Two Christian maids who, according to her words, had participated in these acts were arrested and also "interrogated." On the strength of their evidence over 40 of the Jews of the town were arrested. In August 1826 it was decreed (from above) that all the Velizh synagogues were to be closed because "the Jews abused the tolerance which was shown to their religion." The investigators then began to search for proof of the actual existence of a custom among the Jews to murder Christian children. They collected material and testimonies which had been deposited on the occasion of previous blood libels in Poland and Russia; they found several apostates, one of whom – Grodzinski – brought a Hebrew manuscript before the commission of inquiry which, according to his words, described the ceremony that accompanied the execution of Christian children. At the same time, Terentyeva and the Christian maids testified that they had also participated in the murders of other Christian children.

The czar himself, who received reports on the progress of the investigation, then began to doubt the truth of the charge. He ordered an inquiry to determine who the other children were who had been murdered ("It can easily be clarified whether or not a despicable lie is present"). It rapidly became obvious that there was no foundation to the new libel and that the manuscript which was "discovered" by Grodzinski dealt with the ritual slaughter of animals and poultry. Grodzinski was ordered by the court to serve in the military, and in 1830 the investigation was handed over to the Senate. In the Senate there were divergences of opinion as to the actual accusation which was brought against the Jews and the guilt of the Jews who had been arrested. The deputy minister of justice, Panin, who was responsible for the analysis of the material concerning the accusation, declared that from a legal point of view there was no reason to accuse the Jews of Velizh and he called for their immediate release.

The first decision was then placed in the hands of the State Council. The Jews were defended by the head of the department for civil and religious affairs, Admiral N. Mordvinov, who, as the owner of estates in the surroundings of Velizh, was well acquainted with the Jews of the town and their way of life. In his memorandum to the State Council, Mordvinov declared that the trial of the Jews of Velizh was a premeditated

conspiracy led by Count Khovanski, and that the testimony which had been deposited by Terentyeva and her colleagues had not been given of their own free will but "as a result of a powerful influence." In January 1835 the State Council ordered the release and exoneration of the accused Jews. Terentyeva and her colleagues were sentenced to exile in Siberia on the charge of libel. Mordvinov's proposal to indemnify the Jews for their sufferings was rejected. Four of the arrested died during their nine years of imprisonment.

The trial of Velizh revived the belief in ritual murder among the Christian masses. When he ratified the final verdict, Nicholas I himself commented that he was not convinced that the Jews had not committed the murder. In his opinion, "there are religious fanatics or sectarians among the Jews who required Christian blood for their ceremonies." Accordingly, the czar refused to renew the edict of 1817, and blood libels remained one of the instruments of agitation against the Jews until the abolition of the czarist regime (see also *Blood Libel).

In the 1880s the Jewish community had a synagogue, as well as seven houses of prayer. A state Jewish school was opened in 1883, and a private Jewish boys' school in the early 1900s. During the Soviet regime, the Jewish population dropped from 3,274 in 1926 to 1,788 in 1939.

In July of 1941 the Germans captured the city and relegated the Jews to a camp under a Judenrat. In November they sent 1,000 Jews from Velizh and its environs to a ghetto, which they torched in January of 1942, killing the hundreds who were inside and shooting anyone who tried to flee. Twenty managed to escape.

VELTWYCK, GERARD (d. 1555), German Hebraist and apostate. Little is known of Veltwyck's origins or early life. He was for a time the envoy of Emperor Charles V in Constantinople, and the Marrano physician Amatus *Lusitanus, in his book *In Dioscoridis… de medics materia… enarrationes* (Strasbourg, 1554), mentions that Veltwyck supplied him with medicinal herbs from Turkey.

Veltwyck is mainly remembered for his violently anti-Jewish Hebrew polemical work entitled *Shevelei Tohu – Itinera deserti, de Judaicis disciplinis et earum vanitate* (Venice, 1539), printed by Daniel *Bomberg. The text, translated into Latin by Conrad *Pellicanus in 1545, forms part of the manuscript (now in Zurich, Zentralbibliothek Ms. Car. 1102) containing Pellicanus' copy of Guillaume *Postel's kabbalistic treatise *Or Nerot ha-Menorah* (*Candelabri typici… interpretatio*), which appeared in Venice in 1548. In his *Shevilei Tohu* – a mixture of verse and prose – Veltwyck revealed his hostility toward the Kabbalah, which he declared to be both devoid of authority and riddled with lies and fancies.

VENETIANER, LAJOS (1867–1922), Hungarian rabbi and historian. Venetianer, born in Kecskemet, attended the Jewish Theological Seminary in Breslau (1888–89) and was ordained at Budapest's Landesrabbinerschule. Venetianer became rabbi in Csurgo (1893), rabbi in Lugos three years later, and from 1897 to his death chief rabbi in Ujpest and professor at the Landesrabbinerschule.

A versatile scholar, he was interested in the history of religion, in the common elements in Roman Catholic liturgy and Judaism, and in Jewish literature and history. His profound knowledge of the Christian liturgy and his scholarship were evident in his publications in this field: *Ursprung und Bedeutung der Prophetenlectionen* (in: ZDMG, vol. 73, 1909) and *Juedisches im Christentum* (1913). He edited the publications of the first Jewish medical writers in linguistic and medical-historical respects: *Asaf Judaeus* (1–3, 1915–17), a work of pioneering importance despite the sharp criticism that Immanuel Loew leveled against it. On a more popular level, Venetianer wrote about the organization of Jewish communities, *A zsidóság szervezete az európai államokban* ("The Organization of Jewry in the European States," 1901), a unique work on the subject and about the history of the Hungarian Jews, tending toward the apologetic, *A magyar zsidóság története a honfoglalástól napjainkig* ("The History of Hungarian Jewry from the Beginning of Hungarian History to Our Days," 1922).

VENEZIANI, EMMANUEL FELIX (1825–1889), French philanthropist, born in Leghorn (Italy). He became a director of the relief fund of *Baron de Hirsch and in 1877 traveled to the Balkans and Bulgaria where he organized relief for Jewish and gentile victims of the Russo-Turkish war. At the Congress of Berlin in 1878, Veneziani and Charles *Netter worked for religious liberty in the former Ottoman territories, and in 1880 he was similarly active at the Congress of Madrid on behalf of Moroccan Jewry. In 1882 he and Netter were sent by the *Alliance Israélite Universelle to help organize Jewish emigration from Russia. In 1883 Veneziani toured the Jewish settlements in Palestine. In conformity with Hirsch's views, he advised limiting Russian Jewish immigration there.

VENEZUELA (Span. **República Bolivariana de Venezuela**), republic in northern South America; general population:

24,000,000; Jewish population (2005), est. 15,500 (mainly in the cities of *Caracas, Valencia, Maracay, Maracaibo, Barquisimeto, San Cristóbal, and the Margarita Island).

Colonial Period

Venezuela was discovered by Columbus on his third voyage in 1498, when Columbus, after sailing round the island of Trinidad entered the Gulf of Paria and landed on the mainland without realizing that he was setting foot for the first time on the South American continent. Having observed the huge and powerful currents of fresh water flowing into the gulf, Columbus believed he was at the mouth of one of the four rivers of paradise and, fascinated by the pearl ornaments of the native population, concluded that he was at the doorstep of the Garden of Eden described in Genesis. He was really on the eastern coast of what is now Venezuela.

EARLY JEWISH PRESENCE. Three streams flowing from the same Iberian source shaped the character of the initial Jewish presence in Venezuela: that of Portuguese, Italian, and Dutch Sephardim.

Even though many Portuguese arrived in Venezuela in the years after its discovery and at that time Portuguese was considered a synonym for *Crypto-Jew, contrary to what happened in other lands of South America most of those who came to Venezuela were not of Jewish origin. Only the names of a few of those who arrived and lived in Caracas and Maracaibo between 1642 and 1649 have remained registered. Therefore, their presence must have been very limited. It is only in 1693 that we find the first Jewish establishment in Venezuelan territory, when a group of Leghorn Jews (Italians), who had fled from *Recife (Brazil) to *Suriname, and from there moved to *Curaçao, settled in an inlet neighboring Tucacas, a village on the western coast of the country. Unfortunately, this small community, which was known under the name of Santa Irmandade (Holy Fraternity), also disappeared leaving no traces or documents, not even a cemetery or any other mark. One has to wonder if the only way to survive in the Spanish dominions was to cover one's tracks so as not to be discovered or persecuted by the Inquisition. Yet, the actions of the Inquisition in Venezuela were more sporadic and picturesque than frightening. The judges and commissioners who were sent by Spain lacked jurisdiction and, as a result, their jobs consisted only of reporting acts that had been denounced and sending the suits along to Cartagena de Indias. In 1821 the government of Venezuela definitively abolished the Inquisition, decreeing that it was extinguished and that it never would be reestablished.

18TH CENTURY. After these brief incursions of Portuguese and Italian Jews, it fell upon Sephardi Dutch to provide leadership in the years that followed. At the beginning of the 18th century the economic conditions in Venezuela and the proximity of islands belonging to the Netherlands gave rise to a commerce which would result in a significant Jewish presence in Venezuela. Due to the monopoly imposed on the colo-

Jewish communities in Venezuela, 2005.

nies by the Spanish government, foreign ships bearing illegal merchandise were rife along the Venezuelan coasts. Dutch schooners were seen very frequently and smuggling flourished between Tucacas and Curaçao. Dutch Jews, attracted by the possibility of trade between the Antilles and the continent, participated extensively in the large-scale interchange which evolved under the Dutch flag. A major factor in the boom that ensued was due to the compliance of the Dutch, the very authorities appointed by the Spanish Crown, the Spanish clergy, and even the slaves. At this time, Tucacas was the most active port that sprung up along the west coast and the largest market for products from overseas. From there cocoa, tobacco, indigo and hides were shipped and food, liquors, clothing, and metals received and an active slave trade developed. This commerce between the mainland and the Netherlands Islands spurred the insistent permanence of a small colony of Jews in Tucacas from 1708. There, despite the attacks and devastation they suffered periodically by the Spanish mayors in order to suppress smuggling, they erected 17 houses and the first synagogue on Venezuelan territory and stayed until 1720 when the synagogue and the homesteads were burned and destroyed by Pedro José de Olavarriaga and the inhabitants were obliged to move away.

Even though the only extant reference to this first synagogue had been a single communication (now lost) sent in 1720 by this congregation to the *parnassim* of Curaçao, the existence of the synagogue was subsequently confirmed when in the files of the West India Company in The Hague was found a letter sent in 1737 by one of the *parnassim* to his colleagues in Amsterdam, where he related that "despite Governor van Collen's hostilities toward the Jews, he recognized the significance of their commercial dealings with Venezuela where, according to him, they had incensed the Spanish by erecting a synagogue on the coast near Caracas."

In spite of the intense trading activities developed by the Jews along the Venezuelan coasts, the 18th century did

not favor their permanent settlement in Venezuela. The ban on foreign and Jewish establishments in the Spanish colonies was widely enforced. With the exception of a few known cases, any dealings which were not purely commercial were strictly limited.

Initial Period of Independence

A Spanish colony for more than 300 years, Venezuela became one of the first Spanish South American colonies to declare its independence in the early 19th century. Since becoming a sovereign nation, Venezuela has undergone periodic episodes of civil conflict and dictatorship. Much of Venezuela's 19th- and early 20th-century history was characterized by periods of political instability, dictatorial rule, and revolutionary turbulence, with the military exerting a strong influence over politics.

19TH CENTURY. The year 1811 is that of the Venezuelan Declaration of Independence. Nevertheless, the Spanish forces confronted the patriots inflicting upon them great losses. Simón Bolívar, forced to flee to Curaçao, received there the enthusiastic support of Mordechai Ricardo (in commemoration of this event, the government of Venezuela issued a set of stamps in 1989). The Sephardim of Curaçao saw in Bolívar a hero who, inspired by ideals of equality, with no distinction of race or religion, would fight for the separation of Venezuela from the Spanish Crown. In so doing, he would re-open the doors of the Hispanic world to them. With the onset of the War of Independence, the Dutch Jews were the first to provide aid to the young republic, participating in the war effort by means of financial support. Benjamin and Samuel Henríquez were active officials in the army, and Juan Bartolomé de Sola participated in the famous Battle of Carabobo.

Between 1819 and 1825 many Jews abandoned the island of Curaçao and relocated in various regions of Venezuela and, while some of them established themselves in Puerto Cabello, Maracaibo, Barcelona, Valencia, and Caracas, most of them chose to settle in Coro, where their coreligionists had been living since as early as 1779. There, they began to demonstrate the characteristics which would distinguish them: a unitary spirit, hard work, and an intellectual ability hardly seen in this territory in those days. Besides these skills, the Jews who arrived in Coro carried with them the baggage of religious knowledge and Sephardi traditions that had been cultivated in Curaçao and which they wanted to preserve in their new homes. With this group, a fruitful period of planting roots began. This historical period started in 1829 with Joseph Curiel, and it was the origin of the Jewish social, political, cultural, and economic integration that spread through all of Venezuela. From that time on, Coro has been considered the cradle of the Venezuelan Jewish community.

Since the arrival of Jews in Coro, many of them made important contributions to the economy, science, and culture of the region. Prominent are the names of Joseph Curiel, dedicated to the cause of public health; David Curiel, who contributed largely to pharmaceutical science; his son José David Curiel, president of the Supreme Court of the State; and the important poets Elías David Curiel and Salomón López Fonseca; other residents, such as members of the Jesurun, Senior, Maduro, Capriles, Valencia, Pereira, de Sola, Henríquez, Hoheb, Abenatar, and Salcedo families were outstanding businessmen, doctors, and politicians. But, although the newcomers celebrated religious services in some houses, had a *mohel* and practiced circumcision, celebrated marriages according to the Jewish rite and buried their dead in the Jewish cemetery, they could not be termed as Jewish practitioners. We have to remember that in Venezuela the freedom of religion was accorded in 1834. With the passage of time and although separated by only a thin strip of ocean from the center of Jewish life that was Curaçao, the adherence to the ancestral tradition diminished. These Jews, and at a later date those of the younger generations who were born in the country, soon assimilated into Venezuelan culture.

By the middle of the 1860s, new forms of political relations and business began to develop in Venezuela. The Jews and the people from Curaçao who had settled in Venezuela understood the needs of the country. Given the proportion of the population they represented, they contributed a larger than expected share to the modernization efforts. The trading company of Jacobo Abraham Jesurum & Zoom expanded the commerce between La Guaira and Curaçao. In 1865 Jesurum established a shipping line between Curaçao, La Guaira, Puerto Cabello, St. Thomas, and Europe and signed a contract to construct the eastern railroad and to issue postage stamps for the mail service he provided. Jacobo Abraham Jesurum made several loans to the government, guaranteed by the revenues of the Coro customs office. In 1879, President Antonio Guzmán Blanco, who had cultivated in France the friendship of the banker Isaac Pereire, signed a contract with a son of Isaac to develop natural resources and several enterprises in Venezuela. By the last quarter of the century, a group of industrial managers with a modern mentality and contacts in the United States and Europe arose in the commercial sector. Among them were Manasés Capriles Ricardo, Tomás Chapman, Isaac A. Senior, Salomón López Fonseca, Julio César Capriles and Jacob M. Chumaceiro.

Before the end of the 19th century, a new wave of Sephardi immigration arrived in Venezuela. They were from northern Morocco. These immigrants settled mainly in the cities of Caracas, Barcelona, Carúpano, Cumaná, La Victoria, Villa de Cura, and Caucagua, and some of them went to places as distant as the uninhabited San Fernando de Apure and Ciudad Bolívar. The life of these people was hard at the beginning. Without capital or skills, they became traveling salesmen. Because of their dedication to commerce and trade, they spread out and no longer lived together as a community. Religious life did not exist because there was neither a synagogue nor rabbis. For many of them, this situation contributed to their forgetting their Jewish roots.

Immigration and Communal Organization

20TH CENTURY. By the year 1907, 230 Jews lived in the country. Through perseverance, sacrifice, and savings, those who had arrived at the end of the 19th century started opening commercial houses in prime locations in Caracas and initiated some manufacturing facilities. Gradually they began to prosper. The adoption of local customs was not an obstacle to narrow links of solidarity among themselves; the improvement of their economic situation helped them continue to maintain their faith and the bonds with the family they had left in Morocco. To satisfy the growing needs of the group, they founded in Caracas in 1907 a charitable society named "Sociedad Benéfica Israelita" which remained active until some time after 1909; they used to meet in private houses to pray and celebrate the holidays and in 1916 they inaugurated a cemetery. By 1917 the number of Jews had increased to 475. The National Census of 1926 recorded 882 Jews.

In the 1910s, under the dictatorship of General Juan Vicente Gómez and the boom of Venezuelan oil, Sephardi Jews from Eastern Europe, Yemen, Persia, Syria, and Lebanon arrived in Caracas. At the same time, Ashkenazi Jews coming from Central Europe crossed the Atlantic Ocean to reach Venezuelan shores. These new immigrants had left Europe under the most precarious conditions. They traveled third class on miserable ships to trade their poverty for the almost universal poverty of the rural country that Venezuela then was, and to find an older community of Moroccan origin, now mostly wealthy and well established. These newcomers had to live in houses where each family had a single room with kitchen and bathroom shared. After walking through neighborhoods and climbing steep hills to sell their merchandise for monthly payments, their greatest aspiration was to create their own commercial establishments. With nostalgia for the customs and traditions of their ancestors, they soon formed groups based on places of origin, and Poles, Russians, Hungarians, and Germans came together out of affinity to share memories. These affiliations served as a mutual support in time of need. In 1931 they established the Sociedad Israelita Ashkenazit and 12 years later the Centro Social y Cultural Israel. In 1936, aware of the need to unite forces and to create a congregation, both groups merged and in 1950 they gave birth to the Unión Israelita de Caracas (UIC). Other small Ashkenazi institutions were founded in Maracaibo (1941), Maracay (1944), and San Cristóbal (1945). During all these years the Ashkenazi groups used rented houses to celebrate religious services and organize social activities. It was not until 1961 that the UIC began the construction of its synagogue in Caracas.

Greatly devoted to religious tradition, the Moroccan Sephardi group that lived in Caracas founded in 1930 the Asociación Israelita de Venezuela (AIV), whose first objective was to build a synagogue and which has become since then the representative organization of the whole Sephardi community. The Synagogue El Conde (1939–54) and the Gran Sinagoga Tiferet Israel de Caracas built in the period 1956–63, as well as the group of new synagogues that developed during the last two decades of the 20th century, are an expression of the traditional deep-rooted religious feelings of this Jewry.

The Holocaust and the Subsequent Period

By the end of the 1930s, the Venezuelan government had imposed restriction on Jewish immigration. While during the Nazi regime some Caribbean countries closed their ports to the ships carrying human cargo that tried to escape the annihilation that extended in Europe in those years, in 1939 General Eleazar López Contreras, president of the Republic, had humanitarian feelings. At the initiative of the Comité Israelita Pro-refugiados, he granted permission to land to the passengers of the only two ships under the German flag that anchored at Puerto Cabello and La Guaira, the *Koenigstein* and the *Caribia*. Most of these refugees were intellectuals and educated professionals whose influence would be decisive in the subsequent development of the community and whose contribution to the country has been notable.

The 1940s were framed by the tragic events of World War II. The nucleus that gave rise to the Unión Israelita de Caracas together with the members of the Asociación Israelita de Venezuela showed their solidarity with their coreligionists who, escaping from the Holocaust, arrived in Venezuela in search of shelter. In their desire to help the refugees fleeing events that were developing in Europe, in 1941 a Jewish group from the Middle East and North Africa set up the Centro Benéfico Israelita. Starting in 1946 and continuing well into the 1950s, a new contingent of Askenazim, survivors of the Holocaust, bolstered the Venezuelan community.

During this same decade a succession of events contributed largely to strengthen and consolidate the future of communal life: the bases of the Consejo Central de Sociedades Israelitas de Venezuela (Central Council of Jewish Societies of Venezuela) were established; *Mundo Israelita*, a weekly newspaper, began its appearance in 1943; WIZO de Venezuela was constituted and the first copies of the magazines *Prensa Judía* (1944) and *Paz* (1946) were issued. The Colegio Moral y Luces Herzl-Bialik was founded in 1946, beginning its activities with a registration of 40 students.

Zionist youth movements were established by young Venezuelan Jews who, enthusiastic over the creation of the State of Israel, took names such as Grupo Universitario Scopus (1946), Grupo Juvenil Kadimah (1946), Javerim (1954), Ken Najshón del Hashomer Hatzair y Bnei Akiva (1955), Hanoar Hatzioni, and Young Israel.

Contemporary Period

With the death of the General Juan Vicente Gómez (1935) after 27 years of a strong-arm government, Venezuela adopted the constitutional system. The decisive political changes at the end of the "gomecismo" coincided with the beginning of the modernization of the country (the presidencies of Gral. Eleazar López Contreras (1936), General Isaías Medina An-

garita (1941), Rómulo Betancourt (1945), Rómulo Gallegos (1948), and General Marcos Pérez Jiménez (1950)), and with the reaping of the benefits of oil.

For Venezuela, starting on the path of modernization, two of the ingredients necessary to accomplish it were at hand: the oil wealth that sprang spontaneously from the earth and the people's desire for transformation; the only missing component was the human factor. In this circumstance, the country opened its doors to immigration. Spaniards, Italians, and Portuguese arrived in waves as did Jews who had survived the European catastrophe. By 1950, the Jewish population had grown to about 5,000–6,000 persons. In 1958 the dictatorship of General Marcos Pérez Jiménez fell. During the period 1957–59 about 1,000 Jews from Egypt, Hungary, and Israel were admitted. Others came from South American countries, escaping from their political instability.

After the withdrawal of the military from direct involvement in national politics (1958), Venezuela started to enjoy an unbroken tradition of democratic civilian rule, though not always without conflict. The 1960s were deeply convulsive in political matters, giving rise to a mainly intellectual left. The 1970s were marked by the energy crisis in consequence of the revolution in Libya, the Yom Kippur War, and the fall of the shah of Iran. Presidents Rafael Caldera (1968), Carlos Andrés Pérez (1973), and Luis Herrera Campíns (1978) had to navigate the difficulties of those years.

A highly organized and supportive Jewish community developed then. Since 1966 the Confederación de Asociaciones Israelitas de Venezuela (CAIV) is the umbrella organization that officially represents the whole community. At the beginning of the 1970s the Colegio Moral y Luces Hebraica, spanning Jewish education from kindergarten to high school, opened its door and received in its classrooms 95 percent of the Jewish student population. It was in this setting that Sephardi-Ashkenazi interrelations began to grow steadily, pointing toward the total unification of both communities. In 1970 the Jewish population was estimated at 15,000, most of them living in Caracas. This number had increased to 20,000 in the mid-1990s.

Institutions such as the Instituto Cultural Venezolano-Israelí (1956), the Federación Sionista (1959), the Instituto Superior de Estudios Judaicos (ISEJ, 1977), the Centro de Estudios Sefardíes (1980), the Colegio Sinai (1983), the Museo Raquel Kern (1983), the Beth Avot (Home for the Aged, 1984), the Museo Sefardí Morris E. Curiel (1998), the Centro de Salud Yolanda Katz (1998), the Library Leo and Anita Blum (1998), and the Centro Cultural Gonzalo Benaím (1998), are but a sample of the many educational, cultural, and welfare organizations that provide valuable communal services through intense activity. Cordial relations with churches are maintained through the Comité de Relaciones entre Iglesias y Sinagogas establecidas en Venezuela (CRISEV, 1973). A chair on Judaism opened at the Universidad Católica Andrés Bello.

Throughout these years, the Jewish contributions to the country have been significant. Outstanding individuals among them received national prizes in a variety of fields, examples being in physics (Estrella Abecasis de Laredo) and chemistry (Gabriel Chuchani); plastic arts (Harry Abend; Sofia Imber); theater (Isaac Chocrón); literature (Elisa Lerner); and cinematography (Alfredo Roffé). Jews who have presided over academic organizations were Paul Lustgarten (National Academy of Physical, Mathematics and Natural Sciences), Benjamin Sharifker (rector of the University Simón Bolívar), Rafael Reif (provost of the Massachusetts Institute of Technology), Paulina Gamus (deputy to the National Congress), Ruth de Krivoy (president, Banco Central), Rubén Merenfeld and Gonzalo Benaím (outstanding professionals and community and social activists), and many others.

In 1992 there was a military attempt under the leadership of Lieutenant Colonel Hugo Chávez to remove President Carlos Andrés Pérez from power. Though the coup ultimately failed and Chávez was jailed, his role in resisting the then unpopular president made him a prominent figure in national politics after he was released from jail in 1994. In 1998 he was elected president of the Republic.

The political turmoil of the early 2000s and the social and economic transformations the country has faced under the administration of Hugo Chávez have imposed new responsibilities upon the community. The Jewish environment did not escape the serious crisis that economically affected the less favored people. By the year 2005 the total number of registered students in the Jewish school had decreased due to the recent phenomenon of migration and *aliyah* made by a considerable number of Venezuelan Jewish families. The number of students attending the Colegio is 1,381.

In 2005 it was education and social welfare activities that required the maximum attention from the community authorities. There was an increased need for scholarships for the day school and a considerable number of families required monthly financial assistance. Apparently, the years of prosperity were reaching an end and uncertainty was what characterized the future.

Antisemitism

Leaving aside the anti-Jewish outbursts that occurred in Coro in the mid-19th century and ended in an arrangement with the government, Venezuela is a country where discrimination by origin, race, or religion had been almost nonexistent and where antisemitism was not widespread. Even during the periods of dictatorship which prevailed during part of the 20th century, the Jewish community was not singled out for oppression.

It is since the Six-Day War (1967) that anti-Israeli and anti-Zionist propaganda reared its head and was echoed by the leftist parties, although public opinion and the press remained friendly to Israel and to the Jewish people.

In Venezuela the Jewish and Arab communities had been living and trading together in harmony for years. Successive governments had maintained their neutral position in the

Middle East conflict and had tried to keep peace among these groups, although they were unable to prevent the outbreak of antisemitism that poisoned the press, the university campus, and the politic atmosphere in the 1970s.

More recently (2005), even though President Chávez had affirmed and repeated that a total and absolute climate of liberty exists, intermittent broadcasts of the official radio and TV stations attempted very often to denigrate the integrity of the Jewish people and the State of Israel; degrading concepts and prejudiced expressions are heard in some media; antisemitic watchwords appear painted on walls; posters and "cartelones" incite against the Zionism; antisemitic mottoes are daubed on the façades of Jewish institutions. As a result of a political assassination and in order to explain problematic national and political events, the police carried out an unsuccessful search in the Hebrew school and the Hebraica social club (2005). It is possible that these are isolated actions, but to the surprise of many people, the distribution of antisemitic literature has increased greatly in bookstores and newsstands.

Relations with Israel

Special mention should be made of the close relationships that have always existed between Venezuela and Israel. Diplomatic relations are on the ambassadorial level. The embassy was located in Jerusalem for many years but eventually moved to Tel Aviv. Commercial ties between the two countries are well developed. Visits of ministers and cooperation in specialized professional projects and agricultural development programs have been very frequent.

Venezuelan Jews have maintained strong ties with Israel and many have visited the country several times. The financial contributions to Jewish causes used to be large. To celebrate the 50th anniversary of Israel, a set of commemorative postal stamps was issued by the government in 1998.

The Comité Venezolano pro-Palestina was formed in 1946 and, under the Rómulo Gallegos presidency, the Venezuelan government gave its affirmative vote to the Partition Plan in the United Nations (1947) and was one of the first nations to recognize the State of Israel (1948).

Since the establishment of the Cámara Económica Venezolana-Israelí in 1976, trade between the two countries has grown considerably. In 1970 the total amount per year was $3 million ($1.5 million for each side). In 1980 the total was $21.6 million (of which Israel exported $21.3 million). This Venezuelan deficit continued in 1990 with total trade of $92.9 million (Israel exported $90.7 million). A big drop in trade was registered in 2000, down to $36.7 million, Venezuela exporting $10.4 and Israel 26.3 million. Total trade in 2003 was $29.3 million (3.8 and 25.5, respectively) and in 2004 $56.8 million (9.6 and 47.2, respectively).

With respect to *aliyah* (emigration to Israel), the first years of the 21st century showed a pattern of steady growth (52 people in 2002; 113 in 2003; 117 in 2004; and 129 in 2005).

[Jacob Carciente (2nd ed.)]

VENGEANCE (Heb. *nekamah, nekimah*), inflicting punishment on another in return for an offense or injury, or the withholding of benefits and kindness from another for the same reason. The Bible distinguishes between vengeance that is proper and vengeance that is sinful. Vengeance is proper for man only in the restricted sense of dispensing justice for a legally punishable crime or sin, meted out in the prescribed manner. The one who inflicts the punishment is thus acting as an instrument of the court of law, or in rare cases, of God's revealed will, but never merely to satisfy personal animosity. Examples are "When a man strikes his slave… and he dies there and then, he must be avenged" (Ex. 21:20) and "The Lord spoke to Moses, saying, 'Avenge the Israelite people on the Midianites'" (Num. 31:1–2). Similarly, vengeance is appropriate when it is directed in a legally just war against the enemies of the entire people of Israel, who are at the same time considered enemies of God: "To execute vengeance upon the nations and punishments upon the peoples" (Ps. 149:7). Vengeance is a divine prerogative, as the following verses indicate: "For He will avenge the blood of His servants, wreak vengeance on His foes" (Deut. 32:43); "I will bring a sword against you to wreak vengeance for the covenant" (Lev. 26:25); and "O Lord God of vengeance, O God of vengeance, shine forth" (Ps. 94:1). While the rabbis considered the imitation of God's ways, such as mercy, forgiveness, and so on, to be the ethical ideal for man (see, e.g., Sot. 14a; Sif. Deut. 49; Shab. 133b), they did not fail to point out that certain activities attributed by the Bible to God, such as vengeance, should not be imitated, the reason being that "with a human being wrath controls him, but the Holy One blessed He controls His wrath, as it is said, 'The Lord avengeth and is full of wrath'" [the Hebrew is *ba'al ḥemah*, literally 'master of wrath'; Nah. 1:2] (Gen. R. 49:8).

Human vengeance as the expression of personal animosity is explicitly prohibited in the Bible in the verse, "You shall not take vengeance or bear a grudge against your kinsfolk. Love your neighbor as yourself: I am the Lord" (Lev. 19:18). The rabbis offer a precise definition of this passage: "What is vengeance and what is bearing a grudge? If one said to his fellow: 'Lend me your sickle,' and he replied 'No,' and tomorrow the second comes to the first and says: 'Lend me your ax,' and he replies: 'I will not lend it to you just as you would not lend me your sickle' – that is vengeance. And what is bearing a grudge'? If one says to his fellow: 'Lend me your ax,' he replies 'No,' and on the morrow the second asks: 'Lend me your

garment,' and he answers: 'Here it is, I am not like you who would not lend me what I asked for' – that is bearing a grudge" (Yoma 23a; Maim. Yad, De'ot 7:7, 9; *Sefer ha-Ḥinnukh*, nos. 247, 248). Various reasons have been offered by Jewish thinkers for the injunction against vengeance, besides the obvious one that it increases hatred and strife among men. One consideration is that a man and his neighbor are really one organic unit, so that one retaliating against the other is analogous to the situation in which one hand slicing meat with a knife slips and cuts the second hand: "would the second hand retaliate by cutting the first?" (TJ, Ned. 9:4, 41c). Or, from another aspect, one ought always to consider the harm that befalls him as ultimately deriving from God as punishment for sin, the human perpetrator of the injury being merely an unwitting instrument of divine providence, so that, actually, repentance, rather than vengeance, is called for (*Sefer ha-Ḥinnukh*, no. 247). Maimonides states that "one should rather practice forbearance in all mundane matters, for the intelligent realize that these are vain things and not worth taking vengeance for" (Maim. Yad, De'ot 7:7).

There is, according to the Talmud, one notable exception to the injunction against vengeance. "Any *talmid ḥakham* (pious Torah scholar) who does not avenge himself and retains anger like a serpent, is no real *talmid ḥakham*" (Yoma 22b–23a), the reason being that offense against him entails a slur against the Torah itself. This dispensation granted the *talmid ḥakham* is, however, highly qualified by the rabbis. It is limited to cases where the scholar has suffered personal, rather than monetary, injury; the scholar may not take overt action, but may merely withhold interference if another takes up his cause; the dispensation is terminated if the offender seeks forgiveness (Yoma, *ibid.* and Rashi *ibid.*). Furthermore, according to Maimonides (Yad, Talmud Torah 7:13), the special permission granted the scholar applies only to instances where he was publicly reviled, thus involving a gross desecration of the honor of Torah; and finally, the purpose for allowing vengeance in such a case is that it causes the offender to recant, after which he must be forgiven.

In all other instances where one has been wronged, vengeance in all its forms is forbidden. The ideal, according to the Talmud, is to be of those, "who are insulted but do not retaliate with insult, who hear themselves put to shame without replying" (Yoma, *ibid.*). Concerning such people, the rabbis declare, "he who forbears to retaliate will find forbearance [from God] for all his failings" (Yoma, *ibid.;* Shab. 88b; RH 17a.)

[Joshua H. Shmidman]

VENICE, city in N. Italy.

The Medieval Community

Although some individual Jews had passed through Venice in the Middle Ages, legislation enacted in 1382 allowing moneylending in the city for the following five years marked the start of the authorized Jewish presence in the city, and at its expiration in 1387 a 10-year charter came into effect exclusively for Jewish moneylenders. However, at the end of the ten years, they had to leave, and officially no Jew could stay in Venice for longer than 15 days at a time, with exceptions made only for merchants arriving by sea and for doctors; also henceforth all Jews coming to the city were required to wear on their outer clothing a yellow circle, changed in 1496 to a yellow head-covering to make evasion more difficult.

Plan of Venice ghetto, 1930.

The authorized continuous residence of Jews in the city of Venice and the emergence of its Jewish community was a 16th-century development not initially planned by the Venetian government. Its restrictive policy toward the residence of Jews in Venice in the 15th century was not extended either to the Venetian overseas possessions or to the Venetian territory on the Italian mainland, and the charter issued in 1503

to Jewish moneylenders in Mestre permitted them to come to Venice in case of war. Consequently, in 1509, as during the War of the League of Cambrai, the enemies of Venice overran the Venetian mainland, Jewish moneylenders and other Jews residing in Mestre, as well as in Padua and elsewhere, fled to Venice. The Venetian government soon realized that allowing them to stay was doubly beneficial, for they could provide the hard-pressed treasury with annual payments while their moneylending in the city itself was convenient for the needy urban poor. Consequently, in 1513 the government granted the Jewish moneylender Anselmo del Banco (Asher Meshullam) from Mestre and his associates a charter permitting them to lend money in Venice. Then, two years later, the Jews obtained permission to operate stores selling *strazzaria*, literally rags, but, by extension, secondhand clothing and other used items such as household goods and furnishings, which were sought by a large part of the population, especially foreign diplomats and visitors to the city and even the government itself for state occasions, prior to the Industrial Revolution when less-expensive mass-produced items first became available.

Many Venetians, especially clerics, objected to the residence of Jews all over the city, so in 1516 the Senate decided, despite the objections of the Jews, as a compromise mediating between the new freedom of residence all over the city and the previous state of exclusion, to segregate them. Accordingly, all Jews residing in the city and all who were to come in the future were required to move to the island known as the Ghetto Nuovo (the New Ghetto), which was walled up and provided with two gates that for most of the time that the ghetto existed were locked all night, from one hour after sunset in the summer and two hours after sunset in the winter, when it got dark earlier, until dawn.

Initially, the site adjacent to the island of the Ghetto Nuovo had served as the location of the Venetian municipal copper foundry, *il ghetto* from the verb *gettare,* in the sense of to pour or caste metal, while the Ghetto Nuovo to which the Jews were relegated in 1516 had been used for dumping waste material from the copper foundry. Accordingly it was referred to as "the terrain of the ghetto" (*il terreno del ghetto*) and then eventually the Ghetto Nuovo, while the area of the actual foundry became known as the Ghetto Vecchio (the Old Ghetto). But since the foundry was unable to process a sufficient quantity of metal, its activity came to be consolidated in the Arsenal, and in 1434 the government auctioned off the foundry and adjacent island, both of which became residential areas.

Although a few compulsory, segregated, and enclosed Jewish quarters had existed in Europe prior to 1516, the best-known and longest lasting of which was that of Frankfurt am Main established in 1462, they were never called ghettos because that word came to be associated with Jewish quarters only after the Venetian development of 1516. Thus, the oft-encountered statement that the first ghetto was established in Venice in 1516 is correct in a technical, linguistic sense but misleading in a wider context.

The establishment of the ghetto, however, did not assure the continued residence of the Jews in Venice, for that privilege was based on a charter granted by the Venetian government to the Jews in 1513. Upon its expiration in 1518, very extensive discussions took place in the Senate, as numerous proposals, including the expulsion of the Jews from Venice, were advanced, but eventually a new five-year charter was approved and subsequently renewed for generations.

Overall, the attitude of the Venetian government toward the Jews was highly ambivalent. While the majority of the senators allowed utilitarian socio-economic considerations to be foremost in their decision-making, thereby in retrospect making the residence of the Jews in the city continuous from 1513 on, there was a constant undercurrent of hostility that could find its expression at the time of the charter renewal. An examination of the actual terms of the charters reveals that over the years, clauses were added to further regulate the status of the Jews. Most important was the change in attitude toward moneylending. Increasingly, the Venetian government viewed Jewish moneylenders as a source of cheap credit for the urban poor rather than of revenue for the state treasury, and accordingly, it lowered the interest rates and correspondingly reduced the required annual payments of the Jews. Finally, in 1573, it eliminated the annual payment, but the Jews were required to make loans of up to three ducats each at five percent per annum interest to any borrower with a suitable pledge. Since the native Jews of Venice, whom the government referred to as Tedeschi (i.e., German) Jews because many of them were ultimately of Germanic origin even though their families might have lived on the Italian peninsula for generations, claimed that they could not support the expenses of the pawnshops (sometimes misleadingly referred to as banks) on their own, the Jewish communities of the mainland were required to contribute and that responsibility was also extended to the Jewish merchants, despite their strong objection. Thus the nature of Jewish moneylending completely changed from a voluntary profit-making activity engaged in by a few wealthy individuals to a compulsory responsibility imposed on the Jewish community which passed it on to individual Jews who had the resources to fund the pawnshops, and then subsidized them with a premium over the five percent interest that they could legally charge on their loans.

In 1541, some visiting Ottoman Jewish merchants, known as Levantine Jews, complained to the Venetian government that they did not have sufficient space in the ghetto. Legislation of that year designed to make trading in Venice more attractive to foreign merchants, primarily by lowering customs duties on certain imports, pointed out that these Jewish merchants were importing the greater part of the merchandise coming from the Ottoman Balkans and ordered that their complaint be investigated. Upon confirmation of its validity, they were assigned the area of the Ghetto Vecchio, which was ordered walled up with only one gate at each end, one of which opened up to a bridge to the Ghetto Nuovo.

Meanwhile, the establishment of the Inquisition in Portugal in 1536 increasingly induced many *New Christians to leave, either because they were secretly judaizing or were afraid that they might falsely be accused of doing so. The existence of a Jewish community in Venice and the growing presence of Levantine Jewish merchants in the city after 1541 made it more attractive for judaizing Iberian New Christians to come to Venice, where many reverted to Judaism and either stayed or went on elsewhere, primarily to the Ottoman Empire.

Although the Venetian government was always doctrinally Catholic and concerned with the religious faith of its inhabitants, it usually did not concern itself with the origin and background of those New Christians who upon arriving in Venice went directly to the ghetto and there assumed Judaism and henceforth lived unambiguously as Jews. On the other hand, officially it did not tolerate New Christians who lived outside the ghetto and passed themselves off ostensibly as Christians while nevertheless still secretly judaizing, both because their conduct was an affront to Christianity and also because it was feared that they might lead more simple Christians astray. Only once in the 16th century, in 1550, apparently under the pressure of Emperor Charles v, did the Venetian government take action against judaizing New Christians as a group as it forbade *Crypto-Jews from settling in Venice and the Venetian state.

Yet despite the legislation of 1550, the pressure of the papal nuncio, and the presence of the Venetian Inquisition – revived in 1547 in order to deal with the growth of Protestant heresy rather than with Crypto-Jews as had been the case with the Inquisition on the Iberian peninsula (although once established it concerned itself with all manifestations of heresy, including cases of Crypto-Judaism) – Venice continued to serve judaizing New Christians as both a place of settlement as well a major point of transit.

The cause of the judaizing New Christian merchants in Venice was taken up by Daniel Rodriga, a Jew of Portuguese New Christian origin, in 1573. He submitted to the Venetian government numerous proposals and projects intended primarily to restore the declining maritime commerce of Venice and augment its diminishing customs revenue while simultaneously benefiting Jewish merchants and, above all, obtaining for them privileges in Venice. Keenly aware of the far-flung merchant kinship networks of the Jewish-New Christian Iberian Diaspora in the ports of the Mediterranean, Rodriga claimed that if given suitable guarantees of security, these merchants would bring their merchandise to Venice, increasing its customs revenue and enabling it to maintain its entrepôt function. Finally, in 1589, Rodriga's persistence was rewarded, as the Venetian government, recognizing the need to take some action in view of the serious decline in Venetian maritime commerce, concluded that inviting Jewish merchants to the city constituted the least serious possible modification of its long-standing commercial protectionist policy and accordingly the least objectionable way of attempting to alleviate the situation. Consequently, it issued a charter allowing both New Christian merchants from the Iberian Peninsula (who were called Ponentine – i.e., Western – Jews in order to avoid referring to them as New Christians or Marranos) and also Levantine Jewish merchants from the Ottoman Empire to reside in Venice as Venetian subjects with the coveted privilege of engaging in maritime trade between Venice and the Levant on condition that they resided in the ghetto and wore the special yellow Jewish head-covering.

These Jewish merchants were so successful that their charter was subsequently renewed for successive 10-year periods, and when in 1633 they assured the Venetian government that additional merchants would come to Venice if granted adequate living space, it assigned the newcomers an area containing 20 dwellings across the canal from the Ghetto Nuovo, in a direction almost opposite to the Ghetto Vecchio, that almost immediately became known as the Ghetto Nuovissimo, i.e., the newest ghetto. In light of the spread of the use of the term "ghetto" to refer to compulsory and segregated Jewish quarters on the Italian peninsula in the wake of the harsh papal bull of 1555 known as *Cum Nimis Absurdum*, it is understandable that this third compulsory Jewish quarter in Venice was referred to as a ghetto. However, the Ghetto Nuovissimo differed from the Ghetto Nuovo and the Ghetto Vecchio in one important respect. While the last two designations had been in use prior to the residence of the Jews in those locations and owed their origin to the former presence of a foundry in that area, the Ghetto Nuovissimo had never been associated with a foundry. Rather, it was called the Ghetto Nuovissimo because it was the site of the newest compulsory, segregated, and enclosed Jewish quarter. Thus, the term ghetto had come full circle in the city of its origin: from an original specific usage as a foundry in Venice to a generic usage in other cities designating a compulsory, segregated, and enclosed Jewish quarter with no relation to a foundry, and then to that generic usage also in Venice.

The number of Jews residing in Venice apparently reached around 2,000 (roughly 1.5% of the total population of the city) in the last years of the 16th century, rising to a peak of almost 3,000 (roughly 2% of the population) toward the middle of the 17th century, and then dropped to a low of slightly over 1,500 in the last years of the Republic, although according to some very questionable sources at times it was substantially higher. Especially in the 16th and 17th centuries, the number of dwellings available in the ghetto was very often insufficient, so they were constantly subdivided into smaller units while stories were added to the existing buildings, thereby starting a virtually constant process of alteration and modification.

The Venetian government enforced the regulations regarding residence in the ghetto and the requirement to remain there after the hour established for the closing of its gates. Only Jewish doctors treating Christian patients and Jewish merchants who had to attend to their business enjoyed routine permission to be outside the ghetto after hours, while additionally on occasion individual Jews, including representa-

tives of the Jewish community who had to negotiate charter renewals with the government, singers and dancers who performed in the homes of Christians, especially at carnival time, and others who had special needs and skills were granted the privilege, often only until a specified hour of the night. Only extremely rarely indeed was permission granted – usually to doctors – to reside outside the ghetto. Along with residence in the ghetto, the requirement that the Jews wear a special headcovering, initially yellow, which for some undetermined reason became red although Levantine Jews continued to wear yellow, constituted a very significant part of the Venetian socio-religious policy of segregating the Jews.

Reflecting the heterogeneous ethnic backgrounds of the Jews of Venice, several synagogues were established in the ghetto. Five were generally considered to be major synagogues. Three were located in the Ghetto Nuovo: the Scuola Grande Tedesca and the Scuola Canton, both of the Ashkenazi rite, and the Scuola Italiana. Situated in the Ghetto Vecchio were the Scuola Levantina and the Scuola Ponentina or Spagnola, officially Kahal Kadosh Talmud Torah. Additionally, at least three smaller synagogues existed in the Ghetto Nuovo: the Scuola Coanim or Sacerdote, the Scuola Luzzatto, and the Scuola Meshullam. Only the cemetery, initially established in 1386, of necessity was located outside the ghetto on the Lido. The Scuola Ponentina acquired an additional significance as its by-laws served as a model for the Sephardi community of Amsterdam, whose procedures in turn were utilized by the Sephardi Jewish communities of London and of the English colonies of New York, Philadelphia, and Montreal in the New World.

The rabbis of Venice constituted overall a distinguished cadre that provided leadership for their day and a few outstanding figures of more than local significance. The best known was the prolific Leon *Modena (1571–1648), whose numerous works include a remarkably frank Hebrew autobiography which sheds much light on his own life as well as providing unique and fascinating insight into the everyday life, practices, and values of the Jews in early-modern Venice, including their extensive relationships with their Christian neighbors on all levels, from intellectual exchanges to joint participation in alchemy experiments and gambling. Also of special prominence was Modena's contemporary, Rabbi Simone *Luzzatto (ca. 1583–1663). Today he is remembered primarily for his *Discorso sopra il stato degl'Ebrei et in particolar demoranti nel'inclita città di Venetia* ("Discourse on the Status of the Jews and in Particular Those Living in the Illustrious City of Venice," 1638), written in Italian for the Venetian nobility in order to avert a possible expulsion of the Jews as a result of a major scandal involving the bribery of Venetian judges through Jewish intermediaries. In the course of his presentation, Luzzatto displayed considerable insight into the economic and commercial situation, combined with a thorough acquaintance with classical Graeco-Roman literature and an awareness of contemporary intellectual trends, especially in philosophical and political thought, as well as new scientific discoveries in mathematics and astronomy, as he argued that the presence of Jewish merchants and moneylenders was very useful indeed for the Venetian economy and therefore the Jews should not be expelled. Additionally, Venice served as a significant center for the development, transformation, and popularization of the Lurianic Kabbalah from Safed as Rabbi Menachem Azariah mi Fano began to publicly expound it, and eventually it was transmitted from Venice to Eastern Europe.

Additionally significant in Venice was the presence of Jewish doctors, many of whom had been attracted by the educational experience offered by the nearby medical school of Padua. The attendance of Jewish students there was especially significant since it was generally regarded as the best medical school in Europe, with the humanities integrated into the scientific curriculum, and provided one of the richest opportunities for Jews to familiarize themselves with the best of European intellectual and cultural achievements. Jewish students from all over Italy as well as central and eastern Europe came to Padua, and many returned to serve in their communities and elsewhere. Especially noteworthy was the Jewish doctor David dei Pomis (1525–c. 1593) who left Rome as a result of *Cum Nimis Absurdum*, eventually settling in Venice, where he resided for the rest of his life and published, among other works, his *De Medico Hebraeo Enaratio Apologica* (1588), which refuted charges often brought against Jews and Jewish doctors in his own days in the bull of Gregory XIII.

Hebrew Printing

Understandably 16th-century Venice, with available capital, technical proficiency, good paper, a skilled labor force, and constituting a convenient location for exporting emerged as a major center of printing not only in Italian, Latin, and Greek but also Hebrew, Judeo-Italian, Ladino (Judeo-Spanish), and Yiddish (Judeo-German). Indeed, the Venetian printing press made a very extensive and lasting contribution to Jewish learning and culture through its assuming a major role in the early history of Hebrew printing and publishing. One of the outstanding publishers of Hebrew books in Renaissance Italy, and indeed of all times, was Daniel Bomberg, a Christian from Antwerp who, with the help of numerous editors, typesetters, and proofreaders, mostly either Jews or converts from Judaism to Christianity, printed around 200 Hebrew books. Of prime significance for Jewish religious life and culture is his complete edition of the Babylonian Talmud (1520–23) with the commentary of Rashi and the Tosafot, whose format and pagination has been followed in virtually all subsequent editions up to the present, and also his edition of the rabbinic Bible (*Mikra'ot Gedolot*) (1517–18; 1524–25^2), with the Aramaic translation and traditional rabbinic commentaries, which also became the standard model for most subsequent editions, as well as other major works, including the Palestinian Talmud.

After Bomberg, the more important subsequent printers of Hebrew books included the Christians Marco Antonio

Giustiniani, whose activity overlapped the last years of Bomberg, and Alvise Bragadini. Their competition in rival editions of Maimonides' *Mishneh Torah* led to a papal decree of 1553 condemning the Talmud and ordering it burned. Consequently, on October 21, 1553, Hebrew books were burned in Piazza San Marco, to the great loss of the Jewish community and the Christian printers alike. Subsequently, in the early 1560s, Hebrew printers in Venice resumed their activities, printing books by Jewish authors from all over who sought out the resources of the city on the lagoons, from which the books were exported throughout Europe and the Mediterranean world, although from 1548 on, Jews were officially not allowed to be publishers or printers. Indeed, it has been estimated that of 3,986 Hebrew books known to have been printed in Europe prior to 1650, almost a third (1,284) were printed in Venice. Eventually, during the course of the 17th century, the quantity and quality of Venetian Hebrew imprints declined and other centers of Hebrew printing gradually emerged.

The Modern Community

By the 18th century, Venice as a whole had declined economically, certainly in a relative if not absolute sense, and with it also the financial condition of the Jewish community as a corporate entity, even though an impoverished community did not mean that all of its individual members were impoverished. The Venetian government was very concerned, above all because it required that the Jewish community be solvent in order to operate the pawn shops, especially since it was unwilling to establish in Venice a charitable pawnshop known as a **monte di pietà* in order to eliminate Jewish moneylending and the presence of the Jews or at least to minimize their role as had been done in many places on the Italian peninsula, although that possibility was raised on several occasions during the course of the 18th century. Consequently, in 1722 it took the major step of creating the magistracy of the Inquisitorato sopra l'Università degli Ebrei for the purpose of restoring and maintaining the financial solvency of the community. For the rest of the century, the Inquisitorato, together with the Senate and other relevant magistracies, constantly worked out detailed regulations in attempts to promote the smooth functioning of the pawnshops, to arrange for the repayment of the substantial debts of the Jewish community owed both to Venetian Christians and to the Jewish communities of Amsterdam, The Hague, and London, and generally to restore its solvency, eventually closely supervising all aspects of its everyday financial affairs.

In 1738 the separate charters of the Tedeschi Jews and of the Levantine and Ponentine Jews ended as one unified 10-year charter was issued for all Jews residing in the Venetian state. In a sense, such a charter was long overdue, since the charters of the Tedeschi Jews, which antedated those of the Levantine and Ponentine Jewish merchants, contained general provisions which were also applied to the merchants. Yet, the once distinct economic activities and responsibilities of the two groups of Jews had merged over the years, as for well over a century the merchants had been subjected to payments to the pawnshops of the Tedeschi Jews, while since 1634 the Tedeschi Jews had been eligible to engage in maritime trade with the Levant. The charter of 1788 was slightly over a year away from its expiration when in May 1797 the Venetian government dissolved itself in favor of a municipal council as the army of *Napoleon Bonaparte stood poised across the lagoons. The ghetto gates were spontaneously torn down and the special restricted status of the Jews of Venice came to an end.

After Napoleon ceded Venice to Austria by the Treaty of Campo Formio later in 1797, some restrictions were reinstituted but not the requirement to reside within the ghetto. After Napoleon defeated Austria in 1805, Venice became a part of the Napoleonic Kingdom of Italy and the rights of the Jews were again restored, only to be partially revoked when after the fall of Napoleon, Venice was reassigned to Austria by the Congress of Vienna in 1815. They were briefly restored during the revived Republic that emerged during the revolution of 1848–49, led by Daniel Manin, of Jewish descent, and with two Jewish ministers. Only after Venice became a part of the emerging Kingdom of Italy in 1866 were the Jews granted complete emancipation. In the following decades, the Jewish community decreased in numbers as a result of emigration and intermarriage, numbering around 2,000 in 1938.

[Benjamin Ravid (2nd ed.)]

Holocaust Period

Between the issuing of the racial laws in September 1938 and the summer of 1943, the Jewish community of Venice experienced a difficult period of exclusion and racial discrimination, first under the leadership of Aldo Finzi, who had been appointed by the government, and then, after June 16, 1940, under the presidency of Professor Giuseppe Jona.

The German occupation of Mestre and Venice on September 9 and 10, 1943, however, signaled the beginning of the actual Shoah in the region. On September 17, Professor Jona committed suicide rather than deliver the membership list of the Jewish community to the Germans. The political manifesto of the Italian Social Republic (the so-called Republic of Salò) on November 14, 1943, and subsequent decrees at the end of that month declared that all Jews in Italy were enemy aliens and ordered their arrest and the confiscation of their property. Some Jews were able to escape to Switzerland or to the Allied-occupied south of Italy. Some young people joined the armed resistance, especially the Garibaldi Brigade Nannini. Most of the others were rounded up by Italian police and Fascist militia and held in special assembly points such as the prison of Santa Maria Maggiore, the women's prison on the island of Giudecca, and the Liceo M. Foscarini. From there, they were sent to Fossoli until July 1944, and after that to a camp at Bolzano or to the prison of Risiera di San Sabba in Trieste. Nearly all were deported from those camps to Auschwitz-Birkenau.

Most arrests and deportations of Jews in Venice occurred between the major roundup on December 5, 1943, and

the late summer of 1944, but incidents continued at a slower pace until the end of the war. Particularly hateful was the arrest of 21 patients at the Casa di Ricovero Israelitica on August 17, 1944. Among the victims there was the elderly Rabbi Adolfo Ottolenghi, who chose to share the fate of his fellow Jews. All of these victims were deported, most of them to Auschwitz-Birkenau.

The Nazi-Fascist persecution of Jews in Venice lasted 18 months, during which time, despite the dangers, Jewish life in the former ghetto and religious services at the synagogue continued. There was also some help from non-Jews and from the Church. Some 246 Venetian Jews were captured and deported during this period. A commemorative plaque at the Campo del Ghetto Nuovo records their names forever. Near the plaque is a monument to the Shoah by the sculptor Arbit Blatas.

[Umberto Fortis (2nd ed.)]

Contemporary Period

At the time of the liberation in 1945 there were 1,050 Jews in the community. In the early 21st century Venice had an active Jewish community of around 500 members, with services still conducted in its beautiful synagogues and a Jewish museum established in the ghetto.

VENOSA, town in S. Italy. A group of Jews probably settled in this ancient and flourishing Roman colony long before the third century C.E., the date of the earliest Jewish inscriptions discovered there. Fifty-four epitaphs originating from a Jewish catacomb have been brought to light; they date from the third to the sixth centuries and are composed in Greek or Latin, with a few containing some Hebrew words. In the 1970s more inscriptions were discovered there. Another 23 epitaphs belonging to a cemetery are all in Hebrew and date from the ninth century. These two series of inscriptions constitute valuable source material. Apart from giving data on various individuals, the first series of epitaphs indicates that there was a well-organized community with religious office holders; there were also *rebbites* (or rabbis) and *apostuli* (delegates of the Palestinian patriarchate or the Babylonian exilarchate); moreover, some Jews figure as *maiores* and *partes civitatis*, i.e., as elected administrators of the town. The later series of epitaphs belongs to a period when Venosa had greatly declined as a result of frequent devastations, particularly by the Saracens. However, the prevalence of Hebrew is proof of the revival of Hebrew learning in southern Italy. The 11th-century chronicle of Ahimaaz b. *Paltiel tells of an emissary of the academy of Jerusalem who came to Venosa presumably to collect funds. He stayed there for a considerable time and used to read the Midrash and to interpret it every Sabbath while the local scholar *Silano, talmudist and liturgical poet, rendered it into the vernacular. After the conquest of the town by the Normans (1041), Venosa no longer afforded favorable ground for the cultivation of Hebrew studies.

°VENTIDIUS, PUBLIUS (**Bassus**), Roman general sent to Asia by Mark Antony (40 B.C.E.) to repel the Parthian invasion of Syria. Ventidius defeated the combined forces of Quintus Labienus (the representative of Brutus and Cassius to Parthia) and the Parthians in Syria (39 B.C.E.), thus forcing the Parthian king, Pacorus, to evacuate the country. From Syria Ventidius marched into Judea and encamped near Jerusalem. His purpose, according to Josephus, was to extort as much money as possible from *Antigonus, the Hasmonean prince restored to the throne by the Parthians. Having achieved this purpose Ventidius withdrew with the greater part of his

force, leaving behind a detachment under the command of one of his officers, Silo, who continued to receive bribes from Antigonus. Ventidius remained in Palestine, however, and was occupied with the suppression of local disturbances arising out of the Parthian invasion. At the urging of Mark Antony, Ventidius sent an army under Machaeras to assist Herod, who returned to Palestine at the time and was slowly consolidating his position there. Ventidius subsequently completed the subjugation of Syria, was relieved of his command in the summer of 38 B.C.E., and celebrated his triumph in Rome in November of that year. See Jos., Wars 1:288; Jos., Ant., 14:394ff., 434.

VENTSPILS (Ger. **Windau**; Rus. **Vindava**), city in N.W. Latvia. Under czarist rule Ventspils was a town in the province of *Courland. Jewish settlement was authorized in 1795 after Courland was annexed to Russia. Some Jews from Lithuania and the German states began to settle in the town, but the majority came from neighboring Pilten. In 1835 the community numbered 513, in 1864 it grew to 920, and by 1897 the number had increased to 1,313 (18.5% of the total population). The community was a wealthy one, and during the period of Latvian independence a network of Jewish schools was established in the town. In 1925 the Jewish population amounted to 1,276 (7.8% of the total). Under German occupation a small part of the community succeeded in escaping to the interior of the Soviet Union: the remainder were executed by the Germans and their Latvian collaborators in 1941.

VENTURA, MICHON (1881–1961), lawyer. Born in Istanbul, he graduated in 1905 from the Faculty of Law of Istanbul University. Later on he went to Paris and graduated in 1912 from the Paris Faculty of Law. In 1916 he registered in the Istanbul Bar Association. He was elected as a member of the parliament in 1919 in the last elections to the Ottoman Parliament. He lectured on Roman maritime trade law and philosophy of law at the Faculty of Law of Istanbul University from 1916 to 1934. In 1934 he resigned from his position as he was charged with tax evasion, a charge he denied vehemently. He was a fervent believer in the Turkification of the Jews of Turkey. He wrote *Felsefe-i Hukuk* (1330/1914); *Hukuk-ı Ticariye-i Bahriye* (1330/1914); *Roma Hukuku. Mekteb-i Hukukun İkinci Senesinde Takrir Olunan Dersler* (1330/1916); *Mukayese-i Kavanin-i Medeniye* (1330/1914); *Roma Hukuku Dersinin İmtihan Programı* (1330/1916); *İsviçre Hukuk-ı Medenisi Vecaib Kısmı* (1926); and *Roma Hukuku* 1 (1934).

VENTURA, MOÏSE (1893–1978), rabbi and scholar. Born in Smyrna, Ventura, studied at the rabbinical seminary at Istanbul and at Paris University. In 1938–48 he served as chief rabbi at *Alexandria, *Egypt; lectured at Yeshiva College, New York, 1951–53; and was head of Montefiore College, Ramsgate, England, 1953–55. In 1955 he settled in Israel. Apart from a number of textbooks of Hebrew and religious instruction in French, Ventura wrote *Le livre du Kuzari* (1932); *Le Kalam et le peripatétisme après le Kuzari* (1934); and *La philosophie de Saadia Gaon* (1934). He also prepared a critical edition of the Hebrew text (and part of the Arabic original) of Maimonides' *Millot ha-Higgayon* (*La terminologie logique de Maimonide*, with French translation and commentary, glossary, etc., 1935); and published a series of homiletical talks on biblical books and *Avot.*

VENTURA, RUBINO (1794–1858), Italian soldier from *Finale Emilia who became commander of an Indian army in Lahore (Punjab). Ventura enlisted in Napoleon's army in 1814 and following the defeat of Napoleon returned to Finale Emilia. His short and fiery temper caused him problems with the police and he was forced to leave Italy for Constantinople. In 1818 he sailed to Persia, where he volunteered to train the forces of the shah, Faith Ali. Ventura became a colonel in the Persian army but in 1821 after some friction between Persia and England he was dismissed like other officials from Europe. He went to India where he joined the army of Ranjit Singh, Maharaja of Lahore and became General of the Army with a yearly salary of 100,000 francs. After his departure from Italy he always kept his Jewish identity secret. Ventura organized the Lahore army and led it in battle against the Afghans and other enemies of Lahore. Under the name of Jean Baptiste Ventura, he married the Armenian Anna Moses, daughter of a French official, in 1825. From 1830 he engaged in archaeological excavations in Manikyala. In 1831, for his military services, he was appointed governor of Derajat. On the death of Ranjit Singh in 1839 he remained in the service of his successors. Under the rajhas Sher Singh he extended the boundaries of Lahore. In 1841 he left Lahore for Paris, where he lost much of his fortune in unsuccessful commercial speculations. In 1847 he returned to Lahore and tried unsuccessfully to enter the British military service against the Sikhs of Lahore. He repudiated his wife and he came back to Paris in 1853 with his daughter Victorine. He spent his last years in Lardenne. He was buried in the Christian cemetery of the town.

VEPRIK, ALEXANDER MOISEYEVITCH (1899–1958), composer. Born in Balta (Podolia), Veprik studied at the Leipzig, St. Petersburg, and Moscow conservatories. In the Moscow school he taught orchestration from 1923 to 1942.

He belongs to the Russian and Polish Postimpressionistic school.

His works of Jewish music include *Songs and Dances of the Ghetto* with orchestra; *Jewish Songs* with orchestra; and *Kaddish*, a song without text. His other works include two symphonies, choral works, and the opera *Toktughul* (1940), which was also adapted as a choral suite (1942 and 1955).

VERA Y ALARCON, LOPE DE (1620–1644), Spanish martyr. Vera was born at San Clemente in La Mancha, Spain, to a Christian noble family. At 14 he entered the University of Salamanca, where he excelled in ancient languages, particularly Hebrew. He competed, albeit unsuccessfully, for a university professorship in Hebrew when only 19. The continual reading of the Hebrew Bible led him to follow the Law and he came to consider himself a practitioner of Judaism. When he tried to share his new convictions with a friend – perhaps his brother – he was denounced to the Inquisition and arrested for heresy on June 24, 1639. The trial dragged on for over a year. At the hearing of May 29, 1641, Vera announced that he was intent on becoming a Jew. The Holy Office subjected him to torture, to confrontations with leading churchmen, and to the harassment of his relatives, but could not change his mind. One night in his cell, Vera fashioned a bone knife and circumcised himself, thereafter calling himself Judah the Believer. The tribunal tried to compromise him by means of theological debates, but Vera remained silent even under duress and he was finally permitted to set out his views fully in writing. Having lost all hope of reclaiming Vera's soul, the Inquisition consigned him to the stake at Valladolid on June 25, 1644. Vera's martyrdom made a profound impression on the *Marranos and Jews throughout Europe. Interest in the particulars of the episode was so intense that the document in which Vera propounded his views was smuggled out of the Inquisition palace and deposited in the library of the *talmud torah* at *Leghorn, Italy, where it remained. The inquisitor Bartholomeo Marques Mirezo noted with a tinge of admiration, "Vera was the Church's greatest heretic"; but 100 years later a Spanish writer explained away Vera's heresy as the result of his probably having had a Marrano nursemaid during infancy.

VERBAND DER DEUTSCHEN JUDEN (Ger. "Alliance of German Jews"), organization of representatives of the major communities and organizations. It was formally founded on April 24, 1904, as an attempt to constitute the sole and recognized representation of German Jewry and all its factions, particularly the *Central-Verein (CV) and the Zionists. The Verband was established, after almost a decade of hesitation and planning by Jewish leaders such as Bernhard Breslauer (1851–1928) and Eugen Fuchs (1856–1923), owing to the threat of increasing antisemitism and the growing disenchantment with the progressive parties, in spite of opposition by many Jewish leaders to a separate organization. Its first chairman was Martin *Philippson. The Verband's main goal was the defense of equality and an attack on official discrimination in Germany. Brochures on discrimination in the universities and in the legal and military professions were compiled and publicized for this purpose. The Verband also published works explaining the principles of Judaism to gentiles. It was a roof organization that did not interfere with the work of other organizations. The Verband did not succeed in winning the support of the Orthodox separatists, the younger and more radical generation of Zionists, and the Eastern European Jews. After World War I, it lost much of its influence, owing partly to the fact that the Weimar Republic had largely stopped the official discrimination against the Jews and that the Verband's tactics were not fit for the fight against the new and much more radical antisemitism, and partly to the increasing significance of sectors within German Jewry that did not support it; it ceased to exist around 1922.

[Jacob Borut (2nd ed.)]

VERBAND DER VEREINE FUER JUEDISCHE GESCHICHTE UND LITERATUR (Ger. "Association of Societies for Jewish History and Literature"), association of societies founded in Berlin in 1893 under the leadership of Gustav *Karpeles. The Verband was founded following a wide-ranging process that saw the formation of such societies throughout Germany, a process that bore witness to a great rise in the interest in Judaism, its culture and history in the early 1890s. The societies aimed at increasing their members' knowledge of Jewish history and literature, especially through lectures and discussions. The society in Berlin, founded in 1892 and headed by Karpeles, was among the leaders of that process, encouraging and supporting the foundation of other societies and initiating the founding of the Verband as an umbrella organization. The Verband became the largest Jewish organization in Germany, with 12,149 members in 131 societies by 1900. Karpeles led it until 1909, and was followed by I. *Elbogen, who remained in office until 1938. The Verband tried to coordinate the activities of its constituent societies and published popular literature. From 1898 it published an annual, *Jahrbuch fuer juedische Geschichte und Literatur*, which reached a peak of 5,000 subscribers. After World War I other organizations assumed some of the functions of the Verband, leading to a decline in its membership. Nevertheless, it continued to exist until 1938.

[Zvi Avneri / Jacob Borut (2nd ed.)]

VERBAND NATIONALDEUTSCHER JUDEN (Ger. "Association of National German Jews"), extreme assimilationist organization founded in 1921 by Max Naumann (1875–1939), a Bavarian officer and lawyer. The organization remained numerically weak but was vociferous and supported by certain wealthy and established quarters of German Jewry. Eligible for membership were "Germans of Jewish descent, who, while openly acknowledging their descent, nevertheless felt so completely rooted in German culture and *Wesen* that they could not but think and feel as Germans." The "*Ostjudenfrage*," the problem of unwanted Jewish immigrants from Eastern Europe, served as the raison d'être of the Verband, which identified itself with the mass of right and center parties and viewed the problem from an "objective" German standpoint. The Verband accused the Zionists of hypocrisy in not carrying out their own programs, and of indulging in double loyalty. It called upon the Jews to acknowledge the truth of some antisemitic charges, and to shed themselves of all traces of Jewish nationalism. It established branches in the major cities of Germany and in Vienna, but did not succeed in gaining official recognition or encouragement from any right-wing party, whose negative attitude toward the Weimar Republic it shared.

Max Naumann acclaimed the "national awakening" of 1933 and sought, in vain, for a *modus vivendi* with the Nazi regime (mainly through Gregor Strasser). The Verband called upon the Jews to vote for the unification of the offices of president and prime minister in the plebiscite of Aug. 19, 1934, and tried to erect a counter-organization to the Reichsvertretung, which included Zionists. The Verband published a monthly *Der nationaldeutsche Jude* (1921–35) (circulation reportedly 5,000 in 1926 and 15,000 in 1935) and had its own youth movement, Schwarzes Faehnlein (formerly part of Kameraden with c. 400 members in 1932), which had approached the Hitlerjugend. Despite repeated vows of loyalty, the Verband was summarily rejected by the Nazis, who dissolved the association in 1935–36 because of attitudes "hostile to the State."

[Henry Wasserman]

VERBITSKY, BERNARDO (1907–1979), Argentinean author. The son of Russian immigrant parents, he was born in Buenos Aires and became a major figure in Argentine literature of the 20th century. His family was quite poor as he was growing up and he had a rather difficult childhood. In his 1977 autobiographical novel *Hermana y sombra,* Verbitsky describes his early family life, fraught with poverty, and the general immigrant milieu in which he was raised. Verbitsky's upbringing in a lower-class working family made him sensitive to the plight of the poor and working classes. Through his parents' sacrifice, he was able to attend the university where he studied journalism, medicine, and law, as well as the humanities. He worked primarily as a journalist for more than 20 years and he held a variety of editorial posts, including for the journal *Davar*, one of the leading Jewish publications in Buenos Aires, and was press officer of the Israel embassy. Verbitsky wrote a vast corpus of books including some 20 works of fiction and three volumes of literary criticism. He established himself as a central figure in Argentinean literature, and was particularly known for his works of social realism. He belonged to the Boedo group of writers, a politically motivated group of authors who cultivated the idea of literature as means of political protest. Verbitsky received numerous literary awards and prizes throughout his career.

His most well-known works include the novels *En esos años* (1947), which deals partially with the Holocaust; *Es difícil empezar a vivir* (1963), a critical look at being Jewish in Argentina; and *Villa miseria también es América* (1957), one of his most widely read novels for its denunciation of social inequities in Latin America. He was also an accomplished short-story writer, with his best known works in this genre being *Café de los angelitos* (1949), *Calles de tango* (1966), and *A pesar de todo* (1978). This last volume contains the story "La culpa," which is an eloquent allegory of the Shoah.

[Darrell B. Lockhart (2nd ed.)]

VERCELLI, city in Piedmont, N. Italy. In 1446 the commune granted Abramo della Vigneria and his son Angelo a concession to establish a loan-bank in Vercelli on condition that they be prepared to lend the commune up to 100 florins on request. A small Jewish community formed around these bankers, regulated by the severe statutes issued in 1430 by Amadeus VIII, duke of Savoy. In 1448 the Jews were compelled to live in a separate quarter. They were expelled in 1556 but readmitted on payment of 200 florins. Renewing Jewish privileges in 1572, Duke Emanuel Philibert improved conditions in some minor respects. Jews expelled from Milanese territory were absorbed by the Vercelli community in 1597. There were eight Jewish loan-banks in Vercelli in 1624. In the 18th century the condition of the Jews in Vercelli deteriorated, though it was still better than the general situation of the Jews in Italy. A ghetto was not established until 1724; in 1740 a large new synagogue was inaugurated in the ghetto. On his death Elijah E. Foa (d. 1796) bequeathed his fortune to the community; among the institutions stemming from this bequest was the Collegio Foa (established 1829) which became an important training center for rabbis and Jewish teachers in Italy. The liberating influence of the French Revolution made itself felt in Vercelli; in 1816 they were released from many disabilities including the obligation to wear the Jewish *badge; emancipation was completed when they were granted citizenship in 1848. In that year there were about 600 Jews in Vercelli, economically well-situated. In 1853 Giuseppe Levi and Esdra Pontremoli founded in Vercelli the journal *Educatore Israelita*, which became the most widespread organ of Italian Jewry (it

was superseded in 1878 by the *Vessillo Israelitico*). A new synagogue, in Arabic-Moorish style, was opened in 1878. Until 1600, the Jews of Vercelli followed the Italian synagogal rite; through the influence of some bankers of German origin the Ashkenazi rite was adopted and remained in use. In the 20th century the community dwindled considerably.

In 1931 there were 275 Jews in the community of Vercelli. During the Holocaust period 26 Jews were sent to extermination camps. After the war the community, including the industrial center of Biella, had a membership of 130, which declined to 75 by 1969.

[Alfredo Mordechai Rabello]

VERCORS (pen name of **Jean Bruller**; 1902–1991), French author and engraver. Born in Paris, an engineer by training, he published albums of satirical drawings before World War II. During the Nazi occupation, Vercors founded the clandestine press, Editions de Minuit, launching it with the publication of his own novella, *Le silence de la mer* (1942; *Put out the Light*, 1944). This portrays a francophile and unusually humane German officer, who despite his dignified attitude and his profound understanding of France, ultimately proves incapable of resisting totalitarianism. Accclaimed as the first sign of French moral revival, the book was widely regarded as a minor masterpiece. *La marche à l'Etoile* (1943), which also appeared clandestinely, is based on memories of the writer's own father. A half-Jewish Hungarian settles in France, the land of freedom and justice. There, although legally exempt, he chooses to wear the yellow star. He finally comes to realize that the Vichy-French police are powerless tools of Nazi inhumanity, and his world crumbles.

A starkly humanitarian and ethical message pervades Vercors' works, which include *Plus ou moins homme* (1949); *Les yeux et la lumière* (1948); *Les animaux dénaturés* (1952); *Colères* (1956); *Sylva* (1961); and his wartime memoirs, *La bataille du silence* (1967). He also wrote for the theater and published albums of etchings. An essay of Jewish interest, "La sédition humaine et la pensée judaïque" (first published in *Cahiers du Sud*, no. 297, Dec. 1949), appeared in revised form in E.J. Finbert's *Aspects du génie d'Israël* (1950), 321–30.

[Konrad Bieber]

VERDUN, town in the department of Meuse, E. France. During the ninth and tenth centuries it was a stronghold and a station on the trading route of slaves captured in Germany or England and who were sold in Spain. According to Christian sources, merchants engaged in this trade were Jews, but from Hebrew sources this appears to be doubtful. On the other hand, the latter mention the tosafists of Verdun, Samuel b. Ḥayyim, a disciple of Jacob b. Meir Tam (Rabbenu Tam), Samuel b. Joseph the Younger (Ha-Baḥur), and his brother Jacob. Later the Jews were no longer authorized to live in Verdun and in the bishopric, and it was in vain that the town appealed to the Council of *Basle, in 1434, for the right to admit them temporarily. During the 18th century some Jews of *Metz unsuccessfully attempted to obtain this same right (in 1710, 1748) and others, who had illegally settled there, were expelled (1752, 1774). The community, which was founded at the time of the Revolution, was affiliated with the consistory of *Nancy in 1808. At first it rapidly increased in numbers, reaching 217 Jews in 1806. From then until the 20th century its size was more or less constant. In 1970 there were about 80 Jews in the town. At Douaumont there is a monument to the 10,000 French Jews who fell between 1914 and 1918. Desecrated by the Nazis, it was restored in 1959.

VERDUN-SUR-GARONNE, village in the Tarn-et-Garonne department, in southwestern France. According to non-Jewish historians, particularly the Dominican Bernard Gui, 500 Jews took refuge in a tower which was besieged by the renegade Crusader group, the *Pastoureaux, in the 13th century and committed suicide when they realized the impossibility of escaping from their persecutors. A Jewish community existed in Verdun-sur-Garonne from before 1200 until the expulsion of 1306. When the Jews were readmitted to France in 1315, they preferred to return to the localities in which they had lived previously. A number of Jews from *Comtat Venaissin who traded in Verdun-sur-Garonne during the 18th century were accused by the local merchants of dealing in stolen property. There was little development of a community in the 19th and 20th centuries. In the early 21st century, a small community existed in Verdun and maintained its own synagogue.

VEREA (Wechsler), ADRIAN (1876–1944), Romanian poet and playwright. A Bucharest physician, Verea published verse collections such as *Iasi* ("Jassy", 1917) and plays, notably *Appolonius din Tyane* (1932) and *Delfinii din Vaikiki* ("The Dolphins of Waikiki", 1933). As a sequel to *Roman-Ronetti's *Manasse*, Verea wrote *Dupa moartea lui Manasse* ("After Manasse's Death", 1915), which relates the unfortunate outcome of a mixed marriage. He was killed in an air-raid during World War II.

VEREIN FUER KULTUR UND WISSENSCHAFT DES JUDENTUMS ("**Kulturverein**"), Society for the Culture and Science of Judaism, founded in Germany in 1819. It was initiated by Eduard *Gans, Leopold *Zunz, Isaac Marcus *Jost, Moses *Moser, and others. At a later date, Heinrich *Heine also joined the society. Founded in the aftermath of the anti-Jewish riots that took place in 1819 (see *Hep! Hep!), young Jewish intellectuals, most of them university students, proposed as the object of the society the investigation of the nature of Judaism by modern scientific methods in order to bring to light the universal value of Jewish culture and controvert the stereotype of the inferior image of the Jew. The society sponsored an institute for the scientific study of Judaism, which arranged lectures on Jewish history and culture and published (1822–23) a periodical *Zeitschrift fuer die Wissenschaft des Judentums*, edited by Zunz. The first issue contained a programmatic lecture by Immanuel Wohlwill (Wolf), in which he dealt with the great idea embodied in Judaism since the revelation on Sinai, an issue that found its consummate expression in the teachings of *Spinoza. After Spinoza, the idea was eclipsed by the alleged backwardness of the Jews and their failure to keep up with the general advance of culture. It was the task of the society to restore to the idea of Judaism its ancient glory and to adapt it to the scientific spirit of the times. This led to the idea of the Jewish mission: "The Jews must once again show their mettle as doughty fellow-workers in the common task of mankind. They must raise themselves and their principle to the level of a science … and if one day a bond is to join the whole of humanity, then it is the bond of science, the bond of pure reason …" The society also established a school at which Heine lectured on Jewish history. The society failed to gain the recognition of either Jews or non-Jews and folded in May 1824. Some of its members, among them its president, Eduard Gans, chose to become baptized in order to gain the acceptance of Christian society. Despite its demise, however, the society succeeded in furthering scientific study of the Jewish heritage, especially as a result of the research into rabbinic literature carried out by Zunz.

VEREINIGUNG FUER DAS LIBERALE JUDENTUM IN DEUTSCHLAND (Ger. "Union for Liberal Judaism in Germany"), organization that was founded in 1908 by Bernhard Breslauer (1851–1928), who became its first chairman. The union included the Reform communities of the major cities, rabbis of the Vereinigung der liberalen Rabbiner Deutschlands ("Union of Liberal Rabbis in Germany"), founded in 1899 by Rabbi H. *Vogelstein, as well as private persons. Vogelstein was also one of the founders of the Union for Liberal Judaism; however, the lay element was traditionally predominant in the governing bodies of the organization. Its guiding spirit was Caesar *Seligmann, editor of the Union's periodical, *Liberales Judentum* (1908–22). It had 6,000 members in its first year but the number increased to only 10,000 by 1933. It ceased to exist in the Nazi period. After the Union published its program (*Richtlinien zu einem Programm fuer das liberale Judentum*), signed by 60 rabbis, it was attacked in Orthodox circles. The Union did not champion radical reforms; its ideas had been prevalent in Germany for decades and had already found wide expression and acceptance. It emphasized the universal and humanitarian mission of Judaism in the Diaspora, and took up a strong anti-Zionist stand, particularly through its affiliated youth movement. It combated the increasing strength of the Zionists in the communal organizations after World War I by means of the *Jeudisch-liberale Zeitung.* It affiliated with the World Union for Progressive Judaism at the congress held in London in 1926.

VEREIN ZUR ABWEHR DES ANTISEMITISMUS (**Abwehrverein**, Ger. "Association for Defense against Antisemitism"). The association was founded in December 1890 in the building of the Berlin Reichstag by 12 men, including its initiator, Edmund Friedemann, a progressive lawyer, and most likely also the philanthropist Charles Hallgarten. Among the founders were also non-Jewish participants, such as the liberal politician Heinrich Rickert and the lawyer and professor of law Rudolf von Gneist, who were both among the signers of a public denunciation of antisemitism aimed against A. *Stoecker 10 years earlier. Soon after its founding, the organization published a list of 585 supporters, "Christian gentlemen of repute" (including 56 members of the Reichstag), drawn from educated Protestant and liberal circles; among the signers were the pathologist Rudolf Virchow, Theodor *Mommsen, Max Weber, and the author Gustav Freytag. Bureaus were opened in Berlin and Frankfurt and were soon followed by smaller branches in Stuttgart, Cologne, and other cities. In 1893 the Abwehrverein boasted almost 14,000 members in Germany. The association published its own periodical, the *Mitteilungen aus dem Verein zur Abwehr des Antisemitismus* (1891–1933, from 1925 on called *Abwehrblaetter,* ed. by Ludwig *Jacobowski et. al.) as well as educational literature against antisemitism (such as the *Antisemitenspiegel* (1891), or the *Abwehr-ABC* (1920)). It observed, documented, and denounced all manifestations of antisemitism and supported political parties in their fight against antisemitism, although the prospects of success were sometimes uncertain. The association was known among antisemites as "*Judenschutztruppe*" ("Jew protectors"). The Abwehrverein regarded the fight against antisemitism as a task of non-Jews and Jews alike. Although it was represented as a Christian organization and was mainly based on non-Jewish members, Jewish participation played an essential role in it from the beginning. Later on it was made a principle to reach equal non-Jewish and Jewish participation. After the founding of the *Central-Verein as an explicit Jewish "self-defense organization" in 1893, the two associations cultivated

a relationship that was respectful but not too close. After the chairmanships of Rudolf von Gneist, Heinrich Rickert, and Theodor Barth, the Abwehrverein lost its impetus under the presidency of Georg Gothein (from 1909 to 1933). Despite efforts made in the difficult period after World War I, the association lost most of its non-Jewish members and waned into insignificance after 1930. In July 1933 the Abwehrverein dissolved itself. In 1891, just eight months after the German association was founded, an Austrian Verein zur Abwehr des Antisemitismus was established in Vienna. Among its founders and prominent members were Theodor *Billroth, Arthur von Suttner, Hermann Nothnagel, and Johann Strauss. The Viennese Abwehrverein published a periodical called *Freies Blatt* from 1892 to 1897 (ed. by E.V. Zenker). Although it had around 5,000 members in 1893, it already declined in 1897. Despite the fact that both defense associations bore the same name and were liberal and inter-confessional, no cooperation was maintained between them.

[Henry Wasserman / Mirjam Triendl (2nd ed.)]

VERGELIS, AARON (**Arn**; 1918–1999), Soviet Yiddish poet, novelist, and editor. Born in Lubar, Ukraine, he attended secondary school in Birobidzhan, where his family moved in 1932. From 1934 his poems began to appear in the newspaper *Birobidzhaner Shtern* and the almanac *Forpost*. He studied in the Yiddish department of the Moscow Teachers' Training Institute, graduating in 1940, the same year his first book appeared and he was called up to the army. After the war, he returned to Moscow, directed the Yiddish radio program, and was secretary of the Yiddish section of the Writers' Union and a member of the editorial board of the literary almanac *Heymland*. Following the Stalinist suppression of Yiddish culture in the late 1940s, he briefly edited a Moscow factory's (Russian) newspaper. From the late 1950s, his name was associated with the post-Stalinist period of Soviet Jewish culture. In 1961 he was appointed editor of the journal *Sovetish Heymland*. In this role he traveled to the West as a propagandist of Soviet politics. He was widely reviled for his involvement in anti-Zionist campaigns, though some readers appreciated his poetic talent. In his articles he divided the whole of Yiddish literature into "progressive" and "anti-Soviet" and often ridiculed writers of nostalgic literature which, in his view, expressed an outdated and even reactionary viewpoint. After 1991, he renamed his journal *Di Yidishe Gas* ("The Jewish Street") and published almost until the end of his life. Ironically, his former ideological opponents in the United States and Israel turned sponsors, hailing his commitment to Yiddish culture.

VERKHNEUDINSK (today **Ulan-Ude** and part of the Russian Federation), capital city of Buryat-Mongol Autonomous S.S.R., Russian S.F.S.R. The first Jews to settle in Verkhneudinsk were exiles from European Russia. In 1879 its 65 Jewish families received authorization to erect a synagogue. In 1897, 908 Jews (11.2 percent of the total population) lived in the city and engaged mostly in commerce. At that time another 1,220 Jews were living in the surrounding district, of whom several hundred earned their livelihood in agriculture. The majority of the 2,244 urban Jews counted in Buryat-Mongol in 1959 probably lived in Ulan-Ude. In addition, 450 Jews lived in the rural regions of the Republic. About 92 percent of the Jews of Buryat-Mongol declared Russian to be their spoken language. In the early 21st century the community operated a Sunday school, library, and sports club.

[Yehuda Slutsky]

VERMES, GEZA (1924–), leading scholar in the study of the Dead Sea Scrolls, Judaism during the Second Temple Period, and Jesus. Vermes led a unique and varied career. Born in Mako in Hungary to an assimilated Jewish family, Vermes' primary and secondary studies were undertaken at Gyula, with his higher education beginning at Budapest in 1945. Vermes lost his parents in the Holocaust when they were sent to extermination camps in Poland. Studying theology at St. Albert, Louvain (Belgium) between 1947 and 1952 (receiving his D.Theol. in 1953 on the Dead Sea Scrolls), Vermes continued with his studies at the Institut Orientaliste at the Université Catholique in Louvain, between 1950 and 1952, where he obtained a License in Oriental History and the Philology with distinction. On leaving Roman Catholicism and the priesthood in 1957, Vermes went on to obtain an M.A. (1965) and a D.Litt. (1988) from Oxford University. Vermes held many different academic positions and fellowships over the years, notably serving as Senior Lecturer in Divinity at the University of Newcastle upon Tyne (1964–65) and at the University of Oxford as reader in Jewish Studies (1965–89); professor of Jewish Studies (1989–91), and professor emeritus of Jewish Studies (1991–). He was also the recipient of numerous honors and distinctions (including Fellowships of the British Academy (1985) and the European Academy (2001)) and served as chair and president on many academic boards and research societies. He was the incumbent editor of the *Journal of Jewish Studies* from 1971. Vermes was a very meticulous researcher and prolific writer with a great many research articles and books to his credit, among them: *The Dead Sea Scrolls in English* (1962, rev. ed. 1995; see now, *The Complete Dead Sea Scrolls in English*, 1997), *Jesus the Jew: A Historian's Reading of the Gospels* (1973, rev. ed. 1994), and *Jesus and the World of Judaism* (1984). He also edited and revised Emile Schürer's classic *The*

History of the Jewish People in the Age of Jesus Christ (1973–87, 3 vols., together with F. Millar, M. Black, and M. Goodman) as well as editing numerous volumes of essays. He also wrote *The Changing Faces of Jesus* (2001), *The Passion* (2005), and *Who's Who in the Age of Jesus* (2005).

Goodman (eds.), *Journal of Jewish Studies: Special Issue to Commemorate the Twenty-Fifth Year of Geza Vermes as Editor* (1995); G. Vermes, *Providential Accidents: An Autobiography* (1998).

[Shimon Gibson (2nd ed.)]

VERMONT, New England state, estimated population (2004), 621,394; estimated Jewish population, 5,500. Vermont was the 14th State of the Union, admitted in 1791. Although there were no known Jews living in Vermont until after George Washington's administration, there are documented instances prior to the American Revolution of Jews speculating in Vermont lands with no intention of settlement. The earliest known Jew to settle in Vermont was Joshua Vita Montefiore, a pamphleteer and author of several books on commercial law, who was an indigent uncle of Sir Moses *Montefiore. Settling in St. Albans, Vermont, in 1835, he continued to maintain some Jewish observances while raising his large family as Protestants. He died and was buried in St. Albans in 1845. After 1840 the large migration of German Jews to the United States seeped into northern Vermont to where there were few towns that did not have at least one Jew or Jewish family.

Shortly after the Civil War, a Jewish community was established in Poultney, Vermont. As a thriving center of the slate industry it had attracted Jewish merchants as well as transient peddlers seeking fellow Jews for *minyanim* (prayer quorums) and social opportunities. Poultney acquired Vermont's first Jewish cemetery in 1873 and supported a house of worship and a *shoḥet*. The Jewish community survived until circa 1906 when its Jewish population relocated to Rutland and provided the seedbed for the Rutland Jewish community.

In 1880 a concentration of Jewish families appeared in Burlington, Vermont, the largest city in the state, then a lumber center on the east shore of Lake Champlain. Weekly services were held in Burlington in rented quarters until 1885, when Congregation Ohavi Zedek was formally established and shortly thereafter a synagogue built. Burlington's rabbi was Israel *Rosenberg, who accepted the pulpit in 1909 and served as community rabbi, filling the pulpit of Burlington's three synagogues and building a Hebrew Free School. He left Burlington in 1911 to become the head of the Agudath Rabbonim in New York City. Vermont's longest tenured rabbi was Max Wall who came to Ohavi Zedek directly from military service in 1946 and served until his retirement in 1987. Under Rabbi Wall's guidance, the congregation evolved from largely Yiddish speaking to English speaking and built the synagogue building in which it is presently quartered.

Jewish communities in Vermont. Population figures for 2001.

Burlington remains the site of Vermont's largest Jewish community (3,000) with the conservative Ohavi Zadek the largest congregation closely followed by the Reform synagogue Temple Sinai. Burlington also boasts a highly visible Chabad movement. After 1905 Jewish congregations were organized in other communities. Although congregations in St. Albans and Newport no longer exist, Bennington, Brattleboro, Manchester, Rutland, Middlebury, St. Johnsbury, Stowe, Woodstock-Waitsfield, and Montpelier now boast organized Jewish communities. Other illustrations of an increased Jewish presence in the state include establishment of Jewish Lights, a publishing firm in Woodstock; a prominent Holocaust Studies program at the University of Vermont, which was the home for a generation of the preeminent scholar Raul *Hilberg; and the Rabbi Max Wall Lecture Series at St. Michael's College in Colchester. From 1985 to 1991 Madeleine *Kunin was the governor of Vermont, the first Jewish woman in the U.S. to hold such a position, and during the Clinton administration was ambassador to Switzerland during the dispute over Holocaust victim's bank accounts, when much to her amazement she found that the list of account holders included her grandfather.

VEROIA (**Karaferia**, **Beroea**, **Veria**), city in Macedonia, Greece; W. of Salonika. When the apostle Paul was expelled from Salonika (49 or 50 C.E.), he fled to Veroia and preached in its synagogue (Acts 17:1–10). Inscriptions testify to the existence of a Jewish population there during the first centuries of the Christian era. Judah Ibn Moskoni visited in the 14th century and found a small Jewish library there, pointing to the existence of a small Jewish community. During the first half of the 15th century the preacher Ephraim b. Gerson of Veroia was well known. There was a Romaniot synagogue in the Balat Quarter of Constantinople named after the Jews of Veroia, who were forced to relocate to the capital after the Ot-

tomans conquered it in 1453. In 1540 there were 54 Jewish family heads from Veroia in the capital. In 1688–89, the Karaferia (Veroia) Synagogue in Istanbul had 45 family heads (220 people).

After the 1391 riots in Spain, Jewish refugees arrived in Veroia in the first half of the 15th century. In the latter part of the 16th century, the Veroia Jewish community had 200 families or 1,000 people. Expellees from Spain and Marranos who migrated first to Salonika eventually moved to Veroia. There amassed three groups in Veroia; veteran Romaniot Jews, Spanish and Portuguese Jews, and Italian Sicilian Jews. The known Iberian families were Estruza (Strumza), Sidis, Perpinian, and the descendants of Joseph Pinto and Daniel Solomon.

The Jews lived in an area called Barbuta, a street with 50 houses. The Jewish quarter was triangular and its gates were locked at night. The current synagogue building was only built in the 18th century.

During the 16th and 17th centuries the Jews of the city of Veroia engaged in weaving, tailoring, and the making and selling of cheese. The Spanish and Portuguese Jews brought to the city the wool industry. With the arrival of more Iberian Jews, the authority of Salonika over religious life increased and the Romaniot influence waned. The Veroia Jewish community took on the *minhagim* of Salonikan Jewry, with an emphasis on leniency as opposed to strictness and adopted the Salonikan "*neficha*" system of **sheḥitah*.

The 19th century was tranquil and prosperous for the Jews of Veroia. Most of the Jewish children learned in Greek and Turkish schools and only a minority learned Hebrew in the "*Hevra*" or *talmud torah* as it was called. The synagogue was expanded and a *mikveh* was added in the back. The Jewish women dressed like Salonikan Jewish women, but outside of the Jewish ghetto they wore veils like Muslim women. The Jews of Veroia had handwritten Hebrew *piyyutim*, in a mixture of Hebrew, Turkish, Spanish, and Greek, which they chanted on the Sabbath, festivals, and special events.

In 1880 there were 149 Jews; in 1904, 500; and in 1908, 600. After the 1897 Turkish-Greek war, Jews from Thessaly left Larissa, Trikkala, and elsewhere and settled in Veroia. The Ottoman Turks of Veroia called the local Jews "*andaluzus*" in accordance with their Castillian origin. In the first decade of the 1900s at the end of Ottoman rule, Jews in Veroia had a *ḥevra kadidsha* for burials and an organization for mutual assistance. The La Hermanidad Club hosted social events. After the 1908 Young Turk Revolution, Jews began to move out of the Jewish Ghetto into the new city. The level of the Jewish school was not high, and most Jewish children learned in Turkish and Greek schools. Thus, they lacked knowledge of Jewish history and Jewish law. With help from the *Alliance Israélite Universelle, the community bought a building, and brought a principal from Salonika. Within a short time, 120 boys and 40 girls studied in the school.

Veroia was annexed to Greece after the Balkan Wars of 1912–13. After the wars several Jewish families left for Turkey and Bulgaria. On the other hand, Jews from Salonika fled to Veroia to escape the epidemics of 1911 and 1913. The Jews in Veroia lived in wooden houses in their own quarter. Their dialect, except for slight variations, was similar to that of Salonika. They owned fields and vineyards near the town, which were cultivated by tenant farmers. The Jews also engaged in agricultural trade, moneychanging, and moneylending. However, they also had small stores, were artisans (mainly shoemakers), tinsmiths, broom makers, and olive pickers. Other Jews worked as goldsmiths, as bankers, and in industry.

In 1923, 60 children studied in the Jewish community school. The Jewish girls, for lack of a Jewish girls' school, went to local Greek schools. In 1920, Zionist activists formed a mutual assistance society. In 1925 there was a blood libel against the Jews and a local Jewish leader was accused of kidnapping and hiding a Christian boy. The Jews went to the police and the matter was settled without further reverberations. In 1927, 80 children studied in five grades in the Jewish school.

In 1940 there were about 850 Jews (150 families) in Veroia. Many young Jewish men from Veroia fought against the invading Italians in Albania from October 28, 1940, until April 1941. When the Germans invaded Salonika and famine erupted due to neglect; some 170 Salonikan Jews came to Veroia. The Nazi Rosenberg Commission also came to Veroia to survey Jewish books and archival material, and to look for anti-German material and documentation on anti-German activities in the synagogue. The Germans made the Jews wear yellow stars, and warned them not to hide partisans or other Jews in their homes.

Jewish community president Menachem Strumza encouraged local Jews to flee from the city and hide. However, in Veroia many believed Salonikan Chief Rabbi *Koretz, who tried to calm the Salonikan Jewish population under Nazi occupation. Not only did Jews in Veroia hesitate to hide, but many of those who hid returned to their homes. Rabbi Shabbetai Azaria fled after he gave a talk to the Jewish community, upon German orders, that encouraged enduring the hardships and urged staying at home and remaining in the city. Menachem Strumza also hid in the mountains with the help of Greek-Orthodox friends. On the evening before the day of the deportation, 144 Jews from Veroia fled from the city to the villages in the Bulgarian occupation zone. A local Greek-Orthodox notary, Sideropoulos, collaborated with the resistance and brought Jews from Veroia to two hiding places in the mountains – to Peiria, and to Vermion. On the last day of Passover 1943, at the time of the morning Shaḥarit prayer, the Nazis arrested the Jews, and locked them for three days in the synagogue. Gathered there were also Jews who had fled from Salonika and Jewish refugees from the Bulgarian occupation zone in eastern Macedonia and western Thrace. The Jews of Veroia, together with the Jews of Phlorina and Soufli, were brought to Salonika and from there were sent to Auschwitz/Birkenau.

The Nazis deported 680 Jews from Veroia to Poland in 1943. The agronomist Lazaros Azaria joined the partisans in

1942 and set up agricultural cooperatives in the villages of the mountainous areas of the partisan strongholds to provide food for all in the area. After the war, once the civil war began, he was pursued as a Communist, and fled to Ereẓ Israel through *"illegal" immigration, eventually reaching Palestine in December 1946, after internment in Cyprus.

Thirty-four families (numbering 132 people) remained in Veroia after the war. The Metropolit Polikarpos guarded the ritual ornaments and Torahs scrolls during the German occupation and returned them to the community after the liberation. The synagogue structure and interior was neglected. David Cohen took care of the synagogues for decades.

In 1948 there were 111 Jews, but they eventually moved to Salonika or Israel. About 70 were left in 1949, 36 in 1958, and three by the 1960s. Rabbi Shabbetai Azaria moved to Salonika and served there as rabbi until his death in ca. 1982. The cemetery deteriorated, and though KIS, the Central Board of Jewish Communities of Greece, in Athens knew of the problem, it did nothing. The Greek architect Elias Messinas led a campaign for the renovation of the synagogue in the 1990s. The synagogue is preserved as a Greek national historic monument. Two Jewish families remained in the early 21st century.

Novitch, *Le Passage des Barbares; Contribution a l'Histoire de la deportation et de la Resistance des Juifs grecs* (1982), 72–77.

[Simon Marcus / Yitzhak Kerem (2nd ed.)]

VERONA, city in N. Italy. Jews may have settled there as early as the Roman period, and certainly not later than the early Middle Ages. In the tenth century they were expelled from the city as a consequence of incitement by the bishop Ratherius. Jewish settlement was renewed in the 12th century, and in this period and the following century most of the Jews apparently engaged in trade. Several scholars lived in Verona, including the tosafists *Eliezer b. Samuel of Verona (grandfather of the philosopher and physician *Hillel b. Samuel of Verona) and Isaiah b. Mali di Trani (the Elder). The *bet din* of Verona and the teaching of its scholars are mentioned by the scholars of Germany. The poet *Immanuel of Rome was in Verona at the beginning of the 14th century. After an interval, Jewish settlement was renewed at the beginning of the 15th century, when the city passed to the Republic of Venice, and Jewish loan-bankers settled there. The Jews were again expelled from Verona after the establishment in 1490 of a Christian loan bank (**Monte di Pietà*). However, at the beginning of the 16th century the community became permanent, consisting largely of immigrants who had been arriving from Germany. In the 17th century a number of Sephardim settled there, among them members of the well-known *Aboab family, and organized a separate community. The two communities eventually set up a common organization, but friction between them lasted for a long while. The Verona community numbered about 400 at the end of the 16th century, and approximately 900 at the end of the 18th century. A ghetto was set up in Verona in 1599 after a threatened expulsion. The community succeeded in securing charge of the keys, an event commemorated by the Verona Jews in the 17th and 18th centuries by an annual festivity. The community suffered numerous deaths (about 200) in the great plague which swept Italy in 1629–30. Jewish banking diminished in importance in this period and the Jews of Verona mainly earned their livelihood from trade and crafts. Another important source of subsistence for Verona Jews in the 17th and 18th centuries was lease of the tobacco monopoly. Many Jews from other centers attended the great fairs held in Verona, and in the middle of the 18th century the Verona community demanded that levies should be paid by Jews visiting the fairs from outside. In consequence a bitter dispute broke out between the Verona Jews and the communities of Mantua, Modena, and Ferrara.

The Jews in Verona were not spared the economic crisis from which the communities of Italy suffered in this period. The number of poor dependent upon the community continually increased. The structure and organization of the community were similar to those of the other communities in Italy. Apparently the Verona community was the first to establish the reform of the tax system known as the "casella", which was introduced at the end of the 17th century and in the course of time was adopted in many of the communities in Italy. Rabbis of Verona from the 16th century on included Johanan b. Saadiah, Joez b. Jacob, Samuel *Aboab, Samuel *Meldola, Menahem Navarra, and members of the *Bassani, *Hephetz (Gentile), Marini, Pincherle, and other families.

A few books in Hebrew type were printed in Verona at the press of Francesco delle Donne between 1592 and 1595, one of them in Judeo-German (*Pariz un Viena*, 1594). Most important of the Hebrew books was the *Tanḥuma* of 1595, produced by Jacob b. Gershon *Bak, of Prague, and Abraham b. Shabbetai Bath-Sheba (*Basevi). Fifty years later Hebrew printing was resumed at the press of Francesco de' Rossi (1645–52), on the initiative of the Verona rabbis Samuel Aboab (and his sons Jacob and Joseph) and Jacob *Ḥagiz, the first part of the latter's edition of the Mishnah with his commentary *Eẓ Ḥayyim* appearing in 1649 (the rest in Leghorn, 1650). Abraham Ortona was employed as typesetter. Two other printers were active in Verona late in the 18th and early in the 19th century, printing mainly liturgical items.

When the French revolutionary armies appeared in the vicinity of Verona, the local population made an assault upon the ghetto and its inhabitants. After the capture of the city by the French in 1796, however, the ghetto was abolished, its gates were symbolically torn down, and the Jews were granted civil equality. Israel Cohen from Verona took part in the deliberations of the French *Sanhedrin. When subsequently Verona came under Austrian rule, their civil rights were slightly curtailed, but the Jews of the city were not again confined to the ghetto. Full civil equality was restored to them when Verona was incorporated into the Kingdom of Italy. There were about

1,200 Jews living in Verona in the middle of the 19th century. Subsequently their numbers steadily diminished through emigration or assimilation and at the beginning of the 20th century they numbered about 600. In 1931 there were 429 Jews in the community of Verona. During the Holocaust 30 Jews were taken to the extermination camps. After the war the membership of the community was about 120, which remained constant over the next few decades.

[Shlomo Simonsohn]

VERTOV, DZIGA (originally **Denis Kaufman**; 1897–1954), Russian pioneer in newsreel-documentary movie director and founder of the "cine-eye, cine-ear" theory. He edited (early 1920s) the newsreel *kino-pravda* from film taken by cameramen he dispatched throughout the U.S.S.R. After 1924 Vertov headed his own group of movie theorists and filmmakers; his brother and chief cameramen MIKHAIL KAUFMAN went with him. Among his documentaries are *One Sixth of the World* (1927), *Three Songs of Lenin* (1932), and *Lullaby* (1937).

VESOUL, town in the Haute-Saône department, E. France. There were already a few Jews in Vesoul before the end of the 13th century, but it was at the turn of the century that an important Jewish community was formed. It owned a synagogue in the Grande-Rue, the remains of which could still be seen during the 16th century. One of the leading personalities of this community was Héliot, who, together with a number of other Jews, engaged in banking, moneylending, and commercial and agricultural transactions within a very extensive radius of the town. The names which appear in various documents indicate that there were at least 15 families living there in 1332. When the *Black Death occurred in the autumn of 1348, the duke ordered the Jews to be arrested throughout the duchy and their property seized. Eighty Jews, some of whom may have belonged to neighboring localities, were imprisoned at Toul. Although the sale of their belongings did not raise much, it should not be concluded that the Jews had been impoverished since the days of Héliot, but rather that they succeeded in hiding their precious objects in good time. Condemned to banishment on Jan. 27, 1349, they soon reappeared in Vesoul, though for a short time only. The economically powerful medieval community did not produce any scholars. On the other hand, *Manessier de Vesoul, who negotiated the return of the Jews to France in 1359 and became the syndic of those who established themselves in Languedoil, was a native of Vesoul. At the time of the French Revolution, at least two Jews lived at No. 3 Place du Palais, and a Renaissance bust in the courtyard of this building is known as "du Juif." A small community existed in Vesoul from the middle of the 19th century until the beginning of World War II.

[Bernhard Blumenkranz]

°VESPASIAN, TITUS FLAVIUS (c. 9–79 C.E.), Roman emperor 69–79 C.E. After the defeat of *Cestius Gallus in Judea, Nero appointed Vespasian commander of the army with the duty of crushing the revolt in Judea. Vespasian conquered Galilee, the coast of Judea, and Transjordan in 67–68, and began making preparations for a decisive attack on Jerusalem. On learning of Nero's death he interrupted the war. When Servius Sulpicius Galba was proclaimed emperor, Vespasian sent his son *Titus to him to pay his respects, and subsequently also swore allegiance to Otto and to Vitellius Aulus, who were appointed emperors after Galba. The idea had apparently already entered his mind to gain the throne but only under the influence of the Syrian governor, Caius Licinus *Mucianus, did he resolve to implement it. Vespasian was proclaimed emperor by the governor of Egypt, *Tiberius Julius Alexander, on July 1, 69, which was subsequently officially recognized as the day he ascended the throne (*Dies imperii*). The legions in Judea followed in the wake of the Egyptian legions and also proclaimed him emperor. Vespasian decided to remain in Egypt for some time to prevent grain from being sent to Rome. Gradually, all the army commanders and their legions went over to Vespasian; the last opposition was in Rome. However, the Praetorian guard which fought on the side of Vitellius was subdued, Vitellius was killed, and Vespasian was recognized as emperor by the Senate.

In 69 he proceeded to Rome and began to bring order into the state which had been in a chaotic condition since the death of Nero. In 71 Vespasian arranged a magnificent triumph over conquered Judea and closed the doors of the temple to the god Janus as a sign that peace had returned to the state. The building of the temple of the god of peace, Pax, served the same purpose. For Vespasian's attitude to the rebels in Ereẓ Israel and to the Jews in the Roman Empire generally, see *Josephus, *Rome.

[Abraham Schalit]

VESSILLO ISRAELITICO, Italian Jewish monthly review founded in 1875, superseding *Educatore Israelita*. It was edited until its closure in 1921 by Rabbi Flaminio Servi and then by his son Ferruccio. Imbued with an Italian national revival vision of Italian Judaism, the review – especially when the editor was Flaminio Servi – opposed the penetration of the Zionist movement's influence among the ranks of Italian Jewry. In this way, the *Vessillo Israelitico* took sharp issue with the *Corriere Israelitico* and with *Israel,* which supported Zionism.

The effects of World War I (and last but not least the Balfour Declaration) brought about the end of that specific cultural environment within Italian Judaism from which *Vessillo* drew its readers.

[Massimo Longo Adorno (2nd ed.)]

VÉSZI (Weiss), ENDRE (1916–), Hungarian poet and author. Vészi, who abandoned Socialism in order to adhere to the Communist party line, wrote many poems and stories on proletarian themes. His verse collections include *Ünneprontó* ("The Desecrator of the Festival," 1936); among prose works are the novel *Felszabadultál* ("You are Liberated," 1937) and *A küldetés* ("The Mission," 1954).

VÉSZI, JOZSEF (1858–1940), Hungarian editor and journalist. A poet and translator in his youth, he became editor in chief of the daily *Pesti Napló* in 1894, founded the *Budapesti Napló* in 1896 and brought before the public, among other writers, Ferenc *Molnár and Lajos Biró (who later became his sons-in-law). He founded the *Budapester Presse* in 1911, and then was appointed editor in chief of the semiofficial *Pester Lloyd*, a position he held until 1938. During the turbulent years following the outbreak of World War I, Vészi continued to serve successive governments. He maintained his interest in Hungarian Jewry, and during the White Terror persecution of the Jews, which followed the fall of the Communist regime of Béla Kun in 1919, was a member of the delegation which went to the terrorist headquarters to seek cessation of the terror. In ensuing years, he acted as apologist of the Hungarian government even when in 1920 it introduced a *numerus clausus* law restricting the number of Jewish students to five percent. Vészi was given a seat in the Upper House of the Hungarian Parliament in 1927. He was a member of the Hungarian delegation to the League of Nations (1929–30).

VESZPREM (Hung. **Veszprém**), city in W. central Hungary. Between 1723 and 1725 three Jewish families settled in the city, and in 1736 there were 16 Jews there. By 1830 the community numbered 100 persons. Although Veszprem Jews leased land for a synagogue in 1799, it was not built until 1865. A school was founded in 1805 and existed until the Holocaust. After the schism of 1869 the community joined the Neologists. The first rabbi appointed was A. Fuchs (1809–33), followed by A. Hochmuth (1859–89), A. Kiss (1897–1901), A. Hoffer (1902–28), and L. Kun (1929–44). The majority of Veszprem Jews engaged in trade and crafts. The community had grown to 1,685 by 1880 but the number had fallen to 850 in 1930 and 887 in 1941. After the German conquest (March 19, 1944) about 880 Jews were deported to *Auschwitz and only a few of them returned. In 1947 there were 84 Jews in the city.

[Baruch Yaron]

°VIBERT OF NOGENT (Guibert of Nogent (1053–1124), French Benedictine author and abbot of Nogent-sous Coucy, France. Vibert wrote a well-known history of the First Crusade – the *Gesta Dei per Francos* – and was a theoretician of preaching and the first critic of the traditional hagiography. His treatise *De incarnatione contra Judaeos* was addressed to both the count of Soissons, whom Vibert reproached for his close relations with the Jews, and to the Jews themselves. In referring to the Jews, his tone is extremely vehement.

In his autobiographical work, *De vita sua*, Vibert reports the anti-Jewish persecution of *Rouen at the time of the preaching of the First Crusade and the forced conversion of a Jewish child who, having become a monk himself, wrote an anti-Jewish treatise.

[Bernhard Blumenkranz]

VICENZA, city in N. Italy. In the second half of the 14th century the commune of Vicenza invited a group of Jews to establish a loan-bank there. They were followed by other Jewish bankers, among them the Musetto family (1425), forming a small Jewish settlement whose members engaged in commerce in addition to moneylending. In 1453 there was an unsuccessful attempt to expel the Jews. The rumor that the Jews of *Bassano had in 1485 murdered a child for ritual purposes (see Blood *libel) and the public sermons of the fanatical Bernardino da *Feltre (who also initiated the establishment of a Monte di *Pieta at Vicenza) provided the climate for a ducal decree, issued in April 1486 and implemented in June, expelling the Jews from the city and its environs.

[Alfredo Mordechai Rabello]

VICH, town in Catalonia. At the height of its prosperity in about the middle of the 13th century, the Vich Jewish community had 40 families. In 1277 some 15 families lived in the Jewish quarter, but there were only ten in 1318 when King James II (1291–1327) imposed an annual tax of 500 sólidos on the community; it also paid the same amount in 1329, during the reign of Alfonso IV (1327–36). The Jews of Vich engaged in activities similar to those of the other communities in Catalonia. They owned houses, vineyards, and gardens, and were moneylenders who had the local bishop and various nobles among their clients. In return for loans received, the latter pledged Moorish slaves of both sexes, and/or movable and immovable property. The community had its own cemetery,

in a place called Colldasens. In 1277 land was acquired by the community for the construction of a synagogue. During the persecutions of 1391 the majority of the Jews of Vich were massacred. The six left alive owed their survival to conversion to Christianity. The intestate Jewish property in the town was seized by the crown.

[Haim Beinart]

VICOL, ADRIAN (1922–), Romanian ethnomusicologist. From his youth Adrian Vicol was inclined toward the study of music from a critical and theoretical standpoint. As a result, he became one of the most profound and disciplined minds in Romanian ethnomusicology. He collected thousands of folk music pieces and transcribed numerous items from his musical field collections. Thus, from 1949 until his retirement in 1980 he consistently enriched the largest archival funds of traditional cultures in Romania, including those in the National Archives of the C. Brăiloiu and the Institute of Ethnography and Folklore in Bucharest. Besides this type of fundamental research, he also published several academic essays of particular intellectual acumen. Vicol's research focused on the analytical dimension of the study of traditional music, such as the architectural structures of tunes, the typologies of various genres, and rhythm; these are just a few of the topics he discussed within seminal academic papers. He devoted decades to studying "the parlato recitation in Romanian epic songs." From the 1950s up to the late 1970s he studied and wrote on topics ranging from the construction of peasant flutes and the cymbalom's performing techniques to *Premise teoretice la tipologia muzicală a colindelor* ("Theoretical Premises for a Musical Typology of Carols," 1970). His anthology *Typology and Analysis of Romanian Ballads – A Pioneering Approach* was published in 2004. The event gave Vicol new energy, prompting him to publish his old collection of dance music from Muscel-Arge, as well as his old ethomusicological essays (which were scattered among the issues of the *Revista de etnografie și folclor* (Journal for Ethnography and Folklore) of the Romanian Academy of Sciences.

[Marin Marian (2nd ed.)]

VIDAL, CRESCAS (end of 13th century), Spanish talmudic scholar. Vidal belonged to a distinguished family of Barcelona. He studied in his home town under *Aaron ha-Levi, whom he frequently quotes in his commentary on *Ketubbot.* This commentary was familiar to many later scholars, including *Isaac b. Sheshet, Bezalel *Ashkenazi, who quoted parts of it in his *Shitah Mekubbeẓet* on that tractate, Ḥayyim *Algazi, who quotes it extensively in his *Netivot Mishpat*, and Ḥ.J.D. *Azulai. There are indications that Vidal's talmudic commentary covered a number of other tractates, but, apart from his commentary to *Yevamot*, no other manuscript has been preserved. Vidal is also known for his participation at an early age in the polemic of Solomon b. Abraham *Adret against the study of philosophy and for the subsequent ban on pursuing such inquiries. After receiving the letter of *Abba Mari b. Moses on this subject, Adret first turned to Vidal, who was then (c. 1303) living in Perpignan, where he was held in very high esteem. Adret requested that he exert his authority against those "who dabbled in philosophy" in the Languedoc region. At first Vidal thought Adret had been unduly influenced by extremists who exaggerated the dangers of heresy inherent in the views of *Levi b. Abraham b. Ḥayyim, but afterward Vidal changed his mind. It was Vidal who proposed the text of the rather moderate ban on studying philosophy at an early age, which was in the end accepted by Adret (see Abba Mari b. Moses ha-Yarḥi, *Minḥat Kena'ot* (Pressburg, 1838, 44–48)).

[Israel Moses Ta-Shma]

VIDAL-NAQUET, PIERRE (1930–2006), French historian of antiquity, an emeritus professor at Ecole des Hautes Etudes en Sciences Sociales (EHESS). Vidal-Naquet was born in Paris into a typical assimilated and bourgeois French Jewish family, as the eldest of five in a family originating from Carpentras, in the Comtat Venaissin. His father, Lucien, was a lawyer and his mother, Marguerite Valabregue, a relative of the famous musician Darius *Milhaud. He attended a private school until the outbreak of World War II in 1939. As his father was enlisted in the army, he lived with his mother, brother, and sister for a while in Bretagne, and then moved to Marseille after the defeat of France in 1940, where he stayed until the deportation of his parents in 1944. Coming back to Paris after the liberation, he had to face the death of his parents. He finished high school in 1947 living with his cousins and grandmother. He joined the École Normale in Paris and Marseilles, and began a lifelong friendship with Pierre Nora, Jerome Lindon, and Charles Malamoud. While working with the French periodical *Esprit*, he met there Alex Derczanski, who trained him in some cultural aspects of Judaism. As a student at the Sorbonne in the 1950s he was challenged by the question of decolonization and was actively engaged against torture during the war in Algeria. From then on he became a widely recognized public figure in two venues: the scholar in Hellenistic studies and the active militant against torture and against Holocaust denial. Internationally renowned as one of the leading specialists in the history of Ancient Greece, he was one of the founders – with Jean-Pierre Vernant, Nicole Loraux, Marcel Détienne – of a new approach to classical Greece. His numerous books were widely translated into many languages. Among them are *Myth and Tragedy in Ancient Greece* (1994; French, 1972, 1986) published with Jean-Pierre Vernant; *The Black Hunter: Forms of Thought and Forms of Society in the Greek World* (1986; French, 1966); *Flavius Josèphe ou du bon usage de la trahison* (1987); *Politics Ancient and Modern* (1995; French, 1991). In 2005 he published *L'Atlantide, petite histoire d'un mythe platonicien*.

As a militant against French policies during the war in Algeria in the 1950s and 1960s, he wrote *L'Affaire Audin* (1958); *La torture dans la République, essai d'histoire et de politique contemporaine, 1954–1962* (1975); and *Les crimes de l'armée française en Algérie* (2001). And as a fighter against the denial of the Holocaust he published *Assassins of Memory: Essays on the Denial of the Holocaust* (1992; Hebrew, 1991; French, 1987); and with Limor Yagil, *Holocaust Denial in France: Analysis of a Unique Phenomenon* (1994).

About the Israeli-Palestinian conflict, he wrote *The Jews: History, Memory, and the Present* (1996; French, 1981), and explained his political stance in a volume written as a dialogue, *Questions au Judaisme: entretiens avec Elisabeth Weber* (1996).

Among his autobiographical works are *La brisure et l'attente* (1995); *Le trouble et la lumière* (1998); and *Le choix de l'histoire: pourquoi et comment je suis devenu historien* (2004).

[Sylvie Anne Goldberg (2nd ed.)]

VIDAL YOM TOV OF TOLOSA (second half of the 14th century), Spanish rabbi and commentator on Maimonides. Vidal came from Tolosa, Catalonia, where he compiled his commentary known as *Maggid Mishneh*, to Maimonides' *Mishneh Torah* (often called the *Yad*) of which only the commentary to Books 3; 4; 5, chapters 1–9; 11; 12, chapters 1–3; and 13 is extant. According to one opinion, the commentary covered the whole of the *Mishneh Torah*, but because of the troubles of the period in which Vidal lived, most of it was lost, only a small part remaining (Conforte, Kore (1840^2, 26a)). It is more probable, however, that he limited his commentary to those *halakhot* which have a practical application. Since the Constantinople (1509) edition of the *Yad*, it has invariably been published with Vidal's commentary. Its purpose was to clarify difficult passages and to indicate Maimonides' sources. Vidal deals with the *hassagot* ("criticisms") of *Abraham b. David of Posquieres, endeavoring to answer them and objecting to their sometimes disrespectful tone. He tries to explain the basis of Abraham b. David's criticism, and at times justifies the views of both men, by proving that they were the result of different versions of the text. In his introductions to the various books of the *Mishneh Torah*, he explains the order of the *halakhot* given by Maimonides, stressing his view that much of the criticism of Maimonides would not have arisen if only the final arrangement of the *Mishneh Torah* had been in accordance with its author's conception. He emphasizes that Maimonides expressed his view in a methodical manner, explaining every topic in its correct context, and that he was especially successful in dividing up the laws, statutes, and precepts of the Torah "by giving the general principles before the details, the earlier in time or in cause before the later, and the more stringent before the more lenient" (Introduction to *Zemannim*). Vidal gives the sources and explanations in clear and succinct style and he tends to be stringent in his rulings, quoting *Naḥmanides, Solomon b. Abraham *Adret, and others.

Joseph b. Ephraim *Caro, in his introduction to the *Kesef Mishneh*, states that Vidal was a colleague of Nissim b. Reuben Gerondi, but his name does not occur in Nissim's works. *Isaac b. Sheshet, however, mentions him in his responsa. Caro refers to Vidal as *kadosh* ("holy"), and as a result it has been suggested that he died a martyr's death. A commentary in Arabic to the work on logic of al-Ghazzali, translated into Hebrew by Moses b. Joshua of Narbonne (in the Vatican library) has been ascribed to Vidal, as has a commentary on Job. Vidal died during the lifetime of Nissim Gerondi (Resp. Ribash no. 388). The *Maggid Mishneh* has been accepted as the standard commentary to the *Mishneh Torah* and many scholars have spoken in praise of Vidal, relying upon his rulings and describing his soul as having a spark of the soul of Maimonides. He is respectfully designated *Ha-Rav ha-Maggid* from the title of his work, *Maggid Mishneh*. Vidal's son Nizak (Isaac) was a talmudic scholar who lived in Alcolea de Cinca and was in contact with Isaac b. Sheshet (Resp. Ribash 473), who calls him "the son of holy ones."

VIDAS, ELIJAH BEN MOSES DE (16th century), kabbalist, author on morals, one of the great kabbalists of Safed. Vidas was a disciple and close friend of Moses *Cordovero, whom he always called "my teacher" without mentioning his name. In 1575 he completed his major work *Reshit Ḥokhmah*, one of the outstanding books on morals in Judaism. In contrast with previous authors in this field, Vidas included kabbalistic theories in his work, which was aimed at a popular audience; in particular, he quoted at length all that is said in the *Zohar on the question of morals and religious conduct. Quotations from the Zohar were annotated from manuscripts still found in Safed. The book is encyclopedic in character and is divided into five long chapters, "Fear," "Love," "Repentance," "Holiness," and "Humility." Vidas added five chapters from Israel *Al-Nakawa's *Menorat ha-Ma'or* which was then known only in manuscript. They include chapters on the *mitzvot*, on education, on business dealings in good faith, and on manners. At the end of these, he added *Ḥuppot Eliyahu Rabbah*, a collection of rabbinical sayings which list qualities (e.g., "three good qualities…"), and *Or Olam*, moralizing sayings which open with the word "forever" or with the word "great"; for example, "great is charity, even more than sacrifices."

Vidas' book is written in an easy and engaging style, avoiding metaphors. It was immediately accepted as one of the most important books on morals and was printed some 40 times. The first edition was printed in Venice in 1579 during the author's lifetime. The date of Vidas' death is still unknown. Because of its great length, his book was summarized several times: *Reshit Ḥokḥmah Kaẓar* (Venice, 1600), completed in 1580 in Asti, Italy, by Jacob b. Mordecai Poggetti; *Tappuḥei Za-*

hav, by Jehiel Melli (Mantua, 1623); *Toẓe'ot Ḥayyim* (Cracow, before 1650) by Jacob Luzzatto, a preacher in Poznan. These three summaries were published many times.

VIDIN, port city on the right bank of the Danube in N.W. Bulgaria. The fortress of Judaeus, which was rebuilt in the vicinity of Vidin by Justinian I (527–565), confirms the presence of Jews at that time (Procopius of Caesarea (6th century) *War with the Goths*, Dewing translation, 1954, B. IV. VI. 21). After the expulsion of the Jews from Hungary in 1376, some of them settled in Vidin. When Vidin fell to the Turks in 1394, the community was led by Shalom Ashkenazi of Neustadt (Hungary), who founded a yeshivah in the town and whose pupil Dosa ha-Yevani ("the Greek") wrote in 1430 the work *Perush ve-Tosafot.* Refugees from Bavaria, who were expelled in 1470, also settled in Vidin. Refugees from Spain arrived there via Salonika. In 1778 David Shabbetai Ventura, the author of *Nehar Shalom* (Amsterdam, 1774), and Elijah Ventura, the author of *Kokheva de-Shavit* (Salonika, 1799), arrived in Vidin. To commemorate the escape of the Jews of Vidin during the rule of the Turkish leader Pazvantoglu (1794), a local Purim was fixed on the fourth of Adar. The number of Jews in Vidin at the end of the 19th century was between 1,300 and 1,500; in 1919 there were 2,000 Jews and in 1926, 1,534. The members of the community did not suffer severely during World War II. The decree of expulsion in 1943 was not carried out (see *Bulgaria). After the establishment of the State of Israel, most of the Jews of Vidin immigrated there together with most of Bulgarian Jewry. In 2004 there were 55 Jews in Vidin, affiliated to the local branch of the nationwide Shalom organization.

VIDVILT (**Kenig Artis Houf**), anonymous 15th–16th-century Yiddish epic. This Arthurian romance of the chivalric adventures of Sir Vidvilt (and his father Gawain), based on Wirnt von Gravenberg's 13th-century Middle High German *Wigalois*, proved to be one of the most enduringly popular secular narratives in Yiddish literary history, with numerous manuscript recensions, printings (the first in an extensively expanded version by Joseph b. Alexander Witzenhausen, Amsterdam 1671), and reprintings, in rhymed couplets, *ottava rima* (Prague 1671–79), and prose, over the course of three and a half centuries. The anonymous poet of the earliest Yiddish version composed more than 2,100 rhymed couplets (probably in northern Italy), following Wirnt's plot rather closely through the first three-quarters of the narrative (abbreviating much and generally eliminating specific Christian reference), before offering quite a different conclusion. Typical of early Yiddish epic, vocabulary from the Semitic component is avoided.

°**VIEIRA, ANTONIO** (1608–1697), Portuguese priest politician, and writer. Born in Lisbon, Vieira was taken to Brazil by his parents when he was six years old. In 1641 Vieira was sent to Portugal with an embassy to the new king, John IV, who became fascinated with the dynamic priest and eventually came to look upon him as his most trusted counselor. Vieira represented Portugal diplomatically – and the king personally – in Italy, France, and the Low Countries from 1646 to 1650. When recommending the formation of a company to develop Brazil he advocated a repeal of New *Christian disabilities, proposing as a first step the abolition of confiscation of Crypto-Jewish property. Since the *Inquisition was the major beneficiary of such confiscations, Vieira made a powerful enemy. Pressure was brought on his Jesuit superiors to have him reassigned safely to Brazil. After the death of John IV in 1656 and the political realignment of 1662, Vieira was left without friends in the palace. The Inquisition seized him for preaching supposedly Judaistic ideas about the Messiah, but it was common knowledge that he was imprisoned more for proposing the removal of Jewish disabilities than for voicing heretical ideas. When another palace revolution in 1667 returned his friends to a measure of power, he was released. In 1669 he went to Rome, where he was given a papal grant of immunity from the jurisdiction of the Inquisition. From 1669 to 1675 he was a major factor in the Roman political arena, and is credited with securing a relaxation of inquisitorial activities in Portugal for the years 1676–81. This he accomplished by backing the efforts of the Marrano lobbyist Francisco *d'Azevedo to buy the freedom of accused Judaizers, and by presenting for papal review a 200-page exposé of Portuguese inquisitors that characterized them as inspired more by greed than by piety. Vieira's incisive memorandum was later included in David *Nieto's defense of Jews, *Recondite Notices of the Inquisition of Spain and Portugal* (London, 1722).

[Aaron Lichtenstein]

VIENNA, capital of *Austria. Documentary evidence points to the first settlement of Jews in the 12th century. The first Jew known by name is *Shlom (Solomon), mintmaster and financial adviser to Duke Leopold V. The community possessed a synagogue at the time and Jews owned houses in the city. In

1196 Shlom and 15 other Jews were murdered by participants in the Third *Crusade. Under Leopold VI (1198–1230) a second synagogue was erected. Its existence is noted in 1204. In 1235 the Jew *Teka (Tecanus) is mentioned as living in Vienna; he acted as state banker for Austria, and had far-flung financial interests. A charter of privileges was granted by Emperor Frederick II in 1238 giving the Jewish community extensive autonomy. A Jewish quarter is mentioned at the end of the century, although its origins are somewhat earlier. The oldest Jewish tombstone found dates from 1298; a Jewish cemetery is noted only in 1368, but probably dates from the second half of the 13th century. A slaughterhouse is noted in 1320.

At the close of the 13th and during the 14th centuries, the community of Vienna was recognized as the leading community of German Jewry. In the second half of the 13th century there were in the community 1,000 Jews, living in 70 houses. The influence of the "Sages of Vienna" spread far beyond the limits of the town itself and continued for many generations. Of primary importance were *Isaac b. Moses "Or Zaru'a," his son *Ḥayyim "Or Zaru'a," Avigdor b. Elijah ha-Kohen, and *Meir b. Baruch ha-Levi. At the time of the *Black Death persecutions of 1348–49, the community of Vienna was spared and even served as a refuge for Jews from other places; it developed rapidly during the reign of Rudolf IV (1339–65).

Nonetheless, toward the end of the 14th century there was growing anti-Jewish feeling among the burghers; in 1406 during the course of a fire that broke out in the synagogue, in which it was destroyed, the burghers seized the opportunity to attack Jewish homes. The need of Duke Albert V for money and the effects of the uprising by the *Hussites, combined with the hatred for the Jews among the local population, led to cruel persecutions in 1421 (the *Wiener Gesera). Many of the community's members died as martyrs; others were expelled, and the children forcibly converted. The community was destroyed and its property passed to Duke Albert.

After the persecutions some Jews nevertheless remained there illegally; in 1438 Christian physicians complained about Jews practicing medicine illegally in the city. In 1512 there were 12 Jewish families in Vienna, and a small number of Jews continued to live there during the 16th century, often faced with threats of expulsion. In 1582 a Jewish cemetery is noted. They suffered during the Thirty Years' War (1618–48) as a result of the occupation of the city by Imperial soldiers. In 1624 Emperor *Ferdinand II confined the Jews to a ghetto situated on the site of the present-day Leopoldstadt quarter. In 1632 there were 106 houses in the ghetto, and in 1670 there were 136 houses accommodating 500 families. A document of privilege issued in 1635 authorized the inhabitants of the ghetto to circulate within the "inner town" during business hours and Jews also owned shops in other streets of the city. Some Jews at this time were merchants engaged in international trade; others were petty traders. The community of Vienna reassumed its respected position in the Jewish world. In addition to other communal institutions the Jews maintained two hospitals. Among rabbis of the renewed community were Yom Tov Lipman Heller, and Shabbetai Sheftel *Horowitz, one of the many refugees from Poland who fled the *Chmielnicki massacres of 1648.

Hatred by the townsmen of the Jews increased during the mid-17th century, fanned by the bigotry of Bishop Kollonitsch. Emperor Leopold I, influenced by the bishop as well as the religious fanaticism of his wife and sustained by the potential gains for his treasury, decided to expel the Jews from Vienna once again. Though Leo *Winkler, head of the Jewish community at the time, arranged for the intervention of Queen Christina of Sweden on behalf of the Jews it was of no avail, as was an offer to the emperor of 100,000 florins to limit the expulsion. The poorer Jews were expelled in 1669; the rest were exiled in the month of Av, 1670, and their properties taken from them. The Great Synagogue was converted into a Catholic church, the "Leopoldskirche." The Jews paid the municipality 4,000 florins to supervise the Jewish cemetery. Of the 3,000–4,000 Jews expelled some made their way to the great cities of Europe where a number succeeded in regaining their fortunes. Others settled in small towns and villages. According to the testimony of the Swedish ambassador at the time, some of the Jews took advantage of the offer to convert to Christianity so as not to be exiled.

By 1693 the financial losses to the city were sufficient to generate support for a proposal to readmit the Jews. This time, however, their number was to be much smaller, without provision for an organized community. Only the wealthy were authorized to reside in Vienna, as "tolerated subjects," in exchange for a payment of 300,000 florins and an annual tax of 10,000 florins. Prayer services were permitted to be held only in private homes. The founders of the community and its leaders in those years, as well as during the 18th century, were prominent *Court Jews, such as Samuel *Oppenheimer, Samson *Wertheimer, and Baron Diego *Aguilar. As a result of their activities, Vienna became a center for Jewish diplomatic efforts on behalf of Jews throughout the empire as well as an important center for Jewish philanthropy. In 1696 Oppenheimer regained possession of the Jewish cemetery and built a hospital for the poor next to it. The wealthy of Vienna supported the poor of Ereẓ Israel; in 1742 a fund of 22,000 florins was established for this purpose, and until 1918 the interest from this fund was distributed by the Austrian consul in Palestine (see *Hierosolymitanische Stiftung). A Sephardi community in Vienna traces its origins to 1737, and grew as a result of commerce with the Balkans.

During the 18th century the restrictions on the residence rights of the "tolerated subjects" had prevented the rapid growth of the Jewish population in Vienna. There were 452 Jews living in the city in 1752 and 520 in 1777. The Jews suffered under the restrictive legislation of *Maria Theresa (1740–80). In 1781 her son, Joseph II, issued his *Toleranzpatent, which though attacked in Jewish circles, paved the way in some respects for later emancipation. Religious studies and sermons were delivered illegally by the scholars of the community or by rabbis who had been called upon to visit the town. By 1793

there was a Hebrew printing press in Vienna that soon became the center for Hebrew printing in Central Europe (see below). During this period the first signs of assimilation in the social and family life of the Jews of Vienna made their appearance, and there was a decline in the observance of tradition. At the time of the Congress of *Vienna in 1815 the salons of Jewish hostesses served as entertainment and meeting places for the rulers of Europe. In 1821 nine Jews of Vienna were raised to the nobility.

From the close of the 18th century, and especially during the first decades of the 19th, Vienna became a center of the *Haskalah movement. The influence and scope of the community's activities increased particularly after the annexation of *Galicia by Austria. Despite restrictions, the number of Jews in the city rapidly increased. Several Hebrew authors, including the poet and traveler Samuel Aaron *Romanelli, the philologist Judah Leib *Ben Zeev, the poet Solomon Levisohn, Meir *Letteris, etc., wrote their works in Vienna. Some of them earned their livelihood as proofreaders in the city's Hebrew press. The character of Haskalah and the literature of the Jews of Vienna was gradually Germanized. The first Jewish journalists, such as Isidor Heller, Moritz Kuh, and Zigmund Kulischer, inaugurated an era of Jewish influence on the Viennese press.

At a later period the call for religious reform was heard in Vienna. Various *maskilim*, including Peter Peretz Ber and Naphtali Hertz *Homberg, tried to convince the government to impose Haskalah recommendations and religious reform on the Jews. This aroused strong controversy among the Vienna community. The appointment of Isaac Noah *Mannheimer as director of the religious school in 1825 was a compromise between the supporters of reform and its opponents. In 1826 a magnificent synagogue, the Stadttempel, in which the Hebrew language and the traditional prayers were retained, was built by Josef Kornhaeusel. It was the first legal synagogue to be opened since 1671, but had to be hidden from the street because the law demanded it. The activists around Mannheimer, who founded the synagogue, were Michael Lazar Biedermann, Isak Loew Hofmann von Hofmannsthal, Heinrich Sichrovsky, and Leopold von Wertheimstein. Mannheimer and the *ḥazzan* Salomon *Sulzer tried to improve the decorum of the services in the new synagogue, rejected radical Reform, created the Viennese rite, and prevented a split in the community. Sulzer's *Shir Ẓiyyon* ("Song of Zion") became a model for many Ashkenazi synagogues throughout the world.

Jewish intellectuals were in the forefront of the revolution of 1848. The physician Adolf *Fischhof pleaded for press freedom, Ludwig August *Frankl, Moritz *Hartmann, and Ignaz *Kuranda published poems and articles and founded newspapers. The burial of the Jewish and Christian dead of the revolution together, with Mannheimer and Sulzer participating, was the first ecumenical service in Austria. Among the dead was Hermann Jellinek, the brother of Mannheimer's successor, Adolf *Jellinek. With the new constitution of 1849 the Jews gained equality before the law.

Kuranda, a member of the German National Assembly in Frankfurt and of the Vienna City Council, became president of the Jewish community in 1872. The writer, poet, and journalist Ludwig August Frankl became archivist and secretary of the Jewish community. In 1856 he traveled to Jerusalem, where he founded the Laemel School, which was financed by Elise Herz. He published his experiences in the two volumes, *Nach Jerusalem*. Joseph Ritter von *Wertheimer, who became the first president of the Jewish community in 1864, founded in 1830 the first general kindergarten in Vienna and in 1843 a Jewish kindergarten. He also established an orphanage for girls and a children's home and became founder and president of the Israelitische Allianz zu Wien.

During the second half of the 19th century and the first decades of the 20th, the Jewish population of Vienna increased as a result of immigration there by Jews from other regions of the empire, particularly Hungary, Galicia, and Bukovina. There were 3,739 Jews living in Vienna in 1846, 9,731 in 1850, and about 15,000 in 1854. After 1914 about 50,000 refugees from Galicia and Bukovina established themselves there, so that by 1923 there were 201,513 Jews living in Vienna, which had become the third largest Jewish community in Europe. In 1936 there were 176,034 Jews in Vienna (8% of the total population). The occupations of the Jews in Vienna became more variegated. Many of them entered the liberal professions: out of a total of 2,163 advocates, 1,345 were Jews, and 2,440 of the 3,268 physicians were Jews.

Before the Holocaust there were 19 temples and 63 smaller houses of prayer in Vienna. Together they had 29,200 seats. The first free-standing temple in Vienna was built in 1858 by Ludwig von Foerster in Vienna's main Jewish quarter in the Leopoldstadt district. With 2,000 seats it was the biggest temple in Vienna. In 1929 the last temple – a modern Jugendstil building – was inaugurated in the Viennese district of Hietzing. The Orthodox faction of the Jewish community had two large temples, the famous Schiffschul, built in 1864, where Jesaia Fuerst was rabbi from 1897 until 1938, and the Polnische Tempel (Polish temple) in the Leopoldsgasse with Mayer Mayersohn as rabbi from 1899 until 1937.

In 1857 Adolf Jellinek became preacher of the Leopoldstaedter temple. Eight years later he became Mannheimer's successor in the Stadttempel. He avoided the term rabbi, was one of the greatest preachers of his day, and remained antagonistic to the new national movement. He published many apologetic articles in the newspaper *Neuzeit*, from 1861 edited by Leopold Kompert and Simon Szanto. He also edited many Midrashim and published several studies on the Kabbalah.

In 1866 Moritz *Guedemann, a graduate of the Jewish Theological Seminary in Breslau, became rabbi of the Leopoldstaedter temple. In 1869 he became head of the *bet din*, and in 1894 Jellinek's successor as chief rabbi of Vienna. He was more Orthodox than his predecessors and was an open enemy of the Zionist movement. As a scholar he published a multi-volume history of Jewish education. His memoirs are

stored in the Leo Baeck Institute in New York and, except for short extracts, were never published.

In 1890 the Israelitengesetz was passed, which ruled that only one Jewish community was allowed in one geographical region.

The Jewish community of Vienna had many Jewish educational, cultural, and social institutions. To name only the most important, in 1864 Adolf Jellinek founded the Beth Hamidrasch, where Isak Hirsch Weiss, Meir Friedmann, Salomon Rubin, and Sigmund Gelbhaus taught Bible, Talmud, the Shulḥan Arukh and *Mishneh Torah*, and Jewish history.

The rabbinical seminary, founded in 1893, was a European center for research into Jewish literature and history. It was modeled on the Jewish Theological Seminary in Breslau, of which its first director, Adolf Schwarz, was as a graduate. The most prominent scholars were Adolf *Buechler, David *Mueller, Victor *Aptowitzer, Z.H. *Chajes, and Samuel *Krauss.

After World War I the Zionists – most prominent among them the new Viennese chief rabbi Zwi Perez Chajes – founded several new educational institutions. Among them was the Hebrew Pedagogium, opened in 1918. It offered courses for kindergarten teachers and Hebrew teachers; its language of instruction was Hebrew. Its first director was Harry Torczyner, who moved to Berlin in 1919 to teach at the *Hochschule fuer die Wissenschaft des Judentums and went in 1933 to Jerusalem, where he taught at the Hebrew University under his Hebraicized name Naphtali *Tur-Sinai. His successor was Abraham Sonne. Other instructors were Salo W. *Baron, Zwi Diesendruck, and M.A. Wiesen.

In 1920 a seminary for the training of religious teachers was founded; its director was Moritz Rosenfeld. Also in 1920 a Jewish high school was opened. It was Zionist-oriented; its director was Viktor Kellner, a former teacher of the Herzliah High School in Tel Aviv. After the death of Zwi Perez Chajes the school was named after him.

In 1924 Rabbi Armand Kaminka, who also was the secretary of the Israelitische Allianz and who had taught at the Beth Hamidrasch, founded the Maimonides Institut, where the same traditional Jewish subjects were taught. Its teachers were Moses Zickier; the Vienna community rabbi Moritz Bauer; the lawyer Nissan Goldstein; Moses Horowitz, before he became rabbi of Stanislau; and Salomon Rappaport, who later became the director of the Hebrew seminary in Johannesburg, South Africa.

In 1844 a Jewish institution for the deaf and dumb was founded. It was directed by Moritz Brunner and Salomon Krenberger, but had to be closed in 1926 because of financial difficulties. In 1876 Ludwig August Frankl founded a Jewish institution for the blind. Its directors were Simon Heller (until 1923) and Siegfried Altmann, who emigrated in 1938 to New York. Both were renowned experts in the education of the blind.

In 1869 Anselm Freiherr von Rothschild financed the new building of a Jewish hospital in memory of his father (called Rothschild hospital).

In 1896 the Jewish Museum was opened. It was the first Jewish museum in the world; it was maintained by the Society for the Collection and Conservation of Jewish Art and Historic Monuments. Its curator was Jakob Bronner, who fled to Palestine in 1938. The collection of the museum was dispersed; only parts of it could be found and reconstituted after 1945. The same happened with the famous library of the Jewish community, which had about 50,000 volumes and was directed by Bernhard Muenz, the historian Bernhard *Wachstein, and after his death in 1936 by Moses Rath, the author of the Hebrew textbook *Sefat Amenu.*

Vienna also became a Jewish sports center; the soccer team Ha-Koah and the *Maccabi organization of Vienna were well known.

Though in the social life and the administration of the community, there was mostly strong opposition to Jewish national action, Vienna was also a center of the national awakening. Peretz *Smolenskin published **Ha-Shaḥar* between 1868 and 1885 in Vienna, while Nathan *Birnbaum founded the first Jewish nationalist student association, *Kadimah, there in 1882, and preached "pre-Herzl Zionism" from 1884. It was due to Herzl that Vienna was at first the center of Zionist activities. He published the Zionist movement's organ, *Die *Welt*, and established the headquarters of the Zionist Executive there. The Zionist movement in Vienna gained in strength after World War I. In 1919 the Zionist Robert *Stricker was elected to the Austrian parliament, although he was not reelected in 1920. Three Zionists, Leopold Plaschkes, Jakob Ehrlich, and Bruno Pollack-Parnau, were elected to the Vienna City Council. The well-known Zionist social worker Anita *Mueller-Cohen, who set up a whole network of social institutions for thousands of Jewish refugees who had fled during World War I from Galicia and Bukovina to Vienna, was elected as the youngest member of the Vienna City Council on a non-Zionist list. The Zionists did not obtain a majority in the Jewish community until the elections of 1932, when the Zionist lawyer Desider *Friedmann became president.

After the establishment of the Austrian Corporate State (*Staendestaat*) in 1934 following the defeat of the Social Democrats in the Austrian Civil War, Desider Friedmann became *Staatsrat* (a member of the new governing body), Salomon Frankfurter *Bundeskulturrat* (a member of the advisory council), and Jakob Ehrlich, an appointed member of the body which replaced the democratically elected Vienna City Council.

[Yomtov Ludwig Bato / Evelyn Adunka (2nd ed.)]

The Holocaust Period

The experience and practice in dealing with the Jews, gained in Germany since 1933, were utilized by the Nazis when they occupied Vienna in March 1938 with great harshness and brutality. In less than one year they introduced all the discriminatory laws, backed by ruthless terror and by mass arrests (usually of economic leaders and intellectuals, who were detained in special camps or sent to Dachau). These measures were ac-

companied by unspeakable atrocities. Vienna's chief rabbi, Dr. Israel Taglicht, who was more than 75 years old, was forced to clean the Seitenstettengasse, where the Stadttempel and the community offices were, and to stand in front of a shop with an anti-Jewish poster. He was able to immigrate to England, were he died in 1943.

The president of the community, Desider Friedmann, the vice president, Robert *Stricker, and the director, Josef Loewenherz, as well as the president of the Zionist organization, Oskar Gruenbaum, were immediately arrested. The historian of the Zionist movement, Adolf Boehm became insane, dying in prison shortly afterward. During *Kristallnacht* (November 9–10, 1938), 42 synagogues were destroyed, hundreds of people perished, and thousands were arrested; shops and flats were plundered by the SA and the Hitler Youth, subsequently being confiscated.

Nonetheless, the organization of immigration and the transfer of property necessitated the release of some Jewish leaders who had to form the *Aeltestenrat*. Aryanization was practiced by the forced sale and liquidation of thousands of enterprises; apartments had to be evacuated. Moreover, for the first time, forced emigration (legal and "illegal") was systematically organized by Eichmann's Zentralstelle fuer juedische Auswanderung. Consequently, of Vienna's 166,000 Jews (approximately 10% of the city's population) about 100,000 emigrated before the war; about 18,000 of them were later caught in other European countries; an additional 18,500 succeeded in getting out before the general ban on emigration in the fall of 1941. With the outbreak of war deportation of Austrian Jews increased, whereas previously mainly those of Polish and Czech nationality had been expelled. The first transports were sent to the notorious Nisko, in the Lublin district (October 1939). The last mass transport left in September 1942; it included many prominent people and Jewish dignitaries, who were sent to Theresienstadt, from where later they were mostly deported to Auschwitz. In November 1942 the Jewish community of Vienna was officially dissolved. The "Council of Jewish Elders," with Loewenherz at its head, continued to exist. About 800 Viennese Jews succeeded in remaining underground.

For further details and bibliography, see *Austria, Holocaust.

Postwar Period

According to the historian Jonny Moser in April 1945 there were 5,512 Jews living in Austria, who had survived as employees of the *Aeltestenrat,* in hiding, or in concentration and labor camps. Their number decreased due to excess of deaths over births, and emigration; the loss was soon more than compensated for by the return of several thousands of Austrian Jews, and the addition of a number of *Displaced Persons and refugees who had settled in Vienna. The population of the community reached its postwar peak in 1950 with 12,450 registered Jews, and decreased to 8,930 in 1965. It was estimated that there were at least 2,000 Jews living in Vienna who did not register with the community.

Vienna was the main transient stopping-place and the first refuge for hundreds of thousands of Jewish refugees and emigrants from Eastern Europe after World War II. This applies to the greater part of the exodus of Polish Jews in 1946 (see *Beriḥah), and, to a lesser degree, to Jews from Romania and Hungary in 1946–47, when the Rothschild Hospital of the Viennese community became the main screening station on the way to the DP camps of Germany, Austria, and Italy. It was true also for the great stream of refugees from Hungary during and after the revolt of 1956, when at least 18,000 Jewish refugees found temporary shelter in Vienna, as well as for several thousand refugees from Czechoslovakia after the Soviet invasion of 1968. Emigration to Israel from Poland, the Soviet Union, Czechoslovakia, Hungary, and partly also from Romania passed through Vienna as well.

The Community was reconstituted shortly after the war, with a president appointed by the occupation authorities, but by April 1946, elections were held for the community council. As a result of these first elections, David Brill of the left-wing Unity party was elected president. In April 1948 the Unity party was defeated by a coalition of the Zionists and the non-Zionist Social Democrats (the Bund Werktaetiger Juden), and the Zionist, David Schapira, was elected president.

After two short and turbulent presidencies of the General Zionist Wolf Hertzberg and the Communist Kurt Heitler, both of them lawyers, the long era of the rule of the Social Democratic Party Bund werktaetiger Juden (Union of Working Jews) began in 1952. The lawyer Emil Maurer was elected president, but retired in 1963, and was replaced by Ernst Feldsberg, also a representative of the Bund. Akiba Eisenberg served as rabbi from 1948. The sole synagogue functioning was the old Stadttempel in the Seitenstettengasse, the only synagogue that was not destroyed on *Kristallnacht* on November 9–10, 1938. Though the Zionists constitute a minority, there are intensive and diversified Zionist activities. Their most important event was the transfer of the remains of Theodor Herzl, who had been buried at the Doebling cemetery in Vienna, to Jerusalem in 1949.

In the 1960s and early 1970s it was not possible for the Jewish community, for financial reasons, to rebuild its infrastructure. In 1963 an attempt to build a community center failed because of lack of funding, although the cornerstone had already been laid. A provisional room for a Jewish museum was opened in 1964 and closed after a few years; the same happened with the reading room of the library. In 1966 the Jewish community opened a youth center. In 1967 the ceremonial hall of the main Jewish cemetery was built, but the Jewish hospital was closed in 1970.

As successor to the lawyer Anton Pick, the first non-socialist president of the Vienna Jewish community – the lawyer Ivan Hacker – was elected in 1981. Two new factions of the Jewish community were founded by younger members in the 1970s and 1980s with the aim of a renewal of the Jewish community and its institutions. In 1980 the Jewish community center was opened, in 1984 the Jewish High School (the

Chajesgymnasium), in 1987 a second Jewish high school by Chabad, and in 1989 the Jewish Institute of Adult Education were founded. In 1987 the furrier Paul Grosz became successor to Ivan Hacker. In 1988 the Jewish Old Age Home was enlarged and named after Maimonides. In 1963, as in 1988, the Stadttempel was renovated. In 1994 the psychological and social services center Esra was opened.

Besides the Stadttempel 14 smaller synagogues and prayer rooms existed. In 1992 the Sephardi Center with two synagogues was built. In 1993 the Vienna Jewish Museum was opened in the Palais Eskeles in the heart of the city. The old library of the Jewish community was given on permanent loan to the Jewish Museum and could thus be reopened in 1994. From the early 1990s Jewish cultural weeks, street festivals, and film and theater weeks were regularly organized.

In 1983 Chief Rabbi Akiba Eisenberg died and was succeeded by his son Paul Chaim Eisenberg, the chief rabbi as of 2006. From 1998 the real estate tycoon Ariel Muzicant was president of the community. He was the first president who was born after the Holocaust.

In the early 21st century Vienna had a small but thriving and active Jewish community that played an active part in the public and cultural life of the city. In contrast to the Austrian state, which in early 2005 was still negotiating restitution payments, the city of Vienna strongly supported the Jewish community and its many projects from the late 1970s on. In 2004 the community had 6,894 members.

[Evelyn Adunka (2nd ed.)]

Hebrew Printing

In the 16th century a number of books were published in Vienna which had some rough Hebrew lettering (from woodblocks?): Andreas Planeus' *Institutiones Grammatices Ebreae*, printed by Egyd Adler, 1552; J.S. Pannonicis' *De bello tureis in ferendo*, printed by Hanns Singriener, 1554; and Paul Weidner's *Loca praecipuo Fidei Christianae*, printed by Raphael Hofhalter, 1559. Toward the end of the 18th century extensive Hebrew printing in Vienna began with the court printer Joseph Edler von Kurzbeck, who used the font of Joseph *Proops in Amsterdam. He employed Anton (later: von) Schmid (1775–1855), who chose printing instead of the priesthood. Their first production was the Mishnah (1793). In 1800 the government placed an embargo on Hebrew books printed abroad and thus gave him a near monopoly. His correctors were Joseph della Torre and the poet Samuel Romanelli (to 1799), who with Schmid printed his *Alot ha-Minḥah* for Charlotte Arnstein's fashionable marriage (1793). Among the works they printed were a Bible with Mendelssohn's *Biur* (1794–95) and David Franco-Mendes' *Gemul Atalyah* (1800). Schmid also issued the 24th Talmud edition (1806–11) and the *Turim* (1810–13) with J.L. Ben-Zeev's notes on *Ḥoshen Mishpat*. Besides Kurzbeck and Schmid there were other rivals and smaller firms: Joseph Hraszansky, using a Frankfurt on the Main font, opened a Hebrew department in Vienna. Among his great achievements is an edition of the Talmud (1791–97). In 1851 "J.P. Sollinger's widow" began to print Hebrew texts including a Talmud, with I.H. *Weiss as corrector (1860–73). Special mention must also be made of the Hebrew journals printed in Vienna including *Bikkurei ha-Ittim* (1820/21–31), *Kerem Ḥemed* (1833–56), *Oẓar Neḥmad* (1856–63), *Bikkurei Ittim* (1844), *Kokhevei Yiẓḥak* (1845–73), and *Ha-Shaḥar* (1868–84/5).

VIENNA, CONGRESS OF, international congress held in Vienna, September 1814 to June 1815, to reestablish peace and order in Europe after the Napoleonic Wars. The congress met in the Apollosaal built by the English-born Jew, Sigmund Wolffsohn, and the delegates were often entertained during the course of the proceedings in the *salons of Jewish hostesses, such as Fanny von *Arnstein and Cecily *Eskeles.

The Jewish question, raised explicitly for the first time at an international conference, arose in connection with the constitution of a new federation of German states. The Jews of Frankfurt and of the Hanseatic towns of *Hamburg, *Luebeck, and *Bremen had previously attained equal civil rights under French rule. The Hanseatic cities were annexed to France in 1810, and Jewish emancipation in France was effective ipso facto there. The Frankfurt community paid the French staff of the duke a vast sum of money in 1811 in return for being granted equality. They now sent delegates to the Congress to seek confirmation of their rights, as well as emancipation for the Jews of the other German states. The delegates for Frankfurt were Gabriel Oppenheimer and Jacob Baruch (the father of Ludwig *Boerne), while the Hanseatic towns were represented among others, by the non-Jew Carl August *Buchholz. They succeeded in gaining the support of such leading personalities as Metternich (Austria), Hardenberg, and Humboldt (Prussia). In October 1814 a committee of five German states met to prepare proposals for the constitution of the new federation. Bavaria and Wuerttemberg, fearing the curtailment of their independence, opposed Austria, Prussia, and Hanover, especially on the question of Jewish rights. At the general session of the Congress in May 1815, the opposition to Jewish civic equality grew, despite favorable proposals by Austria and Prussia. On June 10, paragraph 16 of the constitution of the German Federation was resolved:

> The Assembly of the Federation will deliberate how to achieve the civic improvement of the members of the Jewish religion in Germany in as generally agreed a form as possible, in particular as to how to grant and insure for them the possibility of enjoying civic rights in return for the acceptance of all civic duties in the states of the Federation; until then, the members of this religion will have safeguarded for them the rights which have already been granted to them by the single states of the Federation.

This formulation postponed Jewish equality to the far distant future, while by changing one word in the final draft to "by," instead of "in the states," a formulation arrived at only at the meeting on June 8, a loophole had been left by which the states could disown rights granted by any but the lawful government, namely, those bestowed by the French or their temporary rulers. The Congress, therefore, did nothing to better the status of the Jews but, in effect, only worsened their position in many places.

The Jewish question arose again at the Conference of Aix-la-Chapelle (1818), when the powers met to determine the withdrawal of troops from France and consider France's indemnity to the allies. Various Jewish communities turned to the conference for relief, and Lewis *Way, an English clergyman, presented a petition for emancipation to Alexander I of Russia. Despite a sympathetic reception, however, there were no practical results.

[Shmuel Ettinger]

VIENNE, town in the department of Isère, S.E. France. The earliest confirmed Jewish presence in France was in Vienne. In the year 6 C.E., *Archelaus, ethnarch of Judah, was consigned there by Emperor Augustus; he died there in about 16 C.E. This fact was probably the source of the error in the *Roman provençal* of Girard de Vienne, in which it is asserted that a Jew named Joachim arrived in Vienne after the conquest of Jerusalem by Titus. At the beginning of the ninth century there was an important Jewish community in Vienne that was confronted by the coercive missionary activities organized by *Agobard, bishop of Lyons. After Agobard's failure, he induced the bishop of Vienne to call on his community to avoid all relations with the Jews. From 849 a plot of land inside the town was commonly owned by the Jews. This may have been the nucleus of the Jewish quarter, Burgus publicus Hebraeurum, which is mentioned from the last quarter of the tenth century and is commemorated by the "Saint-Pierre entre Juifs" parish and the Rue de Juiverie near the St.-Maurice church. From the tenth century the Jews of Vienne also owned and cultivated agricultural estates, including many vineyards within the proximity of Vienne. They constantly expanded these properties and the purchase of land by Jews was often camouflaged under a fictitious promissory note, for which a pledge in real estate was taken. Also, the Jews often exchanged plots of land, occasionally with the Church itself. At the close of the tenth century the Jew Astier was invested with the function of steward by the abbot of St.-André-le-Bas to deal with business (*negotia monachorum*). The tenor of the relationship with the Christian community changed radically in 1247, when the archbishop of Vienne had to be exhorted by Pope Innocent IV to guarantee the protection of the Jews of his diocese after the *Valréas blood libel. One of the last details known about the Jews of Vienne during the Middle Ages concerns the search carried out in 1389 to seize the promissory notes. Among the Jewish scholars of Vienne during the Middle Ages were the legal authority Tobiah b. Elijah (first half of the 13th century) and the *posek* Yakar (second half of the 13th century).

[Bernhard Blumenkranz]

VIERTEL, BERTHOLD (1885–1953), Austrian writer, stage and film director, essayist, and translator. Viertel was a cofounder and dramatic supervisor of the *Volksbuehne* in his native Vienna (1912–14) and later directed plays in Dresden as well as in Berlin and Duesseldorf. He also contributed to the satirical weekly *Simplicissimus* and to Karl *Kraus' *Die Fackel*, in which his first poems appeared. He wrote a study of the satirist, *Karl Kraus, ein Charakter und die Zeit* (1921). His comedy *Die schoene Seele* appeared in 1925, and a novel, *Das Gnadenbrot*, in 1927. Of far greater importance, however,

was his lyric poetry. He produced four volumes of verse: *Die Spur* (1913), *Die Bahn* (1921), *Fuerchte dich nicht! Neue Gedichte* (1941), and *Der Lebenslauf* (1946). From 1928 to 1931, Viertel was a movie director in Hollywood and from 1933 he worked in London and broadcast anti-Nazi programs over the BBC. Christopher Isherwood's short novel, *Prater Violet*, is regarded by many as a *roman à clef* about Viertel. He settled in the United States in 1939, but in 1947 returned to Vienna, where he directed plays at the Burgtheater, including his own translations of Tennessee Williams' *The Glass Menagerie* and *A Streetcar Named Desire*. He was especially noted for his productions of expressionist dramas. After his death his collected works appeared in the volumes *Dichtung und Dokumente* (1956), *Schriften zum Theater* (1970), *Die Ueberwindung des Uebermenschen* (1989), and *Berthold Viertel: Studienausgabe in vier Baende* (1994). Among the collections of his poems are the books *Dass ich in dieser Sprache schreibe* (1981) and *Das graue Tuch* (1994). Viertel's recollections were gathered in the book *Kindheit eines Cherub* (1991).

VIGÉE (Strauss), CLAUDE (1921–), French poet and essayist. Born in the small Alsatian town of Bischwiller, Vigée was active in the French Jewish underground movement in World War II. He escaped to Spain in 1942 and reached the U.S. in 1943. After completing his studies there he taught at several American universities, including Brandeis. In 1960 he went to Israel as visiting professor of French literature at the Hebrew University of Jerusalem, assuming a permanent post there in 1963.

Vigée's poems, stories, and recollections, with their excursions into childhood and a philosophical quest for Jewishness, testify to a prolonged search for roots. This is especially evident in *La lutte avec l'ange* (1950), *L'été indien* (1957), and *Canaan d'exil* (1962). Consciousness of his own alienated condition led him, in the essays in *Les artistes de la faim* (1960) and *Révolte et louanges* (1962), to an examination of other great exiles searching for an absolute, such as Mallarmé, Camus, and *Kafka. After settling in Israel, Vigée was able to reach a harmony between his poetic urge and the surrounding everyday reality (*Le poème du retour*, 1962). The landscape of Israel inspired *Moisson de Canaan* (1967). Vigée also sought the fundamental bond between Hebrew and Western culture, and in "Civilisation française et génre hébraïque" (essay in his *Moisson de Canaan*) tried to define the role and importance of the specifically Jewish message in Western civilization. His essays on Goethe, Claudel, and Rilke also bear witness to his strong desire to reveal the imprint of the Bible on a civilization which declares itself heir to the Hellenic tradition alone. His works include various translations, such as *Cinquante poèmes de R.M. Rilke* (1953^2) and *L'Herbe du songe*, as well as the autobiographical *La lune d'hiver* (1970). His later works include *Dans le silence de l'aleph: Écriture et Révélation* (1992); *La lucarne aux étoiles: dix cahiers de Jérusalem, 1967–1997* (1998); *Vision et silence dans la poétique juive: demain la seule demeure: essais et entretiens, 1983–1996* (1999); *Danser vers l'abîme ou La spirale de l'extase: choix de poèmes et d'essais: 1995–2004* (2004); *La lutte avec l'ange: un chant de sombre joie dans l'agonie du temps: poèmes, 1939–1949* (2005).

BIBLIOGRAPHY:** M. Finck and H. Péras (ed.), *La terre et le souffle. Rencontre autour de Claude Vigée* (1998); *L'oeil témoin de la parole: rencontre autour de Claude Vigée*, essays collected by D. Mendelson and C. Leinman (2001).

[Max Bilen]

°VIGENÈRE, BLAISE DE (1523–1596), French diplomat, humanist, and Christian kabbalist. As French ambassador in Rome from 1566, Vigenère sought out Jewish scholars and immersed himself in Hebrew studies and the Kabbalah. He became a pupil of Gilbert *Génébrard and Nicolas Le Fèvre de la Boderie, two eminent French Christian Hebraists, and first began to publish at the age of 50. Vigenère was a well-known translator, but mainly achieved fame as the author of books on alchemy, astrology, cryptography, and Kabbalah.

His works include a *Traité des comètes avec leurs causes et effets* (Paris, 1578); and a *Traité des chiffres, ou Secrète manière d'écrire* (Paris, 1586), which was quoted at length by his cousin, Claude Duret, in his work *Thresor de l'histoire des langues de cest univers* (Paris, 1613). Kabbalistic material was more prominent in his *Prières et oraisons* (Paris, 1595), probably based on the second translation of the *Zohar undertaken by Guillaume *Postel. Vigenère himself wrote that the contents were "mainly drawn from the Zohar, the Sefer ha-*Bahir or Book of Splendor, the Midrash *Tehillim*, and other little-known works." The Christian Kabbalah is again prominent in a work which appeared posthumously, the *Traité du feu et du sel* (Paris, 1608; *Discourse of Fire and Salt*, 1649). In his *Traité des chiffres*, Vigenère paid generous tribute to Guy *Le Fèvre de la Boderie and his brother Nicolas, whose achievements had never fully been recognized.

[Godfrey Edmond Silverman]

VIGODA, SAMUEL (1895–1990), *ḥazzan*. Vigoda, one of the star *ḥazzanim* of the Golden Age, was born in Dubrozin, Poland, but the family moved to Hungary, where his father was *ḥazzan*. He studied at the *yeshivot* of Galante and Pressburg and as a child lived for two and a half years with the fa-

mous *ḥazzan*, Yossele *Rosenblatt; later he also learned music at the conservatories of Klausenberg and Budapest as well as medicine at the university there. After serving as *ḥazzan* to the Arena Temple in Budapest, he immigrated to the United States in 1933, where he served as *ḥazzan* to important congregations in New York and Washington, including Rosenblatt's Oheb Zedek, the position that was given to him following Rosenblatt's untimely death. He published many articles on the history of *ḥazzanut* in Europe and the United States and produced many records. In 1980 he was given an award by the Ḥazzanim Farband of America and Canada. In 1981, Vigoda published *Legendary Voices* in English, which contains material concerning Ashkenazi *ḥazzanim*.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

VIHAR, BELA (1908–1978), Hungarian poet and teacher. Vihar, the son of a cantor, was born in Hajdunanas, Hungary, and received a traditional Jewish education. After completing his studies in the Jewish Teachers' Training College in Budapest he taught in various Jewish schools. During World War II he served in the Jewish Forced Labor Battalion on the Russian Front. From 1945 to 1948 he was principal of a Jewish school in Budapest and in 1949 was appointed organizer of culture for national minorities in the Hungarian Ministry of Education. From 1959 onwards, however, he devoted himself solely to journalism.

In his poems, which are of a high standard and full of profound thought, the influence of the Bible and Ḥasidism, as well as of Walt Whitman and Marc Chagall, is evident. In addition to his poetry, he occupied himself with Jewish themes and, together with Aladar *Komlos, published a collection of tales for children entitled *Kincsorzo fa* ("Treasure-Guardian Tree," 1940). He also published the first documentary work on the Holocaust, *Sarga konyv* ("Yellow Book," 1945), and the theme recurs from time to time in his works.

The following collections of his poems have been published: *Ut onmagadhoz* ("Road to Yourself," 1933); *Betuk bekessegeben* ("In Peace of Letters," 1941); *Onarckep* ("Self Portrait," 1962); *Negy felelet* ("Four Responses," 1965); *Kigyoenek* ("Serpent Song," 1970).

VILA REAL, town in N. central Portugal, in the province of Tras-os-Montes. Founded in the 13th century, it contains ancient architecture which exhibits Moorish influence. Vila Real became a Crypto-Jewish center after the forced conversions of 1497 (see *Portugal). The *Marranos there maintained their separate identity for four centuries, surviving the *Inquisition. Their survival was due in part to the character of the region – grapes for Porto's port wines are still grown there – which contributed to an independence of spirit and secretiveness. The Marranos narrowly won a contest of time against the Inquisition. For by 1718, when the Marranos had been effectively purged from the accessible coastal cities, the inquisitors began a systematic campaign into the hill country along the Spanish border. Concentrating on individual towns in the Tras-os-Montes, Beira and Alentejo provinces, the campaign extirpated the Crypto-Jewish center in upper Alentejo and prosperous industries collapsed as a result of the sudden decimation of the Marrano population. For 30 years the Marranos in a dozen towns throughout rural Portugal were sought out by the Inquisition, including Lamego (15 mi. south of Vila Real) and Braganza (to the north). By the 1750s, when Pombal suppressed the Inquisition, it had not yet reached Vila Real.

In 1928 the ex-Marrano Arturo Carlos de Barros *Basto visited Vila Real in an attempt to rouse the surviving Marranos to return to Judaism. Although he found that they feared to make a public declaration of their Jewish affiliation, he remained in touch with a nucleus of the Vila Real group. In 1930 he returned to found a Jewish congregation, under the presidency of Eugenio Cardoso. The Marranos in Vila Real then numbered a few hundred, out of a total population of 6,700. Its neo-Jewish community subsequently had but occasional contact with the Jewish world.

[Aaron Lichtenstein]

VILKAVIŠKIS (Pol. **Wylkowyski**; Rus. **Volkovyshki**), town in S.W. Lithuania. According to tradition, Jews were living in this area in the 14th century and a synagogue was built at the beginning of the 16th. By the 19th century a flourishing Jewish community had developed. Between 1823 and 1862 no new Jews were permitted to settle in Vilkaviškis, which was near the border with Germany, under the czarist legislation restricting Jewish settlement in border towns. Nevertheless, the community numbered 4,417 in 1856 (as against 834 Christians), 3,480 in 1897 (60% of the total population), 3,206 in 1923 (44%), and 3,609 in 1939 (45%). The majority were occupied in commerce and crafts. Some derived their livelihood from agriculture and garden plots close to the town. The sizable brushmaking industry in Vilkaviškis was predominantly Jewish and employed hundreds of Jewish workers. These organized a workers' union, the Jewish "Brushmakers Bund," and in 1898 published a clandestine periodical entitled *Veker*. The industry diminished in scope in the years between the two world wars. The Vilkaviškis community had an active Jewish social and cultural life. Its educational institutions included a large Hebrew primary school, a science-oriented Hebrew secondary school, and a vocational school.

The day of the outbreak of the German-Russian war, June 22, 1941, Vilkaviškis was occupied by the Germans. Most of the Jewish houses, including the synagogues, were destroyed during the fighting. On July 28, 1941, the systematic murder of the Jews in Volkaviškis began. At first about 900 men were murdered. A ghetto was established for the remaining Jews, most of them women and children, in the local barracks, close to the mass graves of the executed men. The Jews in the ghetto

were killed on the day after Rosh Ha-Shanah, Sept. 24, 1941. Only a few survived until the liberation. The number of Jews in Vilkaviškis after the war remained low.

VILLADIEGO, town in N. Spain, west of *Burgos. It is not known when Jews first settled there, but as early as 1222 Ferdinand III extended his protection to 20 Jewish families who went to stay in Burgos. He granted them the same rights as were generally enjoyed by the Jews in Castile. Important evidence, possibly the oldest of its kind in Castile, indicates that in 1240 Ferdinand ordered the community of Villadiego to pay 30 denarii yearly for the benefit of the cathedral of Burgos. In 1290 there were 20 Jewish families in Villadiego, who lived in a separate quarter close to the city walls. In the war between the brothers Pedro and Henry (1366–69), the community was destroyed by English soldiers serving under Pedro. It recovered around 1390, when it again numbered 20 Jewish families. During the 15th century some Jews of Villadiego served as tax farmers. In 1485 the community, then one of the smallest in northern Castile, contributed a special impost of 23 castellanos toward the war against Granada. In 1491 it paid an annual tax of 6,020 maravedis.

VILLAFRANCA DEL PANADÉS, town near Barcelona, in Catalonia, N.E. Spain. Jews apparently first settled there at the beginning of the 12th century; the community belonged to the *collecta* (tax administrative unit) of Barcelona. The earliest extant record of its existence, dated 1207 and signed by the bailiff of Barcelona, concerns the selling of its revenues. Solomon b. Abraham Adret refers to the relationship between the Villafranca community and that of Barcelona in one of his responsa (vol. 3, no. 401).

More information on the Villafranca community is available from the mid-14th century. R. Ḥasdai Crescas, grandfather of the illustrious Ḥasdai Crescas, negotiated with the community around 1345 concerning its contribution to a loan destined for Pedro IV's campaign in Majorca. After 1346, Salomo de la Cavalleria, Vidal de Tolosa, Vidal de Beders, and Isaac b. Moses Ḥen are known as community trustees (*ne'emanei ha-kahal*). The names of two of them, Vidal de Tolosa and Vidal de Beders, show they were of French origin. When riots broke out following the Black *Death in 1348, Pedro IV ordered that measures be taken to protect the community; he repeated these instructions in 1353. During the 1391 persecutions the fate of the community of Villafranca was similar to that of *Barcelona. John I ordered that the Jews be protected, but after the rioting subsided he asked for a list of Jewish property left intestate by the victims, so that it could be handed over to the crown. Nothing further is known about the community.

[Haim Beinart]

VILLAREAL, family name of Portuguese notables. The best known is Manoel Fernandez *Villareal (1608–1652). His son, JOSÉ DA VILLAREAL, migrated to France, where he served as a professor of Greek at Marseilles from about 1695.

Other bearers of the name include JOSÉ DA COSTA VILLAREAL (d. 1731), who was comptroller of the Portuguese royal army during the 1720s. A charge of Judaizing was brought against him, and in 1726 his arrest was ordered. Taking advantage of a conflagration then raging in Lisbon, he slipped away to London by sea with 17 members of his family and 300,000 pounds sterling of his wealth. In London the group re-entered the Jewish fold, when all the males in the family were circumcised and each marriage was recontracted "according to the law of Moses and Israel." As a token of thanksgiving they founded the Villareal girl's school. His widow was later sued for breach of promise by her profligate cousin Philip (Jacob) da Costa. The consequent publication, "*The proceedings at large in the Arches Court of Canterbury, between Mr. Jacob Mendes da Costa and Mrs. Catherine da Costa Villareal, both of the Jewish religion, and cousin Germans. Relating to a marriage contract*" (London, 1734), throws much light on social conditions in 18th-century Anglo-Jewry. Philip lost the case. When Kitty later married William Mellish, a non-Jew, she and her children by Villareal were baptized, the daughter marrying the future Viscount Galway.

The name is attested throughout the Marrano *Diaspora. MANUEL LOPEZ VILLAREAL took an important role in European business activity and established commercial ties between Hamburg and Amsterdam during the 1660s. In the New World the name Villareal appears at Hampstead, Georgia, where ISAAC VILLAREAL (VILLAROEL) was a Jewish settler around 1733. The origins of Benjamin *Disraeli have been traced back to the Villareals of Portugal. The Jewish descent of the Villareal family, and in particular of Manoel Fernandez Villareal, was indicated by the researches of Cecil Roth – a position also held by Martin A. Cohen and other scholars in the field. On the other hand, Antônio Jose Saraiva (see bibliography) concluded that Fernandez Villareal was probably neither Jewish nor a New *Christian, but that the Inquisition had used Judaism as a pretext for discrediting of Fernandez Villareal's liberal pronouncements and confiscating his property. Saraiva goes on to generalize that the majority of confessed Judaizers were not Marranos, but that they made confessions because they could escape death at the hands of the inquisitors only in this way.

[Aaron Lichtenstein]

VILLEFRANCHE-DE-CONFLENT, village in the department of Pyrénées Orientales, S. France, which formed part of the former county of Roussillon. There was a small Jewish community there during the 13th century, most probably founded by Jews who came from *Perpignan. There is evidence of continual migratory movement between the two localities, in addition to regular commercial relations. At the end of the 14th century, the Jewish community of Villefranche ceased to exist. The theologian *Levi b. Abraham, who is known for his participation in the polemics of the early 14th century on the subject of philosophical studies, originated there. Villefranche-de-Conflent is not to be confused with two localities in Spain, called Villafranca, which were inhabited by Jews during the Middle Ages, or with Villefranche-sur-Saône, whose municipal charter of 1260 prohibited the residence of Jews.

VILLINGEN, town in Baden, Germany. The first documentary evidence for the presence of Jews in Villingen dates from the beginning of the 14th century; in 1324 Emperor Louis IV, the Bavarian, granted to the dukes of Fuerstenberg the revenues from his Villingen Jewry in recognition of their service to him, reserving the right to repurchase them for 50 silver marks. The Jews lived in a quarter of the upper part of the town, where a synagogue was also located, mentioned for the first time in 1379. In 1342 some Jews of Villingen, together with Jews of *Freiburg and *Schaffhausen, were denounced for stealing church objects. During the *Black Death persecutions (1348–49) Jews were martyred and the community destroyed. In 1464 their moneylending activities are noted. In 1504 all the Jewish men were temporarily imprisoned in the town's tower because of the *Freiburg blood libel. In 1510 all Jews were expelled, after Emperor Maximilian I accused Jewish doctors of mistreating a sick old man, one of his veteran soldiers. Thereafter Jews could enter the town and trade only when accompanied by the town servant.

Jewish settlement in the town was not renewed until 1862; it grew from 20 in 1875 to 60 in 1933. Of that number, 42 managed to emigrate after the Nazi rise to power. The prayer hall was demolished on Nov. 10, 1938. On Oct. 20, 1940, 11 Jews were deported to Gurs; two returned at the end of the war from Theresienstadt. The building that housed the prayer hall still exists. A plaque commemorating the hall was consecrated in 1978. In 2002 the Jewish community Rottweil/Villingen-Schwenningen was founded. It numbered 179 in 2004. Most of the members are immigrants from the former Soviet Union. The community's prayer hall is in Rottweil.

VILNA (Pol. **Wilno**, Lithuanian **Vilnius**), from 1323 capital of the grand duchy of *Lithuania; from 1940 to 1991 capital of the Lithuanian S.S.R.; from 1991 capital of Lithuania; called by East European Jewry, especially in the modern period, the "Jerusalem of Lithuania" (*Yerushalayim de-Lita*).

The Early Settlement

In 1527 the townsmen of Vilna obtained from the Polish king, Sigismund I, the right to debar Jewish settlement there. However, a number of individual Jewish residents are found in the middle of the 16th century, including lessees of the customs, mintmasters, moneylenders, and large-scale merchants. In 1551 royal permission was granted to two Jews and their servants to lease out houses and shops, to do business in the city as visiting traders, and to engage in pawnbroking. In the same year Jews were permitted to reside in buildings owned by members of the ducal council, which lay outside the municipal jurisdiction. The first information of an organized Jewish community in Vilna dates from 1568, when it was ordered to pay the poll tax. According to tradition, a wooden synagogue was erected in Vilna in 1573. As early as 1592 the street adjoining the synagogue was called "Jew's Street." Although in that year a mob attacked the Jews of Vilna and plundered shops and houses of the Jews as well as the synagogue, in the following year Sigismund II renewed the privileges enabling them to trade and reside in the city.

In February 1633 Vilna Jewry was granted a charter of privileges permitting Jews to engage in all branches of commerce, distilling, and any crafts not subject to the guild organizations, but restricting their place of residence in the city. They were also granted permission to erect a new synagogue, which was built of stone. At the same time new regulations limited to 12 the number of shops under Jewish ownership which might be open to the street, and they might be held for a term not exceeding ten years. The Jews were exempted from payment of the municipal tax but instead were obliged to pay 300 zlotys annually in peacetime and 500 zlotys in time of war. During 1634, and in particular in 1635, the Jews in Vilna were again attacked and their property pillaged. The following year a commission of inquiry nominated by Ladislaus IV bound the municipality to protect the Jewish residents; to compensate for the damages suffered, the Jews were licensed to sell alcoholic liquors in 20 buildings. However, students of the Jesuit

academy committed acts of violence (called in Yiddish *shiler-geloyf*) against Jewish residents in 1639 and 1641.

During the first half of the 17th century the Vilna community was augmented by arrivals from *Prague, *Frankfurt, and Polish towns, who included wealthy Jews and scholars. The number of petty traders and artisans also increased, and in this period about 3,000 Jewish residents are recorded out of a total population of some 15,000. Although the Vilna community, now an important Jewish entity, claimed the status of a principal community, or "community head of the courts" (*kehillah rosh bet din*), within the organizational framework of the Council of Lithuania (see *Councils of the Lands), the status was not conceded until 1652. After 1630 the Vilna community suffered from the general economic deterioration experienced by Lithuanian Jewry, as a result of which the Council of Lithuania accorded it a number of economic concessions in 1634. These subjected the conduct of trade by "residents of the Land of Lithuania visiting Vilna for the purposes of business" to detailed regulation. An additional improvement was "permission to the community of Vilna to undertake business in all the townlets, villages, boroughs, and settlements" within the jurisdiction of the other principal communities of Lithuania. A further financial burden for Vilna Jewry in 1648–49 was the aid it gave to fugitives from the *Chmielnicki massacres. Subsequently, in 1655, Vilna itself was threatened by the armies of the Muscovites and nearly all the Jewish inhabitants fled from the city. During the Russian occupation the Jewish quarter was burned down in the general conflagration that ensued. Three years later Czar Alexis endorsed the Vilna municipal charter but banished the Jews from the city precincts.

With the rehabilitation of the community in 1661, the leadership of Lithuanian Jewry passed to Vilna. The hostility between the Jews and the townsmen continued, fanned by the Jesuits and the reaction engendered by the Counter-Reformation then prevailing throughout the realm. An assault by townsmen on Jews who mustered for the census of defenders of the city in 1681 was condemned by King John Sobieski, who ordered the punishment of the guilty and freed the Jews from the obligation of the city's defense in the future. In 1687 a riot was instigated by Jesuit students, artisans, and shopkeepers, evidently in an attempt to force the distressed Jews to defray their debts. The material damage was estimated at 120,000 zlotys. The municipality was again served a stringent admonishment by the king, and students and the nobility were forbidden to distrain debts from Jews. By 1690 there were 227 Jewish families resident in the Jewish quarter of Vilna, while a similar number, perhaps more, were living outside, in areas falling within the jurisdiction of the magnates or government.

During the Northern War (1700–21) the Swedish invaders levied heavy taxes on the Vilna community, now so impoverished it was forced to place ritual objects in pawn with Christians. In addition, the famine and plague rife in the city took their toll. After the conflagration of 1737 the Vilna community turned to Jews abroad for relief, and its emissaries received a generous response from the Jews of Amsterdam. The opposition of the Christian merchants and artisans to the Jews even continued in the 18th century. In 1712 a commission recommended the promulgation of ordinances by the city council to limit the branches of trade and crafts practiced by Jews and restrict the area of Jewish residence. In 1713 the community board (*kahal*), the organ of Jewish self-government, was forced to bring actions against a number of discriminatory measures passed by the municipality. The charters of privileges conferred on Vilna Jewry were confirmed in 1738 by Augustus III, who extended the license to open shops to a term of 20 years and enabled Jews to deal in alcoholic liquors and other commodities. The townsmen, who lodged an appeal against the grant, managed to obtain a judgment in 1740 recognizing the 1527 prohibition on Jewish residence in Vilna, so that the Jews were again faced with the danger of expulsion. Exhausting negotiations ensued, in which the wealthy communal leader *Judah b. Eleazar took a prominent part. The community was forced to consent to a compromise agreement with stringent terms, including restrictions on the plying of trade and crafts and on place of residence. These the Jews were both unwilling and unable to implement. Litigation continued until a judgment was pronounced in 1783 which lifted the restriction on the occupations. The limitation on their place of residence was also abrogated, excepting two streets still barred to Jewish settlement. Jews were now made subject to the same tax regulations as other citizens and the annual poll tax was abolished. During the uprising against Russia in 1794 a number of Vilna Jews demonstrated their loyalty to Poland in the fighting and the *kahal* made contributions to the participants in the uprising. Thirty Jews were killed in one of the suburbs during the siege. After the conquest of the city by the Russians, however, the Jewish position in commerce and crafts improved. The Russian government abrogated the jurisdiction of the municipal court over Jewish citizens and rescinded the previous enactment of the Polish Sejm. The 1795 census shows 3,613 Jewish poll tax payers in Vilna and its environs.

Scholarship and Communal Affairs

Vilna had already become a preeminent center for rabbinical studies by the beginning of the 17th century. Among scholars born in Vilna were *Joshua Hoeschel ben Joseph and *Shabbetai ha-Kohen, who served as *dayyan* of the community. The rabbi of Vilna in the middle of the 17th century was Moses b. Isaac Judah *Lima. The existence of a *talmud torah* is reported in the second half of the 17th century, when a fund was also established by a philanthropist for the support of students. Among the scholars of Vilna in the second half of the 17th century and the beginning of the 18th were R. Moses, called Kremer, a forefather of Elijah Gaon; his son-in-law Joseph, author of *Rosh Yosef*, halakhic and aggadic novellae (Berlin, 1716); R. Baruch Kahana, known as Baruch Ḥarif; the grammarian Azriel and his two sons Nisan and Elijah; and Ẓevi Hirsch *Kaidanover (Kaidany). Also living in Vilna was the Gordon family of physicians, one of whom, Jekuthiel *Gordon, studied medicine in Padua and became influenced by the

poet and kabbalist Moses Ḥayyim *Luzzatto. Joshua Heshel *Ẓoref of Vilna was among the crypto-Shabbateans. From the second half of the 18th century the personality and activities of *Elijah b. Solomon Zalman, the "Vilna Gaon," who attracted numerous disciples, had a lasting impact on Vilna Jewry. The circle thus formed became the most stimulating religious and spiritual center there and had a profound influence on Judaism in the sphere of both *halakhah* and Kabbalah.

The 1770s and 1780s marked a period of acute social tension for the Vilna community, expressed in a serious crisis over the rabbinate. In 1740 *Samuel b. Avigdor was chosen as rabbi of Vilna – partly because of the contributions to the community made by his father-in-law Judah b. Eleazar (see above). The fierce controversy that arose around the personality, status, and aspirations of Samuel b. Avigdor continued for 30 years and threatened the basis of communal autonomy. Diverse social and ideological forces in the community became implicated in the conflict, as well as external bodies. The Jewish artisans of Vilna, now a strong numerical force which remained without representation in community affairs or the means of exerting influence, took the side of the rabbi, as did also the Ḥasidim, who afforded him surreptitious support, while a number of powerful leaders in the community opposed him. Non-Jewish elements that entered the arena included the governor of Vilna, the bishop, and the crown tribunal. The opposition accused the rabbi of accepting bribes, of unfair decisions, and other practices. In theory the controversy terminated with the removal of Samuel b. Avigdor from office. However, the representatives of the popular faction turned to the non-Jewish authorities and complained about the way the *kahal* was levying taxes. The Gaon of Vilna also intervened. Simeon b. Wolf, the popular representative who had been imprisoned by the governor in Nieswiez (Nesvizh), applied to the Sejm with proposals for amending the community organization; he also demanded that the communities should be deprived of their secular authority, leaving Jewish jurisdiction over religious matters only.

When the Enlightenment (*Haskalah) movement spread to Vilna it did not encounter strong opposition from the leadership, and to begin with was largely conservative in character. About 14 important members of the community subscribed to the commentary on the Torah, the *Be'ur* initiated by Moses *Mendelssohn. Typical of the first adherents of the movement (*maskilim*) were the physician and author Judah ben Mordecai ha-Levi *Hurwitz and Moses *Meisel, the *shammash* of the community, who was acquainted with German literature and wrote several treatises. He had access to the Gaon of Vilna and also became an adherent of *Chabad Ḥasidism.

At the end of the 18th century, under the influence of the Gaon, Vilna became the center of the way of life and system of religious study followed by the **Mitnaggedim* and the focus of their struggle against Ḥasidism. In 1772 the *kahal* disbanded the congregation (*minyan*) formed in Vilna by the Ḥasidim and issued a ban or excommunication against them. Bitter opposition to Ḥasidism continued throughout the lifetime of the Gaon. Nevertheless, groups of Ḥasidim still assembled clandestinely in Vilna and formed their own *minyanim*, and after 1790 the movement even found support among members of the *kahal*. Persecution of the Ḥasidim was renewed when Vilna passed to Russia in 1795, and after the death of the Gaon two years later the conflict became more bitter. Members of the community were forbidden to buy liquor, a major source of livelihood, from Ḥasidim. The Ḥasidim now attempted to break the hegemony wielded by the *kahal*, and the two parties sought the intervention of the Russian authorities. In 1798 the Vilna *kahal* was prohibited from imposing fines or corporal punishment for religious offenses. When the ḥasidic leader *Shneur Zalman of Lyady was denounced to the authorities and imprisoned, 22 Ḥasidim from Vilna and its environs were also incarcerated, although afterward released. The *kahal* elders and *dayyanim* were dismissed from office in 1799, and the *kahal* accounts were examined. A new *kahal* was then chosen from among the Ḥasidim, which controlled the Vilna community for over a year. Subsequently the two parties became reconciled and a new *kahal* was elected with representatives of both parties. The Ḥasidim were permitted to maintain their own *minyanim* (congregations).

Between 1799 and 1802 an attempt was made by the Jewish residents of Vilna, according to the census of 1800, numbering 6,917 taxpayers, to obtain the right to take part in municipal affairs. A grant to this effect was twice obtained from the authorities, but the opposition of the Vilna citizens each time frustrated Jewish representation in practice. During the Napoleonic invasion of 1812 Vilna Jewry generally remained loyal to Russia in spite of the disabilities from which it suffered. (The provisional Lithuanian government established in Vilna by the French levied heavy taxes and war loans on the community, and the troops desecrated the Jewish cemetery, turning it into a cattle pen and destroying tombstones.) Nevertheless, under Czar *Nicholas I the right to take part in municipal government was rescinded, and the autonomy of the *kahal* was abolished in 1844. The directors (*gabba'im*) of the charitable fund (*ha-ẓedakah ha-gedolah*) continued to guide communal affairs unofficially. A visit was paid to Vilna by the philanthropist Moses *Montefiore in 1846.

Vilna's preeminence as the seat of Jewish learning continued in the 19th century. As an important center of Haskalah, it attracted many Hebrew writers. When the government commenced its policy of Russification of the Jews (see *Russia) it made Vilna a center of its activities. Max *Lilienthal was sent there in 1842 to encourage the establishment of modern schools, and in 1847 a government-sponsored *rabbinical seminary was established. Polish language and culture, which had influenced the *maskilim* and men of letters at the beginning of the 19th century, was now superseded by Russian. The *maskilim* of Vilna in this period included Mordecai Aaron *Guenzburg, Adam ha-Kohen *Lebensohn and his son Micah Joseph *Lebensohn (Mikhal), Isaac Meir *Dick, Kalman *Schulman, J.L. *Gordon, Joshua *Steinberg, and Eliakum *Zunser.

1860–1939

The restriction limiting Jewish residence to certain streets in Vilna was abrogated under *Alexander II in 1861. Untold harm was wreaked on the Jewish community when the apostate Jacob *Brafmann arrived in Vilna and conducted a vicious anti-Jewish propaganda campaign. He was vigorously opposed by R. Jacob *Barit, head of the yeshivah and communal leader. In 1860 S.J. *Fuenn began publication of a Hebrew weekly, *Ha-Karmel*, with Russian supplements. Among authors in Vilna who wrote in Russian was J.L. *Levanda, who occupied a government post there as an expert on Jewish matters, called "learned Jew." It was in this period that the first Jewish Socialists in Russia began to be active in the official rabbinical seminary, among them Aaron Samuel *Liebermann and his associates.

Anti-Jewish riots took place in 1881 when a band of military conscripts attacked Jewish shops. The Jewish butchers, who organized themselves to oppose the attackers, turned them over to the police. Owing to the Russian government's prohibition on Jewish settlement in the villages, many Jews in rural areas had to move to Vilna. The 1897 census shows 63,831 Jewish inhabitants, forming 41.5% of the total population. The congested conditions and increasing unemployment led to large-scale emigration. Large numbers left for the United States and South Africa, and a few went to Ereẓ Israel. Vilna became an active meeting ground for Jewish Socialists in the 1890s. A convention of Jewish Social Democrats was held in 1895, while in 1897 the *Bund labor party held its founding convention and Vilna became the center of its activities. In 1902 the shoemaker Hirsch *Lekert attempted to shoot the governor-general of Vilna, Von Wahl, after his treatment of a First of May demonstration. Lekert was condemned to death and hanged. In 1900 a wave of anti-Jewish feeling swept Vilna over the *Blondes blood libel case.

At the beginning of the 20th century Vilna became the center of the *Zionist movement in Russia, and saw the rise of a flourishing Hebrew and Yiddish literature. One of the first societies of the *Ḥovevei Zion movement was founded there; Ḥovevei Zion conventions were held in Vilna in 1889, and subsequently those of the Zionist organizations (the founding convention of the *Mizrachi party in 1902, and others). Theodor *Herzl, who visited Vilna in 1903, was given an enthusiastic popular reception. The central bureau of the Zionist Organization in Russia functioned in Vilna between 1905 and 1911, and for some time the *Po'alei Zion party made Vilna its headquarters. The well-known Zionist leader Shmaryahu *Levin was elected as deputy for Vilna to the *Duma. Orthodox circles were organized under the leadership of R. Ḥayyim Ozer *Grodzenski, and afterward amalgamated with the *Agudat Israel. Among the many Yiddish and Hebrew periodicals published in Vilna was the Hebrew daily *Ha-Zeman*. An excellent library of Judaica was established from the bequest of Mathias *Strashun.

Vilna became a transit center and asylum for Jewish refugees from the vicinity during World War I. Under German occupation lack of food and discriminatory levies on the Jewish population made conditions increasingly difficult. The situation was not improved after the war when the struggle between the Poles and Lithuanians for the possession of Vilna (1919–20) entailed frequent changes of government. In April 1919, 80 Jews were massacred by Polish troops.

The interwar period from 1922 to 1939 was a time of fruitful and manifold social and cultural activities for Vilna Jewry, although Vilna, now part of Poland, was affected economically by the severance of its former ties with Russia and Lithuania. According to the 1921 census, 46,559 Jews were living in Vilna (36.1% of the total population), and in 1931, 55,000 (28.2%). This period saw the establishment of a network of elementary and secondary schools in which Hebrew was either the language of instruction or the principal language, and of Hebrew and Yiddish teachers' seminaries and trade schools. Vilna was a world center for Yiddish culture, and a Yiddish daily and evening press, numerous weekly and other political, literary, educational, and scientific journals were published there. The Jewish historical and ethnographical society, founded by S. *An-Ski, established a museum and archives in 1919. The *YIVO research institute for Yiddish language and culture was founded in Vilna in 1924. The institute attracted Yiddish scholars and authors, among them Zalman *Rejzen, Max *Weinreich, Z. *Kalmanowicz, and Max *Erik. The Yiddish writer Moshe *Kulbak lived in Vilna. A circle of young Yiddish authors (*Yung Vilne*) included Abraham *Sutzkever, Shemariah *Kaczerginski, and Ḥayyim *Grade. Several poems of Zalman *Shneour, who stayed in Vilna for some time, express the glorious place of the city in Jewish life. Among its Hebrew scholars and writers were the linguist M.B. Shneider, S.L. *Zitron, and J.E. *Triwosch. The strong antisemitism rife in Poland in the 1930s was especially noticeable in the university, where the Jewish students often had to organize in self-defense.

[Israel Klausner]

Hebrew Printing

Hebrew printing in Vilna began in 1799 with three ethical books: a short version of Kalonymus b. Kalonymus' *Even Boḥan* by Phinehas b. Judah Polotsk; Abraham Lichtstein's *Hin Ẓedek* on Maimonides' *Shemonah Perakim* (1 and 2), by the press of Aryeh Loeb and Gershom Luria and Moses b. Menahem; and Gershon b. Benjamin's *Shemirat ha-Mitzvot*. The former two were printed by the Canonicus Joseph Mirski (d. 1812) and the third in the printing house Jan Jasienskie Luria's firm produced various small books and a Bible (1806). The firm still existed in 1823. The Drukarnia Djecezjalna (Mirski) and Vilna University had their own Hebrew press.

Hebrew printing in Vilna, however, owes its fame mainly to the house of *Romm. Baruch b. Joseph (d. 1803), after some years in Grodno, set up in Vilna in the last years of the 18th century. Baruch's son Menahem Man Romm (d. 1842) and Simḥah Zimel b. Menahem Nahum of Grodno printed some liturgical items in 1815–17. Menahem Man's three sons – David (d. 1860), assisted by his second wife Deborah, née Harkavy;

Ḥayyim Jacob; and Menahem Man Gabriel – greatly developed the firm. Due to the censorship, by 1845 the firm practically enjoyed a monopoly in Russia and Poland.

Trouble arose when the Talmud was to be printed, which eventually led to the closing of all Jewish printing presses in Lithuania and Volhynia except one in Vilna and another in *Zhitomir (until 1862). In 1835 Man Romm, in association with Simḥah Zimel, began printing the Talmud against the protest of the *Slavuta printers; as a result, Slavuta's second printing (their first dates from 1815/16–1822/23) was never finished. Romm completed their edition in 1854. It was their masterpiece; in 1846 even Sir Moses Montefiore came to visit their establishment. From 1871 it was known as the firm of "the widow and the brothers Romm" (i.e., Deborah, Ḥayyim Jacob, and Menahem Man). The 1866 edition was produced by 100 devoted workers and 14 correctors. Many standard texts, among them the Mishnah, the *Turim*, Maimonides' *Mishneh Torah*, the Jerusalem Talmud, and S. Buber's Midrash editions, made Vilna printing famous for its beauty and accuracy.

There were also a number of small firms. Abraham Ẓevi Rosenkranz and his brother Menahem Schriftsetzer, originally typesetters with the Romms, established their own press in 1863. They also took over the Samuel Joseph Fuenn press in 1893, after it had existed for 30 years. In 1920 the firm was bought up by A.L. Shalkowitz (Ben Avigdor). Among smaller presses that of Boris Kletzkin (d. 1938) employed more than 50 workers and printed some newspapers.

The Vilna presses made some very important contributions before being closed down. Romm's famous *Mishnayot* (vols. 2 and 5) were published in Vilna in 1938, one year before the Nazi invasion of Poland. Their Talmud and other rabbinic standard works continue to be reproduced photographically in a great variety of sizes and editions in Israel and the U.S.

[Israel O. Lehman]

Holocaust Period

With the outbreak of World War II, Soviet Russia invaded Vilna and in October 1939 ceded it to Lithuania. Jewish refugees from divided Poland – the German-occupied part and the Soviet-occupied one – found refuge in Vilna. Among the refugees were many rabbis (and ḥasidic rabbis), scholars, community and party leaders, as well as Zionists and members of Zionist youth movements who immediately organized into temporary "kibbutzim." By long and tortuous ways (even via the Far East), some succeeded in reaching Ereẓ Israel. In June 1940, Lithuania was annexed to the U.S.S.R. The Soviet authorities closed down Hebrew cultural institutions and Zionist organizations. All Yiddish press was replaced by the Communist Party's organ.

Many Jews – active Zionists, Bundists, and "bourgeois" – were exiled in 1941 into the Soviet interior and many were interned in camps there. Some active Yiddishists, including writers (Z. Rejzen, Joseph Chernikhov, and others), were arrested, deported to Russia, and murdered there. In June 24, 1941, the Germans entered Vilna and were welcomed by the Lithuanian population with flowers and cheers. Persecution of Vilna's Jewish population (approximately 80,000) began immediately. Prior to the establishment of the ghetto, about 35,000 Jews were murdered in *Ponary, a wooded area 10 mi. from Vilna. Among them were leaders of the Jewish community and members of the first *Judenrat.

On September 6, 1941, the remaining Jews were herded into two ghettos (the smaller was liquidated 46 days later), and a second Judenrat was established. In January 1942 the various political organizations in the ghetto created a unified fighting organization, FPO (Fareynigte Partizaner Organizatsye), commanded by Yiẓḥak *Wittenberg, Joseph Glazman, and Abba *Kovner. In the beginning, the FPO decided to fight in the ghetto rather than escape to join the partisans in the forests. They planned to blow up the German ammunition dumps and lead the Jews into the forests if they could first arm the ghetto sufficiently. A separate fighting organization, led by Yechiel Sheinboim and comprising several groups that wanted to fight in the forests, eventually joined the FPO. In addition to smuggling in ammunition, the FPO carried out acts of sabotage, issued an underground bulletin, and forged documents. In July 1942 Jacob Gens, chief of the Jewish police, was appointed "ghetto head" by the Germans. In this capacity Gens was responsible to the German authorities for law and order in the ghetto. The Judenrat established various departments through which it supervised and controlled all aspects of ghetto life: a police department; a labor department, which provided employment in German and Lithuanian public and private businesses; an industry department; a supply and distribution department, primarily for food; a health department, which provided a hospital, medical services, and children's care; a housing department, which included a sanitation and sewage disposal section; a social welfare department, which administrated the institutions for aid to the needy and provided free food, clothing, and shelter; and a cultural department, which coordinated the activities of schools, theaters, an orchestra, choirs, a library, archives, a bureau of statistics, a bookstore, a museum, and a wall bulletin, *Getto Yedies*, that contained announcements and regulations issued by the Judenrat. Writers, musicians, actors, and artists created an organization to sponsor lectures and concerts and encourage cultural expression in the ghetto. Religious life, yeshivot, and synagogues continued functioning underground.

Gens was the ghetto's most controversial figure. Some condemned him as an outright German collaborator, while others regarded him as a man who fulfilled German orders in an effort to save as many Jews as possible. Accused by the *Gestapo of aiding the underground, he was shot on September 15, 1943.

On July 5, 1943, Wittenberg, the commander of the FPO, was arrested. While he was being led out of the ghetto, the FPO attacked the guard and freed him. Realizing that a price would have to be paid for this act of defiance, the underground ordered mobilization of all its units. The Germans issued an ultimatum for Wittenberg to surrender by morning or the

ghetto would be wiped out. After hours of difficult deliberation, Wittenberg surrendered himself to the Germans and was murdered by the Gestapo. The FPO then decided to evacuate to the forests. The first detail of fighters to leave for the forest was ambushed, and Glazman, its leader, was among those who died fighting. In reprisal for the flight of the fighters, the Germans killed their families and work brigadiers in the ghetto. Thereafter, no fighters left the ghetto for fear that their capture would result in the death of many Jews.

The destruction of Vilna Jewry continued with the establishment of the ghetto. Various mass murder *Aktionen* were carried out, the largest of which totaled 14,000 killed during the liquidation of the smaller ghetto, 7,000 during the two "yellow certificate actions," and 5,000 during the "*Kovno Aktion*." In August 1943, deportation of the surviving ghetto inmates to Estonia began. That marked the beginning of total liquidation. On September 1, 1943, the ghetto was sealed off, The FPO was mobilized at once, and in the morning the German soldiers entered. Fighting erupted in several areas of the ghetto. In one battle Sheinboim and other fighters lost their lives. Fearing that a continued battle would bring immediate destruction to the ghetto, Gens successfully petitioned the Germans to leave. Between September 1–4, 1943, while 8,000 more Jews were deported to labor camps in Estonia, 200 fighters left the ghetto to join the partisans. On September 15, 1943, the ghetto was again surrounded, but the Germans withdrew when they learned that the remaining FPO fighters were again mobilized for battle. On September 23 the Jews were ordered to prepare for the final deportation, which would liquidate the ghetto. The FPO at this opportunity evacuated the last of its fighters through the sewers. In the following days, the surviving men were sent to Estonia, the young women to Latvia, and the old, children, and sick to *Majdanek.

After liquidating the ghetto, the Germans left two work installations outside its walls: Keilis (a Lithuanian fur factory) and the HKP (army vehicles park), where approximately 3,000 Jews worked. On July 2–3, 1944, they were all taken to *Ponary and murdered there. There are no accurate figures on the number of Vilna Jewry killed. It is estimated that approximately 100,000 Jews from Vilna and the vicinity perished in the Vilna ghetto. Those who were not killed in Vilna died in labor concentration camps in Estonia and other places.

[Abraham H. Foxman]

Contemporary Period

After the Soviet Army liberated Lithuania (July 12, 1944) about 6,000 survivors from the forests and other places assembled in the city. Writers and Jewish communal workers (S. Kaczerginski and others) tried to organize a Jewish museum, a Jewish school, an orphanage, etc. To provide for religious needs, a *kehillah* was organized, but the Soviet authorities immediately suppressed any secular Jewish activity and prevented the existence of any Jewish organization. By provocative means, as e.g., by deceptively organizing "illegal" flights over the border to Poland, the Soviet security police captured and arrested in 1945 scores of Lithuanian Jews who wished to emigrate in order to reach Palestine. In the 1959 census 16,354 Jews (6.96%) were registered in Vilna, 11,326 of whom declared Yiddish to be their mother tongue. In 1970 the number of Jews was estimated much higher. The only synagogue left generally served a small number of elderly Jews, except on holidays, particularly on Simḥat Torah, when many hundreds congregated, including younger people. The deliberate effacement of the Jewishness of the Nazi victims during World War II as well as other measures designed to stifle Jewish cultural expression stimulated Jewish youth to counter-demonstrations, e.g., through identifying more and more with Israel, and studying Hebrew. Eventually, in the 1960s, the authorities permitted the establishment of a Yiddish amateur theater company (in the framework of the local trade unions' cultural activities, alongside Russian and Lithuanian groups), which performed plays by *Shalom Aleichem and some other Yiddish classics. The company's performances drew great crowds, and it was sometimes allowed to perform in other cities of the Baltic republics. In the early 1960s, during the campaign against "economic crimes," Vilna became the scene of one of the first anti-Jewish expressions of the campaign. A show trial against a group of Jewish "speculators" ended in death sentences and executions, accompanied by an antisemitic campaign in the local press.

After the Six-Day War in the Middle East (1967) identification with Israel became more pronounced, especially among the young, in spite of the official anti-Israel campaign, and Jews from Vilna were among those who protested against the refusal to grant them exit permits to Israel. These protests were sometimes published abroad.

UNDER LITHUANIAN INDEPENDENCE. Jewish life in Vilna revived with Lithuanian independence in 1990. Chabad was active in restoring religious life and the Shalom Aleichem State School had around 200 students, studying Hebrew, the Bible, and the history of the Jewish people in addition to general subjects. The community published *Jerusalem of Lithuania*, a periodical in Yiddish, Lithuanian, English, and Russian with special emphasis on the cultural life of the community. The community organized meetings, lectures, and exhibitions dedicated to such subjects as Israel, Jewish holidays, and the Holocaust. With the help of Jewish organizations, especially the American Joint Distribution Committee, and private donors, the community ran a wide-ranging welfare program for needy members. At the outset of the 21st century most of Lithuania's 3,500 Jews lived in the Vilna.

VILNA TROUPE, Yiddish theatrical company. It began as an amateur group in Vilna in 1916, organized by the teacher Mordecai Mazo and the painter Leib Kadison, who was its first producer. It moved to Warsaw in 1917 and came to be regarded as the symbol of the "better Yiddish theater" which others had tried to achieve with limited success. The Vilna Troupe's strength lay in its ensemble and in the ideas of its producers, among them Chaim Schneir, Mark Arnstein, Michael *Weichert, who directed *Asch's *Kiddush ha-Shem*, and David *Herman, who directed *Peretz' *Bay Nakht oyfn Altn Mark* ("At Night in the Old Market"). Herman's outstanding work, however, was his production of *An-Ski's *The Dybbuk* in 1920, which brought the company international fame. The tour with *The Dybbuk* in England, France, and the U.S. in 1921 was triumphant. Success spoiled some of the players, however, and the company broke up not long afterward. One group went to the United States and toured until 1930; the other group remained in Europe and was active in Romania and Poland into the 1930s. Mordecai Mazo, the founder, and his wife, actress Miriam Orleska, perished during World War II in the Warsaw Ghetto.

[Joseph Leftwich]

VILNAY (VILENSKY), ZEV (1900–1988), Israeli geographer, author, and lecturer. Born in Kishinev, Vilnay moved to Palestine with his parents as a child of six and settled in Haifa. In the middle 1920s Vilnay became one of the principal guides in the walking tours (*tiyyulim*) over the country, popular among workers and youth groups; they included areas in Lebanon, Syria, Transjordan, and Sinai. He was an instructor of military topography in the Haganah and later during the War of Independence (1948) and the Six-Day War (1967). He was awarded the Israel Prize in 1982 for *yedi'at ha-areẓ* ("knowledge of Israel").

Vilnay lectured under many auspices on Israel geography, ethnography, history and folklore. He published many books and pamphlets, including the following in English: *Legends of Palestine* (1932), *The Guide to Israel* (1955; 14 editions until 1971); *The Holy Land in Old Prints and Maps* (1965^2); *The New Israel Atlas: Bible to Present Day* (1968); and in Hebrew: *Enziklopedyah li-Ydi'at ha-Areẓ* (3 vols. (1956)); *Yerushalayim* 2 vols. (1960–62, new edition 1970); *Tel Aviv-Jaffa…* (1965); *Yehudah ve-Shomeron* (1968); *Sinai, Aver ve-Hoveh* (1969); *Golan ve-Ḥermon* (1970); *Maẓẓevot Kodesh be-Ereẓ Yisrael* (1963^2); and *Ereẓ Yisrael bi-Temunot Attikot* (1961).

VINAVER, CHEMJO (1900–1973), conductor and composer. Vinaver was born in Warsaw and raised in the ḥasidic court of his grandfather, R. Isaac of Vorka, where he absorbed the Vorka and other ḥasidic musical traditions. From 1916 to 1920 he studied in Warsaw, and then in Berlin (conducting and composition with Hugo Ruedel and Siegfried Ochs). There he organized the Hanigun choir for the propagation of Jewish music, which toured in Europe and Palestine. From 1926 to 1933 Vinaver was the chief conductor at the temple of the Berlin community, with whose choir he recorded over 20 liturgical works. He also taught music at the teachers' college of the Reichsvertretung der deutschen Juden and published articles on Jewish music in the Jewish press and cantorial periodicals. In 1938 Vinaver emigrated to New York, where he organized the Vinaver Chorus and the Vinaver Symphonic Voices. From 1952 he was music consultant in the cultural department of the Zionist Organization of America. In 1967 he settled in Jerusalem, where he also established a choir.

Among his compositions may be mentioned "The Seventh Day" for cantor and chorus, for the Friday night service (1946), *Kol Nidrei*, and *Omnam Ken*. He edited several collections of ḥasidic, Yiddish, and Israeli folk songs, and in 1955 published the *Anthology of Jewish Music*, which contains traditional synagogal music, ḥasidic *niggunim*, and religious folk songs (many of them of his own collection), several synagogal compositions, including Vinaver's own, and Psalm 130, "Out of Depths," composed by Arnold *Schoenberg especially for the anthology. Vinaver's wife was the poet Masha Kaleko.

VINAWER, MAXIM (1862–1926), lawyer and communal worker in Russia. Born in Warsaw, Vinawer completed his studies at the university of Warsaw (1886), and then settled in St. Petersburg, where he became a prominent lawyer in the field of civil law. In court Vinawer was outstanding for his clear and profound analyses, which influenced the shaping of judicial law. His influence was also felt through his literary activity, his presence among judicial colleagues at the university of St. Petersburg, and at conferences on civil law reforms. The fact that he was a Jew interfered with his professional standing and until 1904 he was registered only as an advocate's assistant. After the February Revolution (1917) he was allowed to sit as supreme judge for the short period preceding the liquidation of the old courts as a result of the October Revolution.

Through his literary publications he encouraged social astuteness and interest on the part of advocates in regard to public affairs. As a result of the 1905 Revolution and the introduction of a restricted parliamentary regime, he became one of the founders and leaders of the "Constitutional Democratic Party" (Cadets), or "Freedom of the Nation Party," which called for a genuine parliamentary system, based on the exam-

ple of Great Britain. He was a delegate to the first parliament (*Duma) in 1906. As the vice chairman of his faction (the largest), he was the principal drafter of its policies and acted as mediator both within the group and between the group and other factions. When the Duma dispersed he joined its former members in a protest convention at Vyborg and signed the manifesto calling for civil disobedience. As a result he and all the other participants in the convention were sentenced to three months in prison and deprived of the right to vote. In 1917, after the February Revolution, he was a member of the commission that prepared the elections to the constituent assembly as well as a participant in the temporary parliament ("Council of the Republic"). The October Revolution and the banning of his party caused him to emigrate to the Crimean Peninsula, where he acted as foreign minister in the regional government formed by his party (described in his memoirs). In 1919 he emigrated to France, where he continued his activities among the Russian and Jewish emigrants.

Vinawer's Jewish communal activities began with the *Society for the Promotion of Culture among the Jews of Russia. Heading also the historio-ethnographic commission which gathered and published historical material on the Jews of Russia, he developed it into a special society. He also acted as advocate in the trials following the pogroms of *Kishinev and *Gomel. Although he was, too, among the founders and leaders of the *Society for the Attainment of Full Civil Rights for the Jewish People in Russia (1905–07), he opposed the formation of a separate Jewish faction in the Duma. Vinawer founded the newspaper *Yevreyskaya Tribuna*, one of whose objectives was to disprove the allegation of the "Jewishness" of the Russian Revolution. Vinawer's personality assumed an important place in the memoirs of his contemporaries, both Russian (i.e., *Witte, P.N. Milyukov) and Jewish (S. *Dubnow, M. *Vishniak). Vinawer himself published a collection of memoirs, *Nedavnoye* (1917; second, enlarged edition 1926).

[Abraham N. Poliak]

°**VINCENT, LOUIS HUGUES** (1872–1960), French Dominican monk and archaeologist; one of the heads of the Ecole Biblique et Archéologique Française in Jerusalem. Vincent was born in Varèze and as a youth entered the Dominican Monastery of St. Etienne in Jerusalem, where he lived until his death. His reputation as an archaeologist was established in 1907 when he published the first survey of the results of archaeological excavations in Ereẓ Israel (*Canaan d'après l'exploration récente*). In 1909 he took part in the Parker expedition, an adventurous enterprise which sought to discover the treasures of the Temple and dug in the tunnels of the Gihon. Vincent, however, turned it into a scientific excavation and published the results in *Jérusalem sous terre* (1911; *Underground Jerusalem*, 1911). In collaboration with L.F. Abel and afterward with A.M. Stève, he was the author of a series of monumental works on the remains of Jerusalem (*Jérusalem ancienne et nouvelle*, 1912–14). The concluding work on the Temple was published in 1956. Vincent and Abel also studied the antiquities of Bethlehem, Hebron and Emmaus. A visitor at almost every excavation in Ereẓ Israel and a prolific writer, Vincent was recognized as the doyen of Catholic archaeologists in Ereẓ Israel.

[Michael Avi-Yonah]

VINCHEVSKY, MORRIS (pseudonym of **Benzion Novakhovich**; 1856–1932), Yiddish and Hebrew writer and socialist leader. Born in Yonovo, Lithuania, he began his literary career in 1873 as a Hebrew poet and journalist, often writing under the pseudonyms "*Ben Nets*" ("Son of a Hawk") and "*Yigal ish ha-Ru'aḥ*" ("Yigal, the Man of Spirit"). Hailed by the Soviet Yiddish critics of the 1930s as the "grandfather" of Socialist Yiddish literature, Vinchevsky turned to writing Yiddish poetry in the 1880s. He lived in Germany (which he left when Bismarck's anti-socialist laws went into effect), France, and England (where he wrote pseudonymous articles in English for the socialist journals of H.M. Hyndman, one of the founders of British Socialism), before settling in New York in 1894. He was an active and committed socialist who expressed his sympathies in his often politically tendentious poetry. His work appealed to readers not only in the U.S. but also in pre- and post-revolutionary Russia. The basic trend of his work was humanitarian and deeply Jewish. Vinchevsky was also active in the Yiddish press, regularly contributing essays, poems, and translations to socialist publications such as the **Forverts, Der Emes,* and *Di Tsukunft*, which he also edited. He remained politically active throughout the first decades of the 20th century and was appointed to the Jewish Commission (*Comité des délégations juives), which represented Jewish interests at the Versailles Conference after World War I. In the 1920s Vinchevsky's sympathies veered sharply to the left. He broke with many of his socialist friends and in 1924–25 spent a number of months in the U.S.S.R. In 1927 he became paralyzed and remained in poor health until his death. Vinchevsky had a long and prolific career and, in 1927–28, a 10-volume edition of his works appeared under the editorship of Kalman *Marmor. Vinchevsky's library, manuscripts, and archives (YIVO), comprise a rich source for research into Yiddish literature and Jewish radical movements beginning in the 1860s.

[Henry J. Tobias / Marc Miller (2nd ed.)]

VINCZE, PAUL (1907–1994), medalist. Vincze was born in Hungary, and settled in England, where he rapidly earned a reputation as having a classical gift of portraiture, which was balanced by allegorical reverses on his medals. His talent was

also expressed in coins; he designed some of the new currency for Ghana, Libya, Nigeria, Malawi, and Guinea. Vincze has struck some of the finest Jewish commemoratives in modern times, including the 300th Anniversary of the Jewish Resettlement in Great Britain (1956). He executed medals for the private Israeli mint, Isnumat, and for the government of Israel. Examples of strikings he did for the former are the John F. Kennedy Memorial and the Visit of Pope Paul VI to the Holy Land. Examples of his work for the Israeli government are the 1966 Commemorative for Edmond and James de Rothschild and the 1967 Jubilee of the Balfour Declaration. Vincze executed several medals of distinguished Jews such as Ben-Gurion, Lord Samuel, and Yehudi Menuhin. Just before his death he designed the monetary coins of Malawi.

[Daniel M. Friedenberg]

VINE (Heb. גֶּפֶן). Of the various agricultural products mentioned in the Bible and talmudic literature, the vine and its products – *yayin* ("wine"), *tirosh* ("new wine"), *ḥemer* ("sweet red wine"), and *shekhar* ("strong drink") – occupy the central place. Sixteen times the Bible mentions in juxtaposition "corn, new wine, and oil," which represented the principal produce and the chief blessing of the soil (Deut. 7:13; et al.). Of the seven species with which Ereẓ Israel was blessed the vine figures first among the fruit (Deut. 8:8). "Every man [sitting] under his vine and under his fig-tree" symbolizes the ideal past and the hope of future peace (I Kings 5:5; Micah 4:4). Many biblical parables and allegories are associated with the vine, grapes, and wine. The people of Israel in its youth is compared to grapes which the traveler came upon in the wilderness (Hos. 9:10). Isaiah likens God to the owner of a vineyard and Israel to the vineyard (Isa. 5), a similar metaphor being employed by Jeremiah (2:21), and Ezekiel (17:1–10, 19:10–14) regards the vine as symbolizing the people of Israel and its fate.

Viticulture in Ereẓ Israel goes back to antiquity. An Egyptian inscription of the third millennium B.C.E. states that the Egyptian conqueror of the country ordered its vines and fig trees to be destroyed. The spies, sent ahead of the Israelites to spy out the land, brought back from the valley of Hebron a cluster of grapes of remarkable size (Num. 13:23). Situated in the inheritance of Judah, which was blessed with fruitful vines (Gen. 49:11), was the settlement Beth-Cherem ("the house of the vineyard"; Jer. 6:1), and passing through it was the valley of Sorek (Judg. 16:4), so named after the red grapes (*sorek*) grown there. Excellent wine was produced from the vines growing on Mount Ephraim and in Samaria (Isa. 28), where, Jeremiah prophesied, the vineyards of Samaria, destroyed after the desolation of the kingdom of Ephraim, would again be planted (Jer. 31:4–5). In the vineyards of Shiloh annual festivities accompanied by dances were held (Judg. 21:21), apparently connected with the vintage season, which was an occasion for great joy (cf. Isa. 16:10). According to an ancient tradition preserved in the Mishnah (Ta'an. 4:8) "the daughters of Jerusalem came out and danced in the vineyards" on the 15th of Av and the Day of Atonement. During these dances, the young girls found husbands for themselves. The Hasmoneans and Bar Kokhba struck a cluster of grapes on their victory coins as a symbol of the fertility of the country. Josephus highly praised the vineyards in the valley of Ginnosar (War, 3:519), and many places in Judea and Galilee are mentioned in talmudic literature as noted for their thriving vineyards.

The Bible refers to large vineyards in the kings' inheritance that contained "a thousand vines at a thousand pieces of silver" (Isa 7:23; cf. Song 8:11). Those mentioned in talmudic literature, however, were usually smaller, five vines in a field being considered a vineyard (Kil. 4:6). Individual vines were also planted among other trees, this being permitted by the laws of the Pentateuch, though sowing mixed seeds among the vines is prohibited (Deut. 22:9), and talmudic literature deals with many *halakhot* connected with this strict prohibition (Kil. 4–7; see *Mixed Species). Various strains of grapes were grown. Since the main product of grapes was the sweet red wine called *ḥemer*, there was a preference for the strains which produced red-black grapes known as *sorek*. Inferior white grapes were called *be'ushim* (Isa. 5:2, 4; cf. Ma'as. 1:2). Grapes were grown in two ways: either the trunk and branches trailed along the ground – the *gefen soraḥat* of the Bible (Ezek. 17:6) and the *rogeliot* of the Mishnah (Pe'ah 7:8); or the vine was trained over a pole, the *gefen adderet* of the Bible (Ezek. 17:8) and the *dalit* of the Mishnah (Pe'ah 4:2). The importance of the vine is attested by the Bible's many synonyms for its branches: *baddim, banot, daliyyot, zalzallim, zemorah, ḥoter, yonek, kannah, matteh, netishot neẓer, anaf, porah, keẓirim, sheluḥot, sarigim*, and *sorek*.

More than 40 expressions connected with viticulture are mentioned in the Bible and talmudic literature. Isaiah's song about the vineyard (Isa. 5) gives a detailed account of the different stages from its planting to the harvesting of the grapes: first the soil is dug up and the large stones are removed and used for the fence. Then the shrubs and thorns growing in the uncultivated field are cut down and used as "the hedge" of the fence; the fence protects the vineyard from being "trodden down" by cattle, and the hedge prevents goats from jumping over the fence. Next the field is cleared of small stones, which are put on top of the hedge, and all is ready for planting the sapling vines. The soil between the rows of vines is hoed, and at the end of the summer the branches are pruned. After three to four years, with the approach of the first vintage, the owner of the vineyard hews out a vat, and its stones are used to build a tower for watching over the vineyard during the vintage. Isaiah apparently describes a nonirrigated vineyard that awaits the rains of heaven (*ibid.* 5:6). The vine responds well to irrigation, flourishing particularly near fountains (Gen. 49:22; Ezek. 19:10).

The vine referred to in the Bible and in talmudic literature is the cultivated one, *Vitis vinifera*. In the region of Ereẓ Israel the wild vine does not grow, although in various places in Israel, especially near springs, such as Tel Dan and Naḥal Ammud in Galilee, seeds of the cultivated vine have sprouted and grow wild climbing trees. Various strains of vines, some

local, others imported, are grown in Israel. In Samaria and on Mount Ephraim nonirrigated wine grapes, and in other regions of the country mostly irrigated and trellised eating grapes, are grown.

[Jehuda Feliks]

VINELAND, city in southern New Jersey, 30 miles (50 km) from Philadelphia. The Jewish community of Vineland dates back to the early 1880s, with the establishment of immigrant colonies outside of the city limits. Synagogues were prohibited within city limits until toward the end of the first decade of the 20th century. The first such colony was Alliance, founded in 1882 in Salem County by the Alliance Israélite Universelle (France) and the Baron de Hirsch Fund (Belgium), three miles out of Vineland, followed by others with biblical names like Carmel. In nearby Cape May County, the Baron de Hirsch Fund established Woodbine in 1891, which was incorporated by 1903 as an all-Jewish borough. Some settlers embraced the *Am Olam ideology of return to the soil as a means of salvation for the oppressed Jews of Russia. Men like Moshe Herder, H.L. Sabsovich, Sidney Bailey, and Moses Bayuk envisioned in well-balanced rural communities the basis for creative life. Subsidies were provided by philanthropic organizations in Western Europe and the United States – Alliance Israélite Universelle, Hebrew Immigrant Aid Society and the Baron de Hirsch Fund – as well as American Jewish leaders such as Jacob Schiff and Myer S. Isaacs, who hoped to create viable communities on the principles of self-help within American society. In each colony the fabric of life developed, including at least Orthodox synagogues and religious schools, as well as an array of clubs, fraternal orders, and debating and athletic groups.

An early necessity was manufacturing to supplement farm incomes. The soil was poor, the 10–15 acre lots inadequate; markets were distant, and the settlers untrained in agricultural methods. Subsistence depended on the sewing machine, especially in Carmel, Rosenhayn, Norma, and Brotmanville, as well as Woodbine, where industry was subsidized from the outset. Although the Jewish population grew slowly to about 3,500 in 1901, it dropped to 2,700 by 1919. To some extent this reflected growing American urbanization, as well as the second generation's struggle for better educational and economic opportunities. Among their sons who achieved prominence were Jacob G. Lipman, an agronomist and dean of Rutgers' College of Agriculture; Gilbert Seldes, author, critic, dean of the School of Communications, University of Pennsylvania; and Benjamin M. Golder, Philadelphia congressman. Some moved to New York or Philadelphia, but many settled in Vineland proper, operating stores or small factories. Arthur Goldhaft, a distinguished veterinarian, founded the Vineland Poultry Laboratories. During the 1960s, the Jewish community peaked at just over 10,000 people, with five synagogues in the city and another six in surrounding communities. The largest influx to the community was from several hundred survivors of the Nazi Holocaust, drawn to the area from large cities such as New York and Philadelphia with offers of assistance in the establishment of poultry farms and a quiet country life. These immigrants formed the Jewish Poultry Farmers' Association and a free loan society, as well as several diverse congregations. A Jewish day school, founded in 1953, supplemented the established congregational schools. Community life has included Zionist organizations, B'nai B'rith, Hadassah, Hebrew Women's Benevolent Society, Jewish War Veterans, and participation by Jews in all civic and political activities. The Jewish Community Council, which is today Jewish Federation of Cumberland County, was established in 1924, has been active in local, national and Israeli affairs, and has helped to maintain the community's vibrant Jewish life. Notable residents of national acclaim include Miles Lerman, founding chairman of the United States Holocaust Memorial Museum; Ben Zion Leuchter and Magda Leuchter, a local newspaper publisher and founding chairman of The National Jewish Center for Learning and Leadership (CLAL); and Esther Raab, a tireless Holocaust survivor and educator, upon whose life are based the play *Dear Esther* and the film *Escape from Sobibor*. Samuel Gassel served as borough commissioner and mayor of the City of Vineland; I. Harry Levin as municipal judge in adjoining townships; Dr. Tevis Goldhaft as chairman of the Board of Education; and Stanley S. Brotman as presiding senior judge of the U.S. District Court. The population in 2005 was 1,800.

VINER, JACOB (1892–1970), U.S. economist. Born in Montreal, Canada, Viner began teaching at the University of Chicago in 1916 and returned there after federal government service in World War I. In 1925 he reached the rank of professor. From 1946 to 1960 he was professor of economics at Princeton, and was simultaneously a member of the Institute for Advanced Study at Princeton. Viner served the U.S. government in a number of capacities: he was representative at the League of Nations (1933), and consulting expert to the Treasury (1935–39) and to the State Department (1943–52). His research, writing, and teaching covered many aspects of international economics, including trade and commercial policy, foreign exchange, international finance, and economic development. He was particularly interested in the application and adaptation of the theory of international trade to current problems and was among the first critics of the Keynesian neoeconomics. He claimed that the use of oversimplified and otherwise unrealistic models reduced the usefulness of the theory of international trade. Viner demanded the incorporation into the classical theory of what he regarded as the valuable elements of Keynes' analysis, without abandoning the fundamentals that had been developed by the older theory.

His publications include *Canada's Balance of International Indebtedness* (1924); *Dumping: A Problem in International Trade* (1923, repr. 1966); *Studies in the Theory of International Trade* (1937, repr. 1965); *The Customs Union Issue* (1950); *International Trade and Economic Development* (1953); *The Long View and the Short* (1958); and *Problems of Monetary Control* (1964).

[Joachim O. Ronall]

VINKOVCI, town in Croatia, capital of Srijem Province. Jews are known to have lived there only from the second half of the 19th century. Ignatz Gross opened a retail store in 1866. A *kehillah* was formed in 1870 and Jacob Schlesinger installed a flour mill at that time. Jews were tanners, tailors and merchants. Leaders of the community were L. Stein, Dr. Armin Lederer, and Dr. Ignatz Lang. Zionist activists were Max Lederer, Adolf Beck, and Vilim Orenstein. The first rabbi was Solomon Neumann, followed by R. Schoenfeld and Dr. Mavro Frankfurter, who was horrendously tortured by the Ustashe and died in the Jasenovac death camp. His son, David *Frankfurter, killed the Swiss Nazi leader Wilhelm Gustloff in Davos on February 2, 1936, in an effort to call the world's attention to the dangers of Nazism.

During World War I, Jews were molested and robbed by deserters from the Austro-Hungarian army, but they organized self-defense and successfully resisted the assaults. In 1923 a national conference of Yugoslavia's rabbis took place in Vinkovci. In 1931 about 1,000 Jews lived there; their number dwindled, however, in later years due to emigration, mostly to Zagreb. On the eve of the Holocaust, only 630 Jews remained there. Nevertheless, it was a thriving community.

During the Holocaust most Jews perished and the synagogue was demolished.

VINNIKOV, ISAAC N. (1897–), Soviet Orientalist. Born in Khotimsk, Belorussia, in 1922 Vinnikov was sent by the "People's Commissariat for Education" to study in the faculty of linguistics and ethnology at the University of Leningrad. Two of his teachers were L.Y. *Sternberg and P.K. *Kokovtsov. His first works were connected with pre-Islamic Arabic history and culture. Later he devoted himself to the study of the customs and languages of the Arab tribes living in Central Asia. In 1941 he wrote his doctoral thesis on "The Arabs in the U.S.S.R."; he also engaged in the study of Tyrean and Aramaic inscriptions and devoted many years to compiling a concordance to the Aramaic of Ereẓ Israel (in the Jerusalem Talmud and the Palestinian Midrashim). For many years he gave courses at the University of Leningrad in Semitic languages, among them Hebrew, supervising many students in the field of research.

VINNITSA, town in Vinnitsa district, Ukraine. The earliest information available on the Jews of the town dates from 1532: there is a mention that year of the wealthy Jewish merchant Mekhel, who traded with Turkish Moldavia (in livestock and wool cloth). Until the end of the 18th century, the community remained rather small and suffered from the attacks of the Ukrainian rebels who fought against Polish rule (*Chmielnicki, the *Haidamacks), the oppression of the Polish governors and mayors, as well as from the wars which brought about the disruption of commerce on the nearby borders. In 1776, 381 Jews belonged to the *kahal* of Vinnitsa; of these, 190 lived in the town and the rest in the surroundings. The Russian annexation (1793) resulted in continuous growth of the Jewish population in the town and its region. The census of 1897 found 11,689 Jews (over one-third of the population) living in the town and in 1910, there were 20,257 Jews (45.5% of the total population). They earned their livelihood mainly in tailoring and from commerce in agricultural produce. The community of Vinnitsa did not suffer in 1919–20 because the town served as the regional capital of the successive governments in the region. In 1926 there were 21,812 Jews (41%). The *Yevsektsiya waged a savage campaign to destroy the religious and national life of the Jews of Vinnitsa, and the town became a center of its activities throughout Podolia. A Jewish pedagogic institute was established and during the late 1930s, a Communist Yiddish newspaper (*Proletarisher Emes*) was published in Vinnitsa. A few months after the occupation of the town by the Germans, on Rosh Ha-Shanah, Sept. 22, 1941, 28,000 Jews of the town and its surroundings were exterminated in Vinnitsa. According to the 1959 census, there were about 19,500 Jews (c. 16% of the total population) in Vinnitsa. The former Great Synagogue was closed by the authorities in 1957 and converted into a storehouse.

Though most of the Jews had left in the mass emigration of the 1990s, by 2005, Vinnitsa had a Jewish day school and a club for Hebrew-speaking youth. A new education center was being built.

VIRBALIS (Ger. **Wirballen**; Pol. **Wierzbolow**; Rus. **Verzhboloro**), town in S.W. Lithuania. Due to the position of the town on an important commercial route between Russia and Germany, the Jewish community was financially prosperous. In 1897 there were 1,219 Jews (37% of the total population). Among Lithuanian Jewry, the community of Virbalis was outstanding for its nationalist cultural activity and its promotion of Hebrew both as a language for study and for daily speech. Following World War I, the Jews returned to the ruins of Virbalis, the majority of them having abandoned the town during the war. According to the census of 1923, they numbered 1,233 (30% of the population). Many of them were engaged in agriculture, either as landowners or as lessees of orchards, vegetable gardens, and tobacco plantations. Near the town was

located the training farm of *He-Ḥalutz. This also included a Hebrew secondary school, a Tarbut school, and a kindergarten. There were, in addition, several Zionist organizations and welfare institutions. The mayor of the town was a Jew. The Germans invaded Virbalis on June 22, 1941. A week later they massacred the men, and a short while after that, the women and children. The poet *Yehoash was a native of Virbalis.

°**VIRGIL** (**Vergil**; **Publius Vergilius Maro**; 70–19 B.C.E.), greatest Roman poet. Though Virgil nowhere mentions the Jews directly, there are several indications in two of his greatest works, the *Eclogues* and the *Aeneid*, that he was aware of Jewish tradition.

The brief Fourth Eclogue speaks apocalyptically of the imminent return of the last and greatest age sung of by the Cumaean Sibyl and ushered in by the maiden (*virgo*) goddess Artemis and by the birth of a newborn boy, when a golden race will be sent down from heaven which will consort with the gods. All remaining traces of men's guilt will be removed; and the world, made peaceful by the virtues of the baby's father, will be a veritable utopia, with the earth producing its products without tilling, goats bringing forth udders swollen with milk, and herds cavorting fearlessly with lions. The age will be marked by the death of the snake and the replacement of poisonous herbs by Assyrian nard, though a few traces of men's ancient deceit will remain and though battles will have to be refought and rewon before the age can be ushered in. Virgil says that this Messianic-like age will begin during the consulship of *Asinius Pollio (40 B.C.E.), to whom the poem is addressed; and Pollio may well have been Virgil's major link with the Jewish tradition, since Pollio was one of the consuls who in this very year accompanied *Herod to deposit in the Capitol the decree which the Senate had passed naming Herod king (Jos., Ant. 14:388–9). Later, when Herod sent his sons *Alexander and *Aristobulus to Rome to complete their education, they lodged at his home, since, as Josephus (Ant. 15:343) adds, he was proud of Herod's friendship. Pollio was, moreover, closely associated with *Julius Caesar, who showed special consideration for the Jews (*Suetonius, 84:5); *Horace, who mentions them prominently; and *Timagenes of Alexandria, who wrote a universal history, with comments on the Jews, quoted by Josephus (Ant. 13:319, 344; Apion 2:84). The parallels with *Isaiah's vision (chapters 6, 7, 9, 11) of the birth of a wonderful child and the age of peace which he will usher in and with the snake motif (Gen. 3), suggest that Virgil may have read the Septuagint, which certainly was known to the large and Greek-speaking Jewish community of Rome, though they also resemble well-known details of the traditional Golden Age in classical literature.

*Constantine, *Jerome, *Ambrose, and *Augustine also regarded the poem as alluding to the birth of Jesus; and consequently throughout the Middle Ages, culminating in *Dante, Virgil had a special status as a prophet. The allusion to the Cumaean song may well indicate that Virgil's immediate source was the *Sibylline Oracles; for while it is true that the extant Sibylline Oracles, which are to a considerable degree of Jewish and Christian origin, have little to do with the Sibylline Books associated with the city of Cumae in Italy, they do contain a number of passages based on Isaiah which are parallel to Virgil's Eclogue. Indeed, Horace's apocalyptic Sixteenth Epode, which has similar affinities with the Sibylline Oracles, may well be his reply to this Eclogue of Virgil. The reference to Assyrian spice may be Virgil's indication of an Eastern source.

The Fourth Eclogue, especially in its utopian vision of peace, has been called a blueprint for the *Aeneid*. The fact that Virgil in the *Aeneid* consciously differs from *Homer in making his hero a devout wanderer with the mission of leading his people and their household gods by a roundabout route to a promised ancestral land, during which they are subjected to many trials, offers an obvious parallel with Moses. There are numerous apocalypses in the poem, notably in the Sixth Book, which again suggest the influence of the Sibylline Oracles. The fact that the greatest temptation of all occurs during the year which Aeneas spends at Carthage, a Semitic city, again emphasizes the contact with the Near East. Finally, though the parallels should not be strained, one may cite the similarity between Augustus standing on the shield of Aeneas (8:680) with twin beams of light darting from his temples and Moses (cf. Ex. R. 47:6), and the hitherto unnoticed Hebraic-like parallelism in both thought and language in such lines as *Aeneid* 1:9–10 (*… tot volvere casus…. tot adire labores*).

[Louis Harry Feldman]

VIRGIN, VIRGINITY.

Terminology

The biblical *betulah* (בתולה) usually rendered "virgin," is in fact an ambiguous term which in nonlegal contexts may denote an age of life rather than a physical state. Cognate Akkadian *batultu* (masculine, *batūlu*) and Ugaritic *btlt* refer to "an adolescent, nubile, girl." That the woman who is so called need not necessarily be a *virgo intacta* is shown by the graphic account in a Ugaritic myth of the sexual relations of Baal with the goddess Anath, who bears the honorific epithet *btlt* (see Pritchard, Texts, 142). Moreover, in an Aramaic incantation text from Nippur there is a reference to a *betulta'* (בתולתא) who is "pregnant but cannot bear" (Montgomery, in bibl. 13:9, p. 178). The male counterpart to *betulah* in the Bible is often *baḥur* (בָּחוּר), "young man," e.g., Jeremiah 31:12 [13] and Amos 8:13 (cf. Joel 1:8, where a *betulah* moans for her bridegroom); and the word *betulah* interchanges with the somewhat synonymous age term *ʿalmah* (עַלְמָה), which also describes a young woman. Thus, in Genesis 24:16, 43, Rebekah

is first called a *betulah* and then an *ʿalmah*. (Exactly the same interchange of the two words appears in a Ugaritic text.) *ʿAlmah*, despite a two-millennium misunderstanding of Isaiah 7:14, "Behold a young woman [LXX:παρθένοσ, "virgin"] shall conceive and bear a son," indicates nothing concerning the chastity of the woman in question. The only way that the term "virgin" can be unambiguously expressed is in the negative: thus, Sumerian and Akkadian, "undeflowered," and Akkadian, "not experienced," "unopened," and "who has not known a male." The description of Rebekah (Gen. 24:16), who is first called a *betulah*, "young woman," and then "whom no man had known" (cf. Judg. 21:12), is similar. In legal contexts, however, *betulah* denotes a virgin in the strict sense (as does *batultu* in certain Akkadian legal contexts).

In the Laws

Virginity in a woman was an asset of financial as well as moral significance: a "bride price for virgins" (*mohar betulot*, מֹהַר בְּתוּלוֹת), clearly higher than for non-virgins, was payable to her father for the privilege of marrying her. Biblical laws deal with litigation that may arise over the financial and moral stakes of virginity:

(a) Exodus 22:15–16: A man who seduces a virgin who has not been betrothed must marry her by the payment of a bride price. If the father is unwilling to permit his daughter to marry her seducer, he must still pay her father "in accordance with the bride price for virgins." In either case the father is compensated for his monetary loss. (A similar law pertaining to the seduction of an unmarried girl is found in the Middle Assyrian Laws, A, 56 (in: Pritchard, Texts, 185), where the equivalent of the Hebrew *mohar betulot*, in Akkadian, *sīm batulti*, "price for virgins," must be paid by the seducer. There, too, the father is not bound to give his daughter in marriage to the seducer. The law contains an additional clause which is absent from its biblical counterpart: "The father shall treat his daughter as he wishes," i.e., he may punish her in any way he sees fit.)

(b) Deuteronomy 22:28–29: A man who rapes a virgin who has not been betrothed must pay 50 shekels of silver (later understood as the price of a virgin), is forced to marry her, and is deprived of all future rights of divorce. (Similarly, in the Middle Assyrian Laws, A, 55 (in: Pritchard, Texts, 185), after describing the physical status of the young woman and the various places where the offense might have occurred, the law requires the culprit, if unmarried, to pay the price for virgins, marry the girl, and forfeit rights of divorce. The father in this case, having received the monetary compensation, still has the right to marry her off to whomever he pleases. If the culprit is married, the father may choose to give his daughter in marriage to him, but it is further stipulated that the father shall take the wife of the culprit to be raped in turn!)

(c) Deuteronomy 22:23–27: In the case of a man who violated a virgin who was betrothed, the place of the offense is the criterion of whether she was coerced or willingly consented (cf. Middle Assyrian Laws, A, 55 (above) and Hittite Laws, 197–8, in: Pritchard, Texts, 196). If the offense took place in town, both are stoned to death, "the girl because she did not cry for help in the town, and the man because he violated his neighbor's wife." If, however, it took place in open country, it is considered rape and the man alone is put to death. It is to be noted that as regards inviolability, a betrothed virgin is like a married woman: violation of either is a capital offense. (The Laws of Eshnunna, 26 (in: Pritchard, Texts, 162) and the Laws of Hammurapi, 130 (Pritchard, Texts, 171) may be compared; both prescribe the death penalty for the rape of virgins who are legally married.)

(d) Deuteronomy 22:13–22: If a bridegroom accuses his wife of not being a virgin at the time of marriage, the girl's parents must produce evidence of their daughter's virginity before the elders at the town gate. If he has falsely defamed his wife, he is flogged, fined 100 shekels, and is deprived of all rights of divorce. The large fine befits the gravity of his accusation, which would have resulted in the execution of his bride by stoning if his charge were proven correct, i.e., if she did transgress while yet in her father's house. (For cuneiform analogues to the accusation of adultery, cf. Laws of Hammurapi, 131, 132 (Pritchard, Texts, 171), and Middle Assyrian Laws, A, 17 (Pritchard, Texts, 181).)

Esteem of the unsullied purity of the virgin is reflected in the rule of Leviticus 21:13ff. that a high priest may marry only a virgin of his clan (cf. Rashbam). Ezekiel 44:22 obliges all priests to marry virgins (or a priest's widow), but they need only be Israelites.

In Nonlegal Literature

That virgins were particularly desired and sexually provocative comes out in several passages. Lot tries to appease the frenzy of the Sodomites by offering them his daughters, whose virginity he specially mentions (Gen. 19:8; cf. Judg. 19:24). In massacres, virgins alone might be spared, to be taken as slaves or wives (Num. 31:18; Judg. 21:12). Expanding on II Samuel 13:18, Josephus writes that "in ancient times virgins wore long-sleeved tunics reaching to the ankle in order not to be exposed" (Ant., 7:171).

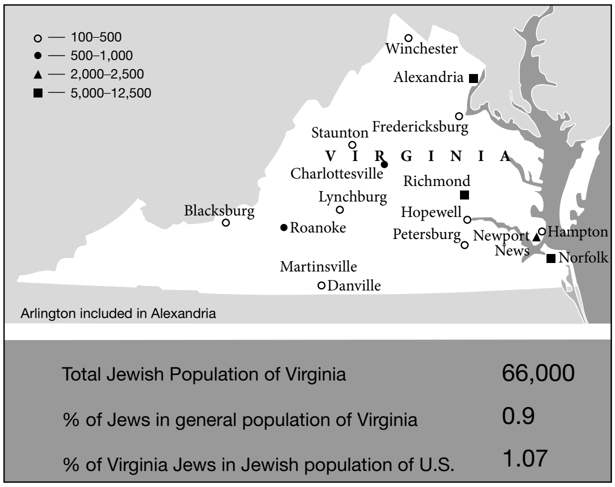
As a figure of purity and moral worth, *betulah*, "maid," is used to personify countries and peoples in poetry (often construed with *bat*, "daughter," "woman"); e.g., Lamentations 2:13, *betulat bat Ẓiyyon*, "fair maiden Zion" – the genitives being explicative (as in *nehar Perat*, "River Euphrates").

[Shalom M. Paul]

In the Talmud and Halakhah

In *halakhah* a virgin is not necessarily a maiden whose hymen is intact. She can be legally regarded both as a virgin with a ruptured hymen and as a non-virgin when it is intact. The former applies when she can claim, according to Rabban Gamaliel and R. Eliezer, or prove, according to R. Joshua b. Hananiah, that the rupture was caused by an injury (*mukkat eẓ*, literally, "injured by a piece of wood"; Ket. 1:7). On the other hand, although a maiden divorced or widowed after *betrothal only has the legal status of a virgin, if she was divorced or wid-

owed after marriage, even though no intercourse took place, she is legally classed as a non-virgin (Ket. 1:2 and 4). Nor is the statement in the Tosefta (Shev. 3:5) that a virgin is "one who has never had intercourse" exact. Intercourse with a girl child aged less than three years and a day does not invalidate her status as a virgin, as it was stated that in this case the hymen grows again, and it is regarded as merely "poking a finger in the eye" (Nid. 5:4). A woman taken captive by foreign soldiery or a manumitted bondswoman is regarded as a non-virgin, since it is assumed as a fact that in these circumstances she was raped or seduced. The legal disability of a non-virgin expresses itself in the fact that her *ketubbah* is only 100 *zuz* instead of the 200 of the virgin (Ket. 1:2; the priests during the Second Temple period instituted a *ketubbah* of 400 *zuz*, to which the rabbis did not object – Ket. 1:5) and the fact that she was forbidden to marry a high priest (Lev. 21:13).



The Mishnah states that the marriage of a virgin used to take place on Wednesdays so that, should she be found to be a non-virgin, the aggrieved bridegroom could immediately make application to the *bet din*, which sat regularly on Thursdays (Ket. 1:1). However, the custom arose to anticipate it and have it take place on Tuesdays in order to foil the custom of *jus primae noctis* exercised by the local governor (cf. Rabinowitz in bibl. for other examples).

Proof that on her wedding day she "went forth to her marriage in a *hinnuma*" (either "in a litter" or "under a veil" – (Ket. 17b)), or accompanied with ὑμέναιος ("the bridal song"), or with her hair unbound, or that "roasted corn was distributed" at her wedding, was sufficient to establish the fact that she was a virgin when she married (Ket. 2:1), since these ceremonies and customs were carried out only with regard to a virgin. Unnatural intercourse does not affect her status as a virgin (Kid. 9b; cf. Rashi, ad loc.; and Maim. Yad, Issurei Bi'ah, 3:6.

VIRGINIA, state on the east coast of the U.S. In 2001, approximately 66,000 residents were of the Jewish faith, comprising just 0.9% of the state's total population. One of the fastest growing Jewish populations in the country, the largest Jewish community resides in Northern Virginia (35,000), followed by the Tidewater (20,000), Richmond (12,500), Roanoke (1,050), and Charlottesville (1,000). Fredericksburg, Harrisonburg, Petersburg, Staunton, and Lynchburg have small Jewish populations. Northern Virginia was once considered not a place where Jews would live, but its Jewish population has grown

Jewish communities in Virginia. Population figures for 2001.

both within the inner areas of suburban Washington and in the regions that have developed beyond Dulles Airport.

The Jewish experience in Virginia dates back to Sir Walter Raleigh's ill-fated Roanoke Colony, then a part of the Virginia territory. Joachim Gaunse, a Prague metallurgist, landed with Raleigh in 1585. Elias Legardo joined the colony at Jamestown in 1621; John Levy received a patent for 200 acres on Powell's Creek in James City County in 1648; and there are references to brothers Silvedo and Manuel Rodriguez, Sephardi Jews, in Lancaster County from the middle of the century. In 1658, Moses Nehemiah was discharged from debt in York County. Michael Franks and Jacob Myer accompanied George Washington in his 1754 expedition across the Allegheny Mountains and received rewards for gallant service. In 1757, Michael Israel and his wife, Sarah, bought 80 acres of land near the mountain pass between North Garden and Batesville, a pass since known as Israel's Gap. Dr. John de Sequeyra, who lived in Williamsburg, was credited by Thomas Jefferson with introducing the custom of eating tomatoes. Solomon Israel bought land in Albemarle in 1764. The Gratz brothers of Philadelphia were trading in Fredericksburg and Williamsburg in 1776. Jacob Darmstadt, who arrived in the colonies as a Hessian soldier, was an early resident of Richmond, as were Isaiah Isaacs and Jacob I. Cohen, both veterans of the Revolution, who became merchants and owners of the Bird-In-Hand tavern. Moses Meyers settled in Norfolk in 1787. Samuel Myers settled in Petersburg in 1789. Commodore Uriah P. Levy of New York purchased and began the first restoration of Thomas Jefferson's Monticello in 1836. He and his nephew Jefferson Monroe Levy preserved and restored the estate, acquired by the Thomas Jefferson Memorial Foundation in 1923. Rachel Levy, the commodore's mother, is interred on the grounds.

Although Jews enjoyed more rights in the British Colony of Virginia than almost anywhere else in the world, they were not give equal status with their Christian neighbors until well after the Revolution. Many were members of the Masonic order. William Byrd II, George Wythe, and Richard Lee II stud-

ied Hebrew, and James Waddell's school in Lancaster County instructed young gentlemen in the language. After the passage of Jefferson's Statute for Religious Freedom (1786), Jewish immigration increased in Tidewater, Fredericksburg, Richmond, Petersburg, and Albermarle County. It came through eastern ports, including New York City, Philadelphia, and Baltimore, to Alexandria, Richmond, and Norfolk along the Piedmont belt and Tidewater region. A second route taken by German immigrants ran from Pennsylvania and Maryland through the Valley of Virginia, with settlements extending south to North Carolina and west to the Ohio River and beyond.

The first Jewish congregation in Virginia, Kahol Kadosh Beth Shalome, was established in Richmond in 1789. In 1848, Jews in the Tidewater region founded the House of Jacob Congregation, later known as Ohef Sholom; Congregation Rodef Sholom was formed in Petersburg in 1858; Congregation Beth El was organized in Alexandria in 1859; the Hebrew Friendship Congregation was established in Harrisonburg in 1870; Major Alexander Hart helped to establish the House of Israel Congregation in Staunton in 1876; Danville's Beth Sholem Congregation was founded in 1881; in Newport News, organization of the synagogue was in 1887; Portsmouth's Congregation Adath Jeshurun was organized in 1893; Roanoke's Temple Emmanuel was organized in 1897; and Congregation Agudath Achim was founded in Lynchburg the same year.

In the mid-19th century, immigrant German Jews founded some of the state's major retail concerns. William Thalhimer arrived in Richmond in 1840 and established Thalhimer Bros. department store that later became the largest in Virginia with branches throughout the state. Anthony Rosenstock opened A. Rosenstock and Co. in Petersburg in 1859; the Guggenheimer family was in business in Lynchburg in 1850; the Bachrach family in Warrenton; the Leterman family opened a store in Charlottesville in 1852; Leopold Wise, Herman Heller, Samuel Loewner, and Jonas Heller settled in Harrisonburg in 1859 and started businesses there. Records show that Virginia Jews served in the Confederate Army. Many of the sons entered professions or continued in the retail businesses established by their parents. Later waves of immigration, bringing the East European Jews, repeated to a large extent this pattern of economic activity. During WWI and WWII, construction of important military bases in Virginia attracted many new Jewish settlers, especially in the Norfolk, Richmond, and Petersburg areas. The Jews continue to be prominent in the retail field as well as in the professions and in the distributing and manufacturing fields.

Since 1991, Virginia has exported over $1.5 billion of goods and services to Israel. The Virginia Israel Trade Commission, established in 1986 to investigate cultural, educational, and economic opportunities, was reformed in 1991 under Governor George Allen as the Virginia Israel Partnership. Norman Sisisky was first elected as the delegate representing Petersburg in the Virginia General Assembly in 1973; and later served nine terms as U.S. Representative for Virginia's Fourth Congressional District. Eric Cantor was elected as a delegate for Henrico County to the Virginia House of Delegates from 1992 to 2000; and in 2006 the U.S. Representative for Virginia's Seventh Congressional District served as chief deputy majority whip in the U.S. House of Representatives. Michael Schewel served as Virginia's secretary of commerce and trade under Governor Mark Warner.

VIRGIN ISLANDS, archipelago in the West Indies. In the late 20th century there was a total population of over 100,000 in the Virgin Islands, which included about 300 Jews. On any given Sabbath they would be joined by tourists visiting the island. There were also Jews on St. John and other islands but the synagogue was located on St. Thomas.

One of the first Jews in the Virgin Islands was Gabriel Milan, whom King Christian of Denmark sent there in 1684 to be governor. The Danes, like the Dutch, who had colonized the islands before them, were liberal toward all religions. Complete freedom of religion was granted to Catholics and Jews on St. Thomas Island in 1685. The story of the St. Thomas community is typical of West Indian Jewry. Its prosperity increased with the rise of sugar plantations and shipping lines, and at its peak the St. Thomas community numbered 400. A house of worship was built in the town of Charlotte Amalie in 1833 to replace an older one destroyed by fire. Called Sephardic Synagogue at St. Thomas, (now known as The Hebrew Congregation of St. Thomas (or *K"K Bracha v'shalom u'gimilut chasadim*) it is the only one on the island and is a landmark, being the second oldest synagogue in the United States and its territories, the oldest in continuous use. The cemetery of the St. Thomas Jewish community is filled with Spanish and Portuguese names and was the subject of a study done by the Danish Jewish community: J. Margolinski, *299 Epitaphs from the Jewish Cemetery in St. Thomas, W.I., 1837–1916* (1957).

From this congregation have come two governors of the Virgin Islands: Morris Fidangue de Castro and Ralph Paiewonsky. Two American politicians were from the Virgin Islands: David Levi, who as David *Yulee became one of Florida's first senators in 1845, and Judah P. *Benjamin, born in St. Croix. The house where Camille *Pissarro was born in 1830 can still be seen in the heart of the commercial center. The Grand Hotel located at Charlotte Amalie's main square was built by Pissarro's father in 1841.

[Benjamin Schlesinger]

Synagogue Restoration

In 1973 the Sephardi Synagogue of St. Thomas, Virgin Islands, had its original plaster on the walls removed after 140 years of service, revealing handsome walls of Danish brick. The syn-

agogue (with the plaster) was restored in 1999 and received national recognition for its restoration. It became a National Historic Monument in 1997, the year after its bicentennial. Like certain other synagogues in the Caribbean, its marble floor is kept covered with a layer of sand to remember the conversos (secret Jews) of Spain who prayed secretly in their cellars with floors covered with sand to muffle the sound of their prayers. It employs a rabbi, Arthur Starr, who serves the community.

[Arthur F. Starr (2nd ed.)]

VISEUL-DE-SUS (Hung. **Felsövisó**; referred to by the Jews as **Oybervisha**), town in N. Romania; until the end of World War I and between 1940 and 1944 in Hungary. The Jewish community in Viseul-de-Sus was organized in 1877, although Jews had already been living there for a long time. The Jewish population developed rapidly during the 1880s. In 1885 the community was designated as the Jewish center for the three villages of Felsövisó, Alsóviso (Viseul-de-Jos), and Középvisó (Viseul de Mijloc), and later for a number of other villages. The *ḥevra kaddisha* was established in 1895. The community was Orthodox and Ḥasidism wielded a powerful influence. There were four synagogues, a number of additional prayer houses, and a yeshivah. In the main, the occupations of the Jews, including ordinary laborers, were connected with the forests and the wood industry of the town and its environs. In 1896 a Hebrew press was established; as it was the only press in the town it also printed works in other languages. The Hebrew religious periodical, *Degl ha-Torah*, was printed there from 1922 and ran to about 80 issues. In 1930 there were 3,734 Jews (33.7 percent of the total population) in Viseul-de-Sus. About the same number of Jews lived there in the spring of 1944, when the Fascist Hungarian authorities set up a ghetto, in which Jews from the surrounding villages were also concentrated. It is estimated that about 35,000 Jews passed through this ghetto on their way to *Auschwitz. After World War II about 700 Jews returned to the town. Their numbers declined through emigration and by 1971 the Jewish community had ceased to exist.

VISHNEVETS (Pol. **Wisniowiec**; in Jewish sources, Vishniets), village in N. Ternopol oblast, Ukraine. Jews first settled in Vishnevets in the early 17th century, and Tatars from Crimea who invaded the locality in 1653 massacred them. In the 18th century the community of Vishnevets was under the jurisdiction of the *kahal* of Kremenets (Volhynia). The village was annexed to Russia in 1795. There were 501 Jews in Vishnevets in 1765, 3,178 in 1847, 2,980 (70% of the total population) in 1897, and 2,825 (70%) in 1921. In the 19th century, Ḥasidism gained a following in the community. Between the two world wars, in independent Poland, there were branches of Agudat Israel and He-Ḥalutz. The community was annihilated in the Holocaust.

VISHNIAC, ROMAN (1897–1990), photographer. Born in St. Petersburg, Vishniac studied biology at Russian universities. When Berlin University under the Nazis refused to grant his Ph.D. in art, he left Germany and traveled throughout Poland, Austria, Holland, France, Romania, and Czechoslovakia, documenting with his camera the lives of the Jews in the cities and in the hinterlands. He was in Poland taking photographs of the Jewish community when Hitler's troops marched in. Vishniac was apprehended and sent to a concentration camp in Zbąszyń, Poland. He escaped to France but within a short time he was again incarcerated in another concentration camp, Camp du Richard in Clichy, France. Early in 1941 he managed to escape from Europe and went to the United States where he renewed his studies in medicine and began to use his camera for research in the biological sciences.

He specialized in photomicroscopy, pioneering in the field of cytoplasmic circulation in microscopic algae as connected with photosynthesis, and photographing the formation of thrombosis in blood vessels. Vishniac immediately won widespread recognition in the field of scientific cinematography. His books include *Polish Jews* (1947) and *Life of the Six Millions* (1969) illustrating European Jewish life before and during the Holocaust.

[Peter Pollack]

VISIONS. The Hebrew Bible contains descriptions of many visions, especially those of God and His angel (or angels). When the appearance of God is mentioned as part of the biblical narrative, it is difficult to say if, in that specific case, the author thought that it was reality or a vision. The idea developed already at a very ancient period of Judaism that God has no shape, and, therefore, the appearance of God and His angels to the prophets was evidently understood by them as a vision (see *Prophecy). This is surely so in the case of Ezekiel's vision of God and the heavenly world. Prophets, however, have also seen visions of simple or imaginary objects and persons, which they interpreted in a symbolic way, the persons or objects themselves having already acquired a symbolic meaning. At the beginning of the Second Temple period visions were often interpreted to the prophets by an angel. This is also the manner of visions and their interpretation by angels in the later apocalyptic literature.

It may be asked if the later prophets at the beginning of the Second Temple period really believed they saw what they describe and interpret, or if visions merely became a literary form for prophecy or teaching. Sometimes, such descrip-

tions evidently contained only a grain of actual vision (cf. the apocalyptic literature), and sometimes there was obviously no actual foundation (cf. the Vision of Seventy Shepherds in the Book of Enoch). In many cases (e.g., in the Fourth Book of Ezra), the question of an actual basis for a symbolic vision cannot be clearly answered, because this often depends on the extent to which the true author persuaded himself. The literary convention overcomes the religious or visionary experience in apocalyptic literature, because the authors did not write in their own names, but in the names of biblical persons of the past. A special type of vision in the apocalyptic literature is celestial journeys of biblical personalities, during which they visited both heaven and earth (heavenly paradise and hell). The oldest book which contains such visionary trips is the Book of Enoch; this book is thus the beginning of a chain leading to Dante. Chapter 14 in the book contains a description of God's heavenly palace, where Enoch sees the Glory of God. This is the oldest example in the tradition of visionary ascents to God's dwelling place following similar descriptions by biblical prophets, the earliest precursors of the *heikhalot* and the *Merkabah literature. A fragment describing God's dwelling place in the same spirit is also preserved in the Dead Sea Scrolls.

Jewish mystics in antiquity, as well as other persons, definitely had visionary experiences. Josephus refers to John Hyrcanus, who saw God announcing to him which of his sons would be his heir. Both Josephus and rabbinic literature relate that John Hyrcanus heard a heavenly voice in the Temple announcing the victory of his sons. This heavenly voice (**bat kol*) is often attested in rabbinical literature; the incidents referred to are both from the Second Temple period and later. Rabbinic literature often mentions the appearance of the prophet Elijah (see *Elijah in the *Aggadah*); the oldest reference comes from Ben Sira (48:11; "blessed is he who sees him"). The Second Book of Maccabees often speaks about visions of angels, especially as signs for future victory. The story of the appearance of angels to Heliodoros and punishment meted through them, narrated in this book, are also famous.

[David Flusser]

In Medieval Hebrew Literature

Following the prophetic visions in the Bible, and the frequent appearance of angels and other divine beings in talmudic and midrashic literature, medieval literature contains many descriptions of different kinds of visions. They appear chiefly in mystical works, but they are also to be found in the fiction of the period (see *Fiction) as well as in its popular literature. The fundamental Jewish tenet that God and His guardian angels are always close to man served as a basis for the belief in the objective reality of such visions. There prevailed, moreover, a profound belief in the existence of *demonic powers, which were also held to reveal themselves supernaturally.

The earliest body of Hebrew mystical works – the *heikhalot* and the Merkabah literature – is essentially devoted to visions. The mystics who make the ascent to the Divine Chariot, a practice usually attributed in these texts to R. Akiva and R. Ishmael b. Elisha and their circle, behold and then describe the glory of the heavenly world, the hierarchy of the angels and other heavenly beings, the Throne of Glory (*kisse ha-kavod*), and the songs of praise sung by the angels. The visitors are usually guided by an angel, very often *Metatron, the angelic incarnation of the mortal Enoch, who did not die but was translated to heaven and became one of the greatest angels in the divine hierarchy. This motif of a visionary "guided tour" in the divine world reappears in the literature of the Middle Ages.

Early Middle Ages

In the literature of medieval Europe, visions were most commonly seen in a dream; they might either occur spontaneously or be deliberately invoked. Whoever wished to invoke a vision would purify himself before going to sleep, and then ask *she'elat ḥalom* ("a question asked of a dream"), believing that his question would be answered by the nature of the dream that he was about to have. It was customary to make a *she'elat ḥalom* not only for matters relating to mysticism but also in connection with practical problems; and even questions of *halakhah* were answered in this way. A collection of such answers by *Jacob of Marvège is still extant, and it is known that other halakhists made similar compilations. The answer in the dream was frequently, although not always, accompanied by a vision.

Neither the mystic nor the ordinary Jew doubted the objective reality or the authenticity of angelic and demonic visions; even philosophers and Ashkenazi ḥasidic scholars (see *Ḥasidei Ashkenaz) devoted lengthy treatises to the nature of such visions, and also to those witnessed by the prophets. But most of the philosophers, and some of the Ḥasidim, believed the visions, albeit inspired by God, to be a product of the imagination of the individual. This view, however, was not widely accepted and both scholars and simple folk told and retold numerous stories of visions reported to have been seen.

One of the most common beliefs concerned the prophet Elijah, who did not die but ascended to the heavens. Following the pattern of talmudic literature, countless medieval folktales recount how he appeared to human beings in order to assist or to punish them. For scholars and mystics his most important role was that of teaching to mortal beings hidden truths which were known only to the *Academy on High. Thus, contemporaneous with the initial development of the Kabbalah in Provence in the 12th century are stories describing how Elijah appeared in the schools of the rabbis who were teaching the new ideas there.

At the same time, it was commonly believed, especially among the Jews of medieval Germany, Northern France, and Central Europe, that demons and the spirits of the dead appeared in visions to the living, either when they were awake or else in a dream. Many descriptions of such visions have been preserved in *Sefer Ḥasidim and other works written by the Ḥasidei Ashkenaz. The object of the visions was not always the

same. Sometimes the dead appeared in order to request the completion of an act which they had begun in their lifetime but had not lived to finish; sometimes it was to pay a debt, or to complain of a fault in the way or the place in which they were buried. Sometimes they spoke of the other world, of the way that the righteous were rewarded and the wicked punished. Demons made their appearance either when invoked by magical means in order to perform a certain task, or else to punish those who had dealt too much in magic. One of the methods most widely used to invoke such visions was to pour oil upon a bright surface, whereupon the demons appeared and were obliged to answer any request asked of them. This practice was used even for such purposes as catching a thief or finding a lost article.

Later Middle Ages

There are manifold descriptions of visions in the kabbalistic literature written after the 13th century. The prophetic kabbalism of Abraham b. Samuel *Abulafia and his followers is merely one example; many other kabbalists had mystical experiences – sometimes when awake, sometimes when in a state of dream or trance – and in these visions they were granted revelations of hidden truths from the heavenly spheres. *Isaac b. Samuel of Acre describes in detail the frequent visitations which he received from Metatron, some in dreams and some while he was in the state between sleeping and waking; he also had revelations from even higher *Sefirot*. The 14th-century author of *Sefer ha-*Kanah* and of *Sefer ha-*Temunah* relates numerous stories describing how esoteric knowledge was revealed to members of the devout Kanah family, many of whom were mystics. The Castilian kabbalists that gathered around Jacob ha-Kohen b. Mordecai Gaon and his sons and disciples in the second half of the 13th century also give accounts of such contacts with higher beings.

The *Zohar contains numerous descriptions of visions revealed to Simeon b. Yoḥai and his followers. For example, while the mystics were sitting and studying the Kabbalah, heavenly fire surrounded them, the **Shekhinah* rested upon them, and they saw allegorical visions of hidden truths. Some of these revelations also intimate the appearance of evil powers representing Satan, the *sitra aḥra*. Later kabbalistic writings, modeling themselves upon the Zohar and the descriptions which it gave, also narrated occurrences in the higher spheres as if they were visions actually witnessed by the kabbalists.

Visions of a completely different nature appear in some literary works, and particularly in Hebrew *maqamāt* and prose narratives, for instance in Ibn Zabarra or Al-Ḥarizi, or in some polemic writings, such as the *Mostrador de Justicia* of the Converso Abner de Burgos, where "a big man" appears in dreams for explaining the "craziness and stupidity" of the Jews that do not recognize the truth. Something equivalent appears also in a rhymed prose composition written as an answer to it by Samuel ibn Sasson, a poet from Carrion and a contemporary of *Santob de Carrion.

Later Writings

The motif of visionary ascents to higher spheres, with an angel or some other divine being as a guide, appeared very frequently in Hebrew literature after the works of Dante became popular, and after *Immanuel b. Solomon of Rome followed Dante in describing a visit to heaven and hell (although even before Dante, Abraham *Ibn Ezra had dealt with a similar theme in his *Ḥai Ben Mekiẓ*). In Italy from the Renaissance on, many Hebrew writers composed works of a similar nature, one of the most notable being Abraham b. Hananiah de Galicchi *Jagel's *Sefer Gei Ḥizzayon* ("Book of the Valley of Visions"). The author, who was in prison at the time, relates how his dead father visited him and took his soul upon a visionary tour of the heavens. There many secrets were revealed to them, different spirits told them stories, and answers were given to their theological questions.

The *Shekhinah*, Metatron, and other heavenly beings appear frequently in the later Kabbalah, usually in order to reveal divine secrets. After the 16th century they were often described as **maggid* (heavenly mentor), and important kabbalistic works were written as if dictated by them, as for example Joseph *Caro's *Maggid Meisharim* and Moses Ḥayyim *Luzzatto's *Zohar Tinyana*.

Visions constituted an important element in the *Shabbatean movement founded by the prophet *Nathan of Gaza, and many of its adherents described the different messianic visions that were revealed to them. Belief in visions persisted in the ḥasidic movement as late as the 18th century, and several stories of *Israel b. Eliezer Ba'al Shem Tov describe how his soul ascended to heaven and the visions he experienced there.

Gottlieb, in: *Fourth World Congress of Jewish Studies, Papers*, 2 (1968), 327–34; R. Margaliot, *She'elot u-Teshuvot min ha-Shamayim* (1957); R.J.Z. Werblowsky, *Joseph Karo; Lawyer and Mystic* (1962), 38–83; J. Dan, in: *Tarbiz*, 32 (1963), 359–69; A.Z. Aescoly (ed.), R. Ḥayyim Vital, *Sefer ha-Ḥezyonot* (1954).

VISSER, LODEWIJK ERNST (1871–1942), Dutch jurist and communal leader. He was born in Amersfoort into an old Dutch Jewish family. Prevented as a Jew from achieving his ambition of becoming a diplomat, Visser was appointed general prosecutor in Amsterdam and in 1903 became a district court judge in Rotterdam. In 1915 he was raised to the Supreme Court of which he eventually became president in 1939, but was dismissed by the Nazis after they entered Holland. Visser was an authority on commercial law and helped draft the Dutch Company Law of 1928. He also became vice chairman of the Dutch Royal Commission on Civil Legislation and a member of the Privy Council.

A conscious Jew, Visser was instrumental in helping Jewish refugees from Eastern Europe in 1918 and was founder of the Jewish Aid Committee for German Jews after 1933.

For many years, he was chairman of the executive of *Keren Hayesod in Holland, and as well chairman of the Permanent Committee of the Ashkenazi community in the Netherlands. During World War II, Visser opposed the German-appointed "Joodse Raad" (Jewish Council) and refused to accept the degrading identity cards. He tried to intervene for Jews arrested by Germans and participated in general resistance activities, becoming a symbol of Jewish wartime resistance in Holland. His wife and son died in concentration camps. In 1968 a square in front of the Sephardi synagogue in Amsterdam was named after him.

[Henriette Boas / Bart Wallet (2nd ed.)]

VITAL, Italian family which produced numerous scholars of whom the most noted were:

JOSEPH VITAL (15th–16th century), a talented scribe, was especially noted for his precision in writing *tefillin*, which were widely known as *Tefillin Rav Calabrash* (*Tefillin* of the Rabbi of Calabria from where his family stemmed). His *tefillin* were highly praised by Menahem Azariah da *Fano (Resp. no. 38). He was the father of the celebrated kabbalist Ḥayyim *Vital.

MOSES BEN JOSEPH VITAL (d. middle of the 17th century), younger brother of Ḥayyim Vital, was rabbi in Safed. Like his brother, he was an enthusiastic kabbalist and many legends enveloped his life; some, in fact, actually related to his brother. Other legendary accounts assigned to him a central role for seeing to it that Rabbi Isaac Luria's legacy was saved for posterity. After his brother's death, he assumed a more important role in the kabbalistic community of Safed. Legendary material on his life is to be found in *Ma'aseh Nissim shel ha-Am* by Naphtali Herz Bachrach.

MOSES VITAL, son of Samuel b. Ḥayyim *Vital, was a rabbi in Egypt from the second half of the 17th until the beginning of the 18th century. He was a penetrating halakhist and brilliant kabbalist. All that remains of his published work is one responsum, included in *Abraham b. Mordecai ha-Levi's *Ginnat Veradim*.

[Guiseppe Laras]

VITAL, DAVID BEN SOLOMON (first half of 16th century), rabbi, preacher and *paytan*, often called *Ha-Rofe* ("the doctor"). It is conjectured that David Vital was born before 1492 in Toledo (or southern Italy) and was among the Spanish exiles (or those leaving Calabria) who went to Turkey and Greece, eventually settling in Patras. During the Turco-Venetian war (1532), the community of Patras was severely affected and Vital's house was destroyed and his library and works lost. He moved to Arta, where he was apparently accepted as a halakhic authority, and remained there for the rest of his life. In 1534 he signed, together with the local rabbis, *takkanot* designed to preserve order and modesty in the town. He died apparently after 1536.

Vital was the son-in-law – and perhaps the pupil – of *David b. Ḥayyim of Corfu, whose responsa he collected and for which he prepared a table of contents. He corresponded on *halakhah* with many contemporary scholars, including Jacob Tam ibn Yaḥya (Responsa *Oholei Tam* in *Tummat Yesharim* (Venice, 1622), 81d–83d) and Meir *Katzenellenbogen of Padua, who writes eulogistically "that our father Abraham has in you a son of such caliber that if, God forfend, the Torah were to be forgotten in Israel, you could restore it through your dialectic" (Responsa Maharam Padua, no. 31).

Vital composed rhymed verse on halakhic and theological topics, which reveal his mastery both of Talmud and *posekim*, grammar and poetry. They include *Keter Torah* (Constantinople, 1536), a rhymed summary of the 613 commandments, in accordance with the enumeration of Maimonides, plus the seven rabbinical commandments (hence the title, the numerical value of *keter* being 620). He based himself upon the tradition that the 620 letters of the Ten Commandments hint at the 620 commandments. The work is regarded as a succinct commentary on the *Sefer ha-Mitzvot* of Maimonides, in that each commandment begins with Maimonides' formulation and concludes with an explanation of it, which sometimes even includes a reply to the critics of Maimonides. Another work is an alphabetic rhymed work on the examination of the lung of an animal after *sheḥitah* in accordance with the view of Maimonides, which appears as an appendix to the *Zivḥei Teru'ah* (Leghorn, 1872). *Mikhtam le-David* (Venice, 1546/7) is a composition intended to prove that the 13 Principles of the Faith are deduced from the *Shema* (translated into Latin by J.H. Wolf in 1726), to which are appended *piyyutim*, supplicatory prayers and poems, including a supplication consisting of 1,000 words, each word beginning with the letter "*he*." *Shirei David* (1882) is a work on grammar, the intercalation of the calendar, and some biblical expositions.

[Yehoshua Horowitz]

VITAL, ḤAYYIM BEN JOSEPH (1542–1620), one of the greatest kabbalists. Vital was born in Ereẓ Israel, apparently in Safed. His father, Joseph Vital Calabrese, whose name indicates his origin from Calabria, South Italy, was a well-known scribe in Safed (see responsa of Menahem Azariah da *Fano, no. 38). His son is also called Ḥayyim Calabrese in several kabbalistic works. Ḥayyim Vital studied in yeshivot in Safed, especially under Moses *Alshekh, his teacher in exoteric subjects. In 1564 he began to study Kabbalah, at first according to the system of Moses *Cordovero, although Vital did not call Cordovero his teacher. He was also attracted to other esoteric studies and spent two years (1563–65) in the practice of

*alchemy, which he later regretted. After Isaac *Luria's arrival in Safed, Vital became his principal disciple, studying under him for nearly two years until Luria's death in the summer of 1572. Later he began to arrange Luria's teachings in written form and to elaborate on them according to his own understanding of them. Vital tried to prevent Luria's other disciples from presenting their versions of his doctrine in writing, and he gathered around him several who accepted his spiritual authority. But he did not entirely succeed in his ambition to be the only heir to Luria's spiritual legacy and to be accepted as the sole interpreter of Lurianic Kabbalah. In 1575, 12 of Luria's disciples signed a pledge to study Luria's theory only from Vital, and promising not to induce him to reveal more than he wished and to keep the mysteries secret from others (*Zion*, 5 (1940), 125, and see another copy of the agreement in *Birkat-ha-Areẓ* by Baruch David ha-Kohen (1904), 61). This study group ceased to function when Vital moved to Jerusalem, where he served as rabbi and head of a yeshivah from late 1577 to late 1585. In Jerusalem he wrote the last version of his presentation of the Lurianic system. He returned to Safed early in 1586, staying there until 1592. According to tradition, he fell seriously ill in Safed around 1587; during his long period of unconsciousness the scholars of Safed are said to have bribed his younger brother Moses, who allowed them to copy 600 pages of Ḥayyim Vital's writings which were then circulated among a select group (according to a letter written by Shlomel Dreznitz in 1606, in *Shivḥei ha-Ari*).

In 1590 Vital was "ordained" as rabbi by his teacher Moses Alshekh. (The text of the ordination is published in *Sefer Yovel le-Y. Baer* (1961), 266.) He was in Jerusalem once more in 1593 and perhaps stayed there several years, returning to Safed from time to time. According to the tradition of the rabbis of Jerusalem, he moved from Jerusalem to Damascus; in any case, he was in Damascus in 1598 (*Sefer ha-Ḥezyonot* (1954), 87) and remained there until his death. For a time he served as rabbi of the Sicilian community there (*ibid.*, 92, 116). After a severe illness in 1604, his sight was impaired and at times he was even blind. During his final years a kabbalistic group gathered around him. Vital was married at least three times and his youngest son, Samuel, inherited his writings. While he was in Damascus, mainly between 1609 and 1612, Ḥayyim Vital assembled autobiographical notes which he called *Sefer ha-Ḥezyonot*, mainly stories and testimonies to his greatness, but also including his dreams and those of others; these form an important source for the study of the course of his life and the complexities of his soul. The work is preserved in his handwriting and was published by A.Z. Aešcoly (1954), from the autograph in the possession of Rabbi A. Toaff of Leghorn. From this work it is apparent that strained relations existed between Vital and Jacob Abulafia, one of the rabbis in Damascus, who doubted Vital's claims to be the sole interpreter of Lurianic Kabbalah. The early editions of *Sefer ha-Ḥezyonot* were published from fragmentary and corrupt copies, in Ostrog (1826) as *Shivḥei R. Ḥayyim Vital*, and in Jerusalem (1866) as *Sefer ha-Ḥezyonot*. Vital's epitaph was published in David Zion Laniado's *La-Kedoshim Asher be-Areẓ* (1935), 43. Besides his son, his other disciples in Damascus included Japheth ha-Miẓri, *Ḥayyim b. Abraham ha-Kohen of Aleppo, and Ephraim Penzieri. Many legends about Vital circulated even during his lifetime, and are preserved in *Toledot ha-Ari* and in the letters of Shlomel Dreznitz, first published in 1629 in *Ta'alumot Ḥokhmah* by Joseph Solomon *Delmedigo. In subsequent generations many other legends were added.

Vital was a prolific writer. His proficiency in exoteric subjects is attested by his ordination and by his rabbinical function in Jerusalem. However, few of his talmudic teachings have been preserved: one responsum from Damascus was published in the responsa of Joseph di *Trani (Constantinople, 1641 ed., 88c.) and ten halakhic responsa are included in Samuel Vital's *Be'er Mayim Ḥayyim* (Ms. Oxford Neubauer Cat Bod no. 832). His commentaries on the Talmud are extant, together with those of his son (in Ms. Guenzburg 283) and have been published at the end of every tractate of the El ha-Mekorot Talmud, appearing in Jerusalem since 1959. A complete volume of his sermons on esoteric subjects and popular Kabbalah is preserved in *Torat Ḥayyim* (unpublished Ms. in the written list of the collection of R. Alter of Gur, no. 286) and several of his sermons can also be found in Badhab Mss. collection 205, now in the Hebrew University, and in Columbia University (Ms. H533, foll. 150ff., New York). His *Sefer ha-Tekhunah* on astronomy was published in Jerusalem in 1866. His own manuscript of his major work on practical Kabbalah and alchemy was extant in the Musayoff collection in Jerusalem in 1940.

According to his son, Vital assembled his major writings into two vast works *Eẓ ha-Ḥayyim* and *Eẓ ha-Da'at*. The former is the inclusive name for all those writings in which he elaborated on the teaching of Isaac Luria. These works went through several versions and adaptations, for Vital began to arrange what he had heard from Luria immediately after his death, and, according to Meir *Poppers, remained absorbed in this task for more than 20 years. This first edition of *Eẓ ha-Hayyim* was organized into eight sections, called "gates" (*she'arim* in Hebrew). "Gate" one contains everything in Luria's own handwriting that Vital could find; no published version of this "gate" exists but it was preserved in several manuscripts (see G. Scholem, in: KS, vol. 19 (1942–43), 184–96); "Gate" two, *Sha'ar ha-Hakdamot*, includes the doctrine of emanation and the creation of the world; in "Gate" three, *Sha'ar Ma'amerei Rashbi ve-Razal*, Vital's commentaries on the *Zohar and on talmudic tractates according to Lurianic principles are arranged; "Gate" four, *Sha'ar ha-Pesukim*, contains commentaries on all parts of the Bible; "Gate" five, *Sha'ar ha-Kavvanot*, covers mystical customs and meditations on prayers; the reasons for the *mitzvot* according to the order of the sections of the Torah are set out in "Gate" six, *Sha'ar ha-Mitzvot*. "Gate" seven, *Sha'ar Ru'aḥ ha-Kodesh*, deals with meditation, customs, acts of magical contemplation (called "unification," *yiḥudim*), the *tikkun* of sins, and the principles of physiognomy; "Gate" eight, *Sha'ar ha-Gilgulim*, covers the doctrine

concerning the soul and its transmigrations. The first version (*mahadurah kamma*) remained in Damascus with Vital's son, who did not permit it to be copied for many years. He himself reedited and rearranged the *Shemonah She'arim* and this version was widely circulated from around 1660. The Middle Eastern kabbalists, especially those in Palestine, considered this the most authoritative version of Lurianic Kabbalah, and some confined their studies to this version only. In Samuel Vital's version of the *Shemonah She'arim* the first "gate" was cut out and its contents dispersed throughout the rest of the work, mainly in the third "gate" which was then divided into two, *Sha'ar Ma'amerei Rashbi* (on the Zohar) and *Sha'ar Ma'amerei Razal*. For 200 years this edition circulated in manuscript form only, being copied by many scribes and kabbalists. Finally the work was printed in seven volumes in Jerusalem (1863–98) with the support of the kabbalists of the Bet-El yeshivah. A new and revised edition was published in Tel Aviv (1961–64). A magnificent manuscript written in large letters, which served as the paradigm for other copies, is preserved in the National Library in Jerusalem (4ø674, three folio vols.). So that it might have greater authority, this manuscript, which was actually written in the late 17th century, had false dates added to it to make it appear that it was copied in Aleppo and Damascus in 1605.

The copies of Ḥayyim Vital's works which circulated during his lifetime among the kabbalists in Palestine were not arranged in good order. Around 1620 Benjamin ha-Levi and Elisha Vestali (or Gastali) assembled them into a three-volume edition. This, too, was not printed but was very popular in subsequent generations. It included *Sefer ha-Derushim*, mainly composed of material belonging to *Sha'ar ha-Hakdamot* and *Sha'ar ha-Gilgulim; Sefer ha-Kavvanot*; and *Sefer ha-Likkutim*. Vital's writings first reached other countries in this edition, which is extant in several libraries. The torn and tattered pages of the "last version" (*mahadurah batra*) which Vital arranged in Jerusalem were discovered by Abraham *Azulai and his colleagues, apparently shortly after 1620, in a *genizah* in Jerusalem. From these writings Jacob *Ẓemah arranged several books, such as *Oẓerot Ḥayyim* (Korets, 1783), *Adam Yashar* (1885), and *Olat Tamid* on meditations in prayers (1850). Another version of Vital's system which corresponds to the *Sha'ar ha-Hakdamot* was discovered and published as *Mevo She'arim* or *Toledot Adam*. His grandson, Moses b. Samuel Vital, reports that he found the author's own manuscript in Hebron (Ms. British Museum, Margoliouth CMBM no. 821). Copies reached Italy in the middle of the 17th century, but it was first published in Korets in 1783. Parts of the beginning of the work are missing in both the printed and manuscript editions, but a complete version was still extant in Jerusalem in 1890, and was also preserved in the collection of Isaac Alter of Gur.

From all the previous editions that reached the Jerusalem kabbalists, Meir Poppers, the disciple of Ẓemaḥ, arranged the final edition of Vital's writings, which was completed (according to testimony in some of the copies) in 1653. All matters pertaining to the *Sha'ar ha-Hakdamot* were arranged in *Sefer Derekh Eẓ Ḥayyim*, in five major sections and 50 sub-sections including the "first version" and the "last version" and even at times other versions (third and fourth), side by side. This book alone was given the name of *Sefer Eẓ Ḥayyim* when it was published in Korets in 1782 by Isaac Satanov (of Moses *Mendelssohn's circle). The best editions are those published in Warsaw (1890) by Menahem Heilperin, and Tel Aviv (1960), by Y.Z. *Brandwein. Everything pertaining to matters of prayer and mystical meditations (*kavvanot*) was arranged in *Sefer Peri Eẓ Ḥayyim* in four sections: *Kavvanot*; the reasons for the *mitzvot* (*Ta'amei ha-Mitzvot*); *Tikkunei Avonot*; and *Yiḥudim*. The section on mystical meditations alone was published under the name *Peri Eẓ Ḥayyim* (Dubrovno, 1803). The book which was published earlier under this name in Korets in 1782, is not based on Poppers' edition but was a separate adaptation by his colleague Nathan Shapira called *Me'orot Natan*. The third and fourth sections were published together under the name *Sha'ar ha-Yiḥudim* and *Tikkun Avonot* in Korets in 1783. All material pertaining to other matters was arranged in *Sefer Nof Eẓ Ḥayyim* in four sections: *Perushei ha-Zohar; Perushei Tanakh; Perushei Aggadot*; and *Gilgulim*. A complete manuscript of this work is found in Oxford (Neubauer, Cat Bod no. 1700). The first section was never published in this form; the second section (which also included the *ta'amei ha-mitzvot*) was published as *Likkutei Torah Nevi'im u-Khetuvim* (Zolkiew, 1773); an incomplete version of the third section was published as *Likkutei Shas* (Korets, 1785); and the fourth section was published earlier than all Vital's other works as *Sefer ha-Gilgulim* (Frankfurt on the Main, 1684). A version in 70 chapters revised according to Nathan Shapira's version was published in Przemyśl in 1875. Hence it is clear that Vital's writings exercised their main influence on kabbalists through manuscript copies, despite the fact that all his works were later published several times. In a few places in Palestine, Turkey, Poland, and Germany, Vital's writings were copied wholesale. *Sefer ha-Kavvanot* (Venice, 1620) was merely an abridgment and adaptation of one of the copies which circulated in Palestine during Vital's lifetime. The major part of the first section on *Perushei ha-Zohar* was published as *Zohar ha-Raki'a* (Korets, 1785).

In all these works Vital's presentation is dry and matter of fact, quite unlike the flowery language common in his day. In one place in *Sefer Eẓ Ḥayyim* (39:16) he inserted an adaptation from Moses *Cordovero's *Pardes Rimmonim* without mentioning that it was not Luria's teaching. In most parts of the *Shemonah She'arim* Vital added statements from Luria's other disciples, mainly on matters which he himself did not hear directly, but he rarely mentions them by their full names. Vital was most exact in transmitting Luria's teachings, pointing out on many occasions that he could not remember exactly, or that he had heard different statements on different occasions, or that he had forgotten. It would seem that on first hearing them he recorded many statements in copybooks and notebooks which were occasionally cited. He also presents some

statements of which he admits that he cannot recall their meaning. Indeed, his works include more than a few contradictions, some of which have their source in his teacher and others in the development of Vital's views while he was editing. These contradictions gave rise to a kind of "*pilpul*" literature on Vital's statements comprising many volumes.

Before his association with Luria, Vital wrote a commentary on the Zohar according to the system of Cordovero, to which he later added occasional remarks alluding to Luria's views. Discovering this commentary in Jerusalem, Abraham *Azulai inserted it in his compilation, *Or ha-Ḥammah* (1896–98). Vital's affinity to Cordovero's teaching can also be recognized in his second major work, *Sefer Eẓ ha-Da'at*, only parts of which are extant. It apparently included commentaries on most of the books of the Bible, but what he calls *peshat* ("the literal meaning") and *remez* ("the allegorical meaning") are in many cases Kabbalah, although closer to the literal meaning of the Zohar. According to one testimony, he began this work as early as 1563 at the age of 20, but according to another he wrote it in 1575. Chapters 2 and 6 of this work were preserved in his own handwriting in the collection of R. Alter of Gur (no. 185; dated 1575). His commentary on Psalms was published from this manuscript, *Sefer Tehillim* (1926). The part on the Torah was published as *Eẓ ha-Da'at Tov* (1864). The second part, including various eulogies, sermons for weddings, circumcisions, on repentance, and commentaries on Proverbs and Job, was published in Jerusalem in 1906 from a manuscript preserved in the kabbalistic yeshivah Bet-El. Vital himself arranged various editions of this work. In addition to these works, he also wrote moralizing tracts; the most important, *Sha'arei Kedushah*, was first published in Constantinople in 1734 and many times afterward. His work *Lev David* was published from his own manuscript by H.J.D. *Azulai (Leghorn, 1789) and several other times. It is assumed that in addition to these works Vital wrote many pamphlets on Kabbalah not included in the printed editions, such as *Hakdamah Kodem Derush Mayim Nukvin* quoted by his son and partly published in the introduction to Meir *Bikayam's *Me'ir la-Areẓ* (Salonika, 1747). Of doubtful attribution is *Goral Kodesh*, on geomancy according to the Zodiac (Czernowitz, 1899). *Arba Me'ot Shekel Kesef* (Korets, 1804) is apparently an extract from Vital's known works with additional autobiographical remarks and allusions to other works but it is highly doubtful that Vital could have written them. The book purports to be written in 1615 but it cites names of later versions arranged by Benjamin ha-Levi and Ḥayyim Ẓemaḥ. It would seem that in fact it was written in the second half of the 17th century, and was known in Morocco in the early 18th century. A scroll containing descriptions of the celestial worlds of the Kabbalah written by Vital and brought from Damascus was found in Yemen, and in 1858 was sold to the traveler Jacob Saphir (*Sefunot*, 2 (1958), 270). Writings of Israel *Sarug, such as *Limmudei Aẓilut* and a commentary on *Sifra di-Ẓeni'uta* (1897), were erroneously attributed to Vital. Vital was also interested in early kabbalistic literature, although he hardly used it in his works. His anthology of early works was found in his own handwriting as late as 1930 in Tunis (Ms. Tanuji). His son Samuel's copy is preserved in manuscript in the Jewish Theological Seminary in New York.

Although he possessed no truly creative powers, Vital was one of the most important influences on the development of later Kabbalah, attaining this position as the chief formulator of the Kabbalah of Luria. No thorough study of his personality and activities has yet been attempted.

Benayahu, in; *Sinai*, 30 (1952), 65–75; idem, *Sefer Toledot ha-Ari* (1967), index; D. Tamer, in: *Tarbiz*, 25 (1956), 99f.

[Gershom Scholem]

VITAL, SAMUEL BEN ḤAYYIM (1598–c. 1678), kabbalist, youngest son of Ḥayyim *Vital. Vital grew up in Damascus where he studied under his father and other rabbis. He married a daughter of Josiah *Pinto. Vital was considered among the important talmudic authorities of Damascus. For many years he reedited his father's writings and added many of his own annotations (which begin *Amar Shemu'el*: "Samuel said"). Many kabbalists went to Damascus to study these writings at his home, but they were not given permission to copy them. From 1650 on Samuel prepared copies, some of which have been preserved. Around 1664 he went to Cairo where he served as rabbi. He was in close contact with the wealthy Raphael Joseph Chelebi. During the heyday of the Shabbatean movement (in 1666), he was responsible for the *tikkun* of repentance of the faithful in Egypt, "going about fasting, praying, and practicing flagellation from the beginning of these events." A protocol on his exorcism of an evil spirit (**dibbuk*) in the summer of 1666 was published at the end of *Sha'ar ha-Gilgulim* (1903), fol. 77–78.

Samuel's writings include: *Ḥayyim Shenayim Yeshalem* (Ms. Guenzburg 283), his own and his father's novellae on the Talmud, the Shulḥan Arukh, *Sifrei ha-Levush*, and *Maimonides. The novellae appear in the Vilna edition of the Talmud, published in Jerusalem; *Be'er Mayim Ḥayyim*, responsa, is arranged according to the dates of the replies, in the handwriting of the author (MS. Oxford 832; *Ha-Maggid*, 15 (1871), 45). In his introduction to the responsa Samuel also mentions *Sha'ar ha-Shamayim*, a collection on astronomy and astrology, and *Ta'alumot Ḥokhmah*, amulets, practical Kabbalah, and incantations – which have been lost; *Toẓe'ot Ḥayyim*, sermons on the Torah, was written between 1630 and 1648. The author's own manuscript copy from 1674 is found in the Alliance Israélite Universelle Library, Paris, 128. The author's copies from previous years were in the library of the rabbi of Gur, 284 and 285; *Mekor Ḥayyim* (Leghorn, 1792), sermons for the new moon (Rosh Ḥodesh), was completed in 1649; *Ḥokhmat Nashim* (Badhab MS. 112, Jerusalem), on the laws of divorce, was completed in 1659; *Ḥemdat Yisrael* (Munkacs, 1901), on the *kavvanot* ("intentions of prayers") according to Isaac *Luria,

was completed in 1663, apparently still in Damascus; another part of *Ḥemdat Yisrael*, still in manuscript (in the library of the rabbi of Gur), contains special prayers for epidemics and locust plague, and also *piyyutim*.

[Gershom Scholem]

VITAL STATISTICS.

Introduction

GENERAL EXPLANATION. Population changes reflect the natural facts of life: births and deaths. Births, in turn, have long been largely governed by the mechanisms of family formation. Vital statistics are compilations of data on marriage, divorce, birth, and death. Births and deaths directly determine changes in the size of a population; marriages and divorces create and dissolve, respectively, the conditions under which most births occur. The surplus of births over deaths is called natural increase; under unfavorable demographic conditions, deaths may exceed births, in which case a natural decrease occurs.

Vital events constitute one of the components of population dynamics; the others are migration and, for a group like the Jews, adhesion and withdrawal. In a "closed" population, unaffected by migrations and by adhesions or withdrawals, the numerical evolution depends entirely on the balance of births and deaths. The natural increase (or decrease) is indeed of fundamental importance for the future of any population, but the migratory changes may counteract the vital balance for some time. For example, despite strong natural increase, there was probably no growth in the total number of Jews in Eastern Europe at the beginning of the 20th century because of extensive emigration, mostly to America. On the other hand, among Jewish populations in Central and Western Europe throughout the 20th century prevailing natural decrease was outweighed or at least compensated by a positive migratory balance.

The figures of vital events in any population are strongly affected by its age composition. In a population containing a very large proportion of young adults, as may be the case where there has been large immigration, birth figures may be high in spite of a modest level of fertility (for definition of this term, see measurement, below); on the other hand, under conditions of advanced aging frequently found at present in Jewish populations, actual death figures may be high even though the specific mortality in each age group is comparatively low. All these factors need to be considered in evaluating the causes and consequences of population trends. The age composition of a population at any specific time is itself the result of the demographic dynamics of preceding decades: unless migratory influences or adhesions/withdrawals were particularly conspicuous, it largely depends on past fertility. A prolonged decrease in births leads to the aging of a population. In the early phases of aging the proportion of children decreases while that of all adults, including the adults of procreative age, increases. This in turn tends to sustain the crude birth rate while deaths of children will be relatively fewer per 1,000 of the population (which may reduce the crude death rate especially if child mortality is still conspicuous). In later phases of aging, the proportion of elderly and old persons in the population grows, and consequently, the crude birth rate is depressed and the crude death rate rises. Age composition thus intervenes as both the consequence and the cause of the frequency of vital events in a population.

MEASUREMENT. Absolute figures of births, deaths, etc., are important for calculating up-to-date estimates of population size and for planning such social services as schools, hospitals, etc. For demographic analysis, it is necessary to consider the frequency of vital events in relation to the population in which they occur. The resulting figures are called demographic rates. "Crude" rates usually indicate the frequency of vital events per 1,000 of mean population in a specified year. The commonly mentioned "birth rate" and "death rate" are of this nature. Crude rates make no allowance for age and sex composition of a population. Consequently, if this composition is markedly distorted, crude rates are liable to lead to misconceptions about the intrinsic demographic situation. Unfortunately, crude rates are often the best available information on vital events among Jewish populations, especially prior to the last few decades.

To overcome the shortcomings inherent in crude rates, age-sex specific rates are calculated to show correctly the frequency of vital events in any specified age-sex group of the population during a certain period. These rates can be synthesized by the use of appropriate techniques. Demographic indicators thus obtained – e.g., "fertility rates" for the measurement of reproduction and "mean life expectancy at birth" for the measurement of mortality – are unaffected by peculiarities in the age-sex composition of any population. They depend, however, on the availability of data broken down by small age groups and by sex, with regard to both the total population and the persons involved in the given vital events (such as the women giving birth, the deceased, etc.). Under present conditions of documentation on Jewish vital statistics, such data are only very partially available. In addition, if the absolute numbers for vital events are broken down by age and sex, very small figures, which are liable to irregularities, result in all but the larger Jewish populations. It is also possible to calculate "standardized rates," assuming, for the sake of comparison, the same age distribution for several demographic groups, e.g., the Jews and the general population of the respective country. The concept of "fertility" relates the births not to the entire population of both sexes and all ages but to the women of reproductive age. It means basically, the number of children born, on the average, to women throughout their reproductive period.

SOURCES. Vital statistics on Jews in Diaspora countries come from either official or Jewish sources. Official statistics of this kind now exist only for a minority of the Jews in Diaspora countries. Data on vital events either come from current statis-

tics reflecting the administrative registration of births, deaths, etc., or are obtained from censuses and surveys. In the latter instances, some of the relevant information may be derived from retrospective questions on age at marriage of the persons ever married, on the number of children born to the enumerated women, etc. Under present conditions, current vital statistics from Jewish sources tend to reflect the frequency of religious functions, such as weddings, divorces, circumcisions, and burials, rather than give a full demographic picture, because some Jews recur to civil ceremonies alone.

DEMOGRAPHIC TRANSITIONS. The widely prevalent descriptive model of the demographic transition divides the modern evolution of the populations of the technologically advanced countries into four stages. In the first stage, which represents the conditions of the past, both fertility and mortality were very high, so that only limited natural increase could materialize. In stage two, which fell mainly into the 19th and early 20th centuries, mortality declined, while fertility continued to be high; considerable natural increase resulted, and the respective populations grew rapidly. In stage three fertility also declined due to the diffusion of birth control; population growth consequently diminished, with a low being reached in the 1930s. The fourth stage – in the context of a generally moderate or low mortality level – resulted in repeated upward and downward fertility fluctuations (such as a "baby boom" in some Western countries and an ensuing "baby bust") reflecting response to changing circumstances. Eventually fertility subsided again, yet maintained itself at somewhat different levels in different countries. In Europe, stages two and three did not begin at the same time in the various countries but spread, on the whole, from west to east. Even within the same country, the timing of the changes differed according to social group and geographical location: the educated, well-to-do, and urban elements were involved earlier than the other groups. By 1970 nearly all the populations in the developing countries of Asia, Africa, and Latin America had entered upon stage two which expresses itself by a "population explosion," and some had already entered upon stage three. By 2000 all countries were moving through one or another stage of demographic transition. Significantly, a fifth stage had emerged mostly among European societies, showing a negative balance between birth and death rates and reflecting a progressive aging of age composition.

It is noteworthy that the Jews of Europe preceded the general population of the respective countries in effecting the transition from stage one to two, lowering mortality, from stage two to three, adoption of family planning, from stage three to four, fertility response to changing environment, and from stage four to stage five, population erosion due to a negative balance of births and deaths. In this, as well as in the subsequent developments, the Jews intensively displayed the characteristics of the social and ecological strata in which they were largely concentrated – the educated and urbanized, with a tendency to white-collar occupations. Besides these compositional effects, additional and more specifically Jewish determinants in the cultural and socio-psychological realm played an important role in the demographic evolution of the Jews.

Mortality

The limited data available from some European cities in the 18th century give the impression that Jewish mortality was already declining. There is ample documentation to show the systematic decline of Jewish mortality all over Europe throughout the 19th century, though there was some time lag between this development among the Jews in the countries of Central and Western Europe, on the one hand, and of Eastern Europe, on the other. In any country of Europe and at any time during the 19th century, the crude death rate of the Jews was almost always lower than that of the entire population of the respective country (see Table 1). This was largely

due to the reasons adduced above for the peculiar position of the Jews in the framework of modern demographic transitions: their concentration in towns and particularly in large cities, which by the 19th century in Europe had better hygienic conditions and health services than rural areas; their higher educational level; and their other socioeconomic characteristics. Additional cultural factors, that were specific to the reduction of mortality, may have included the hygienic influence of the observance of some traditional Jewish precepts in the selection and preparation of food, washing of hands, and ablutions, etc.; the rarity of venereal diseases and alcoholism among Jews; the comparative frequency of physicians among them; and perhaps also greater attention to health and especially to the health of children, the reduction of whose previously high mortality was a major feature in the overall improvement of the mortality situation. The differentials in the death rate of Jews and non-Jews were smaller for towns than for entire countries where the non-Jewish rural population is included in the comparisons.

The differentials between Jews and non-Jews were sometimes particularly conspicuous with regard to infant mortality (see Table 2).

Comparing cause-of-death distributions and morbidity patterns of Jews and non-Jews in the 19th and early 20th centuries, one finds lower proportions of infectious diseases and diseases of the digestive system among the Jews. An often observed difference was the lower frequency of tuberculosis among Jews.

During the Holocaust, Jewish mortality in Europe was on an altogether catastrophic scale: the majority of Jews there perished. The age groups most affected were the old and the very young. The deficiency of persons whose childhood coincided with the Holocaust period continues to make itself felt in the age distribution of European Jews. It was aggravated by a great reduction in Jewish births before, and even more so during the persecutions.

While the Jews in Europe and in technologically advanced countries of other continents preceded their neighbors in the reduction of mortality, the majority of populations closed the gap in the course of time and the respective differentials narrowed substantially. This had already happened in some cities and countries even before the Holocaust. Because of the increasing aging of many Jewish populations, these developments cannot be studied properly from crude rates, and more refined methods must be resorted to. In particular, it has been possible to calculate the mean life expectancy at birth which is based on age-specific rates and not affected by the actual age composition for several Jewish populations. In recent decades, the life expectancy of Jews in advanced countries has been growing by about one year of life every five calendar years, and around the year 2000 it reached 80 years for women and 75 years for men. Although only little different from that of the general population in the corresponding countries or cities, a tendency for infant mortality to be lower among Jews persisted. On the other hand, crude mortality rates of Jews considerably exceed those of the respective general populations, mainly due to the overaged composition of the respective Jewish groups.

The Israel population census of 1961 was instrumental in furnishing information on the mortality conditions of the Jews in Asian and African countries. The census contained a question addressed to women who were ever married: "How many of their children born abroad before immigration to Israel died below the age of 5?" The available data provide relevant information for the participants in the mass migration of 1948–54 (see Table 3). Child mortality among the Jews was still very high in Yemen but reached various stages of decrease in other countries of major Jewish residence in Asia and Africa. Younger women had been affected by lower child mortality than older women, whose experience stretched back into earlier decades.

In Palestine, Jews achieved a remarkable reduction of mortality during the Mandatory period (1918–48), largely due to the strong immigration of European elements and the establishment of active and highly qualified health services. In the latter part of the 1940s, the Jewish population in Palestine was already counted among the very advanced in the world insofar as lowering of mortality was concerned. Some temporary setback, especially in infant mortality, was caused by the mass immigration of Jews from less developed countries in Asia and Africa in the early years of the State of Israel, but it was overcome with astonishing speed. The whole Jewish population had a mean life expectancy in excess of 70 years for females since 1951, and for males since 1959.

Marriage and Divorce

Among the European Jews in the past, as far as is ascertainable from available information, marriage was widespread. Few people did not marry at all unless prevented by official restrictions. Persons of both sexes contracted their (first) marriage at a rather early age. Though high mortality led to frequent instances of widowhood, this was often followed by remarriage, especially of men. In this case, the average age difference between spouses was greater than in the first marriage. Women used to spend a very large proportion of their reproductive years in married life, and this favored high fertility. In addition, there was hardly any out-marriage. Among the Jews in Europe and later among Jews of European origin who settled in America and in other areas of immigration changes developed in this traditional marriage pattern in the course of time. These changes were connected, among other things, with the spread of secularization and the modern complexion of Jewish life. There emerged some tendency for a larger proportion of Jews to remain unmarried which was already particularly marked in Central and Western Europe between the world wars and has again become conspicuous since the 1970s. There was also a systematic rise in age at first marriage, very clearly shown by retrospective census data on the large body of European Jews, mainly from Eastern Europe, who settled in Israel (see Table 4). Between the world wars, Jews in Central and Eastern Europe already had a higher marriage age than the general population of the respective countries. In the United States, Jews participated in a general reduction of the marriage age, but according to an official sample survey of 1957, their median age at first marriage was somewhat higher than among the rest of the population. It is obvious that these trends among Jews of European origin, namely the increase in the proportion never married and in marriage age, were bound to have a depressing influence on fertility levels.

A major trend in the modern marriage pattern of Diaspora Jews is the increase in out-marriage. Because of the inconsistency in the use of words like *intermarriage* and *mixed marriage* the term *out-marriage* will be used here for all unions in which only one partner is, or was, a Jew. The statistical information available on this topic has been scanty and unsatisfactory because of both the paucity of sources and difficulties in measurement. In relation to measurement, it should be noted that most available data reflect the religious diversity of marriage partners at a specified time while ignoring previous diversity that was overcome by change of religion on the part of one of them. Therefore, the data tend to give an underestimate of the real extent of out-marriage among Jews. There are two main types of sources: statistics of current weddings and statistics of couples in the population as ascertained by censuses or surveys. Because of the rising trend of out-marriages, their proportion is higher in the data derived from the former source.

An increase in out-marriage among Jews was observable in European countries of strong Jewish assimilation and in immigration countries overseas as early as the 19th century. Out-marriage reached considerable proportions in some larger Jewish populations of Europe between the world wars. Since World War II, a rise in the proportion of out-marriages has been noticeable among the Jews in Europe, America, South Africa, and Australia. There are, however, great differences in the actual extent of out-marriage. While it spells the disintegration of some smaller Jewish groups in Europe where most marrying Jews contract out-marriages, it used to be much more limited in America until the early 1960s (see Table 5).

Main Sources: Compilations contained in the publications listed in the Bibliography. The data are official ones, except for those on "all existing couples" in the Netherlands and Italy which were obtained through Jewish-sponsored population surveys.

Since then it has been on the increase there also, as shown particularly by current country-wide data from Canada, by intergenerational comparisons made from data of local Jewish community surveys in the United States, and especially by the National Jewish Population Surveys of 1970, 1990, and 2001. The proportion of recorded out-marriages was generally higher among Jewish men than Jewish women, but over time the gap has narrowed.

The basic causes of out-marriage are the growing interaction of Diaspora Jews with surrounding society, the weakening of religious links and of ethnic identity, and assimilation. There are also contributory demographic factors: the limited size of many Jewish populations, especially after the Holocaust; the increased geographical dispersion of the Jews; and distortions in the age-sex composition of Jewish populations which themselves are partly connected with their smallness as well as with the aftereffects of the Holocaust and other factors. It is noteworthy that even before the middle of the 19th century in America and in the early part of this century in Australia, a marked tendency toward out-marriage prevailed in the then small Jewish populations but its frequency greatly diminished after the arrival of large waves of new Jewish immigrants. Similarly, it is found that at present out-marriage among the Jews of a given country is more frequent in localities or regions with fewer Jews.

Out-marriage is of great importance to the demography of the Jews. It often spells demographic losses through the drop-out of out-marrying Jewish spouses or of the children of such marriages. The direct statistical information available on the balance of demographic losses and gains occasioned by out-marriage generally indicates a loss to the Jewish side in Western and Eastern Europe and in the United States. The affiliation balance may turn in favor of the Jewish community in the case of some Latin American countries such as Mexico or Venezuela where the incidence of out-marriage is quite low.

Conversions to Judaism prompted by marriage pose problems of identity in the present and following generations. Some data on ex-Jews and persons of mixed (Jewish and non-Jewish) origin are available from Germany. In relation to 100 infants born to all Jewish couples including the out-married, those with only one parent whose religion was recorded as Jewish were 13 percent in Prussia during 1925–28 and 51 percent in West Germany during 1951–64 (both figures do not include illegitimate births by Jewish women). According to the Nazi census of 1939, 307,600 persons of Jewish religion were enumerated in Germany, Austria, and the Sudeten region, but there were a total of 330,600 "Jews according to race" and another 112,600 "mixed" persons with one or two Jewish grandparents of whom only 7,200 were Jews by religion. From the accession of the Nazis to power in Germany until that census (1933–39), the number of Jews by religion had dropped to less than one-half in the enumerated areas, mainly through emigration. It may be assumed that the relative extent of emigration was smaller for the other categories of persons with one or two Jewish grandparents. It might be roughly conjectured that their number corresponded to about one-quarter of the Jews by religion at the beginning of the 1930s.

Glimpses of the traditional marriage patterns of the Jews in Asia and Africa are found in Israel statistics, particularly in the data of the 1961 population census (see Table 6). First marriages had been practically universal and occurred at an early age, especially among the girls, and remarriage was frequent, primarily because of the rather high mortality. Among the

Asian-African Jews enumerated in Israel in 1961, the proportion of individuals who had married at an early age was particularly high among those married in Yemen. Yet, the Israel data also show some rise in the age of Asian and African Jews at first marriage in the period prior to the mass migration to Israel and a higher marriage age among the better educated. Out-marriages were apparently rare among the Jews in Asia and Africa. In Mandatory Palestine and Israel, virtually all Jews have been in the habit of marrying, including those of European origin. The marriage age of the Jews from Asia and Africa went up, especially among women; the marriage age of the Jews from Europe, on the other hand, somewhat dropped and a tendency clearly emerged toward standardization of the respective patterns of all Jews in Israel. Out-marriage was rare in Israel until the arrival of a substantial number of non-Jewish immigrants in the framework of the major exodus from the former Soviet Union after 1989.

Data on Jewish divorces can be obtained from statistics reflecting current registration of such events or from information supplied by censuses and surveys on the composition of a Jewish population according to marital status. Sources of the latter kind usually show a higher proportion of divorced persons among women than among men, because of the greater tendency of men to remarry. In comparing the frequency of divorce among Jews and the general population of a country in the Diaspora, the religious orientation of the latter and prevailing legal arrangements must be taken into account. The Roman Catholic Church does not permit divorce, whereas it is not infrequent in Muslim societies. In some countries a status of separation is recognized. For an assessment of the relative frequency of divorce among the Diaspora Jews of European origin, their urbanization and socioeconomic stratification must be taken into consideration. The data available point to an increase in divorce in the Jewish populations of Europe and America during the 20th century but there were considerable differences between various countries in the actual proportion of divorced Jews. There also were marked differences between countries in the relative frequency of divorce among the Jews and among the general population, respectively. In Canada, an increase in the proportion of divorced Jews occurred from 1931 to 1961, and the Jews there had somewhat higher proportions of divorces than the general population. In the United States, considerable differences emerged in the extent of divorce among Jews according to the data available from local studies. The overall prevalence of divorce was lower among Jews than among the total U.S. population, but over time Jews tended to close that gap. Divorce was not rare among the Jews in Asia and Africa.

Births

Data on birth and on fertility can be derived either from current statistics, based on registration of the births that take place, or from censuses and surveys. In the latter case, retrospective questions may be asked about the children born to each woman. Failing such a specific inquiry, the sex-age distribution obtained from a census or population survey permits calculation of the "fertility ratio" also called "child-woman ratio" which is the ratio of the number of young children alive to the number of women of reproductive age. For improved measurement, child mortality up to the date of enumeration is accounted for. The average number of children living in each family is a rough indication obtainable from censuses. The ratio between the number of 0–4-year-old children and that of 5–9-year-old children shows recent changes in the frequency of births.

In Europe, the birth rate of the Jews was, on the whole, high in the past. As early as the first half of the 19th century, however, birth rates found among the Jews were somewhat lower than those among the general population in some countries and cities of Central Europe. In large parts of Eastern Europe, the birth rate of the Jews continued to be very high and similar to that of the respective general populations until near the end of the 19th century.

The Jews preceded the general population of their countries of residence in the reduction of natality and in the adoption of family planning through birth control methods. The

reasons for this differential may be the above-mentioned greater concentration of Jews in those social strata which, in general, reduced births more rapidly such as the urban, were better educated, engaged in white-collar occupations; the fact that mortality of the Jews went down more rapidly causing Jewish families to experience the economic pressure exercised by the survival of more children at an earlier date; possibly also the greater concern of Jews for the proper upbringing of their children, as well as the eagerness of Jews for upward social mobility, and other related factors.

The decrease in Jewish births was a gradual process. In some countries, however, it proceeded rather quickly. In Europe, this development spread, on the whole, from west to east. As early as the eve of World War I, there were cities in Europe where the Jewish birth rate had dropped so low that it was barely able to balance the current deaths. This situation intensified in the 1920s and became still more acute and widespread during the general slump in births in the 1930s when the economic and political crisis was aggravated for the Jews in Europe by ever more menacing manifestations of antisemitism. In North America as well, the high fertility of the Jewish immigrants from Eastern Europe quickly gave way to drastic birth limitation. Retrospective fertility data, subsequently obtained in the United States and Canada, show that Jewish women who had spent their most fertile years during the 1930s and early 1940s had borne, on the average, less than two children – not enough for demographic replacement. Then the Shoah overtook European Jewry; births became rare and most young children perished.

After World War II, Jews in Western Europe, America, and Australia participated in the "baby boom" characteristic of those years. The survivors in Europe had the special reason of wishing to reconstitute their families. However, this upsurge of natality among the Jews was rather short-lived. In the United States by the late 1950s and in Western Europe by the early 1960s it was followed by another decline in births. In Eastern Europe, barely any postwar birth-rate recovery emerged. The ensuing data from all over the world show that natality and fertility were lower among Jews than among the general population of their respective countries of residence. This can be seen from decreasing absolute figures and crude birth rates, as well as from the age breakdown of Jewish children (the ratio of 0–4-year-olds to 5–9-year-olds), according to censuses and surveys. It is true that the age structure of the Jewish adults was unfavorable to current births, because the prospective mothers belonged to the comparatively small cohorts born during the great slump in births of the 1930s. But when the age composition turned to be more favorable to Jewish natality for a while as the comparatively large cohorts born during the "baby boom" around 1950 were reaching procreative age, the expected rise in the Jewish birth rate did only partially materialize. Fertility indicators which are less affected by the actual age composition, also pointed to a decline in Jewish fertility. Indeed, birth rates and fertility levels also registered declines in the general population of many technologically advanced countries during the 1950s or 1960s, and even more significantly during the 1970s. Low fertility levels, anticipated by Jewish populations, lead nearer to, or aggravate, insufficient demographic replacement all across developed countries.

There are variations in the actual levels of fertility and natality of Jews throughout their global geographical dispersion. Yet these levels are universally rather low when assessed as a source for the growth, or even for the mere maintenance, of Jewish population size. The present low fertility of the Jews in most Diaspora countries is a major cause of concern for the demographic future of large sections of the Jewish people.

Among Jews of European origin in Mandatory Palestine and Israel, there was a rapid decline in fertility in the 1920s and 1930s to a low at about 1940. Yet the crude birth rate remained substantial because of the comparatively young age composition of this immigrant population. There, too, a "baby boom" was followed by a renewed drop in fertility; however, fertility remained above replacement level. It is noteworthy that the European Jews who immigrated after the establishment of the State of Israel increased their fertility from its level abroad, which was quite insufficient for demographic replacement, to a level which, though moderate, was sufficient for this end.

The Jews of Asia and Africa used to have high fertility in their countries of residence. Retrospective data from Israel on fertility of immigrants abroad prior to immigration show that women gave birth to six or seven children on the average. Though differentiation of fertility according to educational level of women had already set in, the great majority of women had not attended school or had reached only low educational attainment and were very prolific. Jews in Egypt and Turkey had markedly lower fertility, just as they differed in socioeconomic status from other Asian-African Jews. The overwhelming majority of the Jews from Asia and Africa moved to Israel or to France and other countries of Europe and America. Israel data show a rapid fertility decline throughout the 1950s, 1960s, and 1970s under the influence of the new surroundings, and similar developments took place in other countries where the socioeconomic status of Jewish migrants from Asia and Africa was generally higher than that of their peers who had moved to Israel.

Illegitimate births, insofar as statistical data are available, were on the whole less frequent among Jews than among the respective general populations. However, percentages of such births recorded from Central Europe in the period between the world wars and again in recent decades were not negligible. An altogether different matter was the lack of an officially recognized status for many religious Jewish marriages in some parts of Eastern Europe, which led to the offspring of such unions being registered by the authorities as "illegitimate."

Natural Increase

In the past, mortality, and especially child mortality, was so high as to almost offset high fertility; as a consequence, natural increase was small and population growth was slow. On the

whole, this may also be presumed to have been the situation of the Jews before the modern demographic evolution. As mortality declined, while fertility continued to be high or at least moderately high, considerable natural increase was generated. This was the demographic situation of most of European Jewry during a great part of the 19th century. East European Jewry, which adopted widespread birth control comparatively late, displayed natural increase on such a substantial scale that its numbers rose from about five and a half million to seven million during 1880–1914, despite the emigration of more than 2,500,000 persons overseas or to Western Europe. As the Jews had preceded the general population of their countries of residence in the reduction of mortality, they enjoyed, for a considerable time, relatively higher natural increase.

When the subsequent fertility decline among Jews became more acute, their natural increase dwindled and became smaller than that of the corresponding general populations. Extreme instances were Jewish populations in Central Europe that already had a yearly surplus of deaths over births from some time in the 1920s before the accession of the Nazis to power. In the United States and Canada in the 1930s, Jewish fertility was insufficient for demographic replacement in the long run.

The Shoah liquidated not only about one-third of the Jewish people, but also had aftereffects that were highly detrimental to the further demographic development of the survivors. Distortions in the age-sex distribution and the reduced size of the Jewish communities extant in Europe or scattered through migration to other regions of the Diaspora enhanced the chances of out-marriages with their consequent demographic losses to the Jewish people.

After the short-lived Jewish "baby-boom" following World War II, the growth prospects of Jewish Diaspora populations became far from encouraging. In Central and Western Europe all the evidence shows an outright deficit in the balance of births and deaths. For Eastern Europe including the Soviet Union, direct evidence and statistics available on the age composition of immigrants to Israel show that fertility was long below replacement level. As regards the Jews in the United States and Canada, a decline in births since the late 1950s and early 1960s is clearly documented. It is evident that the rate of natural increase cannot be very considerable. This is also the conclusion from data available for South Africa and Australia.

The small natural increase, or even decrease, of Diaspora Jews is the more disquieting from the viewpoint of the demographic future of the Jewish people. Since World War II, and more especially since the 1970s when an unmistakable tendency to increasing out-marriages and some withdrawals emerged, a small natural increase in a Jewish population became insufficient to maintain Jewish population size irrespective of migratory influences. Aggravating circumstances were low fertility; advanced aging; out-marriages and withdrawals. Only by viewing all of these negative factors together, is a realistic picture obtained of the demographic situation and perspectives of most Jewish Diaspora communities in Europe, North America, and other overseas countries.

Until mass emigration following Israel's independence in 1948, the Jews in Asia and Africa were in a stage of rapid and accelerating demographic expansion. Exceptions to this generalization were presented by the Yemenites, whose mortality was still too high to leave much room for natural increase, and on the other hand, the Jews in Turkey and Egypt, whose fertility had already been reduced considerably. The first effect of migration to Israel and to France was a reduction in mortality, which boosted natural increase for a while; however, the fertility decline, which soon set in, operated in the opposite direction. While the transfer of many Jews from Asia and Africa to Israel, France, etc., raised the average fertility and natural increase among the Jewish population in the receiving countries, it tended to lower the fertility and natural increase of the Jewish people as a whole.

Into the 21st Century

Over the last quarter of the 20th century, distinct erosion in conventional marriage patterns among Jews reflected similar general trends among developed Western societies. Propensities to marry significantly diminished. An increase in unmarried couples living together overwhelmingly composed by one Jewish and one non-Jewish partner in the Diaspora, did not compensate for fewer and later marriages. Divorce rates increased and tended to approach the higher rates of non-Jews. In Israel such trends were more conservative, but they could be observed too, as demonstrated by the presence of over one million non-married individuals among the adult Jewish population around 2005.

Among Jews who married since the 1990s, in the United States 50 percent or more had a non-Jewish partner, between 35 and 45 percent did in France and the U.K., and higher percentages approaching 70 and 80 percent did in the FSU and other Eastern European countries. The differential frequency of out-marriages of Jewish men and women tended to disappear, equalling the higher levels previously recorded for men. The majority of children of out-marriages were not identified as Jews. During the 1990s, similar relatively low proportions of children of out-marriages (about 20 percent) were identified by the respective parents as Jewish in Russia (with rather underdeveloped Jewish community resources), as in the United States (with highly developed Jewish resources). In 2001, that percent had risen to about one-third in the U.S. As a compound consequence, the configuration of Jewish households was characterized by an increasing share different from the conventional nuclear family inclusive of two Jewish parents living with their Jewish children. In the Diaspora this comprised an ever smaller minority of all Jewish households.

In a general context of low and declining death rates, life expectancy at birth surpassed 80 years for women and 75 for men. Fertility was quite stable among Jews in Israel, while it turned to be about one half lower among the rest of

Jewish communities worldwide. The latter reflected or even often anticipated the general decline of fertility in the more developed countries. Jews in Israel were an exception, becoming with 2.6–2.7 children on average the population with the highest fertility among developed nations. Jews from similar countries of origin who migrated to Israel or to Europe ended up adopting the quite different social norms and behaviors on fertility of their countries of absorption. In Israeli society, community was an important intervening factor in fertility trends resulting in larger families than could be found among Jews with similar backgrounds that moved to other countries. Cultural, religious, and community related determinants of higher fertility in Israel led to a unique surplus of natural increase and helped to maintain a comparatively young age composition among the Jewish population. The number of Jewish births in Israel was higher than the number of Jewish deaths by over 45,000 in 1990, by over 58,000 in 2001, and by over 67,000 in 2004.

In the Diaspora low fertility was the main determinant of rapid Jewish population aging. This in turn significantly contributed to a negative balance between Jewish births and deaths. Among the better documented examples, in the Russian Republic the number of Jewish deaths exceeded the number of Jewish births by over 10,000 in 1988, and by 7,600 in 2000 among a greatly diminished Jewish population. In Germany, the excess of Jewish deaths over Jewish births was over 300 in 1990, and had grown nearly over threefold in 2004 while the Jewish population itself had grown by three thanks to the steady inflow of immigrants from the FSU. In the U.K., each year the number of Jewish deaths surpassed by over 1,000 the number of Jewish births. The spiral of low fertility, aging, and partial erosion of the younger generation through the non-affiliation with Judaism of a large portion of the children of out-marriage foreshadowed significant further changes in the demographic profile of world Jewry.

While the world's developing countries continue to experience fast population growth rates and also the populations of many of the technologically advanced countries recorded substantial growth – increasingly due to international migration rather than to natural increase – the Jewish Diaspora at the beginning of the 21st century was in a rather precarious demographic situation. Thanks to the persisting natural increase in Israel, world Jewish population kept close to zero population growth.

[Usiel Oscar Schmelz / Sergio DellaPergola (2nd ed.)]

VITEBSK, capital of Vitebsk district, Belarus. The first Jewish settlement appears to have been established in Vitebsk at the end of the 16th century. The charter given to the residents of Vitebsk in 1597 by Sigismund III Vasa forbids Jews "in accordance with long-held practice" to dwell within the city. Still, it appears that some Jews did live there, under the protection of the local nobility, both before and after 1597. The Jewish community developed, though not without conflict with the Christian population of the city over Jewish rights and privileges. In 1627 the local ruler S. Sangushko granted permission for the construction of a synagogue in the city. A document from the 17th century takes note of "the Jew's gate."

During the war between Poland and the government of Moscow in 1654, Jews fought in the defense of the city. When it fell to the Russians, their property was confiscated and they were taken captive, not being released until peace was achieved with Poland (1667). Upon the Jews' return they had to enter into litigation with their neighbors who had appropriated their property. In 1679 King John III Sobieski granted a charter to the Jews, restoring their former privileges and promising them freedom of religion and commercial rights. This charter was renewed and confirmed by the kings of Poland in 1729 and 1759. In 1708, during the war with Sweden, the Jewish quarter of Vitebsk was destroyed by fire. The local residents then occupied the plot where the synagogue had been and built a church upon it. The Lithuanian supreme court ordered them to return the land to the Jews and pay damages of 13,500 gold pieces. The Jewish community of Vitebsk was part of the Council of the *Lands. It was under the jurisdiction of the *Brest-Litovsk community and through it was subject to the Lithuanian Council. The Vitebsk Jewish community kept a *pinkas (minute-book) from 1706.

With the first partition of Poland in 1772 Vitebsk was annexed to Russia. At that time the community numbered 1,227 persons, or about a quarter of the town's population. Most of Vitebsk's trade in flax and tobacco was conducted with Riga by way of the Dvina River. With the completion of the Orel-Vitebsk-Dvinsk railroad during the 1860s the commerce of Vitebsk with regional towns and villages increased and the Jewish community grew accordingly. After their expulsion from Moscow in 1891 some of the Jews transferred their businesses to Vitebsk. In 1897 the city had 34,420 Jews (52.4% of the total population).

Vitebsk was a stronghold of Orthodox Judaism, containing elements of Lithuanian Jewish scholarship, and even stronger ḥasidic influences. At the end of the 18th century the founders of Lithuanian Ḥasidism, Menahem *Mendel of Vitebsk and Shneur Zalman of Lyady, were active in the city. Strong *Ḥabad ḥasidic influences were present. The rabbi of the city from 1803 to 1860 was Yiẓḥak Isaac Behard, who was both kazyonny *ravvin (government-appointed rabbi) and the

choice of the *admor*. Jekuthiel Zalman Landau succeeded him in the rabbinate serving also as head of the yeshivah of Vitebsk. After Landau moved to St. Petersburg the community did not select a new chief rabbi, as a result of a dispute between the Ḥasidim and *Mitnaggedim*. During the last years of the 19th century 72% of the school-age children studied in the *ḥeder* and *talmud torah* schools of Vitebsk.

The settlement of Jews in Vitebsk who had been expelled from Moscow strengthened the *Haskalah elements in the city. The Ḥibbat *Zion movement began to develop, as did the Socialist movement at a later date. Vitebsk was one of the first centers of the *Bund. In 1901 the Zionist leader Grigori (Ẓevi Hirsch) *Bruck was selected as *kazyonny ravvin* of Vitebsk. He had great influence upon the life of the community, even after he was deposed by the authorities. This occurred as a result of his position as a delegate to the *Duma, in which he signed the Wyborg Proclamation. The Zionist and *Po'alei Zion movements flourished, causing the *talmud torah* to be converted into a Hebrew school. After 1905 several private gymnasia opened in the city, most of the students being Jewish. The artist Y. Pen opened an art school which trained hundreds of young people, including Marc *Chagall and S. Yudovin. S. *An-Ski and C. *Zhitlovsky were both from Vitebsk. During World War I Vitebsk served as a way station for tens of thousands of Jews who had been expelled from Lithuania. Several thousands of them settled there permanently.

With the advent of Soviet rule the Vitebsk Jewish community began to decline. Thousands of residents who had come from Lithuania and Latvia used their rights of relocation and emigrated from the Soviet Union. The *Yevsektsiya established one of its centers in Belorussia in Vitebsk, publishing the paper *Der Royter Shtern* ("The Red Star") until 1923. In 1921 a public trial "over the *ḥeder*" was conducted in Vitebsk and several synagogues in the city were confiscated. The Vitebsk *He-Ḥalutz movement was harassed and came to an end during the middle of the 1920s. Vitebsk had a semi-legal Ḥabad yeshivah until 1930. In 1923 there were 39,714 Jews (43.7% of the total population). In 1926 there were 37,013 (37.5%).

With the Nazi conquest of the city in July 1941 part of the Jewish population fled into the interior of Russia. The city was destroyed in a fire started by the retreating Red Army. The 16,000 Jews who remained behind were imprisoned in a ghetto. On October 8, 1941, their systematic liquidation began. After the liberation of the city from the Germans Jews began to return. In the later 1960s the Jewish population was estimated at about 20,000 but there was no synagogue. Most left during the large-scale emigration of the 1990s.

VITERBO, town in central Italy. Documents show Jews living in the town in 1272; in 1294 the loan-banker Elia resided there, and a few years later the number of Jews had increased to such an extent that in 1313 a Christian proposed setting up an institution that would collect all the Jews together to convert them. In the 14th century some of the moneylenders left Viterbo to found the settlement at Urbino and others moved to Orvieto. In 1427 the Franciscan friar Bernardino da *Siena delivered inflammatory sermons in Viterbo. The town came under the rule of the Church in 1435 and 15 years later the Jews were compelled to wear the *badge. In 1538 the banking permits were withdrawn. At that time, the Jews owned two synagogues and a medicinal spring called the "bath of the Jews." As in the other Church possessions, a ghetto was established in Viterbo in 1555, and the community leaders were thrown into prison. After Pius V was elected to the papacy, the Jews were expelled from all the minor cities of the papal states (1569). Ten families were readmitted to Viterbo in 1586, but in 1593 they were definitely banished. Later, Jewish merchants were allowed to visit the town only during the fair; at one of these, in 1705, a group of Jews were accused of a blood *libel but they were acquitted the following year. A number of notable copyists and physicians came from Viterbo, including the talmudist Theodorus de Sacerdotibus (Eliezer ha-Cohen), physician to Pope Julius III.

VITERBO, CARLO ALBERTO (1889–1974), leader of Italian Jewry. Born in Florence, Viterbo studied law at the University of Pisa, coming under the influence of S.H. *Margulies and A. *Pacifici. An early Zionist, he participated in numerous congresses and was president of the Italian Zionist Federation and of Keren Hayesod. In 1936–37, he went on a study tour of North African Jewish communities on behalf of the Italian Jewish community. He also made contact with the *Falashas in Ethiopia, then under Italian rule, and published new documents he had found on their history (*Annuario di Studi Ebraici*, 2 (1937), 125ff.). From 1944 Viterbo edited the weekly *Israel*. He also published some Hebrew language textbooks (1933, 1955, 1968).

BIBLIOGRAPHY: *Israel*, 54 (1969), no. 14, 5–6 (It.). **ADD. BIBLIOGRAPHY:** F. del Canuto (ed.), *Israel un decennio: 1974–1984* (1984).

VITERBO, JEHIEL ḤAYYIM (c. 1766–c. 1842), a rabbi of Ancona, scholar, and poet. Among his poems is a eulogy of 26 stanzas on the death of Ḥayyim Joseph David *Azulai in which he alludes to the 31 works of the latter.

He published two volumes of sermons in Leghorn, *Yiḥyu Dagan*, for Sabbaths and festivals (1830), and *Va-Yeḥi Od*, which includes a commentary on *Pirkei Avot* and responsa (1839). After his death, *Va-Yeḥi va-Yitten* (1843) appeared. Viterbo was in close contact with the *yishuv* in Ereẓ Israel. Many of his letters and poems remained in manuscript and are in the archives of the Budapest rabbinical seminary.

VITKIN, JOSEPH (1876–1912), precursor of the Second Aliyah, teacher, and communal worker. Born in Mogilev, Belorussia, he went to Ereẓ Israel in 1897, where he worked as a laborer. Later he became a teacher and headmaster at a Gederah school, where his reforms led to his being invited to become headmaster of the school in Rishon le-Zion. In 1904 he became headmaster of the school at Kefar Tavor (Meshḥah), and two years later he returned to teaching in Rishon le-Zion, where he remained for the rest of his life. Vitkin was the precursor of the Second Aliyah both chronologically and in his ideological contribution to the pioneering movement in Ereẓ Israel. His influential pamphlet entitled *Kol Kore el Ẓe'irei Yisrael Asher Libbam le-Ammam u-le-Ẓiyyon* ("A Call to the Youth of Israel whose Hearts are with their People and with Zion," 1905), signed Ḥavurat Ẓe'irim me-Ereẓ Israel ("A Group of Young People from Ereẓ Israel") contains all the principles of the labor movement of the Second Aliyah. He forcefully rejected "diplomatic" Zionism and condemned a Zionism that merely entailed shekel- and share-buying by Jews in the Diaspora. He demanded that Diaspora youth unite for *aliyah* and sacrifice for their homeland, as other nations do for their countries. He even outlined plans for a new type of settlement based on self-employed labor on nationally owned land. He ended the pamphlet with the appeal: "Hasten, Heroes of Israel, renew the days of the Biluim with even greater strength and vigor, for otherwise we shall be lost." When the *Ha-Po'el ha-Ẓa'ir Party was formed, he became a member and was the first to demand that, in addition to "conquest of labor" by Jewish workers as wage earners on Jewish-owned farms, the party should advocate "conquest of the soil," i.e., agricultural settlement by Jewish worker-pioneers. He developed a theoretical and practical educational system uniting Jewish values with love of nature.

A selection of his writings appeared in 1912. A new comprehensive edition, containing letters, an appraisal, and a detailed bibliography, edited by E. Shoḥat, appeared in 1961. Kefar Vitkin in the Ḥefer Plain is named after him.

VITORIA, town in N. Spain, S.E. of Bilbao. Vitoria was founded in 1181 by King Sancho I of Portugal, the "City Builder" (1185–1211), and destroyed by fire in 1202. The town recovered in the days of Alfonso *X (1252–84) of Castile, and it appears that the Jews helped to develop it anew. The Jewish quarter was situated in the eastern part of the city, along the battlements. Isaac ibn *Ẓadok (Çag de la Maleha) was a tax farmer there in 1276. Toward the end of the 13th century the community was one of the moderately important Castile communities. Little is known about the community in the 14th century. In 1439 Don Shem Tov ibn Naḥmias collected dues from the fairs held in the Basque country and taxes from the whole of Castile. From 1482 the anti-Jewish decrees issued by the Cortes of *Toledo (1480) were put into effect in Vitoria also. Nevertheless, the crown often intervened on behalf of the Jews there, granting them a charter of protection as late as 1488. Following the edict of expulsion (May 1492), the community leaders of Vitoria negotiated with the municipal authorities regarding the fate of Jewish communal property. The Jewish cemetery was given to the town council, which undertook to take care of it and never to build on it. The place was subsequently known as the *Judimendi* ("Jews' Mount"). The synagogue was also given to the town council and turned into a school. In July 1492 the majority of the Jews of Vitoria left the town for nearby Navarre. In order to speed up their assimilation, in 1493 the Conversos who had remained were scattered throughout the town and not allowed to live in a separate quarter. In 1952, the Jews of *Bayonne, descendants of the Jews of Vitoria, reached an agreement with the town releasing it from its duties toward former Jewish property. The remains in the old cemetery were collected and reburied in a common grave, with a monument to commemorate the old community of Vitoria.

[Haim Beinart]

VITORIA, FRANCISCO DE (d. 1592), Marrano prelate. He was the son of the New Christian Duarte Nuñes, and two of his brothers lived as Jews in Safed and Tripoli respectively, under the names of Abraham and Jacob Curiel. Many other members of his immediate family also reverted to Judaism, while Isaac de Mattathias *Aboab was his great nephew. Entering holy orders, Francisco became bishop of Tucumán (now in Argentina) in 1583 and was later nominated archbishop of Mexico. He aroused great enmity, however, and was recalled for investigation to Madrid, charges both of corruption and of Judaizing being involved. He died before the inquiry was concluded.

[Cecil Roth]

°**VITRUVIUS, POLLO** (or **Mamurra**; first century B.C.E.), Roman architect and engineer, author of a work on architecture. In it (8. 3. 8) he says that at Joppa in Syria and in Nomad Arabia there are lakes of immense size producing much bitumen which is gathered by the neighboring tribes. The reference, which seems to be to the Dead Sea, is similar to that in *Zenophilus (Xenophilus), who likewise speaks of a lake near Joppa with bitumen.

[Louis Harry Feldman]

VITRY (**le-Brûlé**, today **Vitry-en-Perthois**, not to be confused with Vitry-le-François) town in the department of Marne, N. France. When Louis VII, king of France, sacked the town in 1142, he is said to have spared the Jews, who therefore constituted the majority of the population for a while. In 1230, when Thibaut IV, count of Champagne, granted a communal charter to Vitry, he retained for himself the "guard and jurisdiction" over a number of categories of its inhabitants, particularly the Jews. In 1321, after having been accused of poisoning the wells together with the lepers, 77 Jews were immediately massacred, a large number succeeded in escaping, and another 40 were imprisoned. Once the prisoners realized the hopelessness of their situation, they chose death at the hands of one of their companions, who was then killed by the Christians. There is today a small Jewish community in Vitry-le-François, founded in the 16th century as a refuge for the inhabitants of Vitry-le-Brûlé which had been destroyed by fire. Vitry-le-François was built a few miles away from the burnt town. Simḥah b. Samuel, who is said to be the author of the talmudical and liturgic compendium known as *Maḥzor Vitry, was a native of the town.

VITTA, CINO (1873–1956), Italian jurist. Vitta was professor of administrative law first at the Florence Institute of Social Science and then professor at the universities of Cagliari, Modena, and Turin. An authority on all branches of public law his treatise *Trattato di diritto amministrativo* (2 vols., 1954–55[4]), on administrative law, ran into several editions. He also taught international law and lectured at the Hague Academy in 1930, 1934, and 1936. During World War II, Vitta was president of the Jewish community of Florence, a position that had been held by his father and grandfather before him. During the Nazi occupation he and his wife were hidden in the Siena mental hospital. After the war he returned to teaching.

Among his publications: "Il Diritto pubblico degli Ebrei," in: *Accademia Mazionale dei Lincei*, 6 (1951), 109ff.

VITTORIO VENETO, town in N. Italy, formed in 1866 by the union of the two adjacent towns of Serravalle and Ceneda. The presence of Jews in Serravalle is attested in 1398, but nothing is known of their subsequent history. In 1597 Israel di Conegliano was authorized to open a loan-bank in Ceneda; in spite of two expulsion attempts, in 1631 and 1638, the *Conegliano family remained in the town throughout the 17th century. In the 18th century a number of Jews were enclosed in a small ghetto. There were 45 Jews (11 families) in Ceneda in 1765, out of a total population of 7,946. Their status was then superior to that of the other Jews in Veneto, as shown by the fact that in 1770 they obtained the revocation of a 1767 prohibition to trade in grain. About the second half of the 18th century a "council of Jews" (*corpo degli ebrei*) was formed, which was comparatively influential at the beginning of the following century, when it included the important Luzzatto, Romanin, Gentili, Fontanella, Valenzin, Conegliano, and Pincherle families. Lorenzo da *Ponte (Conegliano) was born in Ceneda. However, in 1870 only 50 Jews remained in Vittorio Veneto and their number progressively decreased, although there was a Gemilut Ḥasadim society. The cemetery at Vittorio Veneto was not established until the second half of the 19th century; before then the Jewish cemetery of *Conegliano was used. A private synagogue existed from 1646; it was completely renovated in 1701, in a style similar to the synagogue of Conegliano. It has been transferred to the Israel Museum in Jerusalem.

VIVANTE, CESARE (1855–1944), Italian jurist. Born in Venice, Vivante graduated in law from the University of Padua and in 1882 at the age of 27 became professor of commercial law at the University of Parma, and in 1889 at the University of Bologna. From 1898 he was professor of commercial law at the University of Rome, a post he held for over 30 years until his retirement. He presided over numerous legislative commissions and was chairman of the Italian Commission for the Reform of the Commercial Law Code.

Vivante is considered the founder of the modern Italian school for the study of commercial law. He developed a new inductive approach to its study, establishing the principles from the agreed rules of law while at the same time coordinating commercial law principles with those of civil law. His works include *Trattato di diritto commerciale* (4 vols., 1893), *Il Contratto di assicurazione* (3 vols., 1894), which ran into several printings and was translated into many languages, and his classic *Instituzioni di diritto commerciale* (1891), a standard textbook which attained 60 printings. Vivante was a cofounder of the *Rivista del diritto commerciale* in 1903, the leading Italian journal on commercial law. Among his pupils was Tullio *Ascarelli who succeeded him as professor of commercial law at Rome.

In Bari, at the beginning of 1980s, the "Istituto Commerciale C.V." was founded and in Catania a way was dedicated to his name. The *Rivista della Scuola Superiore dell'economia e delle finanze* published on the Internet his speech (1888) for "un codice unico delle obbligazioni."

BIBLIOGRAPHY: *Studi in Onore di Cesare Vivante*, 2 vols. (1931). **ADD. BIBLIOGRAPHY:** *Novissimo Digesto Italiano*, 20 (1975), 1034.

[Giorgio Romano / Alfredo Mordechai Rabello (2nd ed.)]

VIVANTI, DAVID ABRAHAM (1806–1876), Italian rabbi. Born in *Ancona, Vivanti came from a well-known Italian-Jewish family, originally from Mantua, which had settled in Ancona in the first half of the 18th century. When still a youth, he was ordained as a rabbi and appointed to the *bet din* at Ancona, and in 1840 became rabbi of the community.

Vivanti wrote commentaries on the Pentateuch and Psalms, both of which are unpublished. His annotations to the *Shulḥan Arukh*, arranged in alphabetic order and containing halakhic decisions both of his own and earlier authorities, and annotations to the *Sefer ha-Ḥinnukh* (according to the Venice edition of 1600), together with a *kinah* composed by him for the 24 martyrs of Ancona and some homilies, were published by H. Rosemberg, *Keẓat mi-Kitvei … David Avraham Ḥai* (1932); and in Italian *Saggio degli Scritti degli Rabbini David Abraham Vivante* (1929).

[Alfredo Mordechai Rabello]

VIVANTI CHARTRES, ANNIE (1868–1942), Italian novelist. Annie Vivanti was born in London, the daughter of an Italian political exile, her mother being a German writer. In 1890 she became famous with the publication of *Lirica*, a volume of verse, prefaced by the eminent Italian poet Giosuè Carducci. Abandoning verse for fiction, she wrote several novels including *Circe* (1912); *Vae victis!* (1917), a dramatic though naïve account of the relationship between the victors and the vanquished of World War I; *Naja tripudians* (1920) and *Fosca, sorella di Messalina* (1922). In a novel in English, *Marie Tarnowska* (1915), she analyzed the problem of crime, which she considered a hereditary physical disease devoid of any moral implication. Her years in England, Switzerland, and the U.S. inspired a collection of short stories, *Zingaresca* (1918). She also wrote two plays: *L'Invasore* (1916) and *Le bocche inutili* (1918).

A representative of Italian romanticism at its most decadent, Annie Vivanti was true to the fashion of her times even in her private life. She married an Irish lawyer and journalist, John Chartres, whom she supported in his campaigns for Irish independence. Her daughter, Vivien Chartres, a talented violinist, inspired her best novel, *The Devourers* (1910). The "devourers" are the infant prodigies who sacrifice their parents to their own talents. Vivien Chartres died during an air raid in London in 1941. Annie Vivanti herself suffered from Mussolini's antisemitic laws: her books were banned in Italy, and she spent some time in internment. She died a lonely woman in Turin.

[Giorgio Romano]

VIVES, JUAN LUIS (1492–1540), Spanish humanist. A recent study by Pinta y Llorente and Palacio, *Procesos Inquisitoriales contra la familia judía de Luis Vives* (1964), established that his mother became a Christian only in 1491, that she was said to have continued Jewish practices after her baptism, that she was condemned by the Inquisition 24 years after her death, and that her remains were burned and her property confiscated. Vives' father was delivered in 1524 "to the secular arm" by the Inquisition, which usually meant death. This evidence indicates that Vives was of Jewish origin and that he must have been fully aware of this through the fate of his parents.

Vives studied Latin and Greek at Valencia and then, in 1509, went to the University of Paris. He found the scholasticism taught there sterile, and later bitterly attacked his studies and teachers. He said the university was like "an eighty-year-old lady, sick, senile, and in imminent danger of death." Vives' first major work, *Adversus pseudodialecticos* (1520), was a strong attack upon the school. In 1512 he moved to Bruges where he studied and taught children of influential families. In 1517 he began teaching at the new University of Louvain and became a close friend of Erasmus, whom he had long admired. The religious struggles in the Low Countries, Erasmus' departure for Basle, and the condition of the university led Vives to go to England, where he was immediately received by the humanists and by the court. Vives was offered a post at Alcalá, but refused to return to Spain. Instead he became a professor at Oxford. Political problems involving Henry VIII and Catherine of Aragon finally led to Vives' dismissal. He returned a bitter and poor man to Bruges, where he wrote his major works in isolation and discontent.

Vives' writings include criticisms of scholasticism, reform of education, the classics, social problems, philosophy, and religion. His most famous works, extremely popular in the 16th century, were his commentaries on Saint Augustine (1522); *De Anima et Vita* (1538); *Dialogi: Exercitatio Lingae Latinae* (1538; trans. W.H.D. Rouse, *Scenes of School and College Life*, 1931); *De Institutione feminae Christianae* (1524; trans. R. Hyrde, *The Instruction of a Christen Woman*, 1541); *lntroductio ad Sapientiam* (1524; trans. R. Morison, *An Introduction to Wysedome*, 1540); and *De Veritate Fidei* (posthumous, 1543). Vives was the first advocate of secular education and state, rather than Church, social welfare. His philosophical concern was not to find ultimate truth (since he believed that metaphysics could only yield conjectures), but rather a basis for human conduct. He was the first modern to investigate human psychology empirically, and developed an early form of naturalism. Though many of his writings deal with Christian religious subjects (including a criticism, mild for the time, of Judaism in *De Veritate Fidei*), he was not concerned with doctrinal or institutional elements of Christianity, but mainly with morality. Like Erasmus, he advocated a nontheological religion as a way of life. Vives' philosophical-ethical religion may represent a Marrano compromise with Christianity, interpreting it as an ethic rather than as a set of dogmas.

[Richard H. Popkin]

VIZHNITSA (Rom. **Vijnita**; Yid. **Vizhnits**), town in Chernovtsy district, Ukraine. Before World War I Vizhnitsa belonged to Austria, and between the world wars to Romania. The town derives its fame from the local ḥasidic rabbis (see hasidic dynasty *Vizhnitz). Jews began to settle in the town under Moldavian rule in the mid-18th century. In 1774, under Austrian administration, there were 60 Jewish families (191 persons); by 1782 there were 61 families, and in 1807 there were 64. Later many Jewish settlers were attracted by the Vizhnitsa rabbis and by 1900 there were 4,738 Jews and in 1930, 2,666. A *ḥevra kaddisha* existed from 1768. After the Austrian annexation the Jews were subject to restrictions and persecutions; 19 families were expelled in 1774 on the claim that they did not contribute to the town's agricultural development. In 1789 the authorities ordered the expulsion of all the Jews for the same reason, but this order was not carried out entirely.

During World War I the town was nearly destroyed. The Jews fled to Vienna and some did not return. The rabbi at that time, Israel Hager of the *Kosov dynasty, moved to *Oradea, where he established his court. Vizhnitsa now ceased to be a ḥasidic center.

Under early Austrian rule the community was affiliated with the *Chernovtsy congregation and became independent only in the mid-19th century. By 1888 there were already eight prayer houses, classed according to the congregants' professions. There was a large yeshivah, and in 1921 a Hebrew elementary school was founded. Between the world wars Zionist youth and adult groups were active. Several descendants of the ḥasidic dynasty settled in Israel, where they established yeshivot and ḥasidic centers in Haifa and Bene Berak. From 1941 the Jewish community suffered drastically, and in August of that year 2,800 Jews were deported to death camps. About 800 remained alive and most of them immigrated to Israel.

In 2005, the city had a Jewish community center.

[Yehouda Marton]

VIZHNITZ, ḥasidic dynasty, founded by MENAHEM MENDEL BEN ḤAYYIM HAGER (1830–1884). After the death of his father, the *ẓaddik* of Kosov (1854), Menahem Mendel began to lead the community of Vizhnitz (Vizhnitsa) where he also served as *av bet din*. He became famous as a miracle worker and a distributor of amulets. He headed *Kolel Vizhnitz and Maramuresh, a fund for the poor in Ereẓ Israel. He also attempted to settle the dispute between R. Ḥayyim *Halberstam of Zanz (Sandz) and the sons of R. Israel of *Ruzhin. His book *Ẓemaḥ Ẓaddik* (1885) was written in the spirit of ḥasidic Kabbalah.

His oldest son BARUCH (1845–1893) served as a ḥasidic rabbi in Vizhnitz for eight years, and gathered around him many Ḥasidim. A collection of his writings was published as *Imrei Barukh* (1912). Seven of his nine sons and three of his sons-in-law were ḥasidic rabbis, a fact which contributed to divisions among the Ḥasidim and gave rise to controversy. He was succeeded by his son ISRAEL (1860–1938). R. Israel was very popular and had thousands of ḥasidic followers. He founded a big yeshivah called Bet Israel and moved to Grosswardein (Hung. Nagyvarad) which became a center of Ḥasidism in Hungary. His publications include *Ahavat Yisrael* (1943) and *Or Yisrael* (1938). Other sons of R. Baruch with many followers included ḤAYYIM OF ITINIA (1864–1935) and PHINEHAS OF BORSA (d. 1941). The successors of the Vizhnitz dynasty in Bene-Berak, Israel, the sons of R. Israel, include: ḤAYYIM (1881–1979); whose teachings are in *Kunteres ha-Likkutim* (1949); ELIEZER (1889–1946), author of *Dammesek Eliezer* (1949); and BARUCH, of Siret-Vizhnitz (1895–1972). The *Ẓaddikim* of Vizhnitz were active in spreading Torah learning; in Israel they established yeshivot and housing for their Ḥasidim.

[Avraham Rubinstein]

VLADECK, BARUCH CHARNEY (1886–1938), U.S. journalist, civic leader, and public official; brother of Daniel *Charney and Shmuel *Niger. Born in Dukor, near Minsk, Belorussia, Vladeck abandoned religious study in his teens in favor of political action. A lifelong socialist, he had been a revolutionary in Russia, but became a moderate in the United States. Between 1904 and 1908, he agitated extensively for the Jewish Labor *Bund, and was imprisoned three times. He wrote Yiddish poetry and prose. In 1908, he immigrated to the United States, becoming city editor of the *Jewish Daily Forward* in 1916, and business manager of that newspaper from 1918. From 1918 to 1921, he sat on the board of aldermen in New York City as a Socialist member. Long active in the public housing movement, Vladeck was appointed to the New York City Housing Authority in 1934. In 1938, he served on the City Council, leading a coalition of its pro-La Guardia members. President of ORT from 1932 to 1938 and chairman of the Jewish Labor Committee from 1934 to 1938, Vladeck was an opponent of Communist influence in the labor movement and was influential in helping to align Jewish labor with other segments of the Jewish community.

[Franklin Jonas]

VLADIMIR VOLYNSKI (formerly **Lodomira**, Pol. **Wlodzimierz**; in Jewish sources: **Lodmer**, **Ladmir**, or **Ludmir**), city in Volhynia district, Ukraine. Jews from *Kiev, *Khazaria, and other eastern communities settled in the city in the 12th cen-

tury. They established an important station there on the trade route between eastern and western Europe, which was subsequently visited by Jewish merchants from *Ashkenaz. The Jewish community was destroyed by Tatars in the 1240s but it was renewed on a small scale in the early 15th century under Grand Duke Witold of Lithuania. An organized community was founded in the early 16th century and it developed rapidly after the Polish annexation of *Volhynia (1569).

In the charter of privileges given to the city in 1570 by King Sigismund II Augustus, the Jews were granted equal rights with gentile citizens. During the 16th century the Jews of Vladimir Volynski traded at the fairs in Lublin, Poznan, and Cracow, where they sold furs, woolen cloth, and wax. The richer Jews engaged in estate-leasing and tax-farming. From the middle of the 16th century several famous rabbis lived in Vladimir Volynski, e.g., *Isaac b. Bezalel, who served from 1547 to 1570, Menahem Isaiah b. Isaac (known as Menahem-Mendel R. Avigdors; 1591), who later became rabbi of Cracow (d. 1599), and the talmudist *Isaac ben Samuel ha-Levi (1580–1646), who was born in Vladimir Volynski. The outstanding talmudist and author, Yom-Tov Lipmann *Heller, was rabbi of the community from 1634 to 1643.

The community suffered greatly during the *Chmielnicki massacres (1648–49) in which many Jews were murdered. After repeated attacks in 1653 and 1658, the heads of the community were forced to borrow large sums to save the Jews from impoverishment. Their economic situation improved in the late 17th century. In 1700 Augustus II awarded Fishel Lewkowicz of Vladimir Volynski the title of "royal agent and purveyor and official secretary for the Council of the Four Lands." In 1765 1,327 Jews paid the poll tax.

The economic crisis which befell the Polish kingdom in its last years affected the Jewish population in Vladimir Volynski. By 1784 there were only 340 Jews in the city. In 1795 it was annexed by Russia. In the 19th century the Jewish population increased, numbering 3,930 in 1847 and 5,854 (66% of the total) in 1897. They traded in grain and lumber, and engaged in shopkeeping, tailoring, hatmaking, and shoemaking. The hasidic movement became influential in the community, especially under the direction of Moses Solomon Karliner and the Maid of *Ludomir.

There were 5,917 Jews there in 1921 comprising 51% of the population, and by 1931, 10,665 (44%). In 1926, 84% of the businesses were in Jewish hands. There were *Tarbut, *Beth Jacob, and Yavneh schools. The Jews of Vladimir Volynski organized *self-defense against the attacks of May 1923, and in the 1930s they protested vigorously against the antisemitic boycott. In the city council elections of 1929, 12 of the 24 seats were won by Jews.

[Arthur Cygielman]

Holocaust Period

When the war broke out between Germany and Poland on Sept. 1, 1939, thousands of Jews from western Poland sought refuge in the city, bringing the number of Jews in the city to 25,000. When the city passed to Soviet rule (1939–41), a unique effort was made by the Jews of the city to guarantee a Hebrew education for the children. The Tarbut leaders successfully acquired the local authorities agreement to run a Hebrew language school, on condition that all religious studies be removed from the program. However, the school only functioned for two months for in November 1939 the regional Soviet authorities in Rovno intervened and the language of instruction became Yiddish. In the summer of 1940 many Zionist leaders and refugees were exiled to the Soviet interior. The Germans entered on June 25, 1941. On July 5, 150 Jews were rounded up by the Germans and Ukrainians and murdered in the prison courtyard. A *Judenrat was established in 1941, headed by Rabbi Morgenstern. When he died two months later, his post was filled by a lawyer, Weiler. Weiler refused to hand over the victims to the Germans and committed suicide together with his family. In August–December 1941 the Germans continued to murder the Jews, disposing of their victims in mass graves in the prison courtyard. On Feb. 27, 1942, 250 Jews were taken for forced labor to the Kiev area. On April 13, 1942 a ghetto was set up in two sections: one for skilled craftsmen, nicknamed by the Jews "the ghetto of life", and a second ghetto for the non-productive, called the "ghetto of the dead." They contained altogether about 22,000 Jews. In the summer of 1942 some young people made attempts to contact the partisans operating in the vicinity. On Sept. 1, 1942, an *Aktion* ("action") began, lasting two weeks, in which 18,000 Jews were murdered. Four thousand Jews were killed in the prison courtyard and 14,000 in pits prepared in the Piatydni area. Following this *Aktion*, the area of the ghetto, now reduced in size, contained only 4,000 persons. Leib Kudish, who collaborated fully with the Germans, was placed at the head of the Judenrat. On Nov. 13, 1942, another *Aktion* began, lasting several weeks, following which only 1,500 Jews were left alive and registered while a group of "illegals" continued to exist. During the last *Aktion* an armed group of young Jews took up a fortified position in a bunker near Cygielnia, but they were discovered by the Germans, and 13 fell in the fight. In 1943 the Germans continued in their hunt-down of "illegals" i.e., those who did not possess work permits. The victims were shot in prison. On Dec. 13, 1943, the last of the Jewish community was liquidated, and many of those who tried to escape were killed by Ukrainian peasants or members of the Polish underground Armia Krajowa. The city was freed from the Germans on July 22, 1944, at which time only a few dozen Jews were found alive. A society of former residents of the city functions in Israel.

[Aharon Weiss]

VLADIVOSTOK, city in Maritime Territory, formerly Russian S.F.S.R., now Russian Federation. Jews began to arrive in Vladivostok at the close of the 19th century, forming part of those exiled to the Russian Far East regions. In 1897 there were 290 Jews in Vladivostok (1 percent of the total population), representing an organized community administered by the Zionists until the Soviet occupation in 1922. In 1926 the community numbered 1,124 (1 percent of the total population). Although it is known that with the development of the city and the growth of the Jewish settlement of the nearby region of *Birobidzhan, the number of Jews increased, in 1970 no information was available concerning any organized Jewish life in Vladivostok. In 2005 the original synagogue was again in use and a Sunday school was being run by the community.

[Yehuda Slutsky]

VOET, ANDRIES (1907–1982) U.S. physical chemist. Born in Amsterdam, Voet was chief chemist at an inks works in Hilversum until he went to the U.S. He joined the General Printing Ink Corporation and then (from 1943) the J.M. Huber Corporation in Borger, Texas, heading their physical research from 1950. He was a consultant to the U.S. Industrial Intelligence Agency in Germany (1945). Voet was an authority on the theory and practical applications of printing inks, carbon black, pigments, resins and their reactions with the surfaces on which these are imprinted. He took out over one hundred patents. His book *Ink and Paper in the Printing Process* (1952) is a classic in this field.

[Michael Denman (2nd ed.)]

VOGEL, ARTHUR ISRAEL (1905–1966), British organic chemist. Born and educated in London, he spent his career at Woolwich Polytechnic (London) from 1932. In 1934 he became head of the department of chemistry. He was the author of textbooks known and used throughout the world: *Elementary Practical Chemistry* (1936), *Textbook of Qualitative Chemical Analysis* (1937), *Textbook of Quantitative Chemical Analysis* (1939), *A Textbook of Practical Organic Chemistry* (1948), and *Elementary Practical Organic Chemistry* (1957), each of which ran to several editions.

VOGEL, DAVID (1891–1944), Hebrew poet and writer. Born in Satanov, Russia, he spent his youth in Vilna and Lvov and in 1912 settled in Vienna. Upon the outbreak of World War I, Vogel was imprisoned in Austrian detention camps as an enemy (Russian) national. He was released in 1916 but thereafter lived a solitary life, finding refuge in the seclusion to which he had already given expression in his youthful Hebrew diary, and which is the cornerstone of all his poetry.

His poems were published from 1918 onward in Hebrew journals in various countries, and the only volume of poems he ever published, *Lifnei ha-Sha'ar ha-Afel* ("Before the Dark Gate"), appeared in Vienna in 1923. Vogel settled in Paris in 1925, immigrated to Palestine in 1929, but left a year later. After traveling to Warsaw, Vienna, and Berlin he returned in 1932 to his beloved Paris. During these years he published his stories *Be-Veit ha-Marpe* (1927; "In the Sanatorium"); a novel *Ḥayyei Nissu'im* (1929–30; "Married Life"); *Le-Nokhaḥ ha-Yam* (1932 34; "Facing the Sea"), and prepared a second volume of poems for publication which he did not live to publish. When World War II broke out Vogel was incarcerated in French detention camps as an enemy national (now an Austrian). These experiences are described in the manuscript of his diary (in Yiddish). After the capitulation of France, Vogel was released (1941) and lived in Hauteville near Lyons. There he was arrested by the Nazis in February 1944, and most likely perished in a concentration camp.

Vogel's poetry is completely introspective and describes a dream world, disjointed and purposeless. The main subjects are love, lost childhood, and fear of oblivion, which fuse together to create a sense of alienation and isolation. The constant presence of death becomes the basic sense of existence. The poems are extremely restrained in tone but their lack of pathos serves only to intensify the dread. Vogel's imagery is startling and elliptic and most of his poems are written in free rhythm, without ordered rhyming. Their framework appears loose: unequal sections, and only vague hints as to the affinity between them. Both the external and the inner-psychological plots of his prose works are developed within a framework of time and a given society. *Be-Veit ha-Marpe* creates an atmosphere of despair and aimlessness against a background of life in a tuberculosis sanatorium (Vogel and his wife were both stricken with this disease). *Ḥayyei Nissu'im*, a psychological novel set in Vienna after World War I, depicts a pathological love affair between a Jew and a gentile baroness. Vogel's stories generally were favorably received but had little influence.

His poetry, on the other hand, aroused varied and conflicting reactions, reflecting the changing trends in Hebrew literary criticism. His first poems already won him admirers (among them J.Ḥ. *Brenner), but also dismayed more traditionalist critics (including Ḥ.N. Bialik), who found them entirely illogical. In the 1930s and 1940s he was almost totally ignored as a literary figure but was "rediscovered" in the 1950s. Unlike his early admirers who spoke of his "gentle delicacy," the new critics pointed out the power of his allusive expression and regarded him as an important forerunner of Hebrew modernism.

His complete poems have been published, with an introduction and bibliography by Dan Pagis: *Kol Shirei David Vogel* (1966). Since the 1980s there has been a growing interest in the works of Vogel, who is considered by literary critics to be one of the seminal innovators of modern Hebrew prose. Menaḥem Peri rediscovered and published (1986) the novel *Ḥayyei Nissu'im* (English translation: *Married Life*, 1988 and 1998) and *Taḥanot Kavot* (novellas and diaries, 1990; *Extinguished Stations*) in his series Ha-Sifriah ha-Ḥadashah. The collected poems were published in 1971, 1975 and 1998. An English translation of the novella *Facing the Sea* is included in A. Lelchuk and G. Shaked (ed.), *Eight Great Hebrew Short Stories* (1983). Vogel's diaries and autobiographical notes

1912–1922 and 1941/42 were published in German as *Das Ende der Tage*, with a forward by Amir Eshel. A list of other works translated into English appeared in Goell, Bibliography, 56, and further information concerning translations is available at the website ITHL at iwww.thl.org.il.

[Dan Pagis]

VOGEL, SIR JULIUS (1835–1899), prime minister of New Zealand. Born in London, Vogel was attracted to Australia by the gold-rush and settled in Melbourne in 1852. Unable to make a fortune in the mines, he immigrated to New Zealand in 1861, became a journalist, and edited the colony's first daily newspaper, the *Otago Daily Times*. In the following year he was elected to the Otago provincial council. In 1863 Vogel became a member of the house of representatives where his mastery of financial issues brought him to the fore. He was made colonial treasurer in 1869 and acquired great prestige by successfully negotiating a loan with the British government for the construction of roads and railways. In 1873 Vogel became prime minister and set about reducing the autonomy of the New Zealand provinces with the intention of abolishing the regional system and strengthening the hand of the central government. This policy lost him considerable popularity and in 1875, while on a visit to London to negotiate fresh loans, he resigned. He was briefly prime minister again in the following year, and from 1876 to 1881 was agent-general of New Zealand in London. There he succeeded in persuading the British government to pass the Colonial Stock Act, thereby allowing for the inscription of colonial loans. Vogel returned to New Zealand in 1884 and became colonial treasurer for a second time. However, bitter criticism of his policy of public borrowing forced him to resign in 1887 and he left for London shortly afterward. He took no further part in New Zealand politics. Vogel was knighted in 1875, and died in East Molesley, Surrey. In 1889 Vogel published a novel, *Anno Domini 2000; or, Women's Destiny,* in which he predicted that women would rule and poverty would be abolished.

Dalziel, "Julius Vogel," in: *Dictionary of New Zealand Biography*; R.M. Burdon, *The Life and Times of Sir Julius Vogel* (1948); R. Dalziel, *Julius Vogel, Business Politician* (1986).

VOGEL, KAREL (1897–1961), Czech-English sculptor. Born in Bohemia, educated in Prague, Vogel fled to England in 1939. He gained success as a portraitist and executed a number of public commissions. He also did a series of small nudes in bronze which showed the influence of Rodin. Vogel worked at London's Camberwell School of Arts and Crafts, where he was head of sculpture. His work is in important museums in London and in Prague.

VOGEL, SIMON (1850–1917), Hungarian soldier. Born in Karczag, Vogel joined the Austro-Hungarian army as a private but was selected for the officers' school and fought in the Bosnian campaign. Teaching at the Kassa cadet academy, Vogel was introduced to Emperor Francis Joseph I and was promoted to colonel with command of a regiment. He was made governor of Sarajevo in 1903 and represented the Austrian army at the marriage of King Alphonso XIII of Spain in 1906. In 1909 he became a major general and retired soon afterward.

VOGEL, WLADIMIR (1896–1984), composer. Born in Moscow, Vogel studied piano and theory privately, and was influenced by Scriabin, whom he saw performing at a concert. During World War I he was interned in the Urals and later went to Berlin, where in the 1920s he studied with Thiessen and Busoni. In 1935 he settled in Switzerland and taught composition privately. After World War II he became an honorary member of the Academia Sta. Cecilia in Rome and an ordinary member of the Akademie der Kuenste in Berlin. He won several prizes, including the composer's prize of the Schweizerischer Tonkűnstlerverein. Vogel experimented a great deal with the use of "speaking choirs," being influenced by Communist agit-prop, melodrama, and Expressionist music. He wrote a number of dramatically impressive oratorios and cantatas using this technique, such as *Wagadus Untergang durch die Eitelkeit* (1930) and *Thyl Claes, fils de Kolldraeger* (1938–45). Starting with his Violin Concerto (1937) Vogel used 12-note technique. In some of his later works he was inspired by architectural, pictorial, and graphic images (*Inspiré par Jean Arp*, 1965; *Graphique*, 1976; *Verstrebungen*, 1977).

°**VOGELSANG, KARL VON** (1818–1890), Austrian conservative clerical publicist, and antisemite. Vogelsang was born in Liegnitz (Legnica), Silesia, and studied jurisprudence. A Protestant by upbringing, Vogelsang embraced Catholicism like many other citizens in Mecklenburg after the crisis of the 1848 revolution. In 1850 he therefore lost his position. In the 1860s he and his family moved to Austria. He finally settled in Vienna in 1875 and became the editor of *Vaterland*, an ultra-conservative and clerical daily, the ideological organ of the antisemitic Christian Social movement. His first year was devoted, inter alia, to attacking the minister of justice, Julius *Glaser (a converted Jew), and defending the striking Brno textile workers (many of whose employers were Jew-

ish). A fierce opponent of liberalism and capitalism, which he blamed for all the ills of society, he identified modern Jewry with capitalism, the disrupter of the ideal Christian, feudal, corporative, social fabric. Though not a racial antisemite, he prepared the grounds for modern conservative antisemitism by furnishing it with a wide social appeal: castigating the insolent "*Judenpresse*," despising godless and greedy "*Reformjuden*," and thundering against the "*Judenboerse*." The demagogic talent and later mayor of Vienna, Karl Lueger, took over Vogelsang's political objectives and popularized them. Notwithstanding his antisemitic ideology, Vogelsang was highly respected by the Austrian Conservatives even after the Shoah; in 1990 a special Austrian stamp recalled the 100th anniversary of his death.

VOGELSTEIN, family in Germany, active in the Reform-Liberal movement.

HEINEMANN VOGELSTEIN (1841–1911) was rabbi at Pilsen and Stettin (Szczecin) and founder and president of the Association of Liberal Rabbis and a vice president of the Association for Liberal Judaism (Vereinigung fuer das Liberale *Judentum). He published a prayer book (1894–96) eliminating references to the restoration of Jewish nationhood. A strong anti-Zionist, he was among the *Protestrabbiner in 1897 and published in 1906 a pamphlet *Der Zionismus, eine Gefahr fuer die gedeihliche Entwickelung des Judentums*. He also wrote *Kampf zwischen Priestern und Leviten seit den Tagen Ezechiels* (1889).

His son HERMANN VOGELSTEIN (1870–1942) occupied rabbinical posts at Oppeln (Opole), Koenigsberg, and Breslau. In 1938 he emigrated to the United States. His writings include *Die Landwirtschaft in Palaestina zur Zeit der Misnah – Der Getreidebau* (1894); *Militaerisches aus der israelitischen Koenigszeit* (1906); *Zur Vorgeschichte des Gesetzes ueber die Verhaeltnisse der Juden vom 23. Juli 1847* (1909). With Paul *Rieger he wrote the standard history of the Jews in Rome (*Geschichte der Juden in Rom*, 2 vols., 1895–96) of which a revised edition in English (by M. Hadas) appeared in the Jewish Communities Series of the Jewish Publication Society of America (JPSA; 1940).

Another son of Heinemann, Ludwig *Vogelstein, became a metal magnate and philanthropist.

THEODOR VOGELSTEIN (1880–1957) also a son of Heinemann, was a banker, industrialist, and cofounder of the Democratic Party of the German Weimar Republic. During the Nazi regime he emigrated to Paris where he later died.

JULIE VOGELSTEIN-BRAUN (1883–1971) a daughter of Heinemann, was a writer. She edited Otto Braun's writings after his death (*Schriften eines Frueh-Vollendeten*, 1920), and wrote *Geist und Gestalt der abendlaendischen Kunst* (1957) and *Was niemals stirbt* (1966).

MAX VOGELSTEIN (1901–) son of Hermann, served as rabbi in Frankfurt on the Main and Koblenz (1935–38), and taught at the Jewish Teachers' Academy in Berlin (1934–35). In 1938 he emigrated to the United States. He made a special study of biblical chronology, on which he published, among other works, *Fertile Soil: A Political History of Israel…* (1957).

VOGELSTEIN, LUDWIG (1871–1934), U.S. business executive, philanthropist, and communal leader. Vogelstein, who was born in Pilsen, Czechoslovakia, went to the U.S. in 1896 as the representative of the metal firm of Aaron Hirsch & Sohn of Halberstadt. He later founded his own metal-dealing firm, which subsequently merged with the American Metal Co., Ltd. (1920). In 1924 Vogelstein became that firm's first vice president and later chairman of its executive board. He also founded and developed several large mining and metal companies in the U.S. and Canada. A vigorous supporter of Reform Judaism, Vogelstein predicted the eventual merging of all movements of Judaism. He was a staunch anti-Zionist. Extremely active in Jewish communal life, Vogelstein served as chairman of the Union of American Hebrew Congregations; trustee-at-large for the support of Jewish Philanthropic societies; vice president of the World Union for Progressive Judaism; governor of Hebrew Union College; director of the Jewish Publication Society; and president of Temple Beth-El (New York City), and a trustee after its merger with Emanu-El.

°VOGÜÉ, CHARLES EUGENE MELCHIOR, COMTE DE (1829–1916), French architect and archaeologist. De Vogüé was born in Paris into one of the oldest families of the French aristocracy. In 1853/54 he went on research trips in Ereẓ Israel and Syria, discovering many ruined cities in Hauran and Northern Syria with well-preserved remains. His books *Mélanges d'architecture orientale* (1866) and *L'architecture civile et religieuse du Ier au Vieme siècle dans la Syrie centrale* (2 vols., 1866–77) opened a new chapter in the architectural history of the Roman-Byzantine period in Ereẓ Israel and Syria. De Vogüé also published sketches of the Temple enclosure, *Le Temple de Jérusalem* (1865–67), including a restoration of the Second Temple which is still of value today. The inscriptions found on his travels are translated and clarified in *Inscriptions sémitiques* (1869–77). After the establishment of the Third Republic he became the French ambassador in Constantinople (1871) and Vienna (1875–79).

[Michael Avi-Yonah]

VOHRYZEK, JOSEF (1926–1998), Czech literary critic, translator, and prose writer. Born in Prague, Vohryzek was sent by his parents (who perished in the Holocaust) to Sweden in 1940, where he lived until 1950. In 1956 he graduated

from Charles University in Prague, where he studied Czech and literary sciences. In his articles in the literary monthly *Květen* ("May"), where he worked from 1956 to 1985, he refused to adopt the Marxist-Communist dogma. In 1959 he had lost his job at the Institute for Czech literature of the Czechoslovak Academy of Sciences because of his criticism of the Communist Party's policies. Vohryzek worked as a translator (especially from Swedish – Lindgren, Bergman, Strinberg, Ibsen) and an editor. After 1970 he was forced to do only manual jobs. He signed Charter 77 and became its spokesperson in 1987. A collection of his articles from the 1960s was published as *Kniha Josefova* (1986 in *samizdat* "The Book of Josef"; in 1995 as *Literární kritiky* ("Literary Criticism")). His experimental prose work *Chodec* ("The Walker," 1964) was inspired by his stay in Sweden. After 1989 he was fully occupied with literary criticism and with the issue of antisemitism. He wrote excellent critical works on the books of J. Kovtun; I.B. *Singer; S. *Wiesenthal; and V. Černý.

[Milos Pojar (2nd ed.)]

VOLCHKO (Pol. **Wolf**, **Wólczko**, also known as **Tsolner**; d. 1441?), Polish merchant, revenue officer, banker, purveyor to the king, and founder of settlements. Although the date of his birth is unknown, he originated in the town of Drogobych. A wealthy Jew, he became the banker and official agent (*Officialis Noster*) of Ladislaus II Jagello (1386–1434), king of Poland. Volchko was very successful in financial affairs, tax-collection, commerce, and the founding of settlements (*locator*). The earliest evidence of his activities is a document (1404) which names him as executor of a large sum of money in the king's name for the town of *Lvov (Lemberg). For the next 30 years his affairs also involved the lease of the king's and the town's revenues in Lvov, and those of the customs stations of *Chelm and the salt mines of Drogobych. In addition to granting credit to the king and his court, Volchko also lent money to members of the feudal aristocracy with the king's consent. In 1419 he built himself a magnificent house in the Jewish quarter of Lvov which, at the close of the 16th century, finally became the property of the *Nachmanovich family who later built a synagogue in it. Volchko also engaged in the import of spices, silk, furs, and English cloth as well as in the export of wax. In 1423 the king granted him administrative rights and jurisdiction over the village of Werbiz (near *Sambor), which he developed most successfully on the strength of privileges similar to those of the *Magdeburg Law. To show his satisfaction, the king extended Volchko's rights to other estates in the vicinity. In letters-patent of the king in 1425, however, it was hinted that Volchko converted to Christianity. Volchko gave cause for disappointment in this hope and thus gave Church officials pretext to demand his removal from the estates on the basis that it was forbidden for a Jew to have jurisdiction over Christian settlers. Until 1432 Volchko succeeded in establishing more villages but in time he was compelled to retire from these activities and his rights were taken over by Christians.

[Arthur Cygielman]

VOLCKER, PAUL A. (1927–), U.S. economist. Volcker, who was born in Cape May, N.J., was educated at Princeton, Harvard, and the London School of Economics. He began at the New York Federal Reserve Bank as a summer research assistant in 1949, returned as an economist in the research department in 1952, and became a special assistant in the securities department in 1955. Two years later he became a financial economist at Chase Manhattan Bank and returned there in 1965 as a vice president. He served as undersecretary of the treasury for international monetary affairs from 1969 to 1974. He played an important role in the decision surrounding the American decision to suspend gold convertibility in 1971, which resulted in the collapse of the Bretton Woods system. In general Volcker acted as a moderating influence on policy, advocating the pursuit of an international solution to monetary problems. From 1979 to 1987, Volcker served as chairman of the Federal Reserve System, under presidents Jimmy Carter and Ronald Reagan, and president of the Federal Reserve Bank of New York from 1975 to 1990. Volcker's tenure at the Fed was credited with ending the United States inflation crisis of the early 1980s by constricting the money supply through a sharp increase in interest rates. Inflation, at 9 percent in 1980, was lowered to 3.2 percent by 1983. This was predictably accompanied by a decrease in growth, a recession, and by an increase in unemployment, which rose to the highest levels since World War II. When the inflation was resolved and interest rates were lowered, unemployment and domestic economic growth returned to their normal levels. In the late 1990s Volcker headed a panel that looked to mediate a dispute between Swiss banks and Holocaust survivors. The panel was created by the World Jewish Restitution Organization and the Swiss Bankers Association in 1996 to investigate the dormant accounts. The Jewish groups had accused the Swiss banks of hoarding the wealth of Holocaust victims. Hundreds of auditors pored over bank records for three years, identifying nearly 54,000 accounts that may have belonged to victims of the Nazis. The commission's report lent credence to long-standing charges that the Swiss banks had turned a deaf ear to the needs of Jewish depositors while responding to the orders issued by officials in Nazi Germany. The commission also concluded that it saw no reason to revise the $1.25 billion settlement that Swiss banks agreed to in 1998 to pay Holocaust-era claims. In April 2004 Volcker was assigned by the United Nations to research possible corruption in the Iraqi Oil for Food program. In a report summarizing the research,

Volcker accused Kojo Annan, son of United Nations secretary general Kofi Annan, and the Swiss company Cotecna Inspection, Annan's employer, of trying to conceal their relationship. The report accused more than 2,200 companies and prominent politicians of colluding with Saddam Hussein's regime to bilk the humanitarian mission of $1.8 billion. It blamed shoddy management for allowing the corruption to go on for years. The investigators found that companies and individuals from 66 countries paid illegal kickbacks using a variety of methods, and those paying illegal oil surcharges came from, or were registered in, 40 countries. Volcker maintained his interests in the business world. He served on the board of the Nestlé Corporation from 1988 on and was chairman of the Washington-based Group of Thirty.

[Stewart Kampel (2nd ed.)]

VOLHYNIA (Rus. **Volyn**; Pol. **Wolyá**), historic region in N.W. Ukraine. Under czarist rule most of it was incorporated into the province of Volhynia. Today, the greatest part of it is divided up into the oblasts of *Zhitomir, *Rovno, and Volyn in the northwest part of Ukraine. The earliest information on Jews in Volhynia is in a report on the mourning of the Jews of the town of *Vladimir Volynski over the death of the prince of Volhynia, Vladimir Vasilkovich (d. 1288). However, there is reason to believe that there was already a Jewish settlement there in the 12th century. The Jews continued to live in Volhynia after it was annexed by *Lithuania. Among the Jewish communities whose members were granted rights of residence by the Lithuanian Grand Duke Witold were those of Vladimir-Volynski and *Lutsk.

During the first half of the 15th century, a wealthy Jew leased properties in the town of Vladimir-Volynski and even received an estate from the duke. Jewish landowners in the district of Lutsk are also mentioned during the second half of that century. In 1495, the grand duke of Lithuania, Alexander Jagellon, expelled all the Jews from his country, including those of Volhynia. In 1503, Alexander authorized the Jews to return to Lithuania and restituted their property, with the exception of their estates. In 1507 the ancient rights of residence of the Jews were again ratified by the authorities, and from then until the incorporation of Volhynia into the territories of the Polish Crown (1569), there was a considerable increase in the Jewish population of the region. During this period there were 13 Jewish settlements in Volhynia, including four principal communities (*Ostrog, Vladimir-Volynski, Lutsk, *Kremenets) which together numbered 3,000 members.

The Jews of Volhynia engaged mainly in commerce, but there were also some craftsmen, such as tailors and furriers, among them. Tension arose between them and the townsmen over Jewish economic activities. At the time the authorities, and particularly Queen Bona (1493–1557) – within the limits of her estates – defended the rights of the Jews. The general policy of the authorities toward the townsmen was marked by a tendency to increase their obligations, which also affected the Jews. During the second half of the 16th century, the Jews began to lease inns and engaged in various branches of the economy connected with the estates.

The expansion and consolidation of the Jewish settlement during this period made Volhynia a center of Jewish culture. By the middle of the 16th century, the area already boasted such distinguished scholars as Solomon *Luria, who held rabbinical office in Ostrog, and *Isaac b. Bezalel, the rabbi of Vladimir-Volynski. The golden era of Volhynian Jewry was the period between the annexation of the area to the Polish Crown in 1569 and the massacres of 1648. The establishment of towns on the steppes in the wake of the rapid settlement of the Ukraine and improved conditions of security led to the expansion of the Jewish population of Volhynia into new areas; especially due to migration from the towns to the townlets. In 1648 there were 46 Jewish settlements in Volhynia with a population of 15,000.

After the annexation, the Jews of Volhynia received legal status, equal to the Jews of Poland, whose rights surpassed those of the Jews of Lithuania. The Jews of Vladimir-Volynski (1570) and Lutsk (1579) were exempted from the payment of custom duties throughout the Polish kingdom. The Jews of Volhynia enjoyed the protection of the royal officials, who even defended their rights before the aristocracy and all the more so before other classes. With the weakening of royal authority at the close of the 16th and early 17th centuries, the Jews had the protection of the major landowners, mainly because they had become an important factor in the economy of Volhynia. At the close of the 16th century, the noblemen began to lease out their estates to Jews in exchange for a fixed sum which was generally paid in advance. All the incomes of the estate from the labor of the serfs, the payments of the townsmen and the Jews (who lived in the towns which belonged to the estate), innkeeping, the flour mills, and the other branches of the economy were handed over to the lessee. During the term of his lease, the Jew governed the estate and its inhabitants and was authorized to penalize the serfs at his discretion. During that period, a Jew named Abraham who lived in the town of Turisk became renowned for his vast leases in Volhynia. However, with the exception of these large leases, which were naturally limited in number and on which there is no further information from the beginning of the 17th century, many Jews leased inns, one of the branches of the agricultural economy of the estates, or the incomes of one of the towns or townlets. A lessee of this kind was actually the agent and confidant of the owner of the estate and the financial and administrative director of the economy of the aristocratic class. As a result of his functions, such a lessee exerted administrative authority and great economic influence, a situation which embittered the peasants, the townsmen, and the lower aristocracy. The lease of estates, together with the trade of agricultural produce derived from them, constituted the principal source of livelihood of the Jews of Volhynia.

Cultural and social life also prospered between 1569 and 1648. Each one of the four principal communities became an important Jewish center, and leading personalities, such

as Mordecai b. Abraham *Jaffe (author of the *Levushim*), R. Isaiah b. Abraham ha-Levi *Horowitz' (SHe-La-H), R. Samuel Eliezer b. Judah ha-Levi *Edels (Ma-Ha-RSHA), R. Yom Tov Lipmann *Heller (author of *Tosefot Yom Tov*), *David b. Samuel ha-Levi (Ta-Z), and many others, held rabbinical office in them. The rabbis of the principal communities and the leaders of the province (Volhynia was one of the "provinces" of the *Council of the Lands) convened from time to time to discuss affairs of common interest, but every principal community retained its independence, a fact which caused controversies between the communities. The above-mentioned rabbis and leaders also participated in the conventions of the provinces from the inception of the "Council of the Lands" in Poland in the 1580s. It also appears that earlier, before 1569, they participated in the Lithuanian conventions. In Volhynia, as in the other "provinces", there was a supreme bet *din whose seat was in Ostrog and before which any person who refused to be judged by the *bet din* of his town could present his case; disputes between communities were also brought before this *bet din*.

The rebellion of the peasants and the Cossacks in 1648, led by *Chmielnicki, undermined the very foundations of the Jewish settlement in Volhynia. The Jews of Volhynia, unlike those of the Dnieper region and the plain, knew of the defeats suffered by the Polish army and the massacres of Jews, and the overwhelming majority of them sought refuge in the fortified cities. However, after the fall of the fortress of Polonnoye into the hands of the rebels, as a result of the treason of the Ukrainian townsmen, and the massacre of the Jews of the town, a mass exodus toward the west began. The few who remained in Volhynia were put to death or converted, and Jewish homes and property were thoroughly ransacked. Although those who had fled returned to their residences after a few months (the first of them even before the end of 1648), the Jewish settlement in Volhynia, like the region as a whole, did not recover completely. Volhynia was transformed from a region which served as an economic, social, and administrative hinterland for the extensive colonization of the Ukrainian plain, into a border area of the kingdom, and its importance declined even further after the wars of the middle of the 17th century.

During the 1660s, when a period of relative calm dawned on Poland, the Jewish settlement of Volhynia appears to have regained its former dimensions. In the late 1670s there were about 20,000 Jews living in Volhynia. Thereafter, the number of Jews grew steadily, due to natural increase and to settlement in townlets and small villages. A total of 51,736 Jews were counted in 116 localities in Volhynia in 1765. However, there is reason to believe that their numbers were actually greater because a section of the population evaded the census, which was carried out for purposes of tax collection. About 30% of the Jews lived in over 2,000 villages; in three communities there were between 2,000 and 2,500 people, and in six communities there were between 1,000 and 2,000.

Large leases of whole estates are not in evidence during this period, but a considerable number of Jews leased inns or individual branches of the agricultural economy. Some of the Jews acted as the agents of various landowners, whereas others traded with the farmers. A number of them also traded with other parts of Poland or even traveled abroad to attend fairs. The percentage of craftsmen was also on the rise. In the main towns (the so-called royal towns), the townsmen succeeded in completely undermining the position of the Jews, but the Jews established themselves from the economic point of view in smaller towns (the so-called private towns) owned by noblemen. The owners of these towns compelled the townsmen to do agricultural labor for them; and many of the town dwellers therefore gradually moved over to the suburbs, which became semi-agricultural settlements, while in the town centers the Jewish population that kept its distinct urban character continued to increase. This evolution further strained the relations between townsmen and Jews, and there were ample opportunities for anti-Jewish incitement by the clergy.

From the beginning of the 18th century, a series of misfortunes and persecutions befell the Jewish population of Volhynia: a rebellion of the Cossacks broke out in 1702 and several bands penetrated into Volhynia; the Polish armies and the Cossacks of Mazeppa, who came to suppress the rebellion, also robbed the Jews and molested them. During the Great Northern War between Sweden, Poland, and Russia, Swedish regiments invaded the area (1706) and imposed heavy levies on the population. They were followed by the Russian and Polish armies, which continued to exact extortion from the Jews. From the 1730s onward, the Jews of Volhynia were the victims of repeated attacks by the *Haidamacks. From the 1740s to 1760s, there were most frequent blood libels in eastern Poland, possibly against the background of the rivalry between the Catholic and Russian Orthodox clergies. In 1747, there was a *blood libel in Zaslavl; in 1755 an attempted blood libel in Kremenets; and in 1756 a blood libel in Yampol.

The great revolt of the Haidamacks in 1768 affected the Jews of Volhynia to a relatively slight degree. Two years later, however, "the plague – may we be saved from it – broke out, while a conflagration raged in many districts through innumerable towns and villages, so that the Jews deserted their lands, abandoned their houses, and animals and fled to the forests and the fields; this confusion also struck the province of Volhynia" (Jacob Israel ha-Levi, *Aguddat Ezov*, 2 (1782), 24). After the massacres of 1648, the importance of Volhynia declined but its cultural organization was strengthened. During this period, the autonomous province of Volhynia remained one of the provinces of the Council of the Lands, and its representatives attended meetings. The activities of the provincial council, which met every three years with the participation of the delegates from the principal communities, also continued. During this period, the communities of Dubno and *Kovel were added to the provincial council. Toward the middle of the 18th century there were frequent disputes within Volhynia; for example, the trustees of the province complained against the communities of Ostrog ("the first and leading one among the communities of Volhynia") and Lutsk for their refusal to

contribute toward the province's expenses. Controversies also broke out between the principal communities and the petty communities ("the environs"), which sought to liberate themselves from the authority of the former. It is worth noting that even after the dissolution of the Council of the Lands in 1764, the principal communities of the province continued to convene and deliberate.

Volhynia (together with neighboring *Podolia) was also the first arena of *Ḥasidism. Several members of Israel Baal Shem Tov's company were of Volhynian origin, and during the following generation, Ḥasidism made rapid progress in Volhynia. *Jacob Joseph, one of the most prominent disciples and followers of the tradition of the Baal Shem Tov, lived in Polonnoye; the leader and successor of the Baal Shem Tov, *Dov Baer, in Mezhirech and Rovno; and R. Phinehas in *Korets (where an important press of the Ḥasidim was established); *Levi Isaac in Berdichev; R. *Wolf in Zhitomir; *Moses Ḥayyim Ephraim in Sudilkov; R. Feivish in *Zbarazh; R. Samson in *Shepetovka; R. Zeev Wolf in Zbarazh; R. Mordecai in Kremenets; R. Moses in Zvahi; R. Isaac in Radziwill; R. Joseph in Yapol (the last five were the sons of R. Mekhel of *Zolochev); R. Abraham in Trisk. In the 1760s, the Ḥasidim already exerted much influence in Volhynia and Dov Baer was a decisive authority in the public affairs of Volhynia. The administration of the communities of Volhynia was subsequently controlled by the Ḥasidim, and all appointments required the consent of the *ẓaddikim*. The first partition of Poland in 1772 and the separation of Volhynia from Galicia, to which it was attached mainly by social and economic ties, left a considerable imprint on the Jewish population of the region. The great fair of *Lvov was transferred to Dubno and helped the development of that community. Fairs also flourished in several other towns of Volhynia. At the close of the century, Berdichev became an important commercial center for the whole vicinity.

In the second (1793) and third (1795) partitions of Poland, sections of Volhynia were annexed by the Russian Empire, and the province of Volhynia was created from them in 1799. At first the political changes did not affect the sources of livelihood of the Jews or even the organizational systems of the communities; the proximity to the Austrian border, particularly to the important commercial town of *Brody, encouraged the Jews to establish commercial relations with Austria, even to the point of smuggling. This situation was brought to the attention of the Russian authorities during the first years after the annexation, and in 1812 the governor of the province of Volhynia suggested that the Jews be removed from a border strip 50 versts wide to prevent them from smuggling. This proposal received royal assent in 1816. In 1825, it was extended to all the western provinces of Russia, though in practice it was never fully applied. In 1843, an order was published to remove the Jews from the border region "without any excuses." At that time, Jews from the provinces of Lithuania and Belorussia began to immigrate to Volhynia. In 1847, there were 174,457 Jews in Volhynia. Industry began to develop among the Jews, and toward the middle of the 19th century a number of wealthy Jews leased the alcoholic beverage excise from the government. As a result, the number of Jewish innkeepers also increased. Many Jews traded in agricultural produce and tobacco. In 1885 there were no Christian merchants of the first and second guilds in Volhynia, whereas the number of Jews who belonged to these guilds amounted to 113; in the third guild, there were 3,749 Jewish and 56 Christian inhabitants of Volhynia.

In 1821, R. Isaac Dov (Baer) *Levinsohn returned from Galicia to his native town of Kremenets, and a center of the *Haskalah was thus created in Volhynia. In the early 1830s, through the initiative of the physician Rutenberg of Berdichev, a circle of *maskilim* named "Ḥevrat Shoḥarei Or ve-Haskalah" ("Society of the Seekers of Light and Enlightenment") was organized in Volhynia. At that time, the author Abraham Baer *Gottlober, who influenced many youths in the spirit of the Haskalah, was living in Volhynia. The Haskalah also made progress among the wealthy, including the lessees of the tax on alcoholic beverages. From the 1840s, the Russian government endeavored to propagate education among the Jews of Russia. Zhitomir, where one of the two Hebrew presses permitted by the government to function (in 1845) and the government rabbinical seminary (opened in 1848) were located, became an important center of the Haskalah movement in southwestern Russia.

The emancipation of the peasants in 1861 and the Polish rebellion of 1863 caused far-reaching changes in the economic and social development of Volhynia that affected the Jews. The decline of the estates of the Polish nobility, the construction of railways, and the creation of direct lines of communication with the large commercial centers deprived the Jewish masses of their traditional sources of livelihood and impoverished them. This prompted the Jews to develop industry. Of the 123 large factories situated in Volhynia in the late 1870s, 118 were owned by Jews. The number of craftsmen also increased. In 1862, a vocational school, the first of its kind in Russia, opened in Zhitomir. In 1897, there were 395,782 Jews living in Volhynia constituting 13.21% of the total population; 30% of them lived in the towns, 49% in the townlets, and 21% in the villages. The Jews constituted one half of the population of the towns. Forty per cent of Volhynia's Jews earned their livelihood from commerce, 25% from crafts, 12.5% from public and private services, 3.7% from haulage, and 2.3% from agriculture. The industries in which they engaged were light and nonmechanized and consisted essentially of the processing of agricultural produce, wood, hides, soap, etc. During the last quarter of the 19th century, the Jews of Volhynia, together with those of other parts of Russia, organized their public life and entered upon a political struggle for their rights. By the 1880s cells of the Ḥovevei Zion had already been established in the towns and townlets of Volhynia, and at the beginning of the 20th century branches of the *Bund and the Zionist parties were organized. Ḥasidism, however, continued to exert the most decisive influence.

The Jews of Volhynia were not harmed directly by the pogroms in Russia during the 1880s and in 1905–06. Many disasters befell them during World War I and the Russian civil war, however. In 1915 the Russian soldiers perpetrated pogroms in Volhynia, as in the other regions within proximity of the front, when they enforced the expulsion of the Jews because of their supposed disloyalty to Russia. In the summer of 1917, soldiers fleeing from the front murdered and robbed Jews in various parts of Volhynia. The situation deteriorated in the wake of the hostilities between the Ukrainians and the Bolsheviks in 1918, and the disorders reached their climax in a series of pogroms against the Jews by armed bands and in the frequent changes of regime in 1919–20. Many thousands died in these pogroms. During the Polish-Soviet war of 1920, the Jews of Volhynia suffered at the hands of both sides. In the peace treaty signed between Russia and Poland, the greater part of Volhynia went to the Poles, while the towns of Zhitomir, *Ovruch, and their surroundings remained under Soviet rule. In the 1926 census 65,589 Jews were counted in Russian Volhynia, while some 300,000 Jews lived in Polish Volhynia in the early 1930s. The economic discrimination against Jews by the Polish government was evident in Volhynia as in other parts of Poland, but Jewish cultural and social life prospered there. Jewish educational institutions, parties, the courts of ḥasidic *ẓaddikim*, etc., developed freely. The Jews of Volhynia, as in other parts of Poland, played an important role in *aliyah* to Palestine and the support to the *yishuv.*

The situation in the Soviet part of Volhynia was rather different. A brief period of cultural awakening in the 1920s was followed by the decline and the apathy of the 1930s, when many active Jews abandoned the townlets for the larger towns of the Ukraine and inner Russia. After the division of Poland in September 1939 according to the Hitler-Stalin agreement, the whole of Volhynia was annexed by the Soviet Union, and a policy of liquidation of the Jewish parties, organizations, and institutions was pursued until the German attack on the Soviet Union in June 1941.

Holocaust Period

The extermination of the Jews of Volhynia began in the first days after the outbreak of the war between Germany and the Soviet Union. In many places, the Ukrainians perpetrated acts of murder before the arrival of the Germans or immediately after it. In Zhitomir, 2,500 Jews were exterminated during the last week of July 1941, while several thousands were confined to a ghetto which was liquidated on September 19 of the same year (mainly by Ukrainians). Ghettos were set up in various towns in formerly Polish Volhynia. They continued to exist until the autumn of 1942, and during the months of September–November the Jews were exterminated and the ghettos of Rovno, Kremenets, and Dubno were liquidated. It is difficult to estimate the number of Jews who perished in Volhynia, but there is no doubt that it reached tens of thousands. After World War II, some of the few survivors returned to the towns of Volhynia, but the Holocaust and the Soviet policies of the 1950s and 1960s had completely obliterated the communal and public Jewish life that had existed in Volhynia for about eight centuries.

In 2005, two Holocaust monuments were erected in the city.

VOLKOVYSK (Pol. **Wolkowysk**), city in Grodno oblast, Belorus. Jews were first mentioned as living in the environs of Volkovysk in 1577. In 1766 the Jews paying poll tax in the city and its environs numbered 1,282. Volkovysk was annexed by Russia in 1795, and by 1797 there were 1,477 Jews and Karaites, comprising 64% of the population. There were 1,429 Jews in 1847; 5,445 (64% of the total) in 1897; and 5,130 (46%) in 1921. In the 19th century the Jews engaged in shopkeeping, crafts, and marketing agricultural products; they founded textile plants, sawmills, a brewery, a tannery, and manufactured tobacco products. Many Jews earned their livelihood by providing services and purveying to the nearby Russian army camp. The Jewish proletariat began to organize in 1897 under the influence of the *Bund, which began its activities when a strike broke out in the tanneries. A large yeshivah was founded in Volkovysk in 1887 and existed up to World War I. Between the world wars all the Jewish parties were active in the city, as well as a branch of *He-Ḥalutz. The educational institutions of the community comprised a school and kindergarten of the *Tarbut network, a Hebrew high school named Herzliyya (founded 1927), Taḥkemoni and Yavneh schools, a *talmud torah*, and a CISHO (see *Education) school. There was also a cooperative farmers' union (with 35 farms) for the purchase of equipment and marketing of their produce. Between 1924 and 1929 a Yiddish weekly, *Volkovisker Lebn*, was published. The rabbis of the community included Jonathan b. Mordecai *Eliasberg in the 1890s; Isaac Elhanan *Spektor lived there in the 1830s. Eliyahu *Golomb, Raphael Klatzkin (the Habimah actor; d. 1987), and Naḥman Rachmilewitz (Lithuanian minister for Jewish affairs), were originally from Volkovysk.

[Dov Rubin]

Holocaust Period

With the outbreak of the German-Soviet war (June 22, 1941), Volkovysk was heavily bombed by the Germans. Several hundred Jews were among those killed. A few escaped with the retreating Soviet army. From the start of the Nazi occupation many Jews were massacred, some of them denounced by Poles. A ghetto was set up on Dec. 13, 1941. In May 1942 about 2,000 Jews were exterminated near the town. The head of the *Judenrat, Ajzik Weinberg, attempted to alleviate the suffering of the community and established contact with the parti-

sans. A Jewish underground movement organized groups to join the partisans in the forests. Discovering that Jewish doctors had helped the partisans, the Germans arrested all 11 doctors in the ghetto, severely tortured them, and, when they refused to denounce their colleagues, hanged them in the town square. On Nov. 2, 1942 all of the Jews were rounded up in a former prisoner-of war camp, joined within a few days by all the Jews of the surrounding areas – a total of 20,000 persons. They lived in overcrowded huts below ground level. By the end of 1942, about 18,000 people were deported for extermination to the death camp of *Treblinka. The Volkovysk camp was liquidated on Jan. 12, 1943, and the remnants of the town's community were transferred to *Auschwitz.

VOLKSPARTEI, JUEDISCHE (Jewish National Party; **Juedisch-nationale** or **Juedische Partei**), political arm of the Zionist movement for domestic policy (Landespolitik) in Austria from 1906 to 1934. The party had branches throughout Austria, excepting Galicia, which had an independent organization after 1908. It stressed Jewish pride and rejected the participation of Jews in other national movements. Accepting the idea of an Austrian multinational state, it demanded recognition of the Jews as one of the peoples therein and the transformation of their religious communities into national communities. The Jewish National Party found many adherents in eastern Austria. In the west, it was largely popular among university students. It published weekly papers in several places and from 1919 to 1927 the daily *Wiener Morgenzeitung*. In 1908 Benno Straucher was elected Reichsrat deputy from Bukovina and formed the Jewish Club with three deputies from Galicia (Heinrich Gabel, Arthur Mahler, and Adolf Stand). In 1911 only Straucher's seat was retained. With the break up of the Austrian Empire in 1918, the party lost most of its followers and was virtually limited to Vienna. There it succeeded in 1919 in electing its leader, Robert *Stricker, to the Austrian parliament, where he cast the only vote against proclaiming Austria to be a part of Germany. He vigorously defended equality of rights for Austrian Jews, but he failed to be reelected in the Reichsrat election of 1921 owing to changes in the parliamentary election law. In 1919 the party gained three seats in the city council, to which Leopold Plaschkes, Jakob Ehrlich, and Bruno Pollack-Parnau were elected. In 1923 it lost two of the three seats, with Plaschkes remaining city councilor. In 1927 it lost the last seat. The party participated in subsequent elections with ever diminishing returns. It was successful in the Vienna religious community, however, where it obtained a change in the electoral rules, first gaining strong representation in the 1920s, and finally reaching a majority when Desider *Friedmann was elected community president in 1933.

VOLLI, GEMMA (1900–1971), Italian historian and teacher. Born in Trieste, Gemma Volli devoted herself to Jewish studies, and especially to the history of Italian Jewry in its relations with the Church.

Of particular interest are her papers on the *Mortara case in the *Rassegna Mensile d'Israel* (26, 1960 and 28, 1962) and in the *Bollettino del Museo de Risorgimento* (5 (1960), 1087ff.). Her articles and lectures on the cult of Simon of Trent (in *Il Ponte*, 19 (1963), 1396ff.; and RMI, 31 (1965), 570ff.) led to its abolition by the Church (Oct. 26, 1965); as a consequence, the Jewish *ḥerem* on the city of Trent lost its validity. Volli did the same service in exposing the cult of Lorenzino da Marostica (RMI, 34 (1968), 513ff., 564ff.). Her other works include *Breve storia degli Ebrei d'Italia* (1961); "*La vera storia del protocolli dei Savi anziani di Sion*" (II Ponte, 13 (1957), 1649ff.); and *Gli Ebrei a Lugo* (1970).

Her name was commemorated in the preface to the theatrical story about Simonino from Trento, "Shalom Alechem" by A. Zanotti – R. Fracalossi (Rovereto, 2005) for her contribution to the abolition of the cult of Simonino. Her *Gli Ebrei a Lugo* has been republished.

VOLOS (**Volo**), principal port city of Thessaly, Greece. The community of Volos was founded in the 19th century by a considerable number of Jews who came from the Peloponnesus after the Greek Revolution and the destruction of all of its Jewish communities. The community numbered 35 families in 1850. A new Romaniot synagogue was built in 1865 with the assistance of the Barons Rothschild and Hirsch of Paris. The rabbi was Samuel Molcho. One of the first schools to be opened by the *Alliance Israélite Universelle was in Volos (1864), which was also attended by many Greek children. Due to financial problems, communal apathy, defective instruction, dwindling enrollment, and abhorrent sanitary conditions, the school closed permanently in 1878. In 1889 and 1893 the community suffered from blood libels. At the end of the Turko-Greek war in 1897, anti-Jewish riots broke out, and many Jews fled to *Salonika. In 1909 there were 150 Jewish families and in 1913 about 1,000 persons. In 1910, the Zionist organization Po'alei Zion was founded, and in 1933 the Maccabi scout movement was founded. In 1940 the Jewish population of the city was 882. In 1943 the Jews dispersed themselves in the surroundings, but 130 of them fell into the hands of the Nazis and were included in a transport to the death camps. Rabbi Moshon Pessah, in consultation with the local Greek-

Orthodox Metropolit Ioachim, decided that he would not turn over communal lists to the German commander, and had the insight and courage to advise his community members to flee to the Pelion Mountains and elsewhere outside of Volos in the Thessaly region. Mainly the very poor, old, or those who returned to the city because of the rigors of mountain village life or to get supplies were caught and deported to Birkenau. Some of the Jews of Volos were in a special ELAS Jewish unit in the Pelion Mountains, and throughout Thessaly the Jews cooperated with the British in sabotage against German targets. In 1948 there were 565 Jews in the town; in 1958, 230; and in 1967, 210. In the earthquakes of 1955 and 1957, damage was done to the synagogue. It was decided to rebuild it on the same site, and money was raised from the Greek Board of Jewish Communities, the Salonikan Jewish community, the American Jewish Joint Distribution Committee, and private donors. In 1987, antisemitic graffiti were sprayed on the synagogue and Jewish stores in Volos.

VOLOZHIN (Pol. **Wołożyn**), city in S. Molodechno oblast, Belarus; in Poland before 1793 and between 1921 and 1945. Jews were living in Volozhin in the 16th century. They numbered 383 in 1766, 2,452 in 1897 (including the Jews in the vicinity), and 1,434 (54.5 percent of the total population) in 1921; out of 5,600 inhabitants in 1931, the large majority were Jews. They were mainly occupied in small-scale commerce, forest industries, flour milling, tanning, brickmaking, and crafts for the requirements of the agricultural locality. In World War II, on the eve of the Holocaust, according to estimates by survivors, there were approximately 3,000 Jews in Volozhin. They were "liquidated" in three Aktionen, the first following the German occupation of the town, the second on May 10, 1942, and the third in September 1942.

Volozhin Yeshivah

Volozhin acquired importance in Jewish life in Lithuania and Russia in the 19th century from its yeshivah, founded by Ḥayyim *Volozhiner and named Eẓ Ḥayyim in his honor. It was mainly established to serve as a barrier to the spread of *Ḥasidism, especially among the youth when it became clear that the strong opposition to Ḥasidism had been unable to halt its advance. R. Ḥayyim considered that it was the *pilpul* (casuistic) method of yeshivah teaching, divorcing study of the Talmud from its halakhic foundations, that was the reason for the dissatisfaction among the youth and that pushed many of them into the arms of Ḥasidism because of the religious stimulus and inspiration it offered. Hence the yeshivah he envisaged was to educate its pupils in the methods taught by *Elijah b. Solomon Zalman, the Gaon of Vilna: analysis of the text and understanding of its plain meaning. According to one tradition, the yeshivah was founded on the instructions of the Gaon, although it was established in 1803, several years after he died.

Two yeshivot already existed in Vilna when R. Ḥayyim decided to establish the yeshivah in Volozhin for reasons unknown – possibly to remove it from the influence of the *Vilna community administration, then rent by severe internal discord, and so that he could guide it in accordance with his own views. His opposition to the students' boarding out and the responsibility he took upon himself for their gaining a means of livelihood (about the time the yeshivah was founded he called on the Jewish communities to support it), despite the heavy burden which this devolved on him, evinced his concern to prevent the students from coming under external influence. R. Ḥayyim's endeavors prevented the yeshivah from becoming a merely local institution, and made it into a foundation supported by the whole of Jewry; it thus became a prototype for the Lithuanian yeshivot founded subsequently.

Teaching in the yeshivah began with only ten students, but it rapidly acquired a name among the Jewish public. It became so highly esteemed that the military governor of Lithuania in 1813, during the Napoleonic wars, issued a document of protection to R. Ḥayyim instructing all military units "to safeguard the chief rabbi of Volozhin, Ḥayyim ben Isaac, his schools and educational institutions… and to extend to the above-mentioned chief rabbi every assistance and protection…" The number of students had already risen to 100. In the meantime a special building for the yeshivah had been erected (of wood). The main lectures were given by R. Ḥayyim himself, his son-in-law R. Hillel, rabbi of Horodono (Grodno), and his son R. Isaac.

After R. Ḥayyim's death in 1821 his son R. Isaac served as principal of the yeshivah. Around this time (1824) the Russian authorities decided to close the yeshivah for reasons that are not clear. However, despite the official order prohibiting its existence, the yeshivah continued to function and expand. The number of students rose to 200 and its buildings were enlarged. The head of Volozhin yeshivah was considered at the time to be among the leaders of Russian Jewry, even by the authorities, and when in 1843 the government decided, in line with the recommendations of its "Jewish Committee," to convene a conference of rabbis to discuss problems of Jewish education, R. Isaac was invited to attend. He took this opportunity to obtain official recognition of the yeshivah through the record at the ministry of education of the letter of protection which had been issued at the time to his father. Since R. Isaac was then occupied with public matters and the administrative and financial affairs of the yeshivah, the task of teaching was principally delegated to his two sons-in-law, R. Eliezer Isaac Fried and Naphtali Ẓevi Judah *Berlin (Ha-Neẓiv). By then a controversy had already begun in the yeshivah, because, in contradiction to the tradition laid down by its founder,

R. Eliezer Isaac inclined to favor *pilpul*, and had a following among the students.

After the death of R. Isaac in 1849, R. Eliezer Isaac Fried was appointed principal of the yeshivah and R. Naphtali Ẓevi Judah Berlin the vice principal. R. Eliezer Isaac did not live much longer, and after his death in 1854, when both R. Berlin and R. Ḥayyim's grandson, R. Joseph Baer *Soloveichik, were both appointed principals, a severe disagreement broke out over the method of instruction, in which R. Joseph Baer favored the *pilpul* method, and had many supporters among the yeshivah students. When the controversy threatened to endanger the existence of the yeshivah, a delegation of prominent Lithuanian rabbis, including David Tevele of Minsk, Joseph of Slutsk, Isaac Elhanan *Spektor of Kovno, and Ze'ev the *Maggid* of Vilna, went to Volozhin in order to settle the controversy. The committee ruled that R. Berlin should be the principal of the yeshivah while R. Joseph Baer should serve as his deputy. From then on the yeshivah was headed by two persons – the principal of the yeshivah and his vice principal. In 1865 R. Joseph Baer left the yeshivah to serve as rabbi of Brest-Litovsk (Brisk). R. Raphael Shapira, son-in-law of R. Berlin, was appointed in his place, serving in this position until 1881. His successor was R. Ḥayyim *Soloveichik, son of Joseph Baer and grandson of R. Berlin.

At the end of the 1850s the government renewed the campaign against the *ḥadarim* and yeshivot. It was helped by a number of the *maskilim* who sent memoranda to the state-appointed Jewish Committee requesting that the yeshivot should be closed down as "nurseries of fanatical rabbis." The government evidently considered that so long as the yeshivot continued, the graduates of the state rabbinical seminaries would not be accepted to rabbinical offices, and that the Volozhin yeshivah was the chief rival of these seminaries. Thus in April 1858 the yeshivah was closed down by order of the authorities on the ground that its syllabus had not been submitted for approval to the ministry of education. Prominent Jews in Vilna and Minsk sent a request to the authorities to permit the yeshivah to reopen since "the Volozhin yeshivah, because of the esteem in which its founder was held, had acquired a high reputation from its foundation. By faithfulness to its mission it had made a noteworthy contribution to the spiritual education of our people. We owe a debt of gratitude to the large number of rabbis in various towns, many of whom have become prominent as authors of important works in rabbinical literature." Despite all the efforts on the part of the Jews, the authorities did not rescind their decision. However, like the order of closure of 1824, it did not have noticeable practical effects.

R. Berlin proved a most able administrator, and he was assisted in this by his wife Batya Miriam. The number of pupils continued to grow, reaching 300 at the end of the 1870s and 400 at the end of the 1880s, by then also attracting students from outside Russia – from England, Germany, Austria, and even America. Berlin also considerably expanded the budget of the yeshivah, which in 1885 reached 16,675 silver rubles, of which some 6,000 were expended on support of the students (the juniors received two to four rubles monthly, and the seniors four to ten), and 3,618 rubles on teachers' salaries. At the end of the 1860s R. Berlin went to collect funds for a new building and library, and sent emissaries to all parts of the Diaspora. The appeal succeeded, and a stone building of three stories was built with the funds.

A daily program was established for the students. Prayers were held at 8 A.M., and they then took breakfast. Afterward the weekly portion was read and explained by the principal of the yeshivah. Study proceeded from 10 a.m. to 1 p.m., during which the supervisor ensured that none of the students missed study. A lecture followed (delivered in the 1880s by R. Ḥayyim Soloveichik, son of R. Joseph Baer, in the first part of the week, and by R. Berlin in the second) and then came the midday meal. The students returned to the yeshivah at 4 P.M., held *Minḥah*, and studied until 10 P.M. *Ma'ariv* was then held, preceding supper. Many would return to the yeshivah and study until midnight. They would sleep until 3 A.M. and return to study until morning. The atmosphere of the yeshivah was created by the study circle of young students devoted in their enthusiasm for Torah study. At certain periods the principal of the yeshivah would examine the students once in each term (*zeman*).

In the 1860s opposition began to be voiced in the Jewish press to the yeshivot. Only the extreme *maskilim* demanded that they should be closed down; others criticized their system of study and its contents and wished to introduce general subjects, as had been instituted in the rabbinical seminaries in Germany and in Western countries. R. Berlin adamantly opposed any changes of this nature. However, when the Pahlen Commission was sitting in St. Petersburg and discussing the Jewish question, a number of Jewish communal leaders regarded it necessary to demonstrate to the authorities that the Jews were ready to make changes. On pressure from them in 1887 a number of prominent rabbis, including Isaac Elḥanan Spektor, Joseph Baer Soloveichik, and R. Berlin, convened in St. Petersburg, and at this meeting it was decided on the appointment of a special teacher to instruct the yeshivah students in Russian and arithmetic, provided that these studies would not be conducted within the yeshivah, but outside it. Volozhin yeshivah refrained from translating this decision into practice.

Despite the vigilance of the supervisors and the severe discipline in the yeshivah, external influences began to infiltrate there. At first the influence of the *Musar movement had begun to be felt. Study of ethical works like *Ḥovot ha-Levavot* and *Mesillat Yesharim* won acceptance by many. This opened the doorway to a religious awakening in the *musar* spirit despite the reservations of the heads of the yeshivah. On the other hand the ideas of *Haskalah were increasingly disseminated in the yeshivah and in the 1880s the Ḥovevei Zion also attracted many students. R. Berlin's sympathy with the latter helped to propagate its ideas in the yeshivah.

However, the spiritual excitement raised by these influences did not end there. A growing number of students read

Haskalah literature in Hebrew and other languages despite the energetic opposition of the principal. The *maskilim* began to demand changes in the yeshivah's regime, which finally brought intervention by the Russian educational authorities. On Dec. 22, 1891, the Russian minister of education published the "Regulations concerning Volozhin Yeshivah," which defined the yeshivah as a private open educational institution, and its pupils were required to study general subjects to elementary school standard. The regulations stated that any digression from them would lead to the closing down of the institution. R. Berlin did not agree to the regulations, and on Jan. 22, 1892, the authorities announced the closure of the yeshivah. R. Berlin and the students were expelled from Volozhin.

However, a few years later the yeshivah was reopened. In 1895 the government permitted use of the yeshivah building as a place of prayer. The students reassembled and laid the foundation for reviving the yeshivah. It continued to expand and develop until World War I (from 1899 under R. Raphael Shapira as principal). When the battle zone reached the vicinity of Vilna, the heads of the yeshivah left Volozhin with the rest of the Jewish refugees for the Russian interior (Minsk). The yeshivah did not resume activity until 1921. It existed, though with reduced numbers and influence, until the liquidation of the last 64 students in the Holocaust. The last to head the yeshivah were R. Jacob Shapira (d. 1936) and his son-in-law Ḥayyim Wulkin, who perished in the Holocaust. Many of the students of Volozhin yeshivah distinguished themselves in Hebrew literature and public leadership, including Ḥ.N. *Bialik, who left an enduring monument to the yeshivah in his poem "*Ha-Matmid*" and M.J. *Berdyczewski.

[Shmuel Ettinger]

VOLOZHINER, ḤAYYIM BEN ISAAC (1749–1821), rabbi and educator, leading disciple of R. Elijah b. Solomon Zalman the Gaon of Vilna and of R. Aryeh *Gunzberg (author of *Sha'agat Aryeh*). R. Ḥayyim was the acknowledged spiritual leader of non-ḥasidic Russian Jewry of his day. Ḥayyim distinguished himself both in the theoretical and practical spheres. In 1802 he founded the renowned yeshivah of *Volozhin (later to be named Eẓ Ḥayyim in his honor), which became the prototype and inspiration for the great talmudic academies of Eastern Europe of the 19th and 20th centuries, and similar schools in Israel, the United States, and elsewhere. His yeshivah, which the poet Ḥ.N. *Bialik was later to call "the place where the soul of the nation was molded" transformed the whole religio-intellectual character of Lithuanian Jewry. Imbued with his educational philosophy, it raised religious scholarship in Lithuania to the unique status it was to enjoy there until the Holocaust. It attracted students from afar enhancing the dignity of their calling. Ḥayyim set high standards for admission, insisting on extreme diligence and constancy of study, and instituted in the yeshivah the system of collegial study (*ḥavruta*), preferring it to self-study. The talmudic methodology, which was introduced by Ḥayyim into the yeshivah, was that of internal criticism of texts which he had learned from the Vilna Gaon. Though humble and of pleasant disposition, Ḥayyim was fearlessly independent in his scholarly endeavors. His insistence upon "straight thinking" (*iyyun yashar*), as opposed to the complicated dialectics common to much of the talmudic discourse of his time, led him occasionally to disagree even with decisions of the Shulḥan Arukh, albeit with appropriate reverence. The theological framework for Ḥayyim's educational philosophy is contained in his posthumously published *Nefesh ha-Ḥayyim* (Vilna, 1824), which is addressed primarily to "the men of the yeshivah." Quoting widely from Kabbalistic as well as rabbinic sources. R. Ḥayyim elevated the study of the Torah to the highest value it had ever been accorded in Judaism. He held the hypostatized Torah to be identified with the mystical **Ein Sof*, and he therefore considered study of Torah as the most direct form of unmediated communion with God. In reaction to the ḥasidic thinkers, he defined *Torah li-Shemah* as study for the sake of understanding, rather than as ecstasy or mystical theurgy, regarding this as the ideal form of motivation for study. This cognitive teleology of Torah study was allied with an emphasis on the objective performance of the commandments and a corresponding devaluation of the subjective, experiential component of religious observance. In the great polemics of his day between the Ḥasidim and the *Mitnaggedim*, R. Ḥayyim was the acknowledged leader of the latter. He was the leading ideological spokesman for classical rabbinism, his critique of Ḥasidism being thorough and deliberate. Yet in the communal aspects of the controversy, he was a decided moderate. Thus, despite his enormous reverence for the Vilna Gaon (rivaling the loyalty of Ḥasidim to their *ẓaddikim*), he did not sign the ban against the Ḥasidim. Both these attitudes, that of theological firmness and personal mellowness, were revealed in the *Nefesh ha-Ḥayyim*, which thus became a mitnaggedic response to the dialogue begun by the ḥasidic teacher, R. *Shneur Zalman of Lyady, and the beginning of the reconciliation of the two groups. The ḥasidic reaction to R. Ḥayyim's critique was reflected in the pseudonymous *Meẓaref Avodah*, published in Koenigsberg, 1858. R. Ḥayyim was also the author of a number of important responsa, published in *Ḥut ha-Meshullash* and

Kedushat Yom Tov; Ru'aḥ Ḥayyim, a commentary on Mishnah *Avot* (and, like the *Nefesh ha-Ḥayyim*, posthumously published by his son and successor, R. Isaac); and of a number of introductions to works of the Vilna Gaon.

[Norman Lamm]

VOLOZHINER, ISAAC BEN ḤAYYIM (d. 1849), talmudist and yeshivah head. Son of the founder of Volozhin yeshivah, popularly known as "Itzele of Volozhin," he acquired some secular knowledge, including foreign languages. Isaac taught at the yeshivah during his father's lifetime, and, upon his father's death, succeeded him as principal and became rabbi of the Volozhin community. After the Russian government closed the yeshivah in 1824, Isaac continued to maintain it, the local authorities closing their eyes to his activities. He exercised a profound influence on all the Lithuanian communities, particularly among the *Mitnaggedim*. Eliezer Isaac and Naphtali Ẓevi Judah *Berlin, both of whom taught in the yeshivah, became his sons-in-law, and on his death assumed the leadership of the yeshivah. Volozhiner took an active part in communal affairs. In 1824 M. *Lilienthal sought his support in the establishment of Jewish schools under government auspices. In the summer of 1843, together with M.M. *Shneersohn, Jacob Halpern, and B. Stern, he participated in the conference called by the government on the education of Jews, and defended the stand of the Orthodox circles, who objected that government-run schools might prove a danger to Jewish education and would be fruitless without political rights for Jews. In the end, however, he was compelled to submit to the demands of the government. He was one of those who gave approvals to the textbooks published by the government for Jewish children. He also gave his approval for the publication in Vilna of Mendelssohn's *Biur.* When asked for his reaction to the Russian government's degree ordering the style of clothing to be changed, he ruled that "the law of the government is binding" provided that it applied to all the inhabitants of the state. While taking part in the conference, Isaac obtained the government's permission to maintain the Volozhin yeshivah. He published *Nefesh ha-Ḥayyim* (Vilna, 1824), his father's ethical work, with his own glosses and a biographical introduction. He died in Ivenitz, in the district of Minsk. *Millei de-Avot* (1888), his homiletical commentary on *Avot*, was published posthumously.

[Yehuda Slutsky]

VOLPA (Pol. **Wolpa**; Yid. **Volp**, **Volpe**), town in Grodno district, Belarus. A Jewish community existed there from the early 17th century. In 1766 there were 641 Jews in Volpa who paid the poll tax; they numbered 700 in 1847; 1,151 (58% of the total) in 1897; and 941 (54.3%) in 1921. In the 17th century the community built a wooden synagogue which became famous for its original beauty. Besides their traditional occupation with commerce and crafts the Jews in Volpa engaged in domestic farming. In 1886 there were two tanneries, a dye works, and a brewery. Lack of rail connections prevented further industrial development and the Jews of Volpa took to gardening and tobacco growing, becoming expert in these fields. Before World War I there were 29 Jewish farms on an area of 242 hectares (597 acres); 73 hectares (180 acres) were Jewish owned and the rest were rented from gentile farmers. In 1921, 429 of the 941 local Jews made their living by farming. With the beginning of Polish rule in 1919 the armies stationed near Volpa incited much anti-Jewish activity. In 1929, the Jews were forbidden to grow tobacco, their main source of livelihood. Some of them turned to vegetable farming, cucumbers for pickling being their special crop.

Zionist organizations such as Ereẓ Yisrael ha-Ovedet were active in Volpa between the two world wars. There were a Hebrew *Tarbut school and a Hebrew and Yiddish library each containing 3,000 volumes. The community was annihilated in the Holocaust.

[Dov Rubin]

VOLPE, ARNOLD (1869–1940), conductor. Born at Kovno, Lithuania, Volpe emigrated to the U.S. in 1898. There he conducted the Young Men's Symphony Orchestra (1902–19), the Volpe Symphony Orchestra (1904–1914) founded by him, the Washington D.C. Opera Company (1919–22), and the University of Miami Symphony Orchestra (1926–40). He was also director of the orchestral school of the Kansas City Conservatory (1922–25). In 1918 he founded the celebrated summer concerts at the Lewisohn Stadium, New York.

°**VOLTAIRE** (**François-Marie Arouet**; 1694–1778), French philosopher. No writer contributed so much as Voltaire to the destruction of the traditional beliefs fundamental to European society before the French Revolution: belief in the divine right of monarchy, in the legitimacy of the privileges of the nobility, and in the infallibility of the Church. Voltaire's philosophical convictions were those of a deist, not an atheist. It is also noteworthy that he attacked the biblical belief in the unity of mankind; to blacks, for instance, he attributed an inferior and separate origin. The better to ridicule the established Church, or, in his own words "Écraser l'Infâme," Voltaire preferred to concentrate his attacks on the Old Testament and its followers, the Jews; this he did in such a manner that in antisemitic campaigns in the following centuries he was used as an authority and frequently quoted. From the psychological point of view it seems that the antisemitism of Voltaire, far from being a tactical stratagem, expressed in the facility of his attacks against the Jews, was primarily a result of his hatred for the Church. For instance, it is characteristic of Voltaire that in his polemics with Isaac de *Pinto, he forgot the habitual formula

which followed his usual way of signing, "Écrasez l'Infâme," and signed instead: "Voltaire, chrétien gentilhomme de la chambre du Roi très-chrétien." Historically speaking, Voltaire's outlook was a powerful contribution to the creation of the mental climate which made possible the emancipation of the Jews, but at the same time it prepared the ground for the future racial antisemitism. Just after Voltaire's death, Zalkind *Hourwitz, librarian to the king of France, wrote: "The Jews forgive him all the evil he did to them because of all the good he brought them, perhaps unwittingly; for they have enjoyed a little respite for a few years now and this they owe to the progress of the Enlightenment, to which Voltaire surely contributed more than any other writer through his numerous works against fanaticism." Two centuries later this judiciously balanced judgment seems to have been only partially warranted. Recent scholars such as A. Hertzberg (see bibliography) have seen Voltaire as one of the founders of modern secular antisemitism (see *Antisemitism).

[Leon Poliakov]

VOLTERRA, Italian family especially prominent during the Renaissance. In 1408, BONAVENTURA, son of Genatano of Bologna, was invited to open a loan-bank in Volterra and the name of the city became his own and his descendants'. He may have been the copyist of a Hebrew work on logic. His son MANUEL opened a loan-bank in Florence in 1459. He was very affluent but his family apparently lost its wealth. One of his sons was the traveler MESHULLAM DA *VOLTERRA. Another son, ABRAHAM, opened a loan-bank in Gaeta, southern Italy. Another, LAZZARO (ELIEZER), continued in banking in southern Italy, in Siena and in Florence. His wife Hannah was the daughter of Jehiel b. Isaac da *Pisa. He was in touch with Johanan *Allemanno on philosophical questions. He also wrote poetry, including love poetry. ḤAYYIM (VITA) BEN MOSES of Venice and later Finale, Senigallia, and Ancona, engaged enthusiastically in rabbinic disputes. About 1714 he got into trouble with the Inquisition and took refuge for a time in London (Ms. Roth 262). VITO *VOLTERRA was an Italian jurist.

[Menachem E. Artom]

VOLTERRA, EDOARDO (1904–1984), Italian jurist. Born in Rome, he was the son of Vito *Volterra, the Italian mathematician. He became professor of Roman law successively at the universities of Cagliari, Parma, Pisa, and Bologna. Volterra was removed from his teaching posts in 1938 under the Fascist antisemitic laws. He was decorated for his bravery in fighting the Germans during the last year of the war. He returned in 1945 to Bologna where he was rector until 1947. He became professor of law at the University of Rome in 1951.

Volterra's numerous publications include *Collatio Legum Mosaicorum et Romanarum* (1930), *La Conception du mariage d'après les juristes romains* (1940), and *Instituzioni di Diritto Romano* (1961). He also wrote many articles on family law which were notable for their clarity and wide range of knowledge.

[Giorgio Romano]

He was appointed constitutional justice of Italy (1971–1980); in 1971 the University of Rome published six volumes in his honor, *Studi in onore di Edoardo Volterra;* his books were very popular among scholars. Republished in 1980 was his *Istituzioni di Dirito Romano* as was in 1983 his *Diritto Romano e Diritti Orientali* (originally published a few months before the racial legislation). In 1991 six volumes of his *Scritti giuridici* were published. The British Academy's Research Projects hosted an important internet site called *Project Volterra Database* in honor of his memory. In 2005 the University of Rome commemorated the 100th anniversary of his birth.

VOLTERRA, MESHULLAM BEN MENAHEM, DA (Bonaventura di Manuele; 15th century), Italian traveler. Volterra was partner and later owner of his father's affluent loan-bank in Florence; he also traded in precious stones. He was interested in Jewish literature and philosophy, and was friendly with Lorenzo de Medici to whom he once sent a gift of game. In the spring of 1481 he set out for Ereẓ Israel in order to fulfill a vow made when he got into trouble in Florence. He sailed from Naples to Egypt by way of Rhodes, and then went by land over the Sinai peninsula, arriving in Jerusalem on July 29, 1481. After remaining about a month, he returned via Venice, where he arrived in October. Volterra wrote in Hebrew an account of his journey (Massa Meshullam mi-Volterra be-Ereẓ Yisrael, ed. A. Yaari, 1949; abridged English translation in E.N. Adler (ed.), *Jewish Travellers* (1930), 156–208) which contains a wealth of information about the cities he visited – Alexandria, Cairo, Gaza, Hebron, Jerusalem, Jaffa, Beirut, Damascus – their Jewish communities and traditions; he also gives much information of economic interest. While occasionally noting local legends, he is often skeptical about them. He shows also some familiarity with classical literature. His style is readable and attractive although containing some grammatical errors and numerous Italian expressions. In 1487 Meshullam again left for a trip to the east for commercial reasons, traveling part of the way with R. Obadiah di *Bertinoro. Another Meshullam da Volterra, according to Abraham Portaleone, drew up in 1571 a price list of gems in the world market.

[Menachem E. Artom / Avraham Yaari]

VOLTERRA, VITO (1860–1940), Italian academic. Born in Ancona, he studied in Florence and graduated in mathematical, physical, and natural sciences from the University of Pisa. When 23 years old he taught rational mechanics at the University of Pisa, where he became dean of the Faculty of Sciences. He moved to the University of Turin in 1893. Volterra became a member of the Academy of the Lincei, of which later he was also president. He was dean of the faculty of sciences at the University of Rome in 1907. Volterra was always anti-Fascist. A subscriber to the "Croce Manifesto" drawn up by the anti-Fascist intellectuals, he was among the very few Italian professors to refuse to swear allegiance to the Fascist regime, thus losing his chair. He died in Rome. The department of mathematics at the University of Rome was dedicated in his name.

VOLYNSKI, AKIM LEVOVICH (pseudonym of **A.L. Flexer**; 1863–1926), Russian literary critic and art historian. Volynski studied law, but abandoned an academic career which would have required his conversion to Christianity. His early writings dealt with Jewish themes and appeared in Russo-Jewish periodicals. In 1884 he co-edited an anthology entitled Palestina. His works include books about *Spinoza, S.S. *Frug, the Bible in Russian poetry, Dostoevski, and religious philosophy. He wrote a definitive essay on L.O. *Levanda, the historian of Russian Jewry. Volynski's opposition to the "progressive" critics and their philosophy of materialistic positivism aroused tremendous controversy, and he was branded "decadent." After the 1917 Revolution, he abandoned literary criticism and became head of the Choreographic Institute in Leningrad.

Critical essays which he wrote as an editor of the monthly *Severny vestnik* ("Northern Courier") appeared in two collections: *Russkiye kritiki* ("Russian Critics," 1896) and *Borba za idealizm* ("The Fight for Idealism," 1900). Volynski's last books dealt with ballet. Among his works is a book on the aesthetics of dance, *Kniga Likovanii* ("The Book of Exultations," 1923). He also wrote a volume on Leonardo da Vinci.

°**VOLZ, PAUL** (1871–1941), German Bible scholar. Born in Lichtenstern (Wuerttemberg), Volz was professor in Tuebingen from 1909.

He wrote a comprehensive exposition of Jewish eschatology, which in opposition to the religio-historical school, he considered as genuinely "biblical-Israelite" (*Juedische Eschatologie von Daniel bis Akiba*, 1903; second edition: *Die Eschatologie der juedischen Gemeinde im neutestamentlichen Zeitalter*, 1934). In his work *Mose, Ein Beitrag zur Untersuchung ueber die Urspruenge der israelitischen Religion* (1907), Volz concludes from the post-mosaic pre-prophetic religion that Moses was the founder of a YHWH League; in the second edition (*Mose und sein Werk*, 1932) he regards Moses as the founder of the people and the Decalogue as his authentic program. He anticipated S. Mowinckel's explanation of the Festival of Tabernacles as a New Year Festival of YHWH, in analogy with the Babylonian New Year Festival (*Das Neujahrfest Jahwes*, 1912). With his disciple W. Rudolph, Volz opposed the prevailing theory of the Pentateuch in that he contested the existence of the Elohist source (*Der Elohist als Erzaehler*, 1933). Another well-known work by Volz is *Der Prophet Jeremia* (1922, 1928²).

VON FURSTENBERG, DIANE (1946–), U.S. fashion designer. Von Furstenberg, the daughter of a Holocaust survivor, became an internationally celebrated designer whose achievements were predicated largely on one simple dress. She was born Diane Halfin in Brussels, 18 months after her mother, Liliane, was liberated from Auschwitz. Her father, Leon, a Russian émigré, raised the family in Belgium and Diane was educated in Spain, England, and Switzerland. While studying economics at the University of Geneva, she met Egon von Furstenberg, a Swiss-born German prince. They married in 1969 and moved to New York. In 1970, shortly after the birth of her first child, Alexandre, she launched Diane Von Furstenberg Studio. A year later, her daughter, Tatiana, was born. By 1972, she had created the dress that was to catapult her to fame. Made of Italian printed jersey, it was a simple wrap-around style designed to cling to the body without looking vulgar. It seemed to symbolize the vast changes in sexual and social attitudes then taking place in the U.S. and was a nationwide success, landing Von Furstenberg on the covers of *Newsweek* and the *Wall Street Journal*. By 1976, the modestly priced dress – known simply as The Wrap – had sold in the millions. A version was hung in the Smithsonian Institution in Washington, D.C. But by the late 1970s, von Furstenberg's marriage had dissolved and the market had become oversaturated with the dress. Demand dwindled. She sold her apparel business to Carl *Rosen of Puritan Fashions and licensed her name for products ranging from luggage to cosmetics. In 1979, she created Tatiana, a fragrance that became a best seller. But she was forced to sell her cosmetics and fragrance business in 1983 because it was undercapitalized. Von Furstenberg left the U.S., traveled widely, lived in Bali, then Paris and returned to New York in 1990. In 1992, she created a company called Silk Assets and offered its products on QVC, a television shopping channel. QVC was eventually acquired by Barry *Diller, the founder of Fox Broadcasting and a long-time intimate who would become Von Furstenberg's second husband. In her first appearance on the channel, Von Furstenberg sold $1.3 million worth of silk separates in one hour. In the late 1990s, she revived

her wrap dresses and found a receptive new audience in the daughters of her earliest customers. Her company expanded into jewelry and cosmetics and by 2005, Diane von Furstenberg boutiques were in New York, Miami, London, and Paris. Von Furstenberg has also produced books and been involved in movies. In 1998, she published a memoir, *Diane: A Signature Life*. Earlier, she had produced a series of home furnishing books. She was an executive producer of *Forty Shades of Blue*, a drama that won a prize at the 2005 Sundance Film Festival. She was elected to the boards of the Council of Fashion Designers of America and U.S.A. Network Inc. in 1999 and was awarded a CFDA Lifetime Achievement Award in 2005. Von Furstenberg, an early supporter of the U.S. Holocaust Memorial Museum in Washington, was honored by the Anti-Defamation League and by Israel's Shenkar College.

[Mort Sheinman (2nd ed.)]

VON WEISL, ZE'EV (Wolfgang) (1896–1974), physician, Zionist leader, journalist and writer. Born in Vienna and an active Zionist from youth, during World War I he was a lieutenant in the Austro-Hungarian army, and after the collapse of the monarchy led a Jewish defense unit to forestall attacks on the Jewish Quarter of Vienna.

He graduated as a physician in 1921 and emigrated in 1922 to Palestine where he was a laborer as well as a practicing physician. In 1923 he returned to Vienna, resuming his Zionist activities and contributing to the *Neue Freie Presse* and the *Wiener Morgenzeitung.* He was correspondent for the *Vossische Zeitung* and *Chicago Tribune* for the Middle East, traveling extensively there, interviewing numerous Moslem leaders including Kings Ibn Saud, Feisal and Fuad. He was imprisoned in Persia as a suspected British spy. Lecturing extensively in Europe on behalf of the Revisionist Movement, he was among its founders and leaders in Palestine, a member of the editorial board of *Do'ar ha-Yom*, and editor of *Ha'am.* In 1936 he was elected president of the New Zionist Organization (NZO). In 1940 he escaped from Paris and resumed his political and journalistic activities in Palestine. In 1942 he was chairman of the Palestine NZO. In June 1946 he was interned in the detention camp at Latrun and was released after a prolonged hunger strike, but in 1947 he was again interned together with other Jewish leaders. He was wounded in the War of Independence.

Among his numerous works are *Der Kampf um das Heilige Land* (1925), *Allah ist gross* (1937), and *Tish'im u-Shenaim Yemei Ma'aẓar ve-Ẓom* (1947).

VOORSANGER, JACOB (1852–1908), U.S. Reform rabbi. Voorsanger, born in Amsterdam, Holland, received his rabbinical education there and in 1872 settled in the United States. After holding several pulpits, he became associated with Emanu-El Congregation in San Francisco in 1886, first as assistant to Rabbi Elkan *Cohn, and, upon the latter's death in 1889, as rabbi. Well versed in Jewish literature, an energetic worker, and an able preacher and writer, Voorsanger became the foremost rabbi on the West Coast. He knew 13 languages and taught at the University of California Berkeley. He was classically Reform in his religious orientation and actively opposed Zionism. Among the rabbis he influenced were boys in his own congregation, Judah L. Magnes, Martin A. Meyer, who was his successor, and his son Elkan Voorsanger. In 1895 he founded the weekly *Emanu-El*, which achieved prominence on the West Coast. He published *Chronicles of Emanu-El* (1900) and also compiled a Sabbath evening service. Voorsanger's *Sermons and Addresses*, ed. by O.I. Wise, was issued in 1913. He was not open to the immigration of Eastern European Jews and proposed a quota on the number of immigrants, especially to San Francisco.

[Sefton D. Temkin / Michael Berenbaum (2nd ed.)]

VORARLBERG, autonomous province in W. Austria. Jews lived in the village of Feldkirch in the early 14th century. Seven Jewish families who moved without permission, in 1343, to Bludenz, continued to remain the property of their former lord, Duke Ulrich I of Montfort, according to a decision of the court. Virtually no Jews lived in the isolated and mountainous region in the following century. In 1559 the city of Bregenz received the privilege of not tolerating Jews within its walls; nonetheless, a **Schutzjude*, Wolf, was given permission to settle there in 1584. In 1617 Jewish refugees from Burgau were invited to settle in *Hohenems, where they soon constituted a flourishing community; by 1624 a Hebrew printing press was in operation in the city. In 1676, however, they were expelled. Jews first came to Sulz in 1637 but the community assumed permanent form only in 1676, when refugees from Hohenems settled there. Between 1676 and 1688 the community numbered about 65. Only the three richest Jewish families were allowed to remain in Sulz in 1688 when an expulsion order of the Vorarlberg estates was modified by the emperor; by 1743 their number had grown to ten. In 1744 the local militia, after a victory against French invaders, plundered the synagogue and Jewish homes and expelled the ten Jewish families, who thereafter found asylum in Hohenems. The refugees appealed to *Maria Theresa when the Vorarlberg estates attempted to forbid their return. The empress's decision on restitution was never carried out.

Severe economic restrictions which forbade the Jews to engage in trade within the semi-autonomous province forced them to become large-scale exporters and importers of goods (mainly textiles) from neighboring Switzerland, Italy and Bavaria. The Jewish community of *Saint Gall, Switzerland, was founded by merchants from Hohenems. The Jews established and developed the textile industry in Hohenems and later, in Bregenz. After all economic and civil disabilities were abolished in 1867 in Austria, a sharp numerical decline subsequently set in as the Jews moved to the major cities. The Jewish population declined from 246 in 1869 to 126 in 1910 and 42 in 1934 and ended in the Nazi period. After World War II

(1946) 400 *displaced persons (DPs) were temporarily interned in Bregenz.

[Harry Wasserman]

VORENBERG, JAMES (1928–2000), U.S. lawyer. Vorenberg, the son and grandson of presidents of the Gilchrist Company department store in Boston, graduated from Harvard College and its law school, where he was president of the *Law Review.* He served in the United States Air Force and then became clerk for Justice Felix *Frankfurter of the Supreme Court in 1953 and 1954. He joined the Boston law firm of Ropes & Gray in 1954 and returned to Harvard as a professor of criminal law in 1962. He was active in legal and public affairs. From 1965 to 1967 he served as executive director of a commission appointed by President Lyndon B. Johnson to study the growing problem of crime in America. The report the commission produced reflected Vorenberg's observation that fighting crime required solutions such as rehabilitation services and larger court staffs that were far more complex than those that had been relied upon traditionally, such as larger budgets for the police. He published an article suggesting that the American tradition of giving prosecutors unfettered power had gone too far and proposed limits on their authority. At Harvard, he worked to broaden police understanding of legal principles. In 1973 Vorenberg was selected as one of the senior assistants to Archibald Cox, helping to organize the office that had been established to investigate the burglary at Democratic Party headquarters at the Watergate complex and assertions of campaign sabotage by the Committee to Re-Elect President Richard M. Nixon. Vorenberg set up the staff that continued the investigation that led to Nixon's resignation. In 1981 Vorenberg became dean of the Harvard Law School. His eight-year tenure was somewhat stormy because of bitter disputes over tenure decisions involving professors who advocated a school of legal thought known as critical legal studies, which asserted that law was not neutral. Critical legal scholars argued that law was an oppressive tool of the rich and powerful. While the battles raged, some black Harvard law students protested, saying that there were not enough minority members on the law school faculty. Vorenberg was largely credited with keeping the law school intact during that period. He also was an advocate of affirmative action, to increase the number of minority faculty and students.

[Stewart Kampel (2nd ed.)]

VORONCA, ILARIE (originally **Eduard Marcus**; 1903–1946), Romanian and French poet. Born in Brăila, Romania, Voronca published his first verse in Lovinescu's review Sburătorul Literar in 1921. He himself edited Integral and contributed to many of the avant-garde publications of his time. His books of poetry, beginning with *Restristi* ("Hard Times", 1923) provoked varied reactions among critics.

An outstanding pioneer of modernism, Voronca wove futurism, Dadaism, and surrealism into his Romanian verse collections which include *Ulise* (1928), *Brățara nopților* ("Bracelet of the Night," 1929), *Zodiac* (1930), *Incantații* ("Incantations," 1931), *Petre Schlemihl* (1932), and *Patmos* (1934). In two volumes of essays, *A doua lumină* (1930) and *Act de prezență* (1932), Voronca termed the poet a "*Wandering Jew without a shadow" and a "Peter Schlemihl without a homeland," who could be certain only of universal uncertainty and whose sole religion should be poetry.

During the early 1930s Voronca immigrated to France, where he began writing in French, eventually publishing some two dozen volumes of verse. He made important contributions to periodicals such as the *Nouvelles littéraires, Cahiers du Sud*, and *Cahiers juifs*. Collections of this period include *Permis de séjour* (1933), *Ulysse dans la cité* (1933), *La joie est pour l'homme* (1936), and *Beauté de ce monde* (1940). During World War II Voronca was active in the French Maquis and allegedly converted to Catholicism. This abandonment of Judaism – if it indeed took place – did little to relieve the poet's inner anxiety which, in the form of a profound restlessness, appears in such later titles as *Les témoins* (1942), *Souvenirs de la planète terre* (1945), and *Contre solitude* (1946). Voronca finally committed suicide.

[Dora Litani-Littman]

VORONEZH, city and region in Southern Central Russia. The province of Voronezh lay outside the Jewish Pale of *Settlement, and until 1917 Jews were forbidden to settle there. The Russian authorities also took special steps at the beginning of the 19th century to remove Jews from the province, in order to prevent them from influencing those Russian sectarians who inclined toward Judaism (the Subbotniki, who were numerous there). Small groups of Jews, entitled to settle outside the boundaries of the Pale, nevertheless found their way into the province during the 19th century. In 1874, 319 Jews lived in the town and obtained permission to maintain a synagogue in a private house. The constitution of their community received official authorization in 1890. In 1897 there were 2,888 Jews in the Voronezh province, of whom 1,708 resided in the town of Voronezh. The Jewish population of the town was assaulted during the wave of riots which broke out in Russia in October 1905, and the community was attacked again during the Russian Civil War (1918–20). After World War I, the number of Jews in Voronezh increased and by 1926 had reached 5,208 (4.3% of the general population). The community suffered severely during the Nazi occupation (July 1942 to January 1943). According to the 1959 census, there were 6,179 Jews in the Voronezh district, most of whom lived in the city of Voronezh, though their real number was estimated at close to 10,000. There was no synagogue, as the old synagogue was turned into a storehouse for

building material (reported in the *New York Times*, June 19, 1959). When the Jews attempted to repossess the synagogue, the authorities said that they must first purchase a new storehouse and then renovate the building, but the community lacked the necessary funds. In 1959 the Star of David was removed from the synagogue wall. There was no separate Jewish cemetery. In 2002 there were 1,522 Jews in the Voronezh district.

[Abraham N. Poliak]

VORONOFF, SERGE (1866–1951), surgeon and physiologist. Born in Russia, he was educated in Paris, where he served as chief surgeon of the Russian Hospital. He was later appointed director of the biological laboratory of Ecole des Hautes Études and director of experimental surgery at the Collège de France at Nice. When the Nazis occupied France. he fled to Portugal and later to the United States.

Among Voronoff's early successes was an increase in the yield of wool from sheep by gland transplants. Encouraged by the results, he tried to find a means to rejuvenation, attempting to stimulate the flow of sex hormones by the transplantation of glands from higher primates to human subjects. He claimed that the human life-span could thus be prolonged to 140 years. Voronoff attempted to cure thyroid deficiencies by similar means. His publications include *Traité des greffes humaines…* (1916); *Conquest of Life…* (1928); *Sources of Life* (1943); *Love and Thought in Animals and Men* (1937); and *From Cretin to Genius* (1941).

VORSPAN, AL (1924–), a leading Jewish spokesperson and author on social justice concerns during the second half of the 20th century. *Vorspan served as the long-time senior vice president for social justice of the Union of American Hebrew Congregations (now the Union for Reform Judaism). His social justice textbooks (*Justice and Judaism*, *The Prophets*, *Tough Choices*, *Jewish Dimensions of Social Justice*) have been widely used for 50 years in Reform religious schools, adult education programs, and social action committees. For a quarter century, he taught popular social justice seminars for rabbinical students at HUC-JIR in N.Y.

Raised in St. Paul, Minnesota (along with his brother Rabbi Max *Vorspan, a Conservative Rabbi who served as the vice president of the California-based University of Judaism), he was greatly influenced by the liberal politics of Hubert Humphrey (senator and vice president). After serving in the U.S. Navy during World War II, he began working in New York City at the National Jewish Community Relations Advisory Council. Quickly developing a national population for his eloquence, writing and programmatic skills, in 1953 he was hired as the deputy to Rabbi Eugene J. Lipman in heading the Reform Movement's new social justice program, of which he assumed leadership from 1961 to 1993.

He is credited with playing a key role in stimulating the creation of congregational social action committees, helping to make them a norm in American Jewish life and being a defining expositor of the social justice emphasis of Reform Judaism. The impact was significant. According to J.J. Goldberg in his book *Jewish Power*, "The Reform [C]ommission [on Social Action], … [r]un on a shoestring from the New York offices of the Reform synagogue union, could mobilize an army of congregants through the social-action committees of hundreds of Reform temples nationwide." He played a leading role in the efforts that led to the creation of the Religious Action Center of Reform Judaism, the Reform Movement's social justice center in Washington, D.C.

In the national social justice battles of the mid-century, Vorspan was constantly at the forefront of Jewish efforts. One of the Jewish community's leading proponents of civil rights, Vorspan was part of a 16-person delegation of prominent Reform leaders (all the others, rabbis) who traveled at Dr. Martin Luther King's invitation to St. Augustine, Florida, in 1964 to protest racial discrimination. They were arrested and issued a widely discussed public letter calling the Jewish community to arms in the civil rights struggle.

An outspoken critic of the Vietnam War, he helped, with Rabbi Maurice Eisendrath, to lead the Reform Movement to condemn the war in 1965, several years before other national Jewish organizations did so. Similarly, on Soviet Jewry, domestic poverty, anti-apartheid efforts, women's rights, Middle East peace and the United Nations (at which he served as the NGO representative of the UAHC/URJ), his prolific writings and eloquent speeches shaped and mobilized the social justice activities of large segments of the political liberal Jewish community.

[David Saperstein (2nd ed.)]

VORSPAN, MAX (1916–2002), U.S. rabbi and administrator. Born in St. Paul, Minnesota, Vorspan was ordained by the Jewish Theological Seminary in 1943. During his senior year, he served first as assistant director of the Seminary School of Jewish Studies (1943) and then as the program director of the 92nd Street Young Men's Hebrew Association. Upon graduation, he enlisted in the army as a chaplain, serving in Saipan until the end of World War II. Discharged when the war was over, he accepted a pulpit in Pasadena, California, where he established the first Reconstructionist Congregation in the West. He then joined the Brandeis Camp Institute as an associate director, where he established a reputation as a creative administrator and popular lecturer.

In 1954, Vorspan was invited to become the first full-time registrar and instructor at the University of Judaism, which was then the West Coast branch of the Jewish Theological Seminary. He remained there for some 40 years, retiring in the early 1990s as associate professor of American Jewish history and senior vice president. Universally liked, he was instrumental in establishing the Pacific Southwest Coast Region of the United Synagogue, Camp Ramah in California, and the University's School of Fine Arts.

In addition to his classes at the university, Vorspan lectured widely throughout the West. He published a number of popular articles and cowrote *The History of the Jews of Los Angeles.*

[David L. Lieber (2nd ed.)]

VORST, LOUIS J. (1903–1987), chief rabbi of Rotterdam, Holland. The son of a diamond worker, Vorst entered the Amsterdam Rabbinical and Teachers' Seminar in 1914 and obtained the degree of "*Maggid*" in 1924. He taught at Jewish elementary schools in Amsterdam and in 1927 became head of Jewish studies at the new Jewish post-elementary school there. In 1931 he was invited by Chief Rabbi A.B.N. Davids of Rotterdam to head Jewish education in that city. When Chief Rabbi Davids died in Bergen-Belsen in 1945, Vorst, who had survived although seriously weakened, returned after the liberation to Rotterdam where he took over most of the duties of Chief Rabbi Davids as well as resuming his own duties. He was given the personal title of rabbi, although he had not obtained the rabbinical diploma entitling him to become a chief rabbi. In 1959 he passed the rabbinical examination at the Amsterdam Ashkenazi Seminar and was then appointed chief rabbi of the Rotterdam District. He retired in 1971 and went to live in Israel. On his retirement he was made a Commander in the Order of the Netherlands Lion.

On his promotion to the position of chief rabbi, the Jewish Congregation of Rotterdam in September 1959 published a volume of essays (*Opstellen*) in his honor.

[Henriette Boas]

VOS, ISIDOR H.J. (1887–1942), Dutch physician and liberal politician. Vos was head of the hygiene department of the Netherlands army headquarters (1914–18), and later an Amsterdam councilor and alderman. From 1928 to 1940 he was a member of the second chamber of the Dutch parliament. Given the opportunity to leave Holland after the German invasion in World War II, he sent his family away but he stayed, and died in a concentration camp.

VOSKHOD (Rus. "Dawn"), a periodical in the Russian language published in St. Petersburg from 1881 to 1906. The magazine was established by Adolph *Landau, who transformed his annual literary-scientific publication *Yevreyskaya Biblioteka* ("Jewish Library") into a monthly. Early in 1882 Landau added a weekly supplement to *Voskhod* called *Nedelnaya khronika Voskhoda* ("Voskhod Weekly Chronicle"). From 1885 to 1899, this was the only Jewish periodical published in Russian and it served as the vehicle for the Russian-Jewish intelligentsia which had not severed its ties with Judaism. Although the subscribers (who numbered more than 4,000 in the 1890s) were scattered throughout Russia, they were especially numerous in the southern districts of the Jewish Pale of Settlement.

Among the most important associates of the magazine were S. Grusenberg, who edited the weekly *Chronicle*, and S. *Dubnow. In the late 1890s, when Landau had to interrupt his work with *Voskhod* for prolonged periods because of ill health, Grusenberg served as its editor. Dubnow commenced his work with *Voskhod* by writing sharp polemical articles on religious and educational reform for Jews and later edited its department of literary criticism. He also published certain historical studies, as well as "Letters on Old and New Judaism," first stating his theory of *autonomism, which ran counter to the views of the editors of *Voskhod* and their sympathizers.

Two principles guided the editorial policy of *Voskhod*: confidence in progress and faith in the ultimate triumph of Russian Jews in their struggle for complete emancipation, and the conviction that because Russia was the homeland of its Jewish citizens, solutions to both internal and external Jewish problems had to be found within Russia itself. Although *Voskhod* was not against the idea of a limited settlement of Jews in Ereẓ Israel, it opposed the *Ḥibbat Zion movement and was particularly antagonistic to Zionism. At the same time, the journal opposed total assimilation, advocating the preservation of national-religious Jewish values while encouraging Jews to become more familiar with the Russian language and culture. It also fostered the idea of developing a Jewish literature in the Russian language. *Voskhod* called upon the Russian Jewish intelligentsia to remain close to the masses of the Jewish people and to devote themselves to the public struggle for Jewish rights, participating as individuals in organized Jewish community life, education, and social welfare. The magazine also hoped to raise the standards of the rabbinate in Russia by establishing a theological seminary similar to those of Western Europe. It also suggested a plan for increasing the productivity of Russian-Jewish economic life by having Jews engage in physical labor, especially in agriculture.

Between 1881 and 1884 *Voskhod* courageously called for a Jewish self-defense organization. Its polemic outcries against the Russian authorities, anti-Jewish laws and acts, and the hostile Russian press were regarded as one of the chief tasks of the editorial board, which devoted a special section to the problem, "Echoes of the Press." In 1891, after two warnings, the magazine was suspended by the government for six months. When it was resumed, it had to submit the material of its weekly edition to the censors prior to each publication, a procedure which sharply curtailed its freedom of expression.

Voskhod published studies by A.A. *Harkavy, the basic historical research of S. *Bershadski on Lithuanian Jews and of V. *Nikitin on Jewish agricultural settlements in Russia, and the essays of S. Dubnow on the history of Ḥasidism. It also introduced the works of the historians S. *Ginsburg, Y. *Hessen, P. *Marek, S. Posner, I. *Zinberg, and others. Translations from the literature of the Wissenschaft des Judentums which appeared in Western Europe were also included. As supplements, it offered basic works on the history of the Jewish people, including the writings of Josephus, the *Geschichte der juedischen Literatur* by Gustav *Karpeles, the *History of the Jews* by S. Dubnow, an *Anthology of Jewish Folk Songs* by S. Ginsburg and P. Marek, and a "Systematic Bibliographical Guide to the Literature Pertaining to Jews in the Russian Language." In its "Literary Chronicle" (whose editors included I.L. Gordon, S. Dubnow, and S. Ginsburg), *Voskhod* reviewed new books on Jews and Judaism in Hebrew and other languages. The attitude of the editors toward the Yiddish language changed in the course of time, moving from a complete negation of its value to an appreciation of Yiddish as a positive factor in shaping

both the Jewish image and the way of life of the Jewish masses. *Voskhod* also gave its attention to textbooks and children's literature. In its "Literary Chronicle," it published translations from the works of K.E. *Franzos, L. *Kompert, I. *Zangwill, E. *Orzeshkowa, and others, as well as numerous historical novels. Among the Russian-language short-story writers who contributed to *Voskhod* were I.L. *Levanda, G. *Bogrov, M. *Ben-Ami, N. Pruzhanski, and S. Yaroshevski (a prolific, though superficial, writer whose works generally preached assimilation). Articles and reports of events in both the Diaspora and Ereẓ Israel (including correspondences from H. Hissin, M. Meirovitz, and Ḥemdah *Ben-Yehuda) also found their way into the journal.

In the summer of 1899 Landau sold the magazine to a group of young writers (including J. *Brutzkus, L. *Bramson, S. Ginsburg, and M. *Vinawer), some of whom were nationalists and even Zionists. M.N. *Syrkin became the official editor. The declared aim of the new owners was to serve Jews through "… developing [their] national consciousness, [and] raising the cultural level of the masses." In order to compete with the Russian daily press for the attention of Jewish intellectuals in the provinces, the editors attempted in 1900–01 to publish the weekly supplement (whose name was itself changed to *Voskhod*) as a semiweekly. The new *Voskhod* carried Zionist articles and many translations from Yiddish and Hebrew. The number of subscribers reached 5,000. In 1903, after the pogroms in *Kishinev, issues 16 and 17 of the weekly were confiscated because of an article advocating Jewish *self-defense. In 1904 the weekly was suspended for six months and some of the material that had been prepared for it was published in the monthly. From 1900, the new *Voskhod* had to compete with *Budushchnost* ("The Future"), published by S. Grusenberg. Gradually, an anti-Zionist group led by M. Vinawer took over the direction of the *Voskhod*; the Zionists left it and in 1904 began publishing a Russian-language periodical of their own, *Yevreyskaya Zhizn* ("Jewish Life"). In 1906 *Voskhod* ceased publication.

[Yehuda Slutsky]

VOSKOVEC, GEORGE (1905–1981), Czech actor. Voskovec, born in Sazava, worked with Jan Werich at the "Liberated Theater for Prague," 1927–38. He spent the war years in the U.S., and returning to Prague in 1946 he adapted several American plays before finally leaving Czechoslovakia in 1953. In 1956 he acted in *Uncle Vanya* in New York and *The Diary of Anne Frank* in London. He also appeared in *The Tenth Man* in New York (1959), in Shakespeare at Stratford, Connecticut, and in *The Physicists* (1964). His films included *Twelve Angry Men, The Bravados*, and *The Spy who came in from the Cold*.

VOTICE (Ger. **Wotitz**), town in S. Bohemia, Czech Republic. The first evidence of a Jewish community dates from a document of 1538 concerning a Jewish cemetery. In 1570 there were 13 Jewish families in Votice. A synagogue was built in 1661 and renovated in 1724. The synagogue was torn down in 1949–50. Fifty families lived there in 1799. Votice was an agricultural center, and many Jews earned their livelihood as grain merchants and as **arendas* ("land-leasers") on the surrounding estates. There were 340 Jews in Votice proper in 1869 and 1,015 in the district; in 1902 there were 560 Jews living in 12 localities; in 1910 there were 163 Jews in the town and 348 in the district; in 1930 the community numbered 76. The community had an active cultural life. Outstanding among its rabbis were Jedidiah Tia Weil and Moses Bloch (1847–53). The family names Wotizky and Utitz probably indicate origin in this community. Under the Nazi occupation in 1942 all the Jews were deported to extermination camps. The community's synagogue equipment was sent to the Jewish Central Museum in Prague. A Jewish community was not reestablished after World War II. The synagogue and the cemetery, with gravestones dating from the 18th century, were still in existence in 1970. The names of the victims of the Holocaust were included in the memorial at *Tabor.

[Jan Herman / Yeshayahu Jelinek (2nd ed.)]

VOWS AND VOWING. The Hebrew נֶדֶר (*neder*), a vow, is used in the Bible for a promise made to God to perform some deed (e.g., Gen. 28: 20) as well as for a prohibition which a person imposes upon himself to abstain from something which is otherwise permitted. The former is contrasted in the Mishnah with the *nedavah*, the free will offering (Kin. 1:1) while the latter is differentiated from the *shevu'ah*, the oath. The distinction between these two appears to be largely technical, but it has far-reaching consequences in the practical sphere. In the vow the person prohibits the thing to himself by declaring, "I take upon myself"; in the oath he prohibits himself to the thing by saying, "I swear to do this, or not to do this." It is with the second category, of vow, that the Talmud largely concerns itself, and to which this entry is confined.

The enormous importance of the vow and its serious consequences are reflected in the fact that a whole tractate of the Talmud, consisting of 11 chapters in the Mishnah and 91 folios in the *Gemara*, is devoted to it (see **Nedarim*), excluding the *Nazirite vow, to which a separate tractate is devoted. The biblical laws of vowing are to be found in Numbers 30: 1–16. No explicit provision is made there for absolution from vows (*hattarat nedarim*), the Bible permitting only the voiding of a vow (*hafarat nedarim*) in the case of an unmarried woman by her father, and a married woman by her husband, providing he did so "in the day that he heareth." Nevertheless, the rabbis evolved an elaborate machinery for the absolution of vows, although they frankly admitted that "the rules about the absolution of vows hover in the air and have nothing to support them" (Ḥag. 1:8). The first vow mentioned in

the Bible is that of Jacob (Gen. 28:20) and it receives the indirect assent of God (Gen. 31:13). So with regard to the tragic vow of Jephthah (Judg. 11:30–40) there is no suggestion that it was wrong of him to make it, although the Midrash declares that he could have been absolved from it by Phinehas the high priest, and only the personal foolish pride of both prevented it being done (Gen. R. 60:3).

In Ecclesiastes, however, the first doubt, though a qualified one, is expressed about the advisability of making vows. "When thou vowest a vow unto God, defer not to pay it… better is it that thou shouldst not vow, than thou shouldst vow and not pay" (5:3–4). There is a difference of opinion in the Talmud (Ḥul. 2a) as to the implication of this verse. R. Judah states, "Better than both is he who vows and pays," and in the Mishnah (Dem. 2:3) confines this injunction not to be profuse in vows to the *ḥaver*, while R. Meir is of the opinion, "Better than both is he who does not vow at all." Both views find their expression in rabbinic literature. The Midrash (Lev. R. 37:1, which reverses the authors) states: "He who vows and pays receives the reward both for his vow and its fulfillment," and "he who vows and pays his vow will be vouchsafed to pay his vow in Jerusalem" (*ibid.* 37:4). The weight of opinion, however, especially in the Talmud, is in favor of completely refraining from vows. Samuel goes so far as to say, "Even when one fulfills his vow he is called wicked" (Ned. 22a), while R. Dimi calls him a sinner (Ned. 77b). It is even said that as a punishment for taking vows one's children die young (Shab. 32b).

It was as a result of this view that the elaborate procedure for the absolution of vows, which annulled them *ab initio*, was developed. The annulment depended on finding a "door of regret," the establishment of circumstances which the person taking the vow had not taken into consideration or known about at the time when he took the vow – had he done so he would not have take the vow. The annulment had to take place before a properly constituted *bet din* of three, and the formula of absolution is: "It is absolved to thee, it is absolved to thee" (Sanh. 68a). On the question of the application of the vow, it is emphasized that one follows the popularly accepted connotation of the word used, and not its literary or biblical meaning. The whole of the sixth chapter of Mishnah *Nedarim* and half of the seventh confine themselves to examples. For instance, a vow to abstain from milk does not include whey, "meat" excludes soup, "wine" only grape wine, and "clothes" excludes sackcloth or sheets.

Vowing has practically disappeared from Jewish practice. A curious exception is the accepted formula for making offerings when called up to the reading of the *law (see *Torah, reading of). The donation is introduced by the words *ba'avur she-nadar* ("inasmuch as he has vowed") – which is the origin of the Yiddish word "*shnodder*" for an offering.

Despite the accepted formula which established a promise or an undertaking as a vow, the sanctity of the word was so highly regarded that the verse "that which is gone out of thy mouth thou shalt observe and do" (Deut. 23:24) was taken as a separate injunction, independent of the words which follow "according as thou hast vowed." Even more, it was interpreted as meaning that "the mere utterance of thy lips is equivalent to a vow," giving a simple statement of intention the force of a vow (Ned. 7a), as a result of which the custom developed of adding to any such statement the disclaimer *beli neder* ("without it being a vow"). The Shulḥan Arukh (YD 203:7) permits the taking of vows when its purpose is to rid oneself of bad habits.

[Louis Isaac Rabinowitz]

VOZNESENSK, city in Nikolayev district, Ukraine. The Jewish settlement in Voznesensk was founded during the first half of the 19th century by several of the numerous Jews who migrated from northwestern Russia to "New Russia" (Ukraine). There were 1,249 Jews in Voznesensk in 1864; 5,932 in 1897; and by 1926 the 5,116 Jews formed 23.7% of the total population. The Jews of Voznesensk suffered severely during the Russian Civil War (1918–20) and were exterminated when the Germans occupied the town during World War II. In 1959 there were again Jews in Voznesensk (900, forming about 3% of the population). Most left in the 1990s.

[Abraham N. Poliak]

VOZNITSYN, ALEXANDER ARTEMYEVICH (d. 1738), a proselyte officer in the Russian navy. The Russian authorities accused Voznitsyn of having converted to Judaism under the influence of the Jew Baruch b. Lev of Dubrovno, who had already been suspected of proselytizing. Both Voznitsyn and Baruch were brought before the "Bureau of Secret Investigations" of St. Petersburg, which made extensive use of torture in interrogating persons suspected of plotting against the state. The matter was made known to Czarina Anna, who ordered that the bill of indictment be transferred to the senate. Under the pressure of the czarina and despite the opinion of the ministry of justice that evidence to condemn the two men was insufficient, both were burnt at the stake. The entire episode only served to intensify the already hostile Russian policy toward Jews. The legal dossier, taken from the archives of the Holy Synod of Russia, was published by I. Markon as a supplement to the collection *Perezhitoye* (with vols. 2–4, 1910–13).

VOZROZHDENIYE (Rus. "Renaissance"), Jewish nationalist and socialist group in Russia between 1903 and 1905. It was also connected with groups of Russian Jewish students in Western Europe. Some of the former members of the "Ḥerut" group of Berlin (whose leader had been Nachman *Syrkin) were among the members and supporters of Vozrozhdeniye, e.g., M. *Silberfarb and Z. *Kalmanovitch; members of *Po'alei Zion and of similar orientation also took part, e.g., S. *Dobin, M. Levkovski, J. Novakovski, *Ben-Adir (A. Rosin), N. *Shtif,

B. Friedland, P. *Dashewski, J. Bregman, and W. Fabrikant, and such personalities as M.B. *Ratner, Ch. *Zhitlowsky, and A. Mandelberg. At a meeting of Zionist-socialist students in Rovno (Passover, 1903), the initiative was taken for the convocation of the Vozrozhdeniye foundation conference in Kiev (Sukkot, 1903), which became its center. The detachment from political indifferentism, which had prevailed in Po'alei Zion (particularly within its Minsk trend) was shattered by the *Kishinev pogrom, the Jewish *self-defense movement, and the wave of political strikes and demonstrations which began to engulf Russia. Political activism against the czarist regime became predominant. Simultaneously, during and after the *Uganda controversy, the crisis in the Zionist concept of settling Ereẓ Israel encouraged territorialist trends.

In Vozrozhdeniye the divergence between the territorialist and the autonomist ideologies became apparent, and the autonomist trend gradually gained the upper hand. Its general theory was that the national factor in history would not disappear because it was immanent in human experience in every generation, and was of a progressive nature. Capitalism not only fails to bring about the erosion of national existence by cosmopolitan amalgamation but even enhances national separateness in human society. This process is nurtured, among others, by the democratization of life and by the social and cultural activization of the popular classes, who thus also develop their own natural national forms of existence and creativeness. This is also the background of the national liberation movements of oppressed peoples. National differences will not disappear in the future socialist system, but they will coexist in greater harmony. Within this conceptual framework, Vozrozhdeniye integrated its doctrine of Jewish national life and future. It rejected the pessimism of the Zionist "negation of the Exile." There were opportunities for revival under Diaspora conditions by positive initiatives in various spheres of life and culture: education, productivization, organization of social classes, and political-ideological trends of which the nation was composed. Above all, it claimed that it was possible to attain a recognized official status of the Jews in their countries of residence as part of the state in the form of a national-political autonomy, which would be headed by national Jewish assemblies or diets ("Sejms"). The ultimate territorial concentration of the Jews was an ideal and the final objective, which would be achieved in an undetermined time and place. However, there existed an immanent, organic relationship between the achievement of this final aim and the day-to-day "activity of the present" in its various forms. The Zionist objective – in fact, the territorialist one – would be achieved not as a result of negative factors or of catastrophic misfortune. It would be a gradual evolution of events reflecting the growth of vital and positive forces within the nation in the lands of its dispersion, after it had organized and consolidated itself in the framework of national-political autonomy. The Jewish labor movement should be based on three principles: socialism (as the final objective); revolutionary struggle against absolutism and the bureaucratic regime; and national autonomy (both as an end in itself and as a way for gaining territory for the Jewish people in the future). This ideological system was developed in the Russian organ of the group which bore its name. Numbers 1–2 were published abroad (also in Yiddish under the title *Di Yidishe Frayhayt*) at the beginning of 1904, and issue numbers 3–4 were published at the end of 1904; a third issue (St. Petersburg, 1905) contained a comprehensive essay by Ben-Adir on the "National Ideal and the National Movement." In December 1904 (January 1905), the *Zionist Socialist Workers' Party was founded with the participation of delegates of Vozrozhdeniye. However, because of their rejection of "Sejmism," Dobin, Novakovski and Levkovski resigned from the new party and remained active within Vozrozhdeniye. The second conference of Vozrozhdeniye was held in September 1905. It was attended also by the young Berl *Katznelson. The attempt to establish a joint party with the Ereẓ Israel-oriented Po'alei Zion was unsuccessful because of the issue of affiliation to the Zionist Organization. After the establishment of the Jewish Social Democratic Party *Po'alei Zion under the leadership of B. *Borochov the members of Vozrozhdeniye held the foundation conference of the Jewish Socialist Workers' Party (Sejmists) in Kiev (April, 1906), after which the group disbanded. The autonomism promoted by Vozrozhdeniye influenced not only Borochov's Po'alei Zion but also the Zionist Organization of Russia, as reflected in the *Helsingfors Program.

[Moshe Mishkinsky]

°**VRCHLICKÝ, JAROSLAV**, pseudonym of **Emil Frída** (1853–1912), Czech poet, playwright, and translator. Vrchlický was born in Louny, Bohemia. The most prolific and perhaps the greatest Czech writer of the 19th century, he wrote more than 160 books, and was professor of literature at the Czech University of Prague. Vrchlický was interested in Judaism and Jewish literature (Torah, Talmud) from his earliest years; at least a hundred of his poems and three of his plays are based on Jewish themes.

One of Vrchlický's greatest works is his dramatic 400-page poem *Bar Kochba* (1897). This was translated into German, as was his comedy *Rabínská moudrost* ("Rabbinic Wisdom," 1886), based on the life of R. *Judah Loew of Prague. Samson is the hero of a dramatic *Trilogie o Simsonovi* (1901), one part of which was set to music by J.B. Foerster. He translated many important poetic works from French, Italian, German, English, Spanish, and Portuguese into Czech. Vrchlický also translated into Czech many poems on Jewish themes by great foreign authors. In addition to *Byron's *Hebrew Melodies*, Vrchlický published translations of poems by *Judah Halevi and Ibn *Gabirol, and Morris *Rosenfeld's *Songs of the Ghetto*.

To Rosenfeld he also dedicated two poems and an essay, *Básník žargonu* ("The Poet of Jargon," 1906). Vrchlický's Czech translations of the Hebrew poets were based on Selig Heller's German renderings, those from Rosenfeld's Yiddish on the English version by Leo Wiener. Vrchlický's *Bar Kochba* was translated into Hebrew by Abraham *Levinson. For a time, Vrchlický was a member of the Austrian parliament's Upper House. While practically all histories of Czech literature written before World War II state that Vrchlický was of Jewish origin on his father's side, later studies reject this claim and the formerly accepted theory of Vrchlický's Jewishness seems now to be at least disputable.

[Avigdor Dagan]

°**VRIEZEN, THEODORUS CHRISTIAAN** (1899– 1981), Dutch biblical scholar and Semitist. Born in Dinxperlo, Vriezen was a teacher of religion at The Hague from 1929 to 1941, and graduated as doctor of theology in 1937, the title of his thesis being *Onderzoek naar de paradijsvoorstelling bij de oude semietische volken*. In 1940 he taught Babylonian-Assyrian language at the University of Utrecht; in 1941 he became ordinary professor of Old Testament studies at the State University of Groningen, and in 1965 at the State University of Utrecht.

Of his many articles and books written on the Old Testament and the *Umwelt* of Israel, the best known are his *De Literatuur van Oud-Israel* (1961), *De godsdienst van Israel* (The Religion of Israel, 1963) and his *Hoofdlijnen van der theologie van het Oude Testament* (1954), which was translated into many languages.

[Adam Simon Van Der Woude]

VROMAN, AKIVA (1912–), geologist. Born in Holland, Vroman graduated from the University of Utrecht in 1935. Upon immigration to Ereẓ Israel, he made a geological survey of the southwest region of the Carmel in 1936. He received his doctorate from the Hebrew University in 1938. From 1948 to 1955 he made extensive geological surveys of Israel, including a geological mapping of the Negev with Dr. J. Bentor. He received the Israel Prize for science in 1955.

VROMAN, LEO (1915–), Dutch poet and biologist. Born in Gouda, Vroman fled to England when the Germans invaded Holland and then spent the war years in the Dutch East Indies. In 1945 he went to the U.S., where he worked as an animal physiologist until he retired. After a stay in New Jersey he settled in New York. In 1938 he became engaged to Tineke Sanders. Separated during WWII, they married in 1947, one day after their reunion. She played a colorful role in his poetry and prose ever since. Vroman has a unique place in Dutch experimental poetry, his language – a mixture of colloquial and extremely sophisticated speech – being notable for a biological terminology that creates surrealistic effects. His best-known works are *Gedichten* (1946), written between 1942 and 1945, and *Gedichten, vroegere en latere* (1949), poetry of the years 1935–40 in Holland, of 1940–41 in the Dutch East Indies, and of 1946–48 in the U.S. Memories of his youth were expressed in the epic poem *Inleiding tot een leegte* (1955); war experiences in *De adem van Mars* (1956); and the secret of life and death in *De Ontvachting* (1960). Much of Vroman's verse is included chronologically in the prize-winning collection *126 Gedichten* (1964). Vroman also composed English verse, collected in *Poems in English* (1953). His prose works include the short story *Tineke* (1948), and the collection *Snippers van Leo Vroman* (1958). He further published diary notes under the title *Vroeger donker dan gisteren. Herfstdagboek* (Amsterdam 2004). Of particular note are his letters from the U.S.: *Brieven uit Brooklyn* (1975). His collected poetry appeared in 1985, *Gedichten 1948–1984* (Amsterdam), a feat that by no means signified the end of his activity as a poet. He published new volumes almost every year, such as *Psalmen en andere gedichten* (Amsterdam 1995). Leo Vroman's gifts were not confined to literature – he was a fine artist, and throughout his work his poems were regularly accompanied by subtle drawings.

[Gerda Alster-Thau / Maritha Mathijsen (2nd ed.)]

VUGHT (also called **Kl Herzogenbusch**), the site of a minor Nazi camp for Dutch Jewry in the province of Brabant, Holland. It was established in 1942 under the supervision of WVHA. Karl Chmielewski, who was a veteran of Mauthausen, was its commandant. He was joined by a staff of 80 Kapos, but unlike the situation in Mauthausen, these Jews were not to be mistreated. Two categories of Jews were interned in Vught: textile and diamond workers who had lost their original status as "privileged" Jews; and those who in April and May 1943 had to leave certain provinces which were being "cleansed" of Jews. Originally, the camp was said to be a labor camp; most were employed outside the camp in fur and clothing manufacturing; others worked in construction of fortifications. There was a unique arrangement with the Philips Company, which employed some 1,200 prisoners. The company insisted that the inmates who worked for them be given a hot meal each day and not be deported. Dr. Arthur Lehmann served as the head of the Jewish administration of the camp and he functioned as best he could given his limited and derivative powers to treat his fellow Jews well. He kept a detailed record of life in Vught. Conditions deteriorated when Adam Grunewald replaced Chmielewski; he in turn was removed for excessive punishments, which bespeaks the unusual situation of the camp. Grunewald was replaced by Hans Huttifg.

From Jan. 13, 1943, until Sept. 6, 1944, Vught served as a transit point for Jews who were sent on to death camps. Approximately 12,000 Jews passed through Vught. Transports reduced the camp population and then others arrived. Most notorious of all the transports from Vught was one that took place via *Westerbork to *Sobibor on June 5, 1943, consisting of 1,266 children under the age of 16. They were murdered upon arrival. In the end even the Philips Company could not protect its Jews from deportation, but not for want of trying. Those who were sent to Auschwitz were selected for work for Telefunken by an agreement between the two corporations. But conditions in Auschwitz were so harsh that of the 517 Philips workers who were deported to Auschwitz, only 160 – less than one in three – survived. Among them were nine children and more than 100 women.

[Abel Jacob Herzberg / Michael Berenbaum (2nd ed.)]

VULGATE (Latin *Vulgata* (*versio*); "common version"), *Jerome's translation into Latin of the Bible, Apocrypha, and New Testament. Jerome's translation enjoyed general appreciation and acceptance in Western Christendom during the Middle Ages, thus becoming known as the Vulgate. Until recently the Vulgate was the only text used in the Roman Catholic liturgy. For a full discussion, see *Bible, Translations.

VULTURES, a number of carrion-eating birds. They are recognizable by their blunt claws, in which they differ from other birds of prey, and their bald heads (except for the bearded vulture). These are useful birds since they act as scavengers, and formerly were very common in Israel. In recent times, however, they have diminished in number, and some species are in danger of extinction due to the use of chemical pesticides to kill various animals (like jackals and mice), causing the vultures to die from eating the poisoned carcasses. Four species of vulture are mentioned in the Bible: *nesher* (AV, "eagle"; JPS, "great vulture"), *ozniyyah* (AV and JPS, "osprey"), *peres* (AV, "ossifrage"; JPS, "bearded vulture"), and *raḥam* (AV, "gier-eagle"; JPS, "common vulture"). The first three are mentioned together as forbidden for food (Lev. 11: 13, Deut. 14: 12).

There is no doubt that the *nesher* (נֶשֶׁר) of the Bible is the griffon vulture – *Gyps fulvus*. It is the largest of Israel's carnivorous birds, its outstretched wings sometimes attaining a span of ten feet. It does not prey on living things but feeds on carcasses; as mentioned in Job (39: 27–30): "She dwelleth… on the rock…. From thence she spieth out the prey; her eyes behold it afar off… and where the slain are, there is she." It has no feathers on its neck to prevent the blood of the carcass from congealing when the vulture puts its head inside it, and hence its designation of "baldhead" (Micah 1: 16). It is one of the longest-lived birds (cf. Ps. 103: 5). The pair of vultures builds its nest on the peaks of lofty rocks (Jer. 49: 16; etc.). The fledgling develops slowly, and the parents tend it with devotion and train it to fly (cf. Deut. 32: 11). (On the identification of the *nesher* with the eagle, see *Eagle.) The name *ozniyyah* (עָזְנִיָּה) appears to be connected with the bird's strength; it is called *oz* ("strength") in the Mishnah, which states that articles used to be made from its wings (Kel. 17: 14). Whereas the griffon vulture was common near settlements, it was pointed out that the *ozniyyah* was found only in places far away from settlements (Ḥul. 62a). The reference is to the black vulture, which is similar in build to the griffon vulture, but has only a bald head and not a bare neck. Two species are found in Israel, the *Aegypius monachus*, which is dark brown and very rare, and the *Aegypius tracheliotus*, found in the Negev and distinguished from the former by its brightly colored belly.

The Talmud (*ibid.*) notes that like the *ozniyyah* the *peres* (פֶּרֶס) is not found in inhabited localities. It is identified with the bearded vulture, the *Gypaetus barbatus*. It is presumed that the name *peres* derives from the fact that it breaks (*pores*, פּוֹרֵס) the bones of carcasses by dropping them from a height in order to eat the marrow. It is recognizable by the hairy beard fringe at the end of its beak, and is widely dispersed geographically, being found in southern Europe, Africa, and Asia, although in all these places it is rare. In Israel too, in the mountains of the Negev, only solitary pairs are found. The *raḥam* (Deut. 14: 17, רָחָמָה) is also mentioned as a bird forbidden as food (Lev. 11: 18), and its similar name in Arabic is the basis of its identification with the *Neophron percnopterus*, the Egyptian vulture. It is the smallest of Israel vultures and is found in flocks near garbage heaps where it feeds on carcasses and insects. When young it is brown in color and later becomes white. In the Talmud the *raḥam* is identified with a bird called the *sherakrak*, which, according to the *aggadah*, if it will sit upon the ground and chirp, thus gives a sign of the advent of the Messiah (Ḥul. 63a). Apparently the reference is to a bird of the genus *Merops* which is never seen resting on the ground.

VYGOTSKI, LEV SEMYONOVICH, (1896–1934), Soviet psychologist and author. Vygotski joined the Institute of Psychology in Moscow in 1924. In 1932 he founded the laboratory of psychology at the All-Union Institute of Experimental Medicine in Moscow, where studies by psychologists and psychiatrists were carried out on disintegration of personality in various neuropsychiatric disorders. He advanced the psychological diagnostics of mental disturbances (Vygotski's blocks for the study of concept formation) and methods for teaching mentally retarded children. His main concern was a theory of historicocultural development of man's highest mental functions, such as conceptual thinking and voluntary control of behavior. After his premature death the cre-

ative impetus he imparted to Soviet psychology was carried on by a group of his close associates including A.R. *Luria and B.V. Zeigarnik.

His publications in English included "The Problem of the Cultural Development of the Child," in *Journal of Genetic Psychology*, 36 (1929), 415–34; "Thought in Schizophrenia," in: *Archives of Neurology and Psychiatry*, 31 (1934), 1063–77; and *Thought and Language* (trans. from Russian with introd. by J.S. Bruner, 1962). His publications in Russian include: *Pedagogicheskaya psikhologiya* ("Educational psychology," 1926); *Pedologiya v shkol'nom vozraste* ("Paedology of the School Age") 1928; *Voobrazheniye i tvorchestvo v detskom vozraste* ("Imagination and Creativity in Children," 1930); *Umstvennoye razvitiye detey v protsesse obucheniya* ("Effects of Schooling on the Child's Mental Development," 1935); and *Psikhologiya iskusstva* ("Psychology of Art," 1965).

[Josef Brozek]

VYSOKOYE (Pol. **Wysokie Litewskie**), city in W. Brest oblast, Belorus; in Poland-Lithuania before 1795 and between the two world wars. Jews were living in Vysokoye from the late 16th century. A community was organized in the early 17th century, which by decision of the Lithuanian Council (see Councils of *Lands), came under the jurisdiction of the Brest community. The synagogue, built of stone in 1607 was enlarged in 1828. In 1650 a meeting of the Lithuanian Council took place in Vysokoye. Jewish economic activity in the second half of the 18th century was encouraged by the owner of the town, Duchess A. Jablonowsky (1728–1800), in accordance with her policy toward Jews in Semiatycze and *Kock. A bet midrash was established in 1757. A new building was completed to house the bet midrash in 1837 and a new cemetery was opened in 1898. A *talmud torah* was founded in 1853. The Jewish population numbered 1,475 in 1847 and 2,876 (85% of the total) in 1897. In the 19th century Jews engaged in the trade of agricultural products, tailoring, tanning, carpentry, and transportation. Between the two world wars, when it was part of independent Poland, there was a Hebrew *Tarbut school. The community, which numbered 1,902 (91%) in 1921, was annihilated in World War II.

WA-WEI

WACHNER, LINDA JOY (1946–), U.S. apparel industry executive. Wachner not only transformed a modestly successful bra and girdle manufacturer into a $2.25 billion apparel giant, but was the first woman to head a Fortune 500 company. She was born in Manhattan, the daughter of Herman Wachner, a furrier, and his wife, Shirley, a saleswoman at Saks Fifth Avenue, and raised in Queens. When she was 11, severe scoliosis put her in a full-body cast for a year, an experience, she says, that developed her tenacious nature and taught her to be self-reliant. She graduated from high school at 16, then earned a B.S. in economics and business at the University of Buffalo in 1966. After joining Associated Merchandising Corp., a New York City buying office for department stores, at $90 a week, she became an assistant buyer at Foley's, a store in Houston, Texas, in 1968. A year later, she was a bra buyer at R.H. Macy's in New York City. In 1973, she met and married Seymour Appelbaum, a man 31 years her senior. In 1974, she joined Warnaco, becoming a vice president in 1975. In 1978, she was recruited to run the U.S. division of Max Factor, a money-losing cosmetics company. Wachner cut costs, laid people off, and produced a $5 million operating profit in her second year. In 1983, Wachner's husband, who had a serious heart condition, died. Wachner tried to buy the Max Factor business, but her offer was rejected and she was forced out. Eager to run her own show, Wachner engineered a $550 million hostile takeover of Warnaco in 1986 and quickly began to remake the 113-year-old company, which had a stable of prestigious brand names but did not market them effectively. Annual volume was $425 million when Wachner took over. Becoming chief executive in 1987 and chairman in 1991 – the year she took the company public – she was called "America's most successful businesswoman" by *Fortune* magazine. The same publication also anointed her one of America's "toughest bosses." In 1997, Wachner acquired Designer Holdings, a company licensed to make Calvin *Klein jeans. A year later, Warnaco business began to suffer, a victim of dwindling demand for its products, lower market share, a weakening economy, and several problematic licensing deals. In addition, Wachner's difficult personality was blamed for many top managers leaving the company. Perhaps most important was a nasty, headline-making fight with Calvin Klein over the way his jeans, which accounted for 25 percent of Warnaco's overall sales, were made and marketed. Klein said Warnaco was not only selling the high-prestige jeans to low-end discount houses, but altering designs and skimping on quality. Wachner counter-sued and a settlement was reached in January 2001. Warnaco stock, which had traded at $44 a share in 1998, was down to 39 cents a share in 2001, and Wachner's personal stake in the firm had fallen from some $200 million to $1.8 million. The company filed for bankruptcy in 2001 (emerging in 2003) and Wachner was fired. She sued for $25 million in severance pay, but settled for $452,000.

[Mort Sheinman (2nd ed.)]

WACHSTEIN, BERNHARD (**Dov Ber Wachstein**; 1868–1935), historian, bibliographer, and genealogist. Born in Tłuste, Galicia, he was educated in the Vienna rabbinical seminary and University of Vienna. In 1903 he became librarian of the Vienna community. He broadened the Judaica collection and was made assistant director in 1906; later he became director of the library, which he built up to 50,000 volumes, making it one of the richest and best ordered in Europe. In 1912 and

1917 he published his two-volume master work, *Die Inschriften des alten Judenfriedhofes in Wien*, a scholarly study of the tombstones of the Viennese Jewish community dating from 1540 to 1783. Wachstein subsequently rendered a similar service to the community of *Eisenstadt (*Die Inschriften des alten Judenfriedhofes in Eisenstadt,* 1922) and also published a number of monographs on Moravian communities. He compiled a bibliography of Hebrew eulogies in the holdings of the community library in Vienna (*Mafteach Ha-hespedim. Zur Bibliographie der Gedaechtnis- und Trauervorträge in der hebraeischen Literatur,* 4 vols., 1922–32) as well as bibliographies of the writings of G. *Wolf and M. *Guedemann. Together with Alexander Kristianpoller and Israel Taglicht, he published an anthology on Hebrew journals in Vienna (*Die Hebraeische Publizistik in Wien*, 3 vols., 1930). In 1939, a few years after his death, YIVO published the *Vakhsteyn-bukh,* a compilation in his memory.

[Mirjam Triendl-Zadoff]

WACHTLER, SOL (1930–), U.S. jurist, chief judge of the New York State Court of Appeals. He was born in Brooklyn, New York, and received his B.A. cum laude and his law degree from Washington and Lee universities. He was in private law practice in Jamaica, Long Island, until his appointment as a justice of the New York Supreme Court in 1968; later that year he was elected to a full term in the court. In 1972 he was elected to the New York State Court of Appeals, the state's highest court, and in January 1985 Governor Cuomo appointed him chief judge of the State of New York and the Court of Appeals. In this position he supervised a system that included some three thousand judges and about twelve thousand non-judicial personnel.

As chief judge of the Court of Appeals, Wachtler said that he set for himself two chief missions: to achieve collegiality for the court, so that it may speak with "one voice" and win for itself again the reputation it enjoyed under the leadership of Benjamin N. *Cardozo; and to streamline and modernize the administration of the state's judicial system.

In 1992 Wachtler's career came to a grinding halt when he was arrested by the FBI for stalking and harassing the woman with whom he had been having an affair for several years. In 1993 he was indicted on five counts of extortion, mailing threats, and lying to a government agency. He pleaded guilty to harassment and was sentenced to 11 months in a medium-security federal prison, which followed a year of home confinement. This harrowing experience is chronicled in his book *After the Madness: A Judge's Own Prison Memoir* (1997).

His own personal demons notwithstanding, in his capacity as a jurist Wachtler initiated reforms in a number of controversial areas. For example, he declared it unconstitutional that a man could rape his wife and go unpunished; he extended the human rights law to prohibit discrimination against obese people; he provided women with more power to fight gender bias; and he endorsed gay rights.

Wachtler went on to teach law at the Law School at Touro College in Huntington, New York. In 2000 he received the President's Award of the New York State Mental Health Association for the work he did on behalf of the mentally ill. Wachtler co-authored the novel *Blood Brothers* (2003) with David Gould, a former assistant district attorney.

[Milton Ridvas Konvitz / Ruth Beloff (2nd ed.)]

WADDINGTON, MIRIAM (**Dvorkin**; 1917–2004), Canadian poet. Waddington was born and raised in Winnipeg, Manitoba. She attended high school in Ottawa and earned a B.A. from the University of Toronto in 1939. Subsequently, she earned an M.S.W. from the University of Pennsylvania in 1945, and an M.A. from the University of Toronto in 1968. She married the journalist Patrick Waddington in 1939 (from whom she was later divorced) and had two sons.

In 1945, Waddington moved to Montreal, where she was employed as a social worker and participated in the city's literary life. She contributed poems to *First Statement* and *Preview* and published her first book of poems with First Statement Press. In 1960, she returned to Toronto, where she worked for North York Family Services. From 1964 until her retirement in 1983, Waddington was a professor of English at Toronto's York University.

Waddington published 12 books of poetry. Her earliest collections (*Green World*, 1945; *The Second Silence*, 1955; *The Season's Lovers*, 1958) established her reputation as a lyricist. Waddington's poetry mines the historical past and individual memory. Her work is characterized by intensely visual images that evoke landscape and daily life. At the same time, her oeuvre reflects a lifelong engagement with social issues, which she attributed to her Jewish upbringing, particularly as they affect women. Throughout several decades, she experimented with form and language in poems that reveal – with increasing concision and gentle irony – the contradictory meanings of ordinary life (*The Glass Trumpet*, 1966; *Say Yes*, 1969; *Dream Telescope*, 1972; *Driving Home*, 1972). By celebrating small pleasures, her poems on aging (in *The Price of Gold*, 1976; *Mister Never*, 1978; *The Visitants*, 1981; *The Last Landscape*, 1992) subdue the pain of loneliness. Her *Collected Poems* was published in 1986, and an excerpt from one of her poems appears on the Bank of Canada $100 note. Waddington won the Montreal Jewish Public Library's J.I. Segal Foundation Award in 1972 and 1986.

Waddington also published *Summer at Lonely Beach and Other Stories* (1982), a collection that draws on her childhood and youth in southern Manitoba, and *Apartment Seven* (1989), a volume of essays. She wrote *A.M. Klein* (1970), a pioneering critical study of the Canadian poet, and edited *The Collected*

Poems of A.M. Klein (1974), as well as *John Sutherland: Essays, Controversies and Poems* (1972).

[Ruth Panofsky (2nd ed.)]

WADI AL-NAṬṬŪF, site of the first discovery of the prehistoric Natufian culture in Ereẓ Israel. Starting in the Judean hills c. 12½ mi. (20 km.) north of Jerusalem, Wadi al-Naṭṭūf joins Naḥal Ayalon in the coastal plain near Or Yehudah, and near the village of Shuqbā the wadi turns sharply to the southwest; on the northern side of this turn is the Shuqbā Cave, 72 ft. (22 m.) above the wadi-bed and 656 ft. (200 m.) above sea level. The cave, composed of three chambers, measures 131 × 131 ft. (40 × 40 m.); the vault, 82 ft. (25 m.) above the floor of the cave, contains two open chimneys.

The Shuqbā Cave was excavated in 1928 by D. Garrod in one of the earliest cave excavations in Ereẓ Israel. The cave was the first to reveal a Mesolithic cultural stage, dating to about 10,000 years ago, which Garrod called Natufian after the name of the wadi. Four stages were distinguished in the cave, including, from bottom to top: layer D, with an upper Mousterian industry; layer C derived from D and redeposited with abraded implements; layer B containing the Natufian industry; and the uppermost layer A with pottery dating from the Early Bronze Age to recent times. The Natufian of layer B is characterized by an important group of microliths – tiny stone implements – of which the majority are lunates (crescentshaped blades) and also including triangles, trapezes, and various small-backed blades. Among the non-microlithic artifacts were scrapers, gravers, borers, etc., as well as sickle blades which make their first appearance in the Natufian culture. Bone tools, mainly awls, are also typical of this stage. The Natufian tool kit is regarded as representing a more or less intensive collection of wild cereals in conjunction with the traditional food supply acquired through hunting and food gathering. The report that a domesticated dog was found in the Natufian culture at Shuqbā is dubious.

[Avraham Ronen]

WADI DĀLIYA, valley 12 mi. (c. 19 km.) N.W. of Jericho. In 1962 Bedouin discovered a number of papyri in the Maghārat Abu Shinjah in Wadi Dāliya. The cave was cleared in 1963 by P. Lapp. The finds included over 200 skeletons, jewelry, 128 seals of documents, and a number of legal documents from Samaria, dated 375 (or 365) B.C.E. The Aramaic documents mention Yoshua son of Sanballat (II) the (hereditary) governor of Samaria, and the prefect Hananiah. They mention conveyances of land, manumissions, and the sale of slaves (including one Nehemiah to the Samaritan noble Yehonur). The people in the cave seem to have fled there during the Samaritan revolt against Alexander the Great and appear to have perished in a Macedonian attack.

WAGENAAR, LION (1855–1930), Dutch rabbi. Wagenaar served as chief rabbi of Friesland (1886) and Gelderland (1895), and as rector of the Nederlands Israelietisch Seminarium, the Jewish theological seminary of Amsterdam, from 1918 until his death. A disciple of J.Z. *Duenner, he published many historical-critical articles on talmudic-halakhic subjects and translated the prayer book into Dutch, with a commentary and historical expositions.

A jubilee volume (*Feestbundel*) in his honor was issued in 1925 by the Genootschap voor de Joodsche Wetenschap in Nederland, with a bibliography of his writings. After his death a collection of 31 articles was published (*Ellu le-Aḥavah*, 1932).

[Frederik Jacob Hirsch]

°**WAGENSEIL, JOHANN CHRISTOPH** (1633–1705), Christian Hebraist. While professor at the University of Altdorf, he published a series of writings on Judaism and the Jews whose missionary intention is manifest. His most important work was *Tela ignea Satanae, Hoc est: arcani, et horribles Judaeorum adversus Christum Deum et Christianam religionem libri* ("Flaming Arrows of Satan; that is, the secret and horrible books of the Jews against Christ, God, and the Christian religion"; Altdorf, 1681), a collection of works written by Jews for use in Jewish-Christian disputations and controversies. Wagenseil published these for the first time, with a Latin translation and his own introduction, with the intention of making Christians aware of the Jewish objections to Christianity and thus to refute them. Since this compilation of Jewish polemical writings made Jewish criticism of Christianity widely known, it was used in anti-Jewish propaganda, but these same criticisms were also employed by some opponents of religious fanaticism, such as *Voltaire and the Encyclopedists. Later, in *Denunciatio christiana de blasphemiis Judaeorum in Jesum Christum* (Altdorf, 1703), Wagenseil appealed to the Protestant rulers to prevent the Jews from blaspheming Christianity and to try to convert them (though without persecutions and forcible means, to which he was opposed). A varied collection of essays on Jewish matters, *Benachrichtigungen wegen einiger die gemeine Juedischkeit betreffenden Sachen* (Leipzig, 1705), included a missionary essay and a work against *blood libel.

Earlier in his life Wagenseil published Latin translations of the mishnaic tractate *Sotah* (Altdorf, 1675) and extracts from the Talmud and *Ein Ya'akov* with the sources. Corrections to *Sefer ha-Nizzaḥon* by Yom Tov Lippmann Muelhausen are incorporated at the end of this book. In his determination to understand Judaism in all its ramifications, Wagenseil learned Yiddish and studied its literature. His collection, *Belehrung der juedisch-teutschen Red- und Schreibart* (Koenigsberg, 1699), includes Passover songs in Yiddish, the *Megillat Vinz* of Elhanan b. Abraham Hellen (describing the *Fettmilch uprising in Frankfurt), a Yiddish version of the Arthurian legend,

and a Yiddish version of *Hilkhot Derekh Ereẓ Rabbah ve-Zuta*. Wagenseil was on friendly terms with some Jews, and an interesting correspondence with his teachers has survived. Considered the father of Scandinavian Hebrew studies, he trained a group of Hebrew scholars who were interested in acquiring information on Judaism, such as J.J. *Schudt.

[Judah M. Rosenthal]

WAGENSTEIN, ANGEL RAYMOND (1922–), Bulgarian novelist and screenwriter. Born in Plovdiv, Bulgaria to a Jewish workers' family, Wagenstein was active in the partisan resistance movement in World War II. Captured and tortured, he was sentenced to death and only saved by the rapid advance of the Red Army in August 1944.

After the war he studied cinema in Moscow and went on to write more than 50 screenplays for feature films, documentaries, and animated cartoons produced in Bulgaria, Germany, Russia, the Czech Republic, Greece, China, and Vietnam. *Stars* (*Zvezdi*), dealing with the fate of the Jews during the Holocaust, won a special prize at Cannes in 1959. As a novelist he wrote the prizewinning trilogy *Petoknizie Isaakovo* ("Isaac's Pentateuch") on Jewish life in the 20th century, *Avram Karkacha*, and *Sbogom Shanhai* ("Good-bye Shanghai"), which won the Jean Monet Prize in 2004.

Wagenstein was one of the 12 dissidents invited to the historic meeting with President Mitterand at the French Embassy in Sofia before the collapse of totalitarianism in Bulgaria. After the changes in 1989 he was elected as a deputy in the National Assembly, which produced the new democratic constitution of Bulgaria. He was named a chevalier in the French Order of Merit.

[Emil Kalo (2nd ed.)]

WAGG, British family of stockbrokers and merchant bankers. This prominent English financial dynasty was founded by JOHN WAGG (1793–1878), a German Jewish immigrant who began the family City of London stockbroking firm of Helbert, Wagg & Co. in 1823. Wagg was a relative of the *Rothschilds and acted as their stockbrokers. His sons ARTHUR WAGG (1842–1919) and EDWARD WAGG (1843–1933) developed the firm into a merchant bank dealing with the distribution and arbitrage of international securities. The firm was notable for treating its staff well, introducing a pioneering pension scheme. Arthur's son ALFRED RALPH WAGG (1877–1969) served as chairman of the firm from 1922 until 1954. In 1962 Helbert, Wagg merged with the famous non-Jewish City merchant bank J. Henry Schroder & Co. to form J. Henry Schroder, Wagg & Co. In 2000 Citigroup, the American bank, acquired the firm, renaming it Citigroup Global Market Ltd.

[William D. Rubinstein (2nd ed.)]

WAGG, ABRAHAM (1719–1803), loyalist merchant. Wagg was probably born in London. He settled in New York in about 1770 and became a wholesale grocer and chocolate manufacturer. In that year he married Rachel Gomez (1739–1809), daughter of Mordecai Gomez (1688–1750). He remained in New York City during the English occupation of the city in 1776. As a member of the militia and fire watch, he suffered severe injuries which caused him to become lame. He took an oath of allegiance to Great Britain in 1777 and two years later sailed for England. He settled in Bristol and from there unsuccessfully sought restitution for his properties seized in New York.

[Leo Hershkowitz]

WAGHALTER, IGNATZ (1882–1940), conductor and composer. Born in Warsaw, Waghalter studied in Berlin, where he became conductor of the Comic Opera. From 1912 to 1923 he was conductor and general musical director of the German Opera House in Berlin-Charlottenburg. In 1925 he visited the United States and conducted the New York State Symphony Orchestra for one season. In 1933 he moved to Prague, in 1934 to Vienna, and after 1938 he settled in New York. As a composer he was best known for his operas, particularly *Mandragola* (1914), based on Machiavelli's comedy. He also wrote operettas, works for strings, piano works, a vaudeville (*Bibi*), songs to Yiddish texts, and piano arrangements of Yiddish songs. Waghalter wrote an autobiography, *Aus dem Ghetto in die Freiheit* (1936).

°**WAGNER, RICHARD** (1813–1883), German composer. Disillusioned by the failure of the 1848 revolution, in which he had played an active part, Wagner (like *Proudhon and other early socialists) made a bitter attack on the Jews, whom he portrayed as the incarnation of money power, symbolized by the Rothschilds and commercialism (he published "Das Judentum in der Musik" anonymously in *Neue Zeitschrift fuer Musik*, 1850). This common stereotype and the composer's emotional aversion to Jews were given a kind of rationalization in his racial deterministic theories. He transferred his dislike to the cultural field, denying Jewish cultural creativity in general and, in particular, that the composers Giacomo *Meyerbeer and Felix *Mendelssohn or Heinrich *Heine could be considered truly creative. In ambiguous terms, under the guise of speaking of their redemption, he conceived the idea of the extinction (*Untergang*) of the Jews. Under his own name Wagner republished the article as a separate pamphlet with a supplement, "Enlightenment on Jewry in Music," in 1869, blaming his current problems on the alleged control of the press, theater, and cultural life by Jews, and including in his strictures those non-Jewish writers and editors who were opposed to his chauvinism. Identifying modern materialism with alleged Jewish influence, he envisaged the forced removal of Jews from cultural life or, alternatively (since he was inconsistent), their complete assimilation by means of art and music. Like the original article, the pamphlet, the ideas of which were eagerly seized on by Eugen

*Duehring, provoked a storm of controversy. In a series of articles entitled "German Art and Politics" (1867) in the semiofficial Bavarian *Sueddeutsche Presse*, Wagner expounded his ideas of the pure-blooded German mission, opposed to "alien" French and Jewish materialism. Founding his own paper, the *Bayreuther Blaetter* (1878), he (and his disciples) used it as a platform for his notion that the pastoral Germans of romantic idyll were economically dominated by Jewish speculators and bankers, and reiterated his view on the control of cultural life by Jews, borrowing phrases from the antisemite Wilhelm *Marr. In "Know Thyself," a supplement to *Religion und Kunst* (1881), Wagner deplored the granting of civil rights in 1871, applauded political antisemitism, and branded the Jews as the "demon causing mankind's downfall" (*Untergang*).

Wagner's antisemitism was shared by his devotees, and above all by his wife, Cosima, trustee of his estate for 47 years. She and Houston Stewart *Chamberlain, who married Wagner's youngest daughter in 1908, established the "Wagner cult" as a faith adumbrating the Nazi Fuehrer principle. Wagner Clubs were founded on an international scale from the 1860s on. Wagner began publishing his *Collected Works* in 1871; by 1912 they comprised 12 volumes. The articles and pamphlets on Jews and antisemitism are reprinted in volumes 5, 8, and 10. Wagner's works, which circulated widely among the educated classes, made antisemitism culturally respectable, and generally spread racialist doctrines, popularizing those of *Gobineau, with whom he was personally acquainted. Wagner's political writings were among the great ideological influences on Adolf Hitler, and his favorite reading. He was an admirer of his operas from his early youth and had them regularly performed at Bayreuth in connection with the Nazi Party conventions. The question of Wagner's parentage – whether he was the son of his legal father, Carl Friedrich Wagner, or the actor Ludwig Geyer (whom his mother married eight months after the former's death) – led to the widely circulated rumor that he was of Jewish origin. According to recent research, Wagner was Geyer's illegitimate son. But Geyer was the descendant of German Protestants whose ancestry could be traced back to the late 17th century. The genealogical investigation was undertaken by the Nazis to remove all doubts concerning their cultural and ideological hero.

In the State of Israel, Wagner's music remained excluded from the repertoire of its Philharmonic Orchestra and broadcasting program, in spite of divergent opinions and even protests.

[Toni Oelsner]

WAGNER, SIEGFRIED (1878–1952), Danish sculptor. Born in Lyngby, Wagner had a special position among Danish sculptors because his work showed the influence of the old Oriental style rather than the modern Danish tradition, and because of his immense productivity. His work adorns squares in Copenhagen and many other towns. His memorial in the Jewish cemetery, Copenhagen, to the Jews who died in *Theresienstadt concentration camp consists of the Lion of Judah. Wagner often used Jewish motives in his work.

WAGNER, STANLEY M. (1932–), U.S. rabbi, academician, and community leader. Born in Brooklyn, New York, Wagner was educated at Yeshiva University, where he was ordained (1956) and wrote his doctoral dissertation on "Religious Non-Conformity in Ancient Jewish Life" (1964), a study of talmudic terms and categories for deviant religious behavior. After holding pulpits, as well as university teaching positions, in Lexington, Kentucky (1957–61) and Baldwin, New York (1961–70), Wagner served as executive vice president of the Religious Zionists of America (Mizrachi – Ha-Poel ha-Mizrachi (1970–72). In 1972, he was appointed rabbi of the Beth HaMedrosh HaGodol (BMH) congregation, the oldest traditional congregation in Denver (founded in 1897), serving there until his retirement in 1997. At the beginning of his tenure, Wagner led the BMH into affiliation with the Union of Orthodox Jewish Congregations. At the end of his tenure, another traditional congregation, Beth Joseph, merged with the BMH and was housed in its facility.

In his 25 years in the Denver rabbinate, Wagner played a major role in reinvigorating communal Jewish life in Denver, due to his rabbinic, academic, and inter-religious activism, reflecting his interest in ideological diversity, first evident in his doctoral research. While serving as a congregational rabbi, Wagner also served as professor of Jewish history at the University of Denver (1972–99), where in 1975 he founded and directed the Center for Judaic Studies, which sponsored, in addition to its academic program at the university, courses in Judaica at local Christian seminaries, the Rocky Mountain Jewish Historical Society, and Beck Archives of Rocky Mountain Jewish History, a Holocaust Awareness Institute, and community cultural outreach programs. In 1982 he founded the Mizel Museum of Judaica, and served as its director until 2000. Wagner was also the only rabbi to serve as chaplain of the Colorado State Senate (1980–98). He was an outstanding example in the United States during last third of the 20th century of a rabbi as communal leader, institutional builder, and chief executive officer.

Wagner's publications include *A Piece of My Mind* (1979), and several volumes which he edited, including *Great Confrontations in Jewish History* (1977), *Traditions of the American Jew* (1977), and (with Raphael Jospe) *Great Schisms in Jewish History* (1981). He also served as general editor of a six-volume series on *Christian and Jewish Traditions in the 20th Century*. After his retirement, Wagner collaborated with Israel Drazin on a multi-volume English translation of and commentary

on Targum Onkelos, *Understanding the Bible Text: Onkelos on the Pentateuch.*

Wagner's commitment to community-wide service, transcending denominational divisions, led him to write a halakhic study validating the "Denver Conversion Program," in which Orthodox, Conservative, Reform, and Reconstructionist rabbis cooperated in a joint educational program preparing candidates for conversion, and delegating authority for conversion to an Orthodox Bet Din which accepted candidates for conversion from all movements, and who were to be recognized, in turn, by the entire community. The program, which led to widespread controversy and was ultimately rejected by many Orthodox authorities (see the discussion in Samuel Freedman, *Jew vs. Jew: The Struggle for the Soul of American Jewry* (2000) and the symposium "The Denver Conversion Experience," in: *CCAR Yearbook* XCVI (1986), 47–58), provided a precedent and paradigm for the official Neeman Commission, charged by the government of Israel with developing an effective mechanism for resolving the difficulties of conversion in the Jewish state.

[Raphael Jospe (2nd ed.)]

WAHB IBN MUNABBIH (d. ca. 110/728), Yemenite scholar and ascetic, probably of Jewish origin. Wahb was one of the most important conduits of Isrāʾīliyyāt or biblical materials (both Jewish and Christian), including "Tales of the Prophets" (Arabic: *qiṣaṣ al-anbiyāʾ*) into Islamic tradition; in his days the gates were still wide open. He claimed to have read the "books" *(kutub)* of the famous Jewish converts to Islam, ʿAbdallāh ibn Salām and *Kʿab al-Aḥbār. According to one of Wahb's contemporaries, who was critical of his immodesty, he boasted that he commanded the combined knowledge of these two scholars. Wahb was born in *Sanʿa or in Dhimār south of Sanʿa. His mother was of the aristocratic tribe of Ḥimyar. As to his father, the least prestigious, and hence the most trustworthy, version has it that he was a mawlā or client of the Abnāʾ, i.e. the descendants of the Sassanian warriors who conquered the *Yemen in the sixth century C.E. Other versions have it that his father was of the Abnāʾ themselves, or even a descendant of one of the Sassanian emperors. After converting to Islam, his father became a disciple of *Muhammad's Companion Muʿādh ibn Jabal who was one of Muhammad's envoys to the Yemen. There were many scholars among Wahb's relatives and direct descendants. His brother Hammām (d. 101/719 or 102/720), for example, left a collection of *ḥadīths, i.e., sayings and accounts ascribed or related to Muhammad and his Companions.

Under the caliph ʿAbd al-Malik, Wahb officiated as a salaried preacher (*qāṣṣ,* until 75/694). He was an expert reader of the *Koran, besides being one of the earliest compilers in Islam; his biography of Muhammad, which is replete with miracles, reveals a Shīʿite bias. Wahb's traditions are often quoted in Koran exegesis, and many of them deal with the merits of Jerusalem and Palestine (or Syria; Arabic: Shām). Under the caliph Omar II, the former salaried preacher was appointed qadī or judge of Sanʿa, an office he also held at the beginning of Yazīd ibn ʿAbd al-Malik's caliphate (more precisely until 103/721). His appointment was frowned upon by those who deplored any form of cooperation with the government. Also under Omar II, probably in conjunction with his judgeship, Wahb was in charge of the treasury (probably in Sanʿa). Taking the government's side, Wahb engaged in polemics against rebellious Khārijites who argued that it was illegitimate to pay taxes to oppressive rulers. Still, under the caliph Hishām ibn ʿAbd al-Malik, Wahb was jailed and died as a result of flogging ordered by the governor of the Yemen. Wahb's adherence to the doctrine of *qadar* or free will was probably behind his chastisement, since there is in this context a reference to an ordeal he underwent (*umtuḥina*). In addition to human informants, Wahb relied on written materials: his brother Hammām is said to have bought for him "books." A prominent Yemenite scholar figuratively warned a pupil of his against the "saddle-bag" of Wahb and another scholar, since they were "owners of books, i.e. they transmitted from leaves." Wahb is rarely quoted in the canonical collections of ḥadīth, although most experts on the quality of ḥadīth transmitters considered him trustworthy.

[Michael Lecker (2nd ed.)]

WAHL, ISAAK (1915–2004), Israeli agronomist. Wahl was born in Kherson, Ukraine, and after immigrating to Palestine in 1933 studied botany at the Hebrew University. In 1939 he began to teach natural science at the Ben Shemen Youth Village, while writing his doctoral thesis on the biology of a local mushroom in the Herzl Forest under the supervision of Prof. Israel Deisers, the father of phytopathology (plant diseases) in Israel. In 1946 he left Ben Shemen and began to teach at the Mikveh Israel Agricultural School, where he gained his practical knowledge of agriculture. Inspired by Aaron *Aaronson's discovery of the wild ancestor of wheat, Wahl began to take an interest in native species of wild cereal grains and the ability to withstand disease that they had developed over thousands of years.

While doing research at the University of Minnesota in 1949, Wahl was invited by Senator Hubert Humphrey to join a research group investigating the state's declining grain production. Wahl came up with a hybrid of American and sturdier Mediterranean strains that resolved the problem. In 1951 Wahl returned to Israel and became an associate professor at the Aaronson School of Agriculture (later the Faculty of Agriculture) in Rehovot. In 1966 Wahl moved to Tel Aviv University, where he established the Cereal Crops Research Institute.

Wahl was the recipient of many prizes, including the Technion's Harvey Prize for Science and Technology (1978) and the Bruno Kreisky Human Rights Prize (1985) for research that led to increased food production in the third world. In 1992 he was awarded the Israel Prize in agriculture. The Awards Committee cited Prof. Wahl as "one of the fathers of phytopathology in Israel and one of the greatest researchers in the field the world over." His work made possible the establishment of the Wild Cereals Gene Bank, the source for improved grain harvests all over the world.

[Ruth Rossing (2nd ed.)]

WAHL, JACQUES HENRI (1932–), French civil servant. Wahl was born in Lille, N. France, where his father had a small business. After graduation from the prestigious School for National Administration, he entered the French civil service and held a senior position in the Ministry of Finance. From 1970 to 1972 he was economic minister at the French embassy in Washington and was a member of the board of the International Monetary Fund. In 1978 he was appointed secretary-general of the Elysée Palace, a post regarded as equivalent to that of chief of staff at the White House.

WAHL, JEAN (1888–1974), French philosopher. Wahl was born in Marseilles, studied at the Sorbonne, and taught at Besançon, Nancy, and Lyons. In 1941 he was imprisoned in a concentration camp, but was rescued and went to the U.S., where he taught at the New School for Social Research in New York City, Mount Holyoke, and Smith College. After World War II, he became a professor at the University of Paris and also developed the Collège Philosophique for the presentation and discussion of philosophical themes.

Wahl wrote many important works, both on traditional philosophy and on existentialism, of which he became a leading exponent. He wrote *Les Philosophies pluralistes d'Angleterre et d'Amérique* (1920; *The Pluralistic Philosophies of England and America*, 1925), on Descartes and Hegel, and the important *Etudes Kierkegaardiennes* (1938), which brought Kierkegaard's thought to the attention of the French intellectual world. He followed this with a series of works developing the existentialist position, both in terms of its history and of his own ideas. Wahl stressed the role of traditional philosophy in his major work, *Etude sur le Parménide de Platon* (1926). He also wrote a volume of poems.

[Richard H. Popkin]

WAHL, SAUL BEN JUDAH (in state documents of Poland-Lithuania, **Saul Judycz**; 1541–c. 1617), merchant and *parnas* of *Brest-Litovsk Jewry; son of Samuel Judah b. Meir Katzenellenbogen, rabbi of *Padua, where he was born. In his youth Saul Wahl went to Brest-Litovsk to study, and remained there, becoming a wealthy merchant. In 1578 King Stephen Bathory leased him the salt pans in the grand duchy of Lithuania with the sole right to sell their products and in 1580 also the salt mine at *Wieliczka near Cracow. Later Wahl farmed the king's revenues in the Brest-Litovsk region, and in 1589 King Sigismund III granted him the status of servus regis. From the 1580s Saul Wahl was among the *parnasim* of the Brest community and a leader of Lithuanian Jewry, taking an important part in the *Council of the Lands from the beginning of its existence. In 1593, through the mediation of Wahl, the Brest-Litovsk community was granted the right to adjudicate lawsuits between Jews, despite strong opposition from the city council. He built the women's gallery in the Brest-Litovsk synagogue in memory of his wife. Little is known of the last years of his life; S.A. *Bershadski has argued (in Voskhod, 5 (1889), 1–4) that Wahl died after 1622.

A number of legends grew up around the figure of Saul Wahl. Some scholars regard them as an expression of the economic and political achievements of the Jews in Poland before the catastrophe of the *Chmielnicki persecutions of 1648. One legend relates that, during the interregnum of 1587, before the election of King Sigismund III to the throne of Poland, Saul Wahl was chosen to perform a high royal function; another legend even attributes to him the title of king for a day before the final ratification of the election of Sigismund. The legends explain Wahl's rise to greatness in the patronage accorded to him by Prince Radziwill (apparently Mikolaj Kraysztof "the orphan," 1549–1616) who at a critical time during a pilgrimage to Padua received immediate aid from R. Judah, Saul Wahl's father. Of Saul Wahl's sons, Meir Katzenellenbogen-Wahl was rabbi of Brest and one of the founders of the Council of Lithuania in 1623, and Abraham (Abrashka) was rabbi of Lvov for many years. According to legend, Saul Wahl married his beautiful daughter to a rabbi of Brest-Litovsk of the same name as his.

[Alexander Carlebach]

WAHLE, RICHARD (1857–1935), Austrian philosopher and psychologist. He was professor at Czernowitz and then at Vienna. He was a critic of traditional metaphysics, insisting that all that is knowable are "occurrences," but not their causes. Philosophically he was a skeptical agnostic about the possibility of knowing reality. In psychology he rejected any theory concerning psychic entities or powers. He also wrote on the philosophy of culture and history and on Spinoza.

His major writings include *Gehirn und Bewusstsein* (1884); *Das Ganze der Philosophie und ihr Ende* (1894, 1896²); *Ueber den Mechanismus des geistigen Lebens* (1906); and *Die Tragikomoedie der Weisheit* (1915, 1925²).

[Richard H. Popkin]

WAHRMANN, ABRAHAM DAVID BEN ASHER ANSCHEL (c. 1771–1840), ḥasidic rabbi. Born in Nadvornaya, Ukraine, Wahrmann was a disciple of *Levi Isaac of Berdichev and *Moses Leib of Sasov. He served as rabbi in Jazlowce (Jazlowice) from 1791, and when his father-in-law Ẓevi Hirsch Kro, author of *Neta Sha'ashu'im* (1829) and *av bet din* in Buchach, died in 1814, Abraham was appointed to his position. While living in Buchach, he began to behave like a *ẓaddik*, prayed according to *nusaḥ Sefarad*, and prolonged the morning prayer to noon. Scholars in the town opposed him, but many gathered round him to enjoy his teachings and blessings. He trained many disciples and wrote the following important halakhic and ḥasidic works: *Da'at Kedoshim*, in three parts (part one 1871); *Maḥazeh Avraham* (1876); *Tefillah le-David* (1876); *Divrei Avot* (1879); *Eshel Avraham* (1931); and *Divrei David* (1892).

[*Encyclopaedia Hebraica*]

WAHRMANN, ISRAEL (1755–1826), Hungarian rabbi and grandfather of Moritz *Wahrmann. Wahrmann, who was born in Obuda, Hungary, studied at the yeshivot of *Eisenstadt, Pressburg (*Bratislava), and *Prague. He subsequently served as rabbi in Posen, Bodrogkeresztur, and Pest (from 1799), where he had been living since 1796. As a result of his efforts, the first Jewish elementary school was opened in Pest in 1814. In 1825 Wahrmann obtained an edict ordering that Jewish secondary school students should receive instruction in their own religion even when attending schools maintained by Christian denominations. He introduced regular synagogue services for young people on the Sabbath, preaching the sermons himself. The first constitution of the Jewish congregation of Pest was a result of his efforts, as was the foundation of the Shi'ur Society for the promotion of learning, and other communal institutions (such as Bikkur Ḥolim). Land for the Jewish cemetery of Pest was acquired during Wahrmann's ministry. Two of his sermons were published.

[Jeno Zsoldos]

WAHRMANN, MORITZ (1831–1892), Hungarian economist and businessman. Wahrmann, who was born in Pest, Hungary, entered his father's textile business and in 1859 became the sole owner. His articles in *Pester Lloyd* attracted the attention of F. *Deák, who subsequently supported him in the election campaign which made him the first Jewish member of the Hungarian parliament (1869). There, he served as chairman of the finance committee. At the same time, he was president of both the Pester Lloyd Co. and the Budapest Chamber of Commerce and Industry. Wahrmann advocated the acquisition of landed property by Jews, regarding it both as a profitable investment and as a means of gaining a foothold in the landed gentry class. He believed that it would promote the assimilation and social equality of Jews, but failed to realize the dangers of the inevitable hostile reaction. As vice chairman of the first General Congress of Hungarian Jews (1868–69), he supported an autonomous religious and educational establishment for Hungarian Jewry; he also spoke in favor of this in parliament. From 1883 until his death he was president of the Jewish community of Pest, where he instituted various organizational reforms. His term of office was also marked by the founding of the Jewish hospital and the Jewish community center of Budapest (1889 and 1891).

[Jeno Zsoldos]

WAISMANN, FRIEDRICH (1896–1959), Austrian philosopher. One of the original members of the Vienna Circle, he was born in Vienna. He was assistant of the German neopositivist philosopher Moritz Schlick at Vienna University (1929–36), and then lectured at Cambridge (1937–39). He then went to Oxford as reader in the philosophy of mathematics, and later as reader in the philosophy of science. Waismann's philosophy began as a rather orthodox version of logical positivism, but under the influence of Wittgenstein's later views changed radically, moving away from an emphasis upon formalism to a type of extreme informalism. His later work, such as the series of articles entitled "Analytic-Synthetic" (*Analysis*, 1949–53) and "Language Strata" (*Logic and Language*, 1953), attempts to relieve philosophical perplexity by contrasting the rigid caricatures of language use developed by traditional philosophers with the flexible, subtle, and fluid use of language in its everyday employment. The high point in this development is to be found in his paper "How I See Philosophy" in *Contemporary British Philosophy* (1956) where he contends that philosophy is "very unlike science in that in philosophy there are no proofs, no theorems and no questions that can be decided."

Apart from these influential papers, Waismann's main contributions are to be found in *Einfuehrung in das mathematische Denken* (1936; *Introduction to Mathematical Thinking*, 1951), and *The Principles of Linguistic Philosophy.* The latter work was unfinished at Waismann's death, and was edited by R. Harre and published in 1965.

[Avrum Stroll]

°**WAKEFIELD, ROBERT** (**Wakfeldus**; d. 1537), English Hebraist and Orientalist. Born in Pontefract, Yorkshire, Wakefield was educated at Cambridge and then served as professor

of Hebrew at Louvain (1519) and at Tuebingen (1520–23) before being recalled to England to serve as a chaplain to Henry VIII. He taught at Cambridge from 1524 and in 1530 was appointed first professor of Hebrew at the University of Oxford, where his students included the future Cardinal Pole. His pioneering work, *Oratio de laudibus et utilitate trium linguarum, Arabicae, Chaldaicae, et Hebraicae, atque idiomatibus hebraicis quae in utroque testamento inveniuntur* (London, 1524), "On the value of Arabic, Aramaic, and Hebrew," was the first English publication to contain Hebrew and Arabic type. Dedicated to Henry VIII, it displays Wakefield's considerable rabbinic scholarship and his familiarity with medieval Hebrew literature. A supplementary work, *Syntagma de Hebraeorum Codicum incorruptione…* (London, c. 1530), was published with an address on the study of Hebrew which the author delivered at Oxford in the same year. Both works were printed by Caxton's successor, Wynkyn de Worde. Wakefield also wrote a Paraphrasis in Librum Koheleth (n.d.). Wakefield held the leading Jewish writers of the Middle Ages in high regard and believed that Hebrew was God's own language.

His younger brother, THOMAS WAKEFIELD (d. 1575), was appointed first regius professor of Hebrew at the University of Cambridge in 1540. His temporary replacement in this post by Paulus *Fagius (1549–53) is thought to have been brought about by his loyalty to Catholicism. In 1569 Thomas Wakefield was finally replaced by the convert Immanuel *Tremellius.

[Godfrey Edmond Silverman]

WAKSMAN, SELMAN ABRAHAM (1888–1973), U.S. microbiologist and Nobel Prize winner. Born in Priluki, Russia, he was taken to the United States as a child. From 1925, he taught at Rutgers University, heading its Institute of Microbiology from 1949. Although Waksman's research interests involved various aspects of soil microbiology, he is best known for his investigations of antibiotics, particularly streptomycin. The term antibiotic, a substance produced by one microorganism that kills other microorganisms, was coined by Waksman. When he began his search for antibiotic substances in the 1930s, he had already many years of experience with a group of fungi known as the actinomycetes, and he was very familiar with their abundance, distribution, taxonomy, and activities. In the course of their work Waksman and his colleagues developed many specialized techniques which were valuable in the cultivation of microbes, as well as the isolation and purification of active antibiotics.

Streptothricin, the first antibiotic substance he isolated from an actinomycete, was too toxic for therapeutic use. Returning to a species of fungus that he had first described in 1916, he found a strain that produced a substance possessing antibacterial activity but was less toxic. The fungus, *Streptomyces griseus*, was grown in submerged culture. The isolation of the new antibiotic, which he named streptomycin, was done by adsorption on charcoal, removing it from the charcoal by treatment with dilute acid, followed by drying and crystallization. Using standardized strains of bacteria, a series of laboratory tests were performed to investigate the bacteriocidal properties of streptomycin. It proved to be effective against a great variety of bacteria, including the tubercle bacillus, and was categorized as a broad-spectrum antibiotic. Waksman and his coworkers began the work of elucidating the chemical structure of streptomycin, but the task was completed by other investigators. Streptomycin, one of the most useful antibiotics to be discovered, was considered a major breakthrough in the area of chemotherapy. Following this work, Waksman and his coworkers continued the search for antibiotics and succeeded in finding several more. He was elected to the National Academy of Sciences and in 1952 was awarded the Nobel Prize for Medicine and Physiology. His autobiography, *My Life with the Microbes*, appeared in 1954.

[Norman Levin]

WALBROOK, ANTON (1896–1967), Austrian actor. Born Adolf Wilhelm Anton Wohlbruck in Vienna, Walbrook was the son of a Jewish mother and a non-Jewish circus clown whose family had been actors since the 18th century. He was educated at Catholic schools and was an officer in the German army during World War I, held as a prisoner of war by the French for several years. He began his career under Max *Reinhardt and later starred in German films. He settled in England in 1937 and won acclaim for his stage performances in *Design for Living* (1939) and *Watch on the Rhine* (1942). His film career, spanning three decades, included roles as Prince Albert in *Victoria The Great* (1937); *Sixty Glorious Years* (1938); *Dangerous Moonlight* (1941), where he gave the first performance (through an offstage pianist) of the famous *Warsaw Concerto*; *The 49th Parallel* (1941); *Colonel Blimp* (1943); *The Queen of Spades* (1948);*The Red Shoes* (1948); and *I Accuse!* (1958), based on the *Dreyfus Case. Walbrook gave part of his earnings from each film to help Jewish refugees. He became a British subject in 1947 but then went frequently to Germany for film and television roles, dying in Bavaria.

ADD. BIBLIOGRAPHY: ODNB online.

WALD, ARNOLD (1932–), Brazilian lawyer. Born in Guanabara, Wald lectured at the universities of Rio de Janeiro and Niteroi and in 1966 became professor of civil law at the University of Guanabara, where he lectured for more than 30 years. From 1966 to 1967 he was attorney general of the state of Guanabara, secretary general and vice president of the Institute of Brazilian Lawyers and the Brazilian Committee of Comparative Law. Wald was Brazilian delegate to several international congresses on comparative law and published a number of books and papers on his specialty including *Influência do di-*

reito francês sôbre o direito brasileiro no domînio da responsabilidade civil (1953), *O Mandado de Segurança* (1968), *Direito de familia* (1998,) and *O novo direito de familia* (2000).

[Israel Drapkin-Senderey]

WALD, GEORGE (1906–1997), U.S. biologist and biochemist; Nobel Prize winner. Born in New York City, he received his B.Sc. in 1927 from New York University and his Ph.D. from Columbia University in 1934, where he developed his continuing interest in the biochemistry of vision. In 1934 he joined the Biological Sciences Department at Harvard University, where he rose to the rank of full professor in 1948. After discovering vitamin A in the retina, he showed that a derivative of this substance (retinene) is the primary lightsensitive pigment. Retinene is joined to specialized retinal proteins (opsins) in the visual pigments which abound in tiny structures of the retina called rods. Upon exposure to light, this attachment is broken as a result of chemical rearrangement of the retinene molecule, and ultimately vitamin A is produced. The significance of this fundamental biochemical cleavage pattern was enhanced by Wald's demonstration that it underlies the visual process in all organisms which possess a highly structured eye. Specific modifications of retinene and vitamin A characterize the lower vertebrates and provide biochemical insights into evolutionary relationships. He was the recipient of many honors and in 1967 was awarded the Nobel Prize for physiology and medicine. He wrote a widely acclaimed laboratory manual for general biology and co-authored *General Education in a Free Society* (1945). He was also active in the political arena and played a leading role in mobilizing opposition to U.S. involvement in the Vietnam war.

[George H. Fried]

WALD, HENRI (1920–2002), Romanian philosopher; regarded as an authority on trends in contemporary philosophy and dialectical logics. Born into a Jewish family of humble means, Wald lectured at Bucharest University on logic and the theory of knowledge from 1948 to 1962, and in 1953 was appointed director of the department of dialectical materialism at the Institute of Philosophy of the Rumanian Academy.

Wald's works included *Rolul limbajului în formarea și desvoltarea ideilor* ("The Role of Speaking in the Formation and Development of Ideas," 1956); *Filozofia Deznădejdii* ("The Philosophy of Desperation," 1957); *Structura logică a gindirii* ("The Logical Structure of Thought," 1962); and *Realitate şi limbaj* ("Reality and Speaking," 1968). Later he also became interested in linguistics and semantics, fields to which his contribution was a most important one.

Wald was also interested in the development and criticism of Marxian theory that did not follow the Leninist line. He also published several valuable contributions to the history of Jewish culture in the publications of the Jewish community.

[Dora Litani-Littman / Paul Schveiger (2nd ed.)]

WALD, HERMAN (1906–1970), South African sculptor born in Hungary, the son of a rabbi. Wald settled in South Africa in 1937. Among his principal works are a monument to martyred European Jewry, "Kria," which stands at the entrance to the Witwatersrand Jewish Aged Home, Johannesburg, and a memorial to the Six Million, in the grounds of the West Park Jewish Cemetery, Johannesburg. His later works include municipal fountains and decorations for synagogues in Johannesburg and Cape Town.

WALD, JERRY (1912–1962), U.S. screenwriter and producer. Wald was born in Brooklyn, N.Y. During 1934–41 Wald wrote or coauthored a number of scenarios, including *They Drive by Night*. Then, as an associate producer (1941) and producer (1942–50) for Warner Brothers, he turned out a number of successful films, including *Destination Tokyo, Objective, Burma!*, and *Johnny Belinda*. In 1950 he formed the independent Wald-Krasna Productions with the writer Norman Krasna, an arrangement which ended in 1952. Wald then became production vice president at Columbia. From 1956 he headed Jerry Wald Productions at Twentieth Century-Fox.

WALD, LILLIAN (1867–1940), U.S. social worker. Lillian Wald was born in Cincinnati, Ohio, to a German-Jewish immigrant family and was raised in Rochester, N.Y. As a child, Lillian Wald had all the comforts of upper middleclass life. Her decision to become a nurse led ultimately to contact with the immigrants of New York's Lower East Side, and she soon resolved to bring nursing care and hygienic instruction to the needy. These activities led to a concern for the total needs of the individual and to the establishment of the Nurses (Henry Street) Settlement in 1895. Combined with nursing services were campaigns for improved sanitation, pure milk and the control of tuberculosis, plus the full range of educational, recreational, and personal services offered by the settlement.

Lillian Wald was the very prototype of the liberal reformer of the early 20th century. She disliked millennialism because it too often traded present gains for future hopes; she was deeply interested in people but demanded that reform proceed from fact and sound argument, not sympathy; and she realized that charity could make no dent in social problems since it left both the individual and the environment unchanged. Instead, the state must take the responsibility for creating the proper conditions for a decent and humane society. Thus she campaigned for the end of child labor, supported trade unions, and was an important member of most of the leading social reform organizations of the day.

Vigorously opposed to U.S. entry into World War I, Lillian Wald was president of the American Union against Militarism. In destroying the brotherhood of man and stirring national and ethnic hatreds, war attacked her basic beliefs and the work of a lifetime. Once the United States entered the conflict, she did her best to preserve civil liberties and maintain the social welfare gains of the previous two decades. Although in close contact with the Jewish community of the Lower East

Side, Lillian Wald never identified with her coreligionists as such. She urged a fundamental brotherhood among men, for she had found "that the things which make men alike are finer and stronger than the things which make them different." She wrote *House on Henry Street* (1915) and *Windows on Henry Street* (1934).

WALDEN, AARON BEN ISAIAH NATHAN (1838–1912), ḥasidic author and bibliographer in Poland. Born in Warsaw, Walden was a Ḥasid of R. Menahem Mendel of Kotsk and R. Isaac Meir Alter of Gur. For many years he worked as proofreader at Ephraim Baumritter's publishing house in Warsaw. He became particularly well known for his bio-bibliographical work, *Shem ha-Gedolim he-Ḥadash*, following the same structure and augmenting the *Shem ha-Gedolim* of Ḥ.J.D. *Azulai. It was published in several editions and widely circulated. The first part of the work is an alphabetical list of over 1,500 rabbis and authors, the second part lists over 1,600 works, also in alphabetical order (1864; 1870^2; 1879^3; with additions and corrections by Walden's son JOSEPH ARYEH LEIB, and subsequent editions).

Walden also published Simeon b. Isaac ha-Levi Oshenburk's *Devek Tov* on *Rashi's commentary on the Pentateuch with many emendations (1895); a new edition of *David b. Solomon ibn Abi Zimra's (Radbaz) responsa, Parts 1–7 (1882); Moses *Alshekh's commentary on the Five Scrolls (1862); and *Mikdash Me'at* (1890–93), an anthology of the *aggadah* on the Psalms in five parts. He died in Kielce.

Walden's son MOSES MENAHEM published several works on the history of Ḥasidism in Poland: *Ohel ha-Rabbi* (1913), including tales about Jacob Isaac ha-Ḥozeh ("the Seer") of Lublin; *Beit ha-Ḥayyim* (1930–31) on rabbis who died in Kielce; *Ve-Khabbed Av*, supplements to *Shem ha-Gedolim he-Ḥadash* (1923); *Nifle'ot Yiẓhak* (1914), on the brothers Mordecai Menahem and Jacob David Kalish; and *Nifle'ot ha-Rabbi* (1911), also on Ha-Ḥozeh of Lublin.

Walden, *Beit ha-Ḥayyim* (1931), 110–1; H.D. Friedberg, *Toledot ha-Defus ha-Ivri be-Polanyah* (1950^2), 113; J. Rubinstein, in: *Hadorom*, 16 (1963), 140–50.

[Naphtali Ben-Menahem]

WALDEN, HERWARTH (originally **Georg Lewin**; 1878–1941), German author and editor. Born in Berlin, Walden studied music in Italy and Berlin. In 1907 he founded a society for the cultivation of the arts (Verein fuer Kunst) – a forum for progressive poets, artists, architects, and scientists – and edited the literary and theatrical sections of several German periodicals. But it was as the founder and editor of *Der Sturm* (1910–32) that he was most influential in propagating his theories of expressionism in art, music, and literature. Walden's first novel, *Das Buch der Menschenliebe* (1916), and his first drama, *Weib* (1917), were followed by two more novels and eight plays. These, however, were less significant for his generation than was his theory of abstract art or his aid to early expressionists, futurists, and cubists, who had been rejected by the official artists' associations and important galleries alike. *Der Sturm* reproduced drawings and woodcuts by members of the Bruecke, and in particular works by the fiery young Austrian, Oskar Kokoschka, Walden's special protegé. In 1912 he opened a gallery dedicated to everything new and provocative from a number of countries. The names of the artists sponsored by the Sturm Gallery in its first decade included Albert Bloch, Ludwig *Meidner, Jakob *Steinhardt, and, above all, Marc *Chagall. His last work was a collection of lyrics, *Im Geschweig der Liebe* (1925). Walden was associated with the German left-wing intelligentsia and was himself pro-Communist. In 1932 he emigrated to the U.S.S.R., where he worked as a teacher of German. He published articles in the German exíle press in publications such as *The Word* (*Das Wort*) and *International Literature* (*Internationale Literatur*) until 1938. He became a victim of Stalinist police persecution, dying after seven months in jail. His wife (from 1901 until 1911) was the poet Else *Lasker-Schueler. In 2002 the correspondence between Herwarth Walden and Karl Kraus was published, entitled *Feinde in Scharen: ein wahres Vergnügen dazusein; Karl Kraus – Herwarth Walden; Briefwechsel 1909–1912*, by G.C. Avery.

[Sol Liptzin / Konrad Feilchenfeldt (2nd ed.)]

WALDENBERG, ELIEZER JUDAH (1912–), rabbi. Born in Jerusalem, Rabbi Waldenberg is the author of the multivolume series of responsa entitled *Ẓiẓ Eliezer* dealing with actual problems of life in Israel and abroad and published several other books on questions of *halakhah*. From 1957 he was president

of the District Rabbinical Court of Jerusalem. In 1976 he was awarded the Israel Prize for rabbinical scholarship.

WALDHEIM AFFAIR. The "Waldheim Affair" is the term conventionally applied to the controversy surrounding the disclosure of the previously unknown past of Kurt Waldheim, former secretary general of the United Nations, which arose during his campaign for the Austrian presidency in 1986. The affair not only focused international attention on Waldheim personally, but also raised broader questions relating to the history of antisemitism in Austria and the role Austrians played in the Nazi dictatorship and the "Final Solution." A concomitant of the Waldheim affair was the reemergence in Austrian political culture of the appeal to antisemitic prejudice for political ends. Employing a coded idiom more appropriate to "post-Auschwitz" political debate, the Waldheim camp (principally the Christian Democratic Austrian People's Party [ÖVP], which had nominated him) helped construct a hostile image of Jews ("Feindbild") which served both to deflect criticism of Waldheim's credibility and to explain the international "campaign" against him. The central assumption of this "Feindbild" was that Waldheim and Austria were under attack from an international Jewish conspiracy.

Kurt Waldheim had enjoyed an exceptionally successful career in the Austrian foreign service after World War II. Taken on as secretary to Foreign Minister Karl Gruber in 1946, Waldheim served in various posts abroad and in Vienna, including two stints as Austrian representative to the UN, and was appointed foreign minister in January 1968 by Chancellor Josef Klaus (ÖVP). His term as minister ended in March 1970, when the Socialists (SPÖ) under Bruno Kreisky won the parliamentary elections. Shortly thereafter, Waldheim returned to New York as Austria's ambassador to the UN. In January 1971, he was again in Vienna temporarily to run as the ÖVP candidate for president, which in Austria is a largely ceremonial post for which elections are held every six years. Though he made a very respectable showing, Waldheim lost to the incumbent Socialist Franz Jonas and afterward returned to his post in New York. On December 22, 1971, Waldheim was elected secretary general of the UN, and reelected to a second term in 1976. His bid for a third term, however, failed, and in March 1982, Waldheim, described by one journalist as "the most successful Austrian diplomat since Metternich," finally came home to Austria.

Waldheim's international prominence and personal ambition left few in doubt that he would run for the Austrian presidency in 1986, but it was unclear whether as the candidate of the ÖVP, or as a consensus candidate of the two major parties. The ÖVP hoped to draw maximum political advantage from Waldheim's candidacy for itself, without identifying him so closely with it that it would endanger either Waldheim's election as president or the hoped-for attendant political "turn." Then chairman Alois Mock pushed through Waldheim's nomination by the ÖVP as a "non-partisan" candidate in March 1985, more than a year prior to the elections, very early by traditional Austrian standards. The SPÖ, also conscious of Waldheim's electoral appeal, had not ruled out a joint candidacy until confronted with the ÖVP's fait accompli. One month later, the SPÖ presented Kurt Steyrer, then minister for health and environment, as its standard bearer. Two minor candidates, Freda Meissner-Blau from the Greens, and Otto Scrinzi, former FPÖ member of parliament and representative of the (German) nationalist far right in Austria, also entered the race.

The relatively uneventful early phase of the campaign, in which Kurt Waldheim was the clear front runner, ended abruptly in March 1986. Indeed, the Waldheim affair may be properly said to date from March 3, 1986, when the Austrian weekly *Profil* published documents first revealing details of Waldheim's unknown past. *Profil*'s disclosures were followed on March 4 by nearly identical revelations by the *World Jewish Congress (WJC), and the *New York Times* (NYT). The key to unlocking the evidence was said to be a picture published by an army unit, which placed Waldheim in Yugoslavia at a specific time and thus could unlock his wartime record. This gave historian Robert Herstein, who was commissioned by the World Jewish Congress, a place to begin.

Waldheim had always denied any affiliation with the Nazis of any kind, and, in both his public statements and in the relevant passages in his memoirs, had claimed that his military service ended in the winter of 1941–42, with his wounding on the eastern front. The evidence made public by *Profil*, the WJC, and the NYT suggested on the contrary that the former secretary general had been a member of the Nazi Student Union and that he had also belonged to a mounted riding unit of the Sturmabteilung, or SA, while attending the Consular Academy in Vienna between 1937 and 1939. Other documents revealed that Waldheim had been declared fit for duty in 1942, after his wound had healed. By the end of March 1942, Waldheim had been assigned to Army High Command 12 (which became Army Group E in January 1943), then based on Thessalonika (Salonica), and remained attached to it until the war's end. Army Group E, commanded by Alexander Löhr, was known for its involvement in the deportations of Jews from Greece and for the savagery of its military operations against Yugoslav partisans and their suspected civilian supporters.

For his part, Waldheim denied membership in any Nazi organization and offered evidence suggesting his ideological hostility to Nazism. He conceded having served in Army Group E, but denied participation of any kind in atrocities committed by units under Löhr's command, and claimed to have known nothing of the deportation of the Jews of Thessalonika.

The more general strategy pursued by Waldheim and his supporters was to brand the disclosures as part of a "defamation campaign" designed to inhibit his chances in the presidential election. Waldheim's argument ran along the following lines: the accusations of the WJC and the NYT represent a continuation of a slander campaign which the SPÖ had been waging against him for some time. The Socialists or their accomplices

had fed documents to the WJC and the NYT in order to damage Waldheim's international reputation, his main advantage over Steyrer. Such allegations were all the less credible, since Waldheim had been cleared by the Austrian secret service at the time he entered the diplomatic service 40 years previously. Moreover, during his candidacy for UN secretary general, the CIA, the KGB, and the Israelis all investigated him and would not have allowed his election had there been anything in the least incriminating against him. He had not mentioned his tour of duty in the Balkans in his memoirs, Waldheim claimed, because he had had such a minor function and also because his injury on the eastern front had represented a major caesura in his life. He also said that he knew nothing of Jewish deportations and had had nothing to do with other atrocities. But if Waldheim were to be blamed for such things, then truly every Wehrmacht soldier would also come under suspicion.

Although the Waldheim affair became an international media extravaganza, the principal source of documents relating to Waldheim's past, as well as his most vocal critic, was the WJC, an organization based in New York whose primary activities involve campaigning to defend threatened Jewish communities throughout the world and lobbying for what it perceives as the common interests of Jews. The series of press releases and disclosures of documents (24 between March 4 and July 8, date of the second round of the Austrian presidential election) by the WJC set the pace and largely the terms for the debate on Waldheim in the United States. In the early phase of the controversy, the WJC published evidence relating to Waldheim's membership in the SA and Nazi Student Union, which it believed amounted to proof of his "Nazi past." The material on Waldheim's wartime past the WJC first presented was patchy and inconclusive, but over the next several months it made public dozens of additional documents which helped complete the picture of Waldheim's various duties in the Balkans.

On March 22, the WJC published a copy of the Central Registry of War Criminals and Security Suspects (CROWCASS), a list compiled by the U.S. Army of persons suspected of war crimes, showing that Waldheim had been sought by Yugoslavia after the war for, among other things, murder. The basis for the CROWCASS listing was a file of the United Nations War Crimes Commission (UNWCC), and this latter file was in turn based on a dossier prepared by the Yugoslav authorities and submitted to the UNWCC shortly before it concluded its deliberations in 1948.

With the publication of the Yugoslav file, known as the Odluka, or "Decision," the debate on Waldheim's past acquired a far more serious dimension: allegations of war crimes had been leveled against Waldheim by the Yugoslav War Crimes Commission, and these had been reviewed and endorsed by the UNWCC. The WJC's subsequent disclosures as well as the discussion on Waldheim's past in general were heavily influenced by this new discovery.

On March 25, 1986, the WJC presented the findings of Robert E. Herzstein, the historian it had commissioned to look into Waldheim's past. Herzstein had discovered that Waldheim had served as a staff officer in the military intelligence department of Army Group E and had been assigned to the Battle Group West Bosnia, whose troops were responsible for the slaughter of thousands of Yugoslavs in the Kozara Mountains in 1942. Waldheim had also received an award for valor (the King Zvonimir medal) from the puppet Croatian government at the end of this campaign.

The WJC continued to offer documents it felt corroborated the findings in the Odluka, and pressed U.S. Attorney General Edwin Meese to place Waldheim's name on the so-called "watch list" of undesirable aliens, effectively barring him from entering the U.S. In the international media, calls for the publication of Waldheim's UN file were coupled with more intensive efforts to find a "smoking gun."

The issues involving Waldheim's possible criminality were in any event never self-evident. The possibilities for inferring something opprobrious about Waldheim's service in the Wehrmacht from his previously concealed "Nazi past" were legion, while the publication of the CROWCASS and the Yugoslav Odluka transformed vague intimations about his military duties into concrete juridical suspicion.

Embarrassing, if not necessarily incriminating, documents were surfacing daily, but there were few around who could reliably interpret what they meant. Moreover, merely keeping track of Waldheim's whereabouts in the Balkans was difficult: he had served in seven different posts in at least ten locations in Serbia-Montenegro, Albania, and Greece. The issue of Waldheim's possible war criminality was also complicated by ignorance about the practice of the Nuremberg Tribunal. On the one hand, much of what the Wehrmacht did to Yugoslav partisans was gruesome but "legal." On the other hand, the conditions under which an officer of Waldheim's rank and position could even incur criminal liability were narrowly circumscribed. Categories of guilt, complicity, responsibility, etc., easily elided, while the suspicious background to the compilation of the Odluka, which undermined if not vitiated the charges made in it, only became known later.

In Austria itself, Waldheim and his supporters continued to portray all new claims about his wartime role as slander, and Waldheim as the victim of a coordinated international "defamation campaign," initiated by socialists, led by the World Jewish Congress, and promoted by the international press, particularly the *New York Times*. In the course of the election campaign, the WJC became the main object of abuse, and the abundant political invective arrayed by politicians of the ÖVP against it as scapegoat helped promote and legitimate antisemitic prejudice in public discourse to an extent unseen since 1945. Waldheim also attempted to identify his own fate with that of his generation and country by claiming that he, like thousands of other Austrians, had merely done his "duty" under Nazi Germany, an appeal which struck a responsive note among many Austrian voters. In the election on May 4, 1986, Waldheim polled 49.7% of the votes, just short of the majority needed to win. During the six weeks leading up to the sec-

ond round, the Socialists emphasized their candidate's ability to reconcile a divided nation, but to no avail. Waldheim won the second round handily: his 53.9% of the votes was the largest of its kind (i.e., when not running against an incumbent) in the Second Republic.

Whatever actually determined Austrian voting behavior is open to a great deal of speculation, but the result was almost certainly not affected in any significant way by a negative backlash against the Waldheim camp's antisemitic wager. At the same time, the election does not appear reducible to a moral referendum on Waldheim or his past, for it is doubtful either that Austrian voters conceived the election in such ethico-political terms or that their votes reflected their respective moral choices. Dissatisfaction with government policies or the desire to deliver a protest vote for any one of several reasons seem to have motivated voters at least as much as a reflexive national spite or even antisemitic prejudice. What cannot be doubted is that Waldheim's diminished credibility and his perceived trivialization of Nazi atrocities (in the eyes of his critics, if not his supporters) did not cost him the election.

Contrary to Waldheim's expectations, interest in the unanswered questions about his past did not disappear after his election. Waldheim received no official invitations from any country in Western Europe, and some official government visitors to Austria even avoided traveling to Vienna, as protocol would otherwise have required them to pay a courtesy call on the Austrian president. Some prominent private individuals, such as political scientist Ralf Dahrendorf, also boycotted events where Waldheim would have been present. In April 1987, the U.S. Department of Justice announced that it was placing Waldheim on the watch list, further reinforcing his pariah status.

Since Waldheim's election, three independent research efforts, a commission of seven historians established at the request of the Austrian government, a panel of five international jurists engaged by British and U.S. television production companies, and a commission of the British Ministry of Defense, have illuminated Waldheim's wartime career in great detail, and none found anything in Waldheim's behavior which could implicate him personally in any criminal activity. Waldheim himself considered these judgments a complete vindication, and he and his supporters found the stigma which still attached to him incomprehensible.

Waldheim's diplomatic isolation was broken initially by Pope John Paul II, who received Waldheim officially in June 1987, and Waldheim subsequently visited a few Arab countries, some of whose papers had defended Waldheim against ostensible Zionist attacks. Though in April 1990 the U.S. Justice Department confirmed its decision to bar Waldheim, an indication of a possible thaw in attitudes toward Waldheim came the following July, when presidents Richard von Weizsäcker of Germany and Vaclav Havel of Czechoslovakia publicly met Waldheim at the Salzburg Festival, where Havel gave the ceremonial address in which he, albeit, indirectly attacked Waldheim by speaking of those who distort their memoirs.

In Austria itself, President Waldheim did not become the kind of integrative figure he had wished. Waldheim was initially an irritation and embarrassment to many, and was even forced by opponents in the government into remaining silent at the official commemoration of jubilee of the Austrian *Anschluss* in March 1988. During the second half of his term, which ended in 1992, on the other hand, Waldheim's treatment in the press suggested that increasing numbers of Austrians had accepted Waldheim as president, even though he would never be accorded the respect and affection his predecessors had enjoyed.

More broadly conceived, the Waldheim affair symbolizes the postwar unwillingness or inability adequately to confront the complications of the Nazi abomination. It remains to be seen whether current infelicitous images of Austria's Nazi past will be supplanted by the more prosaic Trapp family pendant, or whether the Waldheim affair becomes the occasion for a more general effort on all sides to come to terms with the past. If so, then Waldheim may indeed be said to have performed an important function.

[Richard Mitten]

There were two collateral impacts of the Waldheim Affair. Simon *Wiesenthal, a citizen of Austria, refused to join the World Jewish Congress in its assessment that Waldheim was a war criminal. Always cautious before making such an accusation, he remained unconvinced. His hesitation was not shared by the *Simon Wiesenthal Center, which joined the WJC in pressing the case. It was rumored that this cost him the Nobel Peace Prize that was awarded to Elie *Wiesel that year. Secondly, the U.S. ambassador to Austria was a then young American Jew, descendent of a family that traced its roots to the Austro-Hungarian Empire and heir to a great cosmetics fortune. Ronald *Lauder experienced antisemitism directly for the first time. This experience aroused in him the desire to act affirmatively on behalf of the Jewish people and gave rise to his important efforts to rebuild Jewish life in Central and Eastern Europe through the foundation he established.

WALDINGER, ERNST (1896–1970), Austrian poet. Born in Vienna, Waldinger had both a secular and an Orthodox education. He volunteered for military service in 1915 and two years later was severely wounded on the Romanian front. Af-

ter hospitalization he studied at the University of Vienna, where he received his Ph.D. in 1921. He then turned to poetry, choosing classical forms rather than the free verse of the dominant expressionists. Although he published individual poems from 1924, Waldinger's first verse collection, *Die Kuppel*, did not appear until 1934. It was followed by others, notably *Der Gemmenschneider* (1937), and in later years by *Musik fuer diese Zeit* (1946); *Glueck und Geduld* (1952); *Zwischen Hudson und Donau* (1958), a volume of selected poems; and *Gesang vor dem Abgrund* (1961). Forced to immigrate to the U.S. in 1938, Waldinger first lived in New York and worked in a library, in a department store, and for the U.S. government during World War II. In 1947 he was appointed professor of German literature at Skidmore College, Saratoga Springs, New York, where he taught until 1965. A master of the sonnet and the ode, he drew his inspiration chiefly from classical myths, musical compositions, war experiences, and the Austrian and American landscapes. His Jewish background inspired poems such as "Jehuda Halevis Tod," "Die Opferung Isaaks," and "Der Sabbat." *Ich kann mit meinem Menschenbruder sprechen* (1965) was his outstanding book of verse.

[Sol Liptzin]

WALDMAN, LEIBELE (c. 1907–1969), *ḥazzan*. Born in New York City, Waldman was recognized as a child prodigy and officiated as a *ḥazzan* and appeared in concerts while still a youth. He held positions in Boston, Passaic, and New York and sang regularly on the radio, rapidly becoming most popular. He possessed a warm, well-rounded, lyric baritone voice which, together with his clear diction and easy-flowing style, was particularly suited to the liturgical pieces and Yiddish religious folksongs which he performed in concerts and on his numerous records.

WALDMAN, MORRIS DAVID (1879–1963), U.S. social worker. Born in Bartfa, Hungary, Waldman was taken to the United States when he was four years old. He lectured at Columbia University (1916–18). He was rabbi of Temple Anshe Emeth in New Brunswick, New Jersey, in 1900–03, and in 1906–08 he directed the *Galveston Movement which was created to direct eastern European immigrants from the East Coast of the United States to less populous areas. Waldman was managing director of the United Hebrew Charities of New York from 1908 to 1917, vice president of the New York State Conference of Charities and Correction (1912), president of the New York City Conference of Charities (1915), and in 1927 was president of the National Conference of Jewish Charities. He traveled widely in the United States, setting up federations of Jewish charities to coordinate local Jewish philanthropy. Waldman spent 1921–22 in organizing relief for Central European Jewish communities, and was European director of the war orphans department and of the medico-sanitary department of the Joint Distribution Committee. In 1928 he became executive secretary of the American Jewish Committee, serving until 1945. From 1942 to 1945 he served as executive vice president of the Committee.

Waldman was responsible for many innovations in social work, including the District Service Plan in Boston, geared to serve family units rather than individual members of families; a planned parenthood clinic in Detroit; and bureaus of Jewish education based on the principle of community control. He helped to create the Bureau of Philanthropic Research and the National Desertion Bureau (of which he was the first chairman). He was also instrumental in having a human rights provision put into the United Nations charter. Additionally, he was active in the non-Zionist section of the Jewish Agency for Palestine; in the British-Zionist negotiations on Palestine, he represented the non-Zionist views. He opposed Jewish nationalism which he defined as the "organization of the scattered Jewry of the world into an international political unit or entity," although at the American Jewish Committee he tried unsuccessfully to bring agreement between Zionists and the non-Zionists in the organization. He later favored the establishment of Israel. Waldman's activities are recorded in *Not By Power* (1953), an autobiography. He also wrote *Sieg Heil* (1962), about Hitler's treatment of the Jews.

WALDMAN, MOSHE (1911–1996), Yiddish poet, journalist, and editor. Born in Ozorkow near Lodz, Waldman attended a Polish school and a modern Hebrew institution. After spending several years in Lodz (1927–31), where he edited the children's literary magazine *Lomir Kinder Lernen* and co-edited the journal *Di Fraye Yugnt*, he moved to Warsaw and then to Paris and Brussels. After publishing an article about Zishe *Bagish in the Brussels Yiddish press and a poem in a Philadelphia journal (1932), Waldman contributed poetry, criticism, and articles about education issues to various journals in Lodz, Warsaw, Cracow, Paris, New York, Buenos Aires, Mexico, and Tel Aviv. On his return to Warsaw (1933), he led various cultural activities of Po'alei Zion until World War II. In 1938 his first collection of poems, *Fartunklte Frimorgns* ("Darkened Mornings"), appeared. The original tone of the

then still unknown poet attracted the attention of Dov *Sadan, who printed Hebrew translations of two poems in the Tel Aviv daily *Davar*. In September 1939 Waldman fled to Bialystok and from there was deported by the Soviets to Komi; he lived in Bukhara (1941–46). Among the survivors of the Holocaust who returned to Lodz, he tried to rebuild a Jewish life there, but in 1949 he immigrated to Paris, which became a flourishing postwar center of Yiddish culture. Waldman's interests then focused on promoting the survival of Yiddish culture. In Paris, he initiated educational and cultural projects, and helped Yiddish writers and artists arriving from eastern Europe. For decades he had a vitalizing effect on young people whom he inspired to take responsibility for the Yiddish cultural heritage. His indefatigable efforts played an important role in the growing interest in Yiddish literature and culture in Paris among young researchers and translators. His poem *Gang aroyf tsu Yerusholayim* ("Ascending to Jerusalem," 1976) was accompanied by French and Hebrew translations. A splendid volume of his collected poetry, *Fun Ale Vaytn* ("From All Remote Regions," 1980), appeared with an introduction by D. Sadan and illustrations by various artists. In 1983 he was awarded the Manger Prize. Two collections of his poetry in Hebrew translation appeared (1985, 1986). Later in life, he often went for longer sojourns to Israel with his wife, the Yiddish novelist Menuha Ram.

WALDMANN, ISRAEL (1881–1940), Zionist, active in the Ukrainian government-in-exile. Waldmann was born in Chortkov, east Galicia. In 1897 he was forced to leave school before completing his studies because of his connections with Zionism. He worked as a legal assistant to the Ukrainian leader Dr. V. Holubovych in Ternopol, and through the latter's influence became acquainted with the Ukrainian intelligentsia and its fledgling nationalist movement. (The Zionist movement stayed neutral in the struggle for Ukrainian self-determination.) Waldmann engaged in Zionist politics during the elections to the Austrian parliament in 1907 and 1911. During World War I he left for Vienna, where he continued his close contacts with the Ukrainian nationalists who had set up their national council in Vienna under Dr. Petrushevych. At that time he published a daily, *Lemberger Zeitung*, supporting Jewish national claims. He was chosen to serve as Jewish representative for eastern Galicia in the Ukrainian national government which was organized in 1918 in Stanislav, but, before his appointment was officially recognized, the expansionist Polish regime annexed Galicia, and the Ukrainian administration was transferred to Vienna in May 1919. Waldmann continued as a propagandist for the Ukrainian leadership and accompanied their representative to the peace talks between Russia and Poland held in Riga in 1921.

In the *Steiger case (1924–25), when a Jew was accused of attempting to kill the Polish president, Waldmann tried to induce the Ukrainian nationalists to admit publicly their responsibility for the act. When his pleadings were ignored, he decided to reveal the Ukrainians' guilt to the public, thereby dissolving his connections with their movement. He testified before the court in Lvov, and several days later Steiger was acquitted. Waldmann was denied residence in Poland and thereafter lived in Vienna until 1935, when he went to Palestine. He died in Jerusalem.

WALDTEUFEL, EMIL (1837–1915), composer. He was born in Strasbourg, where his father, Lazare Waldteufel (Wallteufel), was a piano teacher at the conservatory, and his brothers were also active as musicians. Emil Waldteufel studied at the Paris Conservatory, but left before graduating and began to write dance music. His waltzes became perennial favorites, including *Très Jolie* (op. 154), *Dolores* (op. 170), *Estudiantina* (op. 191), and especially *España* (op. 286) and the "Skaters' Waltzes" (*Les Patineurs*, op. 183). In 1865 Waldteufel was appointed chamber musician to Empress Eugénie and director of the court balls.

WALES, country of the United Kingdom. No Jewish communities are recorded there during the Middle Ages. However, individual Jews are mentioned in places where English influence was prevalent, such as Caerleon and Chepstow. The charters of newly created boroughs in northern Wales in 1284 included the "liberty" to exclude Jews. In the 18th century Jews began to resettle in Wales. They are found in *Swansea from 1731, a community being organized in 1768. The *Cardiff community followed in 1840. In the second half of the 19th century other communities were established, especially after the beginning of the Russian-Jewish influx to Britain in the 1880s. The newly arrived immigrants set up small businesses and pawnbroking establishments in the mining towns of Tonypandy, Tredegar, Aberdare, Llanelly, Merthyr Tydfil, Pontypridd, Porthcawl, and elsewhere. An attempt to introduce Polish Jews into the coal mines failed owing to local opposition, which had some antisemitic undertones. The disorders in South Wales during the miners' strike in 1911 took on an anti-Jewish tinge. On August 18–19 several Jewish-owned shops and houses were looted and wrecked in Tredegar, and the disorders swiftly spread to other mining towns in the area, driving hundreds of Jews to seek refuge elsewhere. Winston *Churchill, then home secretary, was responsible for sending troops to put down the disorders. These anti-Jewish riots, virtually the only example of violent antisemitism in modern British history, have been the subject of much dispute among historians. They also contrast starkly with the long-established Welsh Protestant tradition of philo-semitism and pro-Zionism, which produced such figures as David *Lloyd George, who promulgated the Balfour Declaration. With the change in economic circumstances in

South Wales after World War I, many of the small communities in the mining centers ceased to exist. While the parent community of Welsh Jewry, Swansea, decayed, Cardiff became a considerable Jewish center. Llanelly, Bangor, and the resort town of Llandudno (in northern Wales) had small communities. The total number of Jews in Wales in 1967 was estimated at 4,300 (3,500 in Cardiff).

In later years the Jewish population of Wales declined considerably. The 2001 British census found 941 declared Jews in Cardiff, 170 in Swansea, 39 in Newport, and smaller numbers in other towns, about 1,300 in all. Cardiff (the capital of Wales) has an Orthodox and a Reform synagogue and a number of representative institutions. There are also Orthodox synagogues in Llandudno, Newport, and Swansea.

WALETZKY, JOSH, U.S. filmmaker and musician. Waletzky was born in New York City. Early on his father, Sholom Waletzky, introduced him to Yiddish melodies. Waletzky studied piano and composition at the Juilliard School from 1959 to 1965 and spent a semester studying under Peter Schickele. He graduated from Harvard College in 1969 with a bachelor's degree in linguistics and mathematics. Waletzky sang with the Yugntruf Ensemble, and in 1970 he wrote and directed the Yiddish operetta *Chelm, Undzer Shtetl* with Zalman Mlotek, which was staged at New York's 92nd Street Y. He performed with the Yiddish Youth Ensemble on *Yiddish Songs of Work and Struggle* (1972), a recorded collection of hymns and ballads from the Jewish workers' movements. At NYU Film School, he composed the music for and directed the Yiddish-language film *Dos Mazl* (1974). Waletzky worked as a sound editor on the documentary *Ibeorgun* (1975), followed by work on the Oscar-winning *Harlan County, U.S.A.* (1976), directed by Barbara *Kopple. He composed music for the film *Circle in the Square* (1976), as well as for two shorts, *Car Wash* (1977) and *Body Shop* (1977), for the PBS children's show *Sesame Street*. He served as musical director for a production of *The Jewish Woman* (1977) at the American Jewish Theatre, and scored *The Good Omen* (1978). Waletzky returned to sound editing for two Oscar-nominated documentaries, *With Babies and Banners: The Women's Emergency Brigade* (1978), which recounted the 1937 sit-down strike against General Motors, and *The War at Home* (1979), which followed the antiwar movement in Madison, Wisconsin. After working on the album *Past and Present* (1980) with Kapelye, a klezmer band he helped found, Waletzky starred with the band in the film and on the soundtrack for *The Chosen* (1981). In 1981, he was producer-director of *Image Before My Eyes*, a documentary about Jewish life in prewar Poland, and he served as script and musical consultant for the Barbra *Streisand film *Yentl* (1983). In 1986, Waletzky directed, scored, and cowrote the Jewish resistance documentary *Partisans of Vilna* (1986) with Aviva Kempner. Later Waletzky focused his attention on directing musical documentaries, including *Pavarotti and the Italian Tenor* (1991), *Music for the Movies: Bernard Herrmann* (1992), *Music for the Movies: The Hollywood Sound* (1995), and *Sacred Stage: The Mariinsky Theater* (2005). Other documentaries have included *Dashiell Hammett: Detective, Writer* (1999) and *The Endurance: Shackleton's Legendary Antarctic Expedition* (2000). In 2001, he released a CD of Yiddish songs, *Crossing the Shadows*.

[Adam Wills (2nd ed.)]

WALEY, family of English Jews, active in various branches of public and intellectual life. The Waley family traces its descent from Benjamin Levi (d. 1784), an engraver from Wiesbaden who settled in Portsmouth in 1740. His son Jacob (d. 1817) married ELIZABETH WALEY, and their son SOLOMON JACOB (d. 1864), a successful stockbroker, adopted his mother's original family name in 1834. JACOB WALEY (1818–1873), eldest son of Solomon Jacob, was educated at London University and was among the first Jews called to the English bar. He achieved an eminent position as a lawyer and, in addition, was professor of political economy at University College, London, 1853–66. He was an active member of the Jewish community, being a founder of the United Synagogue, first president of the Anglo-Jewish Association, and president of the Jews' Hospital and Orphan Asylum. His brother, SIMON WALEY (1827–1875), was prominent as a stockbroker, but was also a talented musician. He composed for both piano and orchestra and wrote some pieces for the synagogue. His son ALFRED JOSEPH WALEY (1861–1953), a leading member of the London Stock Exchange, was treasurer of the Royal Academy of Music (1924–46) and chairman of its committee of management from 1946. Jacob's daughter JULIA MATILDA (1854–1917) married Nathaniel Louis Cohen (1846–1913) and was mother of Sir Robert Waley *Cohen. She was president of the Union of Jewish Women and active in many other public bodies, and she wrote devotional literature for Jewish children. A sister, RACHAEL SOPHIA WALEY, married David Frederick Schloss (1850–1912), a prominent Fabian who wrote studies of the London poor; after the outbreak of World War I their sons assumed their mother's family name. SIR (SIGISMUND) DAVID WALEY (1887–1962), who was educated at Rugby and Oxford, spent his working life in the British Treasury, where he became one of its highest officials. Seriously wounded in World War I, he became an expert in external finance; after World War II he was attached to the European Recovery Department of the Foreign Office and during 1951–52 represented the United Kingdom on the Commission on German Debts. He was knighted in 1943. His brother Arthur *Waley was a poet and translator of Chinese and Japanese literature.

[Sefton D. Temkin]

WALEY, ARTHUR (1889–1966), English poet and translator of Oriental literature. Originally named Arthur David Schloss, Waley was born in Tunbridge Wells and was educated at Rugby and at Cambridge University. The family changed its name to Waley in 1918. From 1912 to 1930 he was assistant keeper of the Department of Prints and Drawings at the British Museum but devoted much of his time to the translation of Chinese and Japanese literature. In 1918 he published his translation of *One Hundred and Seventy Chinese Poems* and between 1925 and 1933 the classic Japanese romance, *The Tale of Genji*. The Chinese poems were a genuine popularization of material previously accessible only to specialists, and many poets derived inspiration from the technical adroitness of Waley's free verse. The modern British interest in syllabics – poetry measured by syllable rather than stress – derived from Waley's Chinese translations, just as the extraordinary popularity of the haiku in English arose from his translations from the Japanese. Through his translations, Waley brought something new into English poetry; a quiet, meditative tone, far removed from the crude Orientalizing of the 19th century. However, Waley never visited China. He apparently felt that his detachment from the immediate scene would enable him to concentrate upon more permanent issues and values. Waley's later work is mainly of interest to specialists, much of it lying in fields remote from creative literature.

He wrote several books on Chinese philosophy, notably *Three Ways of Thought in Ancient China* (1939). His last publications were mostly biographical and historical – *The Opium War Through Chinese Eyes* (1958), studies of the Chinese poets Li Po and Po Chu-I, and *The Secret History of the Mongols* (1963). He was made a Companion of Honor (CH) in 1956. His *Madly Singing in the Mountains*, edited by Ivan Morris (1970), is an anthology of writings with an appreciation of his work.

[Philip D. Hobsbaum]

WALINSKY, family of U.S. Jews in public service. OSSIP JOSEPH (1886–1973) was a U.S. labor leader and a journalist. Born in Grodno, Russia, Walinsky in his youth was involved in the Jewish socialist underground (1903) and was arrested. He immigrated to London, England, where he was active in the trade union movement (1904–07), edited Jewish trade union publications (1907–09), and became one of the founders of the Jewish fraternal order, the *Workmen's Circle (1912). From 1912 to 1915 Walinsky lived in Toronto, Canada, as a union manager. In 1915 he arrived in New York, again starting as union manager, and became a regular contributor to the Jewish press. In 1918 Walinsky became president of the International Leathergoods, Plastics and Novelty Workers Union. During the same year he presided over the first American Labor Conference for Palestine and remained an active leader in the National Committee for Labor Israel. In 1956 he published a book of Yiddish poems, *Lament and Song*. Walinsky retired from his union presidency in 1957, concentrating on leading about 2,600 *landsmanschaften*, fraternal orders, and folk organizations in their campaigns for Israel Bonds, UJA, and Histadrut.

His son LOUIS JOSEPH (1908–2001) was a U.S. economist. Born in London, England, and educated in the United States, Walinsky from 1931 was a teacher and lecturer. From 1943 to 1947 he was economic consultant and director of the Materials Division, U.S. War Production Board, and director of the Office of Economic Review and Analysis of the Civilian Production Administration. After that (1947–49) Walinsky became financial director of the latter organization, director of Germany-Austria Operations, and secretary general of the World ORT Union. Subsequently he was economic adviser to the governments of many Asian, African, and Latin American countries, as well as Australia. From 1953 to 1958 he served as an adviser to the government of Burma. In the 1960s he was a consultant to the World Bank. Among his publications are *Economic Development in Burma* (1962); *The Planning and Execution of Economic Development* (1963); and *Issues Facing World Jewry* (1981).

Ossip's daughter ANNA WALINSKA (1906–1997) was an artist. She ran the Guild Art Gallery in New York in the 1930s, traveled around the world in the 1950s, and created more than 1,000 works on canvas and paper over nine decades. A well-known portrait artist, she painted such subjects as Eleanor Roosevelt, Arshile Gorky, Mark Rothko, and U Thant. Her work is exhibited in galleries and museums around the world, including the Smithsonian Art Museum, the National Portrait Gallery, the Holocaust Museum, and Yad Vashem.

Louis' son ADAM (1937–) was a U.S. attorney. Born in New York, he joined the U.S. Department of Justice under Attorney General Robert F. Kennedy. He was Kennedy's legislative assistant and main speechwriter, accompanying him on his trips to South Africa and Latin America. After Kennedy's death he ran unsuccessfully for the office of attorney general of the State of New York (1970). From 1971 to 1995, Walinsky practiced law with the New York firm of Kronish, Lieb, Weiner & Hellman. He was a member and chairman of the New York Commission of Investigation from 1978 to 1981. In 1995, he began to serve full time as president of the Center for Research on Institutions and Social Policy, which concentrates on issues affecting law enforcement and social change. He is considered the father of the Police Corps, a program that strengthens American law enforcement by adding citizens to the police force; they serve four-year terms and receive four-year college scholarships in exchange for their commitment to serve as police officers. The Police Corps became law in 1994 as part of the Omnibus Crime Bill. Walinsky is a trustee of the Robert F. Kennedy Memorial.

[Frederick R. Lachman / Ruth Beloff (2nd ed.)]

WALKIN, AARON (1865–1942), Lithuanian rabbi, communal leader, and author. Born in Shumyachi, Belorussia, Walkin received his education at the Volozhin yeshivah where he studied under R. Naphtali Ẓevi Judah *Berlin. After the yeshivah was closed in 1892, he continued his studies in Kovno under R. Isaac Elhanan *Spektor. Walkin served successively as the rabbi of the communities of Gruzdziai and Seduva in Lithuania, and Mstislavl in Belorussia. After World War I he became the rabbi of the important Jewish community of Pinsk. He was active in *Agudat Israel and, with Meir *Hildesheimer, visited the United States on its behalf in 1914. Walkin and most of his family were murdered by the Nazis during the summer of 1942.

Walkin was considered a leading writer of responsa of this period, and his published responsa appeared in two volumes under the title *Zekan Aharon* (1932, 1938; reprinted in the U.S., 1951, 1958). His talmudic novellae *Beit Aharon* were published in four volumes (to *Bava Mezia*, 1905, reprinted 1965; to *Ketubbot*, 1911; to *Bava Kamma*, 1923, reprinted 1963; to *Gittin*, 1939, reprinted 1955). Walkin also published *Ḥoshen Aharon*, a commentary to the Shulḥan Arukh *Hoshen Mishpat* in three volumes (1927, 1928, 1930). His sermons entitled *Mezaḥ Aharon* were published in two volumes, the first of which was reprinted by war refugees in Shanghai (vol. 1, 1902, 1908, 1928, 1945; vol. 2, 1926). He also issued a new edition of the *Sefer Yere'im* of Eliezer b. Samuel of Metz, which included his own commentary entitled *Saviv li-Yre'av* (1935, reprinted 1960).

WALKOMITZ, SIMḤAH ḤAYYIM (sometimes pronounced **Wilkomitz**), (1871–1918), Hebrew teacher and educator. Born in Nesvizh, Belorussia, Walkomitz became interested in the *Haskalah movement and went to Vilna, where he broadened the scope of his studies. He joined the *Benei Moshe Association and in 1896 went to Ereẓ Israel. As a teacher, he helped to lay the foundations of Hebrew education, stressing the labor ideal. He taught in Reḥovot, Metullah, Rosh Pinnah, and Jaffa, devoting his major efforts to the establishment and development of the school at Rosh Pinnah, where, from 1902, he was headmaster for 16 years. The first rural educational institution in Ereẓ Israel, this school served as a model for the entire country. Walkomitz was among the founders of the *Teachers' Association in Ereẓ Israel, delivering a comprehensive lecture at its first meeting in 1903 on the image of the Hebrew rural school. The anthology *Ha-Moreh* ("The Teacher," 1959), dedicated to his memory, contains appreciations of Walkomitz, as well as his own articles and model lessons, which had previously appeared in various periodicals. His son, AMI ASSAF (1903–1963), a member of the moshav *Bet Yehoshua, was a *Mapai member of Knesset and served as deputy minister of education and culture from 1958 to 1963.

[Gedalyah Elkoshi]

WALKOWITZ, ABRAHAM (1878–1965), U.S. painter. Walkowitz, who was born in Tumen, Russia, was taken as a boy to New York, where he lived on the Lower East Side. Jacob *Epstein was a neighbor and close friend. He eked out a living by lettering diplomas and shingles for doctors' offices. By 1906 he had saved enough to study for two years in Paris. When he returned to New York and showed his paintings in a basement storeroom, they were dismissed by most of the critics as "monstrosities." In 1913 Walkowitz was invited to exhibit ten works in the historic Armory Show in New York. One of his earliest backers was Alfred *Stieglitz, the art dealer. As the public grew used to the anti-academic manner of the new painters, he began to be a success, and his paintings were acquired by leading American museums. Walkowitz drew and painted assiduously until the 1930s, when failing eyesight made it difficult for him to work, and by the mid-1940s he stopped painting completely. As his own creative powers declined, he devoted his time to posing for colleagues, and in 1944 the Brooklyn Museum mounted an exhibition, "One Hundred Artists and Walkowitz" consisting of paintings and sculptures with himself as subject. Walkowitz' style ranges from Romanticism to abstract art. He began by painting dark, misty landscapes but changed in time to warmer and fresher colors. His subjects were confined mainly to outdoor scenes with figures, and for many years his favorite model was the dancer Isadora Duncan.

[Alfred Werner]

WALLACE, IRVING (1916–1990), U.S. writer. Born in Chicago, Ill., Wallace grew up in Kenosha, Wis., where his father, an immigrant from Russia, was a clerk in a general store. He always wanted to be a writer, Wallace said. He sold his first article, *The Horse Laugh*, to *Horse and Jockey Magazine* for $5 while in high school. He attended the Williams Institute in Berkeley, Calif., where he took creative writing courses, and then moved to Los Angeles and began to write full-time in 1937. After service in World War II, where he wrote scripts for training films, Wallace wrote fiction and nonfiction articles for a number of periodicals. Unable to make ends meet as a magazine writer, he moved into screenwriting. Among the films he worked on were *Split Second, The West Point Story, Meet Me at the Fair*, and *The Big Circus*. Turning to fiction, he wrote two books that were ignored by the critics. But in 1960, he published *The Chapman Report*, a novel about the impact of a sex survey on some Los Angeles suburban women. It became a bestseller, and, as a film in 1962 starring Jane Fonda, Shelley Winters, and Efrem Zimbalist, Jr., it was a big moneymaker. In addition to his own books, Wallace collaborated with his wife, Sylvia, his daughter, Amy, and his son, David Wallechinsky, who used the name the family had in Russia. Wallace wrote 15 novels all told, including *The Prize* (1962), *The Nympho and Other Maniacs* (1971), and *The Guest of Honor* (1989).

[Stewart Kampel (2nd ed.)]

WALLACE, MIKE (**Myron Leon**; 1918–), U.S. television journalist. Born in Brookline, Massachusetts, Wallace received a B.A. from the University of Michigan in 1939. He gained prominence in 1956 for his penetrating interviews on New York television. He wrote a column for the *New York Post*, "Mike Wallace Asks" (1957–58; published as a book under the same title in 1958), ran the radio series *New Beat* (1959–61), and worked as staff correspondent for CBS News (1963–64). He hosted several TV series, such as *Night Beat* (1956); *The Mike Wallace Interview* (1957–58); and *Biography* (1961–64). He was the anchor on the *CBS Morning News* from 1963 to 1966. From 1968 he was one of the main correspondents on the popular news magazine series *60 Minutes*. In 1990 CBS News presented the one-hour special *Mike Wallace Then and Now*, which highlighted his 40 years of reporting and interviewing.

Wallace also hosted the TV series *20th Century with Mike Wallace* (1995) and appeared in such TV documentaries as *The Uncounted Enemy: A Vietnam Deception* (1982); *Watergate: The Secret Story* (1992); *The Real Malcolm X* (1992); *Hugh Hefner: Once upon a Time* (1992); *Rod Serling: Submitted for Your Approval* (1995); *Ayn Rand: A Sense of Life* (1997); *Dead Blue: Surviving Depression* (1998); *Breaking the News* (2001); and *The 100 Most Memorable TV Moments* (2004).

Wallace interviewed kings, presidents, and prime ministers, dictators and divas, musicians and millionaires. Among his many honors and awards are 19 Emmy Awards, three Peabody Awards, and the Robert F. Kennedy Journalism Award. In 1989 he was honored by Chicago's Museum of Broadcast Communications for his lifetime contribution to radio and television. In 1991 he was inducted into the Television Academy Hall of Fame and was honored by the Radio/Television News Directors Association with the Paul White Award. In 1993 he was named Broadcaster of the Year by the International Radio and Television Society. In 2002 he received a Lifetime Achievement Emmy.

Wallace's published works include *Close Encounters: Mike Wallace's Own Story* (with G.P. Gates, 1985) and *Between You and Me: A Memoir* (with G.P. Gates, 2005).

[Ruth Beloff (2nd ed.)]

WALLACH, ELI (1915–), U.S. actor. Born in Brooklyn, New York, Wallach received a B.A. from the University of Texas. He got his dramatic training with the Actors Studio and the Neighborhood Playhouse. He was in the Broadway cast of *Mister Roberts* in 1949, and in 1951 won a Tony Award for his portrayal of the Sicilian lover in the Tennessee Williams play *The Rose Tattoo*. In 1954 he appeared in London in *Teahouse of the August Moon*. With his wife, Anne Jackson, to whom he has been married since 1948, he shared several successes, notably on Broadway in *Rhinoceros* (1961) and *Luv* (1964). He also appeared in *Staircase* (1968); *Promenade, All* (1972); *The Waltz of the Toreadors* (1973); *Saturday Sunday Monday* (1974); *Twice around the Park* (1982); *Café Crown* (1989); *The Price* (1992); and *The Flowering Peach* (1994).

Wallach made his film debut in 1956 in *Baby Doll* and had roles in more than 100 movies. Among them are *The Lineup* (1958); *Seven Thieves* (1960); *The Magnificent Seven* (1960); *The Misfits* (1961); *How the West Was Won* (1962); *Lord Jim* (1964); *How to Steal a Million* (1966); *The Good, the Bad and the Ugly* (1966); *The Tiger Makes Out* (1967); *How to Save a Marriage* (1968); *Mackenna's Gold* (1969); *The Angel Levine* (1970); *Cinderella Liberty* (1973); *Crazy Joe* (1974); *The Deep* (1977); *Movie Movie* (1978); *The Salamander* (1980); *The Hunter* (1980); *Tough Guys* (1986); *Nuts* (1987); *Terezin Diary* (1989); *The Godfather, Part 3* (1990); *Mistress* (1992); *Night and the City* (1992); *Two Much* (1995); *The Associate* (1996); *Keeping the Faith* (2000); *Advice and Dissent* (2002); *The Root* (2003); and *King of the Corner* (2004).

He also appeared in a host of TV series and TV movies. In 1967 he won a Best Supporting Actor Emmy for his role in the TV movie *Poppies Are Also Flowers*. His autobiography *The Good, the Bad, and Me: In My Anecdotage* was published in 2005.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

WALLACH, MOSHE (**Moritz**; 1866–1957), pioneer of medicine in Ereẓ Israel. Wallach, born in Cologne, Germany, received an Orthodox education and studied medicine at Berlin and Wuerzburg. In 1891 he settled in Jerusalem and opened a clinic in the Old City. With financial support from Amsterdam and Frankfurt, he purchased land at a deserted spot outside the city walls for the establishment of a modern hospital. Named Sha'arei Ẓedek ("Gates of Righteousness"), the hospital was opened in 1902. Attached to it was a small farm. He served as director of the hospital until his retirement in 1947, giving it its Orthodox stamp.

[Getzel Kressel]

WALLACH, OTTO (1847–1931), German organic chemist and Nobel Prize winner. Wallach was born in Koenigsberg and worked in Bonn from 1870. He was appointed professor in Berlin (1876) and head of the department of pharmacy (1879–89). From 1889 until he retired in 1915 he was professor at Goettingen and director of the university's chemical institute, continuing his research until he was 80.

In 1884 knowledge in the field of "ethereal oils" was in a state of utter confusion. Wallach, after many years of work, characterized 12 terpenes which were different from one another, in place of the far greater number of products previously thought, and charted their interrelationships and determined their structures, based on rings with six carbon atoms as the basic skeletons. He received the 1910 Nobel Prize for Chemistry for "his pioneer work in the field of alicyclic compounds." His work was scientifically important in clarifying a field of natural products, and also (through his students) led to the industrial synthesis of camphor and artificial perfumes. He wrote *Terpene und Kampfer* (1909, 1914). Wal-

lach received many honors and was president of the German Chemical Society.

[Samuel Aaron Miller]

WALLACH, YONA (1944–1985), Israeli poet. Wallach was born in Tel Aviv and was an active member of the literary group known as the "Tel Aviv poets," a circle which emerged around the literary journals *Akhshav* and *Siman Keriah* in the 1960s, with the aim of imbuing Hebrew poetry with an avant-garde, daring spirit. Her first collection, *Devarim* ("Things"), appeared in 1966, followed during her lifetime by *Shenei Ganim* ("Two Gardens," 1969), *Shirim* (1976), and *Or Pere* ("Wild Light," 1983). She also wrote for and appeared with an Israeli rock group, and in 1982 some of her poems were set to music and recorded. Wallach, one of the most original, venturesome voices in contemporary Hebrew poetry, explores inner processes of emotion and perception, reflects on the energies of the feminine body, on the ambiguities of sexual fulfillment, and is indeed one of the first feminine revolutionaries in Israeli writing. Written in fluid lines, her lyrical verse defies conventional poetic structures, offering her readers deliberately provocative, subversive lines of utmost intensity. Little wonder then that her poetry was considered obscene and tasteless, as when she mentioned the *tefillin* in a poem describing the sexual act. Yigal Sarnah wrote her biography (1993), portraying a woman who in her habits and life-style, as well as in her artistic work (be it poetry or performance of rock music) always sought the extreme. After her early death, "Selected Poems 1963–1985" was published. An English volume with poems appeared in 1997 and individual poems have been translated into a number of languages. For information concerning translation, see the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

WALLANT, EDWARD LEWIS (1926–1962), novelist. Although Wallant's writing career was brief, he earned a reputation for craftsmanship and concern for moral values in his works, which included *The Human Season* (1960), *The Pawnbroker* (1961; made into a film after its publication), *The Tenants of Moonbloom* (1963), and *Children at the Gate* (1964), which dealt compassionately with the lives of ordinary people. Wallant's presentation of Judaism often focuses on a love for the marginalized, the stranger, and the "other," as well as Judaism's demands for dignity and justice. His works are often the ground in which Judaism and Christianity meet, suggesting that there is a common situation for faith as well as a common ground in which they encounter one another.

[Lewis Fried (2nd ed.)]

°**WALLENBERG, RAOUL** (1912–?), Swedish diplomat who became a legend through his work to save Hungarian Jewry at the end of World War II. Descended from a long line of bankers and diplomats, he was an architect by profession, a graduate of the University of Michigan. In 1936, he spent six months in Haifa, where he studied management at the Holland Bank, and first met with Jewish refugees from Germany. Upon his return to Stockholm, he became the foreign representative of a central European trading company, whose president was a Hungarian Jew, K. Lauer.

In July 1944, the Swedish Foreign Ministry, at the request of the American *War Refugee Board, sent him on a rescue mission to Budapest as an attaché to the Swedish Embassy. By this time, 437,000 Hungarian Jews had already been deported to death camps, and deportation had been ordered for Budapest Jewry. He had a great deal of cash, provided by Jewish organizations, since the WRB was to be financed by private contributions, and permission to employ unorthodox methods to save Jews. He had one other advantage. He was operating in a climate where everyone knew that Germany would lose the war and the only remaining question was when. Hence neutral countries, including Sweden, and even some German allies, were positioning themselves for the postwar world.

Wallenberg's chief operation was the distribution of Swedish certificates of protection ("Wallenberg Passports" or *Schutz-Paesse*), which were initially granted to Jews who had some link with Sweden. Wallenberg applied pressure on the Hungarian government and gained friends and assistants for his work. His department, "Section 3 – for Humanitarian Aims," employed 300 Jews. When the *Arrow Cross seized power in October 1944, Wallenberg initiated the establishment of the "international ghetto." About 33,000 Jews, 7,000 of whom had Swedish protection, thus found refuge in houses flying the flags of neutral countries. Wallenberg did not work alone. His efforts were joined by Carl Lutz, a Swiss diplomat, and by Giorgio Perlasca, an Italian businessman who posed as a Spanish diplomat and worked with the Zionist underground. Without any authorization or authority, Perlasca offered Spanish safe passes to Jews and established children's houses. He explained his motivation: "I simply cannot understand why a man can be persecuted because he is of a different religion from mine."

When threats did not work Wallenberg offered bribes, or even stood between Jews and their captors, saying they would have to take him first. When Jews had no authentic identification papers, Wallenberg came up with forged papers or driver's licenses. Anything that looked like an official paper, document, or list of names was flourished by an im-

perious Wallenberg with an air of authority that intimidated even Nazi officials. Wallenberg did not back down even in the face of personal danger. *Eichmann made threatening noises, saying, "Accidents do happen, even to a neutral diplomat." Wallenberg's car was rammed.

In November 1944, thousands of Budapest Jews, including women and children, were forced on a "death march" via the town of Hegyeshalom, to the Austrian border. Wallenberg and Per Anger, the Embassy's secretary, followed after them with a convoy of trucks carrying food and clothing, and he himself distributed medicine to the dying and food and clothing to the marchers. By superhuman efforts he managed to free some 500 persons and return them to Budapest. He saved several hundred members of labor detachments who had been put on the deportation train. In Budapest, he organized "International Labor Detachments" and even a "Jewish Guard" consisting of Aryan-looking Jews dressed in SS and Arrow Cross uniforms, and established two hospitals and soup kitchens. Eichmann threatened to kill him, referring to him as "*Judenhund Wallenberg*." Wallenberg formulated a comprehensive plan to restore the Hungarian economy when peace came. When the Soviet army entered Budapest on January 16, 1945, 100,000 Jews were still alive. Many, if not most of them, owed their lives to Wallenberg and his colleagues. At that moment, Wallenberg's struggle seemed to be over. He should have been able to look forward to returning home in honor. He approached Soviet officials with a plan for the postwar rehabilitation of Hungarian Jews. On January 17, 1945, Wallenberg was seen by Dr. Erno Peto, one of his closest collaborators, in the company of Soviet soldiers. He said: "I do not know whether I am a guest of the Soviets or their prisoner." He was never seen as a free man again. During the liberation, he had presented himself to Soviet army guards, who were reconnoitering the streets of Budapest.

For ten years, the Soviet Union denied that Wallenberg was in their custody. But after the death of Stalin and the thaw of the Khrushchev years, the Soviet Union formally announced that Wallenberg had been arrested. They produced a death certificate to substantiate their claim that he had died of a heart attack in 1947.

Yet up until the 1980s, there were occasional reports from former political prisoners who said they had seen an aging Swede in various Soviet prisons. In 1991, on the eve of the collapse of the Soviet Union, Mikhail Gorbachev presented the Wallenberg family with Wallenberg's diplomatic passport.

In 1981 the United States Congress gave Raoul Wallenberg honorary citizenship, an honor previously accorded only to Winston Churchill. The United States Holocaust Memorial Museum is located on Raoul Wallenberg Place and Yad Vashem has named him Righteous Among the Nations.

WALLENROD, REUBEN (1899–1966), Hebrew writer on American Jewish life. Born in Vizno, Belorussia, he emigrated to Ereẓ Israel in 1920, but shortly afterward left to study in France and the United States. Wallenrod served as instructor and later professor of Hebrew literature at Brooklyn College in New York. From 1929, he frequently contributed stories and essays to Hebrew periodicals.

His novels *Ki Fanah Yom* (1946; *Dusk in the Catskills*, 1957) and *Be-Ein Dor* (*At Ein Dor*, 1953), as well as his collections of short stories *Ba-Deyotah ha-Shelishit* (1938) and *Bein Ḥomot New York* (1952), describe the life of immigrant Jews in the United States and their difficulty in adjusting to their new surroundings. Among his works are essays and literary criticism *Mesapperei Amerikah* (1958), a travelogue *Derakhim va-Derekh* (1951), and others. He was coauthor, with Abraham Aharoni, of *Fundamentals of Hebrew Grammar* (1949) and *Modern Hebrew Reader and Grammar* (1945). In English he wrote *The Literature of Modern Israel* (1956) and in French, *Dewey, l'éducateur* (1932).

[Jerucham Tolkes]

WALLENSTEIN, ALFRED (1898–1982), U.S. cellist and conductor. Born in Chicago, Wallenstein was taken when still a child to California, where he played the cello in theater orchestras and later in the San Francisco Orchestra. After studying the cello and medicine in Europe, he became first cellist of the New York Philharmonic under Toscanini (1929) and, from 1931, began appearing on the radio as conductor. Two years later he formed the Wallenstein Sinfonietta, a radio orchestra which became famous for its high standard of performance and its extensive repertoire of classical and contemporary music. From 1943 to 1956 Wallenstein conducted the Los Angeles Philharmonic and, after 1952, was also music director of the Hollywood Bowl.

WALLENSTEIN, MEIR (1903–1996), Orientalist. Born in Jerusalem, Wallenstein taught in Palestine (1925–29) and in Manchester, England (1932–38). From 1946 he was reader in medieval and modern Hebrew at Manchester University, and in 1970 he settled in Jerusalem.

Wallenstein's works include studies on Moses Judah Abbas and his contemporaries in *Melilah*, 1–4 (1944–50); *Hymns from the Judean Scrolls* (1950); *Some Unpublished Piyyutim from the Cairo Genizah* (1956); *The Neẓer and the Submission in Suffering Hymn from the Dead Sea Scrolls* (ed., with translation, 1957); and he edited J. Jaffe's *Ahavat Ẓiyyon vi-Yrushalayim* (1946).

WALLICH, German family that produced many scholars, rabbis, and physicians. The family origin can be traced to the 13th century. The name of Walch is first mentioned in 1349. It applies to a physician who appears in the register of Jews exiled from Worms and Speyer. ABRAHAM WALCH was the authority responsible for the observance of customs within the Worms community and signed, as chairman, the "Worms Judenordnung" in 1584. JOSEPH BEN MEIR WALLICH, also known as Pheibusch, obtained his doctorate at Padua around 1600 and was appointed by the emperor "Jew Doctor" of Worms. His medical activity is also mentioned in *Mainz about 1605. Soon thereafter, he had to defend himself before the Senate against a charge of poisoning, brought by his non-Jewish colleagues. ISAAC (d. 1632) left a catalog of folksongs of his day, written in Hebrew letters. MOSES WALLICH (d. 1739) is the author of the so-called "*Ku-Bukh*" published in Frankfurt in 1687, which is a collection of fables in the Yiddish dialect.

From Worms the family spread to Metz, Frankfurt, Bonn, Coblenz, Mainz, Copenhagen, and many other places. In 1747, SOLOMON EMMANUEL WALLICH, who studied in Heidelberg, was appointed "Jew Doctor" in Mainz by the elector Frederick Charles. He, too, had to overcome opposition of non-Jewish as well as Jewish non-qualified colleagues. ABRAHAM WALLICH, who resided in Frankfurt, compiled a popular medical booklet named "Harmonica Wallichia Medicia," which was published only posthumously (1700) by his son, JUDAH LOEB, also a physician, under the title: *Sefer Dimyon ha-Refu'ot, Terufot le-Khol Minnei Ḥola'im, u-Mashveh Refu'ot ha-Guf bi-Refu'ot ha-Nefesh*. Because of the Wallichs' reputation, one of them was even called to the sickbed of Louis XV of France. The name is also mentioned in the records of other German cities, e.g., in an antisemitic leaflet with woodcuts representing the desecration of the *Host in *Passau (1470). NATHANIEL WALLICH (1787–1854), born in Copenhagen and well known as a physician and botanist, as well as director of the Calcutta Botanical Gardens, specialized in the flora of India, Hindustan, and Burma. Other descendants were the Jerusalem pioneer and director of the Sha'arei Ẓedek hospital, Moshe (Moritz) *Wallach, and the chemist and Nobel Prize winner, Otto *Wallach.

[B. Mordechai Ansbacher]

WALSTON, SIR CHARLES (1856–1927), British archaeologist and writer. Born Charles Waldstein in New York and educated at Columbia University and in Germany, Walston (as he was known from 1918) came to England in 1880 and taught classical archaeology at Cambridge University from 1883 to 1907. He was director of the Fitzwilliam Museum, Cambridge (1883–89), and as director of American School of Archaeology in Athens (1889–93) led the excavations at Plataea, Eretria, and the Hera sanctuary at Argos. His interests included contemporary art history, art education, psychology, and ethics, and among his varied writings was *The Jewish Question and the Mission of the Jews* (1899). He was knighted in 1912. His son, BARON HENRY WALSTON (1912–1991), a farmer and agricultural researcher, was given a life peerage in 1961 and, in 1964–67, served as a junior minister in Harold Wilson's Labour government. From 1968 until 1981 he served as chairman of the Institute of Race Relations.

[Penuel P. Kahane / William D. Rubinstein (2nd ed.)]

WALTER, BRUNO (**Bruno Walter Schlesinger**; 1876–1962), conductor. He was born in Berlin, where he studied at the Stern Conservatory. At 17 he became voice coach at the Cologne Opera and the following year assistant conductor, under Gustav *Mahler, at the Municipal Theater in Hamburg. He conducted in various German towns until 1900, when he became conductor at the Berlin Opera, but he left after a year to become Mahler's assistant at the Vienna Opera, where he remained until 1912. In 1917 he was engaged as general director of the Munich Opera, which gained a brilliant reputation for its fine repertory and high standard of performance. From 1922 he worked as a guest conductor, making his American debut and conducting at the Salzburg Mozart Festival. In 1925 he became conductor of the Municipal Opera in Berlin-Charlottenburg, and in 1929 of the Leipzig Gewandhaus Orchestra. In 1932 he was a guest conductor of the New York Philharmonic and was reengaged for the next three seasons under Toscanini. Meanwhile, the Nazis came to power and he lost his German engagements. In 1936 he accepted the post of musical director of the Vienna Opera, but when the Nazis overran Austria in 1938 he moved to France. On the outbreak of World War II he emigrated to the United States, settling in California, and from 1947 to 1949 was conductor and musical adviser of the New York Philharmonic.

Walter was equally eminent as a conductor of orchestral and operatic music. A classicist among conductors, his interpretations were characterized by a contemplative, lyrical quality and by sensitive color and phrasing. He excelled as an interpreter of Mozart and above all of Mahler, with whom he had worked in close friendship for so many years. He conducted the first performances of *Das Lied von der Erde* and of Mahler's ninth symphony, and remained a lifelong champion of his music. Walter was also a composer, but discouraged the performance of his own works. A man of wide culture, he wrote several books: *Von den moralischen Kraeften der Musik* (1935); *Theme and Variations* (1947; autobiography); *Gustav Mahler; ein Portraet* (1957); and *Von der Musik und vom Musizieren* (1957; *Of Music and Music-Making*, 1961).

WALTERS, BARBARA (1931–), U.S. broadcast journalist. Born in Boston, Massachusetts, Walters received a B.A. in English from Sarah Lawrence College in New York in 1953. She began her career as a writer for local television stations on the

East Coast. In 1961 she joined NBC's *Today* show, and in 1964 she became its lead female correspondent. She was already earning a reputation as a skilled reporter and interviewer at a time when women's function on news programs was usually subordinated to the male anchors. She hosted the TV series *Not for Women Only* (1971–76). In 1974 NBC accorded her the status of co-host on *Today*, a position she retained until 1976. Walters had a string of exclusive interviews with personalities of international status – including Fidel Castro, Anwar Sadat, and every U.S. president since Richard Nixon. In 1976 she joined ABC as co-anchor of its evening news with Harry Reasoner, at a salary of $1 million per year for five years. She thus became the first female to anchor a news broadcast on a major network and the first anchorperson to earn a million dollars a year. While Walters' arrival did not signal the ratings boost for which ABC had hoped, she remained on contract to the network and flourished with a series of interview specials and as a correspondent on the newsmagazine *20/20*, of which she was the co-host from 1984 until 2004. Among her many television stints and appearances, she hosted the running interview series *The Barbara Walters Specials* (which began in 1976); served as substitute anchor on *ABC News Nightline* (1991–2004); hosted the TV series *Turning Point*, along with such journalists as Peter Jennings and Diane Sawyer (1993–97); and hosted the music show in a *New Light '94* (1994); the TV special *A Celebration: 100 Years of Great Women* (1999); and the TV talk show *The View* from 1997, serving as its executive producer in 1999–2000.

Among her many honors and awards, Walters was nominated for 18 Emmy Awards and won one in 2003 for *The View*. She was inducted into the Television Academy Arts and Sciences' Hall of Fame in 1990; she received a Lifetime Achievement Award from the International Women's Media Foundation (1991); was honored by the American Museum of the Moving Image (1992); received a Lifetime Achievement Award from Women's Project and Productions (1993); and in 1996 was honored by the Museum of Television and Radio for her contributions to broadcast journalism. Walters wrote *How to Talk with Practically Anybody about Practically Anything* (1970).

[Rohan Saxena and Ruth Beloff (2nd ed.)]

°**WALTON, BRYAN** (1600–1661), English churchman and Orientalist. Born in Yorkshire, Walton studied at Cambridge University and became active in ecclesiastical affairs. As a result of his High Church views and undisguised royalist sympathies, he retired to Oxford in 1639 and there devoted himself to Oriental studies during the 1640s. When a new Polyglot Bible was published in Paris in 1645, Walton began preparing a project of the same kind, but of greater scope and quality, and as the *Biblia Sacra Polyglotta*, this eventually appeared in six volumes (London, 1654–57). The outstanding work of its type, Walton's London Polyglot contained texts in nine languages, including the Hebrew Old Testament, the Greek Septuagint, the Latin Vulgate, the Samaritan Pentateuch, the Targums, Ethiopic versions of Psalms and Song of Songs, and a Persian translation of the Pentateuch. It also contained the Apocrypha, with Hebrew versions of Tobit by Paulus *Fagius and Sebastian *Muenster. Among the scholars who contributed to the London Polyglot were Edmund *Castell and John *Lightfoot. Walton's own *Prolegomena*, one of the outstanding early introductions to the Old Testament, later appeared separately and, in this form, went through several editions. The Polyglot as a whole still retains much scholarly value and interest. As a reward for his loyalty to the crown, Walton was made bishop of Chester after the restoration of Charles II in 1660.

WALZER, MICHAEL (1935–), U.S. philosopher and professor. Born in New York to parents Joseph and Sally, Walzer graduated summa cum laude from Brandeis University and holds a B.A. in history. He continued his studies as a Fulbright Fellow at Cambridge University, and then earned a Ph.D. in political science and history from the Kennedy School of Government at Harvard University. From 1962 to 1966, he was an assistant professor of politics at Princeton University, before he moved to Harvard and taught as a professor of government. He became a UPS Foundation Professor of Social Science at the Institute for Advanced Study in 1980 at Princeton. In addition to teaching, Walzer acted as both co-editor of *Dissent* and a contributing editor of *The New Republic*, as well as a member of the editorial board for *Philosophy and Public Affairs*, an academic journal. He was also a member of the board of governors at The Hebrew University.

An accomplished writer on topics of multiculturalism, political theory, and moral and social philosophy, Walzer was often hailed as one of the country's foremost political thinkers. His writing and speeches often tackled some most vexing topics of the current era, namely war and the reasoning, or justification, behind the wars and clashes of recent years. Walzer's theories look to historical thought and events to create understanding of today's issues; his current work includes a collaborative project on the history of Jewish political thought, and a study of "difference" in its many forms.

Walzer's body of published work includes more than 20 works written or edited by Walzer, among them *Just and Unjust Wars: A Moral Argument with Historical Illustrations* published in 1977 and reprinted in 1992; *Spheres of Justice: A Defense of Pluralism and Equality* (1983); *The Jewish Political Tradition,* edited by Walzer and two others (2000, Volume 1 and 2003, Volume 2); and *Arguing About War* (2004). His dozens of articles on topics such as political action, equality, war, Israel, and multiculturalism were published in a variety of scholarly and political journals.

Walzer was a member of the American Philosophical Society, International Affairs Committee of the American Jewish Congress, and the Institute for Jewish Policy Planning and Research at the Synagogue Council of America. He was also a

member of the Conference for the Study of Political Thought and the Society of Ethical and Legal Philosophy. He had a special relationship with the Shalom Hartman Institute, where he has worked with Judaic scholars to shape a new understanding of the Jewish political tradition.

[Lisa DeShantz-Cook (2nd ed.)]

WALZER, RICHARD RUDOLF (1900–1975), scholar of Greek and Arabic philosophy. Born in Berlin, Walzer left Germany when Hitler came to power and, from 1933 to 1938, was lecturer in Greek philosophy at the University of Rome. He went to Oxford where he lectured in Greek, Arabic, and Hebrew philosophy. Walzer discovered much lost Greek material in Arabic philosophical writings, and contributed both to the understanding of Greek thought and of its use and development by medieval Islamic thinkers.

Walzer's publications include *Magna Moralia und Aristotelische Ethik* (1929); *Aristotelis Dialogorum Fragmenta* (1934, 1963^2); *Studi su Al-Kindi* (with H. Ritter and M. Guidi, 2 vols., 1938–40); *Eraclito: Raccolta dei frammenti* (1939); *Al-Farabius: De Platonis Philosophia* (with F. Rosenthal, 1943): translations of Galen, *On Medical Experience* (1944), and *Galen on Jews and Christians* (1949); and he edited *Galeni Compendium Timaei Platonis* (with P. Kraus, 1951), and *Greek into Arabic: Essays on Islamic Philosophy* (1962).

[Richard H. Popkin]

WANAMAKER, SAM (1919–1993), U.S. actor, director, producer. Born in Chicago, Wanamaker attended Drake University and studied acting at the Goodman Theater in Chicago. Despite a rich career in acting and directing, Wanamaker gained his greatest notice for his efforts to build an exact reconstruction of William Shakespeare's Globe Theatre, originally erected and used in the 17th century on the banks of the Thames River. Before his death in 1993, Wanamaker had raised over $10 million for the building, completed in 1997. For this effort, Wanamaker was posthumously awarded the 1994 Society of London Theatre Award for Outstanding Achievement. Wanamaker got his start as a stage actor in summer stock productions during the 1930s. From 1943 to 1946, he served in the U.S. armed forces. By the 1950s, he had expanded his talents to directing, including *Purple Dust, The World of Sholem Aleichem*, and *The Three Penny Opera*. In Liverpool, he directed and acted at the New Shakespeare Theatre in the plays *A View From the Bridge, Tea & Sympathy, Finian's Rainbow, Cat on a Hot Tin Roof, King of Hearts, Bus Stop,* and *The Rose Tattoo*. He is well known for his depiction of Iago in *Othello*. Concurrent with his stage directing and acting, he established a film career in *Taras Bulba* (1962), *Those Magnificent Men in Their Flying Machines* (1965), *Death on the Nile* (1978), *Private Benjamin* (1980), *The Competition* (1980), and *Irreconcilable Differences* (1984). He began acting in TV in the 1970s, including roles in the TV series *Berringer's* (1984) and in the award-winning TV drama *Holocaust*.

[Amy Handelsman (2nd ed.)]

WANDERING JEW, figure in Christian legend condemned to wander by Jesus until his second coming for having rebuffed or struck him on his way to the crucifixion. The story has given rise to a variety of folktales and literature still flourishing into the 20th century. Like the image of the Jew in popular conception, the personality of and tales about the Wandering Jew reflect the beliefs and tastes of the age in which he is described. While in the era of Church dominion he inspires religious horror and exhortations to piety, the character is later used as a vehicle for social satire, and even appears as a tragic figure expressing a spirit of revolt against the Church and the established order. He also appears in his old role as a target for modern *antisemitism. The name Wandering Jew has been given to a card game, a game of dice, plants, and birds. The legend has obvious affinities with other tales of eternal wanderers, primarily Cain (with whom the Jewish people as a whole is identified by Christian homilists, beginning with *Tertullian (150–230)).

Origin

At first the legend had only indirect connections with the Jews. Its beginnings have been traced (by L. Neubauer, see bibliography) to the New Testament story of the high priest's officer who struck Jesus (John 18: 20–22); it subsequently became linked and equated with other figures and elements, and in particular was associated with sayings attributed to Jesus foretelling his second coming (Mat. 16: 28; John 21: 20). The legend changed, and details were added. This story of the sinner doomed to eternal life apparently circulated in oral tradition in the Near East and eastern Mediterranean as late as the 15th century.

When the legend appeared in Europe, it readily gave expression to the prevailing medieval anti-Jewish hostility. The first written account specifically mentioning a Jew condemned for his sin to live until Jesus' second coming is recorded in a 13th-century chronicle of Bolognese origin. This states that, in 1223, some pilgrims at the monastery of Ferrara related "that they had seen a certain Jew in Armenia who had been present at the Passion of the Lord, and, as He was going to His martyrdom, drove Him along wickedly with these words 'Go, go, thou tempter and seducer, to receive what you have earned.' Jesus is said to have answered him: 'I go, and you will await me until I come again.'" The Jew subsequently repented of the deed, converted to Christianity, and led an ascetic life while enduring his punishment (*Ignoti Monachi Cisterciencis S. Mariae de Ferraria Chronica…* ed. A. Gandenzi, 1888). The English chronicler Roger of Wendover relates in his *Flores Historiarum* for 1228 that an Armenian bishop visiting the monastery of St. Albans told substantially the same story, adding that the man had struck Jesus. The tale was incorporated by Matthew Paris (d. 1259) in his widely circulated *Chronica Majora*, and in many other writings – in entirety or mentioned – in chronicles, poems, tractates, pilgrim itineraries, and miracle plays, from the 13th to 16th centuries in Italy, Spain, France, and England. The scene with Jesus is said to have been painted by Andrea Vanni of Siena (d. 1414).

At the beginning of the 17th century a chapbook was printed in German which accentuated the anti-Jewish implications of the legend, and was to popularize it further and inaugurate its transposition to further literary genres. Evidently based on Matthew Paris' chronicle, it first appeared under different imprints in Germany dated 1602, entitled *Kurtze Beschreibung und Erzehlung von einem Juden mit Namen Ahasverus*. In the copy published under the imprint of "Christoff Creutzer of Leyden" it is related that Paulus von Eitzen, bishop of Schleswig, in the winter of 1542, when attending church in Hamburg, saw a tall man, dressed in threadbare garments, with long hair, standing barefoot in the chancel; whenever the name of Jesus was pronounced he bowed his head, beat his breast, and sighed profoundly. It was reported that he was a shoemaker named Ahasuerus who had cursed Jesus on his way to the crucifixion. On further questioning he related the historical events that had occurred since. He conversed in the language of the country he happened to be visiting. This version shows "Ahasuerus" as a fully fledged personification of the Jewish people, incorporating the themes of participation in the crucifixion, condemnation to eternal suffering until Jesus' second coming, and the bearing of witness to the truth of the Christian tradition. The description of his person suggests the well-known figure of the Jewish *peddler.

In former versions of the legend, the man who assailed Jesus is referred to by various names: Cartaphilus, Buttadeus, Buttadeo, Boutedieu, Votadio, Juan Espera en Dios. Subsequently the name Ahasuerus (then a cant name for Jew through the familiarity it achieved in *Purim plays) became the most common appellation of the Wandering Jew in later literature, though in French he is frequently called Isaac Laquedem (corrupted Hebrew for "Isaac the Old" or "from the East"). In the German connotation he appears in a distinctly anti-Jewish light, referred to as the "Eternal Jew" (Ger. *Der ewige Jude*), which in English and French versions became the "Wandering Jew" (*le Juif errant*).

Numerous reissues of the chapbook appeared in German in varying versions in the 17th century, nine of which are attributed to the authorship of a (pseudonymous) Chrystostum Dudulaeus Westphalus. It was translated or paraphrased into French (notably the *Histoire admirable du juif errant*, c. 1650, reprinted well into the 19th century), Danish (*Sandru Beskriffuelse*, 1621), Swedish (*Jerusalems Skomager*, 1643), Estonian (printed at Reval, 1613), and Italian (*Narrazione d'un Giudeo errante*, and others).

In Folktale

Well over 100 folktales have invested the legend of the Wandering Jew with many local variations in places far apart, e.g., when the moon is old, he is very very old, but when the moon is young he turns young again (Ukraine); he may only rest for as long as it takes to eat a morsel of white bread (Westphalia), and can only rest on two harrows or a plowshare (Denmark, Sweden). Throughout the Alps his appearance presaged some calamity. In France his passing was connected with storm, epidemics, or famine; 19th-century museums in Ulm and Berne even exhibited large shoes allegedly worn by the Wandering Jew. Mark Twain, in his *Innocents Abroad* (1869), summarizes a local version of the legend told in Jerusalem by his guide in the Via Dolorosa.

After 1600 the Jew was reported to have made his appearance in localities in numerous countries at various dates (among many: Luebeck, 1603; Paris, 1604; Brussels, 1640; Leipzig, 1642; Munich, 1721; London, 1818).

In Literature

In the 17th and 18th centuries the Wandering Jew was the subject of *complaintes* or lyric laments by French popular singers. In England a 17th-century ballad entitled "The Wandering Jew" was printed in Percy's *Reliques* (1765). *The Wandering Jew or Love's Masquerade*, a comedy by Andrew Franklin, was produced at Drury Lane, London, in 1797.

From the end of the 17th century the Wandering Jew was used to describe "at first hand" events in world history or remote corners of the earth. *Goethe planned an epic poem based on the legend to survey events in history and religion and the Church (begun c. 1773; pub. by J. Minor, *Goethes Fragmente vom ewigen Juden…* 1904). The Wandering Jew became a popular theme in Romantic literature, ushered in by the Swabian poet Christian Friedrich Daniel Schubart's *Der ewige Jude* (1783), a poem in which Ahasuerus, standing on Mt. Carmel and overcome by despair, recounts how he has vainly sought death in battle, fire, flood, and tempest. Shelley invests him in *Queen Mab* (1813) with Promethean dimensions as the rebel against the dictates of a tyrannical deity.

Other literary treatments of the legend include, in French, Edgar Quinet's modern morality play *Ahasverus* (1833); Eugène Sue's highly colored novel *Le Juif errant* (1844–45), an anti-Jesuit satire (filmed in France in 1926); and a novel by Dumas Père, *Isaac Laquedem* (Paris, 1853). Gustav Doré published 12 engravings illustrating the legend in 1856. There is a short satirical story by Guillaume Apollinaire (1910; translated into English by R.I. Hall, *The Wandering Jew*, 1965). In Danish, Hans Christian Andersen's drama, *Ahasverus*, was first staged in 1847. Among German writers, Karl Gutzkow (*Plan eines Ahasvers*, 1842) identifies him with the evil attributes of Judaism. Kierkegaard in his notes (1835–37) depicts Ahasuerus as a man whom God cursed and outlawed. To Maxim *Gorki Ahasuerus is a symbol of all Jews in "The Jewish Massacre." August Strindberg in a short poem dealt with Ahasuerus' difficulties in coping with the complexities of modern life (in *Ordalek och Smakonst*, Stockholm, 1905).

English and American literary treatments include George Croly's historical novel *Salathiel* (1827), Nathaniel Hawthorne's story in *Mosses from an Old Manse* (1846), Rudyard Kipling's "The Wandering Jew" (in *Life's Handicap*, 1891), a yarn by A.T. Quiller Couch (in *Old Fires and Profitable Ghosts*, 1900), and short stories by William Sydney Porter (O. Henry; in *Sixes and Sevens*. 1911), and John Galsworthy (*A Simple Tale*, 1914), and E. Temple Thurston's popular play *The Wandering Jew* (1920).

Another popular work was the erotic interpretation in the U.S. novel *My First Two Thousand Years* by G.S. Viereck and P. Eldbridge (1928).

Among Jewish authors who have used the legend as a symbol are Jaroslav Vrcblický, the Czech poet (in three poems between 1872 and 1902), Abraham Goldfaden (poem in Yiddish, *Evige Yude*, Frankfurt, 1880s), and David Pinski (a one-act Yiddish play *The Eternal Jew*, 1906). The Wandering Jew appears as the narrator in the biography of Jesus by Edmond Fleg (1933).

Movies include the Yiddish film *The Wandering Jew* (1933), starring Jacob Ben-Ami, and an English film of the same name with Conrad Veidt (1935).

The hatred of the old superstition is turned into understanding and blessing in the Danish Hans Hartvig Seedorf's poem "Ahasuerus and the Plough" (1961), in which Ahasuerus is bidden to rest on his plow and thus bless the earth: for by the Jew "stones become grapes/ and figs grow from sand./ Pass between lilies, thou son of Israel,/ into the Promised Land of desire."

WANDSBECK, a district of Hamburg, N.W. Germany. Jews were permitted to settle in Wandsbeck in about 1600 by Count Breido Rantzau, when he saw the usefulness of the Jews in nearby Hamburg. The Wandsbeck community was Ashkenazi; they consecrated a cemetery in 1634. When in 1649 the Ukrainian refugees from the *Chmielnicki massacres were expelled from Hamburg, some of them settled in Wandsbeck. Jews from Wandsbeck visited the Leipzig fairs between 1678 and 1748. From 1671 until 1811 the *Altona, *Hamburg, and Wandsbeck communities were united (AHW). From 1688 some Ashkenazi Jews from Hamburg belonged to the Wandsbeck community, but from 1710, when Ashkenazi Jews were allowed to live in Hamburg, the importance of the Wandsbeck community declined. In 1734 there were 123 Jewish families; they had a synagogue in Peterstrasse.

A number of Hebrew books were printed in Wandsbeck between 1688 and 1722. With the arrival in Wandsbeck in 1726 of Israel b. Abraham Halle, the proselyte printer, a serious printing venture began, which owed its inspiration to Moses *Ḥagiz, who was the official censor. Between 1726 and 1733 not fewer than 23 (Bamberger), but perhaps as many as 40, items were issued here, many of them works of Ḥagiz himself.

After the disbandment of the united communities (AHW), the Wandsbeck Jews came under the jurisdiction of the Altona rabbi until 1864, when they elected their own rabbi. In 1905 there were 60 Jewish families in Wandsbeck.

WANNEH, ISAAC BEN ABRAHAM (**Mahariv**; mid-17th century), Yemenite kabbalist. His works and the kabbalistic books which Wanneh copied assisted the propagation of *Kabbalah in *Yemen. His most important enterprise was the arranging of the Yemenite *maḥzor* on the basis of the Kabbalah and its interpretations. With the penetration of the printed *maḥzorim* of the Sephardi rite into Yemen, Wanneh ranked among the faction which was inclined toward the newer version that was inspired by the sanctity of Ereẓ Israel and the mystic conceptions of the kabbalists of *Safed. He enlarged the text of the prayers of Yemenite Jewry with numerous additions of prayers and *piyyutim* which were written by kabbalists, especially those for the Sabbath and festivals. The *maḥzor* which he introduced is a synthesis of the old and the new. His commentary, which is based on the plain and homiletic meanings and the Kabbalah, is the first commentary to have been written to the Yemenite prayer book. He entitled this book Pa'amon Zahav ve-Rimmon (Ms. Sassoon, 337), but it is called *Ḥiddushin* ("Novellae") by the copyists.

His other works include a commentary on *Maimonides' laws of ritual slaughter and the forbidden foods (Bodleian Library, Ms. Heb. f. 8, fol. 187); *Rekhev Elohim*, an explanation on the subjects of the *sefirot* and the Divine chariot; *Tikkun Seder Hashkamat ha-Keri'ah ba-Laylah; Bat Melekh; Mevasser Tov*, which appears to deal with the Messiah and the Redemption, but only its name is known. He is also renowned in popular legend as a miracle worker.

WANNSEE CONFERENCE. The "Wannsee Conference," as it became known after the war, was a high-level meeting that took place on January 20, 1942, to discuss the "Final Solution" of the Jewish Question. The meeting had been called by Reinhard *Heydrich, the head of the Reich Security Main Office (Reichsicherheitshauptamt, or RSHA), which controlled both the Nazi Security Police (Gestapo and Kriminalpolizei) and the SS intelligence service (Sicherheitsdienst, or SD). Heydrich had invited some 14 senior SS officers, Nazi Party officials, and civil servants to meet originally on December 9, 1941, but fallout from the Japanese invasion of Pearl Harbor and a temporary worsening of the situation on the Eastern Front led to postponement. The gathering finally convened on January 20 in a splendid villa on the shores of Berlin's Lake

Wannsee. One of Heydrich's subordinates, Adolf *Eichmann, took minutes, 30 copies of which were evidently distributed among the participants and other interested parties in the following weeks. The only surviving copy, marked No. 16 out of 30, was found in March 1947 among German Foreign Office files by American War Crimes investigators. After that discovery, the minutes, or "Wannsee Protocol," rapidly attained postwar notoriety.

The document's resonance derived above all from the coldly bureaucratic clarity with which it articulated a pan-European plan of genocide. The minutes are summary rather than verbatim, so we cannot be sure of all that was said, but the principal element of the conference was evidently Heydrich's lengthy exposition of past, present, and future policies. Some parts of the minutes were shrouded in euphemism, as when Heydrich discussed what the Protocol refers to as "new possibilities in the East." A table slated 11 million European Jews, listed by country, for inclusion in these "possibilities." Because of such euphemisms, Holocaust deniers among others have claimed that murder was not on the agenda, but elsewhere the Protocol is unequivocal:

> In large, single-sex labor columns, Jews fit to work will work their way eastwards constructing roads. Doubtless the large majority will be eliminated by natural causes. Any final remnant that survives will doubtless consist of the most resistant elements. They will have to be dealt with appropriately, because otherwise, by natural selection, they would form the germ cell of a new Jewish revival.

As far as we can tell from the minutes, other contemporary sources, and postwar testimony, none of the participants, many coming from dignified, well-established ministries that had long predated the Nazi state – the Ministry of the Interior, the Ministry of Justice, the Foreign Ministry, and the Reich Chancellery – protested. For the U.S. investigators after the war, a leading member of whom was Robert Kempner, formerly a high-flying (Jewish) civil servant in the pre-1933 Prussian Justice Ministry, it was almost incredible that such educated and apparently civilized men, eight of them holding doctorates, had concurred with such a plan. As a symbol of the calm and orderly governance of genocide, the Protocol remains without parallel.

For all the minutes' shocking clarity, historians have found it hard to reach agreement over the Wannsee Conference's function and significance. Some copies of the invitations to the meeting survive, and both their wording and Heydrich's opening remarks suggest that the Wannsee gathering was needed to clarify fundamental issues before the full "solution" was inaugurated. For early postwar observers, credence was lent to the idea of Wannsee's centrality in planning the "Final Solution" by wartime statements of the governor general of German-occupied Poland, Hans *Frank, which had already come to light before the Wannsee Protocol itself was found. Around the time the Wannsee meeting had originally been scheduled to take place, Hans Frank had alluded to fundamental discussions on the Jewish question concurrently taking place in Berlin. When coupled with the Protocol's systematic listing of all European Jews slated for "solution," many postwar observers believed it was at the Wannsee Conference that genocide had been decided upon. Yet what made this unlikely was the fact that mass killings of Jews had begun on the territory of the Soviet Union six months *before* the meeting, and that by the time Heydrich and his guests convened in Wannsee preparations for the Belzec camp were well underway, and the Chelmno death camp was murdering at full tilt. Moreover, there was the question of who had the power to make such decisions in Nazi Germany. Neither Heydrich nor his guests were in a position to unleash the Final Solution. Historians tend to believe those decisions lay with Hitler and Himmler.

Historians have therefore long debated how to interpret a meeting that claimed fundamental significance yet came so late in the day. The absence of any record of a clear Fuehrer order to kill Europe's Jews, and the rather ragged process by which killings expanded from shootings in the Soviet Union to a pan-European shooting and gassing program, have led historians to a variety of interpretations of the Holocaust's origins. Thus their conclusions about Wannsee's function have differed in line with their broader understanding of the Final Solution. Those who believe a fundamental command to kill Europe's Jews was given in July 1941 or indeed earlier, for example, see the Wannsee meeting as at best of secondary interest and sometimes as an almost entirely symbolic affair. For those scholars, by contrast, who believe that a decision to murder all European Jews – as opposed to the Soviet killings – crystallized piecemeal over the second half of 1941, the meeting's timing makes more sense as a response to an emerging consensus among Nazi leadership about the way to go forward. Something that may also have affected the timing of the meeting was the negative reaction among some Berlin officials to the rapidly disseminated news that Berlin Jews had been included in mass shootings in the Soviet Union toward the end of November 1941. These shootings in Kovno and Riga in November signaled the first mass executions of German Jews, something that had a different psychological significance than the already familiar content of reports about the murder of Russian and East European Jews. Wannsee may thus have been convened partly to ensure that the Reich's ministries were on board with the program.

What we can say with certainty is that Heydrich had invited many of the agencies with whom he and his RSHA staff had regularly clashed over lines of authority. Indeed, representatives of Hans Frank's civilian authority in the Polish General Government were, along with their SS counterparts, added only as an afterthought after an SS representative from Poland visiting Himmler in Berlin complained about Frank's resistance to the SS mandate. Heydrich's aim was clearly to impose the SS' and specifically his leadership on the Jewish question. To suppress any latent opposition to the deportation of more German Jews, he wanted to obtain agreement on any special categories to be exempted – highly decorated Jewish veterans from World War I and so forth. A substantial element of the

Protocol consists of detailed discussion of how to deal with special and borderline categories. Echoing proposals long articulated by Party radicals, Heydrich sought to overturn most of the special exemptions for the so-called *Mischlinge* (half-Jews and quarter-Jews) and also for Jews in mixed marriages that the Ministry of the Interior and the Reich Chancellery had thus far managed to maintain. This was the one significant area in which the Protocol records any counter-proposals to Heydrich's own suggestions, although in advocating the "compromise" of sterilizing all half-Jews, the Interior Ministry's Wilhelm Stuckart went much further in Heydrich's direction than had previously been the case.

Historians disagree too about the Conference's impact. Some contemporary documents as well as postwar testimony suggest that Reinhard Heydrich was very pleased with the meeting's outcome. It is certainly the case that both the deportation of German Jews, and the killing rate of Polish Jews rapidly accelerated in the spring, though how far this had been facilitated by the meeting itself is unclear. On the matter of the *Mischlinge,* follow-up meetings showed that considerable resistance to their being equated with "full Jews" remained, and in this regard Heydrich did not achieve the breakthrough he had hoped for.

WAQQĀṢA (or **Ruqqasa**), Moroccan family known in *Ceuta and *Fez from the 13th century. The Waqqāṣa family maintained contacts with the first *Merinid princes, particularly with the future sultan Abū-Yaʿqūb Yūsuf, whose private affairs they managed. According to the historian Ibn Khaldūn (14th century), the family encouraged the ruler's desire for wine. The Waqqāṣas' influence grew within the retinue of the prince, and when Abu-Yaʿqūb ascended the throne in 1286, he chose KHALIFA BEN ḤAYUN BEN WAQQĀṢA, known as Khalīfa al-Kabīr (Khalifa the Elder), first as *qahramān al-dār* (palace intendant) and then officially as chamberlain with very extensive powers. From then onward the Waqqāṣas dominated the viziers and other Muslim officials of the government and provided a growing number of intendants and stewards. Khalīfa al-Kabīr, who was very favorably looked upon by the sovereign and had amassed an immense fortune, acted as a dictator with unlimited powers. He was assisted by his brother ABRAHAM, his brother-in-law Moses Sebti, and his cousin KHALĪFA AL-ṢAGHĪR (Khalifa the Younger), who shared their relative's powers in every sphere. The vizier Abdallah ben Abu-Medyen, who was jealous of their position, plotted against them, succeeded in slandering them before the sovereign, and suggested a method of striking out at them. They were suddenly disgraced and arrested near *Tlemcen, which was besieged at the time by the Merinid army. Khalīfa al-Kabīr and all his relatives were executed in 1302, the only exception being Khalīfa al-Ṣaghīr. The latter subsequently entered the service of another sultan, Abu Rabīʿa, and became an all-powerful chamberlain. The kings of Aragon flattered this great personality and sent emissaries to him to assist them in inducing the sultan to join in an alliance against the kingdom of Grenada. Prior to this, Khalīfa al-Ṣaghīr found the opportunity to take vengeance against the vizier Abu-Medyen, who was put to death on the basis of the former's accusations. New intrigues subsequently resulted in the execution of Khalīfa al-Ṣaghīr and his entire retinue in 1309.

WAR AND WARFARE.

TO THE DESTRUCTION OF THE FIRST TEMPLE

The methods of offensive and defensive warfare developed side by side in the Ancient Near East. The development of weapons was dependent upon the supply of raw materials, such as stone, metal, and wood; the technical developments of the period, e.g., the development of a metallurgical industry, the manner in which wood was treated, and that in which different materials, such as wood and metal, were joined; and the need, i.e., whether methods of warfare developed by one country necessitated corresponding developments to counteract them by a rival country.

Weapons

THE EARLY BRONZE AGE (C. 3150–2200 B.C.E.). The beginning of urbanization and the consequent development of more sophisticated armies in the Early Bronze Age also brought about the development of more sophisticated weapons, and the first metal weapons appear at this time. Several types of bows (Heb. קֶשֶׁת, *keshet* (*qeshet*)) are known in this period: the simple double-convex Egyptian bow; the early Mesopotamian bow, shaped like a simple curve; and the composite bow, developed by the Akkadians in the second half of the third millennium. Arrows (Heb. חֵץ, *ḥeẓ*) were hollow reed shafts, their bases usually feathered. Arrowheads were at first made of flint and later of metal. Tubular leather quivers (Heb. אַשְׁפָּה, *ʾashpah*) with circular bases have been found in Egypt. The spear (Heb. רֹמַח, *romaḥ*) was used for hand-to-hand combat (Num. 25:7–8) while the javelin (Heb. חֲנִית, *ḥanit*), a smaller and lighter weapon, was thrown from a distance (I Sam. 18:11). Spearheads found in Palestine (Kefar Monash and Tell el-Hesi) are triangular with a protuberant midrib and

a tang terminating in a hood, which was fitted into the staff. The sword (Heb. חֶרֶב, *ḥerev*, also used for dagger), battle-ax, and mace were the principal weapons used on the battlefield. The technical limitations of the period for the production of long and tough metal blades were the main obstacle in the development of the sword as a basic weapon. At this time, swords were straight, double-edged, and pointed, an average of 10 in. (25 cm.) in length. They were designed mainly for stabbing, as if they were daggers. A second type of sword, the sickle-sword, developed in Mesopotamia in the second half of the third millennium B.C.E., was used for striking. There were two types of axes (Heb. גַּרְזֶן, *garzen*): the cutting ax and the piercing ax, developed as an answer to the metal helmet. Technically, they are divided into two groups according to the manner in which they were attached to the wooden staff: the shaft-holed axes and the tangled axes, both of which were developed in this period. The Sumerian infantry, for which there is the most information on military dress in this period, wore sleeveless leather vests with metal studs, presumably the earliest known coats of mail. Their metal helmets (Heb. קוֹבַע, *kova* (*qova*ʿ)) were slightly pointed, and they carried large rectangular shields (Heb. מָגֵן צִנָּה, *magen ẓinnah*) of wood and leather (?) to which a metal disk was attached.

Chariots (Heb. מֶרְכָּבָה, *merkavah*; רֶכֶב, *rekhev* is mostly collective, "chariotry") were not weapons in themselves but were used as mobile firing bases. They had to fulfill two basic requirements: stability and speed. These contradictory functions followed the development of the chariot, which was first evolved by the Sumerians at the beginning of the third millennium B.C.E. Two-wheeled and four-wheeled chariots are evident at this time, both drawn by two pairs of horses.

THE MIDDLE BRONZE AGE (THE AGE OF THE PATRIARCHS; C. 2200–1550 B.C.E.). The most advanced type of bow, the composite bow, was developed in Akkad in the second half of the third millennium (see above). While the highly technical skill that the bow required is not evident among the nomads who penetrated and conquered Syria and Mesopotamia, the appearance of the composite bow fully developed at the beginning of the Late Bronze Age shows that composite bows were in use in the Middle Bronze Age. Most of the data on bows comes from Egypt. The conservative Egyptians continued to use the simple double-convex bow, as seen in the wall paintings at Beni-Hasan, and the Asiatics in the same painting also carry this bow. Also portrayed is a workshop for the manufacture of bows, and the use of the bow in battle. Quivers did not change much, and the Egyptian ones have the same form as earlier ones. The same type of quiver is carried by one of the Asiatics in the Beni-Hasan wall painting.

Spears and javelins are divided into two types according to the method of attachment to the wooden staff: the tanged head and the socketed head. Tanged javelin heads have been found mainly in the tombs of the nomadic peoples of Middle Bronze Age I. The blade is typically leaf-shaped, with a long tang ending in a hook. With the javelin-heads have been found pointed metal skewers, also with long hooked tangs, which were presumably the butt ends of the javelin (Heb. אַחֲרֵי הַחֲנִית, *ʾaḥarei ha-ḥanit*), used either as weapons (II Sam. 2:23) or to stick the weapon into the ground when not in use (I Sam. 26:7). The socketed javelin head appears at the time of the Hyksos. Both the javelin head and the socket were cast in the same mold, the socket being wrought into shape afterward. The sicklesword, used for striking, was modified in the Middle Bronze Age, when it was made in a mold and the handle was attached to the hilt by a metal rivet. The length of the handle was twice as long as the blade. Several well-preserved examples have been found at Byblos, Shechem, and in Egypt. The dagger-sword was also developed in this period. Those of Middle Bronze Age I, found mostly in tombs, are straight and narrow, with a prominent central spine. The hilt was made together with the blade and had up to ten rivets. From their length of approximately 12 to 15 in. (30 to 40 cm.) it can be assumed that they were used for striking and thrusting. While the sickle-sword was used for striking, broader and shorter daggers for stabbing also appear at this time (Middle Bronze Age II B-C). In accordance with their function, they were strengthened by ribs and a central spine. The hilt was made together with the blade and a crescent-shaped stone or metal piece served as a pommel. While the development of the sword as the main weapon of the infantry lagged because of technical difficulties, the battle-ax that replaced it in hand-to-hand combat made rapid technical advances. The blade of the lugged, tanged ax is narrower and longer than previously, and the cutting edge is shaped like a crescent, and is wider than the rest of the blade. Such axes were used by the Egyptian army as piercing axes until the beginning of the New Kingdom. The triple-tanged ax was used at the beginning of the Middle Kingdom in Egypt mainly as a cutting ax. Demand for a special ax for piercing metal helmets gave rise to several changes in this ax. One of the axes developed to serve this need was the "eye ax," used in the 20th–19th centuries B.C.E. The three tangs of this ax ended in a semicircular shaft, thus forming two "eyes." Such axes were used in the 12th dynasty period and in Palestine, Syria, and Anatolia, and a group of ceremonial gold "eye-axes" have been found at Byblos. In Syria and Palestine in the 19th century, the "eye-ax" was developed into the "duck-bill" ax, which had a longer blade, a narrower cutting edge, and narrower oblong "eyes," which gave the ax its name. The haft was curved to prevent its slipping from the hand. Such axes were found mainly in Syria, and one of the Asiatics in the Beni-Hasan wall painting carries one. Shaft-holed axes, the typical piercing battle-ax, appear in Syria and Palestine in the 18th century B.C.E. and were used throughout Middle Bronze Age II. The forerunner of this ax was used in the Akkadian army. It has a long and very narrow blade, with a shaft no wider than the blade. Technical changes usually consisted of a strengthening of the shaft and a better means of connection between the haft and the blade.

Data from the Middle Bronze Age provide no information on the development of the means for personal protection and the chariot. However, the highly technical advances made

at the beginning of the Late Bronze Age could not have been developed in a vacuum and presumably the personal equipment of this period was similar to that of the succeeding period (see below).

THE LATE BRONZE AGE (1550–1200 B.C.E.). The composite bow, made of wood from birch trees (?), tendons of wild bulls, horns of wild goats, and sinews from the hocks of bulls (Aqhat A, tablet 6, lines 20–23; Pritchard, Texts, 151), was the only type of bow used by archers in this period. The highly technical skill required for its manufacture made it the weapon of the armies of the empires and of the wealthy ruling class of the city-states. The two basic types, triangular and bi-concave, were both used during the same period. The triangular bow is shaped like a shallow isosceles triangle with a wide-angled peak. The arms of the bi-concave bow curve near the ends at the points to which the string is attached. A special bow case was attached to the Egyptian chariot, the bow being the main weapon of Egyptian charioteers. The charioteer had a quiver attached to the right side of the chariot and sometimes additional ones on his shoulders. Quivers, made of leather with a shoulder strap, remained long and cylindrical, and each contained 25 to 30 arrows. Arrowheads were leaf-shaped with a central ridge. To train soldiers in the operation of the bow, on foot or while driving a chariot, special training programs were devised, in which ranges and target shooting were employed (I Sam. 20:20–22). Spears and javelins did not change much from those of the Middle Bronze Age. They were used by the infantry of all armies, especially by the assault phalanx. They were the main weapon of Hittite charioteers, while Egyptian charioteers used the bow, as is clearly seen in the reliefs portraying the battle of Kadesh. Improvements in the melting and casting of metal are evident in the swords and daggers of this period. For the first time, the complete weapon – blade, hilt, and handle – was cast in a single mold for additional strengthening of the weapon. The sickle-sword remained the main type of sword, but the relative sizes of the hilt and handle became 1:1. Daggers were straight and narrow, the handle becoming part of the blade. The handle of both the sickle-sword and the dagger was molded with side flanges, the resulting recess in the center of the handle perhaps being filled by plates. At the end of the period, due to the influence of the Sea Peoples, a straight, long sword took the place of the sickle-sword. The two main types of battle-axes continued in this period. The Egyptians still used the tanged ax-head with extended lugs for better attachment to the wood haft. This ax-head, with a crescent-shaped cutting edge, was used throughout the period with only small changes. The blade was shortened and the cutting edge narrowed. The socketed battle-ax, mainly used by armies of the northern countries, underwent slight changes. The blade was widened and prongs were attached to the socket opposite the blade. This type of ax disappeared at the beginning of the Iron Age.

The development of the piercing battle-ax and the composite bow necessitated a development in personal defense. Body armor was composed of leather or rough cloth, to which oblong scales made of thin leaves of bronze were attached. The size of the scales varied according to their position on the coat. According to the Nuzi tablets, each coat of chain mail contained 400 to 600 scales. Such armor had several disadvantages: weight, cost, and the joints at the sleeves, between the scales, and at the collar, which were the weakest points (I Kings 22:34). Chain mail was used by charioteers and archers, as well as for protection of the chariots and horses. Several outfits have been found in Egypt, Syria, Palestine, and Mesopotamia, and they are represented in the wall reliefs of the Egyptian kings, especially in the chariot reliefs of Thutmose IV and those of Ramses II portraying the battle of Kadesh. Several types of helmets were used by the Late Bronze Age soldiers. The Canaanites wore a round metal helmet that covered the back of the neck but exposed the ears, as represented on the carved ivory plaque from Megiddo. The Asiatics that fought Thutmose IV wore slightly pointed helmets covered by feathers or decorated leather, with a tassel attached to the crown and knotted at the back like a plait. The Hittite helmet as represented on the King's Gate at Boghazköy is pointed with well-defined ear and neck shields and a long tassel. Another type of Hittite helmet is shown in the reliefs of the battle of Kadesh, in which Hittite charioteers wear round helmets covering the neck and exposing the ears. The pharaoh had a special battle crown known as the Blue Crown. The development of armor resulted in a reduction in the size of the shield, which was composed of a wooden frame covered with leather. The Egyptians used a small oblong shield with a round top. A metal disk was later added at the top. The Hittites carried a shield shaped like the number eight. The Canaanite shield was small and rectangular and was later replaced by a small round shield.

The chariot reached a high point of development in this period. It was brought to Egypt by the Hyksos, and the Egyptian chariots of the 16th–15th centuries are imitations of the Canaanite ones. The Egyptian chariots were light, with two wheels, a pole, and a yoke to which two horses were harnessed. The earlier chariots were lighter, with four-spoked wheels and an axle-rod placed near the rear of the body. The frame was constructed of wood and partly covered with leather or light wood. The pole ran underneath the body for additional support, and a double-convex yoke was nailed at the forward end. Chariots of the 14th–13th centuries B.C.E., such as that of Ramses II, were heavier with six-spoked wheels and an axle-tree at the rear of the body. The Egyptian chariot was built to carry a driver and an archer. A bow case and quiver were attached to it. While Canaanite chariots were copied by the Egyptians at the beginning of the period, under Egyptian rule in Canaan, Egyptian chariots were copied by the Canaanites, as seen in the ivory plaque from Megiddo. Hittite chariots, as represented on the reliefs of Ramses II portraying the battle of Kadesh, were heavier, with six-spoked wheels and an axle-tree placed under the middle of the chariot or near the rear. Two horses were harnessed to it, and a driver, a javelin hurler, and

a shield bearer rode in it. While the Egyptians employed their chariots as mobile bases for the archers, the Hittites used them as mobile bases for the infantry, which was armed with javelins and capable of fighting as infantry without the chariots.

The principles of warfare as known today were also employed in the Ancient Near East. The techniques included surprise attack, ambush, concentration of power, methods to ensure maximum mobility, and the interconnected use of different forces of the army. Battles usually were fought on the main roads, such as the battle of Megiddo between Thutmose III and the Syro-Palestine coalition headed by the king of Kadesh. Prior to this battle in the summer of 1468 B.C.E., Thutmose III and his army, which included chariots and infantry, camped at Yehem (Kh. Yama (?)), where the pharaoh received the latest intelligence information concerning the king of Kadesh and his allies, who were reportedly waiting for him near Megiddo. A staff meeting with the Egyptian commanders was held and the three possible approaches to Megiddo were discussed. The commanders preferred to march along the easier routes, the southern one, via Taanach, or the northern one, via Djefti. They argued against the use of the main route via the wadi ʿAruna, because the way becomes narrow and they would be forced to march "one man behind the other, and one horse behind the other." Thutmose III, however, decided to take the more dangerous route on principles of honor and for the sake of achieving a tactical surprise. The entire Egyptian force marched through the pass, in a long procession without encountering any resistance or harassment, regrouped, chose the ground on which the battle would be fought, and won the battle. The Egyptian army, instead of pursuing the fleeing Canaanites, began to loot the camp. Thus the Canaanites managed to take refuge in Megiddo, and it took the pharaoh seven more months of siege to conquer the city and break the rebellion.

Further data concerning the conduct of war are given in the Egyptian description of the battle of Kadesh on the Orontes. In the summer of 1286 Ramses II marched to Syria to check the advance of the Hittites, taking with him four brigades. Before he crossed the Orontes, two *Shosu* (Bedouin) came to his camp and gave him false information – that the Hittites were camping at Aleppo to the north of Kadesh. Acting on this information, Ramses II divided his forces and headed for Kadesh with only two brigades, those of Amon and Re. He arrived at Kadesh with the leading Amon brigade, and while he encamped, his scouts discovered the Hittite army hidden beyond the city of Kadesh. The Hittite chariots then attacked, destroyed the Re brigade while it was marching unawares toward the city, and then struck north, breaking into the fortified camp of the pharaoh. Only the leadership and valor of Ramses and the employment of his reserve brigade saved the Egyptians from total defeat. A mere glimpse of the military tactics of the armies is given in the descriptions of these two battles. However, they reveal that these armies were aware of the advantages of surprise attack, the importance of military intelligence, the deployment of armies marching into battle (with or without a defended flank according to the terrain and the time of day), the division of the army into separate chariot and infantry units, and military discipline.

THE IRON AGE (THE PERIOD OF THE JUDGES AND THE UNITED KINGDOM; 1200–900 B.C.E.). After a period of decline at the beginning of the period, the bow continued in the tradition of the Late Bronze Age. The composite bow was used by all armies. Changes in the shape of quivers and arrows were marginal. Arrowheads lost their protruding spine and some of those found in Palestine and Syria carried inscriptions, such as "the arrow of ʿAbdlabiʾat" (חץ עבדלבאת). The sling, essentially a shepherd's weapon, also appears on the battlefield, as in the confrontation of David and Goliath (I Sam. 17).

The spear and the javelin, along with the sword and the bow, were the basic weapons of the infantry. Deborah lamented that her army was not prepared because it lacked spears: "Was there a shield or spear among forty thousand in Israel?" (Judg. 5:8). The main type was a shaft-holed spearhead with a long blade and a very broad midrib. The finest description of these weapons occurs in that of Goliath's armament (I Sam. 17:5–7): he had a special hurling javelin, with a finger-loop like a "weaver's beam" on the shaft. Under the influence of the Philistines, the sickle-sword changed into a long, straight iron sword used for cutting and thrusting. Since the smiths at that time were all Philistine, the Israelites were not able to produce similar swords (I Sam. 13:19). The new type of sword, described in Judges 3:16, replaced the sickle-sword as the basic weapon.

The Philistines brought with them weapons that had been developed in the Aegean. In the wall reliefs of Ramses III at Medinet Habu, each group of Sea Peoples wore slightly different helmets and armor, perhaps as a tribal distinction. The Philistines wore feather-crested helmets, while the other groups wore horned helmets or helmets with disks and horns. The body was protected by a coat of armor made of numerous metal strips laid at angles to each other, thus forming inverted V's or V's, depending upon the tribe. The lower part of the body was protected by a kilt with two strips of leather (?) forming a cross in the front. The Philistine army fought in groups of four, each soldier armed with either a long sword or a pair of spears, and protected by a round wood and leather shield. In hand-to-hand combat, the duelist, like Goliath, was protected by a man-sized shield carried by a special shield bearer (I Sam. 17:7). The bow and the battle-ax were not included in the Philistine arsenal. While the bow remained a decisive weapon on the battlefield, the long, straight-bladed sword took the place of the ax. It is interesting to compare the dress and weapons of Goliath with those of David. The former had, besides a sword (I Sam. 17:51), "a helmet of brass upon his head, and he was clad with a coat of mail, and the weight of the coat was 5,000 shekels of brass. And he had greaves of brass upon his legs, and a javelin of brass between his shoulders. And the shaft of his spear was like a weaver's bow; and his spear's head weighed six hundred shekels of iron; and his

shield bearer went before him" (I Sam. 17:5–7). David was clad in Saul's "apparel, and he [Saul] put a helmet of brass upon his head, and he clad him with a coat of mail. And David girded his sword upon his apparel" (I Sam. 17:38–39).

While the Egyptian army continued to use the same type of chariot as was used in the Late Bronze Age, the Philistines employed a heavy chariot with six-spoked wheels and a crew of three, armed with hurling javelins like the Hittite charioteers. The Israelite tribes, when settling in the hill country, "drove out the inhabitants of the hill country, for he [Judah] was unable to drive out the inhabitants of the valley, because they had chariots of iron" (Judg. 1:19). The tribal army of Deborah and Barak was victorious over the chariots of Sisera in a battle in the Jezreel Valley (Judg. 4:13–15). David and Solomon were the first to form chariot squadrons in the Israelite army, and Solomon built special cities for chariots (I Kings 10:26; II Chron. 1:14). At the same time, Solomon was the main trader in horses and chariots between Egypt and the Hittites (I Kings 10:28–29).

The technique of night attack can be seen in the description of the battle between Gideon and the Midianites (Judg. 6–8), the latter being mounted on camels. The army of Gideon encamped "beside En-Harod; and the camp of Midian was on the north side of them, by Gibeath-Moreh, in the valley." After the Israelites had assembled, Gideon chose only 300 of them, for a surprise night attack requires only a small number of men. Before the attack, Gideon reconnoitered outside the Midian camp. His plan of attack was simple, with the 300 men divided into three companies under the leadership of Gideon, an agreed signal, and the battle cry of "For the Lord and for Gideon." After a timetable for the attack was set, the Israelites attacked the enemy camp during the changing of the guard. The attack was executed according to plan and the enemy was put to flight. Gideon asked the Ephraimites to block the retreat of the Midianites across the Jordan, while he and his army pursued the fleeing enemy until it was destroyed and the Midianite kings captured.

THE IRON AGE: THE KINGDOMS OF ISRAEL AND JUDAH (900–586 B.C.E.). The main sources of this period for information on the military organization are the wall reliefs found in the palaces of the Assyrian kings. The prophet Isaiah describes the character and great strength of the Assyrian army (5:26–28), which was imitated by the other armies of the ancient Near East. The army was divided into three forces – infantry, cavalry, and chariots – as described in the Bible: "And muster an army like the army that you have lost, horse for horse, and chariot for chariot" (I Kings 20:25); "For there was not left to Jehoahaz of the people save fifty horsemen and ten chariots and 10,000 footmen" (II Kings 13:7). Besides his special weapons, each soldier had a basic armament of a sword, a coat of mail, and a helmet. The design of this basic armament was slightly changed from the reign of one king to the other. The iron sword was long and straight with a double edge, and the handle was constructed to fit to the fingers. It was carried in a sheath shaped like the sword, and a floral decoration was occasionally added near the opening and the base. The sheath was hooked to the belt on the left side and held in place by a leather strap that circled the left shoulder. The coat of armor, shaped like a sack with an opening for the head and short sleeves, was full-length in the ninth century B.C.E. A special scarf of scales used by archers connected the helmet to the armor. In the eighth and seventh centuries the chain mail dress was shortened into a shirt. The shape of metal helmets varied from conical and pointed to feather-crested, according to the troops wearing them and the reigning king.

The infantry (Heb. *ragli, ish ragli*; I Kings 20:29) was divided into four groups: archers (Heb. *dorekhei qeshet*; Jer. 50:14; *nosheqei qeshet*; I Chron. 12:2), slingers (Heb. *kalla'im*; II Kings 3:25), spearmen (Heb. *ʿorekhei ẓinnah wa-romaḥ;* I Chron. 12:9), and auxiliaries. While the spearmen, the assault troops of the army, defended themselves with shields which were rectangular, round, or curved with a round top, depending upon the period, the archers and the slingers were without shields, and special shield bearers were attached to their companies. The infantry took part in battles in the open field and in assaults on fortified cities with no change in their equipment. The cavalry (Heb. *parashim*) only participated in open field engagements and were equipped with either bows or spears. While mounted spearmen defended themselves with round shields, mounted archers, who needed the use of both hands in combat, were protected by mounted shield bearers. The cavalry operated either as independent units or as a mobile defense for the chariots. Chariots (Heb. *rekhev, ḥeil rekhev*) as the main assault force underwent many changes in Assyrian military history. The earliest known ones, those of Ashurnaṣirpal II (883–859 B.C.E.), were heavier than those known from the preceding period. Each had six-spoked wheels of medium size, an axle-rod at the rear of the body, and a heavy pole. Two horses were harnessed to it and a third, riding as an outrigger, was held in reserve. The crew consisted of a driver, who also served as a spearman, and an archer. A shield bearer was added to the king's chariot. The chariots of Tiglath-Pileser III (745–727 B.C.E.) are heavier still, and the wheels are larger with eight spokes. A driver, archer, and shield bearer rode in the chariot, the latter protecting the others with two round shields. The number of horses and, correspondingly, of yokes was increased to four. The tendency of the kings following Tiglath-Pileser III was to build heavier chariots. In the time of Ashurbanipal (668–630 B.C.E.), the crew numbered four – a driver, an archer, and two shield bearers.

A complicated description of the battle between Ahab and Ben-Hadad of Aram is given in I Kings 20:1–23. This battle took place in the Samarian Hills, and the Arameans blamed their defeat on the fact that the Israelite God "is a God of the hills; therefore they were stronger than we; but let us fight against them in the plain, and surely we shall be stronger than they." Subsequently, a second battle was fought in the plain of Aphek in the Golan (I Kings 20:23–30). The two armies faced each other for seven days before finally joining battle, which the Arameans again lost.

Fortifications

THE EARLY BRONZE AGE (C. 3150–2200 B.C.E.). The widespread urbanization which had its beginnings in this period created a need for a developed civic organization, a central administration, and the means for defense of the city. Armies were created, and military engineers designed city walls and inner citadels, fortified city gates and bastions. Posterns were built into the city wall for use in counterattack. The achievements of these engineers have been preserved in the monuments and remains uncovered by archaeologists. The earliest plans of fortified cities are preserved on the ceremonial slate palettes of the late pre-Dynastic period in Egypt (late 4th millennium). These show square or rectangular fortified cities with wide walls, square towers, and a parapet around the top for protection of the defenders. Three fortified enclosures dating to the Second Dynasty in Egypt were found at Hierakonpolis and Abydos. Incomplete fortifications that have been uncovered in Palestine usually have very thick walls, 13–26 ft. (4–8 m.) thick, built of the materials available in the region, i.e., of either stone or brick or a combination of the two, the stone forming the foundation and the brick the superstructure. Such walls were found at Megiddo, Ai, Bet-Yeraḥ, and Jericho. They were fortified with semicircular towers, as at Ai, Arad, and Jericho (and as represented in a wall relief from Deshashah in Egypt, detailing the Egyptian assault of a Syrian city), and/or with rectangular towers as at Tell el-Far'ah (biblical Tirzah), Jericho, and Ai. City gates are of two types. At Tell el-Far'ah and Jericho passageways flanked by two protruding towers were found. The second type, as found at Khirbet et-Tabaik (Rosh ha-Nikrah), features an indirect approach between the inner and outer entrances, thus forcing the attacker to turn in the middle of the attack. The forerunners of certain methods of fortification which occur in a more advanced form in the Middle Bronze Age were found in this period. Thus a primitive glacis was uncovered at Gezer, Tel ʿAierani, and Taanach, and a small fosse (moat) at Jericho.

Three methods were employed to conquer a fortified city: direct approach, i.e., penetrating the wall by breaching, climbing it, or digging a passage underneath it; siege; indirect approach, i.e., penetration by ruse. Only when the first method was employed does material evidence remain; for evidence of the other two, written documents must be used. Direct approach was employed to either penetrate the wall in an undefended spot or to attack the gate, the most vulnerable point in the wall. In such an attack, ladders were used for scaling the wall, or axes, spears, and later the battering ram were used for breaching it, all under the covering fire of archers. The weapons of this period were primitive, but even the large walls of the cities crumbled in front of them, as attested by the many layers of destruction found in excavated sites. Hoes and battering poles for breaching the city wall, and mobile and non-mobile ladders for scaling them were widely used by the Egyptian army.

THE MIDDLE BRONZE AGE (2200–1550 B.C.E.). This period is divided into the pre-Hyksos period (Middle Bronze IIA in Palestine, the 12th Dynasty in Egypt; c. 2000–1750 B.C.E.) and the Hyksos period (Middle Bronze IIB–C in Palestine, the 13th–17th Dynasties in Egypt; cf. 1750–1550 B.C.E.). An excellent example of Egyptian fortifications of the first period was excavated at Buhen in northern Nubia. The citadel measures approximately 170 × 180 m. and has four lines of defense: an inner wall, outer wall, moat, and fortified gate. The brick inner wall is approximately 16½ ft. (5 m.) thick and approximately 33 ft. (c. 10 m.) high. At intervals of 16½ ft. (5 m.) square bastions protrude from the face of the wall. Battlements and balconies crown the top of the wall. The outer wall, lower than the inner one in the typical Egyptian style of this and the preceding period, has a series of semicircular bastions at intervals of 33½ ft. (10 m.). On top of the wall and the bastions are two rows of embrasures, one above the other. A dry moat was excavated at the foot of the outer wall, with a counterscarp on the opposite side. The gate complex consisted of two rectangular towers, which protruded beyond the counterscarp and flanked a narrow passageway leading to a two-doored gate. Remains of a wooden drawbridge were found over the moat. While the ground outside the wall was covered by the archers from at least three directions, the weakest point of the defenses was the gate, and burnt layers at this spot show that the citadel was breached here. A citadel represented on a wall painting at Beni-Hasan in Egypt has a wall sloping outwards at the bottom and topped by balconies and two gates with battlements. A fortified gate excavated at Megiddo was reached by a stairway protected by a wall. The outer and inner entrances are on an indirect axis, which, together with the nearby gate tower, provided an ample means of defense against attack. The appearance of the chariot and a developed battering ram changed the nature of fortifications. The gates could no longer be built with an indirect approach or with a stepped passageway, as chariots could not maneuver under such conditions. Means to protect the wall and its base against the battering ram had to be devised. The walls were built upon large ramparts of terre-pisée, as found at sites as far afield as Syria and Egypt, and at *Sharuhen (Tell al-Fāriʿa), Tell el-ʾAggul (Beth-Egliam), Lachish, Hazor, Tel Dan, and Jericho in Palestine. The outer face of the rampart was made into a glacis, which was constructed of several layers of terre-pisée, in a sandwich pattern, and was faced with bricks, stones, or hardened clay. A fosse was excavated at the foot of the glacis and a counterscarp built on the outer edge. The gates were built against the inner face of the city wall. Three pairs of pilasters flanked the passageway, creating two guardrooms, while also serving as piers for the upper stories of the gate tower. The gate was protected by two multistoried rectangular towers, usually not protruding from the outer face of the wall. This type of gate has been found in almost every excavated site of this period, such as Hazor, Gezer, Beth-Shemesh, and Shechem in Palestine, and Alalakh and Qatna in Syria.

The main development in offensive weapons was the battering ram (Heb. כַּר). Primitive ones are represented in the relief from Deshasheh, but the first representation of one

whose users are covered against arrows from the wall by a hut-shaped enclosure appears in the Beni-Hasan wall painting. The battering ram is also mentioned in the Mari letters and the Boghazkőy archives, which deal with problems of use, special methods of construction, and mobility.

THE LATE BRONZE AGE (1550–1200 B.C.E.). The cities of this period occupied the same sites as those of the Middle Bronze Age and where the defenses were still standing, they were reused, with generally only small changes being made. The main feature which emerges in this period is a citadel built inside the city on the highest point. A palace and temple were built inside the citadel. Elevations of Canaanite cities are shown in the wall reliefs of the 19th Dynasty, whose kings, Seti I and Ramses II, conquered many of them. The cities are stereotyped, being built on a mound with two main features of defense – an outer city wall and an inner citadel, both with semicircular battlements and rectangular balconies. The cities had one or two rectangular gates of the same type as the Middle Bronze II gates, at Megiddo, Hazor, and Gezer. Archaeological remains that exhibit the new developments in military engineering are scarce. One of them is the eastern city gate at Shechem, which is constructed of two pairs of pilasters, with a guardroom between them. The pilasters served as piers for the upper stories of the gate tower. Remains of citadels and fortified temples, called *migdal* in the Bible (Judg. 9:46–49, 50–52), were found at Shechem, Megiddo, and Beth-Shean. The rectangular temples at Megiddo and Shechem were protected by thick walls, with a pair of square towers flanking the entrance. According to biblical descriptions and archaeological evidence, they were multistoried. The fortifications of Boghazkőy, the Hittite capital, exhibit several new features in military architecture. The walls were constructed as casemates, with a low outer wall in front of them. Several underground posterns were found underneath the walls. The gates, known as the King's Gate and the Lion's Gate, were formed by two pairs of pilasters with a guardroom between them and a passageway flanked by two multistoried towers.

Most information on war of offense in this period comes from Egyptian wall reliefs and documents and from the Bible. The Egyptians employed all the three possible methods of offense: direct and indirect approach and siege. While assaulting a city, the shock troops, protected by shields, used scaling ladders to climb the wall or attempted to breach the city gates with battle-axes. No battering ram appears in Egyptian reliefs. When direct approach was impossible or too dangerous, the Egyptians laid siege to the city, which sometimes lasted up to three years, as that of ʿAhmose (Amasis), the founder of the 18th Dynasty, against Sharuhen in Southern Palestine. Ruse was also employed in the conquest of cities. One of the most well-known is the Trojan horse, which ended the siege of Troy. Joshua employed ruses at least twice. That used against Jericho (Josh. 6) is still obscure. A clearer stratagem is that used against Ai (Josh. 8:3–8), in which Joshua and the Israelites drew the inhabitants out of the city by feigning retreat. Burnt levels, found at Beth-El, Lachish, Tell Beit Mibsim, and Hazor, indicate the destruction caused by the Israelites in their conquest of the land.

THE IRON AGE (1200–900 B.C.E.). Excavation has revealed remains of the fortifications of the kings of the United Monarchy, Saul, David, and Solomon. Geba, or Gibeath-Shaul (present-day Tell el-Ful) was the capital of Saul's kingdom. The citadel, dating from the second half of the 11th century, was built with a casemate wall and a corner tower with three chambers. Architectural remains from the time of David are scant. Although remains of fortifications have been found in Jerusalem, it is difficult to attribute any of them to David with certainty. From the Bible it is known that he fortified the city after the expulsion of the Jebusites (II Sam. 5:9). Solomon continued to build in Jerusalem. Besides the erection of the Temple and the palace, he completed the Millo (the fill between the city of David and the Temple Mount) and fortified the city (I Kings 11:27). Remains of two towers, a huge stone glacis, and a gate found in Jerusalem are attributed to the time of David and Solomon. Solomon built extensively throughout the country as well (I Kings 9:15). Excavations at the three cities, Hazor, Megiddo, and Gezer, have shown that all were built according to the same general plan, with almost identical gates. The cities were fortified by casemate walls, a type of construction introduced into Palestine possibly by the Hittites via Syria. The casemates in such walls were used as garrisons and for storage. The gates of these cities were designed with an entrance flanked by two square towers, which led to a roofed passageway with three guardrooms on either side. The walls of the guardroom served as piers for support of the upper story.

The destruction of many cities in the devastating campaign of Pharaoh Shishak in approximately 920 B.C.E. and the appearance of the mighty war machines of the Assyrian army changed the methods of fortification under the divided monarchy. Each kingdom built a peripheral defense (II Chron. 11:6–12). Besides these cities, a chain of citadels was built along the main roads and trade routes and on the frontiers (II Chron. 26:9–10). Casemate walls remained only in nonstrategic places, such as Tell Beit Mirsim in southwest Judah. This was the main feature of citadels in the wilderness, i.e., the Negeb. A fine example of such citadels is that at Kadesh-Barnea, which is rectangular, 100 × 166½ ft. (30 × 50 m.), and fortified by a casemate wall, with square towers at the corners and in the middle of each side. Similar citadels have been found in the Negeb, such as at Arad and Khirbet Uzzah. Inner citadels and fortified palaces, as the palace of Ahab in Samaria and a palace excavated at Ramat Raḥel (Beth-Cherem) near Jerusalem, were also fortified by casemate walls. Defense of the main cities changed with the reappearance of the battering ram, for which there is no extant evidence in the Late Bronze Age and the time of the United Monarchy. The hollow casemate wall was unable to withstand the breaching power of this weapon. The space between the wall was hastily filled with stones, and later a new solid stone wall was built. The outer

face of the wall was constructed with salients and recesses. Secondary defenses took the form of a low outer wall, towers and bastions in the weak spots, and a stone glacis. Battlements and balconies were built on top of the walls. A wooden frame to hold the shields of the defenders was added to the battlement to protect the upper body of the warrior, and a screen of shields was thus formed. This structure is clearly seen in the reliefs portraying Sennacherib's assault against Lachish and is described in the Bible (II Chron. 26:15). Gates also changed, usually following the design of gates in Syria and Assyria. The depth of the entrance was lessened, and a gate with two chambers on either side and two protruding towers was constructed. This style was typical of the ninth century, while a gate with a single chamber on either side and two towers was typical of the eighth century. Gates with a broken approach to the main entrance are also known from this period, especially at Samaria, Lachish, Tell el-Far'ah, and Tell-Muqana' (Ekron). The preparations taken by King Hezekiah of Judah in the face of the coming siege of Jerusalem by Sennacherib are described in II Chronicles 32:3–5 and included the construction of new waterworks, known as the Siloam tunnel, to bring water directly into the city (II Kings 20:20; II Chron. 32:30).

The development of the battering ram in the time of the Judges and the United Monarchy is not known, and the casemate walls constructed at this time were not built to withstand the attack of battering rams. It must be assumed that attacks were carried out along traditional lines, i.e., by means of siege, scaling the walls, and indirect approach, especially surprise attacks. When Shechem rebelled against Abimelech the son of Gideon, who had usurped the kingship there, he divided his troops into three groups and by means of ambush and surprise, stormed the outer city walls (Judg. 9:43–45). After the conquest of the outer city walls, only the citadel remained, which Abimelech destroyed by fire (Judg. 9:48–49). David's campaigns against fortified cities consist of the conquest of Jerusalem by an obscure method (II Sam. 5; I Chron. 11) and the classic battle of Rabbath-Ammon, which can be divided into five stages. The first phase was a battle in the open field, with the purpose of destroying the armies of the Ammonites and their allies, thus preventing a counterattack on the exposed flanks and rear of the Israelites when it later laid siege to the city (II Sam. 10). The second phase was the besieging of the city (*ibid.* 11:1). In the third stage the Israelites tried to breach the walls while the Ammonites counterattacked (*ibid.* 11:23–25). The conquest of the "royal city" and the "city of waters" (*ibid.* 12:26–28) constituted the fourth stage, and the conquest of the inner citadel, the last (*ibid.* 12:29).

The Assyrians were the dominant military power in the Near East at the time of the divided kingdom. Their military might was organized into units, each with a defined purpose, and it was under them that the art of siege was developed. From the reign of Ashurnaṣirpal II (883–859 B.C.E.) onward, the battering ram reappeared as a decisive siege machine. Both mobile and stationary battering rams were used by the Assyrian army at this time. The mobile type had six wheels and a body built on a wooden frame, with the sides covered by rectangular shields. The front was protected by sheets, probably of metal, behind which a turret rose. Inside the turret hung a rope to which the battering ram was attached like a pendulum. The top of the turret was protected by a metal (?) dome with embrasures. The metal cutting head of the ram was shaped like an ax-head, which could be inserted with force between the bricks or stones of the wall and, by levering on all sides, could remove them from the wall, causing collapse. The battering rams were protected by archers mounted on mobile towers. Ashurnasirpal's methods of siege are portrayed in the wall reliefs in his palace at Nimrud. There, the covering fire of archers protects the assault troops, which use four methods of penetration: battering rams breach the main wall of the city; sappers dig underground tunnels; armored sappers demolish the outer wall with pikes and spears; and spearmen scale the wall with scaling ladders. In the reign of Shalmaneser III (858–824 B.C.E.), two new mobile battering rams appear, as seen in the reliefs of the bronze gates at Balawat. These rams have four or six wheels, a turret, and a fixed battering head, shaped like a boar's snout. This type of battering ram was presumably used mainly against city gates. Those of Tiglath-Pileser III (745–727 B.C.E.) and Sargon (721–705 B.C.E.) were light and very maneuverable. They have four wheels and the wooden frame was covered with metal-studded hides. The turret was lower and the cutting edge of the battering ram was shaped like a spearhead. These machines were often operated in pairs and were placed on special man-made ramparts, on which they were driven toward the wall. Several improvements were made in the battering rams of Sennacherib (704–681 B.C.E.), which have a longer pole and higher turret. One member of the crew was a fireman, who poured water onto the front of the battering ram with a long spoon to extinguish the torches thrown by the defenders. The siege of Jerusalem by the Babylonians is summarized by the prophet Ezekiel (21:27): "In his [the king of Babylon] right hand is the lot of Jerusalem, to set battering rams, to open the mouth for the slaughter, to lift up the voice with shouting, to set battering rams against the gates, to cast up mounds [i.e., for the battering rams], to build forts."

SECOND TEMPLE TO 614

In the period of the Second Temple, Judea was incorporated in the Persian Empire and had no independent army. Jews served as mercenaries of the Persian king at *Elephantine (Yeb) in Upper Egypt; they were organized in companies (called a *degel* – "flag") and had their own temple. In Judea proper, the Persian governor (who was normally a Jew) had a bodyguard; Nehemiah came with Persian troops, but Ezra refused such protection. In case of need, the governor (as in the case of Nehemiah) could mobilize the entire able-bodied population. During the building of the wall of Jerusalem, the people were armed with swords, spears, and bows and had coats of mail (Neh. 4:10). A trumpeter was kept ready for signaling.

In the Hellenistic period Jews served in the Ptolemaic armies; they were holders of military cleruchies; they were classified as "Persians of the Epigone," one rank below the Macedonians and Greeks and above the native Egyptians. Two of them, *Ananias and Helkias, were generals of Cleopatra III and their standing influenced the policy of the Egyptian government in relation to Alexander Yannai. In Perea, east of the Jordan, the Jewish family of the *Tobiads had its own cleruchs, as known from the Zeno papyri. The militant nature of Jason, the former high priest, who was allied with the Tobiads, shows their readiness to fight. During the conquest of Jerusalem by Antiochus III, the Jews actively supported the Seleucid attack on the Egyptian garrison in the Temple citadel. The Seleucid king settled Jewish cleruchs in Asia Minor as reliable and good soldiers. However, until the Hasmonean revolt the Jews as a nation fought no wars.

Driven by necessity the rebels under Judah Maccabee gradually acquired the necessary military skills. It is not clear whether the strategic and tactical genius shown by the Jewish leader was the result of his service with some Hellenistic army or of a natural ability. In the beginning the Jewish rebels were badly armed; Judah himself had to pick up and use the sword of his first defeated enemy, Apollonius the governor of Samaria, after the battle. The Jewish forces were properly organized only at Mizpeh; on the eve of the battle of Emmaus Judah used the biblical grouping into "thousands and hundreds and fifties and tens" (I Macc. 3:55) and appointed the "scribes of the people" (*grammateis tou laou*) as a kind of military police. The wars of Judah Maccabee were distinguished by his aptitude for strategic thinking, as witnessed in the blockade of Jerusalem and his swift movements on the inner line of communications which headed off successive Seleucid attempts (four in all) to break through to the besieged city. In his tactics Judah knew how to use the ground; he selected for his attacks the passes leading up to Judea (Lebonah?, Beth-Horon, and Emmaus) and was a master of surprise in the field. His campaign against Nicanor was marked by an attack from an unexpected direction and a massive pursuit which led to the disintegration of the enemy forces. Judah's last battle at Elasa was fought against overwhelming forces and even then he achieved a partial success.

Jonathan, the second leader of the revolt, was for some time forced to carry on an "underground" guerrilla warfare from his stronghold in the Judean Desert. His strength lay in mobility and surprise attacks; the operation against the people of Medeba and his subsequent escape from the army of Bacchides, which had cornered him between the Jordan and the Dead Sea, show a high degree of tactical skill. When besieged in Beth-Bassi Jonathan wisely refused to play the enemy's game and concentrated on harassing him from outside the siege lines. Like his brother Judah, Jonathan had the advantage of a superior intelligence, the fighting being in his own country and among his people. Once installed in Jerusalem as governor and high priest, Jonathan was de facto independent and was able to train a regular force. He fortified Jerusalem (one of his towers can be still seen on the Ophel hill). During his time the Jews attained military superiority in the south of the disintegrating Seleucid empire and moved at will all over Coele-Syria. Jonathan's crowning achievement was the battle near Jamnia (Jabneh) against the forces of the Syrian general, Apollonius. Hitherto, the Jews had been successful mainly on hilly ground, where the Seleucid phalanx could not properly operate. Apollonius invited Jonathan to fight in the plain and prepared an ambush; his cavalry attacked the Jewish forces from the rear, while the infantry held them in front. Under these unfavorable conditions the Hasmonean army showed its mettle; while the enemy "cast their darts at the people from morning till evening," the Jewish ranks remained unbroken till the enemy's cavalry wearied. It was now evident that the Hasmonean army could fight the Greeks under any conditions. In the time of Simeon, the last of the Hasmonean brothers, the Jews developed their skill in siege warfare of the Hellenistic type. They constructed a siege tower (*helepolis*) which was instrumental in the taking of Gezer. Such knowledge must have been most useful in the wars of Simeon's successors, John Hyrcanus (135–104 B.C.E.), Judah Aristobulus I (103 B.C.E.), and Alexander Yannai (103–76 B.C.E), as their conquests were mainly of fortified places. Hyrcanus' sons besieged Samaria for a whole year; the evidence of the destruction wrought by them is still visible. Alexander Yannai, who gradually obtained control of almost all of Ereẓ Israel, was singularly unlucky in the open field; he lost his battles against Ptolemy Lathurus, king of Cyprus, at Zaphon, east of the Jordan; against the Seleucids, Antiochus XII and Demetrius III (at the Yarkon and at Shechem); and against the Nabatean Obodas at Gedor. Nevertheless, by dint of perseverance and skill in siege warfare, he took Gaza, the northern coast including the Carmel, and most of the lands east of the Jordan, turning the Dead Sea into an inland Jewish lake. One ominous development in his time was the employment of foreign mercenaries, Pisidians, Cilicians, and others, in the Hasmonean service. They stood by the king in his war with the Pharisees when the latter allied with a Seleucid invader, but this use of mercenaries was in itself a sign of the increasing Hellenization of Jewish military life and the loss of the moral qualities which had hitherto distinguished it. Under Salome Alexandra, the armed forces were neglected by the ruling Pharisees, and this nearly led to a revolt under her second son *Aristobulus. The civil war which followed the death of the queen and the Roman intervention diminished the fighting capacity of the Judean army, although it still gave a good account of itself with Antipater, Herod's father, when coming to the aid of Julius Caesar in Egypt.

Herod's superior military capacity defeated his Hasmonean rival Mattathias Antigonus. Once king, Herod was able to raise some Jewish and Idumean troops, with which he defeated the Nabatean Arabs. He settled Idumeans and Babylonian Jews to police Batanea and Trachonitis and thus secured these lands for peaceful colonization. He also raised cohorts from his cities Caesarea and Sebaste. His bodyguard was com-

posed of non-Jews, with an addition of Thracian mercenaries and of German and Gaulish soldiers, the gift of Augustus. Herod also had a navy with which he came to help the Romans in the Black Sea.

Augustus had released the Jews from the obligation to serve as auxiliaries in the Roman armies, and with the decline of the Herodian house their troops also diminished, although even Agrippa II still maintained some cavalry. What fighting was done until the first Roman War was by Zealot guerrillas, who were as a rule suppressed without much difficulty by the local levies of the procurators. Only in specially difficult situations, such as at the annexation of Judea and the first census, did the legate of Syria intervene with his legions.

The first war against Rome (66–73 C.E.) was begun by the Zealots, but the command soon passed to the aristocratic circles who planned the creation of an army able to meet the Romans in the field. At the beginning of the struggle Judea and Galilee were divided into military districts, with Josephus being given the command of Galilee. Their unexpected victory over Cestius Gallus, the legate of Syria, on his retreat from Jerusalem by the pass of Beth-Horon, provided the insurgents with much needed arms and siege engines. Their efforts to attack Ascalon failed, however. In Galilee, the most exposed part of the territory in revolt, Josephus made an effort to train a field army, only to see it dispersed at the first encounter with Vespasian. In his despair he fled to the fortress of Jotapata, which fell after a siege of 47 days, although he displayed most of the ruses of siege warfare. The failures in Galilee exposed the weakness of the tactical conception of the Jewish leadership; unable to hold the field they preferred to lock themselves up in strongholds, which were bound to fall when attacked systematically by the Romans. The Jewish war effort dissolved into a series of siege operations against Gamala, then Jerusalem, and finally Masada. The Zealot leaders John of Giscala and Simeon bar Giora were unable to make headway until it was much too late. The Jews fought with great bravery, which is attested also by Josephus, who saw the siege of Jerusalem from the Roman side. They turned the Roman siege machines against their makers, succeeded in burning down the Roman apparatus and in undermining and destroying the siege dams. In the end, however, the methodical warfare of the Romans, coupled with starvation, prevailed in Jerusalem; Masada, which was provided with food and water, succumbed to a high siege dam and tower. The scanty evidence of the weapons used in defending these places show that the Jews used the standard equipment of the Roman army and its auxiliaries. There were even some naval combats in this war, near Jaffa and on the Sea of Galilee, probably in the style of the naval battle from Yannai's days depicted on a wall of Jason's Tomb, Jerusalem.

The second war with Rome (or the war of *Bar Kokhba, 132–135) was preceded by a Jewish rising in Cyrenaica and Egypt against Trajan. Its leader, Lucuas or Andreas, penetrated into Egypt from Cyrenaica; although Alexandria was saved at the beginning of the revolt (115), it lasted until 117 when it was crushed by a special Roman army commanded by Marcus Turbo. The fight was waged with great ferocity. At the same time the Jews of Mesopotamia defended their cities against Trajan, and although they could not stop him, they upset his timetable.

The war of Bar Kokhba was the last great armed struggle of the Jews as a nation until modern times. Its history shows that the Jews had learned well the lessons of the earlier war. The war was carefully prepared; the Jews tendered offers to supply the Roman army with weapons and deliberately delivered them sub-standard; the arms were rejected and went to arm the insurgents. Bar Kokhba avoided sieges; positions in the field were prepared, probably connected with each other, in order to hold up the Roman advance. The command of the Jewish army remained from beginning to end in the hands of Simeon bar Kosiba (Bar Kokhba). When the war broke out, the Jews soon seized Jerusalem and the whole of Judea, possibly even parts of Samaria; they were joined by gentiles who rebelled against Roman society. In the course of the war one Roman legion, the XXII Deioteriana, was probably destroyed completely; it disappears from the Roman army lists. In the end the Romans had to concentrate an army of several legions (including parts of legions from Moesia). Bar Kokhba's army was finally besieged in Bethar, but some of the insurgents fled to the caves above the Dead Sea. Their archives, discovered in 1960–61, throw much light on the military, civil, and religious organization of Bar Kokhba's army and administration. While he took care of sequestrating food and arresting malcontents, Bar Kokhba also ordered the collection of the "four species" for making *lulavim*. The Bar Kokhba war marks the last great military effort of the Jewish nation in Ereẓ Israel. It was followed by two minor occasions on which the Jews took up arms against their oppressors. One was the revolt which broke out at Sepphoris in 351 against Gallus Caesar, the tyrannical emperor Constantinus II. The rebels, led by a certain Patricius, seized the armory and were able for some months to maintain a semblance of government in Galilee (Sepphoris and Tiberias) and Lydda. The revolt was suppressed by the Roman general Ursicinus, who defeated the Jews near Acre and advanced into Galilee.

In 614, at the approach of the Persian armies, the Jews rose again. Their force numbered some 20,000 men from the mountains of Galilee and around Jerusalem. They succeeded this time in taking Acre, but failed before Tyre. Nevertheless they were useful allies in the siege of Jerusalem by the Persians, which ended with the capture of the city and the establishment of a short-lived government there. The Jewish leader in this war is known to us only under the pseudonym "Nehemiah son of Ḥushi'el." The Persians soon dissolved their alliance with the Jews, and this last military effort came to nought.

WARBURG, family of German and U.S. Jews.

PAUL MORITZ WARBURG (1868–1932) was a banker and philanthropist. Born in Hamburg, Germany, he became a partner in 1895 in his family's banking house, M.M. Warburg and Co. In the same year he married Nina Loeb, daughter of Solomon Loeb of Kuhn, Loeb and Co. of New York. In 1902 Warburg moved to the United States and became a member of the Kuhn, Loeb firm. Warburg's contribution to the U.S. banking system was considerable. One of the chief architects of the legislation establishing the Federal Reserve System in 1913, he served as a member of the Federal Reserve Board (1914–16) and as its vice governor (1917–18). Although he declined reappointment and returned to private banking, Warburg maintained an active interest in the board by serving as a member (1921–23) and president (1924–26) of its advisory council. He also wrote several books expounding his belief in the necessity for a strong, politically independent central banking system in the United States. Active in philanthropic and civic affairs, Warburg was a leading figure in the work of the *American Jewish Joint Distribution Committee, the Federation for the Support of Jewish Philanthropic Societies in New York City, the American Society for Jewish Farm Settlement in Russia, the Juilliard School of Music, the National Child Labor Committee, Tuskegee Institute, and many others. He wrote *Federal Reserve System – Its Origin and Growth* (1930).

Paul Warburg's son, JAMES PAUL (1896–1969), was also a banker. He was born in Hamburg, Germany, and was taken to the United States in 1902. After service with the Navy Flying Corps in World War I, Warburg pursued a career in finance, serving as president of the International Acceptance Bank and director of the Bank of the Manhattan Company. He was also one of the major backers of the highly successful Polaroid Corporation. A liberal Democrat, Warburg was a member of President Franklin D. Roosevelt's "brain trust" during the early years of the New Deal. At the same time, he entered a new phase of his career as a prolific writer, first of poetry and technical works on textiles, later of popular volumes on economics, public affairs, and foreign policy. In the late 1930s, Warburg urged U.S. intervention against Nazi Germany and during World War II served as deputy director of the Office of War Information. Disenchanted with the Cold War atmosphere of the 1950s, Warburg consistently championed the cause of peaceful coexistence of the major powers, awareness of the dangers of German rearmament, and the necessity for an independent, progressive U.S. foreign policy. He wrote the autobiographical *The Long Road Home* (1964).

FELIX MORITZ (1871–1937), a brother of Paul M. Warburg, was also born in Hamburg, Germany. He moved to the United States in 1894, married Jacob H. Schiff's daughter Frieda (see below) in 1895, and became a partner in his father-in-law's banking firm, Kuhn, Loeb and Co. Although Warburg participated, as partner and later as senior partner in Kuhn, Loeb and Co., in the financial aspects of the economic and industrial transformation of the U.S., his chief interests were philanthropy, education, and culture, and his contributions in these fields were considerable. He was one of the earliest supporters in New York City of the Educational Alliance and the Henry Street Settlement, organizations facilitating the absorption of immigrants. He served on the New York City Board of Education (1902–05) as a New York State probation commissioner, and he was active in movements to combat juvenile delinquency and family desertion. Deeply interested in music and art, he was a leader in the development of the Juilliard School of Music, the New York Philharmonic Symphony Orchestra, and the erection of the Fogg Museum of Art at Harvard University. His educational activities included service as a trustee of Teachers College of Columbia University, financial support of the Horace Mann and Lincoln Schools, presidency of the American Association for Adult Education, and trusteeship of the American Museum of Natural History.

A key figure in the German-Jewish elite which dominated the U.S. Jewish community in the early decades of the 20th century, Warburg's manifold activities displayed a wide range of sympathetic interests. He was chairman of the American Jewish Joint Distribution Committee from its establishment in 1914 until 1932, a major contributor to the American Society for Jewish Farm Settlement in Russia, and founder of the Refugee Economic Corporation. At home, he led in the formation in 1917 and subsequent administration of the Federation for the Support of Jewish Philanthropic Societies of New York City and was president of the Young Men's Hebrew Association of New York. He generously supported Jewish education, including the Hebrew Union College and, especially, the Jewish Theological Seminary and the Graduate School for Jewish Social Work. Not a Zionist, Warburg nevertheless was active in promoting Jewish settlement in Palestine through major support of the Palestine Economic Corporation and The Hebrew University. He cooperated with Louis *Marshall, president of the American Jewish Committee (of which Warburg was a member), and Chaim *Weizmann in the broadening of the *Jewish Agency for Palestine to include non-Zionists. Chairman of the Agency's administrative committee, he resigned in 1930 in protest against British policies restricting Jewish immigration, and, in 1937, he protested the British plan for the partition of *Palestine.

Felix Warburg's wife, FRIEDA (née SCHIFF; 1876–1958), was a philanthropist and communal leader. She was associated with her husband in numerous philanthropies and was also a leading figure in her own right. Among her major interests were the Young Women's Hebrew Association and the Visiting Nurse Service of New York. Although a non-Zionist, she was active in the work of Hadassah, especially its Youth Aliyah and the hospital in Jerusalem, and the American Friends of The Hebrew University. Her largest single gift was $650,000 in 1951 to the United Jewish Appeal to aid in the absorption of immigrants to Israel.

Felix and Frieda Warburg's son FREDERICK MARCUS (1897–1973) was a banker. After service in the U.S. Army during World War I, he was an investment banker, serving with the American International Corporation (1919–21), M.M. Warburg and Co. (1922–27), and Lehman Brothers (1927–30). In 1931 he became a partner of Kuhn, Loeb and Co. Among the civic and communal groups in which he served as officer or trustee were the American Museum of Natural History, Boy Scout Council, National Recreation Association, and the Federation of Jewish Philanthropies of New York. During World War II Warburg rose to the rank of colonel in the U.S. Army Special Service Division.

His brother GERALD FELIX (1907–1971) made his debut as a cellist with the New York Philharmonic in 1925, was a member of the Stradivarius Quartet from 1930 to 1936, and organized the Stradivarius Society. He was also a founder and conductor of the Brooklyn Symphony Orchestra and served as an officer of the New York City Center and Carnegie Hall.

Another brother PAUL FELIX (1904–1965) was active in banking and related fields, including service with the International Acceptance Trust Company, Bank of the Manhattan Company, J.S. Bache and Company, and, from 1951 to 1961, Carl M. Loeb, Rhoades and Co. He was a founder and president of the Federation Employment Service. During the 1930s he was active in bringing child refugees from Nazi Germany

to the United States, and during World War II he served in the army as an intelligence officer and military attaché at the U.S. embassy in Paris. From 1946 to 1950 he was a special assistant at the U.S. embassy in London. A prominent member of the Republican Party, he was a director of the United Republican Finance Committee.

Another brother EDWARD MORTIMER MORRIS (1908–1992) graduated from Harvard University in 1930. He did not engage actively in the family's banking business, but was immersed in a variety of cultural, communal, and philanthropic activities. His interest in the fine arts was expressed through teaching at Bryn Mawr College (1931–33), extensive foreign travel, a notable private art collection, service as a founder and trustee of the Museum of Modern Art in New York, and chairmanship of the American Patrons of the Israel Museum. He was a member of the Board of Regents of New York State, a trustee of the Institute of International Education, and special assistant to the governor of New York on cultural affairs. Most significant in Warburg's career was his outstanding Jewish philanthropic leadership. He was chairman of the *American Jewish Joint Distribution Committee (1941–66) as well as chairman (1950–55) and honorary chairman from 1956 of the United Jewish Appeal. In 1967 he became president of the United Jewish Appeal of Greater New York. Warburg's interest in Israeli institutions included trusteeship in the American-Israel Cultural Foundation and membership in the Board of Governors of The Hebrew University. During World War II he served in the U.S. Army, rising to the rank of major.

WARBURG, ABY MORITZ (1866–1929), German historian of art and civilization. Warburg was born in Hamburg. His main field of study was the intellectual and social context of Renaissance art. His works such as *Bildniskunst und Florentinisches Buergertum* (1902); *Die Grablegung Roger van der Weydens in den Uffizien* (1903); and *Francesco Sassettis letztwillige Verfuegung* (1907) were concerned with the relationship between classical antiquity and the Christian religion in the Renaissance. *Italienische Kunst und internationale Astrologie im Palazzo Schifanoja zu Ferrara* (1912) revealed the importance of classical astrology in Renaissance art. *Heidnisch-antike Weissagung in Wort und Bild zu Luthers Zeiten* (1920) and *Orientalisierende Astrologie* (1926) also discussed the beliefs and superstitions of the period. In these works and in numerous essays, Warburg developed an interdisciplinary approach to art history, which aimed to investigate the psychological and cultural role of symbolism in general. Warburg founded the Kulturwissenschaftliche Bibliothek Warburg, which opened officially in Hamburg in 1926, and was transferred to London in 1933 when Hitler came to power. In London it became known as the Warburg Institute and was incorporated in 1944 into the University of London. It consisted of 60,000 volumes and 20,000 photographs, and its purpose was to extend Warburg's own researches by tracing the influence of classical antiquity on all subsequent civilizations. The work was carried out by a group of mainly Jewish scholars which included Erwin *Panofsky and Ernst *Cassirer. The lectures given at the Institute were published as *Vortraege der Bibliothek Warburg*. The Institute publishes the journals *Studies of the Warburg Institute* and the *Journal of the Warburg and Courtauld Institutes*, and the Warburg Haus publishes Warburg's own papers under the title *Gesammelte Schriften*.

WARBURG, FREDERICK (1898–1981), British publisher. Warburg was born in London. He was not directly related to the famous German banking family and attended a leading public school, Westminster, on a scholarship. After serving as an officer in World War I, he attended Oxford University and then entered the publishing firm of George Routledge & Sons, but was dismissed in 1935 after the death of its head. With a friend, Roger Senhouse, he purchased the failing publishing firm of Martin Secker, renaming it Secker & Warburg, and developed it into one of the most influential and prestigious firms in Britain. It is most famous for publishing George Orwell's great works *Animal Farm* and *1984*; its other authors included such luminaries as H.G. Wells and Thomas Mann. In 1952 Warburg helped found the influential magazine *Encounter*, and, in 1954, defended an important obscenity lawsuit over the publication of Stanley Kaufman's *The Philanderer.* In later years his firm published a new string of notable works, among them *The Bridge on the River Kwai* and William L. Shirer's *Rise and Fall of the Third Reich.* Warburg published two volumes of autobiography, *An Occupation for a Gentleman* (1959) and *All Authors Are Equal* (1973).

WARBURG, GAVRIEL REUBEN (1927–), Israeli Orientalist. Warburg, a grandson of Otto *Warburg, was born in Berlin, Germany, but immigrated with his parents to Palestine in 1934. From 1946 to 1964 he was a member of kibbutz Yeḥi'am. In 1968 he was appointed lecturer in the Department of Middle Eastern History of the University of Haifa, was chairman of the department from 1969 to 1972, senior research Fellow

at the Research Institute on Communist Affairs and at the Middle East Institute at Columbia University in New York from 1972 to 1973, and in the latter year was appointed associate professor at Haifa. In 1974 he was appointed rector of the University. Warburg published *The Sudan under Wingate* (1971); *The Rise and Decline of the Sudanese Communist Party* (1974), *Egypt and Sudan* (1985), and *Islam, Sectarianism and Politics in the Sudan Since the Mahdiyya* (2003).

WARBURG, KARL JOHAN (1852–1918), Swedish literary historian. Warburg was born in Göteborg, where his father was the Danish consul. Warburg became professor of literature and art history at the Göteborg Academy in 1890. He moved to Stockholm ten years later and from 1901 organized and administered the Swedish Academy's Nobel Library. In 1906 he was elected to the chair of literature at the University of Stockholm, succeeding Oskar Ivar *Levertin. As a literary critic and contributor to the liberal press, Warburg had a considerable influence on Swedish cultural life. His outstanding achievement was the monumental *Illustrerad svensk litteraturhistoria* (1896–97; 6 vols., 1926–30[3]), an authoritative history of Swedish literature written in collaboration with Johan Henrik *Schück. This was the first serious attempt to investigate the subject from its 17th-century beginnings, and was characterized by keen psychological insight. Warburg also played an active part in Jewish communal affairs and, from 1905 until 1908, was a member of the Swedish parliament.

WARBURG, MAX M. (1867–1946), German banker. His family, the *Warburgs, had been successful in private banking for more than a generation. After studying business in Germany, Great Britain, and the Netherlands, Warburg worked in his family's M.M. Warburg Bank in Hamburg. He became one of the leading personalities in late Imperial Germany concerning international industrial banking. Interested in the welfare of the Reich, he concentrated on colonial affairs. From 1903 he was a member of the Hamburg parliament. In the same year he became one of the rare Jews who could directly contact German Emperor Wilhelm II. Though he followed the path of acculturation, Warburg was a member of the Jewish community in Hamburg. Compared to his elder brother, the famous art historian Aby *Warburg, who agreed with his younger brother to forgo leading the family bank – though always receiving enough money to buy books for his library – Max M. Warburg developed a more uncomplicated and direct relation towards his own Jewishness. During World War I Warburg was – together with Albert *Ballin – one of the main promoters and founders of the "Reichseinkauf" (later "Zentraleinkaufsgesellschaft"), a state-owned central organization to buy food for Germany in foreign countries during the war years. Later, Warburg was attacked by antisemites for this activity. Together with his brother Felix M. Warburg, who was a successful banker in the U.S., Max M. Warburg organized financial aid for Jews in Eastern Europe. As the war led to increasing antisemitism, Warburg started to ask officials to protect Jews against discrimination. During the war Warburg came to be one of the leading figures to advise German politicians, diplomats, and the military in financial matters. In October 1918 he was appointed a financial advisor to the chancellor (*Reichskanzler*) Prinz Max von Baden. In 1919, Warburg served the German delegates during the negotiations on the Versailles peace treaty as an economic specialist. Warburg preferred to keep a low profile. When Walther *Rathenau asked him in early 1922 to join the cabinet (*Reichsregierung*) as minister of finance he refused, saying that two Jewish ministers would be too much for Germany. After the assassination of Rathenau the murderers planned also to kill Warburg. In 1924 he was appointed a member of the board (*Generalrat*) of the Reichsbank. The Warburg Bank was still one of the most important banking companies in Germany. From the late 1920s on Warburg intensified his interest in Zionism.

From World War I on, his brothers Felix M. and Paul M. Warburg opened the doors to the leading financial circles in North America for their brother. This was – again – especially helpful, when Germany urgently needed fresh capital during the world economic crisis between 1930 and 1932. After the Nazis came to power in Germany, the Warburg Bank came under increasing pressure. Max M. Warburg focused on helping Jewish emigrants to get their money out of Germany via the Palaestina-Treuhand GmbH. After the Warburg Bank was closed by the National Socialists, Warburg himself immigrated in 1938 to New York, where he died.

[Christian Schoelzel (2nd ed.)]

WARBURG, OTTO (1859–1938), botanist and the third president of the World Zionist Organization. Born in Hamburg to a wealthy, assimilated family, *Warburg received an exclusively secular education. He completed his studies in the natural sciences in 1883 and decided to become a botanist, beginning his scientific career with studies in plant physiology and anatomy and specializing in tropical plants and plant geography and development. From 1885 to 1889 he conducted research expeditions in southern and eastern Asia and on the southeast Asian islands as far as East Australia. His observations on these expeditions provided the basis for his research work, as he discovered many hundreds of new types and species of plants. In 1892 he was appointed to a professorship at the University of Berlin. The most important of his scientific works are his books *Kulturpflanzen der Weltwirtschaft* (1908) and *Die Pflanzenwelt* (3 vols., 1916–23), a storehouse of botanical information on plant families and species, with special emphasis on their uses. A number of plant species are named after Warburg (*warburgia, warburgiella, warburgina*).

Warburg became a Zionist through the influence of his father-in-law, Gustav Cohen. In 1894 he was a member of the committee of *Ezra, the Berlin society of Ḥovevei Zion (see *Ḥibbat Zion). Together with his father-in-law, he joined *Herzl's supporters. He regarded the large-scale settlement of Ereẓ Israel as the basis for a Jewish state and, though a political Zionist, he was opposed to delaying settlement until the granting of a charter. Warburg also favored large-scale Jewish settlement in the countries close to Ereẓ Israel, since he believed that Ereẓ Israel would thus have a reservoir of political, economic, and demographic assistance. He participated in the attempts to settle Jews in Anatolia beginning in 1900, planning to settle there 100,000 Jews in 500 villages, and undertook the financial support of two Jewish settlements from his personal funds. From 1900 to 1906 Warburg dealt with Jewish agricultural and urban settlement in *Cyprus and encouraged the *Jewish Colonization Association (ICA) in its initial steps in this venture. In 1905–06 he planned the settlement of a million Jews in Mesopotamia (now Iraq), but opposed Herzl's proposals regarding *El-Arish and refused to join the Zionist El-Arish expedition. After his first visit to Ereẓ Israel, he drew closer than ever to Herzl and became his adviser on matters pertaining to settlement, providing him with the relevant material for his utopian novel *Altneuland*. From the Sixth Congress (1903), at which he supported the *Uganda Scheme, Warburg became active in the Zionist Organization. At the same Congress he was elected chairman of the Palestine Commission which later became the primary factor in the settlement program of the Zionist Organization, and initiated its publication *Altneuland*.

Warburg's main contribution to Zionism was his role in advancing practical settlement work in the Zionist Organization. He urged the Jewish Colonization Association and the *Jewish National Fund to purchase land, and encouraged the investment of private Jewish capital in agriculture, industry, and commerce. On Warburg's initiative, the Zionist Organization established the *Palestine Office under the direction of Arthur *Ruppin in 1905, as well as the Palestine Land Development Company. He played a large part in the establishment of the experimental agricultural station at Athlit under the direction of Aaron *Aaronsohn.

After Herzl's death (1904), Warburg was elected to the Zionist Executive. He disagreed with the views of David *Wolffsohn, who remained faithful to the doctrine of political Zionism. With the emergence of the leadership of the practical Zionists, Warburg was elected president of the World Zionist Organization in 1911 and technically remained in office through World War I, until 1920, while during the war years the center of world Zionist activity moved first to Copenhagen and then to London. He was elected primarily for fostering practical settlement work in Ereẓ Israel. However, he had to cease activity of this kind completely when war broke out, and he concentrated instead on purely political efforts, e.g., by using his influence with the German Foreign Ministry to restrain Turkish persecution of the Jews in Palestine. After the war, Warburg dedicated himself to scientific work in Palestine. From 1921 he directed the agricultural research station at Rehovot, and from 1925 he also headed the botany department of The Hebrew University. During the 1930s Warburg divided his time between Palestine and Germany, due to his wife's illness. Severely ill himself, he spent his last years bedridden in Berlin, where he died a lonely death under Nazi rule. Sedeh Warburg, a moshav on the coastal plain, is named after him.

WARBURG, OTTO HEINRICH (1883–1970), German biochemist and Nobel Prize winner; Warburg was born in Freiburg, Baden, the son of the physicist Emil Warburg (1846–1931), and, like his father, was baptized. He worked on radiation physics in the Physikalische Reichanstalt Berlin-Charlottenburg, of which his father was president from 1906 to 1922. In 1918 he went to the Kaiser Wilhelm Institut fuer Biologie in Berlin-Dahlem, and for over 30 years from 1930 was director of the Kaiser Wilhelm Institut fuer Zellphysiologie. He was one of the very few scientists of Jewish descent who remained undisturbed in his position during the Nazi period. He never taught, except for directing his research associates. Warburg was awarded the Nobel Prize for Physiology and Medicine in 1931 "for his discovery of the nature and mode of action of the respiratory enzyme." Warburg also designed a manometric apparatus for measuring the respiration of cells, tissues, or extracts of tissues, and an inhibition technique employing carbon monoxide, which are both widely used by biochemists all over the world.

Warburg contributed to scientific journals, and wrote several books, including *Stoffwechsel der Tumoren* (1926; *The Metabolism of Tumours*, 1930); *Katalytische Wirkungen der lebendigen Substanz* (1928); and *Heavy Metal Prosthetic Groups and Enzyme Action* (1949).

[Samuel Aaron Miller]

WARBURG, SIR SIEGMUND (1902–1982), British merchant banker. Warburg was born at Tubingen, Germany, a member of the famous German banking family, although from one of its less affluent branches. Nevertheless, in 1919 he entered the family bank, M.M. Warburg & Co. of Hamburg, spending long periods in London and New York as he learned his trade during the 1920s. He was made a partner in 1930. The way ahead seemed clear when Hitler came to power in 1933. Warburg immediately left for London, where he founded a small merchant bank, the New Trading Company; he became a British subject in 1939. In 1946 his bank was renamed S.G. Warburg & Co. By a process of meticulous

research, information-sharing on a daily basis among all executives, and a painstaking personal approach to its clients, it gradually became an important force in the City of London. In 1957 it became a member of the Accepting House Committee, thus joining the City's financial elite. Warburg pioneered new (and perhaps surprising) takeover techniques, especially in the 1958 purchase of British Aluminium, and spent much of the rest of his life trying to create a genuinely global merchant bank. He was knighted in 1966 and spent most of his last years in Switzerland.

WAR CRIMES TRIALS.

Crystallization of the Principles of International Criminal Law

Immediately after the outbreak of World War II, when the first Nazi violations of the laws and customs of war as defined by the Hague and Geneva Conventions were revealed (and in particular as they affected the noncombatant population and prisoners of war), the Allies began to publish official notes, warnings, and declarations. On September 3, 1939, Czechoslovakia's president-in-exile, Eduard Beneš, sent a letter to the British prime minister Neville Chamberlain, reporting the persecution of his country's civilian population at the hands of the Nazis. In 1940 several statements were published by the governments of the United Kingdom, Poland, Czechoslovakia, and France on the violations of the laws of war in Poland. Crimes against Jews were likewise mentioned. These governments warned Germany and stressed the responsibility of the Nazi regime for the criminal acts. On October 25, 1941, President Franklin D. *Roosevelt of the United States – then a neutral nation – stated that "the Nazi treatment of civilian population revolts the world," while British prime minister Winston *Churchill declared that "retribution for these crimes must henceforward take its place among the major purposes of the war." But this was more an expression of outrage in a propaganda war than a concrete plan of action for a postwar world. After the German invasion of the Soviet Union in June 1941 and the ensuing crimes against the civilian population and prisoners of war, the Soviets also began to publish statements on the subject. The Soviet foreign minister, Vyacheslav Molotov, declared in his notes of November 7, 1941, and January 6, 1942, inter alia, that the Soviet government held the leaders of Nazi Germany responsible for the crimes committed by the German army. One of the important steps toward punishment can be seen in the St. James Declaration made in London on January 13, 1942, in which the representatives of the governments-in-exile – of Belgium, Netherlands, Yugoslavia, Norway, Greece, Luxembourg, Poland, Czechoslovakia, and the Free French – declared that the punishment, through the channels of organized justice, of criminal acts perpetrated by the Germans against civilian populations was among the principal war aims of the signatories. Also present at the St. James Conference were representatives of belligerent but nonoccupied countries, among them the United Kingdom and the United States. The St. James Declaration did not specifically mention the crimes against the Jews. This policy of *Totschweigen* ("hushing up" the Jewish tragedy) aroused Jewish opinion in the U.S. and Britain, and a protest against this policy was lodged on February 18, 1942. Only on December 17, 1942, did the British foreign secretary, Anthony Eden, make a statement in the House of Commons (published simultaneously in London, Moscow, and Washington) on the physical destruction of Jews, of which the Allies had a growing awareness, as it developed, in 1941 and 1942 (see *Holocaust).

Another important step toward this objective was the publication of the Moscow Declaration of November 1, 1943, in which the three principal powers, Britain, the United States, and the Soviet Union, solemnly committed themselves to the punishment of those responsible for war crimes. The Moscow Declaration distinguished between criminals whose acts were committed within the boundaries of specific countries and the "major criminals" whose "offenses have no particular geographical location and who will be punished by a joint decision of the governments of the Allies."

The first international body to make preparations for punishment of the criminals was the United Nations War Crimes Commission (UNWCC). A proposal for its formation was announced in October 1942 and it was constituted on October 20, 1943. Its objects were to investigate the atrocities and record the names of the individuals responsible. Participants in the commission were representatives of Australia, the United States, Belgium, Britain, Denmark, the Netherlands, Yugoslavia, Greece, Luxembourg, Norway, New Zealand, China, Poland, Czechoslovakia, France, and Canada. The Soviet Union, embroiled in controversy over the composition of its representation, did not join the commission.

At the Yalta Conference in February 1945, the last attended by Roosevelt, the president advanced the idea that an international tribunal should be convened to try Nazi leaders for planning and waging a war of aggression and for war crimes. Soviet leader Joseph *Stalin favored the legalist approach but wanted to confine the process to crimes committed in war; Churchill and Eden preferred summary trial and execution.

The various Allied activities culminated in the London Agreement of August 8, 1945, which established the International Military Tribunal, and in the Tribunal's charter, which dealt with substantive and procedural rules. One of the decisive contributions toward the formulation of the revolutionary principles of Nuremberg was made by Hersch *Lauterpacht, a British Jewish law professor originally from Galicia. Lauterpacht defined the three crimes in the charter: crimes against peace, war crimes, and crimes against humanity. In his studies and books, Lauterpacht, who later became a judge of the International Court of Justice, formulated the "Nuremberg principles," which were accepted not only in the London

Charter but also in the development of international criminal law in general.

The first comprehensive description of violations of international military law was offered by Raphael *Lemkin – a Polish Jewish legal scholar who had lost his family in the Holocaust – in his book *Axis Rule in Occupied Europe* (1944). It was Lemkin who coined the term "genocide," which was not adopted by the courts but served as the subject of a special international convention. The main theoretical and practical work in the field by world Jewish institutions was done by the *Institute of Jewish Affairs of the *World Jewish Congress. The political department of the *Jewish Agency also collected incriminating material, prepared lists of war criminals, and presented them to the institutions of the Allies dealing with the location and trial of Nazi criminals.

There were differences of opinion among the Allies as to what to do with the Nazi leadership. As the war was ending, President Roosevelt was at first convinced by Henry *Morgenthau, his Jewish secretary of the Treasury, that the top Nazi leaders should be summarily shot once caught. At the Quebec Conference in September 1944, Churchill also supported this approach. A list of 2,500 "archcriminals" set for execution by military firing squad was being created by Morgenthau's assistants. Secretary of War Henry Stimson strongly argued, however, for holding trials. After a great deal of intracabinet dueling, Roosevelt eventually abandoned the so-called Morgenthau Plan (which also called for destroying Germany's industrial capacity and turning it into "a country primarily agricultural and pastoral in its character") in favor of Stimson's legalist approach. Murray Bernays, a young Jewish lawyer in Stimson's office, drafted the first outline of how the Nazi archcriminals should be tried. Bernays also came up with the idea of putting on trial not just individuals but also Nazi organizations, using the Anglo-American legal doctrine of conspiracy liability. Stalin also favored trials, but the kind of show trials mounted by the regime in the Soviet Union, in which guilt was predetermined. The Soviet Union and France were uninterested in conspiracies and Britain shied away from conspiracies against the peace. The Soviet Union wanted to restrict the trials to the war years alone. Ambiguity papered over diplomatic differences. The importance of the trials was enhanced when President Harry S. Truman named Supreme Court Justice Robert Jackson, who took leave from the Court, as the chief American prosecutor. The move was virtually unprecedented and it enhanced the stature of all that was to follow.

Number of Nazi Criminals and Their Collaborators

As it is not possible to establish exactly the number of German criminals who participated in the annihilation of the Jews; only an estimate is possible. One ordinarily thinks of two main groups of criminals: the instigators, planners, and commanders who directed the killing operations or with whose knowledge, agreement, or passive participation these acts were committed; and the actual implementers of the plans and commands at various levels of authority and initiative. But there was also a wider circle of persons involved, including those who designed and engineered the gas chambers and the crematoria and those who built the economic infrastructure that allowed the camps to flourish. Also involved were the corporations that invested in these camps, and that used slave laborers there and worked them to death. The first group, to which the leadership of the German government belonged – the heads of ministries, the Nazi Party, the armed forces, the Gestapo, the SS, and the RSHA (*Reichssicherheithauptamt*, Reich Central Security Office) – numbered many hundreds. The second group included hundreds of thousands – members of the Gestapo, the SS, the Waffen SS, the SD, the police with its many branches, the armed forces; officials from special departments of the Foreign Ministry and Ministry of the Interior who dealt with Jewish matters, the staffs of the concentration camps, doctors who practiced in the concentration camps, lawyers, judges, and many others. The estimate of hundreds of thousands who participated actively in the annihilation of the Jews and other crimes is no exaggeration. This number, furthermore, does not include collaborators from the conquered territories – Croats, Ukrainians, Latvians, Lithuanians, Estonians, Byelorussians, Russians, and others. Many tens of thousands of collaborators who participated in the planning and execution of the murder of Jews, Soviet prisoners of war, and local civilian populations were able to retreat together with the Germans as they fled from Eastern Europe, and later escaped – posing as innocent refugees – to the United States, Canada, Great Britain, Australia, and Latin America. During the war, many of these killers were organized in special units – often referred to as *Schutzmannschaft* units – mostly within the framework of the Security Police (SD), among them such notorious murder squads as the "Special Detachment" (*Ypatingas burys*) and the 12th Lithuanian Auxiliary Police Battalion in Lithuania and the Arajs Kommando in Latvia. They not only carried out the orders of the Nazis, but also killed tens of thousands of Jews on their own initiative. The murder of the Jews of Kaunas and other areas in Lithuania, for example, began immediately upon the evacuation of the Soviet army from these places, even before the first German soldiers entered. The same was true in the parts of Poland that had been occupied by the Soviet Union in 1939, in western Ukraine, and elsewhere.

Trials in Allied Military Tribunals

Nazi war crime trials began during World War II itself. The first trial of perpetrators of crimes against civilian populations was conducted in the liberated territories of the Soviet Union. The trial dealt with the abominable actions committed by the German invaders in the city of Krasnodar in the northern Caucasus. It opened on July 14, 1943, after the liberation of the area, with eleven accused, of whom eight were sentenced to death. The second trial dealing with annihilation of civilian populations and prisoners of war took place in the city of Kharkov, Ukraine, in December 1943. Three Germans,

*SS men and police, and a Russian collaborator were tried, and all were sentenced to death by hanging. At this trial, for the first time, documentation of the annihilation of civilian populations by gas was shown.

THE INTERNATIONAL MILITARY TRIBUNAL (THE FIRST NUREMBERG TRIAL). The specific question of war crimes and crimes against Jews, defined then as "crimes against humanity" under the general policy of the infamous Final Solution, was considered only after World War II, first by the International Military Tribunal (IMT) at Nuremberg that tried the heads of the Nazi regime who had been captured by the Allies.

The IMT trial, the first of the Nuremberg trials, was conducted from November 1945 to October 1946. The defendants included Hermann *Goering, the most prominent Nazi the Allies had captured, who officially held the title of Commander of the Luftwaffe and several departments of the SS; Hans *Frank, governor general of occupied Poland; Ernst *Kaltenbrunner, head of the RSHA; Joachim von *Ribbentrop, Reich minister for foreign affairs; Julius *Streicher, gauleiter of Franconia and editor of *Der *Stuermer*, the infamous antisemitic publication; Martin *Bormann, chief of the chancellery of the Nazi Party and Hitler's private secretary, who was tried *in absentia*. (Some of the most prominent Nazi criminals and German government leaders managed to evade justice and were not brought to trial at Nuremberg, including *Hitler, *Himmler, *Goebbels, and Robert Ley, who committed suicide [the latter hanged himself in his cell while awaiting trial at Nuremberg]; Reinhard *Heydrich, charged by Goering with the implementation of the Final *Solution, was assassinated in 1942; Heinrich *Mueller, one of the heads of the *Gestapo, disappeared without a trace. Martin Bormann, tried in absentia, was never found. Having fled from the chancellery bunker on May 1, 1945 as the Red Army was closing in, he was said to have been killed by the Russians; his death in Berlin was supposedly confirmed by evidence found in 1972, but he was also rumored to have escaped to South America.)

In accordance with the principles of the London Charter of August 8, 1945, an indictment was brought by the principal prosecutors of the four main Allied powers, detailing the accusations against each of the defendants as well as against six organizations defined as criminal: the Reich cabinet, the Leadership Corps of the Nazi Party, the SS, the SA, the Gestapo and SD, and the General Staff and High Command of the German armed forces. In preparing the material, as well as during the trial, the four prosecutors had the cooperation of the delegations of the other members of the anti-Nazi alliance and some representatives of Jewish organizations, in particular the World Jewish Congress' Institute of Jewish Affairs, founded as a documentation center in 1941, headed by Jacob *Robinson. The latter assisted in the preparation of the material and in the formulation of the statement concerning the persecution and murder, which the Germans called "extermination," of the Jews. Nuremberg was chosen as the site of the trial not because of the Nuremberg Laws or its role as the location of grand Nazi Party rallies but because the city had not been completely ruined during Allied bombing raids and was in good enough condition to host the trials, with a standing courthouse (still in use today). Courtroom 600 of the Palace of Justice, where both the IMT trial and subsequent American zonal trials were held, is still in use as a working courtroom.

The proceedings began on November 20, 1945 and were concluded on October 1, 1946 – the date of Yom Kippur (the Jewish Day of Atonement) that year – with a judgment in which twelve defendants were sentenced to death, three to life imprisonment, four to prison terms, and three acquitted. The death sentences were carried out by hanging on October 16–17, 1946, except for that of Goering, who took poison before he could be executed.

Justice Jackson set the scene in his opening statement:

> In the prisoners' dock sit twenty-odd broken men. Reproached by the humiliation of those they have attacked, their personal capacity for evil is forever. It is hard to perceive in these miserable men as captives the power by which as Nazi leaders they once dominated much of the world and terrified most of it. Merely as individuals, their fate is of little consequence…
>
> What makes this inquest significant is that these prisoners… are the living symbols of racial hatreds, of terrorism and violence, and of the arrogance and cruelty of power… Civilization can afford no compromise with the social forces which would gain renewed strength if we deal ambiguously or indecisively with the men in whom those forces now precariously survive.

The charter of the International Military Tribunal at Nuremberg served as a basis for domestic laws later enacted in countries in which trials of war criminals were conducted (except for the Federal Republic of [West] Germany, which did not officially adopt the Nuremberg principles). The Tribunal, and four-power cooperation in general, did not continue after the judgment, due to the deteriorating relations between the Western Allies and the Soviet Union, leading to the onset of the Cold War.

British historian David Cesarani has assessed the importance of these trials: "The Nuremberg tribunal established a model for the future. It generated a detailed record and accumulated a mass of material, which ensured that the history of the Nazi era would not be forgotten easily and would make political distortions more difficult. The tribunal… satisfied the popular desire for retribution… and made, for the first time[,] the political echelon accountable in a court of international law for the planning and conduct of war." In 2005–06, on the sixtieth anniversary of the trials, conferences were held around the world commemorating their significance to the growth of international criminal law. A conference in Washington, D.C. cited the Nuremberg proceedings as "the birth of [modern] international law." The *ad hoc* international tribunals created by the UN Security Council in the late 1990s to try perpetrators of the atrocities in Yugoslavia and the genocide in Rwanda were

directly modeled on the Nuremberg proceedings, and became the first international trials for war crimes and crimes against humanity since Nuremberg. The permanent International Criminal Court, established at the beginning of the twenty-first century, is also in a direct lineage from Nuremberg. The trials also led to subsequent action by the United Nations, such as the 1948 Genocide Convention and the Universal Declaration of Human Rights.

Certain dimensions of the IMT trial remained unclear. There was confusion between war crimes and crimes against humanity. The specific nature of what happened to the Jews became a background to the trial rather than its central theme; contrary to current popular belief, the crimes of the Holocaust played only a secondary role. The major emphasis, especially for the Americans, was to try the Nazi leadership for the crime of waging aggressive war.

Of significance also was that the Tribunal did not accept the defense of "merely following orders," though in many subsequent trials such a defense was invoked.

The proceedings also provided copious documentary evidence of the crimes committed by Nazi Germany. The material (trial transcripts, affidavits, and documents) was published in an official edition of 42 volumes in English, French, and German (English title: *Trial of the Major War Criminals*) between 1947 and 1949 (the "Blue Series") and constituted an invaluable contribution to the administration of justice to Nazi criminals in various countries, as well as to the study of the Nazi Party and the German administrative apparatus that implemented the "Final Solution to the Jewish Question" that is now known as the Shoah or Holocaust.

The Nuremberg judgment constitutes an important historical turning point, one of the great landmarks in the development of international law and international relations, whose importance has grown in recent years. Despite Nuremberg not being a trial specifically of the Holocaust, the IMT proceedings did expose the criminal measures against the Jewish people and did not submerge the victimization of the Jews in the general category of "racial persecution," "stateless persons," or other euphemisms. In this respect, it served as a binding precedent that was followed in subsequent trials almost everywhere. On the other hand, the IMT followed the provisions of the charter and considered as crimes against humanity only such crimes that were somehow connected with "crimes against peace" or war crimes – in other words with crimes committed after the outbreak of the war. Consequently, no attention was paid to such crimes as the April 1, 1933 boycott, the Nuremberg laws, *Kristallnacht*, etc.

There were many who found the trial problematic. Some Germans considered it victors' justice. Others regarded it as *ex post facto* law. The role of the Soviet Union in the invasion of Poland was deliberately ignored. Still others felt that Nuremberg was a distraction because they wanted to focus on the future and the swiftly developing Cold War – the next war – and not the last war. Others felt that the punishment given the convicted defendants, however great, was inadequate given the magnitude of the crimes. In subsequent years, as the punishments meted out to subsequent defendants became less severe, some questioned whether any real justice was achieved or merely the appearance of justice.

On December 20, 1945, the four Allied governments in occupied Germany enacted Control Council Law No. 10, which had special significance for the continuation of the Nazi trials and the definition of crimes against humanity. This law, with minor modifications, eliminated the connection between crimes against humanity and the two remaining crimes (crimes against peace and war crimes), and raised crimes against humanity to a level equal to that of the other two. This also extended the period covered by the law from the war years alone to the entire Nazi period. Control Council Law No. 10, whose articles dealt mainly with crimes against humanity, enabled each of the Allies, as well as military and civilian tribunals, to hold trials in conquered territories in Germany.

INDIVIDUAL ALLIED MILITARY TRIBUNALS. The 1945–46 trial at Nuremberg of the surviving Nazi leadership was the only one conducted by the IMT. Later trials, called Subsequent Nuremberg Proceedings or zonal trials (and also widely known as "Nuremberg Trials") were conducted by military tribunals of the four occupying Allied powers within their own occupation zones, under the terms of Control Council Law No. 10.

Twelve trials of special significance were conducted at Nuremberg by U.S. military tribunals ("Nuremberg Military Tribunals," composed of American judges) in 1946–49. (Other U.S. military tribunal trials were held at Dachau, also in the U.S. Occupation Zone, during the same period.) Justice Jackson's deputy, Telford Taylor, a lawyer serving in the U.S. Army and given the rank of brigadier general, took over the job as chief counsel for the prosecution after Jackson's return to the U.S. Supreme Court at the conclusion of the IMT proceedings.

The twelve cases were brought against groups of important Nazis who bore the chief responsibility for some of the most serious and significant of Nazi crimes. They were:

1. The Medical Case, November 21, 1946–August 20, 1947
2. The Milch Case, December 20, 1946–April 17, 1947
3. The Justice Case, February 17–December 4, 1947
4. The Pohl Case, March 10–November 3, 1947
5. The Flick Case, April 19–December 22, 1947
6. The I.G. Farben Case, August 14, 1947–July 30, 1948
7. The Hostage Case, July 8, 1947–February 19, 1948
8. The RUSHA Case, October 10, 1947–March 10, 1948
9. The *Einsatzgruppen* Case, July 3, 1947–April 10, 1948
10. The Krupp Case, September 17, 1947–April 10, 1948
11. The Ministry Case, November 15, 1947–April 14, 1949
12. The High Command Case, December 30, 1947–October 28, 1948

As noted above, the crimes committed against the Jews were not the main focus of the IMT trial. During the subse-

quent trials, however, much more attention was paid to acts of cruelty and the annihilation of Jews under the Nazi regime. The Jewish question had special significance in the following trials: the Pohl Case, in which Oswald Pohl and 17 others were tried for committing crimes against the inmates of the concentration and death camps, and especially against Jews; the *Einsatzgruppen* Case, the trial of 24 SS and Gestapo men from the *Einsatzgruppen* (special "mission units" or task forces) who headed firing squads that murdered approximately a million Jews in the conquered German territories in Eastern Europe, and particularly in the Soviet Union; likewise, the Ministries Case, with 21 defendants including three government ministers, molders of Reich policy, who were tried for abetting the preparation of the war and creating the conditions for the implementation of the crimes of the Nazi regime. In the last trial Robert *Kempner, one of the chief U.S. prosecutors, presented to the Tribunal and the entire world one of the most important Nazi documents from the files of the German Foreign Ministry relating to the annihilation of the Jews. It was the record of the *Wannsee Conference of January 20, 1942, during which cooperation was requested and received from all party and government institutions involved in the implementation of the Final Solution. The *Einsatzgruppen* trial was primarily a trial of documents. The chief prosecutor in the case, Benjamin Ferencz, a young American Jewish lawyer working under Taylor, was able to obtain conviction of the generals responsible for the murders by these mobile killing squads by introducing into evidence the operational field reports sent to Berlin from the killing fields of the Soviet Union. The Medical Case trial led to the enunciation of new principles of medical ethics, known in medical circles as the "Nuremberg Code" and taught now in every medical school in the United States. The ten-point Nuremberg Code prohibits experimentation on human subjects without their "informed consent" and gives the subject or patient the right to stop the experiment or treatment at any time.

One hundred seventy-seven Nazis were tried and convicted in these twelve trials. Of these, twelve were sentenced to death, 25 to life imprisonment, and the remainder to long prison terms. Proximity to the crime was taken as a measure of guilt. Those who were directly involved in the killing – doctors, concentration camp heads, *Einsatzgruppen* officers – received the most severe sentences. Thus, those who profited by the crime and developed the infrastructure that enabled the killings to proceed were treated more leniently.

The U.S. tribunals met in 1,200 sessions, and the trial transcripts cover 330,000 pages, aside from documents entered in evidence. This vast corpus of material supplements extensively that from the International Military Tribunal. A large part of the documentation of the military tribunal trials was published by the U.S. authorities in 15 volumes (*Trials of War Criminals* – "Green Series") in 1949–53.

In the U.S. military tribunal trials conducted in Dachau, 1,517 of the 1,941 defendants who were tried by 1949 were found guilty. Of these, 324 were sentenced to death, and 278 of these sentences were actually carried out.

In the British Occupation Zone, in Lueneburg, Hamburg, and Wuppertal, 1,085 defendants were tried before British military tribunals and 240 were sentenced to death. Among the more important trials in the British Zone, that of the SS guards at the *Bergen-Belsen concentration camp (the Bergen Trial, September 17–November 17, 1945) should be mentioned. Josef Kramer, the camp commandant, and his accomplices were convicted. Kramer was put to death.

In the French Zone, 2,107 defendants were tried and 104 sentenced to death.

The total number of Nazi criminals convicted in the three Western occupation zones between 1945 and 1949 was 5,025, of whom 806 were sentenced to death. Four hundred eighty-six death sentences were carried out; the remainder were commuted to prison terms of varying lengths.

Official or semiofficial figures are not available for the trials of Nazis in the Soviet Occupation Zone. It is assumed, however, that tens of thousands of Germans were tried there and that most of them were convicted and in large measure deported to Soviet territories to serve their sentences. (In 1955, in the wake of a Soviet-West German agreement, 8,877 criminals were freed. Another 749 were handed over to West Germany for further investigation.)

In the course of its work, the United Nations War Crimes Commission prepared 80 lists of war criminals, which together comprised 36,529 names (including Japanese). The Commission published a number of partial statistics on the period until March 1, 1948. The authorities of the United States, Great Britain, France, Greece, Netherlands, Norway, Poland, and Yugoslavia conducted 969 trials, in which 3,470 German defendants were tried. Death sentences were passed for 952; 1,905 were sentenced to varying prison terms, and 613 were acquitted.

Before the trials concluded, the political climate changed. The Cold War had begun and both the Americans and the Soviet Union were vying for the esteem of the German people. For some Americans, the Korean War made putting the Nazi period in the past ever more urgent. John J. McCloy, a former assistant secretary of war who became U.S. high commissioner for Germany in 1949, promulgated the Clemency Act in January 1951, commuting many of the convicted war criminals' sentences. By 1958 nearly all prisoners had been freed.

Trials in Liberated Countries and Israel

WEST GERMANY AND AUSTRIA. *West Germany.* Courts in postwar Germany began to function at the end of 1945, when some of the Allies reinvested the Germans with the right to hold trials. According to a summary prepared by the Federal Department of Justice in Bonn, indictments were issued by the West German authorities against 9,401 Nazi criminals between 1945 and Jan. 1, 1969. Of these, twelve were condemned to death (through 1949), 98 to life imprisonment, 6,002 to various prison terms, and the remainder acquitted or never

brought to trial. All in all, during the above period, investigations were carried out against 79,401 accused Nazi criminals. 13,000 were tried and 6,487 were convicted; 6,197 were sentenced to prison (thirteen to life terms) and 23 to death. Among the most important trials were those of the Treblinka guards (1959–65); the Auschwitz SS personnel (1963–79 and 1963–64); Franz Stangl, commandant of Sobibor and Treblinka (1974–75); the Majdanek case (1975–81); and Josef Schwammberger, commandant of the Mieliec, Rozvadow, and Przemysl forced labor camps in Poland, who also destroyed the Przemysl ghetto (1991–92).

Three periods are discernible in the trial and punishment of Nazi criminals in West Germany: 1) from the close of the war until 1952, the "denazification period"; 2) 1952–57, a period of relative cessation of legal activities in this area; and 3) from 1958 on, with the establishment of the Central Office of the State Judicial Authorities (*Zentralstelle der Landesjustizverwaltungen*) in Ludwigsburg.

Immediately after the end of World War II, the Allies realized that in the interests of international security, Germany must be thoroughly purged of its Nazi elements. "Denazification," the process of purging the German state and civil society of their Nazi elements, began in 1945 and had several aspects: military, political, and legal. In the military sphere, the magnitude of the German defeat ensured that the German military posed no threat to the occupying armies; the Allied military governments in occupied Germany further secured themselves by means of preventive arrest of members of all Nazi government, military, police, and party bodies. In the political sphere, denazification proceedings were intended to prevent Nazis not included in the list of war criminals from assuming influential positions in the political, economic, and social life of Germany, and to assure the process of German democratization. In the legal sphere, investigations of Nazi functionaries were carried out and those accused of crimes prosecuted, when the evidence warranted (trials and denazification were not the same thing). More than 3,000,000 Germans were obliged to undergo this process, and trials were conducted against accused Nazi criminals in both Allied and German courts. From 1946 to 1952, trials were held by the West German states of, inter alia, participants in the **Kristallnacht* riots (November 9–10, 1938), and the number of accused reached several hundred.

When a state and civil society are dominated so totally by a ruling party that all officials either willingly or by necessity adhere to its expressed ideology, it is difficult to purge these people from its institutions, including the judiciary and legal community and the government bureaucracy, and still have a functioning system. Denazification, therefore, was not at all successful, and most former Nazis, especially in the judiciary, returned to their old posts.

After 1953, denazification ceased in West and East Germany. Searching for criminals not yet brought to trial abated, and many were able to flee Germany and go elsewhere. Latin America was a frequent destination, as were Arab countries. As a result murderers lived freely and with only vague fears throughout the world – Adolf Eichmann lived in Argentina; the physician Josef *Mengele lived in Argentina until 1960 and later in Paraguay and Brazil; Horst Schumann, who performed medical experiments on Jewish prisoners in the concentration camps, lived in Ghana until his extradition; Franz Stangl, commandant of the *Treblinka and *Sobibor death camps, lived in Syria and Brazil until his extradition; and there were plenty of others. And many lived freely in East and West Germany as well. West German authorities rationalized this by claiming that the Nuremberg trials, even though they had been held in Germany, did not evoke the appropriate reaction in the country. After its overwhelming defeat, the German nation was busy repairing the ravages created by the war. Appropriate documentation was lacking, as the victors had taken all the German archives that remained after the war. The reservoir of potential witnesses that existed in Germany between 1945 and 1950 and constituted an important element in gathering complaints and evidence, disappeared with the elimination of Displaced *Persons camps and the migration of the refugees to Israel and other countries. Most importantly, the Cold War became a central concern of the Allies and the politics of fighting it predominated. There was less incentive for the Western allies to pursue war crimes trials. In addition, Germans in general, and their official institutions, maintained that they were not completely aware of the extent of the crimes committed by the Nazis. It was only in the wake of the 1958 Ulm trial against the members of the *Einsatzkommando Tilsit*, which operated in Lithuania, that most Germans learned of the extent of the crimes – or so it was argued.

Whatever the validity of this claim, it is a fact that 1958 marked a turning point in the attempt to bring Nazi criminals to justice within the territory of the Federal Republic of Germany, and, to a far lesser extent, in Austria. In a number of places suitable conditions and tools were created for renewed activity in this field, especially in West Germany, Israel (where Yad *Vashem, the memorial institution whose work includes documentation of the Holocaust, was established, as was a special police unit for Nazi criminals), and the United States (where the Institute of Jewish Affairs concentrated exclusively on assistance to German and Austrian judicial authorities). In the Ulm trial, it became clear to the prosecution that until that time the crime of the Final Solution was barely considered by the German courts and that those mainly responsible for its planning and execution were not tried at all. This had to do with the restrictions placed by the Allies on the authority of the West German courts, which were loosened only later.

As a result of this trial, there was an awakening among liberal jurists in Germany. Thirteen years after the end of the war, a special meeting of the ministers of justice of the 13 *Laender* (states) then constituting the Federal Republic was held in city of Ludwigsburg, near Stuttgart. Following the suggestion of the minister of justice of Baden-Wuerttemberg, the ministers of the federal Laender decided in October 1958 to create the aforementioned *Zentralestelle der Landes-*

justizverwaltungen zur Aufklaerung der NS-Verbrechen (Central Office of the State Judicial Authorities for the Investigation of National Socialist Crimes – Central Office, for short). This authority started its work in Ludwigsburg on December 1, 1958.

According to the administrative agreement of the Laender, the task of the Central Office consisted of collecting and sifting all obtainable records about relevant criminal acts under investigation, examining crimes, classifying them and determining the whereabouts of the perpetrators. The office was obliged to coordinate preliminary inquiries and transmit relevant information to the appropriate public prosecutors and to be of further assistance to them.

As the Central Office itself was not a public prosecution office, it could not prefer charges, apply for arrest warrants, or examine property, but was obliged to pass its findings to the public prosecutors. The Central Office had no competence to investigate genuine war crimes. It also did not initially possess any jurisdiction to investigate killings in those concentration camps which were located in the area of the Federal Republic. Later on – at the end of 1964 – its jurisdiction was extended and it then investigated such crimes committed in German territory, with the exception of those committed by the Reich Central Security Office, which remained within the jurisdiction of the Chief State Prosecutor at the Supreme Court of Justice.

Under the terms of the Administrative Agreement, public prosecutors were obliged to forward to the Central Office all the findings they obtained during proceedings and present the minutes of the examination sessions of accused and witnesses, as well as other relevant documents together with their concluding notes. The Central Office registered these documents in card indexes. In January 1985, the central card catalogue in the Central Office contained more than 1.3 million cards arranged alphabetically as well as by the sites at which the acts were committed and by which division (*Dienststelle*). The data was obtained from witnesses, the accused, and other persons. The document collection included more than half a million individual documents about the Nazi era (mainly photocopies) and more than 500 microfilms. These were also available for use through separate document catalogues.

Initially, the Central Office was entrusted with the investigation, in addition to murders, of crimes classified as manslaughter. The statute of limitations ran out on these as of May 8, 1960. As a result only those murders which are defined as willful murders can be prosecuted. A law of December 1979 lifted limitations for all murders, not only Nazi killings.

The employees of the Central Office were generally prosecutors and investigating judges; the majority were devoted young people, who were not adults when the Nazi crimes were committed. They began their work by becoming acquainted with the problem, gathering documentary material and establishing ties with Israel and Jewish institutions in the United States. This office did not deal with crimes committed within German territory itself; those crimes were prosecuted by the regular judicial authorities in the states in which the alleged perpetrators resided, as were crimes committed outside Germany – the Central Office gathered information, and individual states undertook investigations and trials.

The Central Office came up against many problems. On the one hand, its activities were an annoyance and a threat to German circles that included many influential figures who wanted to forget the past, e.g., ex-Nazi politicians, judges and police officials, and adherents of *neo-Nazism. On the other hand, prosecutors encountered many difficulties and obstacles in gathering documentary material scattered in many countries. Certain countries, for political reasons, were not always willing to assist by placing the material in their possession at the disposal of the German authorities.

In addition, in dealing with Nazi crimes, investigation authorities had to take into consideration further difficulties. Many witnesses who were victims of National Socialism were no longer alive or were unwilling to give testimony about their terrible experiences, especially in the oppressive atmosphere of a courtroom. Proof becomes more difficult to establish over time. Some survivors refused to return to Germany even for a trial. Others were angry at what they considered the disrespectful tone of cross-examination. Ordinary victims had usually been in contact only with low-level perpetrators and not with those in charge, the leaders. In cases of culprits who were not known to their victims either by name or by appearance verification could be arrived at only through documentary evidence. Documents often arrived in the form of photocopies from the archives of Eastern European states and were therefore distrusted, or flatly rejected, by certain circles in the Federal Republic. In some trials in which such documentary evidence was introduced, counsel for the defense asked the courts not to accept it. (When, however, incontestable originals were placed at the courts' disposal, no further attempts were made to dispute the authenticity of these documents.) Unfortunately, in several cases, such documentary proof was entirely missing, as the documents had been destroyed shortly before the end of the war or never existed. These proceedings were almost always dependent on the testimony of witnesses. But it is only natural that, decades after the events, the value of such testimony becomes more and more questionable. In addition, the exterminations of the National Socialist era were not carried out openly, but in specially chosen localities, behind walls and fences and under the strictest secrecy.

The problem of locating witnesses was even greater with respect to German nationals, who were unwilling to give incriminating testimonies against their accomplices. The reservoir of witnesses was therefore usually limited to the circles of the perpetrators or the victims. Many of those who witnessed such acts or were in contact with those who committed them were afraid to expose themselves to investigation; they remained silent, because of misguided solidarity with the perpetrators, or because they had suppressed the terrible events from their memory. The victims were often able to recall the essentials, but had forgotten details which seemed to them

at the time unimportant and which might have been crucial for the proceedings. They often instinctively substituted for their imperfect knowledge hearsay evidence and conclusions reached later, often after discussion with other survivors. Perpetrators, times, and places became confused, especially as many of the victims had passed through a dozen or more camps. Still, even in these cases remarkably precise testimonies were often given which could be – sometimes through documentation – unequivocally verified. It has also been repeatedly established that witnesses for the accused contacted each other, sometimes in an organized fashion, to coordinate their exonerating statements.

Many of the investigations handed over for legal action were completed with the trial and conviction of the accused, e.g., the trials of the SS men from the staff of the *Chelmno death camp; the members of the *Einsatzgruppen* who operated in Belorussia; the Heuser trial involving the destruction of the Jews of Minsk; the trials of the murderers of the Treblinka, Auschwitz, and Sobibor death camps and the Tarnopol, Czestochowa, Lvov, and Stanislav ghettos. Special units of the criminal police were established to assist the Central Office; their task was to interrogate witnesses in Germany, locate criminals, and make arrests on the basis of the office's data. Among the important cases dealt with by the Central Office are those of the *Einsatzgruppen*, with all their units, that operated mainly in the German-occupied Soviet territories, and the infamous *Aktion Reinhard* case, the operation aimed at murdering Polish Jews. The Central Office also investigated the crimes committed in the ghettos in Poland and in all German-occupied countries of Europe. Again, it is important to note that an enormous amount of investigatory work was also undertaken by each state prosecuting attorney's office – for example, in the Auschwitz trial, most of the investigation was done by the prosecution and the court in Frankfurt.

An important limitation of the prosecution of Nazi killings was the amendment of Article 50, Paragraph 2 of the Penal Code passed in October 1968, whereby persons who had participated in such murders could be punished only if their own special criminal characteristics, such as delight in murder, avarice, or other base motives such as racial hatred or lust for revenge, were proved. Failure to prove these meant that the act was covered by the statute of limitations and was not actionable as of May 8, 1960. Other related manifestations, such as extreme cruelty and malice, were, however, excluded from the above amendment.

In performing its functions the Central Office cooperated from the outset with private and state institutions in Germany and elsewhere – especially with institutions in Israel, the U.S., and France – to obtain documentary proofs or testimonies of witnesses. From 1965 the Central Office was also given the opportunity, after appropriate agreements were reached, to cooperate with states of the Eastern Bloc and to make use of the extensive documentary material in their archives. Difficulties arose with regard to cooperation with the states of the Middle East, South American countries, and also the German Democratic Republic (East Germany). Interpol had declined to help in clarifying Nazi crimes, as it classified these in the category of political offenses, with which, according to its constitution, it is not supposed to deal. As a not insignificant number of persons sought for had succeeded, equipped with false personal documents and in some cases helped by the Vatican, in disappearing into Arab or South American countries, which as a rule declined extradition of these persons, proceedings against these accused often remained unsettled. For example, Walter Rauff, former *SS-Standartenfuehrer* and director of the technical department of the RSHA dealing with the use of gas, lived until his death in 1984 in Chile, and could not be extradited. It is also possible that some accused lived unidentified in the Federal Republic.

In comparatively numerous cases the accused committed suicide in detention or died during the proceedings. Often, the inability of a defendant to stand trial – supported by official medical examinations – resulted in the suspension of the proceedings. The fact that these suspensions have occurred more frequently in Nazi trials than in other legal proceedings is related not to the indulgence of the courts, but to the age of the defendants. 2005 was sixty years after liberation and thus a thirty-year-old officer in 1945 was by then 90 and likely to plead ill health and feebleness. With defendants at death's door, some have suggested that no trials be held and that the courts simply wait for time to take its toll.

All these circumstances now necessitate an especially careful and precise examination of testimonies by the courts. Proceedings have often terminated – in spite of very lengthy searches throughout the world for witnesses – with verdicts of acquittal because of possible errors in testimony, following the principle "*in dubio pro reo*" (when in doubt, favor the accused). As over the years the number of living witnesses has decreased and their memories have deteriorated, the proportion of acquittals in forthcoming cases will undoubtedly increase.

The fall of the Berlin Wall and the incorporation of the German Democratic Republic into the Federal Republic did not lead to identification or prosecution of East Germans now under the jurisdiction of the Central Office. The unified German government was more interested in trying former East German Communist Party leaders and former Berlin Wall guards responsible for the killing of East Germans attempting to escape than in prosecuting aged pensioners with a Nazi past.

As of 2004, the Central Office had 35 suspected Nazi war criminals under review. In 2003, two new indictments were filed for murder, and these were the only murder charges outstanding against former Nazis or collaborators anywhere in the world.

Chances of obtaining additional convictions, moreover, remain small, for reasons apart from failing memories. As the Canadian historian Rebecca Wittmann has pointed out, the conservative German judiciary has always been loath to convict aging German pensioners for wartime acts. A prominent example is the case of Friedrich Engel, a former Nazi SS offi-

cer known as the Butcher of Genoa, for his part in the wartime massacre of 59 Italian POWs. In 2002, a Hamburg court found Engel guilty of murder and sentenced him to seven years' imprisonment. In 2004, however, Germany's Federal Court of Justice threw out the conviction. Although the appellate court agreed that Engel ordered the execution, it held that the charge of murder had not been sufficiently proven and would have required a retrial which would not take place because of Engel's advanced age. In 2006, Engel died of natural causes at age 97 in Hamburg.

Austria. Despite the proclamations and claims of government circles in Austria about the desire to eradicate traces of Nazism and antisemitism from the country, the acts of the Austrian courts attest to the opposite. Only isolated trials against Nazi criminals were held in Austria in the 1960s, and all the verdicts constituted a mockery of justice and law, to the point of arousing wrath the world over. Among those brought to trial were Franz Novak, an SS member and aide to Adolf Eichmann, who organized the transport of tens of thousands of Jews to the gas chambers (he was tried in 1964 and sentenced to eight years. A new trial was held in 1966 and he was acquitted. He was tried again in 1969 and sentenced to nine years and a fourth trial was held in 1972 when he was found guilty and sentenced to seven years); Franz Murer, the murderer of Vilna Jewry, who was acquitted by the court in Graz of a charge of murder and is free; Erich Raja Rajakowitsch, another of Eichmann's aides, responsible for sending tens of thousands of Dutch Jews to the death camps, who was sentenced to two and a half years' imprisonment; and the Mauer brothers, criminals who committed atrocities and murdered the Jews of the city of Stanislav, Poland (now in the Ukraine).

While Austria as of 2004 had 27 ongoing investigations, the only convictions obtained there have been those discussed in the preceding paragraph. In February 2006, Ephraim Zuroff of the *Simon Wiesenthal Center called Austria "a paradise for Nazi criminals" after failing to convince the Austrian government of Prime Minister Wolfgang Schuessel to take more active measures to investigate and prosecute suspected former Nazis still living in Austria.

Former United Nations Secretary-General Kurt Waldheim, who later became President of Austria, was known to have lied about his whereabouts during World War II (he served in Yugoslavia in the vicinity of the places where atrocities were committed). He was placed on the "Watch List" for Nazi War Criminals by the Department of Justice of the United States, but his personal responsibility for crimes has not been established by a Court of Law.

Punishment of Criminals Tried in West Germany and Austria. In contrast to the period immediately after the war, when membership in a Nazi organization was sufficient for a prima facie case, current German criminal law stipulates that proof must be given that an individual defendant committed acts of murder or was an accomplice to such acts. The Federal Republic's Justice Ministry did not adopt any of the international criminal provisions and chose instead to try Nazi criminals under the existing pre-Nazi German penal code that had been established in 1871. Although it was still possible to find Jewish eyewitnesses to testify against low-ranking Nazis, it was almost impossible to do so in the case of high-ranking officials, those who gave the commands. Jews were seldom in direct, eyewitness contact with the leaders, merely with the lower-level officials who operated in the vicinity of Jews. Thus, it was only on the basis of testimony given by accomplices or documents from the period that they could be brought to trial, and these were often unavailable or nonexistent. The verdicts of trials against accused Nazi criminals in West Germany, and even more so in Austria in the 1950s, often reflected the tendency to acquit them or spare them severe punishment on the ground that they had committed their criminal acts out of "an error of conscience." Defendants were tried as either perpetrators of or accomplices to murder; they could not be tried for manslaughter after 1960, as noted above, because of the 15-year statute of limitations on manslaughter. There was a 20-year limitation on charges of murder, which was hotly debated throughout the 1960s and the 1970s but was ultimately never invoked vis-à-vis Nazi crimes. Defendants who were convicted were largely convicted as accomplices, because in order to convict them as perpetrators (earning an automatic life sentence) the prosecution had to show their inner motivations. Elements of inner motivation included lust for killing, sexual drive for killing, cruelty, treachery, base motives (defined in Nazi trials as racial hatred, and very hard to prove). Above all, the prosecution had to prove the individual initiative of the defendant in order to get a conviction of murder. This led to a strong focus on defendants who committed brutal acts in excess of their orders. The "just following orders" defense had already been thrown out at Nuremberg, as it had been proven there that no Nazi or SS officer or enlisted man had ever been punished or even investigated for refusing to carry out these kinds of orders.

Despite the substantial amounts of documentary material and testimony presented against them, many of the criminals convicted nonetheless received sentences that did not stand in any reasonable proportion to the extent of their crimes. Tens of thousands of other defendants enjoyed the immunity afforded by the German statute of limitations, twice extended. Prior to the 1979 amendment it was only 30 years in the case of murder. The reasons for this leniency included the fact that many German and Austrian judges or jurors themselves served the Nazi regime and some of them had been members of the Party. Even those who were not Nazis were not inclined to mete out severe punishments to their neighbors. The indifference of the bulk of the German and Austrian public to the question of Nazi criminals also played a role in this matter.

Various circles in Germany and a large part of the German press protested more than once against the absurdity of the light punishments or acquittals of the criminals in comparison to punishments meted out to ordinary thieves, murderers, and others. In contrast, the voices of Nazi sympathiz-

ers encouraged the acquittals and the lenient sentences. The response to the German broadcast of the American television docudrama *Holocaust* in 1978, and to growing international pressure, led West Germany to decide not to invoke the statute of limitations on crimes of murder committed during the Holocaust.

Nevertheless, as discussed above, the overly strict legalistic approach adopted by German judges and the lack of political will or popular support to continue investigations and prosecutions of aged Nazis, has resulted in the failure to bring many Nazis to justice. As Rebecca Wittmann observes, "[C]hanges to the law made it easier and easier for those who had the most power in the Nazi regime – the desktop murderers – to go free or escape trial, and in the end only the most sadistic – and exceptional – of Nazi criminals, usually camp guards, were tried and convicted of murder. On the one hand, there were thousands of trials. On the other hand, the continuities in the judicial personnel made the sentences and interpretation of the laws extremely favourable to the defendants…. The law was not the setting in which Germans would come to recognize the wholesale complicity of an entire generation."

OTHER LIBERATED COUNTRIES. In the years after the end of the war, many countries that had been occupied by the Germans conducted a large number of trials of Nazi occupiers and their collaborators, most in accordance with special legislation, but the number of defendants of German origin was relatively low. The reason is that the Nazi criminals, except those who had been captured before the end of the war, were not always found within the borders of the countries in which the crimes were committed. Through 1949, hundreds of Nazi criminals were extradited to the legal authorities of these countries, but others remained free because no extradition agreements were in place. Extradition activities continued only until 1950 when the cold war set in. Summarized below are several trials, held in countries that are of special interest from a Jewish perspective.

In Poland, trials of Nazi criminals were held from 1944 in accordance with special legislation. Special tribunals were established that functioned until 1946, after which the accused were tried by ordinary courts. During the two years 2,471 defendants were convicted (out of about 10,000); 631 were sentenced to death and the remainder to varying prison terms. Especially significant in their bearing on the Holocaust were the cases of Amon Goeth, commandant of the *Plaszow concentration camp, in 1946, who was sentenced to death; of Ludwig Fischer, governor of the Warsaw district, who was found guilty and executed in Poland in 1947; and Rudolf *Hoess, commandant of the *Auschwitz death camp (Hoess was hanged on a gallows outside the gas chamber at Auschwitz; the gallows is still there as a kind of memorial to his crimes); of SS General Jakob Sporrenberg, responsible for the *Majdanek death camp, in 1950, who was found guilty and executed; and of SS General Juergen *Stroop, suppressor of the Warsaw ghetto uprising, in 1951, who was also found guilty and executed. According to unofficial statistics Polish tribunals dealt with about 40,000 persons, both Germans and collaborators, accused of Nazi crimes.

In Czechoslovakia, the following, inter alia, were tried for war crimes: Dieter *Wisliceny, an aide to Eichmann; Karl *Frank, commander of the police and the SS in Czechoslovakia; Monsignor Josef Tiso, president of the Nazis' Slovak puppet state, and Alexander Mach and Anton Vasek, leading collaborators responsible for the annihilation of Jews in Slovakia, who were found guilty and hanged. According to available statistics, 19,000 persons were brought to trial for Nazi crimes and collaboration in Czechoslovakia, the vast majority of them local collaborators.

In Hungary, according to official statistics of the Ministry of Justice, up to March 1, 1948, the Hungarian government instituted proceedings against 39,514 persons, of which 31,472 had been completed and 8,042 were still pending in 1948 when the regime changed. The courts dismissed 5,954 cases, 9,245 cases resulted in not guilty verdicts, and 19,273 defendants were sentenced to prison terms. Three hundred twenty-two persons were sentenced to death and 149 actually executed. No official data is available for post-1948 trials. The swift execution of the Holocaust in Hungary – the Germans occupied the country in March 1944, Jews were ghettoized in April and 437,402 deported between May 15 and early July – was an important ingredient in the war crimes trials in that country. Among the minor war criminals were those of the "labor battalions" and people involved in the deportation of the Jews. As to major war criminals, a former prime minister, László Bárdossy, was held responsible for the deportation of Jews to *Kamenets-Podolski and for the *Novi Sad massacre; he was executed. Another former prime minister, Béla Imrédy, was charged with responsibility for, among other things, the anti-Jewish laws and for the destruction of Hungarian Jewry; he, too, was executed. Three leading men of the Ministry of Interior – the minister, Andor Jaross, and the state secretaries, László Baky and László Endre, who played a leading part in the destruction of Hungarian Jewry – were sentenced to death and executed. Practically all members of the Szálasi and Sztójay governments (including the prime ministers) were tried and sentenced to death.

In the Netherlands, most of the trials took place between 1948 and 1952. More than 200 accused collaborators were tried, as well as several Germans. Among the latter, the trials of the following should be mentioned: Hans Rauter, commander of the police and SS in the Netherlands, in 1948; Wilhelm Harster, commander of the SD in the Netherlands, who bore the chief responsibility for the deportation of Dutch Jews to the death camps, and Ferdinand aus der Fuenten, Harster's aide, also responsible for the deportation of the Jews, both in 1949. Rauter was sentenced to death, and after being denied a pardon, was executed on March 25, 1949. Harster was sentenced to twelve years imprisonment (he was later sentenced to an additional 15 years in another trial in Munich). Aus der Fuenten's original death sentence was later commuted to life imprisonment.

Many trials were also held in Denmark, Belgium (610), Norway (81), and France (2,345), among them those of Karl Oberg and Helmut Knochen, police and SS commanders responsible for the deportation of French Jews to the death camps. All in all, according to West German sources, about 80,000 Germans were convicted in all countries (including the then Soviet Union and East Germany) for committing crimes against humanity. The number of local collaborators reached the tens of thousands. For example, 13,600 collaborators were tried in Denmark alone. More than 90 percent of all collaborators were sentenced to fewer than four years' imprisonment.

THE SOVIET UNION. The Soviet Union played a major role in the prosecution of Nazi war criminals and collaborators in Eastern Europe. During the initial decade after the war, thousands of accused perpetrators were put on trial in the Soviet republics that had been under German occupation – although not always for their role in the murder of the Jews. Unfortunately, no exact figures exist on the number of such trials and their results, but from the information available in the post-Communist era, it is clear that the number of those punished is relatively high when compared to Western countries. Since numerous local Nazi collaborators in these areas actively participated in the mass murder of Jews, these trials and the transcripts, documents and secondary sources published in their wake are of great importance for Holocaust history. Unfortunately, the trials were not, and the publications are not, entirely free of Soviet propaganda, which diminishes their value. The Soviets' policy of denying or minimizing (depending on the era) the singularity of the fate of the Jews and their suffering during World War II must also be considered in evaluating these sources.

Many of those convicted by Soviet courts were executed for their crimes, while others were sentenced to lengthy terms in prison camps or in exile. Many were freed in the 1955 amnesty granted by Nikita Khrushchev. Trials were held in the Soviet Union of Soviet citizens who collaborated in occupied territories during the war. Inasmuch as official publications and documents on these trials are not available, information about them was gleaned primarily from publications of the Soviet information agency, Tass. Also implicated in these trials were collaborators who had previously been Soviet citizens, i.e., those who had fled from the Soviet army – both deserters and Soviet POWs who were recruited by the Germans and later found asylum in Western countries. Trials since 1961 have not dealt explicitly with the annihilation of Jews *qua* Jews, while in trials held previously, Jews were submerged in the broad category of Soviet citizens, in keeping with the Communist interpretation of the war. There were notable exceptions such as the October 1965 trial in Riga, Latvia that considered the annihilation of the Jews and the role of Latvian collaborators in it.

The breakup of the Soviet Union led to the opening of wartime archival materials in Moscow and other Russian cities, and newly discovered Soviet documents became quite useful in the prosecution of aging collaborators living in the United States. Russia itself did not hold any trials, and there was no call for such trials to be held in Russian territory. But there were unprosecuted Holocaust perpetrators still living in Latvia, Lithuania, Estonia, and Ukraine at the end of the twentieth century. Unfortunately, these countries showed little or no interest in investigating their local populace. Latvia and Lithuania did mount some investigations and Lithuania was able to obtain one conviction of a local collaborator in the 1990s.

Trials Outside Continental Europe

Trials also occurred outside continental Europe, at a distance from the site of the crime.

ISRAEL. In spite of all their problematic features and limitations, the trials recorded above can lay claim to notable achievements. A vast store of documentary material on the criminal policies of the Nazi regime toward the Jewish population and on the responsibility of the leaders for the crimes was collected by the Allies. Likewise, trial records and collections of documents from the main trials, in various languages, were also published. In all these trials, the specific persecution of Jews was considered as only one of the many facets of Nazi criminality, all of which were required to establish the responsibility of the accused for various violations of international law: crimes against peace, war crimes, and crimes against humanity. In contrast, the only trial that dealt specifically and comprehensively with the Final Solution was the *Eichmann trial held in Jerusalem in 1961–62. The Eichmann trial had important implications for the trials of Nazi criminals and their aides in those countries where such trials were still being conducted (West and East Germany, Austria, and the U.S.S.R.). In the wake of renewed interest in the prosecution of Holocaust perpetrators generated by the Eichmann trial, Simon *Wiesenthal opened an office in Vienna and relaunched his efforts to bring Nazi war criminals to justice. He had closed his first office in Linz in 1954 after the Cold War dampened Allied enthusiasm for the prosecution of Nazi war criminals in West Germany.

A second trial in Israel, that of death camp guard John Demjanjuk, was held more than a quarter of a century later, in 1988. Demjanjuk was tried as "Ivan the Terrible," who operated the gas chambers at Treblinka, but his original conviction and death sentence were overturned when doubt was cast on his identification as Ivan, doubt which also raised questions regarding the accuracy of survivor testimony. The Demjanjuk trial obviously had significantly less impact than the Eichmann trial, but by then the memory of the Holocaust was less dependent on trials and more institutionalized and broadly based on scholarship, writing and film. Demjanjuk, a naturalized American citizen, later returned to the United States after serving seven years in Israel for his role as a concentration camp guard (he was kept in prison while his case was being

appealed, the death sentence triggering an automatic Supreme Court appeal in Israel). Late in 2005, he was ordered deported from the United States for concealing his wartime past when applying for immigration and naturalization.

THE UNITED STATES. Since the passing of the most intense phase of the Cold War in the 1950s and early 1960s, and the Eichmann trial in 1961–62, the country that has been most active in pursuing Nazi war criminals has been the United States, where the presence of many Nazi war criminals and collaborators was first exposed in the mid-1970s. Because of doubts about whether they had jurisdiction to prosecute crimes committed overseas in which neither the suspects nor the victims were American citizens, American legal authorities decided to press only civil charges against suspected war criminals, for immigration and naturalization violations. Thus, in effect, Nazi war criminals have been tried for concealing their wartime activities when they applied to enter the United States and/or when they applied for U.S. citizenship. In 1978 Congress passed the Holtzman Amendment, sponsored by Representative Elizabeth *Holtzman of New York, that enabled the United States to deport aliens if they had been Nazi criminals or accessories to Nazi crimes; in 1979 the U.S. Justice Department established its Office of Special Investigations (OSI) for this purpose. As of 2006, OSI has won verdicts against more than one hundred Nazi war criminals, with more than eighty having been denaturalized and more than sixty having been removed or deported.

The Demjanjuk case was a matter of overreach by OSI, which did not pursue him merely as a camp guard, which was easily provable, but as Ivan the Terrible. After Demjanjuk's conviction in Israel, the Supreme Court of Israel overturned the verdict because of questions relating to an essential document supplied by the Soviet Union supposedly identifying him as the notorious Ivan, and Demjanuk was freed and returned to the United States. OSI moved against him again and won both denaturalization and deportation rulings. In December 2005, after exhausting all his appeals, the 85-year-old Demjanuk was ordered by an immigration judge to be deported from the United States, presumably to Ukraine, his place of birth.

A statistical summary of OSI's activities since 1979 shows the following results as of early 2006:

Persons whose denaturalization and/or removal have been sought: 132

Persons denaturalized or removed to date: 101 (81 denaturalized and 60 removed, of whom 19 had never become citizens)

Persons placed on the "watch list" for possible exclusion from the U.S.: nearly 70,000

Persons excluded at U.S. ports of entry: 170 (during 458 border stops or inquiries)

Cases in litigation: 20

Peak number of cases in litigation: 28 (in 1984)

Persons under investigation: 94

Preliminary inquiries underway: 167

Investigations opened to date: 1,517

Investigations closed to date: 1,423

[Emmanuel Brand / Rebecca Wittmann and Michael J. Bazyler (2nd ed.)]

THE UNITED KINGDOM. The presence of suspected Nazi war criminals in the United Kingdom was first exposed by Zuroff, who compiled an initial list of 17 suspects which was submitted to the British consul in Los Angeles by Rabbis Marvin Hier and Abraham Cooper on October 22, 1986 with a request that the U.K. government conduct a comprehensive investigation of the scope of the problem. Although the government initially refused to even consider any legal action in these cases, it ultimately agreed to the establishment of an official commission of inquiry following a series of exposés by Scottish Television on Nazi war criminals living in the U.K., pressure brought to bear by the All-Party War Crimes Group headed by Members of Parliament Merlyn Rees and Greville Janner, and groups such as the Wiesenthal Center.

On February 8, 1988, Home Secretary Douglas Hurd announced the appointment of an official War Crimes Inquiry, to be headed by Sir Thomas Hetherington and William Chalmers. The War Crimes Inquiry completed its report on June 16, 1989, and it was presented to Parliament in July 1989. The report confirmed that a number of persons implicated in Nazi crimes had managed to enter the U.K. after the war and were still alive, and recommended that legislation be introduced to give domestic courts jurisdiction over "acts of murder and manslaughter, or culpable homicide" committed as war crimes in Germany or in German-occupied territory during World War II by persons found in the United Kingdom. "Consideration should be given," it stated, to prosecution "in three cases in which there appears to us to be a realistic prospect of conviction on the evidence already available." Other cases, the report stated, merited investigation.

The proposed legislation twice passed in the House of Commons only to be rejected by the House of Lords. It became law on May 10, 1991, after it passed the Commons a third time, enabling U.K. courts to try British citizens and residents for murder and other culpable homicides committed between 1933 and 1945 in Germany and German-occupied territory. Later in 1991, war crimes units were set up in the Crown Prosecution Service and the Metropolitan Police (New Scotland Yard).

On July 13, 1995, the British government instituted its first prosecution, a criminal case brought against Semyon Serafimovich, the alleged former chief of police in the city of Mir, Byelorussia (Belarus), for complicity in the mass murder of Jews in 1941 and 1942. The case had originally been expected to go to trial in 1996. At the committal hearing, the prosecution's key witness was Oswald Rufeisen, a Jew who, while masquerading as a Pole, had actually worked for a time as an interpreter for Serafimovich. (Rufeisen, who saved the lives of several hundred Jews in Mir by tipping them off to the planned liquidation of the community, converted to Catholi-

cism after the war and settled in Israel, where he was known as Brother Daniel. He died there on July 30, 1998). On January 17, 1997, however, Serafimovich was adjudged by the court mentally incompetent to stand trial, reportedly on the basis of Alzheimer's disease. He died in hospital seven months later, on August 7, 1997.

On September 26, 1997, the government made its second arrest, taking into custody Anthony (Andrzej) Sawoniuk, 76, of East London. Sawoniuk was charged with murdering three unnamed Jewish women and two named Jewish men in 1942 in the vicinity of the town of Domachevo, Byelorussia (now in Poland), while serving as deputy commander of the *Schutzmannschaft* in Domachevo. Committal hearings began in London on April 20, 1998. On May 29, 1998, magistrate Graham Parkinson committed Sawoniuk for trial on four of the five charges brought by the government, and granted him bail. The fifth charge failed because the necessary witness was unable to travel from Poland to testify. The defense conceded that there was sufficient evidence for indictment with respect to three of the charges. In April 1999, at the conclusion of an Old Bailey trial, Sawoniuk was convicted of multiple murders and was sentenced to two life terms. On February 10, 2000, a three-judge panel of the Court of Appeal unanimously affirmed the conviction, rejecting Sawoniuk's contention that it was impossible to obtain a fair trial on charges involving events of so long ago. Sawoniuk died in a Norwich prison more than five years later, in November 2005.

At the conclusion of the Sawoniuk trial, Scotland Yard announced that the War Crimes Unit, which had once employed eleven police officers, two historians and a support staff, was being scaled down to a small staff to conclude its work, and that any new allegations received would be investigated by Scotland Yard's Organised Crime Group. On October 13, 1999, Scotland Yard announced that it had been advised by the Crown Prosecution Service that there was insufficient evidence to mount a prosecution in the one remaining case that it had referred to the CPS under the War Crimes Act of 1991. The same day, a Scotland Yard spokesperson announced that in light of the CPS's decision in the case, all of the War Crimes Unit's inquiries had now been exhausted and the unit would be shut down, and by year's end it was closed.

Ironically, the case which had been instrumental in convincing the British government to take legal action against the Nazi war criminals in the U.K. – that of Lithuanian police battalion officer Anton Gecas (Antanas Gecevicius) of Edinburgh, whose unit murdered thousands of Jews in Lithuania and Belarus – was never brought to trial. Gecas had worked for British intelligence following his arrival in the U.K., a factor that apparently influenced the authorities. The Lithuanian government sought Gecas' extradition, but he died in 2001 before he could be sent to Vilnius for trial.

CANADA. In April 1987, special units were set up within the Canadian Justice Department and the Royal Canadian Mounted Police to handle war crimes cases.

In September 1987, Canada's criminal code was amended to allow prosecution of persons implicated in war crimes and crimes against humanity committed anywhere outside Canada at any time before or after the law's enactment. The legislation received Royal Assent on September 16, 1987. This amendment was possible despite the fact that the Canadian Constitution's Charter of Rights and Freedoms, adopted in 1982, contains a provision, Section 11(g), barring the enactment of ex post facto criminal legislation, because the same section allows conviction for acts or omissions that were criminal "according to the general principles of law recognized by the community of nations."

During the period 1987 through 1994, six proceedings were initiated, four of them criminal cases. Only the two civil cases were successful. It was the 1994 decision in the case of the Hungarian gendarmerie commander Imre Finta, in which his defense of "superior orders" was accepted by the Supreme Court of Ontario, that ultimately forced the Canadian government to switch to the model employed by the United States. Thus on January 31, 1995, the Canadian government announced that it would henceforth emphasize the bringing of civil cases – citizenship revocation and deportation actions – rather than criminal prosecutions, since all previous criminal cases had been unsuccessful. This change meant that Canadian prosecutors would now be proceeding much as the U.S. Justice Department's Office of Special Investigations had since its inception in 1979. As of early 2005, a total of 21 civil cases have been brought with the following results: eight denaturalizations; two cases in which defendants voluntarily left Canada; three cases lost by the government. None of those denaturalized has yet been removed from the country.

AUSTRALIA. The presence in Australia of Nazi war criminals was first exposed in April 1986 by journalist Mark Aarons. In response the government established an official commission of inquiry, headed by retired civil servant Andrew C. Menzies, which confirmed the suspicions raised by Aarons and others. These others included the Wiesenthal Center, which submitted to the Australian government on September 1, 1986 a list of forty suspects known to have emigrated to Australia. In April 1987, the authorities established a Special Investigations Unit (SIU) in the federal Attorney-General's Department to handle these cases. More importantly, in January 1989, the Australian War Crimes Act of 1945 was amended to permit the prosecution in ordinary Australian courts, rather than military tribunals, of persons who committed war crimes outside the country during World War II.

The government closed down the SIU on June 30, 1992, despite its being clear that the problem of Nazi criminals in Australia had hardly been solved. In fact, at that point, 841 persons had been investigated (of whom 542 had been located) but only three had been brought to trial, none of whom was convicted.

Subsequently, additional allegations against suspected Nazi war criminals living in Australia were raised, primarily

by Zuroff, and extradition requests for two Australian residents accused of Nazi crimes were submitted, one by Latvia (for Arajs Kommando officer Konrad Kalejs) and one by Hungary (for the soldier Karoly Zentai). As of early 2006, however, Australia had failed to take successful legal action against a single Holocaust perpetrator living in the country.

Cancellation of Pardons Granted to Holocaust Perpetrators. One of the byproducts of the efforts to bring Nazi war criminals to justice has been the attempt to prevent the granting of pardons and "rehabilitations" to convicted Nazi war criminals. Following the demise and dismemberment of the Soviet Union, each of the former Soviet Baltic republics launched an extensive rehabilitation program that included legal pardons and generous financial compensation for those considered illegally convicted by Soviet courts. Even though Nazi war criminals were not supposed to be eligible for such pardons, in practice at least dozens of such criminals were rehabilitated in Lithuania and Latvia. The Simon Wiesenthal Center exposed this process in Lithuania and Latvia and played a leading role in the efforts to cancel the pardons. So far, over 160 pardons for Nazi-era crimes have been cancelled in Lithuania and two in Latvia thanks to these efforts.

[Michael Berenbaum (2nd ed.)]

The Impact of the Trials

After 1958, and especially after the capture and trial of Adolf Eichmann, a change became noticeable in the pursuit of Nazi criminals. In Germany and in other countries, investigations were renewed against a number of Nazis who had long ceased to be of official interest; the search for Nazi criminals who had thus far succeeded in avoiding imprisonment was intensified; the possibilities for Nazis to exploit the rights of asylum in other countries were diminished; there was an increased awareness that the crimes of the Nazis must not be forgotten and that the criminals must be punished in order to prevent a recurrence of the crimes. Although the sentences meted out to Nazi criminals in most of the trials in West Germany, and especially in Austria, were in no way proportionate to the crimes (if proportion were at all possible), the careful preparation of the trials by the prosecution and the openness and thoroughness of the substantiated verdicts, based, inter alia, on testimony given by Jewish victims, resulted in their contributing significantly to the research of Holocaust history for the education of the German people, and especially German youth.

[Emmanuel Brand]

The investigation of Nazi crimes has remained a controversial chapter of postwar German history, both in private discussion and public debate. All nuances of opinion are represented, starting with the reproach of "fouling one's own nest" from right-wing, neo-Fascist, neo-Nazi circles, through the widespread criticism heard in Germany and elsewhere (and not only in Eastern Europe) that the investigation of Nazi crimes was, from the outset, carried out only half-heartedly, and ending with the repeatedly voiced opinion that people should try to forget what happened in those wretched times. Martin Hirsch, a former German federal judge, has said about the reproach of "mud-slinging" that he finds it shocking that the same people who "fouled the nest" in those days in such a terrible way should now level this accusation against those who try to cleanse it.

Oftentimes, trials in the latter years of the twentieth century had an unintended disquieting impact on the societies in which they were held. In France, Klaus Barbie, the former head of the Gestapo in Lyon – known as the "Butcher of Lyon" – was brought to trial after a decade of work by Nazi hunters Serge and Beate *Klarsfeld. French politicians had preferred to ignore the issue, as it once again raised questions about Vichy France and the participation in its government by postwar French politicians. Barbie stood trial in Lyon between May 11 and July 4, 1987. The evidence brought exposed the cooperation between fleeing SS men and Allied intelligence services (Barbie had worked for the Americans after the war, and they had helped him escape prosecution). The defense contested the moral standing of those who tried Barbie and the discrepancies in memory some four decades after the fact between resistance leaders and Jews. Barbie was found guilty but the trial was less than a clear success in the battle for memory.

Another French trial, that of Paul Touvier, was also disruptive to French self-perception. Touvier had been a high-ranking officer in the Vichy government. Convicted of collaboration in 1946 and sentenced to death, he went into hiding with the assistance of the Roman Catholic Church. In 1967 there was an attempt to clear his record, but it backfired as resistance veterans and Jews demanded that he be tried. He then disappeared, certainly not unassisted. He was tried and found not guilty because he had been an agent of Vichy France, but the outrage that greeted the verdict led to an appeal which overturned the verdict and Touvier was found guilty, the first Frenchmen to be found guilty of crimes against humanity.

The trial of Maurice Papon, another high-ranking functionary of the Vichy regime, was held in 1997 for his role in the deportation of the Jewish men, women and children from Bordeaux. A high-ranking civil servant in postwar France – he was chief of the Paris police and eventually became a minister in the cabinet of President Valery Giscard d'Estaing – Papon was found guilty of complicity in crimes against humanity and sentenced to ten years' imprisonment. (While Papon was chief of police, he was responsible for the murder of Algerian demonstrators – the number is disputed – in 1961.) He was released in 2002 on grounds of ill health and was still living as of early 2006.

No trial was held for Vichy police chief René Bosquet, who was finally indicted after being protected from prosecution for years. He was assassinated in 1993 by a deranged assailant shortly before his trial was scheduled to begin.

Ongoing Investigations

Zuroff is the last of the Nazi hunters. He has brought considerable pressure to bear on various governments, especially fol-

lowing the demise of the Soviet Union and the fall of Communism. Among his important initiatives has been "Operation Last Chance," a joint project of the Simon Wiesenthal Center and the Targum Shlishi Foundation of Miami, founded by philanthropist Aryeh Rubin, which offers financial rewards for information that will facilitate the prosecution and punishment of Holocaust perpetrators. Besides leading to the issuing of three arrest warrants, two extradition requests, and dozens of new investigations, the project, which by 2005 had been launched in nine countries (Germany, Austria, Lithuania, Latvia, Estonia, Poland, Romania, Croatia, and Hungary), raised public consciousness in these countries regarding the complicity of the local population in the mass murder of Jews during World War II by employing media ads that focused on this issue.

Each year the Wiesenthal Center issues an Annual Status Report on the investigation and prosecution of Nazi war criminals worldwide. In 2005 it reported that the investigation and prosecution of Nazi war criminals continued in sixteen countries, among them countries such as Germany, Austria, Lithuania, Latvia and Poland – where the crimes of the Holocaust were committed – and others, like the United States, Britain, Canada and Australia, which afforded postwar havens to Holocaust perpetrators. From April 1, 2004 until March 31, 2005, five convictions of Nazi war criminals were obtained, all in the United States. Most of those convicted served as armed guards in death camps and/or concentration camps in Poland and Germany. The number of convictions is lower by two than the number achieved during the previous year. From January 1, 2001 through March 31, 2005, a total of thirty-two convictions of Nazi war criminals were obtained all over the world. Of these convictions, 23 were in the United States, where the violations are civil, relating to providing false information on visa applications rather than to the actual crime, with the others in Germany (3), Canada (3), Poland (1), France (1) and Lithuania (1).

During the period from (April) 2004 through March 2005, legal proceedings were initiated against at least six Nazi war criminals in four countries – three in the United States, one in Hungary, one in Denmark and one in Lithuania. The number of indictments obtained in this period is lower by four than the figure achieved during the previous year. From January 1, 2001, through March 1, 2005, 33 new indictments have been submitted against Nazi war criminals, the majority in the United States. New investigations were initiated in eleven countries against at least 663 suspected Holocaust perpetrators. In 2005, there were ongoing investigations against more than 1,252 suspected Nazi war criminals in 16 countries, with the largest number of cases being investigated in Poland (450), the United States (246), Austria (199), Canada (190), Latvia (58) and Germany (46).

The Ukraine will not address the issue of Holocaust perpetrators, and Austria is unwilling to prosecute Milivoj Ašner, who served as police chief of Pozega, Croatia during World War II and played an important role in the persecution and deportation to concentration camps, where they were murdered, of hundreds of Jews, Serbs and Gypsies. Sweden and Norway no longer investigate Nazi war criminals due to existing statutes of limitation.

[Michael Berenbaum (2nd ed.)]

Implications for the Twenty-First Century

There is much about international criminal law in the twenty-first century that tends to be taken for granted: ousted tyrants such as Slobodan Milosevic, of Serbia and Yugoslavia, and Saddam Hussein, of Iraq, being brought to trial at the bar of justice; tribunals of various sorts springing up as the result of human rights violations in places such as Rwanda, Sierra Leone, and Cambodia; perpetrators of Nazi-era atrocities being hauled before courts in the United States, stripped of their citizenship and deported; and the existence of a permanent International Criminal Court, with wide-ranging jurisdiction to try the most serious offences in the international legal lexicon, though its authority is not accepted by all. Additionally, terms such as "crimes against humanity," "genocide," and "war crimes" have become part and parcel of the daily vocabulary, and are encountered with great frequency. In various ways, the world has become blasé about such matters – to the extent that it is often forgotten what a recent phenomenon all of this is. New generations growing up in the modern era could easily be forgiven for thinking that it has always been this way.

Yet, as recently as 1945, it would have been unthinkable. On November 20 of that year, Sir Geoffrey Lawrence of the British Court of Appeals, presiding over the opening of the International Military Tribunal trial of major war criminals at Nuremberg, solemnly intoned, "The trial which is now about to begin is unique in the history of the jurisprudence of the world…"

The uniqueness began with the very fact that there were trials at all. Thanks in large measure to President Truman and Justice Robert Jackson, who took leave from the Supreme Court of the United States to be the chief prosecutor, the British view favoring a "political solution" (translation: just take them out, put guns to their heads and shoot them) did not prevail.

The U.S. rationale was threefold: precedents had to be established in international law to place the relevant legal principles as well as the process of justice on a firm, well-established footing, and to send an unequivocal message to future would-be Hitlers of the fate that potentially awaited them; a high moral plane had to be established, in marked contrast to the wanton brutality practiced by the defendants, signifying that civilized society would not respond in kind; and a comprehensive historical record had to be collated systematically for the benefit of future generations, thereby enabling them to learn the lessons of the Nazi era.

Besides being the first international tribunal in history to try criminal offences, the IMT at Nuremberg also established two other precedents of a procedural nature: "Crimes… are

committed by men, not by abstract entities…," thereby resoundingly affirming the charges against the leaders of the Nazi regime, who argued that since, under international law, only states had legal personality, it was the state of Germany that should have been tried. In the process, too, it was made abundantly clear that heads of state, heads of government and other national leaders could not hide behind claims of immunity in an international tribunal.

At the substantive level, Nuremberg added two major criminal offenses to the canons of international law: planning and conducting aggressive warfare, the culmination of the work of some three decades of whittling away at the unfettered right of states to declare and conduct wars; and crimes against humanity, contemplating acts such as extermination, enslavement, and other inhumane acts directed against civilian populations. The body of international law dealing with such crimes which was thereby established on a sound foundation was further enlarged in 1948, with the adoption of the Genocide Convention, directed against acts intended to wipe out whole populations, defined by race, religion, nationality, or ethnicity.

The precedents thus created have reverberated into the twenty-first century. The tribunals for Rwanda and Yugoslavia were based directly on the Nuremberg tribunals, while seeking to improve on the original model, for instance by conferring jurisdiction to investigate and prosecute alleged crimes by all sides to the conflict, not just the losers. In addition, other models have developed. National courts exercise jurisdiction to try the very same crimes referred to above, most famously in the trial of Adolf Eichmann in Jerusalem over his central role in the Final Solution. In Sierra Leone, what was established was a hybrid tribunal, combining national as well as international elements. In the "Pinochet model" a Spanish magistrate almost succeeded in having the former Chilean dictator extradited from Britain to face trial over atrocities committed by his regime. In 1998, the Rome Statute creating the new, permanent International Criminal Court was adopted by 120 nations, thus addressing yet another shortcoming of Nuremberg, namely the ephemeral nature of the tribunals. (It should be noted that the United States has refused to ratify the Rome Statute and thus exempts itself from the International Criminal Court's jurisdiction, while Israel, which has signed on to the Court, is currently refusing to obey a ruling against it declaring illegal the separation wall it is building on occupied Palestinian territory.)

The evolution of the procedural dimension has been matched at a substantive level. Thus, although crimes against humanity and genocide lie at the heart of prosecutions of large-scale human rights violations, both have evolved over the decades. For instance, the modern definition of crimes against humanity expressly includes rape. And, in patrilineal societies, rape may also constitute genocide, where it takes place across ethnic lines, with the aim of producing offspring which take on the father's ethnicity and prevent the mother's group from reproducing itself.

The Nuremberg model lay largely dormant for some 45 years. Beginning in the 1990s, however, prosecution of international crimes gained considerable momentum, to the extent that the world began to become a small and distinctly uncomfortable place for tyrants, or at least some of them. In this fashion, profound meaning began to be breathed into the remarks of Lord Justice Lawrence that followed his above-quoted opening: "… and it is of supreme importance to millions of people all over the globe." The revolution wrought by Nuremberg, and its abiding legacy, is indeed that.

WARENDORF, town in the former Prussian province of Westphalia, N.W. Germany, after 1945 in North Rhine-Westphalia. In the Middle Ages Jews from Warendorf are mentioned only once, in 1387 in Cologne. From the early 16th century many Jews settled in the bishopric of Muenster; they are first mentioned in Warendorf in 1553. After 1628, jurisdiction over the Jews in the bishopric of Muenster passed to the bishop, and under his protection a Jewish community gradually developed in Warendorf. It was one of the largest in the bishopric and remained its main community until the abolition of episcopal rule in 1802, as no Jews were allowed to reside in the city of Muenster until the Emancipation. Warendorf was the seat of the *Obervorgaenger* (elder) of the Muenster **Landjudenschaft*, founded in 1651, as well as of the Muenster **Landrabbiner* after the Muenster rabbinate had become separated from that of Cologne. The first *Landrabbiner* was Samuel Michel Essingen (1742), known as a disciple of Jonathan *Eybeschuetz. His successor was Michael Meyer Breslau of Hildesheim (1771–89), *Court Jew and mint supplier to the Muenster bishop; Michael Meyer was followed by his

son David Breslau (1790–1815). A synagogue is first mentioned in 1709; it was renovated in 1808 and 1897. The community of Warendorf owned a cemetery from 1773; after 1823 a new cemetery was acquired. From one or two Jewish families living in Warendorf, their number grew to 18 (88 persons) in 1803 when the bishopric came under Prussian rule. Since neighboring Muenster was now open to Jewish settlement, a number of Jews left Warendorf. The community later increased slightly. It numbered 99 in 1833; 55 in 1849; 85 in 1880; 43 in 1933; and 15 in 1939.

The synagogue was destroyed in 1938. The last six Jews from Warendorf who had not emigrated were deported, with other Jews of the Muenster region, to Riga on Dec. 13, 1941, and murdered there. A memorial to the martyrs was consecrated in the cemetery in 1970.

The community was not reconstituted after the war. In 1971 two Jews were living in the town. The synagogue building was used as a dwelling. A plaque commemorates the former synagogue.

WARFIELD, DAVID (1866–1951), U.S. actor. His roles ranged from a youthful burlesque, "Solomon Yankel," to a controversial portrayal of Shylock. His Jewish specialty was developed by David *Belasco into the role of Solomon Levi in *The Auctioneer* (1901) which Warfield played for three years, establishing the type of sentimental Jewish hero. Another of his long-playing roles was that of the German musician in *The Music Master*, a play which ran from 1903 to 1907, and again in 1917–18. In 1922 at the height of Warfield's popularity, Belasco produced *The Merchant of Venice*, and Warfield portrayed Shylock as a man crazed by persecution. The adverse criticism which greeted this interpretation was said to have influenced his retirement in 1924. Warfield was a collaborator in a volume of sentimental sketches, *Ghetto Silhouettes* (1902).

[Samuel L. Sumberg]

WARHAFTIG, ZERAH (1906–2002), lawyer and leader of the National Religious Party in Israel. Born in Volkovysk, Belorussia, Warhaftig became active in the Mizrachi movement and at the outbreak of World War II fled to Lithuania and, through Japan, to the United States, where he became deputy director of the Institute for Jewish Affairs of the *World Jewish Congress. In 1947 he settled in Palestine, became a member of the Va'ad Le'ummi, and in 1948 a member of the Provisional State Council, serving as one of the framers of its constitution. He was also a signatory of Israel's Declaration of Independence. In 1948 he set up and directed the Institution of Hebrew Law at the Ministry of Justice. From 1948 to 1963 he was a lecturer of law at the Hebrew University. Warhaftig was repeatedly elected to the Knesset on the Ha-Po'el ha-Mizrachi (later *National Religious Party) list and served in the Israel government as minister of religious affairs from 1960. In 1970, Warhaftig was elected chairman of the *curatorium* of Bar Ilan University. In 1983 he was awarded the Israel Prize for special contribution to law and society.

Warhaftig published articles on religious and political affairs and, while in the United States during World War II, published in English *Starvation over Europe* (1943), *Relief and Rehabilitation* (1944), and, after the war, *Uprooted* (1946). His works in Hebrew are *Ha-Ḥazakah ba-Mishpat ha-Ivri* ("Presumption in Hebrew Law," 1954) and *Al ha-Shipput ha-Rabbani be-Yisrael* ("Rabbinical Judgment in Israel," 1955).

[Joshua Gutmann]

WARKA, hasidic dynasty in Poland. Its founder, ISAAC (KALISH) OF WARKA (1779–1848), became one of the most noted *ẓaddikim* in central Poland in the first half of the 19th century. Born at Zolochev, after his marriage at the age of 14 he moved to Zarek (Bremberg). He officiated as rabbi in Gowanczow and then in the village of Ruda. His teacher, David of *Lelov (Lelow), would travel with him to the "courts" of *ẓaddikim*, and in this way he became a student in the *bet midrash* of *Jacob Isaac ha-Ḥozeh (the "Seer") of Lublin, and a disciple of *Simḥah Bunem of Przysucha and his son, Abraham Moses. After the early death of the latter in 1829, Isaac settled in *Przysucha, becoming the acknowledged leader of the Ḥasidim there. Some time later he moved to the small town of Warka (Warsaw district), where he gathered many disciples round him, including *ẓaddikim* and *admorim* such as Jacob Aryeh of *Radzymin, Dov Baer (Berish) of Biala, Shraga Feivel of Goerits (Gorzyca), Jehiel of *Aleksandrow, and others. He was also a friend of Menahem Mendel of *Kotsk and Mordecai Joseph of *Izbica Lubelska, and often visited Israel *Ruzhin and Meir of Peremyshlyany.

Isaac of Warka negotiated with influential people on behalf of the Jews to obtain the abrogation of hostile decrees, including the conscription of young Jews for military service (*Cantonists; 1827), and the prohibition forbidding the Jews to wear their traditional dress (1845). To achieve these he attempted to invoke the assistance of Sir Moses *Montefiore and the British government in influencing Czar *Nicholas I. In 1846 Isaac met Sir Moses when the latter passed through Poland.

Because of his activities Isaac was given the appellation "Lover of Israel." A characteristic story relates that Menahem Mendel of Kotsk sought Isaac of Warka in the upper world after the latter's death, and passed through the *heikhalot* (upper halls) until he found him in a field by a river, where

he was standing, bent, leaning on his stick and looking at the river – made by the tears of the Jewish people – unable to move from there. Tales concerning him and his novellae on the Torah were collected in *Ohel Yiẓḥak* (Piotrkow, 1814) by Meir Walden, and in *Huẓẓak Ḥen* (1947), by Noah Weintraub.

Isaac of Warka's son, JACOB DAVID OF AMSHINOV (1814–1878), founded the Amshinov dynasty. Born at Zarek, he was a pupil of Menahem Mendel of Kotsk. After his marriage he lived at Gur (*Gora Kalwaria), and later at Przysucha, becoming in 1849 the leader of a large group of Ḥasidim at Amshinov. Like his father he was active in Jewish affairs. Following enactment of the law prohibiting Jews from growing a beard and sidelocks, he was put in prison with R. Isaac Meir of Gur on the charge of inciting the masses to revolt against the government. However, he succeeded in obtaining revocation of the decree and received a personal certificate of protection from a minister in Warsaw, forbidding anybody to harm him. He died in Italy where he had gone for medical treatment. His son MENAHEM (1860–1918), continued to head the Amshinov dynasty for 40 years.

The second son of Isaac, MENAHEM MENDEL OF WARKA (1819–1868), continued the Warka ḥasidic dynasty. He was known as the "silent *ẓaddik*." In contrast to his brother Jacob David, in his youth he was not very studious. After his father's death he refused to take over the leadership. However, Shraga Feivel of Goerits, who substituted for him, died six months later, and Menahem Mendel then became the leader against his will. He usually secluded himself and conversed and taught little on Torah, mainly speaking briefly and by implication. Most of the time he spent in silence in accordance with the scriptural saying, "To thee silence is praise" (Ps. 65:2). In Menahem Mendel's opinion, one should not speak of the Torah unless one is overflowing with it. The real cry of prayer is worship within the heart, without uttering a sound, and on this point he would preach with quotations from many biblical verses. In his words, man possesses three fine things: an erect bow, a silent shout, and a motionless dance. From what his pupils related it would appear that silence was his mode of speech. Tales describe meetings between him and contemporary *ẓaddikim* where not a word was uttered, all sitting in complete silence. His pupil, Dov Baer of Biala, testified that he sat with the rabbi and all his Ḥasidim around the table in dead silence: "I felt that all my blood vessels were about to burst, so closely did he examine me, but I passed the test and gave replies to all his questions." Menahem Mendel was even gay in his silence, preaching forgetfulness of the cares of the morrow, and was given to strong drink, which in his opinion led to the love of God, and joy.

Menahem Mendel's son, SIMHAH BUNEM (1851–1907), emigrated to Ereẓ Israel in 1887. He was imprisoned by the Turks and expelled after spending some months in Tiberias. He went back to Poland, staying in Otwock, and returned to Ereẓ Israel in 1906. At first he lived in Jerusalem but settled in Tiberias shortly before his death.

WARNER, family of pioneers of the motion picture industry and founders of Warner Bros. Pictures, Inc. The Warners date their entrance into the industry from 1903, when they rented a vacant store in New Castle, Pennsylvania. There were nine children in this Polish immigrant family, but only four were active in the business: Harry, the eldest (1881–1958), born in Poland; Albert (1883–1967), born in Baltimore; Sam (1884–1927), and Jack, born in London, Ontario (1892–1978). As their enterprise prospered, the brothers opened more theaters. In 1912, they decided to produce films themselves. Sam became technical chief of the studio, Albert handled distribution, Harry was business head, and Jack, the showman, was in charge of production.

In 1917 they scored a coup by filming *My Four Years in Germany*, from the book by U.S. Ambassador James W. Gerard, who had been ordered home from Berlin. It was at that time one of the most significant pictures yet made.

In 1923 they became incorporated as Warner Brothers Pictures, Inc. By 1925 the company was a leader in the silent film business. That year they bought the Vitagraph Company, which owned an invention that synchronized sound with action, called Vitaphone. In 1927 Warner Brothers issued *The Jazz Singer*, thus marking the official debut of talking pictures and revolutionizing the industry.

During the 1930s the Warners acquired the Stanley Company of America, which controlled 250 cinema buildings. This guaranteed them an outlet for all their films. They set the scale for film musicals with the lavish *Gold Diggers* series and films built around "headline" news, such as *G-Men* (1935) and *China Clipper* (1936), and spectacles such as *A Midsummer Night's Dream* (1935) and *The Adventures of Robin Hood* (1938). They also used the screen for presenting social issues such as *The Life of Emile Zola* (1937) and *The Black Legion* (1937), which involved racial and religious bigotry.

In 1951 the company was forced to divest itself of its theaters after the film industry lost a 13-year suit brought by the U.S. Government on anti-trust charges. The Warner studios continued to be one of the leaders in Hollywood through the 1960s. Branching out into television, Warner has produced a wide variety of sitcoms and action series, such as *Maverick*; *Murphy Brown*; and *Lois and Clark*. By 1993 Warner Bros. was ranked as Hollywood's largest supplier of television programs. In 1995 Warner and the Tribune Company launched the WB television network, targeting the teenage viewing audience with such weekly series as *Buffy the Vampire Slayer* and *Dawson's Creek*. In the late 1990s Warner obtained the rights to the immensely popular *Harry Potter* novels and released four film adaptations between 2001 and 2005.

Acquisitions held by Warner include the television cartoons of Hanna-Barbera Productions; the TV and film holdings of Lorimar; and rights to the majority of the film library of Castle Rock Productions.

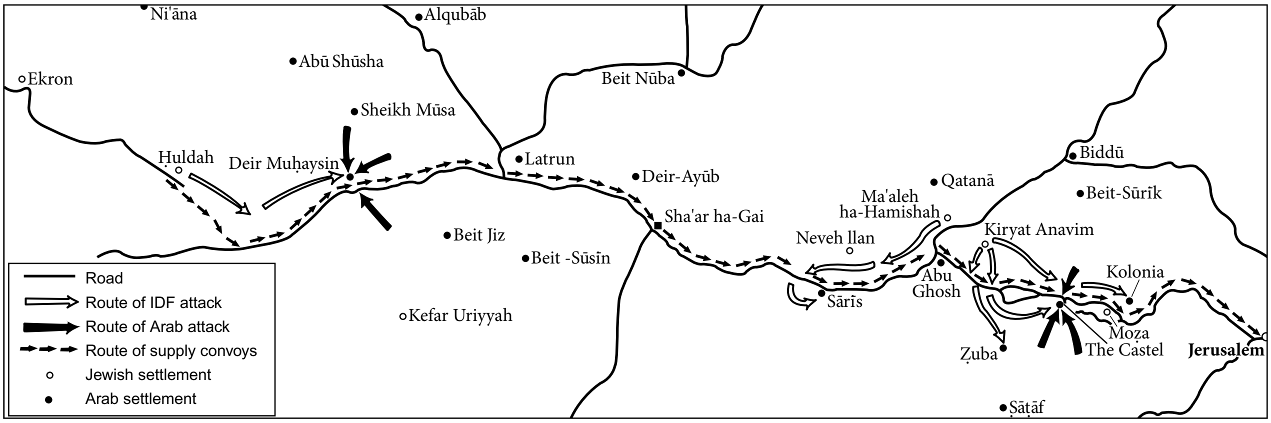
[Stewart Kampel / Ruth Beloff (2nd ed.)]

WAR OF INDEPENDENCE (Heb. מִלְחֶמֶת הָעַצְמָאוּת *Milḥemet ha-Aẓma'ut*, or מִלְחֶמֶת הַקּוֹמְמִיּוּת *Milḥemet ha-Komemiyyut*, or מִלְחֶמֶת הַשִּׁחְרוּר *Milḥemet ha-Shiḥrur* (the War of Liberation)), war waged by the Jews of Palestine for survival, freedom, and political independence against the Arabs, mainly from the neighboring countries, between the end of November 1947 and July 1949.

The war was divided into two distinct phases: the first began on Nov. 30, 1947, the day after the UN General Assembly adopted its resolution on the partition of Palestine, and ended on May 15, 1948, when the British forces and administration were withdrawn from the country; the second started on the day after the British evacuation and came to an end on July 20, 1949, when the last of the armistice agreements was signed (with Syria). In the first phase, the *yishuv* and its defense forces, organized in the *Haganah, were under attack by Palestinian Arabs, aided by irregular volunteers from Arab countries. In the second phase, the army of newly independent Israel – officially established on May 28 as the Israel Defense Forces (see *Israel, State of: Defense Forces) – fought primarily against regular troops from Egypt, Iraq, Transjordan, Syria, and Lebanon, who were supported by volunteer detachments from Saudi Arabia, Libya, and the Yemen. In both phases, the avowed purpose of the Arabs was to frustrate the UN partition resolution and prevent the establishment and consolidation of the Jewish state.

THE FIRST PHASE: NOVEMBER 30, 1947–MAY 14, 1948



The Jewish Forces

At the beginning of the first phase, Arab attacks were carried out by loosely organized bands led by representatives of the Palestine Arab political organizations. As early as October 1947, however, the *Arab League had instructed its member states to train volunteers and collect money and arms for the Palestine Arabs. The first Arab onslaughts were resisted by the mobilized units and active reserves of the Haganah, which consisted, in addition to headquarters, service units, and a small ordnance industry, of four battalions of *Palmaḥ, consisting of 2,100 men and women and 1,000 reserves (in October); Ḥish (Ḥeil Sadeh – field force or infantry), with 1,800 on active service and 10,000 reserves; and Ḥim (Ḥeil Mishmar – guard or garrison force), with 32,000 registered members, responsible for static defense. The Ḥish was organized mainly in area commands named after the region (e.g., Givati, Golani, Carmeli), which later developed into brigades. There were also the *Gadna, trained in auxiliary functions, who would later fill the ranks of the Palmaḥ and the Ḥish. On the eve of the war, the Haganah had in its secret arsenals over 15,000 rifles of various makes, a small quantity of light machine guns, and a few dozen medium machine guns and 3-inch mortars, as well as hand grenades, explosives, and Sten submachine guns manufactured in its clandestine workshops. There were also two other armed underground organizations that operated independently during the first phase: the IẒL (*Irgun Ẓeva'i Le'ummi), with 5,000 members at the beginning of the war, and Leḥi (*Loḥamei Ḥerut Israel), with 1,000 members.

Repelling the Arab Offensive: November 29, 1947–March 1948

From the start, the nature of the Arab offensives was determined by a number of factors: the existence of a considerable number of Jewish settlements in predominantly Arab areas, the mixed Arab-Jewish population of several cities, and Arab control of most of the hill region and of the major road arteries. The first attack took place on Nov. 30, 1947, when a Jewish bus was ambushed near Lydda. The next day, the Arab Higher Committee declared a general strike, and on December 2 an Arab mob attacked and destroyed the commercial center in Jerusalem. There was also Arab firing in Haifa and on the border between Tel Aviv and Jaffa. After Arab attacks, on December 10, on Jewish vehicles in the Negev and on the Jerusalem–Kefar Eẓyon road, Haganah and IẒL forces started to hit back at concentrations of Arab bands. During December, Arab- and Jewish-controlled areas were gradually demarcated; in the mixed cities, areas between Jewish and Arab residential quarters were evacuated and contested. In the battle for the roads, which was gaining in intensity, the Arabs had the upper hand, largely as a result of the attitude of the British forces, which were neutral in theory and pro-Arab in fact. For political reasons, 33 Jewish settlements, which according to the partition resolution were to be included in the Arab state, were not evacuated.

On January 10, a 900-man force of the Arab Liberation Army, commanded by Fawzī al-Qāwuqjī and trained on the other side of the border, attacked Kefar Szold and was repulsed. The following days were marked by attacks on isolated Jewish settlements in the Jerusalem and Hebron hills, Upper Galilee, and the Negev. A platoon of 35 men, on its way to reinforce the isolated Eẓyon bloc of settlements (Kefar Eẓyon, Massu'ot Yiẓḥak, Ein Ẓurim, and Revadim) was wiped out in a fierce engagement near Beit Nattīf. There were continual attacks against Jewish population centers and Jewish workers in enterprises employing both Arab and Jewish labor. Explosive charges were set off in Jewish areas of Haifa and Jerusalem; in the capital, the targets were the offices of *The Palestine Post* (February 1), Ben-Yehuda Street, one of the principal shopping thoroughfares (February 22), and *Jewish

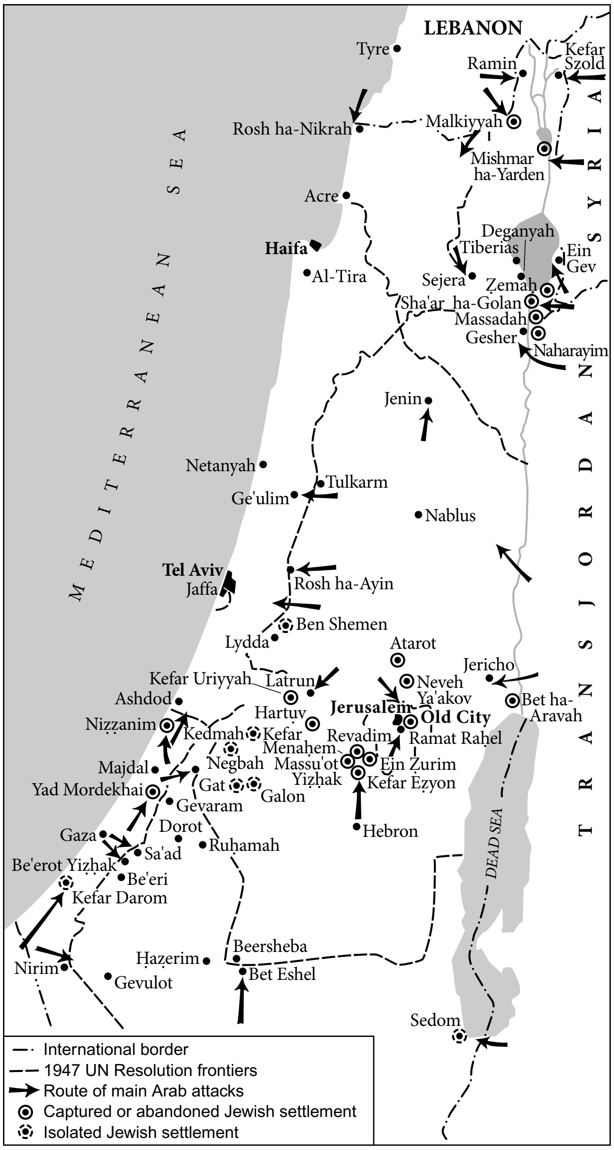
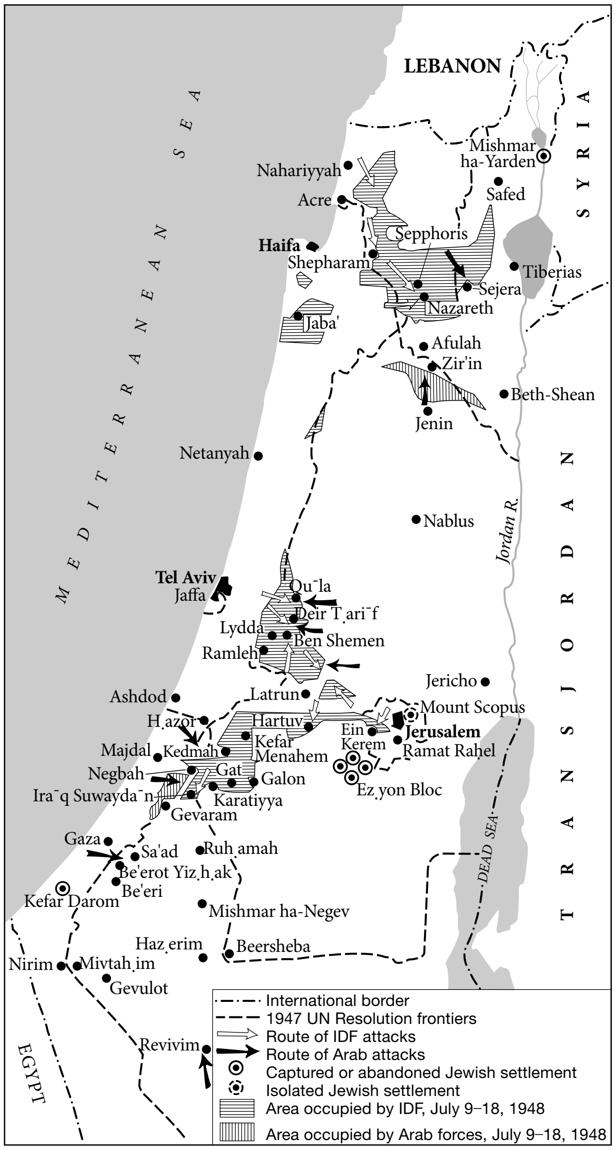
Agency headquarters (March 11). The outlying Jewish quarters in the southeastern part of Jerusalem were cut off from the center. On most of the roads, Jewish communications were maintained by means of armored vehicles and convoys, which left at odd hours, usually at night, and used circuitous routes. In March, Jewish traffic to several quarters of Jerusalem and on some of the country's principal roads came to an almost complete standstill.



On February 16, the Arab Liberation Army attacked Tirat Ẓevi and was forced to withdraw with heavy losses. In March, having failed to capture Jewish settlements, the Arab forces concentrated on the battle for the roads, while continuing their attacks on outlying districts in the mixed towns and on settlements in the north, the Jerusalem mountains, and the Negev. Nevertheless, a convoy of armored trucks succeeded in making the trip from Negbah to Gat, which had been cut off for a long period, and an Arab arms convoy was ambushed and destroyed near Kiryat Motzkin. In general, the Arabs scored considerable success in the battle for the roads: on March 26 Jewish traffic on the coastal road leading to the Negev came to a complete stop; a convoy on its way back to Jerusalem from the Eẓyon bloc was trapped near al-Nabī Dāniyāl and another, which tried to reach Yeḥi'am, was ambushed and wiped out.

Throughout this period, however, the Jewish defense forces made substantial progress in organization and training. By the end of March, 21,000 men aged 17–25 were under arms. The manufacture of antitank projectors, submachine guns, and explosives was greatly stepped up, and large quantities of light arms, purchased in Czechoslovakia, were expected to arrive. The *yishuv*'s air force consisted of 30 light planes for reconnaissance, transportation, and supply to isolated areas. The Arab forces – both the locally organized National Guard and the volunteers from the Arab states – were also growing.



Jewish Forces Take the Initiative: April 1948–May 15, 1948

The hour of military decision was fast approaching. The impending British evacuation made action imperative in order to gain control of the area allotted to the Jewish state and to improve the Jewish position in the face of the expected Arab invasion, while the growth of its strength made it possible for the Haganah to take the initiative. A comprehensive operational plan ("Plan D") had been adopted for execution in stages, depending upon the rate of British withdrawal and developments on the various fronts. The first objective was to open the road to Jerusalem. For this purpose Operation Naḥshon was planned; a force of 1,500 men was mobilized and equipped, in part with Czech arms which had been secretly landed on April 1. Two preparatory actions were carried out: the blowing up of the headquarters of Hasan Salāma, the Arab area commander, near Sarafand, and the capture of Qasṭal (Castel), an Arab village dominating the approaches to Jerusalem. Operation Naḥshon began on April 6, Haganah forces taking the Arab village of Ḥuldah, the Wadi al-Ṣarrār Camp, and Deir Muḥaysin (Beko'a). They encountered fierce opposition, especially on the Qasṭal hill, which changed hands several times until April 10, when the Arabs finally withdrew; on the previous day, the commander of the Arab forces in the Jerusalem area, ʿAbd al-Qādir al-Husseini, was killed in battle. By April 15, when Naḥshon came to an end, three large convoys carrying food and arms had reached Jerusalem.

Meanwhile the Arab Liberation Army, still under Qāwuqjī's command, had made another attempt to capture a Jewish settlement. On April 4 it had shelled Mishmar ha-Emek, following up with an infantry attack, which was beaten back. A second attack, next day, was halted by the intervention of British troops, and a cease-fire was proclaimed, during which the women and children were evacuated. At the end of the cease-fire, Haganah forces counterattacked, capturing several strongholds southeast of the village on April 12 and routing an Arab force which was trying to renew the attack. Qāwuqjī appealed for help to the commander of a battalion of Druze mercenaries encamped at Shfāʾ ʿAmr (Shefaram). This force attacked two strongholds east of Ramat Yoḥanan between April 12 and 14, but was repulsed with heavy losses and took no further part in the war. Qāwuqjī was now in danger of being cut off from his base, and he decided to withdraw to Jenin. The artillery at his disposal was transferred to Jeru-

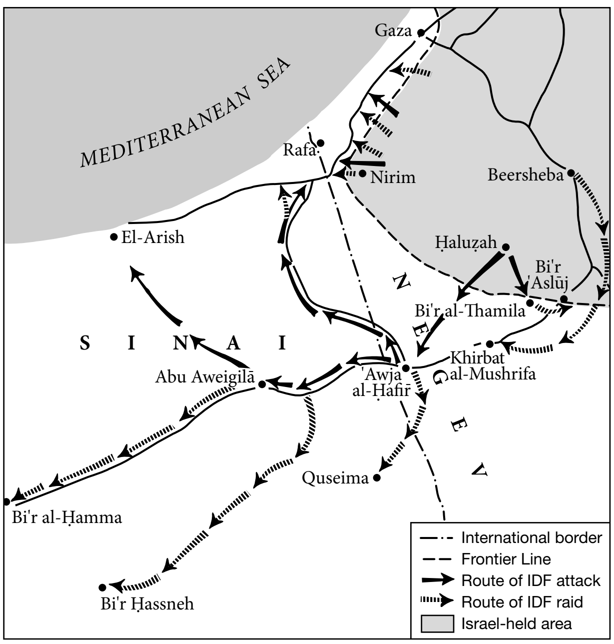
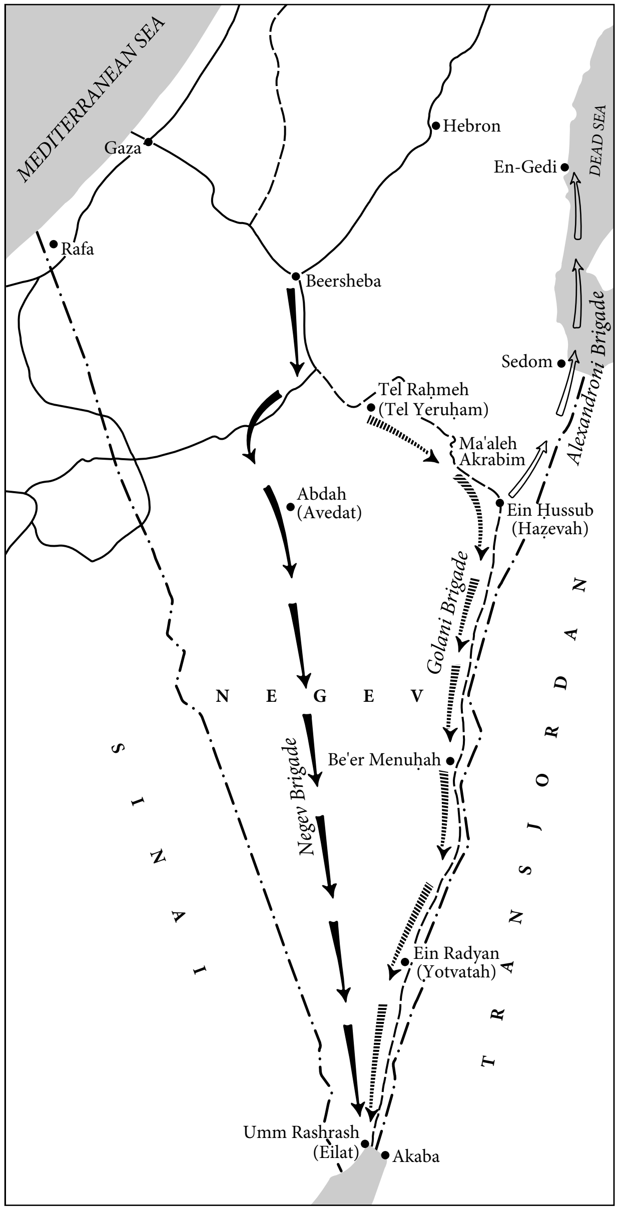
salem and at the beginning of May began shelling the Jewish quarters of the city.

The success of Naḥshon and the defeats inflicted on the Arabs at Mishmar ha-Emek and Ramat Yoḥanan encouraged the Haganah to continue the implementation of Plan D. On April 18, troops of the Golani area command (later the Golani Brigade) and the Palmaḥ cut in two the Arab part of Tiberias, where the Jewish quarter was under heavy attack. The Arabs decided to leave the town and were evacuated with British aid. On April 21, when the British started to concentrate their remaining forces in the Haifa port area, the battle for Haifa began. The Jewish forces captured it within 24 hours and most of the Arab inhabitants left, despite Jewish assurances that no harm would befall them if they stayed.

The capture of Tiberias and the opening of roads leading to eastern Galilee made it possible to reinforce the Haganah troops in "the finger of Galilee" at the northern tip of the country. On April 14, a Palmaḥ unit infiltrated into Safed, bolstering the defenses of the besieged Jewish quarter. As part of Operation Yiftaḥ – designed to win Upper Galilee and gain control of its major arteries – Haganah forces occupied the Rosh Pinnah police fortress and a neighboring army camp as soon as these were evacuated by the British (April 28). Two attempts were made to capture al-Nabī Yūshaʿ, the fort on a ridge dominating the Ḥuleh Valley, which had been handed over to the Arabs by the British, but failed, with the loss of 28 Haganah men. On May 1 the Arabs launched an attack on the beleaguered village of Ramat Naftali, with the support of Lebanese army artillery and armored cars. With the help of a few Piper Cub airplanes, the settlers managed to hold out, and Operation Yiftaḥ could proceed according to plan. On May 3, a second Palmaḥ battalion entered Safed, but the first Jewish



Map 4. Operation Yo'av, Oct. 15–22, 1948. Ibid.



attack, on May 6, ended in failure; the Arabs brought in reinforcements and began using artillery. A new attack, on May 10, resulted in the capture of the key positions in the town. The Safed Arabs, numbering some 10,000, fled en masse, followed by the Arab villagers of the Ḥuleh Valley, and on the eve of the Arab states' invasion the Jewish forces were in control of a continuous area in eastern and upper Galilee.

Further south, Golani troops occupied the Arab town of Samakh (Ẓemaḥ) and the police fortresses at Samakh and Gesher as soon as the British had withdrawn from them (April 29). Arab Legion troops, supported by artillery and armored cars, attacked Gesher but were beaten back. Beisan (Beth-Shean) fell to the Haganah on May 12; so did a number of villages in the Mount Tabor area, Arab Shajara, Bethlehem (in Galilee), the erstwhile German colony of Waldheim, and Umm al-Zīnat in the southern Carmel. In Operation Ben-Ami, troops of the Carmeli area command captured the strongholds dominating Acre, A-Ziv (Akhziv), and Basah (Beẓet), and reestablished overland connection with Yeḥi'am and the Ḥanitah group of settlements. (Acre itself was taken on May 17.)

In the Tel Aviv area, the Alexandroni, Kiryati, and Givati brigades launched Operation Ḥameẓ on the eve of Passover and occupied several Arab villages, including Hiriya, Sakiya,

Salame, and Yazur, and encircled Jaffa, which had been included in the area of the Arab state envisioned in the partition resolution. Meanwhile, I.Ẓ.L. forces attacked Manshiye and other northern quarters of Jaffa, but met with heavy resistance, and British forces intervened. The attack was renewed on April 26 and Manshiye was cut off. The encirclement of Jaffa was completed on April 29, and most of its 70,000 Arab inhabitants fled. Its final surrender came on May 13, when the British troops had left.

On April 9, a combined IẒL and Leḥi force attacked Deir Yassin, an Arab village on the outskirts of Jerusalem. Two hundred Arabs, including women and children caught up in the fighting, were killed. The heavy casualties were given wide publicity in the Arab world as a deliberate massacre and intensified the panic among the Arab population, which was one of the causes of their flight. On April 13, a convoy to the Hadassah Hospital on Mt. Scopus was attacked by Arabs and 77 people – mainly doctors and other medical personnel – were massacred. British troops stationed nearby made no attempt to interfere with the slaughter. In view of rumors that the British intended to advance the date of their evacuation of Jerusalem, the Harel Brigade of the Palmaḥ was transferred to the capital. As soon as the brigade convoy had passed through, the Arab Liberation Army seized the strongpoints dominating the road to Jerusalem, and once again the city was cut off. Although the rumors of an earlier British withdrawal proved false, it was decided to launch Operation Yevusi to reestablish the links with the isolated quarters and nearby settlements: Neveh Ya'akov, Atarot, and Mount Scopus in the north, and Mekor Ḥayyim, Ramat Raḥel and Talpiyyot in the south. An attack on Nebi Samwil, on April 22, ended in failure, and while Harel troops succeeded in taking the Sheikh Jarraḥ quarter of Jerusalem on April 26, British troops forced their withdrawal. Two days later, an attempt was made to capture the Augusta Victoria buildings on the Mount of Olives and thereby gain control of the road to Jericho, but this, too, was unsuccessful. An attack on the St. Simon Convent in the Katamon quarter, launched on April 29, was successful, however. Both sides had reached the point of exhaustion when Haganah reinforcements were sent in and decided the issue. The resulting capture of Katamon made it possible to reinforce the isolated Mekor Ḥayyim quarter. Another attempt to open the road to Jerusalem, Operation Makkabbi, also failed: although the Harel Brigade took the village of Beit Maḥsir and Givati captured the *Latrun detention camp, only a few dozen trucks got through to Jerusalem before the road was once more blocked.

On May 4 the Arabs attacked the Eẓyon bloc with the support of an Arab Legion armored unit and four British tanks. The attack was beaten off, but the defenders suffered heavy losses, which were irreplaceable owing to the complete isolation of the four villages. On the eve of May 12 the Arab forces succeeded in cutting the block in two; the following day they captured a strongpoint dominating the area between Kefar Eẓyon and Massu'ot Yiẓḥak, and Arab Legion armored cars penetrated into Kefar Eẓyon. After the defenders had surrendered, many were massacred by Arab villagers from the Hebron area, and on May 14 the survivors were taken captive by the Arab Legion. On May 14, when the last British troops left Jerusalem, forces of Eẓyoni, the capital's infantry brigade, launched Operation Kilshon ("Pitchfork") to seize the areas evacuated by the British and prevent their being taken over by the Arabs.

In the six weeks preceding the establishment of the State of Israel and the invasion by regular Arab armies, the Jewish forces had taken over Haifa, Jaffa, Safed, and Tiberias, encircled Acre, and captured about 100 Arab villages. Apart from the Latrun sector of the Jerusalem road, the Jewish armed forces could move freely on most of the major arteries of communication. The Palestine Arab forces had been routed, and the Arab Liberation Army had suffered heavy defeats in the north and in the Jerusalem Corridor. The Jews had lost several hundred men, but they now had 30,000 young men under arms, ready to meet the invaders. The arrival of the first boatload of Czech arms and the acquisition of antitank and antiaircraft guns had considerably improved the quantity and quality of the arms at their disposal, but they still lacked field artillery and fighter planes.

[Netanel Lorch]

THE SECOND PHASE: MAY 15, 1948–JULY 20, 1949

The Arab Armies Invade

On May 15, 1948, the day the British Mandate over Palestine ended, the regular armies of five neighboring Arab states invaded the new State of Israel, which had proclaimed its independence the previous afternoon. The invasion, heralded by an Egyptian air attack on Tel Aviv, was vigorously resisted. From the north, east, and south came the armies of Lebanon, Syria, Iraq, Transjordan, and Egypt. (Saudi Arabia sent a formation that fought under Egyptian command; Yemen considered itself at war with Israel but sent no contingent.)

The Jews found themselves in a precarious situation. The invading forces were fully equipped with the standard weapons of a regular army of the time – artillery, tanks, armored cars and personnel carriers, in addition to machine guns, mortars and the usual small arms in great quantities, and full supplies of ammunition, oil, and gasoline. Egypt, Iraq, and Syria had air forces. As sovereign states, they had no difficulty (contrary to the pre-state Jewish defense force) in securing whatever armaments they needed through normal channels from Britain and other friendly powers.

The Jews had no matching artillery, no tanks, and no warplanes in the first days of the war. Some supplies of these weapons arrived in the days that followed, however, and turned the tide. Little more than small arms – and not enough of those to go round – a few homemade, primitive armored cars, and some light training planes were all that had been available to the *Haganah, the underground defense force controlled by the responsible Jewish authorities during the British Mandate. However, it could now emerge aboveground as the army of the sovereign State of Israel, though the con-

stitutional formalities establishing the army were completed only on May 28 with the publication by the Provisional Government of the Israel Defense Forces (IDF) Establishment Order. Haganah's general staff and commanders continued their functions in the IDF, with the difference that their identities were now no longer secret. The two dissident organizations, Irgun Ẓeva'i Le'ummi (IẒL) and Loḥamei Ḥerut Israel (Leḥi), agreed to discontinue their independent activities, except in Jerusalem, and to the absorption of their members into the IDF. Their units in Jerusalem were disbanded in September, following an ultimatum by the IDF.

Invaded from all directions, Israel had suddenly to cope, as it were, with the outbreak of a thousand fires, and to do so with limited means. Numerous settlement outposts in Galilee and the Negev were isolated, open on all sides to Arab attack, and had to rely on their own tenacity and meager armories to stave off defeat. The hastily mobilized army had to engage in offensive action to dislodge the enemy from key positions, block the advance of their columns, and rush to seal gaps in Israel's defenses.

Until the First Truce: May 15–June 11, 1948

THE EGYPTIAN ADVANCE. In the south, Egyptian forces jumped off from their advance bases in Sinai and crossed the frontier. Passing through Arab-populated territory, one formation moved up the coastal road to Gaza; another was landed by ship at Majdal further north; a third drove up from Abu Aweigila northeast to Beersheba, some of its units pressing on later to the Arab towns of Hebron and Bethlehem, where they linked up with Transjordan's Arab Legion and took up positions just south of Jerusalem. The major enemy forces were those at Gaza and Majdal, and their main thrust was aimed at Tel Aviv, though they could also penetrate from Majdal to other vital sectors in the interior of the country. To stop them, Israel deployed the Negev Brigade, operating south of the Majdal–Bet Guvrin line, and part of the Givati Brigade deployed north of it. There were also some 27 settlements scattered in the area, 22 of which had less than 30 defenders. Five of these kibbutzim lay alongside what was later known as the Gaza Strip. The Egyptians decided to wipe them out before proceeding to Tel Aviv, to protect their rear and flanks. Their first target was Kefar Darom (see *Benei Darom), a religious kibbutz 7 mi. (11 km.) south of Gaza, which had already withstood attacks by units of the extremist Egyptian movement, the Muslim Brothers, in the pre-state fighting. In an assault only a few days earlier, the Orthodox Jewish defenders had filled the small bags that held their *tefillin* with TNT and flung them at their assailants, after they had exhausted their stock of hand grenades. On the morning of May 15, eight Egyptian tanks approached the kibbutz, their guns blazing, followed by infantry. Having no artillery, the 30 defenders had no other course but to wait until the enemy came within range of their small arms, and then they opened fire. One Piat antitank weapon that had been rushed to the kibbutz during the night was quickly put in to action, and direct hits were scored on the enemy lead tanks. The remaining tanks thereupon turned around in retreat, exposing the infantry to fire from the kibbutz. Enemy armored vehicles returned later, but only to cover the retreat of the infantry. As a parting gesture, they mortared and shelled the kibbutz but made no further attempt to take it, contenting themselves with occupying positions covering its perimeter.

While Kefar Darom was under attack, another formidable Egyptian column attacked kibbutz Nirim, with its 40 defenders, further to the south. Nirim lost more than half its men in killed and wounded, but repulsed the enemy. Next day the Egyptians returned to their attack, accompanied by air bombardment. They were again driven back. Thereafter they did not attempt a ground assault, but kept the settlement isolated and subjected it to periodic shelling and air bombardment. The pattern at Kefar Darom and Nirim was to be typical of all but a few of the encounters between the enemy and kibbutzim on all fronts throughout the country.

There was, however, one kibbutz which the Egyptians considered it vital to liquidate if they were to proceed with their drive on Tel Aviv. This was Yad Mordekhai, close to the coastal highway between Gaza and Majdal and blocking the linkup of these two Egyptian bases. After their bitter experience, the Egyptians prepared the attack more carefully and assigned larger forces – two infantry battalions, one armored battalion, and one artillery regiment. Nevertheless, it took them five days of hard fighting to overcome the defenders, who numbered, together with reinforcements from the Negev Brigade, no more than one infantry company. Shortly before dawn on May 24, their plight desperate, with many killed and wounded, ammunition spent, and their last machine gun out of action, the defenders abandoned the settlement, creeping through the enemy lines under cover of darkness and carrying their wounded with them. Although Yad Mordekhai fell, the five days of resistance proved crucial. It held up the main Egyptian advance, and in that time the IDF was able to strengthen the defenses nearer to Tel Aviv, dispatch reinforcements to the south, and acquire heavier weapons and some fighter planes, which were to play a key role in the major confrontation.

The major phase of this confrontation began on May 29, when the Egyptian forces had regrouped after the Yad Mordekhai battle and a column of brigade strength, numbering some 500 vehicles, moved north from Majdal, passed Ashdod, and halted at the Ashdod bridge 2 mi. (3 km.) to the north. The IDF units in this area were from the Givati Brigade, and their sappers had blown up the bridge the night before. With the column held up, the IDF GHQ sent the first four Messerschmidt fighter planes, which had just arrived and been hastily made ready for action, to attack it. It was the first time the enemy had seen Israeli fighter planes, and this new factor made the column vulnerable. The Egyptians accordingly proceeded to dig in. Now they were subjected to another weapon that they had not encountered from Israel before – some 65 mm. artillery which had just been landed and

rushed into action. These guns shelled the column, while other Givati units harassed it continuously. The destroyed Ashdod bridge, only some 20 mi. (32 km.) from Tel Aviv, was to prove the northernmost limit of the Egyptian advance throughout the war. Though halted and harassed, the Egyptian brigade had not lost its fighting capacity, and during the next few days it sought out targets in the vicinity. Attacks on the kibbutz of *Negbah failed. The attack on kibbutz *Niẓẓanim, launched on June 7, succeeded, however. Givati also had its gains and failures in attacks and counterattacks.

By now, after feverish efforts at the United Nations, it was evident that a truce would soon be called. Each side tried desperately to improve its positions before the cease-fire. The most important Israeli failure was the unsuccessful attempt to take the ʿIrāq Suwaydān police fort and breach the east-west line from Majdal through Suwaydān to Fālūja. This meant that the Negev was cut off from land communication with the north. On June 11, the first truce went into effect. It lasted a month.

THE FIGHT FOR JERUSALEM. Jerusalem and the corridor to the west were the scenes of continuous bitter fighting throughout the four weeks that ended with the June truce. The Israelis suffered heavy losses and several serious setbacks, the most important of which were the loss of the Jewish Quarter of the Old City and the failure to take Latrun at the western end of the corridor. But they emerged with West Jerusalem intact and in possession of a tenuous link with the coast. The Arabs had several military successes, but they failed in their major objective – the conquest of West Jerusalem (the New City), with its 100,000 Jews, whose citizens were holding out on starvation food rations and the troops on "starvation rations" of ammunition. They now had to cope not only with hunger, but with a military onslaught from all directions and with the constant shelling of their homes by Arab Legion 25-pounders and Egyptian heavy artillery and mortars from positions near Bethlehem. As the British departed and the Arab Legion came in, the Eẓyoni Brigade succeeded, in "Operation Pitchfork," in consolidating all the Jewish areas in the New City and beating off all penetration attempts by the enemy. But the perimeter of these areas was now the front line. The main Jewish outpost in the south, the Eẓyon Bloc, had fallen on May 14. On that night and the next, the two northern settlements in the heart of the Arab hills, *Atarot and Neveh Ya'akov, were evacuated. On May 21, there was a powerful attack by units of the Arab Legion and the Egyptian Muslim Brothers on *Ramat Raḥel at the southern edge of Jerusalem, which changed hands three times in the next four days, being captured during the day and recaptured at night. On the 25th, the defenders, assisted by a unit from the Harel Brigade, fought a daylong battle and routed their assailants. Successive Arab Legion attempts to break into the New City were all repelled, often in hand-to-hand fighting, while armored cars were knocked out at close range with Molotov cocktails.

In the most desperate position was the Jewish Quarter of the Old City, close to the *Western Wall, whose strategic situation was far outweighed by its deep meaning for Jewry. The Jews living there, mostly elderly folk engaged in religious study, with their families, were completely surrounded by Old City Arabs and Arab Legion forces. The Jews had been strengthened during the previous months by some 80 members of the Haganah, some of whom had been there for months, and others who had fought their way through the walled city to help organize the defenses. There were also some IẒL personnel. On May 16 the Arab Legion attacked from all directions, and although the Jews resisted with homemade incendiary bombs, hand grenades, submachine guns, and a meager quantity of explosives, they were steadily pressed back from house to house, as each was destroyed by the powerfully armed Legion. On May 19 a Harel unit managed to blast the Zion Gate and reach the Jewish Quarter; but it withdrew the following day. Legion pressure mounted, but renewed attempts to reinforce the beleaguered defenders failed. On May 28 the Jewish Quarter surrendered.

To break the siege of Jerusalem, it was essential to capture Latrun, astride the highway from the coast. The Israel GHQ set up a special brigade, the 7th, for this task. It was composed of one hastily assembled armored battalion, with half-tracks that had just reached Israel's shores; one infantry battalion with men drawn from existing formations; and one battalion made up of new immigrants who had also just arrived in the country and who had received some training with dummy weapons in the displaced persons' camps in Europe and the immigrant camps in Cyprus.

The 7th Brigade was thrown into action immediately, without time to organize and train together. At the last minute, a veteran battalion of the Alexandroni Brigade was included. A two-battalion attack was launched on May 25, Alexandroni making a frontal assault on the Latrun police fort and village, with the battalion of new immigrants assigned to secure its right flank. The assault should have started in darkness, but there was a delay and it was past dawn when they approached the fortified Arab Legion positions. The element of surprise was lost, and the assault came under such fierce fire that they were forced to retire with heavy casualties. The brigade tried again on May 30, the Alexandroni battalion being replaced by a battalion from Givati. The armored battalion made the main assault this time, fighting its way right up to the police fort, and even succeeding in breaking into the courtyard. But the battalion sappers, who were to breach the wall of the fort, were hit by Legion shells, and the untrained infantry units failed to reach them. The battalion retired. The third attempt to capture Latrun was made on the nights of June 9 and 10, the Yiftaḥ Brigade of the Palmaḥ, which had been operating in Galilee, replacing the 7th Brigade, and a Harel battalion also taking part. This attack also failed, and it was about to be resumed when the cease-fire took effect at 10:00 on June 11.

In the meantime, however, an alternative link between Jerusalem and the coast had been discovered and rendered serviceable. This was a rough dirt track, broken by a steep wadi, on which hundreds of elderly men worked night after

night to make it fit for vehicles. They dubbed it the "Burma Road." With the truce, Jerusalem was joined to the coastal plain, its siege days over.

IN THE COASTAL STRIP. In the central sector, the narrow coastal strip in the Sharon was gravely threatened by the tough-fighting Palestinian Arabs in the Samarian bulge, stiffened by the surviving irregulars of the Arab Liberation Army under Fawzī al-Qāwuqjī. Their chief centers were the towns of Nablus, Jenin, and Tulkarm, the point of a dagger thrusting at nearby Netanyah on the coast. On May 24 one Iraqi armored brigade and two infantry brigades occupied this "triangle" and prepared for offensive operations. The Iraqi forces had started crossing the Jordan on May 15 and were active in the southern part of the Jordan Valley, south of the Syrian invaders. But they had suffered two severe setbacks, being repulsed at kibbutz *Gesher and by a Haganah unit at *Belvoir. When the Arab Legion moved its main forces in the "triangle" to the Latrun and Jerusalem sectors, the Iraqis moved in. Defense of the Sharon was in the hands of the Alexandroni Brigade.

On May 25, the Iraqis tried to cut through to Netanyah, capturing one kibbutz and attacking three others near Tulkarm. The captured kibbutz was retaken by Alexandroni and the Iraqi drive was temporarily stopped. But it was evident that the only way for the Israel forces to prevent an all-out assault toward the coast by so powerful an enemy force was to keep it on the defensive. On May 29, the Golani Brigade penetrated the "triangle" from the north, taking several villages plus the strongholds of *Megiddo and al-Lajjūn, which offered a good base for an attack on Jenin. This was undertaken on the nights of May 31 and June 1 by one battalion from Golani and two battalions of the Carmeli Brigade, which had been operating in western Galilee. Golani captured all enemy positions in the valley leading to Jenin, and on the following night the Carmeli formations seized the two key hills southeast and southwest of the town, holding them against fierce counterattacks throughout the next day. Then the men of Golani entered and took the town. The Iraqis rushed up more reinforcements, and the fighting was heavy. But the Israel troops held firm. Since the IDF could spare no forces for an operation to take the whole of the Arab bulge, it decided on an orderly withdrawal from Jenin. This was carried out on June 4, with the Israeli units taking up defensive positions on the southern slopes of Mt. Gilboa. Shortly thereafter, an Alexandroni unit captured the key village of Qāqūn just north of Tulkarm. The only Iraqi gain before a truce was the seizure of the headwaters of the Yarkon river and the pumping station at *Rosh ha-Ayin (Ra's al-ʿAyn).

THE SYRIAN ATTACK REPULSED. In the north, the Syrians crossed into Israel just south of Lake Kinneret and spearheaded their invasion on the night of May 15 with a crack infantry brigade, a battalion of armored cars, one of artillery, and a company of tanks. Facing them in the Jordan Valley were a cluster of kibbutzim, whose members were a kind of Haganah garrison force and a Haganah battalion for offensive action drawn from the Golani Brigade. The Syrian aim was to rout the kibbutzim, cross the Jordan, and then make a lightning dash westward through mostly Arab-held territory of Lower Galilee to Haifa. The first Syrian targets were Ẓemaḥ, at the southern tip of Lake Kinneret, and *Sha'ar ha-Golan, and *Massadah (not to be confused with Masada on the Dead Sea), the two easternmost kibbutzim in the area. Though they suffered heavy losses, the Jewish defenders held all three positions. On the 18th the enemy again assaulted Ẓemaḥ in full force. It fell after stubborn fighting; Sha'ar ha-Golan and Massadah had been evacuated shortly before. The front line now shifted to *Deganyah, the very first kibbutz to have been established (in 1909). The attack on Deganyah was launched early on May 20 by a Syrian infantry company, five tanks, and numerous armored cars, after the kibbutz had been heavily shelled. They managed to reach the outer perimeter and came steadily on. Then one tank was knocked out. A second, which had got right through to the kibbutz, was halted by a Molotov cocktail (the remains of the tank are still there), and a third was disabled by a three-inch mortar. Armored cars that reached the trenches were put out of action by Piats and Molotov cocktails. The infantry was dealt with by small-arms fire. At noon two old pieces of artillery, which had just arrived in the country, were rushed to Deganyah and put into action against Syrian concentrations of armor and support units. This probably tipped the balance, for the Syrians then retired, also evacuating Ẓemaḥ and taking up positions in the hills to the east.

Apart from minor clashes, the Syrians made no further attacks in this sector, and their aim of a lightning drive to Haifa was abandoned.

Instead, they sought to make local territorial gains and use their powerful force to nip off the northeastern tip of Upper Galilee. While they were regrouping, a huge supply base was blown up by a Haganah sabotage squad, and the Syrian assault was postponed. It came, however, on June 6, directed against *Mishmar ha-Yarden, north of Lake Kinneret, and was accompanied by heavy shelling and air bombardment of the kibbutzim in the area. The attack was repelled with heavy losses on both sides; but a renewed attack on June 10 was successful, so that the truce found the Syrians with a foothold on the Israel side of the Jordan. On the same day, *Ein Gev, the only Jewish kibbutz on the eastern shore of Lake Kinneret at the time, fought off a heavy enemy attack, and did so again when it was attacked the next day despite the truce. The cease-fire became effective in this sector only on June 12.

THE LEBANESE ASSAULT. The invasion route chosen by the Lebanese army was through Malkiyyah, just west of the powerful, Arab-held police fort of Nabī Yūshaʿ, on the ridge dominating the Ḥuleh Valley. Jewish defense in this sector was the responsibility of the Yiftaḥ Brigade of the Palmaḥ, which had effected the remarkable capture of *Safed a few days earlier. On the night of May 14/15, a Yiftaḥ battalion cut across the mountains on foot toward the Lebanese border, skirted

the Nabī Yūshaʿ fort, and, without resting, went straight in to storm Malkiyyah and nearby Kadesh. Both fell after heavy fighting. But the next day the Lebanese put in a determined counterattack, and the Palmaḥ men were forced to retire, taking up positions between the border and Nabī Yūshaʿ. That night, a unit of the battalion infiltrated deep into Lebanon and cut an important supply route. This action, together with their casualties in retaking Malkiyyah and Kadesh, stopped the Lebanese from pursuing the Yiftaḥ battalion, which accordingly attacked Nabī Yūshaʿ the next night and was successful. (In an earlier, heroic but unsuccessful, attempt just before independence, 28 Yiftaḥ men had lost their lives.) On the 18th the Palmaḥ launched the attack on Malkiyyah, taking the enemy by surprise by approaching from the rear – from inside Lebanese territory. Malkiyyah fell. With the Lebanese advance halted, the Yiftaḥ Brigade was rushed south to take part in the urgent actions in Jerusalem and the Corridor. Replacing Yiftaḥ was the newly formed Oded Brigade, consisting of men from local settlements, a Haifa Haganah battalion, and new recruits.

In western Galilee, the Carmeli Brigade, ready to meet a possible Lebanese invasion through *Rosh ha-Nikrah on the coast, cleared the stretch from Haifa to the border, taking Acre on May 17. Carmeli later operated in the Jordan Valley and in the Jezreel Valley just north of Jenin.

On June 6, simultaneously with the Syrian attack on Mishmar ha-Yarden, a combined two-brigade force of Syrians, Lebanese, and Qāwuqjī's reorganized Arab Liberation Army attacked Malkiyyah and overran the small Israel garrison that had been left there. Through this gap poured units of the Liberation Army that proceeded to consolidate themselves in heavily Arab-populated Central Galilee and remained there when the truce went into effect.

The First Truce: June 11–July 9

The truce was supervised by Count Folke *Bernadotte, the mediator for Palestine who had been appointed by the UN General Assembly on May 21, together with teams of UN observers made up of army officers from Belgium, France, Sweden and the United States. It was to last 28 days (the UN hoped it would be extended), and the observers were to ensure that neither side gained any "military advantage" during the truce by the acquisition of additional arms or "fighting personnel."

On the tenth day of the truce, a grave intra-Jewish incident occurred when an IẒL arms vessel, the *Altalena*, attempted to land its weapons on the shores of Israel. It had left a French port early in June, and IẒL refused to hand it over to the Israel government. When IẒL persisted in its refusal to agree to the government's conditions, the landing was resisted by force. The ship was set on fire just off the Tel Aviv beach by IDF troops, who then waded into the water to rescue IẒL personnel. There were casualties on both sides.

In the meanwhile, both the Arab and Israel armies used the truce to improve their positions. The IDF engaged in more rigorous training of its men – established settlers, new immigrants (*Gaḥal), and volunteers from overseas (*Maḥal) with World War II battle experience; regrouping its forces; and readying for action more of the newly arrived heavy weapons and planes (flown by local pilots and overseas volunteers). Toward the end of the truce period it became clear that the truce would not be prolonged. The one agreement Bernadotte was able to arrange between the two sides was the demilitarization of the Mount Scopus area in Jerusalem. The truce ended at 6 A.M. on July 9 and hostilities were resumed. They lasted ten days and were followed by the second truce.

The "Ten Days": July 9–18

ON THE EGYPTIAN FRONT. In the south, the Egyptians had taken advantage of the truce to bolster their Majdal-Bet Guvrin line, cutting northern Israel off from the Negev. Their strength was now four brigades. Twenty-four hours before the truce ended, on the morning of July 8, they launched a series of attacks on both sides of the line, ejecting an IDF unit from Kawkaba to the south, but being badly mauled when they tried to take Beit Darās to the north. That night, Givati units attacked the line from the north, capturing the villages of ʿIrāq Suwaydān, Beit (Bayt) ʿAffa, and ʿIbdis – the last in a tough battle in which they routed two Egyptian companies and captured large quantities of weapons and ammunition. A Negev Brigade unit, attacking the line from the south, was less successful; it seized several positions but failed in its assault on the ʿIrāq Suwaydān police fort. (Suwaydān village and, later, Belt ʿAffa had, accordingly, to be abandoned.) For the next eight days, the two IDF brigades fought continuously to contain the more powerful Egyptians, break their line, and join in the defense of local kibbutzim, notably Negbah and *Be'erot Yiẓḥak, which held out miraculously against overwhelming enemy forces. On the night of July 17, with another truce about to be called, the IDF launched a determined attack on two positions astride the Egyptian line, Ḥatta and Karatiyya, located between ʿIrāq Suwaydān and Fālūja. Taking a key role in the combined Givati-Negev brigades action was a commando battalion from a newly created armored brigade that had made a spectacular dash through the town of *Lydda a few days earlier and had been rushed down to reinforce Givati. Ḥatta and Karatiyya fell, thereby breaching the Majdal-Fālūja line. When the truce came on the evening of July 18, Egyptian east-west communications were thus severed, and the Israelis had a direct land connection with the Negev.

ON THE CENTRAL FRONT. The IDF's greatest offensive effort during the ten days of fighting was directed against the Arab Legion on the central front, the area between Tel Aviv and Jerusalem. With the major objective of taking the two towns of Lydda and *Ramleh, clearing the central area, and then, if there was still time, attempting the capture of Ramallah and Latrun, the IDF organized a strong force, headed by the commander of the Palmaḥ, consisting of the Yiftaḥ Brigade, the new 8th Armored Brigade – comprising a tank battalion, a commando battalion of jeeps and half-tracks – and two battalions from the Kiryati and Alexandroni Brigades, as well

as additional artillery and engineering units. The action was called "Operation Dani." Two forces struck in a pincer movement, one moving on Lydda and Ramleh from the northwest, the other from the southwest. Yiftaḥ, the southern force, captured ʿInāba and Jimzū and by the afternoon of the 10th fought its way through to *Ben Shemen, to the rear of Lydda. One unit turned westward to take Kefar Daniel, which cut off Ramleh from the east. The armored brigade moved off along the northern arc on the morning of the 10th and captured Wilhelma, Ṭīra, and other villages en route and then swung south to Deir Ṭarīf, ready to meet the southern pincer forces at Ben Shemen. During this advance, a small force darted off to capture al-Sāfiriyya and then pushed on to capture the Lydda airport. Thus, within a day and a half of the resumption of hostilities, the largest airport in the Middle East and a dozen key villages had fallen to the IDF in the first engagements in which Israel units had used armor. At Deir (Dayr) Ṭarīf the tank battalion was held up by strong Arab Legion forces based on Beit Nabālā across the road, on the western slopes of the hills. Fighting there was heavy, and Deir Ṭarīf fell only on the following day. The commando battalion did get through to Ben Shemen, however, on the afternoon of the 10th, having bypassed Deir Ṭarīf. Then, without pausing to rest or wait for the required artillery support, it made a surprise dash to Lydda, breaking into the city past Arab positions, driving right through it and shooting it up, and repeating the same maneuver on its way back. This was one of the most daring actions of the war and caused utter confusion in the enemy ranks. They were still dazed when Yiftaḥ troops moved in to effect the city's capture. The Arab Legion counterattacked the next day without success. On July 12, Kiryati units took Ramleh, which surrendered after a brief engagement, and, north of this sector, Rosh ha-Ayin, which had been seized by the Iraqis in June, was recaptured.

The Arab Legion now regrouped its forces to strengthen the defenses of Ramallah and Latrun. With reinforcements brought from Jerusalem, the Legion held the Latrun enclave with a full brigade and considerable armor. For the next few days it fought stubbornly – and effectively – being saved by the truce from the attacks of the Yiftaḥ and Harel units. But north of Latrun, Israel units pressing southward from Lydda and Ramleh captured Shiltā, Barfilyya, Burj, Bīr (Bi'r) Maʿin, and Salbit. This brought them to positions from which they dominated the Ramallah-Beit Nūba-Latrun road. Southeast of Latrun, Harel, again responsible for the Jerusalem Corridor, widened it by capturing important positions on its southern edge, including Hartuv. In and around Jerusalem, *Ein Kerem and Malḥa were captured by local Jerusalem units, who had been engaged in heavy fighting throughout the ten days in different quarters of the city. But the truce found the Old City still held by the Arab Legion. The one Legion gain was the capture of a building belonging to a certain Mr. Mandelbaum. This later became the celebrated Mandelbaum Gate, the crossing point between Jordan and Israel during the period from the armistice to the *Six-Day War.

OPERATIONS IN THE NORTH. The most spectacular operation in the north during the ten days of fighting was "Operation Dekel," which culminated in the capture of Nazareth. It was carried out by a group consisting of the 7th Brigade and a battalion from Carmeli, with some support from Golani. After capturing several Arab positions between the coast and the foothills southeast of Acre, the force successfully attacked the Shefaram (Shefāʿ Amr) on July 14 and pressed on southeast to take Ẓippori the following day after stubborn fighting. The opposing Arab force in this region was Qāwuqjī's Arab Liberation Army, which at that moment was placing very heavy pressure on *Sejera, to the east. With the fall of Ẓippori, and Qāwuqjī's main force still being resisted by the Jewish settlement of Sejera, the people of Nazareth began to panic as the main brigade column advanced on the city. At the same time, a small unit from Golani moved toward Nazareth from the Jezreel Valley, suggesting to Qāwuqjī that he was also threatened by a strong force from the south. When the brigade was less than a mile from the town, however, the commander of Nazareth sent out an armored car unit to block its advance. The brigade column went straight on without pausing, firing as it moved. After desultory fighting, the city surrendered on the evening of July 16. Qāwuqjī himself, together with the bulk of his forces, succeeded in escaping into the mountains to the north through trails that IDF troops had not yet had a chance to seal. The result of "Operation Dekel" was to free the entire belt of Lower Galilee from Haifa Bay to Lake Kinneret.

Further north, the Carmeli Brigade undertook operations whose major aim was the elimination of the Syrian salient at Mishmar ha-Yarden, and whose lesser purpose was the containment of the enemy within the area of the bridgehead. Fighting was intense throughout the entire ten days, with positions like Dardara and Hill 223 changing hands as many as three times. The battles ended in a stalemate, with the Syrians still in Mishmar ha-Yarden; but the Syrians were stopped from advancing even the short distance westward to cut the Rosh Pinnah-Metullah road.

AIR AND NAVAL OPERATIONS. The Israel air force, with its newly acquired warplanes, though inferior in number and type to those of the enemy, was very active during these ten days, carrying out support, pursuit, and bombing missions. Three World War II Flying Fortresses carried out air attacks on Egypt en route to Israel on July 14, one bombing Cairo and the others attacking Rafa and El Arish. Damascus was also bombed. The Israel navy, having feverishly reconditioned the hulks of "illegal" immigrant boats, bombarded Arab centers along the Carmel coast, sabotaged ships near Gaza, and shelled the Lebanese port of Tyre. Most of the navy's casualties, however, were suffered on land when an amphibious company was rushed to the southern front during the critical operation to break the Egyptian Majdal-Fālūja line to reinforce Givati.

The Second Truce

Breaches of the second truce, which went into effect at 7 P.M. on July 18, began almost from the first day. In the Jerusalem

area the Arab Legion intensified its bombardment of the New City, and during the remainder of July, August, September, and October, Jerusalem was shelled, mortared, and machine-gunned almost every night. (The attacks stopped only on November 30, when both sides agreed to a "sincere cease-fire.") On August 12, the Legion destroyed the Latrun pumping station, even though it was under UN control, but Israel quickly laid a pipeline along the "Burma Road" and kept Jerusalem supplied with water. In the north, Qāwuqjī's Arab Liberation Army kept up sporadic harassment of Jewish positions.

Clearing the Road to the Negev: October 15–22

In the south, the Egyptians soon ignored the truce provisions and denied Jewish convoys passage through the Ḥatta-Karatiyya gap in their line. They seized positions outside the truce boundaries and then extended their attacks to several IDF posts that covered the gap. On October 15, the Israel army and air force turned to the offensive after the Egyptians had attacked a convoy proceeding south and raided inter-kibbutz communications. In a brisk seven days' campaign, the road to the Negev was opened and the Negev was cleared of Egyptian troops.

During this period, Operation Yo'av (also known by its preliminary name, Operation Ten Plagues) was carried out. In the reorganization that the army had carried out during the preceding truce months (when, incidentally, officers had been given ranks for the first time), the country had been divided into four military commands. The southern front command, headed by the Palmaḥ commander, was responsible for Operation Yo'av. The force consisted of three infantry brigades, Negev, Givati and Yiftaḥ, plus an armored battalion from the 8th Armored Brigade and the largest artillery formation that had ever been available to the IDF. (The Oded Brigade joined the command on October 18.) During the truce months, Yiftaḥ was flown south in an extraordinary airlift – since the Egyptians had blocked the road – to relieve the Negev Brigade, which was lifted north to rest, reorganize, and prepare for resumed action.

On the night of October 15 the Israel Air Force bombed bases from which Egyptian assaults had been launched and also attacked Egypt's advanced airfield at Rafa. This action kept most of the Egyptian front-line fighters out of the skies and gave the IDF air superiority for the first time. The Israel navy also took part in these southern engagements, shelling enemy coastal installations, preventing supplies from reaching Gaza and Majdal by sea, and scoring a spectacular triumph on the very eve of the truce, when its special unit sank the *Amir Fārūq* ("Emir Farouk"), flagship of the Egyptian navy, off the shores of Gaza.

On the ground, Yiftaḥ troops led off by carrying out a series of raids and sabotage actions against Egyptian concentrations and communications in the coastal strip north and south of Gaza, to the links between Rafa and Gaza, and between Gaza and Majdal. The Givati and the armored battalion went into action to break the Majdal-Bet Guvrin line. In heavy fighting, the tank unit failed to take ʿIrāq al Manshiyya, just east of Fālūja. Next night, Givati units made a breakthrough west of Fālūja, fighting their key battles at Hill 113 and nearby Egyptian strongholds dominating the crossroads between Majdal and Fālūja. After stiff hand-to-hand engagements, the positions were captured and held against heavy Egyptian counterattacks. On the night of the 16th, Givati advanced southward and took the Heights of Kawkaba, commanding the road running north–south. But Yiftaḥ failed to take the Heights of al-Ḥulayqāt further south, which also commanded that road. Ḥulayqāt fell only on October 20, after other Yiftaḥ units had succeeded in capturing several nearby positions. The road to the Negev was now clear, in spite of the fact that the ʿIrāq Suwaydān police fort had successfully resisted a further Israel attack to capture it.

Meanwhile, the Security Council was anxiously trying to effect a cease-fire, and the IDF recognized that it had little time to exploit the successful opening of the Negev road. At 4:00 on the morning of October 21, the IDF moved to capture Beersheba. Taking part were the bulk of the 8th Brigade; a Negev Brigade battalion, which had dashed south along the road within hours of the capture of Ḥulayqāt; and the Negev Brigade's commando battalion, which had already been operating in the south, harassing the enemy in the Gaza-Rafa region. While some units took up blocking positions north and south of the town to hold up Egyptian reinforcements, and another carried out a diversion action in the direction of Hebron, the main IDF force advanced on the city from the west. There was stiff fighting inside the city, but at 8:00 a.m. a white flag went up on the police fort, and by 9:15 the capture of Beersheba was complete.

During Operation Yo'av, the Harel Brigade was active in the mountainous area between the Jerusalem Corridor and Bet Guvrin, greatly widening the approaches to Jerusalem and cutting the Egyptian artery from Bet Guvrin to Bethlehem. Detachments from the Eẓyoni and Givati Brigades took part in some of these actions. A truce was ordered for 3:00 p.m. on October 22, but there was some action in the days immediately following. The police fort of Bet Guvrin fell on October 27, and after the Egyptians had retreated southward from Ashdod (October 28) and Majdal (November 6) to Gaza, IDF troops occupied the coastal strip down to Yad Mordekhai. Trapped in a pocket, which was centered around Fālūja and included ʿIrāq Suwaydān on the west and ʿIrāq al Manshiyya on the east, was an entire Egyptian brigade, consisting of some 4,000 troops headed by a brave Sudanese commanding officer who refused to surrender. On November 9, the area of the "Fālūja Pocket," as it came to be called, was reduced by IDF's capture of the village and police fort of ʿIrāq Suwaydān, in one of the numerous actions in which both sides engaged to improve their positions despite the truce.

The Arab Liberation Army Driven Off: October 29–31

In the north, Qāwuqjī's Arab Liberation Army which did not consider itself bound by the United Nations truce, carried out

local attacks during the cease-fire months. On October 22, thinking that the IDF would be too preoccupied with actions in the Negev, Qāwuqjī launched a strong attack on the outpost of kibbutz *Manarah, a kibbutz on the ridge near the Lebanese border above the Ḥuleh Valley. They captured the strongpoint of Sheikh ʿAbbād, repelled a counterattack by the local IDF unit, and ambushed the reinforcements who were rushed in to relieve Manarah, inflicting heavy casualties on them as they tried to negotiate the steep heights. Israel's protests to the UN were unavailing. The Arabs continued to hold Sheikh ʿAbbād and captured further hill positions, cutting the Manarah-Nabi Yūshaʿ track and dominating the *Rosh Pinnah-*Metullah road. On the night of October 28, the IDF initiated Operation Ḥiram, striking not at the point of attack selected by Qāwuqjī, but at his main bases, in an effort to rout his army. The forces available to the northern front commander were four brigades: the 7th (together with the armored battalion that had fought with it in Operation Dekel), Oded, Golani, and Carmeli. The air force was active in bombing and ground-support missions. The main action fell to the 7th Brigade, which pushed off from Safed in a western and northwestern drive on Sasa, the heart of Upper Galilee. In less than 24 hours of hard fighting, they made a lightning advance through the rugged hills and captured Meron (succeeding in the second attack); took Safsāf; sped on to the powerful stronghold of Jish, which had been reinforced by a Syrian battalion and which they overcame in stiff combat; and by nightfall on the 29th were in Sasa. In a coordinated action, Oded started eastward at zero hour from bases near Nahariyyah also aiming for Sasa, so that the Arab Liberation Army would be encircled and squeezed by Oded thrusting from one direction and the 7th Brigade from the other. Oded's first objective was Tarshīḥa. Several outposts near the approaches to the town were captured, but Tarshīḥa itself held firm. It surrendered only on the morning of the 30th, after Golani had undertaken a series of diversionary actions in the south that sent the Liberation Army northward.

In a quick change of plan, Golani was ordered to exploit its success and push on to ʿAylabūn, which it captured, while the 7th Brigade, further north, also exploited its success by advancing northeastward on Malkiyyah. Oded detachments, who by now were driving eastward beyond Tarshīḥa, engaged Arab forces retreating from the south, and then, after reaching the frontier road with Lebanon, changed direction and pushed due west, clearing the entire road up to the Mediterranean coast. The 7th Brigade took Malkiyyah by surprise, coming at it from the south, and captured it. This relieved the pressure on Manarah, and the Carmeli Brigade, covering the eastern sector to prevent a Syrian breakthrough from Mishmar ha-Yarden, now moved to the offensive. It crossed into Lebanon and captured a number of villages lying near the Manarah road. Some of its detachments reached the Litani River. (The Lebanese villages were given up by Israel in the *armistice agreement which was signed in March 1949.) When the survivors among Qāwuqjī's forces realized that they were being squeezed from the east, south, and west, and particularly after the fall of their key centers at Jish, Sasa, and Tarshīḥa, they started evacuating the pocket, using little-known tracks to make their way northward into Lebanon. When the cease-fire was ordered on October 31, 60 hours after the start of the action, the entire Galilee was clear of the Arab Liberation Army.

Expelling the Egyptians: December 22–January 7

In the south, there were infractions of the truce by both sides throughout November and December; but those of the Egyptians were more serious, as they had more to gain, having lost so much. They attacked Jewish settlement communications, sabotaged the inter-settlement water pipeline, and tried to seize Negev outposts in order to improve their military positions. They also refused to implement a Security Council order (which Israel accepted) to start armistice talks, unless Israel first allowed the release of the trapped Fālūja brigade. Israel said it would release the force as soon as talks got under way. Egypt remained adamant, and its forces continued their harassing activities in the Negev. Israel then decided to launch Operation Ḥorev, aimed at expelling the Egyptians from the borders of the country. The forces taking part, under the commander of the southern front, were the 8th Armored and the Negev brigades, which had participated in Operation Yo'av; the Alexandroni and Golani brigades, which replaced Givati and Yiftaḥ; and two battalions and an additional unit from the Harel Brigade. The Egyptians were entrenched along two main wings, the western and stronger of the two, forking north from ʿAwjā al-Ḥafīr along the Sinai border into the coastal strip through Rafa to Gaza, and the eastern one curving in an arc northeast from ʿAwjā through al-Mushrifa and Bīr (Bī'r) ʿAslūj to 15 mi. (24 km.) south of Beersheba. The main effort called for in the first phase of IDF's operation was the destruction of the eastern arm, with its heavily defended strongpoints ranged all along the main, hard-topped Beersheba-ʿAwjā highway. To effect surprise, the IDF decided to use a little known old Roman road cutting directly across the desert through Wadi al-Abyaḍ from Beersheba to ʿAwjā, which would bring its forces in the rear of ʿAwjā and of the Mushrifa and Bīr ʿAslūj bases. This ancient track had to be prepared by the engineers to take vehicles, however, and such work could not be started without losing the element of surprise until the campaign was under way. It was accordingly decided to start operations with feinting and diversionary attacks on the western Egyptian wing, which would also promote the impression that this was the main objective, and then deliver the principal punch to the east wing.

On the afternoon of December 22, the coastal strip was heavily shelled, and that night Golani units went into action cutting enemy communications between Rafa and Gaza and trying to seize key hills. For the next 48 hours IDF fought bitter battles and suffered many casualties in strong Egyptian counterattacks, displaying particular heroism in the battle for Hill 86 (from which they eventually had to retreat). But they fulfilled their task of diverting the enemy's attention from the eastern wing and misleading them as to IDF's true intentions.

On the morning of December 25 (a storm and flooding forced a postponement of zero hour by a day) the 8th Armored and Negev brigades set forth from al-Khalaṣa, south of Beersheba, on their appointed tasks. The Negev Brigade cut southward, aiming for Mushrifa, and had to fight a series of stiff battles for the well-defended group of hills round al-Thamila, close to the ʿAwjā-Bīr (Biʾr) ʿAslūj road. The Egyptians counterattacked heavily, and one Negev unit lost half its men trying to hold one key height. But it was soon regained, and by the morning of December 26 the key middle bastions of the Egyptians between ʿAwjā and Bīr ʿAslūj were in Israeli hands, with Bir ʿAslūj, the northeastern terminal of the Egyptian line, cut off and the rear of ʿAwjā exposed.

Meanwhile, the Armored Brigade had had a very difficult drive southwest across the Roman road to the south, and despite the brilliant work of the engineers in making the track passable, there were delays. The main force, which was to have reached the ʿAwjā area by dawn on the 26th, did not get there until the late afternoon, when it engaged ʿAwjā's outposts but was not in a position to launch its main attack. The offensive was carried out on the morning of the 27th, after roadblocks had been established north and west of ʿAwjā. The attack, in which the commando battalion of the Armored Brigade played a key part, was heavily resisted; Egyptian ground forces were aided by their air force, which bombed and strafed the Israeli units. But by 8:00 A.M., ʿAwjā fell, and thereafter Egyptian troops began evacuating their strongholds in the rear of ʿAwjā, with Israeli units in hot pursuit. The Negev Brigade completed its task of clearing the entire line up to and including Bīr ʿAslūj, which it occupied just after midday, and then raced westward along the paved road, joining up with the Armored Brigade at ʿAwjā in the afternoon. The Beersheba-ʿAwjā highway was now open, and no Egyptian troops were left on Israeli soil.

IDF then continued westward and northwestward from ʿAwjā into Sinai in pursuit of the Egyptian forces. On the night of the 28th, the Negev Brigade plus the Armored Brigade's tank battalion carried out an attack on Abu Aweigilā, some 30 mi. (48 km.) west of the international border, commanding the important junction of the road west to Ismailia and the road northwest to El-Arish. Golani units assisted by carrying out operations to halt enemy reinforcements. Captured enemy transport was used for the fast move (which led to a mishap soon after they crossed the border when, with enemy markings still on them, they were attacked by Israeli planes). The column advanced, battling defensive strongpoints en route, until they reached the outposts of Abu Aweigilā itself. There was stubborn fighting through the night, but the outposts were finally captured, and by dawn Negev units entered Abu Aweigilā. Almost without pause, part of the force pressed forward to raiding operations, though subjected to Egyptian air bombing. The tanks and commando units advancing northwest reached the El-Arish airfield, destroying installations and capturing one Spitfire intact, and went on to fight a brisk battle with the battalion-held outpost of Bīr Laḥfan, which they captured. But with no supporting troops, and the tanks badly in need of maintenance, the units returned to Abu Aweigilā on December 30. On the previous day as well, a light mobile unit sped westward to raid the air base at Bīr Ḥamma more than 50 mi. (80 km.) west of Abu Aweigilā, and returned. The 30th was spent in capturing Egyptian defense positions between Abu Aweigilā and El-Arish, between ʿAwjā and Rafa, and al-Quṣayma, some 20 mi. (32 km.) south of ʿAwjā.

By this time, however, with IDF forces inside Sinai in pursuit of the enemy, strong diplomatic pressure was being exercised on the government of Israel. Britain even threatened to activate the Anglo-Egyptian Treaty of 1936 unless the IDF withdrew to the international boundary. The front command was accordingly given orders to evacuate Sinai by January 2, 1949, but to continue operations within the boundaries of mandatory Palestine. The last Israeli actions inside Sinai were a Harel raid on Bīr Ḥassneh and the destruction of a large bridge spanning the Ismailia-Abu Aweigilā road. The next few days were spent in bitter fighting in the Rafa area, mostly by the Golani and Harel brigades, supported by the Armored and Negev brigades, in which several outposts of Rafa, stubbornly contested by both sides, kept changing hands. With the enemy squeezed back toward the coast, the IDF prepared to attack Rafa itself, but was prevented from doing so by the cease-fire, which became effective on the afternoon of January 7. On that day, five British fighters zoomed low over Israel battle positions and were shot down by Israeli planes. It transpired later that they were on armed reconnaissance flights, but they had been taken for Egyptian warplanes, which had been strafing Israeli units daily. This action caused a furor in the British parliament, where the government was strongly criticized – particularly by Winston Churchill, who was then leader of the opposition – for sending planes over the battle area in what seemed an open act of British intervention.

The Alexandroni Brigade had been assigned to contain and then subdue the Egyptian brigade trapped in the Fālūja Pocket. It attacked ʿIrāq al-Manshiyya on the night of December 27 and fought a hard battle. But the defenders under their Sudanese commander put up very stout resistance, battling with bravery and skill and effecting determined counterattacks when any position fell. The Israelis withdrew. The Fālūja Brigade was released only with the signature of the Israel-Egypt armistice agreement at Rhodes on February 24, and was saluted for its bravery by its Israeli adversaries as it left.

Under that agreement, Israel was permitted to maintain only defensive troops in the western Negev, from Fālūja to Eilat. They were free, however, to maintain whatever forces they considered necessary in the eastern half of the Negev. Up to then, Israel had controlled the Negev by regular patrols, without having a permanent force at the southern tip on the Gulf of Akaba. Early in March, the Negev Brigade set off from the northern Negev to trek south along interior tracks through sand and rock, hill barriers, and canyons, while the Golani Brigade moved along the Arabah. On the afternoon of March 10, 1949, the Israeli flag was hoisted on a few mud

buildings, abandoned by a Transjordanian detachment, at what was known then as Umm Rashrash and now as Eilat. The spearheads of both brigades arrived almost simultaneously. The armistice agreement with Transjordan was signed, also at Rhodes, on April 3, 1949. On March 23 an agreement was signed with Lebanon at Rosh ha-Nikrah; and the last armistice agreement, with Syria, was signed on July 20. These acts officially ended Israel's War of Independence.

WAR REFUGEE BOARD, a United States government agency established to assist refugees during World War II. In the autumn of 1943, at the initiative of the Emergency Committee to Save the Jewish People of Europe (the Bergson group), members of Congress introduced a resolution urging the creation of a government agency to rescue refugees from Hitler. At the same time, aides to Treasury Secretary Henry *Morgenthau, Jr., discovered that the State Department had been obstructing opportunities to rescue Jewish refugees and blocking the transmission to the U.S. of information about German atrocities. With pressure building in Congress and the press, Morgenthau, armed with a report from his staff about the State Department's actions, brought the issue to President Roosevelt in January 1944. FDR pre-empted Congressional action by establishing the War Refugee Board.

The WRB was handicapped from the outset. By the time it was established, more than four million Jews had already been slaughtered. As its agent in Istanbul, Ira Hirschmann, put it, the agency was created "at five minutes to twelve [midnight]." Moreover, Roosevelt had established the WRB primarily as a political gesture, and gave the new agency little financial or other support. Private Jewish organizations contributed more than 90 percent of its budget. Fortunately, the board, led by executive director John Pehle, was staffed largely by the same Treasury Department officials who helped lobby for the agency's creation in the first place. Their creativity, determination, and zeal helped overcome some of the administrative and other obstacles they encountered. The WRB's representatives in Turkey, Switzerland, North Africa, Portugal, and Italy energetically employed unorthodox means of rescue, including bribery of border officials and the production of forged identification papers and other documents needed to protect refugees from the Nazis.

The WRB's agents arranged for some 48,000 Jews to be moved from Transnistria, where they would have been in the path of the retreating German army, to safe areas in Romania. About 15,000 Jewish refugees, and about 20,000 non-Jewish refugees, were evacuated from Axis-occupied territory, and at least 10,000 more were protected through various WRB-sponsored activities.

As the German deportation of Hungarian Jews to Auschwitz got underway in the spring of 1944, the WRB launched a campaign of psychological warfare aimed at the Hungarian authorities, whose cooperation was crucial to the success of the deportations. The WRB engineered a series of threats of postwar Allied retribution against collaborators, including public statements to that effect by President Roosevelt, Congressional leaders, and other prominent Americans. Their warnings were conveyed to Hungary through diplomatic channels, radio broadcasts, the European press, and the dropping of leaflets by Allied planes. The WRB's efforts also helped elicit pleas to the Hungarian leadership from the Vatican, the International Red Cross, and the king of Sweden. When the Hungarians finally succumbed to these pressures, about 120,000 Jews remained alive in Budapest. Many had been sheltered by the Swedish diplomat Raoul *Wallenberg, who, with financial and logistical backing from the WRB, organized a network of safe houses in the city.

The WRB took action in other areas, as well. It arranged for the shipment of tens of thousands of food parcels to concentration camp inmates during the final months of the war. The board also helped Herbert Pell, the U.S. representative to the Allied War Crimes Commission, put pressure on the State Department to take a stronger stand on the postwar prosecution of Nazi war criminals.

Some of the board's efforts met with less success. For months, it sought to persuade President Roosevelt to establish temporary shelters for refugees in the United States, but in the end he agreed to just one token shelter for a group of 982 refugees in Oswego, New York. The board repeatedly asked the War Department to bomb the railroad lines leading to Auschwitz or the gas chambers and crematoria, but the requests were rejected. The State Department, too, often refused, or delayed, cooperating with the board's requests for assistance, despite the fact that the president's executive order creating the WRB specifically required such cooperation. The British government likewise responded coldly to the board's efforts and sometimes even impeded them.

Given the magnitude of the Nazi genocide, WRB director John Pehle was correct in his later assessment of the board's accomplishments as "late and little." Still, the WRB deserves credit for playing a major role in the rescue of more than 200,000 refugees during the final 15 months of the war despite numerous and daunting obstacles.

°**WARREN, SIR CHARLES** (1840–1927), British army officer, police commissioner, and archaeologist. Warren entered service in the Royal Engineers in 1857. He carried out a survey

of Gibraltar from 1861 to 1865 and conducted excavations at Jerusalem from 1867 to 1870. Together with C.R. *Conder, he published the results of the survey of western Palestine which Conder had completed in 1881. Warren also conducted a survey of southern Transjordan. In his archeological work in Jerusalem Warren concentrated on excavating the outer wall of the Temple enclosure. Digging a series of underground tunnels, he labored under vast difficulties. Among his discoveries was the wall of the Ophel. Warren recorded the results of his excavations with great care, and they provided the main source of information on the Herodian wall down to its foundation until excavations were again undertaken there in 1968. He also preserved and registered every object he uncovered – a new departure at that time – which gave his work lasting value. His topographical and historical theories, on the other hand, have for the most part become obsolete.

Among his publications are *The Recovery of Jerusalem* (1871), *Underground Jerusalem* (1876), *The Survey of Western Palestine* (with C.R. Conder, 1884), and several works on problems of ancient weights and measures (especially *The Early Weights and Measures of Mankind*, 1913). Warren was one of the founders of the Palestine Exploration Fund and a member of its Executive Committee from 1871 until his death.

Warren was among those who advocated the Jewish settlement of Palestine (in *The Land of Promise*, 1875). In his opinion the country with its natural borders could absorb 15 million people if all its resources were exploited properly. Warren is most famous today for his time as commissioner of the Metropolitan Police from 1886 until 1889, when, among other things, he had to deal with the "Jack the Ripper" murders in Whitechapel. Warren acted with great sensitivity towards the large Jewish community in London's East End, ordering that antisemitic graffiti found near the scene of one murder be immediately erased, for fear that it would stir up anti-Jewish hostility. His role is discussed in all of the many accounts of the "Ripper" crimes, generally regarded as the most famous unsolved murders in history.

WARRENS, ROSA (1821–1878), Swedish poet and translator. Born in Karlskrona, she spent much of her life in Hamburg and died in Copenhagen. Apart from important contributions to the study of Scandinavian folklore and Norse legend, she published Nordic verse in German translation: *Schwedische Volkslieder der Vorzeit* (1856), *Daenische Volkslieder* (1858), and *Schottische Volkslieder* (1861). Her other works include three volumes of Norwegian, Icelandic, and Finnish folk songs and a collection of original verse (1873).

WARSAW (Pol. **Warszawa**), originally capital of the Masovia region; from the 16th century, capital of Poland. Jews were apparently living in Warsaw by the end of the 14th century, but the first explicit information on Jewish settlement dates from 1414. In 1423 the records show ten Jewish families paying tax in Warsaw, and about the same number exempted. The hostility of the townsmen of Warsaw to Jewish settlement in the capital was particularly strong. In 1483 the Jewish inhabitants were expelled, although some were living there three years later. There is no information about Jews in the city between 1498 and 1524; evidently they had either been driven from the city entirely or remained in the outskirts on property owned by the Polish magnates from where they could enter the city for business purposes. Eventually, in 1527, the townsmen of Warsaw obtained the privilege *de non tolerandis Judaeis*, authorizing the exclusion of Jews from the city. Because of its importance as a political and commercial center, however, their connection was not entirely severed. A number of Jews were able to continue to reside in the outskirts, and some managed to gain access to Warsaw itself. When the national Sejm (diet) transferred its sessions to Warsaw in 1572 Jews were permitted to enter the city during its conventions. The time permitted for their sojourn was subsequently extended to a period of two weeks before and after the sessions. In addition, Jewish representatives (*shtadlanim*) of the *Councils of the Lands, empowered to negotiate with royalty and the nobility, also visited Warsaw. A number of other Jews obtained authorization by various means to enter the city temporarily even while the Sejm was not sitting. One of the customary "arrangements" was the "daily ticket" system, which gave the holder of a ticket the right to stay in Warsaw for 14 days. A census of 1765 records that there were 2,519 Jews in Warsaw.

During the *Haidamack attacks of 1768 fugitives from the eastern districts of Poland flocked to the outskirts. The census for 1792 records 6,750 Jews in Warsaw, forming 9.7% of the total population: 30.4% of those economically active were engaged in commerce or as taverners, 26.7% in craft or industry, 41.4% in undefined occupations, and 1.5% in domestic employment or as simple laborers. Several scores of Jewish entrepreneurs engaged in flourishing business as moneylenders, court factors of royalty or the nobility, army suppliers, or agents for foreign embassies. These were the nucleus of the great Jewish bourgeoisie which subsequently formed in Warsaw; they were mainly immigrants from abroad or from other towns in Poland.

Throughout the period of unofficial settlement the townspeople spared no efforts to drive the Jews from the capital. A partial expulsion of the Jewish residents was enforced, in conjunction with organized street attacks, in 1775 and 1790. After the first partition of Poland (1772), Warsaw Jewry, in particular the poorer sector, took an energetic part in the Polish uprising against the Russians. Many Jews volunteered for guard duties, and a number joined in the fighting in the Jewish legion formed under Berek *Joselewicz. In their onslaught the Russian troops massacred the Jewish civilian population, in particular in the Praga suburb where resistance was fierce. Legend associates the name of Joseph Samuel *Zbitkower with large-scale rescue operations during the massacre.

After Warsaw passed to Prussia in 1796, Warsaw Jewry was subjected to the *Juden Reglements* of 1797. Only Jewish residents of the city prior to 1796 were allowed to stay; the others were only permitted the right of temporary domicile, in a reversion to the old "daily ticket" system. In 1805 fresh attacks on Jews in Warsaw were made by the Polish populace. Nevertheless, there was now continuous immigration of German-speaking Jews from Prussia, Silesia, and other places to Warsaw, and the Jewish population increased from 7,688 (12% of the total) in 1797 to 11,630 (17.4%) in 1804.

Within the Duchy of Warsaw (1807–13)
After the formation of the Napoleon-sponsored duchy of Warsaw the Jews were not deprived of the rights of citizenship, but in 1808, under the "infamous decree" of *Napoleon, restrictions were imposed on Jewish rights for ten years. During this period Warsaw Jewry was burdened with heavy taxes. In 1809 a "Jewish quarter" was established outside in which the only persons permitted to reside were Jewish owners of real estate, wholesale merchants, manufacturers, bankers, army suppliers, and doctors, on condition that they wore European dress, were able to read and write Polish, German or French, and sent their children to general schools. The "daily ticket" was abolished in 1811. The vicissitudes of war between 1812 and 1815, and the inimical attitude of the government of the duchy, led to a reduction of the number of Jewish residents in Warsaw, who in 1813 numbered 8,000.

From 1527 until the Prussian conquest no authorized community (*kehillah*) had existed in Warsaw. However, the Jews living in the city and environs met for prayers, established prayer houses and charitable associations, and appointed a *syndic-parnas*, to direct the tax administration, exercise judicial power, and organize the census, among other duties. He was assisted by *dayyanim* and a sworn-in *meturgeman* (interpreter). Rabbis had also officiated without authorization. The Prussian administration had appointed a representation for Warsaw Jewry with the right to exercise the **ḥerem* (excommunication) to facilitate tax collection. Thus the Warsaw community was revived and had the opportunity of appointing authorized rabbis. During the existence of the duchy of Warsaw the community extended its authority until it was transformed in practice from a local body to an institution representative of the Jewry of the whole duchy.

*Ḥasidism spread to Warsaw toward the latter part of the 18th century. A celebrated public disputation between spokesmen of the Ḥasidim and *Mitnaggedim* was held in the Praga suburb in 1781. On the other hand, a small circle of *maskilim* also formed in this period, which included a number of wealthy arrivals from abroad, physicians, and others. In 1802 Isaac Flatau founded the "German Synagogue," in which traditional services were held but sermons were delivered in German. A government-sponsored rabbinical seminary was established in 1826, which the Orthodox members of the community strongly opposed. It continued for 37 years, until the Polish uprising of 1863, and became a center for assimilationist and reformist tendencies.

Within Congress Poland (1815–1915)
During the existence of Congress Poland, the size of the Warsaw community increased to become the largest in Europe. The Jewish population numbered 15,600 (19.2% of the total) in 1816, 72,800 (32.7%) in 1864, 130,000 (33.4%) in 1882, 306,000 (39.2%) in 1910, and 337,000 (38.1%) in 1914. Natural increase was responsible for only part of this growth, which was mainly the outcome of the migration to Warsaw beginning in the 1860s and particularly after the *pogroms in Russia of 1881, when 150,000 Jews moved to Warsaw, a substantial number coming from Lithuania and Belorussia, and from the Ukraine.

From 1815 there was a sharp deterioration in the status of Warsaw Jewry. The area of the "Jewish quarter" was further restricted, the system of "daily tickets" was reintroduced, and the animosity of the general populace increased. The second half of the 19th century inaugurated a change for the better, and was marked by some rapprochement between certain Jewish and Polish circles. In 1862 the restrictions relating to all the Jews of Congress Poland were lifted. The Jews of Warsaw took an active part in the two Polish uprisings against Russia, especially in the second in 1863.

At the end of the 1870s there was a recrudescence of anti-Jewish feeling in Warsaw and throughout Poland. In December 1881 a pogrom broke out in Warsaw in the wake of the Russian pogroms, motivated in particular by the notion that the "Litvaks" (Lithuanian Jews) were the promoters of russification in Poland. The elections to the fourth Imperial *Duma of 1912, in which Warsaw Jewry returned a left-wing candidate, further aggravated anti-Jewish hostility.

Throughout this period, the Warsaw Jews considerably extended their activities in the economic sphere, and the social and economic differences within the community grew more marked. Jews played an important role in finance and all sectors of commerce and also in industry. Of the 20 bankers in Warsaw in 1847, 17 were Jews. Jewish bankers initiated and developed various industries in the state, participated in the construction of railroads, held the monopoly for the sale of *salt and alcoholic beverages, leased the Jewish taxes, and engaged in other activities. In 1849 Jews formed 52% of the total persons engaged in commerce. Nevertheless this *haute bourgeoisie*, despite its economic importance, formed a negligible percentage in the total Jewish population of Warsaw, in 1843 forming 2.2% of the number of Jews actively employed there. In this year about 30% of the Jews earned a livelihood from commerce, mainly as shopkeepers or peddlers, about one-third as artisans and laborers, 13.5% as carters, porters or day laborers, and 12.5% as domestic workers. The proportion of Jews engaged in commerce increased until the 1870s but afterward dropped in face of growing Polish competition.

In 1862 the main source of livelihood for the Jewish proletariat was commerce and crafts: 31.7% were employed in com-

mercial establishments, 27.9% in crafts, and 4.5% in industry; the number in industry later increased, although mainly in small or medium industry, large industries, even under Jewish ownership, taking a smaller number of Jewish workers; 2.8% of the Jews were employed in finance, 1.9% in transportation, and 1.9% in the liberal professions. The large percentage of domestic workers (29.3%) reflects the migration of unemployed women to the metropolis. Later, part of this number was absorbed into the garment and tobacco industries.

Social and Cultural Developments

Ḥasidism spread rapidly in Warsaw. In 1880 two-thirds of the 300 approved synagogues, and many prayer rooms, were ḥasidic, and this also reflected the proportion of Ḥasidim to the total Jewish population in the city. The *Mitnaggedim* were augmented by the end of the 19th century with the advent of the "Litvaks."

The tendency to *assimilation in Warsaw began with the penetration of German cultural influences, in which an important role was played by the wealthy arrivals from the West at the end of the 18th century and the beginning of the 19th, whose ranks were reinforced by wealthy Jews of Polish birth. Later the attachment of the assimilationists became closely orientated to Polish culture and society, and in the second half of the 19th century the tendency spread to the youth of wider circles. The assimilationists took an active role in the leadership and cultural life of the community. The incidence of conversion in Warsaw became the highest in Eastern Europe: in the first half of the 19th century 70 bankers, industrialists and large-scale merchants, 15 printers, and 20 officials adopted Christianity.

In 1883 the society of She'erit Israel of the Ḥovevei Zion was established in Warsaw, led by Israel Jasinowski and Saul Phinehas *Rabinowitz, and in 1890 the society Menuḥah ve-Naḥalah was founded, led by Eliyahu Ze'ev *Lewin-Epstein, which established the moshavah of *Reḥovot in Ereẓ Israel. The Geulah Company, formed in 1904, participated in acquiring land for the society of Aḥuzzat Bayit which pioneered the building of Tel Aviv. The circles of Ḥovevei Zion in Warsaw concentrated in particular in the synagogue of Ohel Moshe, founded in 1885, and subsequently in the Moriah synagogue founded in 1908, at which Isaac *Nissenbaum served as preacher.

A number of Zionist youth and student circles, whose leadership included Jan Kirshrot, Yiẓḥak *Gruenbaum, and Yosef *Sprinzak, combined in the society Ha-Teḥiyyah in 1903. Its ranks included supporters of differing national and socialist ideologies who soon separated. Some of its members joined the Zionist Democratic Fraction, under the leadership of Gruenbaum. Another group became a formative influence in the Po'alei Zion, under the leadership of Yiẓḥak *Tabenkin and Ben-Zion Raskin, and in Ẓe'irei Zion, led by Sprinzak. After the split in the Sixth Zionist Congress over the *Uganda scheme (1903), the supporters of Theodor *Herzl and the political Zionists joined in the Meginnei ha-Histadrut which established its headquarters in Warsaw.

At the end of the 19th century Jewish socialist societies and workers' circles were consolidated into the *Bund, under the leadership of Leo Goldman, John Mill, and Ẓiviah Hurvitz, originally from Vilna. The Bund conducted its activities among the Jewish workers, organized strikes and May 1st demonstrations, and promoted Yiddish culture: it was opposed to Zionism and the movement to revive Hebrew.

Until the end of the 1860s the Warsaw community leadership was mainly Orthodox, excepting for the periods 1841–44 and 1856–58, when the president of the community was Matthias Rosen, an assimilationist who was acceptable to all groups of the community. After a financial criterion was established in the elections, the assimilationists assumed the leadership of the community by agreement with the Ḥasidim, and controlled its affairs for over 50 years, between 1871 and 1926. Zionist opposition to the assimilationists was organized for the first time in 1899.

Four rabbis served for the whole of Warsaw and its vicinity, all *Mitnaggedim*: Solomon Zalman *Lipshitz, 1819–39; Ḥayyim *Dawidsohn, 1839–54; Dov Berush *Meisels, 1854–70; and Jacob *Gesundheit, 1870–73, who was not accepted by the Ḥasidim and was removed from office with the help of the assimilationists. The rabbis served in conjunction with *dayyanim*. Attempts to establish a *Reform synagogue in Warsaw were unsuccessful. The only innovation introduced by the "modernized" congregations was that sermons in their synagogues were preached in German or Polish. Rabbis in these synagogues were Abraham Meir Goldschmidt, Isaac Kramsztyk, Mordecai *Jastrow, Isaac Cylkow, Samuel Abraham *Poznanski, and Moses *Schorr.

The main trend of Jewish education in Warsaw was Orthodox. In the middle of the 19th century, 90% of all Jewish children of school age attended *ḥeder*. Subsequently the percentage decreased, and by the end of the century only 75% attended *ḥadarim*. In 1896 there were 433 authorized *ḥadarim*, in Warsaw and a large number of unauthorized ones. In 1885 circles of Ḥovevei Zion established the first *ḥeder metukkan*, or modern *ḥeder*, in Warsaw. In 1820 three state schools for Jewish children had been opened under the supervision of Jacob *Tugendhold, but the Orthodox opposition curbed the development of general schools. On the threshold of World War I there were 20 elementary schools in Warsaw in which the language of instruction was Russian. Attempts to open private schools for boys met only with limited success. On the other hand, the girls' secondary schools, which disseminated Polish culture, were more popular; even Ḥasidim, who normally insisted on an extreme Orthodox education for their sons, sent their daughters to them. In 1895, 19 schools of this type existed in Warsaw. Vocational training courses, a secondary school with a scientific trend (1878–88), and a trade school were also opened. The first Hebrew kindergarten was founded by Jehiel Heilperin in 1909, in conjunction with a course for kindergarten teachers, opened in 1910.

Jewish Press

The Haskalah literature in Warsaw was of an inferior standard and made little impact. However, in the 1880s, Warsaw became the center for Hebrew publishing in Poland and throughout Russia. The daily and weekly press, the many literary organs, and other periodicals which now began to burgeon, marked the transition from the world of Haskalah to the new Hebrew literature. They provided a platform for the elite of the writers, poets, scholars, and journalists. In 1862 the Hebrew periodical *Ha-Ẓefirah* was established as a weekly by Ḥayyim Selig *Slonimski, which after a series of intervals and setbacks became a daily in 1886 and the central organ for Russian Jewry. Other daily or weekly Hebrew newspapers also published in this period did not continue for long, generally for lack of readership; the heavy hand of the censor also proved a stumbling block. The pioneer of Hebrew publishing in Warsaw was A.L. Ben Avigdor (see *Shalkovich) while the most active personality in journalism and literature was Nahum *Sokolow.

The first Yiddish (and Polish) weekly was *Der Beobakhter an der Weykhsel*, published in 1823–24 by assimilationist circles. The transition in *Yiddish literature to new forms and contents originated with Y.L. *Peretz and his circle and the literary publications which they founded, *Yidishe Bibliotek* (1891–95) and *Yontev Bletlakh* (1894–96). After a number of unsuccessful attempts, two Yiddish periodicals became established which soon began to overtake the Hebrew press: Samuel Jacob Jackan began to publish the daily *Yidishes Tageblat* in 1906, changed in 1908 into *Haynt*. Zevi *Prylucki established the daily *Moment* in 1911. Polish periodicals also appeared, first sponsored by the assimilationists, among them the weekly *Jutrzenka*. At the beginning of the 20th century national newspapers were also published in Polish.

World War I and the Polish Republic

During World War I thousands of refugees arrived in Warsaw. In 1917 there were 343,400 Jews (41% of the total population). The German occupation brought improvement from the political standpoint, but the concentration of refugees and the havoc wrought by war increased the economic distress.

During the period of renewed Polish independence (1918–39) the Jewish population of Warsaw showed marked growth, but a decrease compared with the general population. In 1918 the total was 320,000 (42.2%), and in 1938, 368,400 (29.1%). The tendency of the Polish state to centralize economic activity in its own institutions, the antisemitic direction of its policy and the antisemitic feelings rife among the Polish public, as well as the economic action taken against the Jews (see *Poland), severely affected Jewish life in Warsaw. The number of Jewish unemployed reached 34.4% in 1931, while that of those without means of livelihood was even greater. In 1933 half of the members of the Warsaw community were exempted from the communal tax as they were unable to furnish the minimal payment of five zlotys a year. Consequently the pressure of emigration increased, in particular to Palestine.

Warsaw was the headquarters of Jewish parties and movements in Poland, the arena of the struggle for Jewish representation in the state Sejm and Senate, and the center of Jewish cultural and educational activities, of the arts, scholarship and literature, and of the Jewish national press. A fierce political struggle was waged over the character that Jewish life in Warsaw should assume. Ḥasidism continued to be an important factor in Jewish affairs. Many of the ḥasidic *admorim* of various dynasties settled in Warsaw. Assimilation became a less important issue, and the chief political struggle was between the Zionist factions and the Orthodox-ḥasidic groups, which combined in the *Agudat Israel. Between 1926 and 1936 the direction of Warsaw communal affairs was in the hands of Agudat Israel and the Zionists, either in coalition or alternately. However, in 1936 the Bund gained the lead in both the elections to the communal leadership and the Jewish representation on the Warsaw municipality. The Polish government annulled the results of the democratically held communal elections and appointed another community board (*kahal*) which continued in office until the German occupation in World War II.

JEWISH EDUCATIONAL INSTITUTIONS. During the inter-war period a number of Jewish school systems existed: six Hebrew-national elementary schools, established by the Zionist Tarbut organization; four Yiddish secular schools established by the CYSHO supported by the Bund and the left Po'alei Zion; a Yiddish-Hebrew school of the Shulkult organization, separated from the CYSHO; an Orthodox school of Agudat Israel (Ḥorev for boys and *Beth Jacob for girls) – the exact number of their schools is not known but the number of the pupils exceeded that for other schools; two bilingual (Polish-Hebrew) elementary schools and one secondary school of the Yavneh founded by *Mizrachi; and numerous private secondary schools. Most Jewish children attended the state schools. In neighborhoods where there were Jewish concentrations, some of these schools were solely intended for Jewish pupils: lessons were held on Sundays instead of the Sabbath, and the schools were known as *szabatówki*. In 1928 the Institute for Jewish Studies, Makhon le-Ḥokhmat Yisrael, was opened, and the name was subsequently changed, as its sphere of activity expanded, to Makhon le-Madda'ei ha-Yahadut. Moses Schorr, Meir *Balaban, Abraham *Weiss, and Menahem (Edmund) Stein served as principals.

During this period Hebrew literature and press declined. Many of the Hebrew writers emigrated to Ereẓ Israel. Attempts to continue publication of Hebrew dailies were unsuccessful; not one lasted for an appreciable time. The most important publishing house of Hebrew books in Warsaw was that of A.J. *Stybel. On the other hand, the Yiddish and Polish Jewish press increased its output. Other Yiddish dailies were published alongside the *Haynt* and *Moment*, including party organs and unaffiliated papers, with a wide public and considerable influence on their readers. In 1917 *Nasz Kurjer* was published under the editorship of Jacob Apenszlak, which

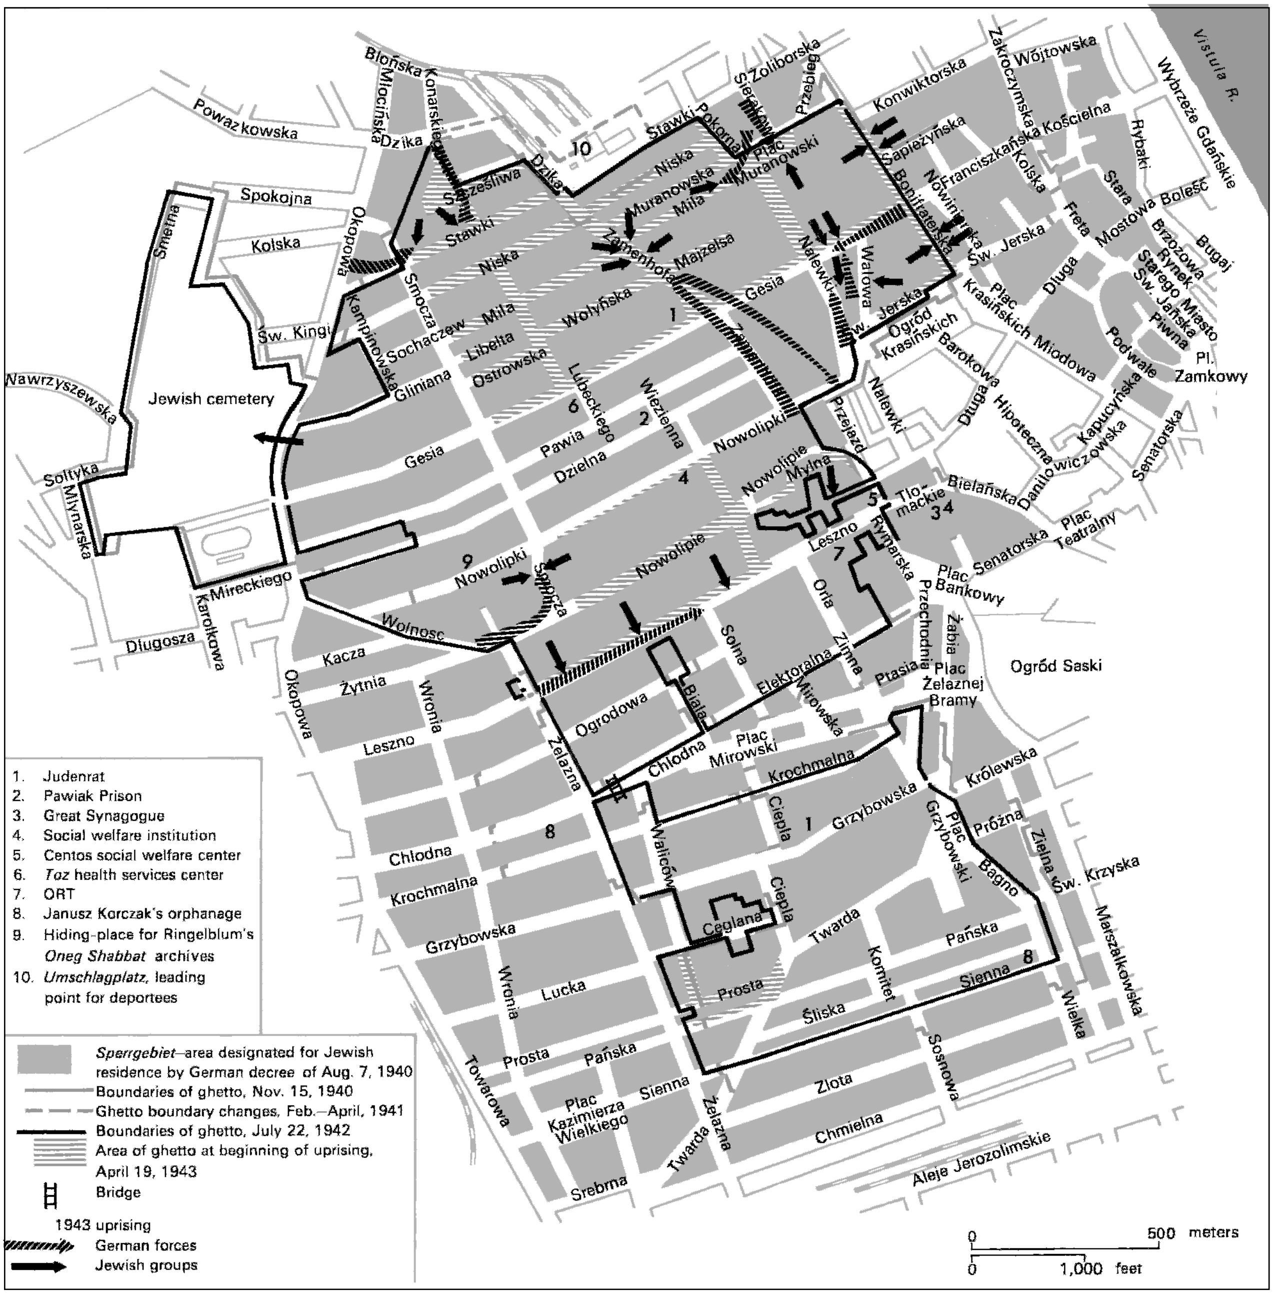
changed to *Nasz Przegląd* in 1920, a national independent daily. Other weeklies and periodicals were also published.

[Avraham Rubinstein]

Hebrew Printing

The beginning of Hebrew printing in or near Warsaw was due to the desire of the government to stem the outflow of capital abroad for the import of Hebrew books. In Warsaw the first Hebrew book (Ẓevi Hirsch b. Ḥayyim's notes on the Yalkut Shimoni *Ẓemah le-Avraham*) was printed by Peter Zawadzki in 1796. After his death his widow continued printing – mainly anti-hasidic literature – until 1801. Another non-Jewish Hebrew printer was V. Dombrowsky (to 1808). The first Jewish-owned press was that of Ẓevi Hirsch Nossonowitz of Lutomirsk, who printed, with Krueger's Novydwor type, from 1811, in partnership with Avigdor Lebensohn 1818–21, and afterward the two of them separately, Nossonowitz now changing his name to Schriftgiesser ("type-caster"). He died in 1831, succeeded by his son Nathan; the firm continued for another century, printing a Talmud edition (1872). Lebensohn and his descendants were active to 1900. More than 30 additional presses were established in Warsaw during the 19th century, including that of S. Orgelbrand and sons, who printed Talmud editions as well as *Turim*, Maimonides' *Yad*, the Shulḥan Arukh, and a Mishnah edition.

Among the moving spirits of Hebrew printing in Warsaw was Isaac Goldmann (1812–1887), who ran his own press from 1867 producing more than 100 books, among them Talmud tractates. In 1890 the brothers Lewin-Epstein established a Hebrew printing house, which is still active in Israel. A dozen or so more presses were set up in the first quarter of the 20th century. At the outbreak of World War II in 1939 more than 1,000 workers were engaged in the Hebrew printing works in Warsaw.



Holocaust Period

When German forces entered the city on Sept. 29, 1939, there were 393,950 Jews, comprising approximately one-third of the city's population, living in Warsaw. Between October 1939 and January 1940 the German occupation authorities issued a series of anti-Jewish measures against the Jewish population. These measures included the introduction of forced labor; the order that every Jew should wear a white armband with a blue star of David, and the special marking of Jewish-owned businesses; confiscation of Jewish real estate and other property; and a prohibition against Jews using the railway and other public transportation.

THE GHETTO. In April 1940 the Germans began constructing a wall to enclose the future Warsaw ghetto. On October 2, the Germans established a ghetto for all Warsaw Jews and Jewish refugees from the provinces. Within six weeks all Jews or persons of Jewish origin had to move into the ghetto, while all "Aryans" residing in the assigned area had to leave. The ghetto originally covered 340 hectares (approximately 840 acres), including the Jewish cemetery. As this area was gradually reduced by the Germans, the walls were moved, and the number of gates changed. In the autumn of 1941 the ghetto was divided into two parts, joined by a bridge over Chlodna Street. The gates were guarded by German and Polish police from the outside and by the Jewish militia (*Ordnungsdienst*) from the inside and only those with a special permit could enter or leave the ghetto. In the beginning, the Warsaw city hall, German political authorities, and a special office, the "*Transferstelle*," responsible for financial affairs, dealt with the ghetto's administration. However, from April 1941 a German commissioner, Heinz Auerswald, was appointed over the ghetto. The head of the Jewish community council was Adam *Czerniakow, an engineer who had been appointed by the mayor of Warsaw during the siege (Sept. 23, 1939). By order of Hans Frank (Sept. 28, 1939), a *Judenrat was created, consisting of 24 members, and presided over by Czerniakow. Czerniakow carried out his functions for the general good under trying conditions, often interceding with the German authorities to ameliorate the repressive regulations. He tirelessly supported social and cultural institutions in the ghetto and provided relief wherever possible.

Originally some 400,000 Jews were crowded into the area of the ghetto. The reductions in its size necessitated internal shifting and further overcrowding, so that thousands of families were often left without shelter. The situation was further aggravated when some 72,000 Jews from the Warsaw district (see *Poland) were transferred to the ghetto, bringing the total number of refugees to 150,000 (April 1941). The average number of persons per room was 13, while thousands remained homeless. The ghetto population during various periods prior to July 1942 is estimated to have been between 400,000 and 500,000. The confiscation and plunder of Jewish property was conducted by the "*Transferstelle*." In January 1942, Jewish goods valued at 3,736,000 zlotys ($747,200) were confiscated; in February – 4,738,000 zlotys ($947,600); in March – 6,045,000 zlotys ($1,209,000); and in April-6,893,000 zlotys ($1,378,000). The ghetto population received a food allocation amounting to 184 calories per capita a day, while the Poles received 634, and the Germans 2,310. The price per large calorie was 5.9 zlotys (about $1) for Jews, 2.6 zlotys (50 cents) for Poles, and 0.3 zlotys ($.06) for Germans. The average allocation per person in the ghetto was four pounds of bread and a half pound of sugar a month. The dough was mixed with sawdust and potato peels.

The ghetto suffered from mass unemployment. In June 1941, 27,000 Jews were active in their professions, while 60% of the Jewish population had no income at all. A small number of Jews who had their own tools and machines found employment in factories taken over by Germans. Wages were minimal. For 10–12 hours of strenuous labor, a skilled worker earned 2½–5 zlotys ($0.50–1.00) daily. There was an acute shortage of fuel to heat the houses. In the winter of 1941–42, 718 out of the 780 apartments investigated had no heat. These conditions led to epidemics, especially typhoid. The streets were strewn with corpses due to starvation and disease. Bands

Plan of Warsaw ghetto, 1940–43, after J. Ziemian, The Borders of Warsaw Ghetto, *Jerusalem, 1971.*

of children roamed the streets in search of food. A few women and children occasionally slipped across to the "Aryan" side, in an attempt to find food or shelter. The Polish police usually seized them and turned them over to the Germans. In October 1941 the authorities declared that leaving the ghetto without permission was punishable by death.

From time to time the authorities rounded up able-bodied people in the streets and sent them to slave labor camps. In April 1941 some 25,000 Jews from the Warsaw ghetto lived in these camps under conditions that rapidly decimated their numbers. After the outbreak of the German-Soviet War (June 1941), many of the inmates in the camps were executed.

It is estimated that by the summer of 1942, over 100,000 Jews died in the ghetto proper. Nevertheless, the morale of the ghetto inhabitants was not broken, and continual efforts were made to overcome the German decrees and organize relief. Illegal workshops were gradually established for manufacturing goods to be smuggled out and sold on the "Aryan" side. These included leather products, metals, furniture, textiles, clothing, and millinery. At the same time raw materials were smuggled in. In this way thousands of families were sustained. The

smuggling of foodstuffs into the ghetto, carried out by Jewish children, was especially intensive. In December 1941 the official import of foodstuffs and materials into the ghetto was valued at 2,000,000 zlotys ($400,000) while illegal imports totaled 80,000,000 zlotys ($16,000,000). Social welfare institutions were active to combat hunger and disease. The *Centos for social welfare, the *Toz for health services, and other organizations re-formed and established hospitals, public kitchens (daily providing over 100,000 soup rations), orphanages, refugee centers, and recreation facilities. In each block of houses a committee for charitable work functioned and also engaged in cultural and educational activities, such as reading groups, lectures, and musical evenings. A network of schools, both religious and secular, as well as trade schools functioned in the ghetto. Some of these schools were illegal and could operate only under the guise of soup kitchens. Similarly, medical, technical, and scientific training was given under the guise of trade courses. By the end of 1940 the Jewish historian, Emmanuel *Ringelblum, established a secret historical and literary society under the code name of *Oneg Shabbat*. This group set up secret archives on the life and martyrdom of the Polish Jews under the Nazis. These archives, which were hidden in several places, were discovered after the war. Despite the closing down of all synagogues and the prohibition against public worship, clandestine services were held, especially on holidays. Yeshivot secretly functioned. The *ẓaddikim* of *Aleksandrow and *Ciechanow were hidden and cared for by their followers. Many religious Jews held the view that their sufferings were preliminary to the coming of the Messiah. There were many instances of heroism by ultra-Orthodox Jews in the face of death. Hillel *Zeitlin, the famous religious writer, arrived at the "*Umschlagplatz*" (assembly point) during the 1942 deportation, proudly dressed in his religious garb. Janusz *Korczak, the director of the Jewish orphanage, continued to give hope and courage to his wards until he boarded the death train together with the children.

FORMATION OF RESISTANCE. The main form of resistance in the ghetto revolved around the underground political life which existed throughout the German occupation. The most active were the Zionist groups – *Po'alei Zion, *Ha-Shomer ha-Ẓa'ir, Deror, *Betar, *Gordonia, as well as the Bund and the Communist-inspired Spartakus organization. As early as Passover 1940 the Germans, with the cooperation of Polish hooligans, provoked a pogrom in the Jewish district. Underground Jewish groups organized effective self-defense. After the ghetto was established, underground activity increased, as the purely Jewish environment offered better security against denunciations and infiltration of German police agents into the ranks of the underground. The political underground movements in the ghetto engaged in such activities as disseminating information, collecting documents on German crimes, sabotaging German factories, and preparing for armed resistance. A series of illegal periodicals appeared in Hebrew, Yiddish, and Polish. Among the best known were the following Hebrew publications: *Deror*, circulated by the *He-Halutz organization; *El Al, Itton ha-Tenu'ah*, and *Neged ha-Zerem* by Ha-Shomer ha-Ẓa'ir: *Magen David* by Betar; *Sheviv* by the General Zionists; Yiddish publications: *Bafrayung* by He-Halutz; *Morgenfray* and *Biuletin* by the Bund: and Polish publications: *Awangarda* by Po'alei Zion; *Jutrznia* and *Plomienie* by Ha-Shomer ha-Ẓa'ir.

The first Jewish military underground organization, Swit, was formed in December 1939 by Jewish veterans of the Polish army. Most of its members were Revisionists. The organization was headed by David Apelbaum and Henryk Lipszyc, aided by a Polish major, Henryk Iwanski.

Early in 1942 a second underground fighting organization emerged, created by four Zionist groups: Po'alei Zion, Ha-Shomer ha-Ẓa'ir, Zionist Socialists, and Deror, as well as the Communist organization. It soon became known as the anti-Fascist bloc. Its leaders were Szachna Sagan, Aron Lewartowski, Josef Kaplan, and Josef Sak. Four commanders were appointed: Mordecai *Anielewicz, Pinkus Kartin, Mordecai Tenenbaum, and Abram Fiszelson. The Bund did not join the bloc but created its own fighting organization "Samo obrona" (self-defense) under the command of Abraham Blum. None of the three military organizations of the ghetto succeeded in acquiring arms prior to July 22, 1942, when mass deportations to *Treblinka death camp were initiated by the Nazis.

FIRST MASS DEPORTATIONS. The deportations were preceded by a series of terrorizing "actions," when scores of people were dragged out of their homes and murdered in the streets. Just one day before the mass deportations to Treblinka began (July 21, 1942), 60 hostages were taken to the Pawiak Prison. Three days later, the president of the Judenrat, Adam Czerniakow, committed suicide following a demand by the Nazis that he cooperate with them in the deportations. His successor, Maksymilian (Marek) Lichtenbaum, also an engineer, obeyed the Nazi orders. The number of deportees averaged 5,000–7,000 daily, sometimes reaching 13,000. Some of the victims, resigned to their fate as a result of starvation, reported voluntarily to the "*Umschlagplatz*," lured by the sight of food which the Germans offered to the volunteers, and by the promise that their transfer to "the East" meant they would be able to live and work in freedom. In the beginning, the Germans exempted from deportation employees of the ghetto factories, members of the Judenrat and Jewish police, and hospital personnel, as well as their families. Thousands of Jews made feverish attempts to obtain such employment certificates. In the course of time even these "safe" categories were subject to deportation. The number of victims, including those murdered in the ghetto and those deported to Treblinka, totaled approximately 300,000 out of the 370,000 inhabitants in the ghetto prior to July 1942. This major *Aktion* lasted from July 22 until Sept. 13, 1942. Following the deportations, the ghetto area was drastically constricted so that some factories and several blocks of buildings were left outside the new walls and cordoned off with barbed wire to prevent anyone finding shelter there. The Germans also fixed the number

of inhabitants allowed to remain in the ghetto at a maximum of 35,000 persons.

ACTIVE RESISTANCE. The leaders of the underground movements appraised the new situation. At their first meeting, they decided to create the Jewish Fighting Organization (Żydowska Organizacja Bojowa-ZOB), and take active steps to oppose further deportation. A few members of the underground managed to escape from Treblinka, and brought to the ghetto information about the real fate that awaited the deportees, namely physical annihilation. Because of the blockade it was not even possible to pass this information on to the non-Jewish population.

Some 30,000–35,000 Jews, most of them factory workers and their families, legally remained in the ghetto and were employed within or outside the ghetto. In addition, there were between 20,000 and 30,000 Jews living on in the ghetto "illegally." By the end of 1942 there was an influx of several thousand Jews from the labor camps which had been closed. At this time some Jews hiding on the "Aryan" side were seized and returned to the ghetto. In this period intensive preparations were made for armed resistance. The Bund also joined the ZOB, while the Revisionists continued to adhere to their separate organization, Swit. Appeals were made to several Polish underground organizations for the acquisition of weapons. An emissary of the ZOB, Arie (Jurek) Wilner, succeeded in persuading the commanders of one of the Polish underground armies (Armia Krajowa) of the necessity of supplying weapons to the ghetto underground and, after long negotiations, about 100 firearms and some hand grenades were sent into the ghetto. Another small quantity of arms was supplied by the Communist "People's Guard." The Revisionists also obtained several loads of arms from two Polish underground organizations led by Major H. Iwanski and Captain Szemley (Cesary) Ketling. Several secret workshops were established in the ghetto to manufacture homemade hand grenades and bombs, and some additional arms were bought on the black market. At the same time, a network of bunkers and subterranean communication channels was constructed to enable combat against the superior German forces and to protect the non-fighting population.

The second wave of deportations began on Jan. 18, 1943, when the Nazis broke into the ghetto, surrounded many buildings, and deported the inhabitants to Treblinka. They liquidated the hospital, shot the patients, and deported the personnel. Many factory workers who had been employed outside the ghetto were included among the deportees. The underground organizations, insufficiently equipped and ill-prepared, nevertheless offered armed resistance, which turned into four days of street fighting. This was the first case of street fighting in occupied Poland. The Germans, fearing the impact of this outburst on other parts of Poland, stopped the deportations, and attempted to carry out their aim by "peaceful" means, namely by voluntary registration for the alleged labor camps. The underground, in turn, conducted an intensive information campaign about the real intentions of the Nazis. As a result the second wave of deportations was suspended after four days, during which the Germans managed to send only 6,000 persons to Treblinka. About 1,000 others were murdered in the ghetto itself.

THE GHETTO UPRISING. After this *Aktion*, daily life in the ghetto was paralyzed. Walking in the street was punishable by death. Only groups of workers marching under armed guard were to be seen. Social institutions ceased to function and the Judenrat, most of whose members were killed in the January *Aktion*, were reduced to a small office. The underground organizations, however, were preparing for armed resistance in case a further attempt would be made by the Germans to liquidate the ghetto. Mordecai Anielewicz now headed the ZOB. The members of his command were: Itzḥak (Antek) *Cukierman, Herz Berlinski, Marek Edelman, Zivia Lubetkin, and Michal Rojzenfeld. The entire force was divided into 22 fighting units, each unit affiliated with one of the political groups. Israel Kanal was commander of the units operating in the central area of the ghetto; and Eleazar Geller and Marek Edelman commanded the factory units. The ZOB underground headquarters were at 18 Mila Street. The Revisionist commanders were Leon Rodal, Pawel Frenkiel, and Samuel Luft.

On April 19, 1943, a German force, equipped with tanks and artillery, under the command of Col. Sammern-Frankennegg, penetrated into the ghetto in order to resume the deportations. The Nazis met with stiff resistance from the Jewish fighters. Despite overwhelmingly superior forces, the Germans were repulsed from the ghetto, after suffering heavy losses. Sammern-Frankennegg was relieved of his command, and Gen. Juergen *Stroop, appointed in his stead, immediately resumed the attack. Street fighting lasted for several days, but when the Germans failed in open street combat, they changed their tactics. Carefully avoiding any further street clashes, the Germans began systematically burning down the houses. The inhabitants died in the flames, while those hiding in the canals and bunkers were killed by gas and hand grenades. Despite these conditions, the Jewish fighting groups continued to attack German soldiers until May 8, 1943, when the ZOB headquarters fell to the Germans. Over a hundred fighters, including Anielewicz, died in this battle. Several units continued to fight even after the fall of the ZOB and Revisionist headquarters. Armed resistance lasted until June 1943. With the help of the Polish "People's Guard" some 50 ghetto fighters escaped from the ghetto and continued to fight the Germans in the nearby forests as a partisan unit named in memory of Anielewicz.

The Warsaw ghetto uprising had an enormous moral effect upon Jews and non-Jews throughout the world, especially since it was prepared and carried out under conditions which practically excluded *a priori* any attempt at armed resistance. Despite the vastly unequal forces, the uprising continued for a long time and constituted the largest battle in occupied Europe before April 1943 (excepting in Yugoslavia). This battle

also had its impact upon the Polish population, resulting in the intensification of resistance by the Poles as well as by Jews throughout the country. On May 16, 1943, Stroop reported to his superiors on the complete liquidation of the Warsaw ghetto. As a token of his victory he blew up the Great Synagogue on Tlomacka Street. According to his report, the Germans in the course of one month's fighting had killed or deported over 56,000 Jews. The Germans themselves officially suffered 16 dead and 85 wounded between April 29 and May 15, but it is conjectured that the German casualties were in fact much higher. In the course of the following months, the Germans penetrated the empty ghetto and hunted down the remnants hiding in the ruins, often using fire to overcome sporadic resistance, which continued until August 1943.

The Warsaw ghetto uprising became an event of world history when details of what happened became known after the war. Among the writers who depicted life in the ghetto and the underground fighters were Yiẓḥak L. Katznelson, John Hersey, and Leon *Uris.

After the liquidation of the ghetto, the surviving members of the ghetto leadership continued underground work on the "Aryan" side of Warsaw. The underground's main activity was to assist Jews living on the "Aryan" side, either in hiding or by means of forged documents. According to their figures, the number of Jews on the "Aryan" side reached 15,000 (May 1944). They also established contact with Jewish organizations abroad and received financial assistance. Among their leaders were Adolf *Berman of Po'alei Zion and Leon Fajner of the Bund. Emmanuel *Ringelblum continued his scientific work of collecting evidence on Nazi crimes until March 1944, when he was seized and executed. Hundreds of Jews were active in the Polish underground of Greater Warsaw, particularly Hanna Szapiro-Sawicka, Niuta Tajtelbaum, Ignacy Robb-Narbutt, Menasze Matywiecki, and Ludwik Landau. When the Polish uprising in Warsaw broke out on Aug. 1, 1944, over 1,000 Jews in hiding immediately volunteered to fight the Germans. Hundreds of them fell in the battle, among them a member of the high command of the People's Army, Matywiecki, and Pola Elster, a member of the Polish National Council. In addition, the remnants of the ZOB, under the command of Cukierman, and a group of liberated prisoners from the city concentration camp, participated in the uprising.

Post-War Developments

About 6,000 Jewish soldiers participated in the battle for the liberation of Warsaw. Warsaw's eastern suburb, Praga, was liberated in September 1944, and the main part of the city on the left bank of the Vistula on Jan. 17, 1945. On that day only 200 Jewish survivors were found in underground hideouts in the ruins of destroyed Warsaw. By the end of 1945 about 5,000 Jews had settled in Warsaw. That number was more than doubled, when Polish Jews, who had survived the war in the Soviet Union, returned. Warsaw became the seat of the Central Committee of Polish Jews. On April 19, 1948 (the fifth anniversary of the Warsaw ghetto uprising) a monument executed by N. Rapaport in memory of the ghetto fighters was unveiled in the square called "The Ghetto Heroes' Square." In 1949 a number of Jewish cultural institutions (The Jewish Historical Institute, the Jewish Theater, editorial staffs of the Yiddish papers *Folksshtime* and *Yidishe Shriften*) were transferred from Lodz to Warsaw. A club for Jewish youth, "Babel," was opened there and one synagogue was rebuilt. After the war Warsaw Jews left Poland in three main waves: in 1946–47 after the great pogrom in *Kielce; in 1957–58; in 1967–68 when the Polish government launched its official antisemitic campaign. After 1968 Jewish institutions, although officially not closed, had actually ceased to function. The number of remaining Jews, mostly aged people, was estimated at 5,000 in 1969.

[Danuta Dombrowska / Stefan Krakowski]

In the following two decades Jewish life in Warsaw was dormant, as in all of Poland, with one synagogue open and no rabbi. With the fall of Communism Jewish life revived. Poland now had a chief rabbi whose seat was in Warsaw. A primary school and kindergarten were opened and Jewish courses were offered at the university. Warsaw's Jewish Historical Institute housed Emanuel *Ringelblum's famous ghetto archive as well as a 60,000-volume library while the Warsaw Yiddish Theater was the only regularly functioning Yiddish theater in the world, though most of the actors were non-Jews. In the early 21st century the majority of Poland's 8,000 registered Jews lived in Warsaw, though it was believed that there were many more people of Jewish ancestry.

WARSCHAWSKI, MAX (1925–), rabbi and scholar, chief rabbi of Bas-Rhin (Alsace, France), Warschawski was born in Bischeim, a suburb of Strasbourg, to an Alsatian family whose roots go back to Eastern Europe. He was a student of Chief Rabbi Abraham Deutsch, and during World War II studied in the Jewish Seminary of Limoges, to where the Alsatian Jewish community was evacuated in 1939. After the liberation, he completed his studies in Paris and London and became rabbi of his hometown Bischeim. He was in charge of religious teaching in Strasbourg. He was appointed rabbi of Strasbourg in 1954; then he became deputy chief rabbi in 1961 and chief rabbi in 1970. He was active and successful in developing Jewish education both in Jewish schools and in state schools. He was also active in welcoming in Alsace Jews from North Africa, mostly from Algeria, who massively emigrated in 1962. His aim was to avoid what had happened in the inter-war period, when Alsatian Jews had refused to welcome Jewish immigrants from Eastern Europe and from Germany. The old Jewish community of Strasbourg became more diverse in the 1960s, and Warschawski struggled to maintain its unity. Under his guidance, Jewish life flourished in Strasbourg: many students engaged in Jewish learning and were of a strong Zionist bent; new synagogues were built in the city and its suburbs. Warschawski, together with his wife, Mireille (born Metzger), tried to be a rabbi for both secular and Orthodox Jews. He maintained strong ties with the Jewish scouts (Éclaireurs Israélites de France). Warschawski also worked as a historian of the Jews of Alsace, studying the traditions of this ancient, deeply rooted community, saving the artifacts he could find (delivering them to Strasbourg museums), and writing numerous articles in the Jewish press on these old rural communities. With his wife, he wrote a textbook for young Jewish students about the Bible, *Ma Bible illustrée* (1957). With his wife, he immigrated to Jerusalem in 1988.

[Jean-Marc Dreyfus (2nd ed.)]

WAR SCROLL, manuscript comprising 18 columns found among the manuscripts in Qumran Cave 1 in 1947 and acquired by E.L. *Sukenik for the Hebrew University; it is now in the Shrine of the Book, Jerusalem. Two fragments of the scroll were discovered when the cave was officially inspected early in 1949; further fragments of a different recension of the same work were found in Cave 4.

Summary

The work contains prescriptions for the eschatological warfare, lasting 40 years, which will end with the extermination of wickedness (embodied in the "sons of darkness") and the triumph of righteousness (embodied in the "*sons of light"). It is in some degree a Midrash on Daniel 11:40ff., describing in detail how the last great enemy of the people of God, together with his supporters, "shall come to his end, and none shall help him" (Dan. 11:45), and how Michael will stand up to champion the cause of God (Dan. 12:1). The exiles will return from "the wilderness of the peoples" to encamp in "the wilderness of Jerusalem" and in the first instance they will give battle to the *Kittim and their allies, extirpating them first from Syria and then from Egypt. This phase of the war lasts six years. A pure sacrificial worship is established in Jerusalem, organized by a worthy priesthood. There remain 29 years for fighting (for every seventh year is free from war); during these remaining years the other enemies of Israel are attacked and wiped out in turn: those of the family of Shem in the first nine years, the family of Ham in the next decade, and the family of Japheth in the final decade.

The Holy War

The whole campaign is envisaged in terms of the ancient institution of the holy war; slogans emphasizing this are inscribed on the trumpets and on the standards of the sons of light. Some of these slogans have the character of "orders of the day," as when Judah Maccabee, before joining battle with Nicanor, gave the watchword "God's help" (II Macc. 8:23). The "great standard at the head of all the people" was to bear the inscription "Peoples of God" (1QM 3:13), which may be compared with Simeon's official title *sar am El* (I Macc. 14:28). As Judah, before leading his troops into battle, reminded them how divine help had come to their ancestors in similar crises, in the destruction of Sennacherib's army (II Macc. 8:19), so encouraging episodes from Israel's history are invoked in the *War Scroll*: "Goliath of Gath, a mighty man of valor, Thou didst deliver into the hand of David Thy servant, because he trusted in Thy great name" (1QM 11:1ff.). As Judah and his men, returning from victory, "sang hymns and praises to heaven" (I Macc. 14:24), so the *War Scroll* prescribes a hymn of thanksgiving to be sung after battle (1QM 14:4ff.) as well as blessings to be pronounced before and during the action itself by the high priest and the priests and levites (1QM 10:1ff.). As befits a holy war, the priesthood plays a leading part; special vestments are prescribed for its members to wear during battle, in which they accompany the fighting men to strengthen their hands and blow the trumpets for advance, engagement, and return. But when the rout of the sons of darkness begins, "the priests shall sound from afar when the slain fall, and they shall not come to the midst of the slaughter lest they be defiled by unclean blood, for they are holy and must not profane the oil of their priestly anointing with the blood of a nation of vanity" (1QM 9:7–9). Ceremonial purity is insisted upon throughout; not only are the men engaged in a holy war but the holy angels go with their armies. The soldiers must therefore abstain

from sexual intercourse while on active service; latrines must be separated from the camp by 2,000 cubits; physical blemishes incapacitate a man from military service as rigorously as they do from ministry in the sanctuary (1QM 7:3–8).

Contemporary Models

While the fundamental principles of the action are those of the holy war, the detailed directions about battle formation, tactics, and weapons are fairly closely related to contemporary practice. It does not appear that the author of the work had ever seen a battle; as in Chronicles, the sons of darkness remain passive and allow the sons of light to carry out their plan of war against them without offering much resistance. Yet the author and his associates had made it their business to study contemporary military manuals, and the results of their study are incorporated in the *War Scroll*. It is debated whether their models were Hellenistic or Roman, but the battle formation has more in common with the Roman *triplex acies* than with the Hellenistic phalanx, and the arms for defense and attack resemble those which are attested for the Roman armies in the age of Caesar. That Jewish generals did adopt Roman models is evident from Josephus' account of his training and equipping the forces which he commanded in Galilee at the beginning of the war against Rome (Jos., Wars, 2:577ff.); a comparison between this account and the *War Scroll* shows some impressive points of resemblance, except that Josephus was more of a realist than the author of the *War Scroll* and tried to anticipate the probable action and reaction of the enemy. The detailed way in which the prescriptions are particularized makes it quite improbable that the conflict with which the *War Scroll* is concerned is an allegorical conflict against spiritual forces of wickedness (like John Bunyan's *Holy War*); fighting with material weapons against foes of flesh and blood is envisaged, even if the course of the action turned out differently from that anticipated in this blueprint when at last the sons of light declared war on the Kittim.

WARSHAVSKY, YAKIR (1885–1942), Yiddish and Hebrew novelist and journalist. Born in Mlawa, Poland, to a ḥasidic merchant family, Warshavsky received a traditional education and studied secular subjects on his own. He worked as a Hebrew teacher, an official in Jewish institutions, and a Zionist organizer, as well as writing articles, stories and sketches for various Yiddish and Hebrew periodicals, influenced by his townsman and classmate, Joseph *Opatoshu. Articles about his 1914 trip to Palestine became the basis for his first book, *Min ha-Moledet* ("From the Homeland," 1919). His collection of tales, *Di Letste* ("The Last Ones," 1929), described Polish ḥasidic life vividly and sympathetically. He lived in Warsaw, continuing to work and write during World War II in the Warsaw Ghetto until his murder by the Nazis in the summer of 1942.

WARSHAWSKI, MARK (1848–1907), Yiddish poet and song-writer. Born in Odessa, he practiced law in Kiev. He wrote both the words and the music of his songs, improvised couplets and sang them at various gatherings, but remained unaware of the literary and folk quality of his songs until *Sholem Aleichem encouraged him to publish them and wrote the introduction to Warshawski's *Yudishe Folkslider mit Notn* ("Jewish Folksongs with Music," 1900). A second edition, with additional poems and biographical information, was published in Odessa (1914) and a third edition in New York (1918). A fourth edition, edited by S. Rozhansky (Rollansky), appeared in Buenos Aires in 1958. Warshawski's songs and poems, written in a simple, unsophisticated style, describe the joys and sorrows of everyday life. In contrast to many writers of his period, who were generally critical of Jewish ways, he wrote with enthusiasm about customs and modes of life. "Oyfn Pripetshik," glorifying the old-fashioned *ḥeder*, became one of the most popular Jewish songs, attaining the status of a folk song. His wedding songs and his hymns to Zion brought cheer, comfort, and hope to Russian Jews under czarist oppression.

WARSHAWSKY, ISAAC (pseudonym **Ben Asher**; 1832–1903), Hebrew writer and linguist. Born in Odessa, Warshawsky taught Hebrew at a *talmud torah*, Judaism at a government school there, and supervised several charitable institutions. He published articles in the Hebrew and Russo-Jewish press.

A proponent of the purity of the Hebrew language, he wrote the polemic, *Li-Teḥiyyat Sefat Ever* (2 vols., 1893, 1902), attacking those who were developing the language without due regard to its grammar. Among his other works are *Ha-Ḥoker* (vol. 1, 1863 in Hebrew, vol. 2, 1866 in German) and a history of Israel until the building of the Second Temple, *Toledot Yisrael* (1867, and many other editions).

[Gedalyah Elkoshi]

WARSKI-WARSZAWSKI, ADOLF (1868–1937), Polish Communist leader. Born in Cracow into an assimilated fam-

ily which favored Polish independence, he was connected from early youth with the Polish workers' movement. Warski-Warszawski was one of the founders of the Polish Labor Union, and organized the Social Democratic Party of Poland and Lithuania. He took an active part in the Russian revolution of 1905 and was arrested by the czarist authorities on several occasions. During World War I Warski-Warszawski represented the Polish Democrats at the anti-war conferences of Zimmer-Wald and Kiental (Switzerland). After the war he was one of the founders of the Polish Communist Party and was a member of its central committee and political bureau. He was elected as a Communist member of the Sejm, and won a reputation for his courageous speeches and sharp criticism of the authorities. When the Communist Party was made illegal in 1930 he emigrated to the Soviet Union, where he became a prominent figure in the Polish section of the Communist International. In 1937, during the great purges in the U.S.S.R., he was accused of treason and of being a counterrevolutionary, and he was imprisoned and executed.

[Abraham Wein]

WARSZAWSKI, OSER (**Varshavsky**; 1898–1944), Yiddish novelist. Born in Sochaczew, Poland, he astounded the Yiddish literary world with his youthful novel *Shmuglares* ("Smugglers," 1920), dealing with Polish-Jewish life under German occupation during World War I. The language is laced with dialect and vulgarity; the focus skips from one underworld character to another; the descriptions are bloodily expressionistic. The influence of his patron, the naturalistic novelist I.M. *Weissenberg, is obvious. Five Yiddish, three Russian, and one Hebrew edition of *Shmuglares* appeared within a decade. In 1924 Warszawski settled in Paris, where he edited with Peretz *Markish the second issue of the Yiddish avant-garde journal **Khalyastre*, and associated with the foreign, often Jewish, artists of Montparnasse. From the Nazi occupation of France until his arrest by the Gestapo in Rome in May 1944, Warszawski penned fictionalized chronicles of Jewish life in occupied Paris and Vichy France. After his murder at Auschwitz and the liberation of France, his widow Marie published his wartime writings in both Yiddish and (French) translation, which posthumously transformed Warszawski from the author of a paradoxical Yiddish bestseller into one of the rare writers who, like Isaiah *Spiegel, produced Holocaust fiction simultaneously with the incomprehensible events they recount and rework.

WARWICK, town in central England. Jews are not mentioned there until the 13th century. They were excluded in 1234, but subsequently the community seems to have attained relative importance and was the seat of an *archa. The local synagogue was in the house of an active financier named Elijah, but the Elijah of ווראיק referred to in a medieval Hebrew source is probably Elijah of York. No Jewish community has existed in Warwick since the expulsion of the Jews from England in 1290.

[Cecil Roth]

WASHINGTON, a Pacific Northwest state of the United States, with a Jewish population – including Seattle – of approximately 45,000 Jews (2003). A Latvian adventurer, Adolph Friedman, who came to Washington in the late 1840s, is considered the first Jew to have settled in the new territory. Others soon followed – German-speaking Jews in the 1850s; Yiddish-speaking Jews in the 1880s; and Judeo-Spanish (Ladino) speaking Jews in 1902. By 1889, when Washington became the 42nd state, Jews had been contributing to the state's economy and growth for four decades. One of them, Edward S. Salomon, became territorial governor in 1870, others joined state legislators and/or became city mayors. Successful entrepreneurs, such as the Schwabacher family, had businesses throughout the state.

By 1920 just over 10,000 Jews called Washington State home. They would be joined by immigrants fleeing Hitler's Germany before World War II, survivors from Hitler's death camps, and people who moved west to take advantage of Washington's mild climate, beautiful lakes and mountains, welcoming businesses, excellent medical facilities, and, in Seattle, opportunities and amenities of the University of Washington. Unlike the first three groups who were mainly businessmen and women, the latter group were or became physicians, professors, teachers, rabbis, cantors, musicians, artists, and business and health workers of all kinds. They would invigorate Jewish life and add to the state's culture and economy.

The first Jewish organizations in Washington were benevolent societies rather than temples or synagogues. The desire for a Jewish cemetery led Jews in Olympia and small towns around Puget Sound to establish the Hebrew Benevolent Society of Puget Sound in 1873. They also made clear that the society would "aid and assist poor and distressed co-religionists." The Hebrew Benevolent Association of Tacoma

Jewish communities in Washington. Population figures for 2001.

also followed that example. Soon other Jewish communities throughout the state set up a myriad of voluntary organizations to help the unfortunate as well as to enhance the lives of Jews in the state.

Tacoma, Spokane, and Seattle all had religious congregations before 1900. All were Reform, sometimes modified to contain elements of an Orthodox service. Others, like Bellingham and Everett, chose Orthodox. The small community of Aberdeen followed Reform, but services included Orthodox rituals. All the cities except Spokane were in the western part of the state, the largest population area.

After World War II, Jewish religious life in Washington expanded. Newcomers and the maturing new generations of Americanized Jewish children either established new congregations in cities such as Richland, Wenatchee, and Vancouver, or changed the status of existing ones. For example, in Tacoma and Spokane the Reform and Orthodox combined to form one place of worship.

Another great expansion of Jewish religious life started in the 1970s and accelerated into the 1990s. In many congregations, half the couples had only one partner who was Jewish, a reflection of the growing trend of interfaith marriages throughout the United States. The founding of a temple or synagogue for a special group of people, say gays or lesbians, or becoming Reconstructionist became unremarkable and Reform and Conservative congregations welcomed women rabbis and cantors. In 2003 there were 41 religious congregations offering services.

[Jacqueline Williams (2nd ed.)]

WASHINGTON, D.C., capital of the United States. Jewish population (est. 2005), 27,735; general population, 572,059; Jewish population of the Washington metropolitan area, 215,000; general population: 5,162,029; sixth largest Jewish community in the nation.

Early Arrivals and First Congregations

In contrast to U.S. cities where the first Jews, often Sephardi in origin, arrived in the 17th and 18th centuries, Washington's Jewish community got a later start. The diamond-shaped area along the shores of the Potomac River was not designated as the future home of the federal district until 1790; the federal government arrived 10 years later. Washington's economy, based largely on the presence of the federal government, lacked the manufacturing of other cities. Jewish residents in the first decades of the 19th century, and many of those who followed later, were attracted by the growing capital's economic opportunities or arrived to pursue federal service. As Washington was not a port of entry, 19th- and early 20th-century immigrants did not arrive in the city directly. Most had previously spent time in port cities such as New York and Baltimore.

Among the earliest Jewish residents was land speculator and builder Isaac Polock, grandson of a founder of the Newport, Rhode Island, synagogue, who arrived from Savannah, Georgia, in 1795. Anticipating the ensuing needs of the federal government, Polock completed a row of buildings near the President's House. Known as the Six Buildings, they initially housed the U.S. State Department and the Secretary of the Navy. In 1828, Captain Alfred Mordecai, of North Carolinian colonial lineage, was assigned to the Washington Arsenal and made his home in Washington. His daughter, Rosa (b. 1839), was the first known Jewish child born in Washington. Mordecai became superintendent of the Arsenal during the Mexican-American War (1846–1848). Rather than fight against his native South, he resigned from the army at the start of the Civil War.

For decades, the numbers of Jews in Washington remained small, estimated at only 25 in 1847. The population grew significantly in the late 1840s and the 1850s with the arrival of German-speaking immigrants fleeing dwindling economic prospects, harsh restrictions, and failed revolutionary movements in Central Europe. Many of the new arrivals were merchants who catered to the growing federal city. In 1852, 21 German-speaking men met in a Pennsylvania Avenue home to form Washington's first Jewish congregation, which would become known as the Washington Hebrew Congregation. The congregation petitioned Congress (constitutionally responsible for local law) for legislation ensuring its right to own property in Washington. President Franklin Pierce signed "An Act for the Benefit of the Hebrew Congregation in the city of Washington" on June 2, 1856. U.S. Navy Captain Jonas P. Levy, a president of the congregation and a popular hero of the Mexican-American War, assisted the congregation in that endeavor. Today one of the nation's largest Reform synagogues, Washington Hebrew, is the only congregation in the country with a Congressional charter.

During the Civil War (1861–1865), the city's Jewish population grew from 200 to almost 2,000, with some soldiers staying in Washington after completing their service. Most Jewish newcomers were merchants arriving to serve the wartime boom. One newspaper reported six kosher restaurants operating in the capital during the 1860s. Washingtonians organized the first Washington lodge of B'nai B'rith (the Elijah Lodge) in 1864. During the war, the women of the Washington Hebrew Congregation raised money for the U.S. Sanitary Commission, and the congregation's visiting nursing corps ministered to injured soldiers. Among the Jewish Civil War soldiers cared for by the Washington Hebrew nurses was Leopold Karpeles who was awarded the Medal of Honor for his service during the Battle of the Wilderness (1864). After the war, Karpeles married his nurse, Sarah Mundheim, and became a clerk in the U.S. Post Office Department.

Changes to the liturgy and the introduction of a melodeon (an organlike keyboard instrument) at the Washington Hebrew Congregation upset a small group of like-minded traditionalists who resigned to found Adas Israel Congregation in 1869. President Ulysses S. Grant attended the 1876 dedication of its synagogue, the first building constructed as

a synagogue in Washington. Grant's presence at the dedication was particularly meaningful. During the Civil War, General Grant had issued Order No. 11 (1862) expelling Jews "as a class" from Mississippi, Tennessee, and Kentucky on charges of war profiteering.

In 1861 the Washington Hebrew Congregation established the city's first Jewish school, an all-day program that compensated for the lack of public schooling in the District of Columbia. By 1870, with a new public school system in place, the Jewish elementary school closed. For more than half a century Jewish education in the nation's capital would consist of supplementary classes meeting on weekday afternoons and on weekends.

New Immigrants, New Congregations

By 1880, many of Washington's 1,500 Jews were second-generation Americans, including shopkeepers, clerks, established merchants, and a smattering of professionals. They were soon joined by a new wave of Jewish immigrants, Orthodox Jews fleeing Eastern Europe's pogroms, poverty, and forced military service.

The influx of newer immigrants in the 1880s and 1890s made necessary new philanthropic institutions, including the Hebrew Relief Society (1882; later the United Hebrew Relief Society), United Hebrew Charities (1890), the Jewish Foster Home (1908), the Hebrew Free Loan Society (1909), and the Hebrew Home for the Aged (1914). One of the outstanding leaders in these endeavors was Minnie Lansburgh Goldsmith (1871–1971), daughter of department store owner Gustav Lansburgh. She served as president of the United Hebrew Charities, led fundraising efforts for the Jewish Foster Home and the Hebrew Home for the Aged, and helped create Washington's Community Chest, predecessor to the United Way. The arrival of new immigrants increased Washington's Jewish community to 10,000 by 1920.

Zionist activity in Washington dates to the early 20th century, with the founding of the Washington Zionist Organization, the local chapter of the Zionist Organization of America (c. 1901), Washington Poale Zion Society, and Washington's first Hadassah chapter (1919), formed shortly after a visit to the city by Hadassah founder Henrietta Szold.

Jews principally settled where existing commercial development suggested the viability of small businesses, running grocery stores, meat markets, dry goods establishments, hardware stores, and the like across the city. Families often lived above their shops and formed congregations in the neighborhoods. One of the largest concentrations of Jewish residents clustered around Seventh Street NW, one of the city's main business districts. Amid small furniture, fancy goods, jewelry, and millinery shops, several Jewish merchants expanded their businesses into fashionable department stores such as Lansburgh's, Hecht's, and S. Kann & Co. In the early 20th century, enough families lived in the Seventh Street neighborhood to support three synagogues within as many city blocks: Washington Hebrew Congregation, Adas Israel Congregation, and Ohev Sholom Congregation (1886), the first congregation in Washington founded by Russian Jews.

New immigrants also joined the handful of German-speaking Jewish merchants in Georgetown and Southwest Washington. In Georgetown, German-speaking Jews had established the Mount Sinai Society (1860s), later absorbed into Washington Hebrew. In 1910, Orthodox Russian immigrants founded Kesher Israel Congregation, which remains on the same site today.

In the early 20th century, close to 200 Jewish families in Southwest D.C. supported two synagogues, Talmud Torah Congregation (1887) and Voliner Anshe Sfard (1908). Al Jolson (born Asa Yoelson) attended synagogue at Talmud Torah, where his father, Moshe Yoelson, served as a cantor, *mohel* and *shoḥet*. Many Russian Jewish immigrants also settled along H Street NE in the early 1900s and founded Ezras Israel Congregation (1907). A small community of Orthodox Jews living nearby on Capitol Hill established the Southeast Hebrew Congregation (1909).

Wartime Washington and the Great Depression

World War I introduced a new wave of soldiers and government war workers to the capital. A group of young men who had formed the Young Men's Hebrew Association (YMHA; 1911) organized activities for arriving government workers and the first servicemen's club in the United States. The YMHA and the Young Women's Hebrew Association (1913) hosted dances, Sabbath services, and recreational opportunities for the thousands of Jewish servicemen and servicewomen posted in Washington during the war. After the war, national and local leaders raised money to build an impressive Jewish Community Center (JCC) on Sixteenth Street (1926), one mile from the White House. A local Jewish newspaper, the *National Jewish Ledger* (now *Washington Jewish Week*), began publication in 1930. The Jewish Community Council organized in 1938 as a unified voice for communal organizations on issues of importance to the Washington Jewish community.

As Jews became more established, they moved uptown into neighborhoods made possible by the development of streetcar suburbs in the northernmost areas of Washington and in nearby Maryland. New congregations were also founded in these uptown neighborhoods. The move northward was restricted in part by developers who placed covenants in real estate deeds prohibiting sale or lease to Jews, African Americans, and other racial and ethnic groups in areas like Spring Valley, an upscale neighborhood, and parts of Chevy Chase, Maryland. Although the Supreme Court ruled restrictive covenants unconstitutional in 1948, their effects lingered in many neighborhoods.

Although the presence of the federal government spared Washington the worst of the Great Depression, organizations like the Hebrew Sheltering Society provided kosher meals, a change of clothes, and lodging for those newly arrived in Washington and looking for work. The 1930s and 1940s saw a more than doubling of Washington's Jewish population, as

young professionals arrived to work on President Franklin Delano Roosevelt's New Deal, for the war effort, and in an expanding civil service. Many of them first-generation Americans, they helped shape and implement New Deal policies and programs of social relief and reform.

As Hitler's grip tightened on Europe in the 1930s, Washington became a fulcrum of Zionist and rescue activity. Washingtonians worked to rescue European Jewish children and to support a Jewish homeland in Palestine as a haven for refugees. In 1938, 4,000 protesters packed the Daughters of the American Revolution's (DAR) Constitution Hall to pressure the British government to open Palestine to Jewish immigration. Local clergy of many faiths, civic leaders, and congressmen addressed the crowd and attendees petitioned President Roosevelt to intercede on behalf of Jews seeking to immigrate. The Women's Auxiliary of B'nai B'rith's Argo Lodge, whose anniversary luncheon in 1938 was attended by First Lady Eleanor Roosevelt, raised money on behalf of European Jewish refugees. Denise Tourover, Hadassah's first Washington representative, led lobbying and fundraising efforts to rescue the "Teheran children" – 700 Polish orphans stranded in Persia after making their way out of Europe. In 1943 she pleaded with State Department officials and ambassadors until British ships finally transported the children to Palestine.

As the nation mobilized for war, Jews were among the tens of thousands of soldiers and war workers who arrived to serve at the epicenter of the Allied war effort. In 1941 alone, the JCC room registry helped find housing for 4,000 Jews in local boarding houses, some of which catered to Jewish residents with kosher-style meals. Local organizations and synagogues sponsored religious services for military personnel.

Like American Jews in general, Washington Jews held differing views about Zionism. In 1940 and 1941, leaders of the Washington chapter of the Zionist Organization of America (ZOA) worked to build local membership. The Washington apartment of Supreme Court Justice Louis D. Brandeis served as a salon for national and local Zionist leaders. Rabbi Norman Gerstenfeld of the Washington Hebrew Congregation spoke ardently against the idea of a Jewish state. Local Zionists – such as Edmund I. Kaufmann, Zionist Organization of America president (1940–1941), and Rabbi Isadore Breslau, director of the American Zionist Bureau's lobbying efforts – rose to prominence on Washington's national stage.

In the aftermath of World War II, many of the most influential members of Washington's Jewish community participated in a secret fundraising campaign to support the Haganah in its war for independence. Men and women raised money to provide ships and crews to support Aliyah Bet (illegal immigration to Palestine), to purchase machinery for a munitions factory, and supply World War II surplus weapons and explosives for the Haganah. The local United Jewish Appeal met its first million-dollar campaign in 1946 to help meet the overwhelming economic and social needs of Jewish immigrants in Palestine. In 1947, Washington Jews tapped personal connections in the embassies and the White House to influence the UN vote on the partition of Palestine.

As David Ben-Gurion proclaimed the independence of Israel in Jerusalem on May 14, 1948, an exuberant crowd of Washington Jews gathered at the Jewish Agency building on Massachusetts Avenue NW. They danced and sang as the new flag was raised. Local Jews selected and purchased Israel's first embassy near Embassy Row shortly after statehood. Formerly non-Zionist and anti-Zionist organizations and individuals, including Rabbi Gerstenfeld, came to support the new nation. The presence of the Embassy of Israel in Washington reinforced the community's ties to Zionism, with the ambassador and his family playing an active role in local religious and community life.

Suburbanization

With the expansion of the federal bureaucracy in the postwar period, returning veterans and newly arrived government workers contributed to the transformation of Washington from capital city into metropolitan region. Seeking new homes, many Jewish residents joined an exodus to the Maryland and Virginia suburbs. By 1956, half of the area's 81,000 Jews lived outside the city limits. Many Jewish-owned businesses followed. Synagogues also moved to follow their congregants, and suburban residents formed new congregations, including the Arlington Fairfax Jewish Center (now Etz Hayim), which began meeting in Arlington, Virginia, in the early 1940s, and the Montgomery County (Maryland) Jewish Center (now Ohr Kodesh), founded in 1947. Jewish builders and real estate developers played a major role during Washington's postwar building boom. When it opened in 1944, Hebrew Academy (Orthodox) became the first day school in the Washington area in nearly a century. A number of smaller schools, including Beth Jacob School and a Yeshiva High School, operated in Washington for a number of years in the 1950s and 1960s.

In the late 1950s community leaders made plans to move communal agencies to the Maryland suburbs to serve the burgeoning suburban population. In 1969, the Jewish Community Center, the Hebrew Home for the Aged, and the Jewish Social Services Agency (later joined by the United Jewish Appeal (UJA) and the Jewish Community Council) relocated to a centralized campus of Jewish institutional life in Rockville, Maryland. The process was accelerated by the urban riots in the late 1960s. As Jews left Washington, D.C. neighborhoods and fled to the suburbs, so, too, did Jewish institutions. B'nai Israel relocated to Rockville – as part of a cluster of Jewish institutions that included the JCC of Greater Washington, the Hebrew Home for the Aged and the Charles E. Smith Jewish Day School. Adas Israel almost moved from its Quebec Avenue NW site, save for the objection of some donors, who had only recently contributed to its construction. Within several years, it was again thriving, as the Metro opened almost at its front door.

The Jewish Community Council placed civil rights issues at the forefront of its activities in the 1950s and 1960s.

The Council lent its name to the Thompson's Restaurant court case, decided by the Supreme Court in 1953, which ended segregation in public accommodations in Washington. Following *Brown v. Board of Education* (1954), which declared segregated public schools unconstitutional, the Council worked with city and religious leaders to encourage peaceful integration.

Washingtonians joined thousands in the national Jewish community who protested the treatment of Soviet Jews with massive demonstrations on the Mall in the 1970s and 1980s and maintained a daily vigil outside the Soviet embassy from 1970 to 1991. Church groups took over the vigil on Shabbat and on the High Holidays.

The 21st Century Community

In 2005, 83 percent of greater Washington's 215,000 Jews lived in the Maryland and Northern Virginia suburbs. Although the Jewish community is clustered most densely in lower Montgomery Country, Maryland (36 percent), the community now extends to the far reaches of the Greater Washington, D.C. metropolitan region. Northern Virginia experienced a 111 percent growth in its Jewish population between 1983 and 2003. In 2004, Congregation Sha'are Shalom built the first Jewish house of worship in Loudoun County, Virginia (25 miles from Washington, D.C.). Over 70 congregations and three JCCs serve the metropolitan area. The Washington-Baltimore corridor is virtually one continuous city, yet the Jewish communities of Washington and Baltimore are quite separate and the Jewish community of Columbia, Maryland, is also independent, though more linked to Baltimore than to Washington.

In addition to synagogue religious schools, serving the community in the area of Jewish education are the Hebrew Academy (1944), which had moved from 16th Street in Washington to nearby Silver Spring, and then again out closer to the Orthodox community in Kemp Mill; Charles E. Smith Jewish Day School (1972; a community day school, which evolved out of a Solomon Schechter Day School established in the 1960s), one of the largest day schools in the Diaspora, located in Rockville; the Jewish Primary Day School, first housed at Adas Israel congregation and later at the 16th Street home of the Hebrew Academy (1987; an independent, community K-6 school); and Gesher (Northern Virginia's community day school).

The Jewish Community Relations Council of Greater Washington, comprised of over 210 constituent organizations in the early 21st century, encourages collaborative partnerships within the area's Jewish community and between the Jewish community and the broader society. One local project has provided tours of the U.S. Holocaust Memorial Museum for Washington, D.C. police officers. The United States Holocaust Memorial Museum is a major presence of Jewish memory adjacent to the National Mall and has drawn almost four out of five American Jews as pilgrims.

Although the majority of the Jewish community lives in the suburbs, a resurgence of interest in maintaining a Jewish presence downtown has occurred over the last decades. District residents formed a new downtown Jewish Community Center in the late 1970s, and in the 1990s purchased, restored, and reopened the original JCC building. The first building constructed as a synagogue in Washington is listed on the National Register of Historic Places and is maintained by the Jewish Historical Society of Greater Washington as the Lillian and Albert Small Jewish Museum. The second home of Adas Israel, a church for half a century, has been restored and reopened as the Sixth and I Historic Synagogue, providing a downtown meeting place for the community.

Jews and the Federal City

Jewish Washingtonians have served in elected and appointed positions in the local and federal governments since the 19th century. Adolphus Solomons (1826–1910), publisher and proprietor of a Washington bookstore, served in the Washington, D.C. House of Delegates (1871). He turned down the offer of the governorship of the District, as the position would have required working on the Sabbath. Simon Wolf, who moved to Washington in 1862 after receiving his law degree, served as recorder of deeds for the District of Columbia. In the 20th century, local Jews have served in the district government and as ambassadors, policy advisors, heads of federal agencies and Supreme Court justices. Many have joined local synagogues and taken part in the life of the Washington Jewish community. Senator Joseph Lieberman, the first Jewish candidate for vice president (2000), is a member of Kesher Israel Congregation in Georgetown. Many Jews who come to Washington for what they think to be a brief stay in elective office or government service make Washington their permanent home. Senators and congressmen, Supreme Court justices, cabinet officials, ambassadors to the United States from foreign countries and high-ranking staff of the executive branch, the judiciary and the Congress, and their spouses and children, are found in synagogues and schools, ordinary participants in Jewish life.

Washington's confluence of religious, civic, and political life and its status as national and international capital have made it a fitting backdrop for national Jewish dialogues. In the 19th century, Adolphus Solomons counseled local and national Jewish leaders and played a pivotal role in convincing President Lincoln to allow Jews to become military chaplains during the Civil War. Simon Wolf, one of the most influential Jewish leaders of his time, advocated on behalf of Jewish issues worldwide through his work with the Board of Delegates of American Israelites. When the Board merged with the Union of American Hebrew Congregations in 1878, Wolf served as chairman of the UAHC's Board of Delegates of Civil and Religious Rights for over 30 years. In 1913, Carrie Simon, wife of Rabbi Abram Simon of the Washington Hebrew Congregation, created the National Federation of Temple Sisterhoods.

Lobbyists, activists, dignitaries, and philanthropists convene in Washington to discuss support for Israel and legislative issues of concern to the American Jewish community. Many

national Jewish organizations and lobbying groups, including the American-Israel Public Affairs Committee (AIPAC), the national office of the Jewish War Veterans, the Union of Reform Judaism's Religious Action Center, B'nai B'rith International (which established its national office in Washington in 1943), and Hillel: The Foundation for Jewish Campus Life, are headquartered in the capital.

[Laura Burd Schiavo (2nd ed.)].

°**WASHINGTON, GEORGE** (1732–1799), commander in chief of the American forces in the Revolutionary War and first president of the United States. So far as can be ascertained, Washington's Jewish associations were exclusively official, and despite claims in earlier Jewish sources, no Jew ever served him as aide-de-camp.

Three members of the Franks family had dealings with him. In 1758, when Washington took command of Braddock's defeated forces in western Pennsylvania, he applied to David *Franks (1720–1794) of Philadelphia for supplies. Franks served as agent for a British syndicate quartermastering British colonial forces and was banished behind the British lines for his loyalist sympathies in 1778. The Jew whom Washington came to know best was David Solebury *Franks (c. 1742–1793), who joined the patriot forces in Montreal in 1776. By June 1778 he was aide-de-camp to General Benedict Arnold, commandant at Philadelphia. Two years later Franks was on Arnold's staff when the latter turned traitor, but he was later exonerated from all charges. Franks continued functioning as a military and diplomatic courier, rising to the rank of lieutenant-colonel. In November 1789, as secretary of a commission to the Creek Indians, he dined with the commissioners at Washington's table. The yellow fever epidemic that killed Franks brought Washington in touch with Isaac W. Franks (1759–1822). In the fall of 1793 Washington sought a suburban presidential mansion outside disease-ridden Philadelphia; he rented Franks' Germantown house.

Solomon *Bush (1753–1795) served under Washington as a captain of a Pennsylvania battalion in the Battle of Long Island. He rose to lieutenant-colonel, the highest rank achieved by a Jew on active duty. Philip Moses Russell (1747–1830) served as surgeon's mate with Virginia regiments from 1775 to 1778, becoming ill as the result of his ministrations at Valley Forge. In applying for a pension his widow stated that he had received a letter of commendation from General Washington. The Prager family, merchants from Holland, settled in Philadelphia, ignoring their Jewish origins. In July 1784 Washington furnished one of them with letters of introduction and, three years later, while attending the Constitutional Convention, Washington dined at the Prager home.

Washington was inaugurated as president of the United States on April 30, 1789. Within one week, Levi Sheftall, as president of the newly reorganized *Savannah Hebrew congregation, penned a congratulatory letter which Washington acknowledged. Savannah's hasty action embarrassed Shearith Israel Congregation, located in the then capital city of the U.S., New York. Its leadership delayed until June 1790 before inviting the congregations in Newport, Philadelphia, Charleston, and Richmond to join in preparing a message to the president. Newport declined because Rhode Island had not yet ratified the Constitution. However, when Washington made a visit to Newport on August 17, 1790, Moses *Seixas, as president of that congregation, and also as grand master of the masonic lodge, presented two letters to Washington. For the congregation he wrote extolling a government, "which to bigotry gives no sanction, to persecution no assistance…." In his response, Washington repeated these phrases. When Shearith Israel continued to procrastinate, Manuel *Josephson, president of the Philadelphia congregation, took the occasion of the government's move to Philadelphia to present the congratulations of the four remaining Hebrew congregations on December 13, 1790.

[Malcolm H. Stern]

WASHOFSKY, MARK E. (1952–), U.S. Reform rabbi, academician. Washofsky was born in New Orleans, Louisiana, and received his B.A. from the University of Alabama in 1974. In 1980, he was ordained at *Hebrew Union College, where he earned a Ph.D. in 1987. He served as rabbi of Beth Israel Synagogue in Hamilton, Ohio (1981–85), while also teaching homiletics at the Cincinnati campus of HUC-JIR. In 1985, he was appointed associate professor of rabbinics and elevated to professor in 2001. A scholar in the field of the literature of the Talmud and **halakhah*, his subspecialty is the divergent traditions of Ashkenaz and Sepharad. In the Reform movement, Washofsky has been the chairman of the Committee on Responsa of the *Central Conference of American Rabbis since 1996. He was a major contributor to *The Oxford Dictionary of the Jewish Religion* and is the author of *Jewish Living: A Guide to Contemporary Reform Practice* (2001). He also coedited (with Gunther *Plaut) *Teshuvot for the Nineties: Recent American Reform Responsa* (1997).

[Bezalel Gordon (2nd ed.)]

WASIT, city in S. Iraq, founded about 703 by al-Ḥajjāj, governor of Babylonia on behalf of ʿAbd al-Malik, the *Umayyad caliph. Situated in a fertile region on the banks of the Tigris, Wasit was a populous center under the Umayyads and *Abbasids; it retained its importance during the Late Middle Ages up until the 16th century when the city fell into ruins as a result of the Tigris changing its course to a more eastward one. Under the Abbasid caliphs, Wasit had one of the leading Jewish communities in Babylonia, and, as reported by *Nathan

ha-Bavli, paid an annual tax of 150 dinars to the *Sura academy. It was still a flourishing community in the 13th century; in 1201 R. Daniel b. Eleazar b. Ḥibat Allah, the head of the Baghdad academy, addressed himself to the communities of Basra and Wasit (in connection with *Beit Keneset shel Ezra*), from which it appears that these were the two outstanding communities in southern Babylonia. Some of the members of the *Ibn al-Barqūlī family, a prominent Jewish family of Wasit in this period, served in government posts. Judah *Al-Harizi visited Wasit and in his report praised the dignitary Samuel, who may be identical with Samuel ibn al-Barqūlī. The poet *Eleazar b. Jacob composed many poems in honor of Joseph ibn al-Barqūlī, a resident of Wasit. *Matteh Oz*, a work dating from this period, is a collection of sermons given by Isaac Sar-Shalom in Wasit and other southern Babylonian towns from 1210 to 1232 (Neubauer, Cat, no. 1001).

[Eliyahu Ashtor]

WASKOW, ARTHUR (1933–), founder of the American movement for Jewish Renewal. As the leading proponent and founder of the American religious movement for Jewish Renewal, Waskow's midrashic interpretations of Jewish texts have sparked a renaissance of interest in the connection between Jewish spirituality and social justice in contemporary America.

Born in Baltimore, Md., Waskow received his bachelor's degree from Johns Hopkins University in 1954 and a master's degree (1956) and doctorate (1963) in U.S. history from the University of Wisconsin. From 1959 to 1982, he worked in Washington, D.C., on public policy concerning military strategy and disarmament, race relations, nonviolent action, the Vietnam War, and renewable energy sources. He also served as a founder and fellow of the Institute for Policy Studies from 1963 to 1977.

Throughout the 1960s, he was active in writing, speaking, electoral politics, and nonviolent protests against racism and the Vietnam War. In 1981 and 1986, along with eight other plaintiffs from the Washington area, he won a lawsuit against the FBI for illegal and unconstitutional harassment of his antiwar work, under its COINTELPRO program.

In 1969, Waskow's life took a new turn, toward leadership in the renewal of Jewish life in America. This work first began when Waskow wrote *The Freedom Seder*, a Passover *Haggadah* that wove together the traditional text with passages from leaders of social justice movements, such as Martin Luther King. Waskow continued to work as a writer, teacher, and organizer in the movement to renew Judaism. His other notable titles include *These Holy Sparks: The Rebirth of the Jewish People* (1983), *Tales of Tikkun: New Jewish Stories to Heal the Wounded World* (1997), and *A Time for Every Purpose Under Heaven*: *The Jewish Life-Spiral as a Spiritual Path* (2002), the latter two coauthored with Phyllis Berman.

In 1982, Waskow moved to Philadelphia to become a member of the faculty of the Reconstructionist Rabbinical College, where he founded The Shalom Center, a think tank concerned with Jewish thought and action in response to the dangers of the nuclear arms race and other global environmental threats. During this era, he founded the journal *Menorah: Sparks of Jewish Renewal*, of which he was editor since its inception. In 1993 The Shalom Center left the Reconstructionist Rabbinical College and merged with P'nai Or, founded by Rabbi Zalman *Schachter-Shalomi, to form ALEPH: Alliance for Jewish Renewal. In 1995, after five years of directed study and writing, Waskow was ordained privately as a rabbi by four individuals (three rabbis – one ḥasidic, one Conservative, and one Reform – and a feminist theologian) in the custom of Jewish renewal. In 2005, The Shalom Center became an independent organization, with Waskow as rabbinic director.

Waskow devoted his life's work to raising questions of social justice in the Jewish community. In addition to his pioneering work on eco-Judaism and public opposition to the wars in Vietnam and Iraq, Waskow may be best known for his writing and teaching on behalf of a two-state solution for peace between Israel and the Palestinian people. He was among the leaders of Breira in the 1970s and of New Jewish Agenda in the 1980s, and was one of the peace activists invited to the White House to witness the signing of the Israeli-Palestinian Declaration of Principles in September 1993.

[Michael Berenbaum (2nd ed.)]

WASSER, DENNIS M. (1942–), U.S. lawyer. Born in Brooklyn, N.Y., Wasser and his family moved to California, where he earned a bachelor's degree from the University of California, Los Angeles, and a law degree from the University of Southern California. A member of the firm Wasser, Cooperman & Carter in Los Angeles, Wasser first gained fame when he represented the tennis star Billie Jean King, who was sued by her former lover, a woman, who sought property and support for the rest of her life. King and her husband won the suit, and Wasser's reputation in family law was established. Over the years, he represented a galaxy of Hollywood celebrities in divorce actions, including Steven *Spielberg, Clint Eastwood, Tom Cruise, James Woods, Jane Fonda, Richard *Dreyfus, Lionel Richie, Jennifer Lopez and the wife of Michael *Douglas. Wasser also successfully represented the baseball star David Justice in a "palimony" suit and negotiated on behalf of Kirk Kerkorian, who was sued for child support by a woman he lived with but whose baby he had not fathered. Wasser wrote and lectured widely on family and divorce law.

[Stewart Kampel (2nd ed.)]

WASSERMAN, DALE (1917–), U.S. playwright. Born in Rhinelander, Wisconsin, Wasserman came to the fore when he adapted Ken Kesey's novel *One Flew Over the Cuckoo's Nest* (1963) for the stage. This was followed by *Man of La Mancha* (1965), for which Wasserman received many awards, including a Tony Award and a Critics Circle Award. His other plays include *Western Star*; *An Enchanted Land*; *Players in*

the Game; *Beggar's Holiday*; *Boy on Blacktop Road*; and *The Stallion Howl.*

Wasserman also wrote screenplays for such feature films as *The Vikings* (1958); *Cleopatra* (1963); *Quick, before It Melts* (1964); *Mister Buddwing* (1966); *A Walk with Love and Death* (1969); and his own *Man of La Mancha*, which he also co-produced (1972).

For television, Wasserman wrote the adaptations for the productions of *The Citadel* (1960) and *The Power and the Glory* (1961), as well as *Long after Summer* (1967). He also wrote for a number of television series, such as *Studio One* (1948); *Armstrong Circle Theatre* (1950); *Kraft Television Theater* (1953); *The DuPont Show of the Month* (1957); and *G.E. True* (1962). Wasserman's book *The Impossible Musical: The Man of La Mancha Story* was published in 2003.

[Ruth Beloff (2nd ed.)]

WASSERMAN, DORA (1919–2003) and **BRYNA** (1947–), Yiddish theater directors. Dora Wasserman was born Dora Goldfarb in Chernikhov in the U.S.S.R. to a poor family. After graduating from high school, she studied voice and went on to train with the Moscow Yiddish Academy under Solomon *Mikhoels. She worked with the Tyuz children's theater in Kiev, the Kiev State Theater, and the Zhitomir Theater until the Soviet Union entered World War II. On the road in 1944, she met and married her husband, Shura Wasserman, in Kazakhstan. They had two daughters, Bryna and Ella. After the war, Dora formed a theater troupe and performed in DP camps in Austria. Wasserman immigrated to Montreal in 1950 and organized children's Yiddish theater groups. In 1957 she formed the Yiddish Drama Group, an adult ensemble created under the auspices of the Montreal Jewish People's Schools. She received support for the theater from the Jewish community, as well as from the wider theater community. The well-known Québecois actor Gratien Gélinas provided technical and material support. In 1967 the company was invited to join the new Saidye Bronfman Centre.

Wasserman went on to produce or direct more than 70 plays for the Yiddish theater. She worked closely with many of the writers who presented works at the company or whose works she adapted for the Yiddish theater. She acquired exclusive stage rights to the works of Isaac Bashevis *Singer. She had Ted Allan's play, *Lies My Father Told Me*, translated into Yiddish (1984), and then staged Michel Tremblay's Quebec classic, *Les Belles Soeurs* (1992). She produced *Fiddler on the Roof* for the first time in Yiddish (1993). The company toured in Israel, the United States, Austria, and Russia. Wasserman was invested as a member of the Order of Canada and the Order of Quebec. In 1996, after Dora Wasserman suffered a stroke, her daughter Bryna took over the artistic directorship of the Yiddish Theatre.

Bryna Wasserman grew up around productions at the Yiddish Theatre. She received a BFA and an MFA in directing from the Tisch School of Fine Arts (NYU), and worked at English and Yiddish theaters, including the Vivian Beaumont at Lincoln Center, Mercer Street, Vancouver Opera House, American Place, and the Folksbiene Playhouse. In 1998 she was appointed artistic director of the English-language theater program for the Theatre of the Saidye Bronfman Centre for the Arts. Under her direction, both the SBC Theatre and Dora Wasserman Yiddish Theatre have received MECCA (Montreal English Critics' Circle) Awards. The Dora Wasserman Yiddish Theatre remains North America's only Yiddish theater company in permanent residence.

[Rebecca E. Margolis (2nd ed.)]

WASSERMAN, ELHANAN BUNIM (1875–1941), Lithuanian talmudic scholar, yeshivah head, and communal leader. Wasserman received his education at the yeshivot of Volozhin and Telz, which were headed at the time by Eliezer *Gordon and Simeon *Shkop, respectively. In 1899 he married the daughter of Meir Atlas, rabbi of Salant, and spent some years studying in his father-in-law's home. In 1903 he was appointed head of the yeshivah of Amtshilov, where he proved an outstanding teacher, greatly influencing his students. He joined the *kolel* of the Ḥafeẓ Ḥayyim in Radun in 1907 and remained there until 1910, when he was appointed rabbi of Brest-Litovsk. During World War I he returned to Radun, and when the war reached that town the yeshivah moved to Smilovichi, where Wasserman was appointed its head. After the war he moved to Poland and established a yeshivah at Baranowicze, which became one of the most famous in eastern Europe. He was one of the main pillars of the *Agudat Israel movement, together with Ḥayyim Ozer *Grodzinski and the Ḥafeẓ Ḥayyim, and was regarded as the latter's spiritual successor. Wasserman emerged as one of the outstanding leaders of Orthodox Jewry. In addition to his academic activities, he played a major role in communal affairs, contributing extensively to the Jewish press, and figuring prominently at Agudat Israel conferences.

He wrote *Ikvata di-Meshiḥa* (1942), and published the responsa of Solomon b. Abraham *Adret (the Rashba) with annotations (1936^2). His talmudic novellae appeared in the rabbinic journal *Sha'arei Ẓiyyon* (1929–34) and in other publications. At the outbreak of World War II he fled to Vilna and, in June 1941, while on a visit to Kovno, was arrested by the Nazis together with 12 other rabbis and sent to his death. On their last journey he encouraged his fellow victims to walk proudly and with head erect. "The fire which will consume our bodies will be the fire through which the people of Israel will arise to a new life," he assured them.

[Mordechai Hacohen]

WASSERMAN, LEW (1913–2002), U.S. entertainment executive. Born Lewis Robert Wasserman in Cleveland, Ohio, to Russian immigrant parents, Wasserman worked as an usher

at a vaudeville theater during high school. After graduating in 1930, he worked as a promoter for the Mayfair Casino nightclub. The Music Corporation of American (MCA) talent agency hired him in 1936 as national director of advertising and publicity, and two years later Wasserman moved to Los Angeles. As vice president of MCA's motion picture division, Wasserman brought in such A-list celebrities as Billy *Wilder, Bette Davis, Jimmy Stewart, Gene Kelly, and Ronald Reagan, and won greater control for his clients by doing away with the standard seven-year studio contract and earning them a percentage of the box office. By 1946 he had risen to president of MCA, and in the early 1950s Wasserman branched out with an MCA motion picture division. In 1958, Wasserman purchased a portion of Paramount Pictures' film library for $10 million, and then sold the broadcast rights to television stations for more than $30 million. MCA purchased Universal Studios and Decca Records in 1962, and soon found itself under the scrutiny of the Justice Department, which forced MCA to divest itself of its talent business. Subsequently, Wasserman became involved in politics, holding fundraisers for political campaigns, and courting presidential candidates; Wasserman was also active in donating to Jewish and Catholic charities. In 1973, Wasserman was named chairman of MCA, following Jules Stein's retirement. Soon after he launched the phenomenon of the "summer blockbuster" with such films as *Jaws* (1975) and *Star Wars* (1977). In the late 1970s and 1980s, MCA expanded its television stake by producing such programs as *The Rockford Files*, *Columbo*, *Kojak*, and *Miami Vice*. In 1990, MCA was sold to the Japanese electronics company Matsushita, which allowed Wasserman to maintain his chairmanship. Matsushita sold its stake in MCA to Seagram in 1995, which all but ended Wasserman's control of the company. That same year, Wasserman, in his trademark thick black frame eyeglasses, was presented with the Presidential Medal of Freedom by President Clinton. Wasserman has been the subject of many books, including *When Hollywood Had a King* by Connie Bruck (2003), as well as a documentary, *The Last Mogul* (2005).

[Adam Wills (2nd ed.)]

WASSERMANN, AUGUST VON (1866–1925), bacteriologist and immunologist. Born in Bamberg, he studied medicine and worked initially at the Institute for Infectious Diseases in Berlin, under Robert Koch. In 1906 he was appointed head of the Serum Department in the institute, and in 1913, head of the Institute of Experimental Medicine at Dahlem near Berlin. Wassermann was one of the founders of immunology, his great discovery being the reaction for the sero-diagnosis of syphilis, which bears his name. This test, which he published in 1906 together with Albert Neisser and Carl Bruck, became one of the most important methods of the sero-diagnosis, and Wassermann used it to prove the syphilitic nature of the tabes dorsalis and progressive paralysis. He developed specific antisera for determining the origin of proteins and blood cells originating from different animals; he also investigated, with Paul *Ehrlich, methods for the determination of the potency of therapeutic sera. He co-edited the first encyclopedia of medical bacteriology and immunology, *Handbuch der pathogenen Mikroorganismen* (1903–13). In 1913 he was ennobled. Throughout his life he remained linked to Judaism.

[Aryeh Leo Olitzki]

WASSERMANN, JAKOB (1873–1933), German novelist and essayist. In his autobiography, *Mein Weg als Deutscher und Jude* (1921; *My Life as German and as Jew*, 1933), Wassermann reviews his life from his birth in Fuerth, an industrial center of Franconia and the seat of an ancient Jewish community. He had an unhappy childhood and youth and, during his years of penury, found escape from despair in literary visions. In Munich, Wassermann joined the staff of *Simplizissimus*; from 1898 he lived in Vienna. In time he became friendly with Hugo von *Hofmannsthal, Arthur *Schnitzler, and Thomas *Mann. For his first novel, *Die Juden von Zirndorf* (1897; *The Dark Pilgrimage*, 1933), Wassermann utilized personal experiences interwoven with old myths and legends of Franconian Jewry to present a vivid portrait of changing Jewish life in his native province. He won wider recognition with *Caspar Hauser oder die Traegheit des Herzens* (1908; *Caspar Hauser*, 1928), the tragic story of a foundling. The unusual individual at odds with society was also the main theme of *Das Gaensemaennchen* (1915; *The Goose Man*, 1922), a novel about a musician and composer burdened with guilt and tragedy through his concentration on his art and withdrawal from life.

Wassermann's international vogue dates from *Christian Wahnschaffe* (2 vols., 1919), a grandiose epic of Europe on the eve of World War I, which became an American best seller under the title *The World's Illusion* (1920). The novels that followed include *Ulrike Woytich* (1923; Eng. *Gold*, 1924), a critical analysis of materialistic greed; *Der Fall Mauritius* (1928; *The Mauritius Case*, 1929), which castigated the worship of legalism; *Etzel Andergast* (1930; Eng. 1932) and its sequel, *Joseph Kerkhovens dritte Existenz* (1934; *Joseph Kerkhoven's Third Existence*, 1934), clinical studies set against the political and moral chaos after the German defeat of 1918; and many other less profound, but popular, works. He also wrote biographical sketches of Christopher Columbus (1929) and Hofmannsthal in *Hofmannsthal der Freund* (1930).

Wassermann was preeminently a gifted storyteller. In his long prose epics he drew characters from various social strata who seek God despite their horrible experiences, and eventually find salvation after perilous adventures.

Wassermann was an articulate exponent of German-Jewish assimilation and an implacable foe of Jewish nationalism. He believed in a Jewish priestly and prophetic mission among the nations, yet held the "Chosen People" idea to be "plainly

absurd and immoral." In his view, the Jews were unfitted for common action and had no talent for politics. Reconstituted as a nation in line with Zionist aspirations, they would be an international laughingstock. Wassermann insisted that his own work exemplified the synthesis of Germanism and Judaism which others should follow, but he abhorred apostasy. The triumph of Nazism and the burning of his books in German towns brought Wassermann back to the spiritual ghetto from which he had always fled and to a common destiny with the eastern European Jews with whom he had always denied kinship. Wassermann published a second autobiographical work, *Selbstbetrachtungen* (1933), but *Ahasver*, a novel intended to describe the epic history of the Jews, was never completed.

[Sol Liptzin]

WASSERMANN, OSCAR (1869–1934), German banker active in Jewish organizations. The scion of an old established family of Jewish merchants in Bavaria, which in 1880 founded the bank A.E. Wasserman in Bamberg, he opened its Berlin branch in 1900 and served as its director, together with his cousin Max, until 1912, when he became a member of the board of directors of the Deutsche Bank. Chosen in 1923 to stand at the head of the board as its "speaker," a post he held until his dismissal in 1933, Wassermann became one of the central German bankers, serving on many governmental and official committees, such as the Council of the Reichsbank. Unlike most descendants of the *Court Jews who severed their ties with the Jewish community, Wassermann was a learned and conscious Jew, albeit not orthodoxly observant, who knew Hebrew and the Bible and was a patron of many Jewish institutions of learning and philanthropy. Although an alleged "non-Zionist," Wassermann was among the founders (1922) of the German *Keren Hayesod and served as its president and a member of its world board of directors. In 1927/28 he took part, together with Lord *Melchett, Felix *Warburg, and Lee *Frankel, in the Joint Palestine Survey Commission, that prepared the ground for enlarging the *Jewish Agency in 1929 by adding non-Zionist representatives. As one of the signatories of the new Agency's charter, Wassermann occupied leading positions in its administrative and financial committees.

[Avraham Barkai (2nd ed.)]

WASSERMAN SCHULTZ, DEBBIE (1966–), first Jewish congresswoman ever elected from Florida. Born and raised on Long Island, N.Y., she ran for student council each year and lost. She attended the University of Florida and graduated with a bachelor's degree in political science in 1988 and with a master's degree in 1990. At 26 she became the youngest woman ever elected to the State House. She served eight years in the House, two as minority leader, and then moved to the State Senate from 2000 to 2004. During her last year in the Florida Senate, Wasserman Schultz was among Democratic lawmakers who presented a plan for overhauling the state's education system, but it was ignored in the Republican-controlled Legislature.

She also was an outspoken opponent of a proposed state constitutional amendment that the legislature has put on the ballot to require parental notification before minor girls can obtain abortions. "History has shown that we have had terrible, terrible results when abortion wasn't safe and legal, and that's what we're going to be forcing here," she said.

She ran on a liberal platform that included promises to spend more on health care and education. "We live in the greatest country in the world," Wasserman Schultz said. "Yet we have sick children whose families cannot afford to take them to a doctor." She wants to extend health care for every child and young adult up to age 25, not just those from low-income families. She has been critical of Congress for failing to fully fund federal education programs.

She stepped up to a Congressional seat when Peter Deutsch, the incumbent Congressman, ran for an open Senate seat. She won the election without a primary opponent, a rarity for an open seat, and swamped her opponent in the general election from her heavily Democratic, heavily Jewish District.

Wasserman Schultz was appointed to the Financial Services Committee, the committee in the House of Representatives that oversees the entire financial services industry, including the securities, insurance, banking, and housing industries. The committee also oversees the work of the Federal Reserve, the Treasury, the Security and Exchange Commission (SEC) and other financial services regulators. Most recently, Wasserman Schultz was appointed to the Committee on the Judiciary, with responsibility for the administration of justice in Federal courts, administrative bodies, and law enforcement agencies. It also handles issues relating to bankruptcy, espionage, terrorism, the protection of civil liberties, constitutional amendments, immigration and naturalization, claims against the United States, presidential succession, antitrust law, revision and codification of the statutes of the United States, state and territorial boundary lines, and patents, copyrights and trademarks. Particularly important in our time is the committee's oversight responsibility for the Departments of Justice and Homeland Security.

Wasserman Schultz has been a critic of the war in Iraq, saying it has diverted the United States from fighting terrorism and been too costly in lives and treasure. She also is committed to supporting Israel as "the lone democracy in the Middle East."

WASSERSTEIN, BERNARD (1948–), British historian. Born in London and educated at Oxford University, Wasserstein taught at Brandeis and Glasgow Universities and was president of the Oxford Centre for Hebrew and Jewish Studies from 1996 to 2000. In 2003 he became professor of history at the University of Chicago. Wasserstein has written prolifically on modern Jewish history in such works as *The British in Palestine* (1978), *Britain and the Jews of Europe, 1939–1945* (1979), *The Secret Life of Trebitsch Lincoln* (1989), *Vanishing Diaspora* (1996), and *Divided Jerusalem: The Quest for the Holy City* (2001). In 2000–2 he was president of the Jewish Historical Society of England.

[William D. Rubinstein (2nd ed.)]

WASSERSTEIN, BRUCE (1948–), U.S. entrepreneur. Wasserstein, who was born in Brooklyn, N.Y., graduated from the University of Michigan and then earned two degrees from Harvard, one from the business school and one from the law school. In addition he was a Knox traveling fellow at Cambridge University, earning a graduate diploma in comparative legal studies in economic regulation. Wasserstein's first job was at the white-shoe law firm Cravath, Swaine & Moore, but he was recruited by Joseph R. Perella to join the First Boston Corporation in 1977. Two years later Perella stunned his boss by asking him to make Wasserstein co-head of mergers and acquisitions, his equal. In 1988 the pair formed Wasserstein, Perella & Company, which became one of the most prominent mergers-and-acquisitions advisers. They helped broker more than 1,000 transactions worth $250 billion, including Texaco's acquisition of Getty Oil. When Perella left the firm in 1993, he sold all his stock, although, for contractual reasons, his name stayed on the door. In 1992 the firm took Maybelline, a cosmetics company, private and then spun it off in a public offering in 1992. In 1994 the firm owned Collins & Aikman, an automotive supplies maker that filed for bankruptcy protection. In 2000, at the top of a bull market, Wasserstein sold his boutique investment bank Wasserstein, Perella to Germany's Dresdner Bank for $1.5 billion. Wasserstein pocketed more than $600 million on the deal. Over the years, Wasserstein wrote four books: *With Justice for Some: An Indictment of the Law by Young Advocates* (1972), *Corporate Finance Law* (1978), *Big Deal: The Battle for the Control of America's Leading Corporations* (1988), and *Big Deal: Mergers and Acquisitions in the Digital Age* (2001). He also had a hand in publishing, owning American Lawyer Media's collection of 29 legal newspapers and magazines around the country, and *The Deal*, a publication covering the mergers marketplace. In 2004 he added *New York* magazine to his media empire. After Wasserstein left the Dresdner Bank, he took the top position at Lazard Frères, the famously secretive investment bank. Michel David-Weill, the patriarch of Lazard, and Wasserstein had a public feud over the direction of the firm. In 2005 Wasserstein succeeded in taking Lazard public after David-Weill was bought out. Wasserstein and Lazard made a substantial profit on the initial deal.

[Stewart Kampel (2nd ed.)]

WASSERSTEIN, WENDY (1950–2006), prize-winning U.S. playwright and the first woman to receive the Tony Award for Best Play. Wasserstein, the youngest of four children of Lola (Schleifer) and Morris Wasserstein, a prosperous textile manufacturer, was born in Brooklyn and grew up in Manhattan. She received a B.A. from Mount Holyoke College in 1971 and an M.F.A. from the Yale School of Drama in 1975. Her plays, which have strong feminist themes tempered with humor and compassion, include *Uncommon Women and Others* (1975); *Tender Offer* (1983); *Isn't It Romantic* (1983); and *The Heidi Chronicles* (1989), which won both a Tony Award and the Pulitzer Prize. While many of her plays had distinctively Jewish elements, *The Sisters Rosenzweig* (1992) explicitly portrays the different ways three sisters come to terms with their Jewish heritage. Other plays include *An American Daughter* (1997), *Old Money* (2000), and *Third* (2005).

Wasserstein was also a prolific writer in other genres, including television and film. Collections of her essays include *Bachelor Girls* (1991) and *Shiksa Goddess* (2001). She was the author of *Sloth* (2005), part of a series on the seven deadly sins published by Oxford University Press. Wasserstein died of cancer in New York City, leaving behind a daughter born in 1999. Her papers are collected at the Mount Holyoke Archives, South Hadley, Massachusetts.

[Judith R. Baskin (2nd ed.)]

WASSERZUG (Lomzer), ḤAYYIM (1822–1882), cantor and composer. Born in Sieradz, Poland, Wasserzug became cantor in Konin at the age of seventeen. In his years at Nowy Dwor, near Warsaw (1841–54), he introduced four-part choral music to the Polish synagogue, despite the bitter opposition of the Ḥasidim. He pursued his innovation as cantor in Lomza (1854–59) and Vilna (1859–67). In 1868 he emigrated to England, and, until his death, officiated at the North London Synagogue. In 1878 he published *Shirei Mikdash*, with his own compositions and some older melodies all simply harmonized for cantor and choir. Wasserzug had a voice remarkable for its quality and compass, and he drew great crowds wherever he sang. He was offered a contract to sing in opera, but refused it on religious grounds.

[David M.L. Olivestone]

WAT, ALEXANDER (**Szymon Chwat**; 1900–1967), Polish author, editor, and translator. Born in Warsaw, Wat was an active pamphleteer for the Polish "New Art," futurist movement, coediting *Nowa Sztuka* (1921–22) and the *Almanach Nowej Sztuki* (1924–25). From 1929 onward he edited the leftist literary monthly *Miesięcznik Literacki* and worked as a literary editor in the Gebethner and Wolff publishing house (1932–39). Dur-

ing World War II he lived in Soviet Kazakhstan, returning to Warsaw in 1946. He subsequently took a lead in postwar Polish literary life, but emigrated to France in 1963.

His works include *Bezrobotny Lucyfer* ("The Unemployed Lucifer," 1927), collected stories; *Ucieczka Lotha* ("Lot's Escape," 1948–49), a novel; and *Wiersze* ("Poems," 1957). Wat's painful experiences in the U.S.S.R. and during the Stalinist period in postwar Poland shattered his Communist ideals. His last works, such as the verse collection *Ciemne świecidło* ("The Dark Spangle," 1968), which appeared posthumously in Paris, display a swing to religious feeling and mysticism, with the writer seeking a new road to an understanding of the world and its many complexities. Wat also published many translations from Russian and Western literature.

[Stanislaw Wygodzki]

WATCHERS. In Daniel 4:7ff., Nebuchadnezzar, king of Babylon, relates a strange dream of his and its interpretation by the Jewish savant, Daniel. A baleful message is delivered by a heavenly being, referred to as an *ʿir we-qaddish*, the so-called "Holy Watcher" (4:10). The exact interpretation of the name of this being is somewhat problematic. Rashi explains it to mean an angel, deriving the word from the Hebrew *ʿr* "to be awake," and explains that an angel is always awake. The Greek versions of Aquila and Symmachus translate the term, "Wakeful One," a translation which is the source of our English, "Watcher" (Fitzmyer, in bibl., p. 72), an archaic word for one who is awake. However, the Septuagint has simply angel. That the term means angel can be shown from the *Genesis Apocryphon* of the Dead Sea Scrolls, where the word *ʿir* is in clear parallelism with "sons of heaven" (2:1). Also in the *Zadokite Documents*, the "Watchers" are associated with the legend of angelic intercourse with women (A 2:17–18). In Daniel itself, they seem to be some sort of heavenly council (4:14). The "Watchers" figured prominently in pseudepigraphic and later mystical literature.

[Daniel Boyarin]

WATEN, JUDAH (1911–1985), Australian novelist and critic. Born in Odessa, Waten was taken to Ereẓ Israel shortly after his birth, but in 1914 the family immigrated to Australia. An active anti-Fascist, he did much during and after World War II to assist refugees seeking a haven in Australia. He was a fervent Communist, and some of his journalistic work was devoted to cultural aspects of left-wing politics. Unlike many intellectuals who supported Communism, Waten became closer to the Soviet Union after 1956. His political writings were often viewed as propaganda, especially his repeated denials of Soviet antisemitism.

Several of his novels deal with Jewish characters and settings. His best-known work, *Alien Son* (1952), was one of the first Australian novels to deal with Jewish themes and is seen as a landmark in Australian literature. He also wrote *The Unbending* (1954), *Distant Land* (1962), and *From Odessa to Odessa* (1969). Three other novels were *Shares in Murder* (1957), *A Time of Conflict* (1961), and *Season of Youth* (1966). Waten was an important literary critic and also translated works by Hertz *Bergner and Pinchas *Goldhar from Yiddish into English. His own novels have been translated into Russian, German, Dutch, and Chinese. Although an anti-Zionist, Waten retained his links with the Jewish community. He published an autobiography, *Scenes of a Revolutionary Life*, in 1982.

BIBLIOGRAPHY: J. Hetherington, *Forty-two Faces* (1962), 153–8. **ADD. BIBLIOGRAPHY:** W.D. Rubinstein, Australia II, index; D. Carter, *A Career in Writing: Judah Waten and the Cultural Politics of a Literary Career* (1997); idem, *Judah Waten: Fiction, Memoirs, Criticism* (1998).

[Greer Fay Cashman / William D. Rubinstein (2nd ed.)]

WATTASIDS (**Banu Wattas**), Moroccan dynasty related to the *Merinids. The Wattasids ruled much of eastern *Morocco in the 13th century and replaced the Merinids in the years 1472 to 1554. Their capital, court, and administrative center were situated in *Fez. During the Wattasids' reign the Jewish community expanded demographically and prospered, as the waves of immigration of the *megorashim* (the ones expelled) from Spain resettled in parts of Morocco beginning in 1492. Several Jews were diplomats, financial advisers, and ministers in the Wattasid court. The most noted among them were Jacob Rosales, Abraham Cordovi, and R. Jacob Roti, the **nagid* of the Fez Jewish community during the 1530s and 1540s. Roti was an affluent merchant with international connections who carried on extensive and delicate negotiations with *Portugal – then a vital commercial and military power – which occupied key Moroccan towns. In the 1530s he even served as foreign minister. Another Jewish diplomat was Moses Abutam. In 1554, the Sharifian Saʿdi dynasty overthrew the Wattasids. The Saʿdis claimed to be descendants of the Prophet *Muhammad and dominated Morocco until 1660.

[Michael M. Laskier (2nd ed.)]

WATTERS, LEON LAIZER (1877–1967), U.S. scientist, teacher, writer, and communal leader. Watters was born in Salt Lake City, Utah. After teaching chemistry at Columbia University (1898–1900) and the University of Cincinnati (1901–2), he became a food and drugs investigator for the City of New York and presented papers on that subject before the American Association for Advancement of Science. Watters developed a method for sterilizing catgut used as sutures in surgery. He founded the Watters Laboratories and Hospital Supply Company, which he later sold to the Air Reduction Company (1948). During World War I he built the first por-

table disinfectors for the U.S. Army and Navy. In World War II he designed a mobile hospital unit that was used in North Africa by the British. A civic-minded scientist, Watters was a founder and president of the Utah Club of New York, head of the advisory committee of Cooper Union, and a member of the Chemists Club of New York. At the suggestion of his friend Albert Einstein, he endowed the Watters Memorial Research Laboratory for experimental research in pure physics at the California Institute of Technology and established scholarships and students' loan funds at the University of Utah. Active in Jewish life, Watters was chairman of the New York section of the Jewish Welfare Board during World War I. He served at one time as vice president of the Hebrew Technical Institute and as treasurer of the New York YMHA. Watters' nontechnical writings included *Pioneer Jews of Utah* (1952); his papers are at the American Jewish Archives at Hebrew Union College in Cincinnati, Ohio.

BIBLIOGRAPHY: L. Watters, in: *Western Humanities Review*, 2 (1948), 10–25; J. Dumond and J.P. Youtz, in: *Review of Scientific Instruments*, 8 (1937), 291–307; *New York Times* (April 19, 1967), 45; AJYB, 69 (1968), 613.

[Isidore S. Meyer]

°**WATZINGER, CARL** (1877–1948), German archaeologist. Watzinger taught as lecturer in Berlin (1905), assistant professor in Tostock (1905–09), and professor in Giessen (1909–16) and Tuebingen (from 1916 until his death). Together with E. *Sellin, he directed excavations at Jericho and published the excavation report (1913). He also collaborated with H. Kohl in clearing ancient synagogues in the Galilee; the publication of their results *Antike Synagogen in Galilaea* (1916) remains to this day the basic study of the earlier type of synagogues in Israel.

During World War I Watzinger participated in German surveys. He was the author of two works on Damascus – *Damaskus, die antike Stadt* (1921), and *Damaskus, die islamische Stadt* (1924). After the war he published a study of the finds of Megiddo (1921) and a work on the antiquities of Ereẓ Israel, *Denkmaeler Palaestinas*, 2 vols. (1931–35).

[Michael Avi-Yonah]

WAWELBERG, HIPOLIT (1843–1901), banker and philanthropist. Born in Warsaw, he was a son of the merchant banker and *maskil*, Ẓevi Hirsch Wawelberg. From his youth he advocated the assimilation of Polish Jewry into the gentile population, but his longtime residence in St. Petersburg (from 1869), where he managed a branch of his father's bank, brought him into close contact with Jewish public workers and Jewish affairs. He was appointed a member of the Committee for the Struggle Against Civil Discrimination against Russian Jews, headed by Baron Horace *Guenzburg. He was also active in the *Society for the Promotion of Culture among the Jews of Russia and contributed liberally to various Jewish cultural and charitable institutions. Wawelberg displayed particular concern for the settlement program of Baron de *Hirsch in Latin America, and in 1899 he donated a large sum to the *Jewish Colonization Association (ICA) for this purpose. ICA responded by renaming the settlement Santa Elena (in Argentina) "Wawelberg." He also generously supported the school for crafts of the Warsaw Jewish community and founded a Jewish agricultural school in *Czestochowa. Wawelberg sided with those Polish circles that advocated a compromise with the Russian regime, and, to encourage this tendency, he founded a liberal Polish weekly *Kraj*, in St. Petersburg. It was outstanding for its literary standard. He financed the publication of the Warsaw Polish daily *Kuryer Polski*, whose trend was also liberal, advocating sympathy for Russia and fighting antisemitism. Wawelberg donated large sums for the publication of inexpensive editions of the works of classical Polish writers and is still considered one of the greatest Maecenases of Polish literature. He believed that a cultural and social rapprochement between Polish Jewry and their gentile neighbors could be effected through the establishment of institutions in which Jews and Poles would work together. In 1895 he contributed to the establishment of an industrial school in Warsaw. When the school reverted to the Polish government (1918), Wawelberg's heirs inserted a clause into the agreement stating that Jewish students were not to be discriminated against, although this was not abided by. Before his death, Wawelberg established a fund at the University of Lvov to encourage research in Jewish history in Poland. This fund was helpful to several Jewish historians, such as M. *Schorr, M. *Balaban, and I. *Schiper.

[Gedalyah Elkoshi]

WAXMAN, AL (1936–2001), Canadian actor, director, teacher. Waxman was born in Toronto. His parents, immigrants from Poland, owned and operated a small restaurant in downtown Toronto. His mother continued in the food service industry after her husband died when Al was only nine years old. From his early teens Waxman wanted to be an actor and, by the time he was 17, he was performing in live CBC radio dramas. He gathered together enough money to study theater at New York's Playhouse Theater before moving to London in 1961 for further study. He struggled to find acting jobs in London and Hollywood and appeared in several films. His acting breakthrough came after his return to Toronto, where he was hired for a starring role in the sitcom *The King of Kensington*, a successful Canadian series that ran for five seasons. He added to his own celebrity as a regular character in the American television detective series *Cagney & Lacey*, which ran for 125 episodes beginning in 1981. Waxman never again lacked for work as an actor on televison, in films, or on stage. After a career that spanned more than 50 years, Waxman is regarded as a pioneer in Canadian theater, television, and film. He acted in, directed, produced, or wrote more than 1,000 radio, tele-

vision, theater, and film productions. He also taught theater for 10 years at York University in Toronto. In the years before his death, Waxman was drawn to the stage. In 1997 he played the role of Willy Loman in the Stratford Festival production of *Death of a Salesman*. The year before his death, he directed a well-received production of *The Diary of Anne Frank*, and at the time of his death, Waxman was about to play Shylock in the Stratford production of *The Merchant of Venice*.

Waxman was honored with many awards and was active in many Jewish and larger community organizations. In 1997 he was named to the Order of Canada, the highest award Canada can bestow on a citizen.

[Joel Greenberg (2nd ed.)]

WAXMAN, MEYER (1887–1969), scholar of the history of Jewish literature and rabbi. Born in Slutzk, Russia, Waxman received a traditional yeshivah education. He emigrated to the United States in 1905 and studied at the Jewish Theological Seminary, where he was ordained as a rabbi in 1913. After serving for some years in rabbinical posts, he became principal of the Mizrachi Teachers Seminary (1917–21) and director of the Mizrachi Zionist organization (1921–24). In 1924 he joined the faculty of the Hebrew Theological College in Chicago, where he served as professor of Hebrew literature and philosophy until his retirement in 1955, also teaching at the College of Jewish Studies in Chicago. He moved to New York where he continued his literary and scholarly activities until his death. Waxman was an extremely prolific writer on the history of Jewish thought and literature, publishing hundreds of articles in Hebrew, Yiddish, and English. Many of his articles were collected in volumes of essays, *Ketavim Nivḥarim* (2 vols., 1943–44), *Galut u-Ge'ullah* (1952), and *Moreh ha-Dorot* (1963). He wrote studies in the history of Jewish philosophy, including the *Philosophy of Don Hasdai Crescas* (1920) and a translation, with introduction, of Moses Hess's *Rome and Jerusalem* (1945). Waxman's works, *A Handbook of Judaism* (1947) and *Judaism-Religion and Ethics* (1958), were widely used. His major work was *History of Jewish Literature* (4 vols., 1941; 5 vols., 1960²), a comprehensive detailed account of the main trends in Jewish literature from the end of the biblical period until the present day. In this work Waxman summarizes and evaluates the works of Jewish literature in all fields. On the occasion of his 75th birthday a jubilee volume was published containing articles in English and Hebrew, *Meyer Waxman – Jubilee on the Occasion of his 75th Birthday* (ed., Judah Rosenthal, 1967), which includes an evaluation of Waxman's achievements by Chaim Rothblatt and a bibliography compiled by L. Mishkin.

[Seymour Siegel]

WAXMAN, MORDECAI (1917–2000), U.S. Conservative rabbi, interfaith activist. Waxman was born in Albany, N.Y., and received his B.A. from 1937. In 1941, he was ordained at the *Jewish Theological Seminary, which awarded him an honorary D.D. in 1968. After serving as rabbi of Temple Beth Israel in Niagara Falls, N.Y. (1941–42), he became founding rabbi of North Park Congregation Shaare Tikvah in Chicago, Illinois (1942–46), leaving the synagogue for two years during World War II to serve as a chaplain in the U.S. Army. In 1947, he was appointed rabbi of Temple Israel in Great Neck, Long Island, where he remained for 55 years, until his death. Under his leadership, Temple Israel grew from 100 member families to 1,300 families.

Waxman emerged as a leader in the Conservative movement after he edited and wrote the introduction to *Tradition and Change* (1958), the definitive anthology of writings on the views and philosophy of *Conservative Judaism. He became chairman of the Membership Committee of the *Rabbinical Assembly (1966–68) and subsequently editor of the journal *Conservative Judaism* (1969–74). He also chaired the RA's Committee on the Study and Reevaluation of the Community Service Program (1969–70) – a requirement that JTS graduates enter the military chaplaincy or a designated alternative equivalent that had become so unpopular during the Vietnam War that it was terminated. In 1974, Waxman was elected president of the Rabbinical Assembly, where he worked to strengthen RA representation in the World Council of Synagogues, the official representative of Conservative Judaism in the *World Zionist Organization. Seeking to establish Conservative Judaism in Israel, he pressed for greater coordination among the various Israel programs sponsored by the RA, the JTS, and United Synagogue. Also during his term of office, the RA approved the plan to publish a new commentary on the Torah for use in Conservative synagogues.

Following his term in office, Waxman became president of the Conservative movement's World Council of Synagogues (1980–85) as well as president of the Synagogue Council of America (1983–85). As president, and later as chairman of the National Council of Synagogues (1996–97), he participated in the annual assemblies on world Jewish affairs convened by the presidents of the state of Israel, as well as in the deliberations of The Hebrew University's Diaspora Institute headed by Moshe *Davis. He was also instrumental in obtaining the funding for the first headquarters of the United Synagogue of America in Jerusalem.

Waxman, who served as chairman of the International Jewish Committee for Interreligious Consultation (1985–87), was particularly active in Catholic-Jewish relations. In 1987, he led a delegation of Jewish leaders that met with Pope John Paul II at Castel Gondolfo to resolve the *Waldheim affair. Soon after, he spoke for American Jewry in welcoming the pope to the United States. For many years thereafter, Waxman and Cardinal William Keeler of Baltimore co-chaired an annual series of Catholic-Jewish dialogues. He helped draft the welcoming Jewish response to the Vatican document *We Remember: A Reflection on the Shoah* and worked to implement its mandate that Jews and Catholics sponsor joint educational programs on the Holocaust. His efforts were instrumental in bringing about the establishment of diplomatic relations between the Vatican and the State of Israel (1993). In 1997 he was

awarded the Nostra Aetate Award, and in 1998 he became the first rabbi to be named by the pope a Knight Commander of the Order St. Gregory the Great.

Concerned about widening differences within the American Jewish community, Waxman joined with Reform, Orthodox, and Reconstructionist rabbis in the 1986 "Symposium for Unity" – a traveling panel that discussed Jewish issues from the perspectives of the four denominations. He was also a contributor to numerous publications, including the *Encyclopedia Judaica*. In recognition of his many contributions, he was named Rabbi of the Year in 1991 by the New York Board of Rabbis – the first rabbi to receive the $10,000 Finkle Prize that accompanies this designation. Other honors bestowed on him were the Lifetime Achievement Award from the Ziegler Rabbinic School of the University of Judaism (2001), and the Louis Finkelstein Award from the Jewish Theological Seminary of America (2002).

[Bezalel Gordon (2nd ed.)]

°**WAY, LEWIS** (1773–1840), British missionary. Way was educated at Eton and Oxford and became a barrister. At the age of 40, out of religious inclination, he became interested in Jews and Judaism and joined a British missionary society. He visited Jewish settlements in eastern Europe and came to the conclusion that the Jews should be granted civil rights and their economic situation improved, so that they would become attracted to Christianity. During his stay in Russia, Way heard about the interest of Czar *Alexander I in the conversion of Jews. In 1818, during the assembly of the heads of the European states (Congress of Aix-la-Chapelle (Aachen)), he submitted several memoranda to Alexander I and other participants in which he suggested granting Jews equal rights and access to public office, compulsory military service, apportionment of land for Jewish agricultural settlement, and encouragement of the settlers through exemption from taxes and granting of loans. He suggested compelling poor Jews to teach their sons a craft, the opening of educational institutions to Jews, and the establishment of elementary schools for Jewish children. On the other hand, Way proposed taking strong measures against those Jews engaged in nonproductive professions. Under the influence of Alexander I the participants at the conference adopted a favorable attitude to Way's memoranda, though without any practical results. The memoranda were published in 1819 under the title *Mémoire sur l'état des israélites dédiés a leurs Majestés Impériales et Royales réunies au congrès d'Aix-la-Chapelle*. It probably had a certain influence on Czar *Nicholas I and his government in determining their Jewish policy.

[Yehuda Slutsky]

WAYNE AND SHUSTER, Canadian comedy team often regarded as the founding fathers of English Canadian TV comedy. FRANK SHUSTER (1916–2002) and JOHNNY WAYNE (John Louis Weingarten; 1918–1990) were both born in Toronto. Johnny Wayne, son of a successful clothing manufacturer, was raised in downtown Toronto, the eldest of seven children. Frank Shuster grew up in Niagara Falls, Ontario, where his father operated a local theater before returning to Toronto. The two first met in Toronto's legendary Harbord Collegiate, high school to many in Toronto's inner-city Jewish community. Wayne and Shuster each went on to complete a degree in English at the University of Toronto, where they also wrote, produced, and starred in a number of student variety shows. They worked briefly at CBC radio in the early 1940s before joining the Canadian infantry in 1942. In the military they wrote and performed for the Big Army Show, which entertained Canadian troops across Canada and, after the invasion of Europe, in the Netherlands, Belgium, and France. After the war, they returned to CBC, where they remained Canada's premier comedy team until Wayne's death in 1990. During their early years they wrote all their own material, but they later hired other writers to work with them. In general, their comedy was literate, middle-brow, and upbeat. They never resorted to cruel humor, preferring the send-up to the put-down.

Relentlessly loyal to Canada and the Canadian "voice," the comedy team resisted the temptation to relocate to the United States. But Wayne and Shuster's comedy became well known in the United States. They made a record-setting 67 appearances on *The Ed Sullivan Show.* After first appearing on the *The Ed Sullivan Show* in 1958, Sullivan was so enamored of the pair that he agreed to a one-year contract granting them complete freedom to decide on the length, frequency, content, sets, and supporting cast of all their sketches. They proved to be Sullivan's most popular act in 10 years of broadcasting. Edited versions of their many CBC television specials were also highly popular in American syndication, and Wayne and Shuster made frequent appearances on the BBC. The pair won numerous awards, including the illustrious Silver Rose of Montreux. In 1998 the Margaret Collier Award paid tribute to the duo's routines at the Gemini Awards, and twice TV critics and editors in the United States chose Wayne and Shuster as the best comedy team in North America. In 1999, their names became part of the Canadian Walk of Fame in Toronto. A year later, the duo was also among the first six inductees into the Canadian Comedy Hall of Fame.

[Joel Greenberg (2nd ed.)]

WAŻYK (Wagman), ADAM (1905–1982), Polish poet and novelist. A member of the *Awangarda* group, he published poems and prose and coedited the "New Art" *Almanach Nowej Sztuki* (1924–25). After World War II, Ważyk coedited *Kuźnica* and *Twórczość* and wrote many verse collections, plays, novels, and essays. His *Poemat dla dorosłych* ("Poem for Adults," 1956) heralded Poland's anti-Stalinist campaign.

WDOWINSKI, DAVID (1895–1970), participant in the Warsaw Ghetto Uprising and founder of the Zydowski Zwiazek Wojskowy (ZZW; Jewish Military Union). Born in Bedzin, Wdowinski studied psychiatry at the universities of Vienna, Brno, and Warsaw. He became very involved in the Zionist Revisionist movement. Whereas many Jewish leaders fled in the wake of the German invasion of Poland, Wdowinski remained in Warsaw and was very active in underground activities in the ghetto. In particular he was the Revisionist representative in the Zydowski Towarzystwo Opieki Spolecznej (Jewish Mutual Aid Society), which engaged in welfare work. Around the time the great deportation was drawing to a close, and nearly 265,000 Jews had been deported to Treblinka, the ZZW was formed by Wdowinski, Dr. Michael Strykowski, and Leon (Arie) Rodal. Pawl Frankiel, of Betar, was made the military commander of the organization and Wdowinski apparently set its political tone. The ZZW never integrated into the main underground fighting organization in Warsaw, the Zydowska Organizacja Bojowa (The Jewish Fighting Organization), but the two groups did coordinate their activities to a certain extent during the spring of 1943. The ZZW did not participate in the first armed clash in the ghetto, in January 1943. During the April uprising its fighters fought fiercely near Muranowska Square, in one of the major battles of the rebellion. Other ZZW men fought in the Brushmakers' area of the ghetto, and still others in the area where supplies were kept. Wdowinski was captured by the Germans during the uprising and was sent to various concentration camps but survived. He settled in the United States after the war and in 1961 was a witness at the Eichmann Trial. He published his memoirs, *And We Are Not Saved* (1963).

[Robert Rozette]

WEBB, JACK (1920–1982), U.S. actor, director, producer. Born Jack Randolph Webb in Santa Monica, California, Webb graduated from Belmont High School, and served in the Air Force from 1942 to 1945. Webb began his entertainment career as a radio announcer in San Francisco, followed by roles in the radio dramas *Pat Novak for Hire* (1946) and *Johnny Modero* (1947). He married actress Julie London (née Julie Peck) in July 1947, but they divorced in 1953. Webb made his feature film debut in *He Walked by Night* (1948), followed by roles in such films as *Sword in the Desert* (1949), *The Men* (1950), and *Sunset Boulevard* (1950). In 1949, he created the radio drama *Dragnet*, which was the first series based on actual police files. While the show moved to television in 1951, he continued to produce the radio version until 1955. Webb played the cool, emotionless Sgt. Joe Friday throughout the series' incarnations, including the highly rated television runs from 1951 to 1959 and 1967 to 1970, as well as the 1954 feature film. Webb began directing and starring in his own films, *Pete Kelly's Blues* (1955), *The D.I.* (1957), and *-30-* (1959). In 1958, he published a book about the Los Angeles Police Department, *The Badge: True and Terrifying Crime Stories That Could Not Be Presented on TV*. Webb followed up his success on *Dragnet* by producing such television dramas as *Adam 12* (1968–70), *The D.A.* (1971), *Emergency!* (1971–75), and *Project Blue Book* (1978). In respect for the man who became so closely associated with the department, the LAPD lowered its flags for Webb when he died, an honor traditionally reserved for fallen police officers and government officials.

[Adam Wills (2nd ed.)]

WEBER, KOLOMAN (d. 1931), Czechoslovakian Orthodox rabbi. Weber attended yeshivot in Pressburg (*Bratislava), where he received *semikhah*. He served first as rabbi of Rete but made his name as rabbi of *Piestany, Slovakia, where he remained for 29 years, waging a bitter battle against *Neologists and *Zionists. After World War I, Weber was instrumental in organizing the autonomous Orthodox *Zentralkanzlei* of Jewish communities in Slovakia, which he headed autocratically for 12 years. In March 1926, Emil *Margulies accused Weber in the *Selbstwehr* of expropriating for his own use large sums from the American Jews' Central Relief Committee, and Weber took legal action against him. In the course of the trial it came out that Weber and Rabbi Simon Hirschler had received 100,000 crowns in order to split the Jewish vote in Subcarpathian Ruthenia by creating a "Jewish Economic Party," thus keeping the Zidovska strana (the "Jewish Party") out of parliament and benefitting the ruling Agrarian party. Although he lost his suit, neither his power nor combativeness suffered. He died a few years later in an accident.

[Henry Wasserman]

WEBER, MAX (1881–1961), U.S. painter. Weber was born in Bialystok, Poland, and taken to New York at the age of ten. From 1905 to 1909 he worked and exhibited in Paris. He was a pupil of Henri Matisse and a close friend of Henri Rousseau. Back in New York, he arranged the first American Rousseau exhibition. Weber's work, highly controversial and often attacked by critics, was shown at avant-garde galleries but was unappreciated for many years. The artist had to support himself and his family by teaching, mainly at the Art Students League. His breakthrough finally came in 1948 with a comprehensive retrospective exhibition at the Whitney Museum of American Art, New York. In the years to follow, he received many prizes and awards and in 1955 was elected member of the National Institute of Arts and Letters.

His compositions grew bolder, more abstract, but without severing completely the link to nature. In sensuous, rich colors, geometrical patterns, they seemed to catch the dynamism of the metropolis. His subject matter included somber and melancholy landscapes with trees; well-arranged still lifes; plump and unseductive, yet disturbing, nudes; musicians; sweating workmen; and Orthodox Jews. Weber frequently stressed the dynamism of Jewish groups in action, using their eloquent hands to underline an argument, or dancing ecstatically in the *shul*. He was also a distinguished sculptor, whose

three-dimensional work veers toward the abstract. He published *Cubist Poems* (1914), and *Essays on Art* (1916).

[Alfred Werner]

WECHSLER, DAVID (1896–1981), U.S. psychologist. Born in Lespedi, Romania, he was taken to the United States in 1902. He was chief psychologist, Bellevue Psychiatric Hospital (1932–66). He was also clinical professor of the NYU College of Medicine (1942). He was the originator of several widely used intelligence tests. Wechsler's greatest contribution was in the field of mental measurement. He demonstrated that there is a change and a differential decline with age in human abilities. His intelligence tests are based upon the concept of intelligence as being much more than the sheer ability to reason, deal with symbols, abstract, and conceptualize. He stressed that there were also volitional and non-intellective factors in intelligence. Thus his tests combining verbal and performance items were based on a non-hierarchical concept of intelligence, and the IQ was derived from the average of tested abilities in which equal credit was apportioned to subtests measuring abstract as well as concrete tasks. WAIS or Wechsler Adult Intelligence Scale was prepared in such a way as to underemphasize speed of response and present items of interest to most adults. The use of his scales made it possible to make quantitative as well as qualitative observations of behavior and thought processes, and permitted, through pattern analysis, a diagnostic approach to intellectual deficiencies, organic brain disorders, schizophrenia, etc. These tests were adapted for use in many countries, and hundreds of publications describing and discussing them have appeared in almost all languages.

He was the author of articles and of books on adult intelligence: *The Measurement of Emotional Reactions* (1925, includes bibl.); *Wechsler-Bellevue Intelligence Scale* (1939); *Wechsler Intelligence Scale for Children* (1949); *The Range of Human Capacities* (1955²); *Wechsler Adult Intelligence Scale* (1955); *The Measurement and Appraisal of Adult Intelligence* (1958⁴); and *Wechsler Pre-school and Primary Scale of Intelligence* (1968).

[Boris M. Levinson]

WECHSLER, ELINA (1952–), Argentinean poet. Born in Buenos Aires, she was a psychoanalyst by profession. She left Argentina in 1977 as a consequence of the military dictatorship that unleashed extreme political repression and violence and took up residence in Madrid. Wechsler was the author of four collections of poetry: *El fantasma* (1983), *La larga marcha* (1988), *Mitomanías amorosas* (1991), and *Progresiones en un cierto mes de julio* (1995). Her poetry is characterized by her questioning approach, most likely influenced by her training in psychology. Her early volumes are linked rather directly to her exile and the political repercussions she suffered in her personal life as a result. Likewise, her writing focuses on issues of identity that specifically deal with being a woman and Jewish. She often seeks to examine these aspects of her identity through the lyrical treatment of such female figures as Lilith, Eve, and Lot's wife. She is also the co-author of *La metáfora milenaria: una lectura psicoanalítica de la Biblia* (1993), an insightful reading of the Bible that has much in common with many of the questions she raises in her poetry.

[Darrell B. Lockhart (2nd ed.)]

WECHSLER, HERBERT (1909–2000), U.S. legal scholar. Wechsler was born in New York City and graduated from Columbia University Law School in 1931. A member of the Columbia Law School faculty from 1933 until 1978, he was at the time of his death the Harlan Fiske Stone Professor of Constitutional Law Emeritus. Wechsler specialized in criminal and constitutional law, and in the practice of law. During his career he served as law secretary to Supreme Court Justice Harlan F. Stone and as counsel to Senator Robert F. Wagner, when the latter was minority leader in the N.Y. State constitutional convention of 1938. During World War II he was assistant attorney general in charge of the war division of the U.S. Department of Justice. Wechsler participated in the establishment of the International Military Tribunal at Nuremberg in 1945, and then served as principal technical adviser to the U.S. judges in the Nuremberg war-crime trials. During 1941–45 he also served by appointment of the U.S. Supreme Court on the committee that drafted the federal rules of criminal procedure and on that court's advisory committee to revise its rules of practice. He was a member of the President's Commission on Law Enforcement and Administration of Justice, which reported in 1967.

In 1952 Wechsler was appointed chief reporter in the preparation of the model penal code, which was approved by the American Law Institute (ALI) in 1962. He became director of the institute and also chairman of the permanent editorial board for the Uniform Commercial Code. From 1961 he was a member of the temporary commission of the New York State Legislature to draft a revision of the state's penal law and code of criminal procedure. Wechsler appeared as counsel in many important cases before the U.S. Supreme Court. He served as director of the ALI from 1963 to 1984, after which he became director emeritus. In 1993 he was awarded the Institute's Henry J. Friendly Medal for his "outstanding achievement in promoting reform and clarification of the law" and for the extent to which his "outstanding intelligence, integrity, and devotion to the law enriched the areas of constitutional law, criminal law, and federal jurisdiction."

He wrote *Principles, Politics, and Fundamental Law* (1961), *Criminal Law and its Administration* (with Jerome Michael, 1940), *Federal Courts and the Federal System* (with Henry M. Hart, Jr., 1953), *The Nationalization of Civil Liberties and Civil Rights* (1968), and many articles in professional periodicals. Wechsler believed that "the main constituent of

the judicial process is precisely that it must be genuinely principled, resting with respect to every step that is involved in reaching judgment on analysis and reasons quite transcending the immediate result that is achieved." Thus judicial review, if it is to be faithful to its function or its authorization, must operate in accordance with what Wechsler styles "neutral principles."

[Julius J. Marcke / Ruth Beloff (2nd ed.)]

WECHSLER, ISRAEL (**Spanier**; 1886–1962), U.S. neurologist, born in Lespedi, Romania. He was taken to the U.S. at an early age and educated in New York. He taught at Columbia University (professor of clinical neurology, 1931) and served as consulting neurologist at various New York hospitals. He was president of the American Neurological Association (1958). He was a member of the Board of Governors of The Hebrew University of Jerusalem from 1930 and president of the American Friends of The Hebrew University.

Wechsler made special studies on various aspects of epilepsy. He recommended the use of ephedrine in the treatment of autonomic epilepsy and paraldehyde intravenously for status epilepticus. He also did research on Vitamin E in amyotrophic lateral sclerosis. He is the author of *Textbook of Clinical Neurology* (1927, 1958[8]) and *The Neurologist's Point of View: Essays on Psychiatric and Other Subjects* (1945).

[Suessmann Muntner]

WECHSLER, JAMES ARTHUR (1915–1983), U.S. editor and author. Born in New York, Wechsler graduated from Columbia University in 1935. In his early years Wechsler wrote for the *Student Advocate, The Nation*, and the New York liberal daily, *P.M.*, where he served as assistant editor and Washington bureau chief. In 1946 he joined the staff of the *New York Post* as Washington correspondent. He was particularly concerned with civil liberties and labor relations. In 1948 he was appointed editor of the *Post*. Under his editorship the paper assumed the role of crusader, taking on such issues and public figures as J. Edgar Hoover, Senator Joseph McCarthy, Richard Nixon's slush fund, and the mass evictions incurred by Robert Moses' slum clearance program. He served as editor until 1961, when the reins were turned over to executive editor Paul Sann, and Wechsler became a columnist and chief of the editorial page.

Wechsler's books include *Revolt on the Campus* (1935); *Labor Baron* (1944); *The Age of Suspicion* (1953); *Reflections of an Angry Middle-Aged Editor* (1960); and *In a Darkness* (1972).

[Ruth Beloff (2nd ed.)]

WECHSLER, JUDAH (1832–1907) U.S. Reform rabbi, journalist, interfaith and civil rights activist. Wechsler was born in Bavaria and studied at the yeshivah of Würzburg, where he was ordained an Orthodox rabbi. Arriving in the United States in 1857, he served the Jewish community of Portsmouth, Ohio, as **ḥazzan* and **shoḥet,* before becoming rabbi of the Reform Indianapolis Hebrew Congregation in Indianapolis, Indiana (1861–64). A pioneer in conducting interfaith services, he was the first rabbi to preach in the city's Methodist church. When the congregation was having financial difficulties, Wechsler took the pulpit of a congregation in Richmond, Virginia (1864–67), returning to Indianapolis in 1867. In 1869, he served a congregation in Columbus, Ohio, moving to New Haven, Connecticut, in 1872, and then to Temple Mt. Zion in St. Paul, Minnesota (1882–92). His final pulpit was in Meridian, Mississippi (1892–97); in retirement, he moved back to Indianapolis, where he remained until his death.

In St. Paul, Wechsler – who was a member of the *Central Conference of American Rabbis from its founding in 1889 – strove to bring his temple into the *Union of American Hebrew Congregations and the mainstream of Reform Judaism. He also became the patron of a utopian-style colony in Painted Woods, South Dakota, populated by immigrants fleeing czarist Russia. The colony grew to nearly 250 people; but when it ultimately failed, Wechsler moved on to another tremendous challenge in Meridian, Mississippi, where he took a courageous stand on behalf of improving the education and status of African-Americans. He was so instrumental in the building of a high school for blacks that the school bears his name.

In 1884, Wechsler traveled to the West Coast and chronicled his visits to Jewish communities in Portland and San Francisco. He was a regular contributor to the **American Israelite* and the *Jewish Messenger,* and his articles were frequently translated into Hebrew for publication in the European Jewish press.

[Bezalel Gordon (2nd ed.)]

WECHSLER, MAX (pseudonyms: **Germanicus**; **I.H. Văleanu**; **Ieşau**; 1870–1917), Marxist theoretician and leading member of the general and Jewish socialist movement in Romania. In the 1890s he was among the founders of the first independent Jewish socialist society, which was formed in *Jassy under the name of *Lumina. Wechsler fought against the refusal of the Romanian Social-Democratic Party to conduct a special campaign for the emancipation of the Jews. He was among the signatories to the memorandum of the society to the Fourth Congress of the Second International in London (1896). Wechsler was one of the editors of the society's organs in Romanian (*Lumina*) and Yiddish (*Der Veker*). He rejected the demand for assimilation and conversion as a condition for the civic emancipation of the Jews. After the establishment of the new Social-Democratic Party, a few years before World War I, Wechsler joined its ranks. In May 1917 he was accused by revolutionary soldiers of complicity in the liberation of the party's leader, his friend Christian Rakovski (the future president of Soviet Ukraine). He was imprisoned by the Romanian military authorities and put to death.

[Moshe Mishkinsky]

°WEDGWOOD, JOSIAH CLEMENT, FIRST BARON (1872–1943), British statesman and supporter of Zionism. Wedgwood was a member of the famous pottery family and was educated at Clifton College. He first worked as a naval architect and a military officer. He was a member of Parliament from 1906 to 1942, when he received the title baron; until 1919 he was a member of the Liberal Party, and from then on a member of the Labour Party. While serving on the Gallipoli front as an artillery officer in 1915, Wedgwood met the men of the Zion Mule Corps, commanded by Joseph *Trumpeldor, and from then on took an active interest in Zionism. He participated in the political efforts which led to the *Balfour Declaration in 1917 and was among those who influenced President Wilson's delegate at the Versailles Peace Conference, Colonel House, to take a sympathetic stand toward Zionism. Between the two world wars, he visited several countries on Zionist missions and made two visits to Palestine in 1926 and in 1934. Wedgwood envisaged a Jewish state on both sides of the Jordan that would be a member of the British Commonwealth. He was among the founders of the "League for the Seventh Dominion" and in 1928 published *The Seventh Dominion*, a work on this subject. He realized at an early stage that the British government would abandon its pro-Zionist policy and concluded that the Jews must fight the British administration with all the means at their disposal – including illegal ones. He was close to V. *Jabotinsky and the *Revisionist movement and often voiced criticism of the Zionist and *yishuv* leadership for their loyalty to the British authorities. He even drew up a plan for war against the Mandatory government that provided, inter alia, for "illegal" *immigration and for armed resistance to repressive acts perpetrated against the Jews by the British authorities. On the outbreak of World War II, Wedgwood called for the establishment of a Jewish fighting force within the framework of the British army.

Wedgwood published a number of books, including *Testament to Democracy* (1943), *Forever Freedom* (with A. Nevins, 1940), and *Palestine: The Fight for Jewish Freedom and Honor* (1926), a collection of speeches made in America. One of the leading gentile pro-Zionists of his time, he wrote an autobiography, *Memoirs of a Fighting Life* (1940). Dame C.V. Wedgwood (1910–1997), the famous historian, was his niece.

WEEDS. Israel abounds in species of weeds, the climatic and soil conditions causing the speedy proliferation of both cultivated plants and weeds. Many of them are *thorns. The prophets frequently warned that because of sin, misfortunes would befall Israel's agriculture and the land would produce weeds in place of cultivated plants. Isaiah in particular warns against the transformation of the sown and planted area into *shamir* and *shayit* ("briars and thorns"), a general term for all the species of weeds that flourish among cultivated crops. These weeds start as annual plants, then lowly shrubs grow, and finally the field turns into a forest (cf. Isa. 7). Normally weeds grow in fields of grain in Israel, the most conspicuous being *tares, species of *mustard, Scolymus thistle (*ḥo'aḥ*), and *Ridolfia segetum* (*boshah*, "noisome weeds"). Job (31:40) swears that if he has indeed sinned, then let him be cursed, "Let *ḥo'aḥ* grow instead of wheat, and *boshah* instead of barley." The *amora* Oshaiah observes that it can be deduced from this verse "that a field that produces *ḥoḥim* is good for wheat, while a field that produces *boshah* is good for barley" (Tanḥ. B. Deut. 25), showing that these weeds are indications to cultivate plants.

[Jehuda Feliks]

WEEGEE (1899–1968), U.S. photographer. Born Usher Fellig in what is now the Ukraine, Weegee went to the United States, where he was renamed Arthur, as a boy. He was the second of seven children of Jewish parents who fled antisemitic pogroms spreading throughout the Russian *Pale of Settlement. Weegee became the ultimate crime-news photographer in a newspaper career that ran from 1935 to 1946.

Weegee attended local public school on the Lower East Side up to seventh grade. At 15 he left home and earned his living selling candy to factory workers and working in restaurants. He became an assistant to a photographer, loading glass-plate holders and magnesium flash power. For a time he accompanied silent films on the violin, and he later wrote that he loved playing on the audience's emotions. One critic said he simply switched instruments. After years on the fringes of photography as a street portraitist, darkroom assistant, printer, and technician, he set out as a freelancer, hanging out at Manhattan police headquarters, waiting to fill the needs of picture-hungry tabloids and magazines. He specialized in the night shift, from 10 P.M. to 5 A.M. He lived in a rundown room near a police station and woke up as night fell. He was the first photographer given a permit to install a short-wave radio for police and fire calls in his car, and he had a small darkroom in his trunk. He was usually the first to arrive at a murder scene, a fire, an arrest, or a rescue. Gangland killings became a trademark, but he had remarkable range, from the homeless, to strivers, to freaks, politicians, and celebrities to tender shots of people afflicted or uplifted by everyday life. He exposed the faces of accident victims, survivors, and helpless sufferers. In one famous image, two women watching relatives burn to death in a fire are convulsed with grief and horror. In his book *Naked City,* Weegee said he cried when he took the picture. A critic said he combined "instincts of a bloodhound, a Peeping Tom, a showman and a human-interest edi-

tor." Weegee himself said, "Crime was my oyster, and I like it, my postgraduate course in life and photography."

Weegee used infrared film to register in the dark or low light to catch lovers in the movies and on the beach at night. His artless, mostly unposed, shots not only made him famous but also inspired a generation of younger photographers, from Diane *Arbus to Andy Warhol. One of Weegee's more famous photographs, "The Critic," of 1943, shows two elegantly clad women, furred and jeweled, sweeping grandly past a shabby, angry-looking bystander as they arrive at the opera. The truth, as Weegee revealed in his 1947 book, *Weegee's World*, is that he asked an assistant to ply the "bystander," a regular at bars on the Bowery, with cheap wine and then pose her near the curb as the socialites emerged from their limousines. Disheveled and barely able to stand up, she stared drunkenly at the women as Weegee's flashbulbs popped.

His only steady affiliation, with the newspaper *PM*, lasted 4½ years, beginning in 1940. Some of his most important work appeared in *PM*. After the publication of *Naked City,* Weegee went to Hollywood, where he served as a consultant on the film made from his book and played some minor film roles. He was the set photographer and technical consultant for Stanley *Kubrick's antiwar classic *Dr. Strangelove* (1963). Kubrick originally ended the film with a pie fight in the war room. He didn't like that ending, so he destroyed the negative and replaced it with the final wild cowboy ride on a nuclear bomb. The only record of the pie-fight sequence is Weegee's photographs.

No one is sure where he got the name Weegee, which he adopted in 1938. Some said it came from his job as a "squeegee boy," removing excess water from prints before they were put in darkroom dryers. Others suggested that it reflected a craze in the 1930s for the supposedly clairvoyant Ouija board, whose fanciful border was illustrated by fictional characters, one of whom resembled the photographer. Weegee himself said the name reflected his own clairvoyance at sensing photo opportunities, but his statements were not always trustworthy. Later he elaborated the name to Weegee the Famous.

[Stewart Kampel (2nd ed.)]

WEGROW (Pol. **Węgrów**; in Jewish documents: **Vengrove**), town in Warszawa province, E. Poland. Jews settled there at the beginning of the 16th century, when it was under Lithuanian rule. They engaged in trading both locally and abroad, and in tax farming. An organized community was established soon after the middle of the 16th century. After the town was incorporated within the kingdom of Poland in 1569, the community developed rapidly to achieve a leading position among the communities of the region. The owner of the town, Jan Kazimierz Kraniński, in an attempt to attract new Jewish settlers, granted the community in 1655 a privilege confirming its right of judicial autonomy, freedom to engage in trade and crafts, and exemption from municipal taxes. It imposed on the Jews an annual tax of two zlotys per household, and a one-time payment of six zlotys by new families as a domiciliary fee. At the beginning of the 17th century the Wegrow community had jurisdiction over the communities of Ciechanowiec, *Sokolow, and later Miedzyrzec *Podlaski and others. After a prolonged struggle against the *kahal* of *Tykocin, the Wegrow *kahal* obtained official representation at the *Council of Four Lands, and from the 1660s headed the independent *galil* (province) of Wegrow, which survived until 1764. In 1715 the Ciechanowiec community broke free of the authority of Wegrow, to be followed by Miedzyrzec in 1753. In 1765 there were 3,623 poll-tax payers under the community's jurisdiction, of whom 581 lived in the town. In 1764 the Wegrow community was the sixth largest in the Polish kingdom. Up to 1788 the Jewish community of the Praga suburb of Warsaw was affiliated to that of Wegrow as regards the payment of the poll tax.

In the second half of the 18th century Jews of the town traded in cattle, participated in the fairs of Breslau, Berlin, and Koenigsberg, and were occupied as tailors, weavers, furriers, bakers, and carters. The Jewish artisans were mostly organized in independent guilds. The *pinkas* of the *dayyanim* of Wegrow for 1781 to 1814 (now in the National and University Library in Jerusalem) provides an important source for the social and economic life of the community. In the 1790s Jewish entrepreneurs established workshops for wool weaving and tanning, and wealthy merchants were purveyors to the Polish and Russian armies. In 1794 a branch of the Hebrew printing press of *Nowy Dwor, founded by J.A. Krieger, printed books in Wegrow, including *Josippon.

In 1815 Wegrow was incorporated within Congress Poland. The community numbered 1,463 (48% of the town's population) in 1827; 2,343 (61%) in 1857; and 5,150 (62%) in 1897. From the 1870s many Jews took up occupations as jewelers, manufacturers of luxury goods and ritual articles, and engaged in transportation. At the beginning of the 20th century many Jews in Wegrow were occupied in the knitting and tanning industries. The *Bund gained considerable influence among the local workers in 1905.

In 1918 the *Po'alei Zion established Bet Borochov; later Tarbut, Central Yiddish School Organization (CYSHO), Yavneh, and Beth Jacob schools were established. In Orthodox circles the Gur (*Gora Kalwaria) Ḥasidim became influential. The Jewish population numbered 5,227 (55%) in 1931.

[Arthur Cygielman]

Holocaust Period

At the outbreak of World War II there were about 6,000 Jews in Wegrow. Immediately after the German army entered the town, attacks were made on the Jewish population, and on Sept. 23, 1939 (the Day of Atonement), the rabbi of Wegrow, Mendel Morgenstern, was tortured to death. During 1940 about 1,500 Jews from other parts of Poland were forced to settle in Wegrow, and the number of Jews there had grown to about 7,500 by the beginning of 1942. On Sept. 22, 1942, several thousand Jews from Wegrow and the vicinity were transferred to the *Treblinka death camp, where they perished. However, the majority of the Jewish population had managed to escape

to the surrounding forests the previous day. Almost all of them were eventually caught and shot by German armed units who searched them out. The last 100 Jews, who had remained in a local forced-labor camp, were executed on May 1, 1943.

The community was not reconstituted after the war.

WEICHERT, MICHAEL (1890–1967), Yiddish theatrical producer, who worked in the Warsaw ghetto during World War II. Born in Galicia, Weichert studied drama in Vienna, and in Berlin under Max *Reinhardt. After World War I he returned to Poland and joined the *Vilna Troupe, which by then had moved to Warsaw. Among his productions for them was his dramatization of Sholem *Asch's *Kiddush ha-Shem* (1928). He also helped to run a Yiddish drama school, and when the Vilna Troupe broke up continued to work as teacher and producer, introducing Jewish audiences to modern social drama. When the Germans invaded Poland in World War II, Weichert accompanied the Jewish masses into the Warsaw ghetto and played an important part in organizing Jewish life while this was still possible. He left an account of his work there in *Yidishe Aleynhilf 1939–1945* ("Jewish Self-Help"), a two-volume work published in 1962. He survived the Holocaust, and in 1957 went to Israel, where he wrote his memoirs in three volumes (*Zikhroynes*, 1960–63).

[Joseph Leftwich]

WEICHMANN, HERBERT (1896–1983), German politician. The son of a doctor in Silesia, Weichmann became an official in the Weimar government. He was a provincial judge from 1926 to 1927 and from 1927 to 1933 held a number of important governmental posts. With the advent of the Hitler regime, Weichmann left Germany for France, Spain, and finally the United States, where he became a university lecturer. In 1948 Weichmann returned to Germany. At the invitation of the burgomaster of Hamburg he joined the city's administration. He held high positions and was himself eventually elected burgomaster (1965–71). In 1965 Weichmann entered the Bundesrat (the Federal Upper House) as a Social Democrat and became its president. In this capacity, he was acting president of federal Germany in the absence of the president from the country. Weichmann, whose family was killed by the Nazis, regularly attended synagogue services and emphasized his Jewishness at every opportunity. He always rejected the frequent suggestion that he be considered for the presidency of the Federal Republic because he felt that, as Jew, he would be a burden on relations with the Arab world.

[Monika Halbinger (2nd ed.)]

WEIDENFELD, (Arthur) GEORGE, Baron (1919–), British publisher. Weidenfeld was born in Vienna. Following the Anschluss in 1938, he immigrated to Great Britain and joined the BBC where he worked in overseas intelligence and as a commentator on European affairs. Weidenfeld was a lecturer at Chatham House and in 1945 founded *Contact*, a journal of contemporary affairs and the arts. In 1948, together with Nigel Nicolson, he set up Weidenfeld and Nicolson, a large British publishing house, whose program is divided equally between general literature, academic books, and art and illustrated productions, and publishes the works of many Israeli scholars. In 1969 a subsidiary company was established in Jerusalem.

Weidenfeld was political adviser to President Chaim *Weizmann from 1949 to 1950, and his close association with Israel dates from that period. He was later chairman of the Board of Governors of Ben-Gurion University of the Negev and a member of the Board of Governors of the Weizmann Institute of Science. In 1969 Weidenfeld was knighted and in 1976 given a life peerage. Weidenfeld was one of the best known and most successful of postwar British publishers and produced many works of Jewish interest by a range of Jewish notables, among them Moshe *Dayan, Dr. Henry *Kissinger, Golda *Meir, and Sir Martin *Gilbert. He was the author of an autobiography, *Remembering My Good Friends*, in 1994.

[Asher Weill]

WEIDENREICH, FRANZ (1873–1948), German anatomist, physical anthropologist, and paleontologist. Born in the Palatinate, Weidenreich taught anatomy at Strasbourg from 1899 to 1918 and at Heidelberg from 1921 to 1924. In 1928 he was appointed professor of anthropology at Frankfurt University. In 1935, during the Nazi regime, he left Germany and took a position at Union Medical College in Peking (Beijing), China. He settled in the United States in 1940, and from 1941 until his death was affiliated with the Museum of Natural History in New York City. A leading scholar of human evolution and morphology, Weidenreich became internationally known for his studies of *Homo Sinanthropus*, the human fossil remains discovered in China in 1927 of which he gave the first description in 1943. He also investigated the later *Homo Sapiens* group found at Chou Kou Tien in north China, Neanderthal skeletons from Europe and Central Asia and, together with the Dutch paleontologist Gustav Koenigswald, the remains of *Pithecanthropus, Maganthropus* and *Paleojavinicus* from Java.

Among the problems dealt with by Weidenreich in his articles were the relation of erect posture to the evolution of the foot, hand, pelvis, and skull, and the influence of the expansion of the brain on human development. His shorter anthropological papers written from 1939 to his death were published in 1949 (Eng.; ed. by S.L. Washburn and D. Wolffson).

[Ephraim Fischoff]

WEIDER, BEN (1924–), Canadian businessman, physical fitness enthusiast, and Napoleon scholar. Weider was born into a working-class Montreal family. After serving in the Canadian military during World War II, and with only an elementary school education, he joined his brother Joe, who was publishing a bodybuilding magazine. Together the brothers expanded into the manufacture and sale of bodybuilding equipment. Their business now includes the manufacture of nutritional food and health supplements. Though Joe eventually moved to the United States, while Ben stayed in Canada, their holdings have become a sport, physical fitness, and bodybuilding empire. Two Weider companies, Weider Sports Equipment and Weider Health and Fitness, are estimated by some industry analysts to control as much as 25 percent of the worldwide health and fitness market.

To generate interest in bodybuilding and bring recognized standards to international weightlifting, in 1946 Ben Weider established the International Federation of Bodybuilders (IFBB). It has since become the world's oldest organization for bodybuilders and fitness competitors, active in over 170 countries. As the president of the IFBB, Weider worked to have bodybuilding and the IFBB recognized on the world sports stage. In 1998 the International Olympic Committee granted the IFBB official recognition as the international governing body of weightlifting.

From his home in Montreal, Weider was active in the Montreal and Canadian Jewish communities and an advocate of building political, ethnic, and religious understanding through sports and physical fitness. His efforts have been widely recognized in Canada and abroad. The Montreal YMHA is named in his honor. He was also granted several honorary degrees and the Order of Canada, the nation's highest citizen award.

Weider is also an acknowledged Napoleon scholar and served as president of the International Napoleonic Society. He is credited with groundbreaking research on the French emperor. He published several books on Napoleon, including *The Murder of Napoleon*, which was translated into 39 languages and sold over a million copies.

[Avi Hyman and Brenda Cappe (2nd ed.)]

WEIDMAN, HIRAM ((**Chaim**) **Leib**; 1862–1933) and **MORDECAI S.** (1864–1952), businessmen and Winnipeg communal leaders. Born in Orla near Bialystok in Russian Poland, the brothers moved to Winnipeg in 1882, where they lived for two years, and then worked on farms in the Jewish agricultural colony of New Jerusalem in present-day Saskatchewan. They returned to Winnipeg in 1887, when Hiram opened a grocery and jewelry business and Mordecai ran a fruit store. Both brothers branched out into other areas of retail, but their most enduring business began in 1909 when together they opened a wholesale grocery business, with Hiram as president and Mordecai as vice president.

Hiram and Mordecai shared strong anti-socialist sentiments, and were both opponents of the Winnipeg General Strike of 1919. But there were also some political differences between the brothers. An advocate of free trade, Hiram supported the Liberal Party and was a founder of the Hebrew Liberal Club in 1908. Mordecai, in contrast, supported the Conservative Party. He helped organized Jewish support in Winnipeg for the Conservatives, and in 1908 was chosen as one of three vice presidents of the Hebrew Conservative Club of Winnipeg. In 1910 he was elected to the executive committee of the Hebrew Conservative Association. Although an ardent Conservative, that same year Mordecai voted for Solomon Hart Green, a Liberal who became the first Jew elected to the Legislative Assembly of Manitoba.

Both men were active in communal affairs, together founding the Shaarey Zedek Synagogue in 1889, with Hiram serving as synagogue president from 1920 to 1921. They were both strong supporters of Jewish education, and together were founders of a Hebrew literary society. Hiram also was a moving force behind the establishment of a *talmud torah*. Both were committed Zionists: Hiram was a founder of Winnipeg's Zionist society in 1898, and helped found the Federation of Canadian Zionist Societies a year later. In response to the 1903 Kishinev pogrom, Hiram spearheaded the formation of a committee to raise relief funds. In 1923, Hiram and Mordecai traveled to Poland, where they made donations to Jewish institutions and charities, and from there to Palestine, where their parents had immigrated in 1904. The brothers deeded the Jerusalem home of their parents to a Jewish maternal aid society, and donated money towards the home's upkeep.

In the 1920s, even as a new generation of Weidmans moved into the family business, Hiram and Mordecai retained their positions in the family firm, and continued to do so until they died. At the time of his death, Mordecai was one of the last of the Russian Jewish immigrants to Winnipeg.

[Henry Trachtenberg (2nd ed.)]

WEIDMAN, JEROME (1913–1998), U.S. novelist. Born in New York City, Weidman obtained first-hand knowledge of the Jewish garment industry while working his way through college. In his first novel, *I Can Get It for You Wholesale* (1937), later made into a musical, he described the rise of an unscrupulous go-getter in the dress trade. His second novel, *What's in It for Me?* (1938), which had a similar setting, aroused a storm of protest because of its unpleasant portrayals of Jewish characters. During World War II, Weidman worked for the Office of War Information and there found material for his satire on war propaganda, *Too Early to Tell* (1946). In his novel, *The Enemy Camp* (1958), Weidman analyzes relations

between Jews and non-Jews on the basis of his own experiences as a young man. The short stories of *My Father Sits in the Dark* (1961) contain nostalgic glimpses of East Side Jews. Weidman's style is restless, naturalistic, and colored with slang and satiric overtones. In his portrayal of Jewish types, he takes his place beside other Jewish writers of his age group such as Budd *Schulberg, Norman Katkov, and Albert *Halper, but was less unkind than some of his contemporaries. Hedonistic in his attitude, Weidman remained generally aloof from the strivings of the Jews of his generation. Weidman also wrote the book for a musical, *Fiorello* (1959), which was awarded a Pulitzer Prize. Later works included *Back Talk*, essays (1963), a short story collection entitled *The Death of Dickie Draper and Nine Other Stories* (1965), *Fourth Street East: A Novel of How It Was* (1970), and the autobiography *Praying for Rain*.

[Sol Liptzin]

WEIDNER, PAULUS (c. 1525–1585), physician and rector of Vienna University. Born in Udine, Italy, as Asher Judah b. Nathan Ashkenazi (the physician and diplomat Solomon *Ashkenazi was his brother), he studied medicine at Padua and was invited by the estates of Carinthia to practice there, in a province where Jews were not allowed to reside. After a period of spiritual struggle he embraced Christianity in Vienna in 1558. His first book, *Loca praecipua fidei christianae* (1559), was an attempt to persuade the Jews of the truth of Christianity; the work showed his mastery of Hebrew and Christian sources. Weidner enjoyed the substantial patronage of the Austrian emperors, whom he served as physician. On March 13, 1560, *Ferdinand I, after repeatedly postponing the expulsion of Bohemian Jewry, ordered all its Hebrew books to be brought to Vienna; they were checked by Weidner, who found no fault in them and had them returned. A year later the Jews of Prague were forced to listen to a series of conversionary sermons preached by him. Weidner's last published work was *Sententiae Hebraicae* (1563), a collection of proverbs, mainly from Pirkei *Avot, in Hebrew, German, and Latin. After his conversion he was accepted by the University of Vienna, where he became dean of the faculty of medicine six times and thrice rector of the university. The title "von Billerburg" was granted him in 1582.

°**WEIGAND, THEODOR** (1864–1963), German archaeologist. Weigand went on expeditions for the Prussian Oriental Museum from 1895 and for a time was the scientific attaché in the German embassy in Constantinople. During World War I Weigand served as a staff member of the German Denkmalschutz-Kommando for the preservation of antiquities in Syria and Palestine and conducted a survey of the Negev – the first in which air photography was used in archaeological work – and of Petra. From 1911 to 1931 he was director of the antiquities department of the Berlin Museum, and from 1932 until his death the head of the German Archaeological Institute.

[Michael Avi-Yonah]

WEIGEL (Zaluszowska), CATHERINE (c. 1460–1539), martyr in Poland. Catherine was the wealthy widow of Melchior Weigel, a merchant-patrician and member of the Cracow municipal council. In 1530, at an advanced age, she was accused of Judaizing. She recanted, but in 1539, on further accusation, refused to do so again, and was burned at the stake. According to the chronicler Lukasz Gornicki, as well as eyewitnesses, the 80-year-old woman went to her death courageously. Asked "Do you believe in His [God's] only son, our Lord Jesus Christ?" she said: "God had neither wife nor son, nor does He need this; for only mortals need sons. We are His children … and all who walk in His ways are His children" (*Dzieje w Koronie Polskiej* (1637), 5). Whether Catherine was a Jewess to the full or a radical anti-Trinitarian, her death made a great impression. On the king's order the heads of the Cracow community were arrested, and a number of Jews fled. The rabbi of the town, the physician Moses Fishel, suffered so much in prison that he died a short time after his release. This event started off a Judaizing scare, and a hunt for proselytes to Judaism which was relentlessly pursued in *Poland-*Lithuania in 1539–40.

[Arthur Cygielman]

WEIGEL, HELENE (1900–1971), actress and intendant of the Berliner Ensemble. Born in Vienna, she went to Frankfurt after her training and later to Berlin, where she was taught by Max Reinhardt and appeared at the Volksbühne and at the Deutsches Theater.

In the early 1920s she met Bertolt Brecht. The couple married in 1929 and had two children. Weigel inspired the female figures in her husband's work and played them on stage. In 1933 the family emigrated to the United States (via Prague, Vienna, Paris, Switzerland and Scandinavia), where Weigel dedicated herself to her family.

A year after the family's return from the U.S. in 1947, Weigel played the main character in the world première of Brecht's *Die Antigone des Sophokles* in Switzerland. In the same year the couple went to East Berlin. In 1949 Weigel became intendant of the newly established Berliner Ensemble, which she and Brecht led to an international reputation.

In 1950 Weigel was a founding member of the Deutsche Akademie der Künste (German Academy of Arts) in East Berlin. In 1954 she ran as a candidate of the SED for the Berlin parliament. Three times (1949, 1953, 1960) she was awarded with the National Prize of the GDR. She also received the "Vater-

ländischer Verdienstorden in Silber" (Patriotic Order of Merit in Silver) and the "Clara-Zetkin-Medal."

[Monika Halbinger (2nd ed.)]

WEIGERT, CARL (1845–1904), German pathologist. Born in Muensterberg, he worked as an assistant to famous anatomists and pathologists, including Julius *Cohnheim. In 1897 he was appointed professor of pathological anatomy at the Senckenberg Institute of Frankfurt (director from 1884).

He discovered and developed methods for the staining of tissues and bacteria, and these methods helped greatly in the development of histology and bacteriology. Weigert's staining methods are still used in histology. He made important studies on tissue degeneration, on embolism and on miliary tuberculosis.

BIBLIOGRAPHY: R. Rieder, *Carl Weigert und seine Bedeutung fuer die medizinische Wissenschaft* (1906).

[Joshua O. Leibowitz]

WEIGERT, FRITZ (1876–1947), German physical chemist and biochemist. Born and educated in Berlin, he was the nephew of Paul *Ehrlich and of C. *Weigert. He was on the staff of Berlin University from 1908. From 1914 until the Nazis forced him to leave in 1935, he was professor of photochemistry in Leipzig University. He immigrated to Britain and from 1936 was director of the Physiochemical Department of the Cancer Research Institute at Mount Vernon Hospital, Northwood.

He elucidated the metabolism of the carcinogenic hydrocarbon 3, 4-benzpyrene by fluorescence spectroscopy. His books included *Die chemischen Wirkungen des Lichts* (1911) and *Optische Methoden der Chemie* (1927).

WEIGHTS AND MEASURES. From the earliest period of their history the Jews were alive to the necessity of an accurate system of weights and measures, and an honest handling of them. The first legislation in the interest of economic righteousness in general is found in Leviticus 19:35 and Deuteronomy 25:13–16, and the prophets constantly denounced the use of false measures (Amos 8:5; Hos. 12:8; Micah 6:10; see also Prov. 11:1; 16:11; 20:10). Rabbinic legislation went so far as to demand the periodic cleaning of weights, scales, and measures lest their true standard be impaired by dirt (BB 5:10; see also BB 89a-b).

Metrological Systems in the Bible and the Ancient Near East

An authoritative and accepted system of weights for buying and selling, building, measuring areas, and the like is a necessity of civilized life. Therefore even in very ancient periods fixed measurements were established, initially for barter, estimation of distances, etc., and later for more complex needs such as building, the division of land, the digging of canals, and others. For that reason, most of the first measures were natural or common physical phenomena, such as the palm of the hand, a day's journey, seeds of grain, and simple utensils. As time progressed, the measures were improved and made more precise, but they were still called by their ancient names. Various systems of measurement developed in the large cultural centers of Egypt and Mesopotamia from a very early period. There, even complex reckoning was carried out to determine the equivalence between the different categories, that is, to reckon volume in terms of weight or area, and the like.

This type of reckoning is not found in the Bible though it was certainly known in Israel. An allusion to a similar reckoning is found in the Bible in a verse which expresses acreage in terms of volume of seed requirement: "And he made a trench about the altar, as great as would contain two measures of seed" (I Kings 18:32; see also Jer. 27:16; Isa. 5:10b (see *Targum), and later sources down to modern Palestine Arab usage).

The weights and measures in the Bible are in large part based upon the weights and measures which were accepted by the ancient peoples, the names of the measures also being the same. In Israel, measures of several peoples were used simultaneously: from Mesopotamian measures, the kor, *se'ah*, shekel, and others; from Egyptian measures, the ephah, hin, and others; and measures whose names were borrowed from the Canaanites such as *letekh* and *kikkar.* Apparently the Israelites adopted the measures from the Canaanites, who lived in the land before them, along with the names which were originally Egyptian and Mesopotamian. For this reason Egyptian measures have been found that have Mesopotamian names. Some measures, since they are not found among the neighboring countries, were apparently established in Israel.

In biblical measures, it is customary to distinguish between natural measures (measures established in reference to parts of the human body, utensils, average sizes of burdens loaded on animals, etc.) and between measures established by reckoning which were fixed and precise. In some cases the Bible explains the relationship between measures, but it is difficult today to establish their absolute values because as early as the days of the Second Temple the biblical measures were abolished, and later translators and commentators were inclined to identify them with their contemporary measures without being precise as to their values.

In the metrology practiced in the Ancient Near East, there were measures which differed in their absolute value but were identical in name, for example: in Egypt and Mesopotamia, the short cubit was in use along with the long cubit, and there were also different weights, light and heavy, called by the same name, such as the mina. Double weights of this sort were in use also in Palestine, as has been proven from the Bible and from archaeological finds, and were in use there almost until modern times.

Aside from these, there were measures confined to specific localities. Ancient documents provide evidence of weights named for cities: "Alalakh weight," "Carchemish weight," and the like. This custom, too, was practiced in Palestine. In addition to the already-mentioned difficulties, there is the problem of the durability of these weights, since it is likely that with the passage of time many changes took place in them. The ascertaining of biblical measures and the determination of their values in terms of present-day measures is done mainly on the basis of archaeological finds. In the excavations carried out in Palestine, many weights have been uncovered and also fragments of vessels upon which measurements of volume have been written. Linear measure can be reckoned according to ancient structures whose measurements are marked. In the neighboring countries – mainly Egypt, Syria, and Mesopotamia – actual measuring rods of wood and stone were uncovered, along with weights and economic documents, all of which are valuable aids in determining the biblical measures. However, it still cannot be known whether these measures are identical with biblical measures and which of the various standards the Bible used. The Bible demands the use of correct measures and promises long life to one who is careful in this matter (Deut. 25:13–16; Amos 8:5, et al.).

Linear Measure

The units of length mentioned in the Bible, as well as those used by other ancient peoples, are derived from average measures of the length of human limbs. Names of measures based on the limbs of the body are in use in some languages even to this day.

It appears that in the early period it was customary to measure with the limbs themselves: the part of the arm from the elbow to the tip of the middle finger is the "standard cubit [lit. by a man's forearm]" (Deut. 3:11); the span (*zeret*) was the distance between the tip of the little finger and the tip of the thumb with the fingers straddled. The measurement of the handbreadth was the width of the four fingers, and the fingerbreadth was measured according to the width of the finger. As time progressed, absolute and more precise values and relationships were established for these natural measures, though these were still named according to the parts of the body.

The large measures mentioned in the Bible are based upon crude estimates such as the range of the bowshot (Gen. 21:16), i.e., the distance which the bow is able to shoot the arrow. In several places in the Bible, the expression *kivrat ʾerez*, "a short distance," is mentioned (Gen. 35:16; 48:7; II Kings 5:19) which seems to mean a journey of two hours. Greater distances were measured by days' journey (Gen. 30:36; 31:23; et al.).

Among the instruments used for measuring small units of length, the Bible mentions: *ḥut*, "thread" (Jer. 52:21); *ḥevel*, "rope" (Amos 7:17); *ḥevel middah*, "measuring line" (Zech. 2:5 [1]; *kav* (*qav*) *ha-middah*, "measuring line" (Jer. 31:38 [39]; *petil pishtim… u-qeneh ha-middah*, "line of flax… and measuring reed" (Ezek. 40:3). It is likely that all or some of these instruments were used regularly for linear measure and it should be noted that the rope served as a standard measurement of length among several ancient peoples.

Five small units of length are mentioned in the Bible. Their exact length is not explicit but their interrelations are generally established: *kaneh* (*qaneh*), "reed"; *ʾammah*, "cubit"; *zeret*, "span"; *ṭefaḥ*/*ṭofaḥ*, "handbreadth"; and *ʾezbaʿ*, "fingerbreadth." The most important and basic measure was the cubit. It appears that there were two values for the cubit which were in use in different periods: the short cubit is implicit in II Chronicles 3:3 in the description of the Temple, "in cubits of the old standard," and the meaning of the verse is that the measurements of the Temple are given in terms of the ancient cubit and not the longer royal cubit which was in use in this time. In the description of the future sanctuary in Ezekiel 40:5 (see also 48:13), the second or long cubit is mentioned: "and the length of the measuring reed in the man's hand was six long cubits, each being a cubit and a handbreadth in length." The cubit in this description exceeds the normal cubit by one handbreadth and thus contains seven handbreadths and not six like the short cubit. Ezekiel uses the long Persian cubit, which was in use also in Mesopotamia, and which may have come into use in Palestine during the time of the Return. (See Table: Units of Length-Bible.)

Table 1. Ratio between the Units of Length in the Bible

	reed	cubit	handbreadth	fingerbreadth
According to the short cubit				
reed	1			
cubit	6	1		
handbreadth	36	6	1	
fingerbreadth	144	24	4	1
According to the long cubit				
reed	1			
cubit	6	1		
handbreadth	42	7	1	
fingerbreadth	168	28	4	1

Attempts have been made to learn the value of the cubit in terms of present-day measures by comparisons with ancient structures whose measurements are noted, such as the tunnel of Siloam dating to the reign of Hezekiah; or on the basis of the measurements of buildings which, in the opinion of their excavators, were built in whole cubits, such as the walls of Hazor, Megiddo, and Gezer from Solomon's time (I Kings 9:15); or by estimating the volume of "the molten sea" which stood in the Temple (I Kings 7:23 – 26; II Chron. 4:2). However, all of these calculations are unreliable. Various scholars (e.g., R.B.Y. Scott) – some on the basis of comparisons with Egyptian and Mesopotamian standards, and some according to parallels from Hellenistic sources – established the values shown in Table: Value of the Cubit.

Table 2. Conjectured Value of the Cubit

long cubit (28 fingerbreadths)	–	521.0 mm.
short cubit (24 fingerbreadths)	–	446.0 mm.
handbreadth (4 fingerbreadths)	–	74.0 mm.
fingerbreadth	–	18.6 mm.

These figures probably approximate the actual values of the measures, but they cannot be considered precise.

Volume

As was the case with linear measures, human limbs were initially used to measure volume. The small units were: *komeẓ* (*qomeẓ*, "handful"; Lev. 2:2; 5:12), which is the measure of the grasp of three fingers and perhaps is the *shalish* mentioned in Isaiah 40:12; *ḥofen* (Ex. 9:8, et al.), which is the entire palm of the hand; and *ḥofnayim*, which is two handfuls. They were also accustomed to measuring with receptacles which the farmer used at home and in the field; the omer (*ʿOmer*) is a bundle of ears of corn; a quantity of wine in the measure of a skin (jar) is also mentioned (I Sam. 1:24). The values of these measures cannot be established, for it is certain that they were not precise; later on some of them did become fixed, their previous names being preserved. It is likely that various foods used to be prepared in fixed portions, and therefore the Bible notes quantities of food, liquid and dry, in numbers of portions without designating the volume (I Sam. 25:18; II Sam. 16:1, et al.).

The units of volume mentioned in the Bible are the following:

homer (Lev. 27:16; Isa. 5:10; Ezek. 45:11; 13:14; Hos. 3:2);
kor (Ezek. 45:14);
letekh (Hos. 3:2);
ephah (Ex. 16:36; Ezek. 45:11, 13; 46:14, et al.),
bath (Ezek. 45:11, 14; II Chron. 2:9);
seʾah (Gen. 18:6; I Sam. 25:18; I Kings 18:32; II Kings 7:1, 18, et al.);
hin (Ex. 29:40; Ezek. 45:24; 46:11, 14, et al.);
omer (Ex. 16:16, 36; Lev. 23:10 – 14, et al.);
ʿissaron (Ex. 29:40; Lev. 14:21; Num. 15:4, et al.);
qav (II Kings 6:25);
log, which is the small liquid measure (Lev. 14:10, 12, 15, 21, 24).

(See Table 3: Measures of Volume and Their Ratios).

It is worth noting the mixture of the decimal system which was used in Egypt and the sexagesimal system of Mesopotamia which is most characteristic of the scale of weights and measures in Palestine. Also the names – as was noted – are in part from Egyptian measures and in part from Mesopotamian measures.

If a distinction is made between liquid and dry measures, the following tables can be set up as seen in Table: Dry and Liquid Measures.

Table 4. Distinction between Dry and Liquid Measures

Dry		Liquid	
homer	1	kor	1
letekh	2	bath	10
ephah	10	hin	60
seʾah	30	*log*	720
omer – *ʿissaron*	100		
qav	180		

Scholars no longer attempt – as in previous generations – to equate these measures with Greek and Roman measures and thereby determine their absolute values, because this was based on conjecture only. The only method by which modern scholars can determine the values of these weights is to measure the volume of vessels discovered in excavations in Palestine whose capacity is marked on them, such as fragments of vessels with the words *bt*, "bath," or *bt lmlk*, "royal bath," written upon them. According to W.F. Albright's calculations, which are accepted by most scholars today, the "royal bath" has a capacity of 22 liters. (See Table: Scale of Measures of Volume.)

Table 5. Scale of Measures of Volume (Dry and Liquid)

homer – kor	220.0 liters
letekh	110.0 liters
ephah – bath	22.0 liters
seʾah	7.3 liters
hin	3.6 liters
omer – ʿissaron	2.2 liters
qav	1.2 liters
log	0.3 liters

Aside from the inscriptions "bath" and "royal bath," some potsherds were discovered during excavations with inscrip-

Table 3. Measures of Volume and Their Ratios

	Homer – kor	*letekh*	ephah – bath	*seʾah*	hin	omer – *ʿissaron*	*qav*	*log*
homer – kor	1							
letekh	2	1						
ephah – bath	10	5	1					
seʿah	30	15	3	1				
hin	60	30	6	2	1			
omer – *ʿissaron*	100	50	10	3 1/2	1 2/3	1		
qav	180	90	18	6	3	1 4/5	1	
log	720	360	72	24	12	7 1/5	4	1

tions which in general designate the type of goods and the quantity; however, for the most part, the names of the units of volume are missing from these inscriptions (a common practice in the Bible also; see I Sam. 25:18; II Sam. 16:1). A shard was found at Tell Qasileh bearing the inscription (according to the reading of B. Mazar), "To the king, 1,100 [measures of] oil, from Aḥiyahu." The liquid measure is not explicit: in the opinion of Mazar, the *log* is intended. Another inscription, discovered in Kadesh-Barnea, reads 51, and according to M. Dothan, it designates five measures of oil and the hin is intended. Also discovered in Samaria were tens of ostraca upon which measures of oil and wine are mentioned by the *nbl*, "skin" (biblical, *nevel*, cf. I Sam. 1:24; 25:18; II Sam. 16:1, et al.). The units of volume mentioned in the Elephantine papyri from the fifth century B.C.E. are *se'ah* and *qav*, the measure being designated by the first letter only. This way of designating measures continued in Palestine until the end of the Second Temple, as a vessel uncovered in the ruins of Qumran reveals. Upon it is inscribed: "two *se'ah* and seven *log*." This vessel has the capacity of 35.65 liters.

Area Measure

The main measure of area in the Bible is the *ẓemed* (I Sam. 14:14; Isa. 5:10), which refers to the area which a pair of oxen can plow in one day. This method of measuring area persists into the Mishnah and the Talmud Ancient Near East and later passed on to the Romans. In Rome the unit of area used was called *jugerum* from *jugum*, "yoke" (Pliny, *Naturalis Historia*, 18:9), while the modern measures feddan and acre have similar meanings. These measures, which in the beginning were not precise, in time became more clearly defined.

There was also another system of measuring area mentioned in the Bible, based upon the quantity of seeds sown in it (Lev. 27:16; I Kings 18:32; Isa. 5:10b (see *Targum)); and, needless to say, this measurement was not precise. This system was especially prevalent in Mesopotamia, and a formulation of this measure there reads: *bīt 1 imēru*, "property measuring one homer." This method of measuring area persists into the Mishnah and the Talmud (BB 7:1; 2:5, et al.) and is also attested in a deed from the time of the Bar Kokhba revolt. The Bible uses more precise measurement in its description of a rectangular area, noting the measure of the length and width in cubits or parts of cubits, and also adds the adjective *ravuʿa*, "square" (Ex. 27:1; 28:16, et al.). Ezekiel also notes the areas of the entire complex of buildings in the Temple in cubits (Ezek. 40).

Weights

WEIGHT IN THE BIBLE. The verb shql ("to weigh") is shared by all Semitic languages; and generally the system of weights used by Semitic peoples is the same. Weights, for the most part, were made of stone, hence the Bible refers to weights generally as "stones" ('even). In Akkadian, weights are called also aban kīsi, "stones from the bag," which consist of stones placed in a cloth bag (Micah 6:11; Prov. 16:11, et al.). In Ugaritic too the word *'a*bn, "stone," signified weights; but there have also been found many cast metal weights from the biblical period. During the Persian period, the metal weight became a coin and indication of this process can be seen in the Septuagint where the word for shekel, σίκλος, is changed to the word for the coin didrachm, δίδραχμον. Similarly they translated beka (beqaʿ), δραχμή, and gerah, ὀβολὸς.

In some ancient countries, especially in Mesopotamia, the old unit of weight was a seed of grain. Although the Bible used the names of early Mesopotamian weights, it does not mention this particular weight since the reciprocal relationship between Israel and Mesopotamia in weights, as in measures of volume, appears only in a relatively late period (apparently the Neo-Babylonian; see below).

Seven weights are mentioned in the Bible: talent, mina, shekel, beka, gerah, *pim*, and *kesiṭah*. A scale of the relationships between the first five weights mentioned can be established on the basis of the Bible and other sources; the absolute and relative value of the *pim* can be determined from archaeological finds (see below). The seventh weight, the *kesiṭah* (Gen. 33:19; Josh. 24:32; Job 42:11), seems to be an archaic weight and the origin of its name and its metrological value are not known. (Some believe it means rather "a sheep or goat.")

The basis of the biblical system of weights becomes clear by investigating the interrelationships of the three most important weights, the talent, shekel, and gerah.

The talent (*kikkar*), was the largest unit of weight in the Bible, and was already known by the same name in Ugaritic. In Ugaritic it was pronounced *kakaru*, as has been shown from Akkadian documents from Ugarit and Alalakh where the Canaanite name appears in the forms *qaq*(*q*)*aru*(*m*), *kakaru*(*m*). The very name *kikkar* testifies to the round shape of the weights. The relation between the talent and the shekel becomes clear in Exodus 38:25–26. The half shekel brought by 603,550 men amounted to 100 talents and 1,775 shekels. Thus the following calculations can be made as seen in Table: Shekel and the Talent.

Table 6. Relation between the Shekel and the Talent

603,550 half-shekels	=	300,000 + 1775 shekels
300,000 shekels	=	100 talents
3,000 shekels	=	1 talent

This system of dividing the talent into 3,000 shekels differs from the Mesopotamian system which divides the talent into 3,600 parts, and is the same as the Ugaritic system where the talent is also divided into 3,000 shekels. From this it follows that the biblical division is based upon an ancient Canaanite tradition.

The shekel (Akk. *šiqlu*; Ugaritic, *ṯ~ql*; early Aram. *shql*; late Aram. *tql*) is the most basic weight, as its name, which means simply weight, testifies. Since the shekel is the definite weight, an expression such as "1,000 silver" (Gen. 20:16) can be explained as 1,000 shekels of silver, and the name of the weight is omitted since it is self-explanatory. Abbreviations

like these are also found in other Semitic languages. The fundamental nature of the shekel can also be seen in the fact that all weights which the Bible explains are explained only in terms of the shekel.

The gerah is known in Akkadian as *girû*. The basic meaning of the Akkadian word is a grain of carob seed. The value of the gerah is the 20th part of a shekel (Ex. 30:13), unlike the Akkadian *girû* which is the 24th part of a *šiqlu*. S.E. Loewenstamm noted that the ratio 24:20 is identical with the ratio 3,600:3,000, and therefore he holds that the division of the shekel into 20 gerah is based upon the same ancient Canaanite tradition according to which the talent was divided into 3,000 shekels.

The mina (Heb. *maneh*; Sum. *mana*; Akk. *man* –; Ugaritic, *mn*), which designates a weight of approximately 50 or 60 shekels (see below), is found in the Bible primarily in the late books (Ezek. 45:12; Ezra 2:69; Neh. 7:70, 71). In the period preceding the destruction of the First Temple, the mina is mentioned only once, in the verse about Solomon's shields (I Kings 10:17). From this it is reasonable to assume that in ancient times in Israel reckoning was done in shekels and talents only, and the mina was not used except in unusual situations. It appears that this practice too had its roots in an ancient Canaanite tradition, for in Ugaritic writings many calculations are found involving shekels and talents and very few involving the mina. The value of the mina is defined in Ezekiel 45:12. From this verse it follows that the mina is equivalent to 60 shekels like the Akkadian *man* –. However, there is reason to assume that Ezekiel's definition was influenced by his Mesopotamian environment, and that the Canaanite-Israelite mina was equivalent to only 50 shekels. First, it appears that there are two systems intertwined in Ezekiel's words. Portions of 15 and 20 shekels are appropriate for a mina of 60 shekels, as they equal a fourth and a third of it. Not so a portion of 25 shekels which is appropriate only for a mina of 50 shekels, of which it would comprise half. F. Thureau-Dangin found support for the existence of a Canaanite mina of 50 shekels in Ugaritic weights which contain 50 Ugaritic shekels. He regarded these as weights of a mina. According to this, the ratio of the Mesopotamian weight to the Canaanite weight would be 60:50, like the ratios 3600:3000 and 24:20 which were dealt with above. Support for this system can also be found in the passages which speak of payment of 50 or 100 shekels (Deut. 22:19, 29, et al.), which probably refer to payments of one or two minas. Moreover, there are signs that the Mesopotamian system of Ezekiel did not succeed in supplanting the Canaanite system. The Septuagint (LXX A) reads for Ezekiel 45:12: "five shekels shall be five shekels, and ten shekels shall be ten shekels, and your mina shall be fifty shekels"; and although Borrois advanced proofs to show that this version should not be preferred over the Masoretic Text, this version is significant. It provides evidence that at the time of the translation, the mina consisted of 50 shekels.

The beka is mentioned twice in the Bible (Gen. 24:22; Ex. 38:26) and its value is explicitly determined as one-half a shekel. Its name is derived from the root *bqʿ*, "to break, to divide," and its basic meaning is "a part." According to the reckoning of a mina as 50 shekels, the Table: Weight and their Ratios 1 may be set up:

Table 7. Measures of Weight and Their Ratios (mina = 50 shekels)

	talent	mina	shekel	beka	gerah
talent	1				
mina	60	1			
shekel	3,000	50	1		
beka	6,000	100	2	1	
gerah	60,000	1,000	20	10	1

However, on the basis of Ezekiel 45:12 according to which the mina contains 60 shekels and on the assumption that Ezekiel divided the talent (*kikkar*) into 60 minas, the Table: Weight and their Ratios 2 may be set up.

Table 8. Measures of Weight and Their Ratios (mina=60 shekels)

	talent	mina	shekel	beka	gerah
talent	1				
mina	60	1			
shekel	3,600	60	1		
beka	7,200	120	2	1	
gerah	72,000	1,200	20	10	1

This table is arranged according to the Mesopotamian system and contains nothing from the Canaanite-Israelite system except the division of the shekel into 20 gerah instead of 24.

In addition to being divided into the beka and gerah, the shekel is also divided into a fourth and a third (I Sam. 9:8; Neh. 10:33). There is support for this division both inside and outside Palestine. From Assyrian documents found at Calah it is evident that the shekel was very often divided there into many more subunits, but there is no proof that this was so in Israel as well.

Also mentioned in the Bible is the *peres* (Dan. 5:25, 28), and C. Clermont-Ganneau has suggested that it is half a mina. This weight is mentioned also among bilingual weights (Akkadian-Aramaic) from the Persian period and its written form is פרש. The *peres* is also mentioned in the Mishnah (Pe'ah 8:5; Ḥul. 11:2) and its value there is half a *zuz*.

In establishing the value of the shekel there is an additional complication in that the Bible mentions at least three kinds of shekels: in Genesis 23:16, a shekel of silver "at the going merchant's rate [ʿ*over la-soḥer*]," which is similar to the Akkadian expression *ina manê ša tamkari*, "in the merchant's mina"; in Exodus 30:13, "shekel by the sanctuary weight [*ha-qodesh*]"; and in II Samuel 14:26, "shekels by the king's weight [*be-ʾeven ha-melekh*]," that is, shekels stamped by the royal treasury as proof that they are perfect. Also in the Elephantine papyri from the Persian period it is said "royal weight" (באבני המלכא or במתקלת מלכא). It cannot be determined whether these shekels were equivalent in value, but

on the basis of evidence from external sources, it appears that there were differences between them.

ARCHAEOLOGICAL FINDS. In excavations carried out in Palestine many weights have been uncovered – some with the weight marked on them, but most without any notation. The shape of the weights, for the most part, is semicircular (dome-shaped). There are also some cast metal weights that are rectangular and cube-shaped, and some that are oval or in the shape of animals. Most of the weights found in Palestine are from the end of the period of the monarchy (the seventh to sixth centuries B.C.E.).

Very few weights and inscriptions with the word shekel written explicitly have been found in strata from the Israelite period. A bronze weight in the shape of a turtle was found in the coastal plain; on its reverse side it bears the inscription (according to the reading of A. Reifenberg) פלג שקל, and on the front, פלג רבעית, and its weight is 2.63 gm. And in fact, a weight of this sort (one-quarter shekel) is mentioned in I Samuel 9:8. Another bronze weight from Samaria, also in the shape of a turtle, bears the inscription חמש ("five"), and this has been interpreted to mean five gerahs, that is one-quarter of a shekel, and its weight is 2.49 gm. Another weight from Samaria is marked on one side ל[ק]רבע ש and on the other רבע נצף, and its weight is 2.54 gm. (see below). At Tell Qasileh an ostracon was found with the following inscription engraved upon it: [ז]הב אפל לבית חרן and here too, B. Mazar interprets the letter *sin* to mean shekels. Two ostraca containing calculations in shekels were also found in Yavneh-Yam. Many weights found in excavations bear a special mark in the form of ≡ ש, with another sign next to it which in general designates the number of units. These weights have for some time been considered shekels. They were discovered for the most part at localities in the Kingdom of Judah, in the following places: Gibeon, Jerusalem, Ramat-Raḥel, Gezer, Tel Zechariah, Tell Jedideh, Lachish, En-Gedi, Tel Malḥatah, and Arad; and others in the coastal plain; Tel Jemmeh, Nebi Rubin, Yavneh-Yam, and Ashdod. Only one weight of this type is known from the area of Samaria, and it was discovered at Shechem. Many others of unknown provenance are in private collections.

Scholars have been greatly divided as to the interpretation of the sign x̱ which appears on the weights. Thompson thought that this sign was taken from the Egyptian *nb* ("gold") weight which weighs approximately 12 gm. On the basis of a bronze weight of 12.28 gm. which was discovered at Gezer and upon which is written the number two and next to it *lmlk*, Diringer and Borrois maintain that the purpose of this sign is to designate the royal shekel which was fixed at 11.3 gm.; and this was the accepted opinion among scholars in the past. Recently the debate was revived when R.B.Y. Scott suggested that the sign be interpreted as a schematic drawing symbolizing the word *ẓeror*, that is, a cloth bag, tied at the top, in which precious metals were wrapped. Y. Yadin, basing his opinion on these weights from Gezer and upon the image of a scarab found in the Elephantine Papyri upon which the word למלך, *lmlk*, also appears, maintains that this sign is merely a schematic drawing of the well-known royal scarab which is found on common *lmlk* seals. In his opinion, in every case where this sign is written, it serves as a recognized sign designating the word *lmlk*, that is, the official royal standard.

Alongside this sign is usually written an additional sign which all scholars interpret as a number which notes the quantity of royal shekels contained in each weight. By examining the average weight of all the weights of this kind which have been discovered up till now, it becomes evident that they were clearly divided into weights of one unit (11:3 gm.); two units (22.6 gm.); four units (45.5 gm.); eight units (91.2 gm.); 16 units (188.5 gm.), and 24 units (268.24 gm.). In line with this, Yadin assumes that the numerical signs are Hebrew and signify parallel units (that is, they designate the numbers 1, 2, 4, 8, etc.). Against this, Aharoni, following Scott, conjectures that these numbers are actually Egyptian-hieratic which were copied on weights of the Judahite kingdom and stand for the values 5, 10, 20, and 30. The contradiction between the division of the weights into units of 4, 8, 16, and 24 and the values of the Egyptian numbers he explains by saying that the basic weight, that of eight shekels, is identified with the Egyptian *dbn* which was chosen by Josiah for international trade. Since the *dbn* weight is divided into 10 *qdt*, it means that Judahite weights of 4, 8, 16, and 24 units are equivalent to 5, 10, 20, and 30 *qdt*. The hypothesis of Scott and Aharoni that the signs on the large units are Egyptian is reasonable, all the more so since much important evidence has been gathered concerning the use of hieratic numbers in Israel during this period (from an ostracon from Arad, among other sources). However, in spite of this, it is difficult to assume that the Egyptian system itself was adopted in Israel, since the basic unit in the shekel system – as Aharoni also notes – is a weight of eight shekels. This division, different from that practiced in Egypt (division by tenths) or Mesopotamia (division by sixths), and which is evidence of Phoenician-Israelite local distinctiveness, is the same phenomenon which was found in the biblical system of weights. Likewise, it is difficult to imagine that they used one system for weighing and actually meant a different system (an uncommon situation in the metrological systems of the Ancient Near East). Another suggestion which Aharoni himself raised, and then rejected, is more reasonable; it is that the Egyptian numbers were carved on the weights because of their simple form (it is difficult to carve complex numbers on small stone weights) without paying attention to their original values, and that the Egyptian number five was understood to be four in Israel. Support for this interpretation is found on an ostracon from Yavneh-Yamon which, according to the reading of J. Naveh, is inscribed "the weight of four [shekels of] silver" and next to it is the common sign for the unit of four shekels, which is to say that they did not read this number five and intend four, but rather also read the number as four.

Weights with Designations Discovered in Israel. Three other types of weights, also from the end of the Kingdom of Judah,

have been discovered in Israel and their names are inscribed on them in full: *nẓp, pym*, and *bqʿ*.

The word *nẓp* does not appear in the Bible and is known only from the inscriptions on these Hebrew weights, and also from Ugaritic. The word *nẓp* is explained on the basis of the Arabic *nisf*, "half." If this interpretation is accepted, the weight of the *nẓp* unit is half of 19.75 gm. since the average weight of the *nẓp* is 9.8 gm. This unit of weight is not known in Israel. In R. de Vaux's opinion, the *nẓp* is half the weight of the Ugaritic shekel, which is known as the "heavy shekel" and weighs from 18.7 to 23.4 gm. It is also possible that the *nẓp* does not belong at all to the metrological system based on the shekel but rather to a different and unknown system. At least one weight which is a subunit of the *nẓp* was found in Samaria. On it is written רבע נצף, "one quarter," and it weighs 2.54 gm. According to this, the whole *nẓp* weighs 10.16 gm. However, on the second side of the weight is written רבע ש[ק]ל, "one-quarter shekel," and some see this as additional proof that two standards existed side by side in Israel, and one weight could be at the same time one-half shekel according to one standard and a whole shekel according to the other. Seventeen *nẓp* weights have been discovered.

The *pim* is mentioned once in the Bible (I Sam. 13:21). *Pim* (*pym*) weights which were uncovered in excavations helped to clarify the obscure verse I Samuel 13:21, but not to explain the name. Several scholars tried, unsuccessfully, to explain it. Clermont-Ganneau suggested: *pi* (*shenayi*)*m* (according to Zech. 13:8), that is two portions, i.e., two-thirds. E.A. Speiser held that its source is from the Akkadian *šinipu*, that it means two-thirds (of a shekel), and that in Canaan they borrowed the last part of the word from Mesopotamia, interpreted it as a third, and made it dual. Diringer and Borrois also think that the *pim* is two-thirds of a standard shekel but that Speiser is correct that the source of the word is foreign and that it has no meaning in Hebrew. Twelve such weights have been discovered, and their average weight is 7.8 gm.

The beka is the one unit of weight mentioned in the Bible whose value has been determined. It is half a shekel (see above). However, this value does not correspond to the beka (*bqʿ*) weights found in excavations. In Israel, seven weights have been found with the name beka written on them. On some the name is written in full, and on some only the letter ב (*beth*) appears. Their average weight is 6.03 gm. more than the value of the half-shekel of 11.3 gm. The heaviest one is 6.65 gm. and the lightest 5.55 gm. Petrie believes that the beka is an extremely ancient unit of weight which was used in Egypt and has been discovered in pre-dynastic graves of the Amration period (the fourth millennium B.C.E.). In his opinion, the beka was the common weight used in Egypt for gold and its weight was 12.28–13.90 gm. If Petrie's opinion is accepted the Israel beka would be half the weight of the Egyptian weight which Petrie established as the Egyptian beka. Reifenberg publicized a coin from the Persian period bearing the inscription beka; its weight is 3.88 gm.

Weights Marked with Numbers. In addition to the aforementioned weights, some 20 weights marked with numbers (either letters or numerals) have been uncovered in excavations, and their weights range from 1.52 to 7.05 gm. Recently, Scott has gathered all the above-mentioned finds, sorted them into groups, and tried to determine their precise relationships to the perfect weights mentioned above. However, all attempts – those of Scott as well as his predecessors – to determine the exact value of these small weights, are very unreliable since there are no written sources about the detailed division of the Israelite shekel into small subunits.

A large number of weights have been discovered which contain no inscription, no number, and no sign whatsoever. Examination of these weights has not led, in general, to sufficient clarification. Among them, it is worth noting in particular two weights. One was found at Tell Beit Mirsim, weighing 4,565 gm., and in W.F. Albright's opinion has the value of eight minas of 50 shekels each (that is, the weight of 400 shekels). The second is a basalt stone weight from the area around Taanach which weighs 4,780 gm. This weight is decorated with the relief of a winged lion and in addition bears the personal name *Šmʿ*. In N. Avigad's opinion, the value of this weight is eight minas of 50 shekels, that is, 400 shekels, which, he believes, is a standard weight (compare "four hundred shekels of silver at the going merchant's rate," Gen. 23:16). Scott's explanation as noted above is that the shekel weights were established according to the Egyptian standard and interprets the unit of 400 shekels as 50 *dbn*. In his opinion, that is the reason for the special Israelite system of weights which contains only 50 shekels in a mina. However, we have already found this division at Canaanite Ugaritic and it is more plausible that the special Israelite system was based upon the ancient Canaanite system and not the Egyptian system.

[Eliezer Bashan (Sternberg)]

In the Talmud

After a long and complex development (cf. Jos., Ant., 14:105; 3:144), the talmudic system emerges. In it the Italian mina was equated with 100 *denarii* (TJ, Shek. 2:4, 46d; mina = *litra* = Roman *libra* originally; TJ, Ter. 10:7b), thus equaling 1⅟24 Roman pounds (Tanḥ. B., Ex. 109). However, the Talmud mentions yet another maneh of 40 shekels (160 *denarii*; Ḥul. 137b–138a), and there were also regional variations (Ḥul. 12b). The biblical gerah was identified with the current *me'ah* ("obol" = ⅙ drachma; Bek. 50a). The syncretist system was linked to the Tyrian standard and conveniently dovetailed with the monetary system. (See Table: Syncretist System in the Talmud.)

Besides the rough and ready measures, e.g., *komeẓ* ("three-fingers full"; Lev. 2:2), or *ḥofen* ("handful"; Ex. 9:8, etc.), a carefully graduated system, primarily of Mesopotamian origin, was used from earliest times both for dry and liquid measures. The relationships between the various denominations are amply attested, revealing the system. (See Table: Measures of Volume in the Talmud.)

Table 9. Syncretist System of Weights and Measures in the Talmud

	Kikkar ("talent")	mina	Italian mina	*tartimar* (=⅓)	*Unkiyyah* "uncia")	sela ("hetra-drachm")	Shekel ("½ biblical shekel")	*zuz* ("denar- ius")
Kikkar ("talent")	1	37	60	120	750	1,500	3,000	6,000
mina		1½	1⅗	3⅕	20	40	80	160
Italian mina			1	2	12½	25	50	100
tartimar (=⅓)				1	6¼	12½	25	50
Unkiyyah ("uncia")					1	2	4	8
sela ("hetra-drachm")						1	2	4
Shekel ("½ biblical shekel")							1	2
zuz ("denar-ius")								1

Table 10. Measures of Volume (Dry and Liquid) in the Talmud

A. Dry	B. Liquid	1 homer kor	2 *letekh* –	3 ephah bath	4 *se᾽ah* –	5 – hin	6 omer *ʿissaron*	7 *qav* –	8 – *log*
1 homer	kor	1	2	10	30	60	100	180	720

8 –	log								1

The table shows the influence of the sexagesimal system with a parallel decimal subdivision, while philological analysis shows the terms to be derived from Mesopotamian (e.g., 1AB, 4), Egyptian (3A, 5B), and Canaanite (2) sources. In rabbinic times the *log* was further subdivided as follows: 1 *log* = 2 *toman* = 4 *revi'it* = 6 *beiẓah ukl a* = 36 *mesurah* = 64 *kurtov*. According to *Eruvin* 83a there were at least three standards current (with a 30% variation; cf. Jos., Ant., 3:197, 321; 8:57; 9:86), but the basic standard was probably linked to the Roman one (Kelim 17:11), so that the *log* equaled the *sextarius* (Gr. *xestes*), giving a *se'ah* of 1½ *modii*-16 *sext.* = 1 *mod.*-(but cf. TJ,

Ter. 5:1, 43c). For cubic equivalents see TJ, *Pesaḥim* 10:1, 37c, where 1 *revi'it* = 7⅓ cu. *eẓba* ("digit"), while *Eruvin* 14b states that a *mikveh* containing 40 *se'ah* is 3 cu. *ammah*. However, in view of the differing standards of length (see below), it is difficult to reach any absolute value for these measures.

Alongside this developed system of exact measures, the rabbis introduced a series of "rule of thumb" measures, readily recognizable by all. Thus one was punishable for eating (most) forbidden foods only after having had an amount equal to a medium-sized olive (*ke-zayit*). The standard for (transgressing the stricture on) leavened bread on the Passover and for eating on the Day of Atonement was a (large) *kotevet* (a certain species of date), while that for carrying on the Sabbath was a *gerogeret* ("dried fig"). These measures bore no easy relationship to the established metrological system. They themselves were at most ready and approximate, and their relationship to the exact measures likewise. Thus the *ke-zayit* was probably about half a *beiẓah*, the *gerogeret* larger than the *ke-zayit* but smaller than the *kotevet*, and the *kotevet* larger than the *gerogeret* but still smaller than a *beiẓah*. In recent years the size of these measures has been the subject of considerable controversy.

Length. The most common metrical denominations are measures of length derived from parts of the human body: the finger-breadth (digit), handbreadth or palm, cubit (from *cubitum*, elbow) or length of the forearm. It is this latter, in Hebrew *ammah*, which appears to be the basic unit of the Palestinian system (Kelim 17:9–10). Normally the *ammah* consisted of handbreadths (*tefaḥ*, pl. *tefaḥim*); however, Ezekiel 40:5 and 43:13 suggest that there was also an *ammah* of seven *tefaḥim*. This seems to be paralleled by the Egyptian system, which had a "short" cubit of six handbreadths, and a "royal" one of seven. The Mishnah too tells of different *ammot* (Kelim, *ibid.*). There is considerable discussion as to the precise length of the *ammah* (or *ammot*), as different sources yield varying results, and much has been written on the subject. All that can be stated with real certainty are the relationships between the different units:

1 *ammah* = 3 *zeret* = 6 *tefaḥ* = 24 *eẓba*. The only multiple of the *ammah* mentioned in the Bible is the *kaneh* ("reed") of Ezekiel 40:5, which according to *Menaḥot* 97a equals six *ammot*. Longer measures were approximate, e.g., a bowshot (Gen. 27:16), day's journey (Gen. 30:36, etc.; see also Gen. 35:16). In the Greco-Roman period there was a syncretistic system for the longer measures, in which the *mil* (Roman mile, *milion* in Matt. 5:41) of 2000 *ammah* was reckoned at 7½ *stadia* (Heb.

ris, Yoma 6:4), giving a convenient division of the *parasang* (Heb. *parsah*) into 30 *stadia*.

Surface. In biblical times the concept of area was expressed by squaring the length, i.e., "x *ammot* squared" (*ravu'a*, passive participle from *arba*, "four"). In the Mishnah it is expressed in the form "x *ammot* by [*al*] × *ammot*." In antiquity two methods were used to measure land:

(a) a standard was based on the area plowed by a yoke of oxen in a given time (cf. Roman *jugum, jugerum*);

(ii) an area was judged by the amount of seed required to sow it (a method of Mesopotamian origin).

Both methods were known and practiced in biblical times, the former being alluded to in Isaiah 5:10, the latter in I Kings 18:32 (cf. Lev. 27:16). In the Mishnah the size of a field is uniformly calculated by the second method. The whole series of dry measures (see above) was employed in this system. The size of these surface measures may be in terms of *ammot* from certain talmudic equations. Thus from *Eruvin* 96a it emerges that a "*beit se'atayim*" (2 *se'ah* plot) equaled the area of the Tabernacle's court, 5,000 sq. *ammot*. Hence, a "*beit se'ah*" = 2,500 sq. *ammot* (BB 26b). The obscure *ma'anah* of I Samuel 14:14 is identified with a four *se'ah* plot (= *beit haperas*; Oho. 17:1), and said to be 10,000 sq. *ammot*. (See Table: Measures of Surface.)

The *ammah* varied between the approximate limits of 45.75 and 53.34 cm. (18 and 21 in.), but the upper limit may be even higher (21½ in., for example). The *beit se'ah*, which was 2,500 sq. *ammot* would therefore be equal to 1,143 – 1,333.5 sq. m. However, the variation in *se'ah* measures would affect this calculation.

The basic measure of capacity is the *log*:

1 *log midbarit* = 503.5 cc. = grm (= 30.7 cu. in.)

1 *log yerushal mit* = 699.4 cc. = grm (= 39.6 cu. in.)

1 *log sepphorit* = 777.4 cc. = grm (=47.4 cu. in.)

The basic weights were the *sela* = 224 grains and the mina (40 selas) = 8,960 grains. All other measures may be calculated from these, according to the ratios given. However, the resultant calculations will only have a "probability truth-value," as the range of variation grows in the higher multiples.

As measures (*shi'urim*) are of great halakhic importance, there were throughout the ages constant attempts to reevaluate them in current terms. There has thus grown up over the years a considerable body of halakhic material dealing with metrology, which affords much valuable information.

[Daniel Sperber]

Criminal Law. The biblical injunction, "You shall not have in your pouch alternate weights, larger and smaller; you shall not have in your house alternate measures, a larger and a smaller; you must have completely honest weights and completely honest measures" (Deut. 25:13–15) was interpreted not as prohibiting any fraud by means of false weights and measures (which is dealt with in Lev. 19:35–36), but as applying to the manufacture or possession of any weights or measures, including utensils (such as pots or pitchers), which might be used for weighing or measuring and cause false weighing or measuring (BB 89b; Maim. Yad, Genevah 7:3; Sh. Ar., ḤM 231:3). While the manufacture of false weights and measures may be punishable with *flogging, the mere possession thereof is not, the violation of a negative injunction being so punishable only where an act is committed, as distinguished from the omission to get rid of the prohibited utensils. In order effectively to enforce the prohibition, courts in talmudical times appointed market inspectors charged with the control of all weights and measures even in private houses (BB 89a). There are detailed provisions for the manner in and the materials with which weights and measures are to be manufactured or repaired so as to be and remain accurate (Maim. Yad, Genevah, 8:4–11; Sh. Ar., ḤM 231:4–11). It is said that the crime of false measures is graver than even those crimes (like incest) which are punishable with *karet* (*Divine Punishment); the latter can be expiated by repentance and flogging, whereas in the case of the former repentance is of no avail, since neither the damage caused or the persons to whom restitution has to be made can be ascertained (BB 88b and Rashi ad loc., Maim. Yad. Genevah 7:11).

[Haim Hermann Cohn]

The Approach in Jewish Law

The dominant approach in Jewish law to the subject of weights and measures is the insistence that any doubt be resolved by the merchant in favor of the customer. Where the price is established by weight according to a scale, the merchant compares the two sides of the scale – the weight as opposed to the merchandise. However, if it is difficult to be certain of the comparison, the merchant must make his estimation in favor of the customer. Where the custom was not to make such a

determination, the merchant must add an additional amount of merchandise for which he does not charge, and there is also a minimum amount that is required to be added. This law is derived from the verse in Deuteronomy 25:15: "A perfect and just weight…" and, as explicated in the Talmud, "'just' – [take] of yours and give him" (BB 88b; Sh. Ar., ḤM, 231:14). Due to the stringency of the requirements, the question arises as to whether imprecision in weights and measures may be pardoned. Tosefta BB 5:4 states: "…one sells to another one *log* [liquid measure or dry measure] and a half [*log*], a quarter [*log*], an eighth [*log*]: when he calculates the bill he may not say fill up this measure and say, sell me this (*kortov*) (1/64 portion) for the science of measures is not dependent on people, and it is God who has set his name upon them, because the verse ends with 'I am the Lord your God' [Lev 19:36]." Some commentators are of the opinion that agreeing to pardoning inexactitude is not effective, insofar as it may mislead people into thinking that this is the local custom, from which they will learn to cheat. Others are of the opinion that pardoning is effective, based on the Mishna in BB 7:2 (BB 103b), regarding one who sells a *bet kor* (area of land in which one can sew a particular amount of produce) and says to the buyer that the measure is "more or less." Even if he sold less or more, up to a certain percentage of the quantity a deviation of certain amount is permitted, and the transaction is valid (see Sh. Ar., ḤM 231:1 and *Kesef Kedoshim*; *ibid*; 209.1, Sh. Ar., ḤM 209:1; *Teḥumin* 3, p. 338).

The question arises today in the context of factories requesting a certain acceptance of imprecision on their part. The term for this is "scale tolerance." For example, a factory packages a line of products on a production line; each box or bag is stopped at a particular point on the line for a predetermined number of seconds, is filled with a predetermined amount from a container that is poured into it, is automatically closed, and continues on the line. The manufacturers claim that on occasion, unpredictably, the measurements in this process will be imprecise, as in the case where some of the product is spilled or the bag's progress is off schedule on the production line by a second more or less. They therefore demand that they not be checked on the basis of a single bag, but rather according to the average of a number of bags. The European Market has approved this arrangement – one which seems to require an act of pardoning imprecision in advance. If, on the other hand, we were to require the manufacturers to take into consideration the "determination" in favor of the consumer, they would raise the price of the product accordingly. It may be that an arrangement could be used whereby the labeling states that the package contains 98 to 102 tea bags, as in the case of the declaration of "more or less" cited above, or perhaps 98 to 103 tea bags, in order to fulfill the obligation of the determination in favor of the customer (see *Teḥumin* 3, *supra*).

WEIL, A. LEO (1858–1938), U.S. lawyer and civic reformer. Weil was born in Keysville, Charlotte County, Virginia. He practiced law in Bradford, Pennsylvania, from 1879 until he moved to Pittsburgh in 1888. There he organized the Voters' League of Pittsburgh and was its president for almost 30 years. The league's purpose was to fight corruption in public office and ensure honest elections. Weil believed that if leaders were honest, the ills of society could be cured without radical changes, maintaining that religious teachings and the laws of the land were sufficient to supply the maximum good. One Voters' League campaign resulted in 149 indictments, and led to the abolition of the city's councils (150 members) and the establishment of a new nine-member body in its place. An

investigation of the city's school system led to its reorganization and substantial improvement. Weil became known for his successes in these activities and was invited to help organize reforms in other states.

An active participant in Jewish life, Weil served on the board of Temple Rodef Shalom, Pittsburgh, and was its vice president. He was one of the incorporators of the American Jewish Committee and a member of the executive committee, as well as a trustee of the Jewish Publication Society of America. Weil was vice president of the National Municipal League, of the World Union for Progressive Judaism and of the Union of American Hebrew Congregations. He was on the executive committees of the Pennsylvania Civil Service Association and of the Federated Jewish Philanthropies of Pittsburgh.

WEIL, ANDRÉ (1906–1998), U.S. mathematician. Born in Paris, Weil was appointed professor at the Aligarh Muslim University in India at the age of 24. He returned to Europe to join the faculty of science at the University of Strasbourg in 1933. He was a lecturer at Haverford College and Swarthmore College in the U.S. from 1940 to 1942, and in 1945 joined the faculty of philosophy at the University of São Paolo in Brazil as professor of mathematics. He returned to the U.S. in 1947 to join the department of mathematics at the University of Chicago, and from 1958 was at the Institute of Advanced Studies in Princeton until he retired.

Weil contributed widely to many branches of mathematics, including the theory of numbers, algebraic geometry, and group theory. Among his books are *Foundations of Algebraic Geometry* (1946, 1962), *Introduction l'étude des variétés kaehlériennes* (1958), *Adeles and Algebraic Groups* (1961), and *Basic Number Theory* (1967). In 1979 Weil was awarded the Wolf Prize, and the following year the American Mathematical Society awarded him its Steele Prize. In 1994 he received the Kyoto Prize from the Inamori Foundation of Japan.

[Maurice Goldsmith]

WEIL, ERIC (1904–1977), German philosopher. Born in Hamburg, he worked for his doctorate under Ernst *Cassirer. In 1933 Weil immigrated to France and in 1945 was appointed Maître de Recherche at the Centre National de la Recherche Scientifique and professor at the École Pratique des Hautes Études of the Sorbonne. In 1956 he took up the post of professor of philosophy in Lille and in 1968 was appointed professor of philosophy at Nice. Weil represents a classical tradition in philosophy according to which man is a rational but finite being. Although considering that past philosophical systems form the main stages of the development of the human spirit, Weil, unlike Hegel, does not think that Reason realizes itself entirely in the historical process. Philosophy is confronted by an eternal task: to grasp violence and to come to terms with it. In application, philosophy is not an Olympian and harmonious activity, but a moment of peace and reflection between violent events. In politics there is no reasonable attitude other than the desire for success, and success can result only from a certain capacity for thinking. Philosophers can locate reason in political actions and show that pure violence can never be a permanent scheme of action. Politics is always involved with morality, which for Weil is the refusal of the individual to accept foreign values and external influences. Man lives in inner (intellectual) freedom, and he wants his legitimate wishes to be satisfied. Dissatisfaction – even if no more than a vague sentiment – introduces a dialectical element into society, causing a dangerous antagonism between man and man. So, like politics, morality too is exposed to violent eruptions, and humanity needs philosophy in order to understand the nature of real human satisfaction. The latter consists in leading a meaningful life and attaining true knowledge of an ever-present reality.

He wrote *Logique de la Philosophie* (1950), *Hegel et l'État* (1950), *Philosophie Politique* (1956), *Philosophie Morale* (1961), and *Problèmes Kantiens* (1963).

[Eugene Jacob Fleischmann]

WEIL, FRANK LEOPOLD (1894–1957), U.S. lawyer and communal leader. Weil founded the law firm of Weil, Gotshal and Manges in 1926. Weil led many Jewish and general community efforts in a voluntary capacity. Long active in scouting, he was a member of the national executive board of the Boy Scouts of America and chairman of the Jewish Committee on Scouting. He was president of the 92nd Street YM-YWHA, New York, 1932–40 and of the N.Y. Metropolitan Section of the National Jewish Welfare Board (JWB). From 1940 to 1950 he served as president of the National Jewish Welfare Board and in this capacity convened the first meeting which created the United Service Organizations (USO), becoming a vice president and later chairman of the President's Committee on Religion and Welfare in the Armed Forces. As president of the JWB during World War II, he succeeded in mobilizing U.S. Jewry for moral and religious support of the military on an unprecedented scale and received the Medal of Merit, the highest U.S. government civilian award.

Weil was also instrumental in initiating the historical study of JWB and the Jewish community center movement with a view to determining their postwar objectives. The significant recommendations of the JWB survey were adopted in 1948. During Weil's presidency, JWB undertook the sponsorship of the Jewish Book Council of America; the National Jewish Music Council; and, for several years, the American Jewish Historical Society. He was a founder and president of the World Federation of YMHAs, Jewish Community Centers, and of the National Social Welfare Assembly. In 1952 he was chairman of the National Citizens Committee for UN Day. A vice president of Temple Emanu-El, New York, he was elected chairman of the board of governors of Hebrew Union College-Jewish Institute of Religion, which established the Frank L. Weil Institute of Advanced Studies in Religion and the Humanities in his memory.

[Philip Goodman]

WEIL, GOTTHOLD (1882–1960), Orientalist. Born in Berlin, Weil began his academic career at the Berlin State Library in 1906, and in 1918 became director of its Oriental department, which he had founded. Teaching post-biblical Jewish history and literature at Berlin University from 1912, he was appointed professor in 1920. In 1931 he was appointed professor of Semitic languages at the University of Frankfurt, in succession to Josef *Horovitz. Weil was dismissed by the Nazis with the rest of his Jewish colleagues in 1934. From 1935 to 1946 he was head of the National and University Library in Jerusalem and also held the chair of Turkish studies at The Hebrew University (to 1952).

Weil's main field was Arabic studies, but he had wider Jewish interests as well and was on the board of various Jewish cultural institutions in Germany, and a governor of The Hebrew University. World War I directed his interest to Turkish studies. Tatar prisoners of war gave him the opportunity to conduct linguistic research, and he also published a *Grammatik der osmanischtuerkischen Sprache* (1917). His work in the field of Arab philology was concerned in the main with the history of Arab grammar (*Abul Barakat ibn al-Anbari, Die grammatischen Streitfragen der Basrer und Kufer*, 1913), and he also wrote about Arabic prosology (*Grundriss und System der altarabischen Metren*, 1958). In 1953 he published *Maimonides Responsum ueber die Lebensdauer* (text with German translation). On the occasion of his 70th birthday a *Festschrift* was issued by the Institute for Oriental Studies of The Hebrew University.

Goldschmidt, in: *Yad la-Koré*, 6 (1961), 172–3. **ADD. BIBLIOGRAPHY:** J.M. Landau, "Gotthold Eljakim Weil," in: *Die Welt des Islams*, 38/3 (1998), 278–85.

[Lothar Kopf]

WEIL, GUSTAV (1808–1889), Orientalist. Born in Sulzburg, Baden, to a rabbinical family, he was schooled at home and at Metz, and later studied at Heidelberg, where he began his work in Arabic which he continued in Paris. As a correspondent he went with the French forces to *Algeria (1830) and proceeded to *Cairo, where he spent over four years as French instructor at a medical school, devoting most of his time to enriching his Arabic and mastering Persian and Turkish. He spent some time at Constantinople. Upon his return to Heidelberg, he was employed as librarian, later as teacher, and, after two decades, was awarded a professorship. His extensive literary output attempted to present a general survey of Arab letters and history, often on the basis of manuscript material. It can be divided into (1) work on the *Koran and tradition, e.g., the first introduction to the Koran (*Historischkritische Einleitung*, etc., 1844) and a study tracing the rabbinic background of much of the biblical lore of the Muslims (*Biblische Legenden der Muselmaenner*, 1845; English tr. 1846); (2) translations (of the Arabian Nights; the biography of the Prophet by Ibn-Isḥāk); (3) history, especially *Geschichte der Chalifen* (5 vols. 1846–62); a shorter work was translated by S. Khuda Bukhsh as *History of the Islamic Peoples* (Calcutta, 1914).

[Moshe Perlmann]

WEIL, JACOB BEN JUDAH (d. before 1456), German rabbi and halakhic authority in the first half of 15th century. The name Weil was derived from the town of that name in the Neckar district. Weil's main teacher was Jacob *Moellin (the Maharil), who ordained him and appointed him rabbi of Nuremberg. Moellin granted him permission to establish a yeshivah there, but he refrained out of respect for Zalman Katz, who had previously been appointed to this office (Responsa Weil, no. 151). It appears, however, that from 1422 he served in both offices. Weil also refers to Zalman Ronkel of Mainz as "my teacher" and states that he studied in his yeshivah (*ibid.*). After Nuremberg he was in *Augsburg, then in *Bamberg for a short period, and from 1444 he was rabbi of *Erfurt. Scholars from various communities, including Israel *Isserlein, addressed their halakhic problems to him. Weil became renowned through his volume of responsa (Venice, 1523, frequently republished) which contains 193 responsa. They were copied during his lifetime and some are found among the responsa collections of other rabbis. Particularly well known is his *Hilkhot Sheḥitah u-Vedikah* ("laws of slaughtering and examination"), which was accepted as halakhic practice by the Ashkenazim and has been republished more than 70 times. These laws were first published in his responsa (Venice, 1549), and various scholars, among them Solomon *Luria (the Maharshal), added glosses, explanations, and novellae. The section *Bedikot* (Venice, 1552) was first published separately, but from the Mantua, 1556, edition, it was published together with the laws of slaughtering and given the title *Shehitot u-Vedikot*.

Apart from their halakhic importance, Weil's responsa are a valuable source for the social and religious history of German Jewry. They reflect the various problems that occupied the Jews of Germany during his era and, in particular, throw light on the internal organization of the communities. Particularly noteworthy is his responsum in connection with the rabbinic office. In his view the claim of presumptive right (*ḥazakah*) does not apply to the rabbinical office, and any scholar has the right to take up residence in a town where there is a rabbi whose authority has been accepted by the community and may act as rabbi in the same manner as the incumbent; "and we have also seen in our own generation several places where there are two rabbis, and we have never heard that one had a greater right than the other" (Responsum 151). In one responsum he complains about the decline in the honor of the rabbinate and attacks those rabbis "who declare their own importance [and] administer their office in a high-handed manner, treading upon the heads of ordinary Jews and imposing monetary fines upon them in order to promote their own honor." In answer to the query of a contemporary scholar who complained that certain litigants refused

to accept him as *dayyan* over them, he points out that nowadays "the generations have degenerated, understanding has declined, the *dayyanim* have deteriorated, and there is not a single scholar in the world who is an acknowledged expert." He attests of himself that "during my whole life l have never acted as judge over any one against his will, and always refrain with all my might from acting as a judge" (no. 146).

His *Hilkhot Shehitah u-Vedikah* was intended primarily for *shoḥatim*, to enable them to revise the laws. For this reason the sources are not given, nor does the work contain halakhic novellae, but merely gives the ruling in the briefest terms. He stresses the final halakhic ruling but also gives the local customs. Also appended to his Responsa is *Dinim ve-Halakhot*, in 71 sections, on the laws of divorce, **ḥaliẓah*, redemption of the firstborn, repentance, and the festivals, giving the halakhic ruling and relegating the sources to the end of his responsa. Two additional pamphlets appended to the responsa are: a collection of the novellae of the author of the *Aguddah* and the *Nimukkim* of *Menahem of Merseburg. Weil permitted the use of *pilpul merely as an aid to study, but in his practical halakhic rulings he relied only upon "clear proofs, clarified and complete, and elucidated from the plain meaning" (no. 164). Solomon Luria states that Weil was the chief of the **aḥaronim* and that all his successors relied upon his rulings. The *aḥaronim*, especially Moses *Isserles, attached great importance to his rulings, accepting them as binding. Of the many commentaries on his *Hilkhot Sheḥitah u-Vedikah*, the *Ohel Yisrael* (Wandsbek, 1733) of Israel of Copenhagen should be noted. It contains additions by later authorities and also includes questions "that should be asked of those coming to receive ordination," so that they can show their familiarity with the subject.

[Yehoshua Horowitz]

WEIL, JIŘI (1900–1959), Czech writer, journalist, and translator. Born in Praskolesy, Bohemia, Weil completed his studies of Slavonic philology and comparative literary history at Charles University in Prague in 1928. As a student, he became a member of the Communist Party of Czechoslovakia and began to work at the Soviet embassy. In 1933 he left for Moscow, where he translated Russian, Soviet, and Marxist literature (Gorky, *Pasternak, Lenin, Majakovsky). His critical letters about the conditions of life in the Soviet Union may have contributed to his sudden expulsion from the Soviet Communist Party and later from the Czechoslovak party. He was sent to the Soviet East (Alma-Ata and a labor camp in Central Asia) as a reporter and returned to Czechoslovakia in 1935. After the German occupation of Czechoslovakia, he lost his job and started to work in the Jewish Museum in Prague. When in 1942 he was summoned, as a Jew, for deportation to Theresienstadt, he feigned suicide in the Vltava River and lived in hiding until 1945. After the war he worked as an editor, as he was out of favor with the dogmatic Communists who took power in 1948. Some of his books could be published only in the 1960s and after 1989.

Weil belonged to the modernist literary group Devětsil, whose avant-garde members took inspiration from France and the Soviet Union. From 1933 he was a co-editor of the progressive magazine *Tvorba* ("Creation"). In 1924, Weil published his literary survey "Russian Revolutionary Literature," followed by "Czechs Are Building in the Land of the Five-Year Plans," 1937. His novel *Moskva – hranice* ("Moscow – the Border," 1937, 1991) was the first to tell the truth about the purges and trials under Stalin's rule. Both style and content were met with anger from the Communists, and Weil was criticized severely. He therefore did not dare to publish his next novel, "Wooden Spoon" (1977, in *samizdat*, 1992), which was set in the *Gulag*. His historical novel *Makanna, otec divů* ("Makanna, Father of Wonders," 1945, 1948) appeared after the war; he also published collected stories from the Protectorate, *Barvy* ("Colors," 1946); another series of stories, containing two with Jewish themes, *Vězeň chillonsk* ("Prisoner of Chillon," 1957), and "Elegy for 77,297 Victims," 1958, 1999. The fate of Czech Jews under the Nazis is described in Weil's two novels *Life with a Star* (1989, 1991, 1998, with a preface by Philip *Roth) and, posthumously, *Mendelssohn on the Roof* (1998). The first one is a Kafkaesque and existentialist account of human suffering in the form of a Jew in Nazi-occupied Prague attempting to hold on to his humanity. The second book is also dedicated to the Jewish tragedy of that time.

[Milos Pojar (2nd ed.)]

WEIL, JOSEPH (1897–1977), U.S. electrical engineer. Born in Baltimore, Weil received his B.A. from Johns Hopkins in 1918 and his M.S. from Pittsburgh in 1926. Weil joined the faculty at the University of Florida in 1921, and was professor and head of the department of electrical engineering from 1931, and dean of the college of engineering, 1937–63. He was a consulting engineer to municipalities, industrial organizations, radio stations, and U.S. government agencies; he was closely involved in defense training courses, civilian pilot training, and manpower commissions. Weil was the first, and for many years the only, Jewish faculty member at the University of Florida.

[Sharon Zrachya (2nd ed.)]

WEIL, NETHANEL BEN NAPHTALI ẒEVI (1687–1769), German rabbi. In his youth Weil studied at the yeshivah of

Abraham *Broda in Prague, and in Metz. Later, he served as head of a yeshivah in Prague. On the expulsion of the Jews from Bohemia in 1744, he was appointed rabbi of the Schwarzwald (Black Forest) district. In 1750 he became rabbi of Karlsruhe.

He is known mainly for his *Korban Netanel*, a comprehensive commentary on *Asher b. Jehiel's commentary to *Mo'ed* and *Nashim*. This was the first Hebrew book printed and issued in Karlsruhe (1755) and has been printed in all editions of the Talmud containing the *Rosh*. He also wrote *Netiv Ḥayyim* (Fuerth, 1779), annotations to the Shulḥan Arukh, *Orah Ḥayyim*, and *Torat Netanel*, responsa and sermons (2 vols., Fuerth 1795).

[Zvi Meir Rabinowitz]

WEIL, R. ADRIENNE (1903–?), French naval engineer, Adrienne Weil was born in Paris, where her father was professor of philosophy at the Sorbonne, and her mother a senior official in the Ministry of Education. From 1940 to 1944 she was at the Cavendish Laboratory, Cambridge University. From 1951 she was contractual engineer for arms and construction in the French Navy.

WEIL, SIMONE (1909–1943), French philosopher. Simone Weil was one of those rare thinkers whose life and thought were inseparable. Born into an upper-class Paris family (her brother was André *Weil), she lived most of her adult life in circumstances of physical deprivation. In 1934, wishing to share the experiences of the poor, she gave up teaching philosophy to become a factory worker. The fruit of this experience was *La Condition Ouvrière*, published posthumously in 1951. In 1936 she joined the Republicans in the Civil War in Spain, and in 1940, after the Nazi invasion, she worked as a farm laborer in southern France. In 1942, she left the U.S., where she had immigrated with her family, intending to return to France and join the Resistance. She never got further than England where, weakened by the hardships of her earlier life, she permitted herself to die of starvation. Most of Simone Weil's writings, published posthumously, consist of fragments from her notebooks, letters, articles, and memoranda, and can perhaps best be regarded as the testimony of a life of relentless dedication to the search for absolute truth and social justice. She was a mystic in the tradition of the 14th-century German theologians Meister Eckhart and St. John of the Cross, both of whom influenced her thought. Although she never actually converted to Catholicism, she experienced a mystical encounter with Jesus in 1938. Her main reason for not converting was that she found it impossible to accept the unchristian historical role of the Church. On the other hand, her attitude towards Judaism was one of total and blinding rejection. She considered it a racial, nationalistic, and cruel religion, and attributed all the evil in Christianity, such as the Inquisition and the killing of heretics, to its Jewish sources.

Published selections of her writings include: *Cahiers* (3 vols., 1951–56; *Notebooks*, 2 vols., 1956); *La pesanteur et la grâce* (1946; *Gravity and Grace*, 1952); *L'Enracinement* (1949; *The Need for Roots*, 1952); *Attente de Dieu* (1950; *Waiting on God*, 1951); and *Lettre à un religieux* (1951; *Letter to a Priest*, 1953).

[Myriam M. Malinovich]

WEILER, JACK D. (1904–1995), U.S. realtor and communal worker. Weiler, who grew up in New York City, held leadership positions in several Jewish organizations, particularly in the UJA since its inception in 1939. From 1953 he was a national chairman of the organization. He represented the UJA in this capacity on the Joint Distribution Committee and became the committee's vice chairman and director. Also on the UJAS Executive Committee, the organization's top policy-making body, he became chairman of trustees for the Greater New York UJA, a select group of New York community leaders. A real estate man, Weiler joined with his brother-in-law, Benjamin *Swig, in 1937 to form one of the most successful real estate firms in the country, with one office in San Francisco and another in New York. The partners bought and sold real estate in cities throughout the United States. He also served as chairman of the finance committee for Senator Herbert H. Lehman in 1950 and for New York City Mayor Robert Wagner in 1956. Weiler's holdings included 5 million square feet in New York City; 1.5 million in California; and a community of more than 2,000 homes on the southern ridge of Jerusalem.

Other organizations in which Weiler held leadership positions include the State of Israel Bond Organization, the Federation of Jewish Philanthropies, the New York Board of Rabbis, and the Jewish Theological Seminary of America. Some of the institutions that Weiler contributed to are the Jack D. Weiler Hospital of Yeshiva University's Albert Einstein College of Medicine in New York City; the chaplaincy of the New York Board of Rabbis; and, in Israel, the architecture department of Bezalel Academy of Art, and the Jack D. Weiler Fund for Research into Halakhic Philosophy at Bar-Ilan University.

WEILL, ALEXANDRE ABRAHAM (1811–1899), French author. Born in Alsace, Weill trained for the rabbinate in Frankfurt, where he also studied languages and literature. Abandoning rabbinics in 1836, he went to Paris where, armed with an introduction from Heinrich *Heine, he gained admittance to the principal literary salons. His friends included Balzac (whom he later criticized), Gérard de Nerval, Victor Hugo, and *Meyerbeer. Weill was a prolific author, publishing over 40 books and hundreds of articles in a variety of French and German journals. His subjects ranged from religious polemic and historical studies to linguistic speculation, mediocre poetry, and autobiography. His *Sittengemaelde aus dem elsaessischen Volksleben* (1847), tales of village life in Al-

sace, provides invaluable source material for the Jewish social historian.

His biographical studies include *Ludovic Boerne* (1878) and *Souvenirs intimes de Henri Heine* (1883). *La France Catholique* (1886) was his energetic reply to Edouard *Drumont's notorious antisemitic libel. Weill's kabbalism, later formulated in *Mystères de la Création* (1855), probably influenced the last book of Hugo's *Contemplations*. One of his many biblical publications maintained that the altar of the Tabernacle was in effect an electrical device. In 1890 he published an autobiography, *Introduction à mes mémoires*.

BIBLIOGRAPHY: M. Bloch, *Alexandre Weill, sa vie, ses oeuvres* (1905); R. Dreyfus, *Cahiers de la Quinzaine*, Série 9 (1908); D. Saurat, *Victor Hugo et les dieux du peuple* (1948), 18–32.

WEILL, KURT (1900–1950), composer. The son of a *ḥazzan*, Weill was born in Dessau and studied under the composer Busoni in Berlin. He at first wrote operas and symphonic and chamber music, but later turned to social satire in the theater. Weill formed an association with the German dramatist Bertolt Brecht, with whom he produced a "singspiel," *Aufstieg und Fall der Stadt Mahagonny* (1927–29), a savage satire on American life. In 1928 he composed, again with Brecht, *Die Dreigroschenoper*, a modern version of the English 18th-century ballad-opera *The Beggar's Opera*. This was an extraordinary success in Europe and the United States. After the Nazis seized power in Germany, Weill, accompanied by his wife, the actress Lotte Lenya, moved to Paris and then to London, finally settling in the U.S. in 1935. Unusually adaptable, Weill became acclimatized to American theatrical ways and produced a number of successful musical works, including the Jewish opera *The Eternal Road* (1937) based on the historical pageant *Der Weg der Verheissung* written by Franz Werfel; *Knickerbocker Holiday* (1938), *One Touch of Venus* (1943), and *Love Life* (1948). He also wrote a one-act American folk opera, *Down in the Valley* (1948), and the music for Ben *Hecht's pageant in honor of the State of Israel, *A Flag is Born* (1948). With Hindemith, Kurt Weill was instrumental in shaping the genre of *Gebrauchsmusik* (utilitarian music), which aimed at producing music accessible to the masses and capable of performance by non-professional groups. This did not, however, exclude the application of dissonant counterpoint and harmony. Weill made liberal use of modern dance rhythms, particularly jazz, often combining these modern resources with nostalgic and even sentimental ballad forms. Weill's music paved the way for many experiments of his younger German contemporaries, including B. Blacher, C. Orff, and H.W. Henze; it also impressed and inspired his American colleagues, such as Aaron *Copland. Today Weill is rightfully considered one of the most influential German composers of his generation.

[Nicolas Slonimsky / Yulia Kreinin (2nd ed.)]

WEILL, MICHEL AARON (1814–1889), French rabbi. Weill, who was born at Strasbourg, studied at the Ecole Rabbinique at Metz and at the Sorbonne in Paris. In 1845 he was appointed teacher and subsequently chief rabbi at Algiers, the first Frenchman to hold this office (1846–64). In 1876, after a period of temporary retirement, Weill became rabbi of Toul. He resigned in 1885 and settled in Paris to devote himself to writing.

His chief works are *Le Judaisme, ses dogmes et sa mission* (4 vols., 1866–69) and *La morale du Judaïsme* (2 vols., 1875–77). His son GEORGES WEILL (1865–1942) was a historian, author of *L'éveil des nationalités et le mouvement libéral 1815–1848* (1930, 1962).

WEILL, RAYMOND (1874–1950), French Egyptologist and historian. He directed excavations in Egypt, in the Sinai Peninsula, and, under the auspices of Baron Edmond de Rothschild, in Jerusalem on the hill of Ophel (1913–14; 1923–24). The latter expedition revealed a large area of the southern part of the city of David, including a great part of its eastern fortifications and a complex of tombs, which Weill thought to be those of the kings of Judah. These excavations are described in *La Cité de David* (2 vols., 1920–47). In 1920 he was appointed professor of Egyptology at the Ecole des Hautes Etudes in Paris, and in 1931 he became professor of Oriental history at the Sorbonne.

Among his numerous publications are: *Recueil des inscriptions égyptiennes du Sinai* (1904); *Les origines de l'Egypte pharaonique* (1908); *Les décrets royaux de l'ancien empire égyptien* (1912); *La fin du moyen empire égyptien* (1918); *L'installation des Israélites en Palestine* (1924); *Bases, méthodes et résultats de la chronologie égyptienne* (1926); *La Phénicie et l'Asie occidentale* (1939; 1949^2).

WEILL, SANFORD I. (1933–), U.S. banker, financier, and philanthropist. The son of Polish immigrants, Weill was born in Brooklyn, N.Y. When his parents could not find housing, they enrolled him at the Peekskill Military Academy. He attended Cornell University, where he was a member of the Air Force ROTC. Although he wanted to be a pilot, that was not to be. In 1955 he got his first job on Wall Street as a runner for Bear Stearns. While there he became friends with Arthur Carter, who was working at Lehman Brothers, and he became a licensed broker. In 1960, Carter, Roger Berlind, Peter Potoma, and Weill formed Carter, Berlind, Potoma & Weill. After the New York Stock Exchange brought disciplinary proceedings against Potoma, he left the firm. In 1968 the firm became Cogan, Berlind, Weill & Levitt (Marshall Cogan, Roger Berlind, who later became a Broadway producer, Arthur Levitt). Weill was chairman from 1965 to 1984, a period in which the firm completed over 15 acquisitions to become the country's

second largest securities brokerage firm. The company became CBWL-Hayden, Stone in 1970, Hayden Stone in 1972, Shearson Hayden Stone in 1974, when it merged with Shearson Hammill & Co., and Shearson Loeb Rhoades in 1979, when it merged with Loeb Rhoades Hornblower. With capital totaling $250 million, Shearson Loeb Rhoades trailed only Merrill Lynch as the securities brokerage industry's largest firm. In 1981 Weill sold the company to American Express for about $930 million in stock. He began serving as president of American Express in 1983 and as chairman and chief executive of its insurance subsidiary, Fireman's Fund Insurance, in 1984. Frustrated with the direction of the company, Weill quit American Express in 1985. The following year he went to Minneapolis to persuade Control Data to spin off its subsidiary, Commercial Credit, in a public offering worth $850 million. Weill took over as chief executive, investing $7 million of his own money. He also acquired its subsidiary, a property and casualty insurance concern called Gulf Insurance. By 1988 Weill and his team had turned Commercial Credit around and acquired the Primerica Corporation for $1.5 billion along with its holdings, the brokerage Smith Barney and the A.L. Williams insurance company, renamed Primerica Financial Services. Over the next two years Primerica absorbed the consumer lending operations of Barclays American/Financial. In 1992 alone, Primerica raised $625 million by selling nonstrategic assets. Weill then bought 27 percent of Travelers Insurance for $722 billion. He personally earned $67.6 million that year, most of it from stock options, making him the second highest-paid executive in the United States. The following year Weill realized an old dream. He regained control of Shearson (now Shearson Lehman), buying it back from American Express for $1.2 billion. By doing so, he acquired Shearson's 8,400 brokers and state-of-the-art back office, while leaving behind Shearson's litigation liability. In 1996 Weill added to his holdings, at a cost of $4 billion, the property and casualty operations of Aetna Life & Casualty, and the following year he acquired Salomon, the parent company of Salomon Brothers, for over $9 billion in stock. In April 1998 Travelers announced an agreement to undertake the $76 billion merger between Travelers and Citicorp, the parent company of Citibank, to create Citigroup. Citicorp was the world's largest supplier of credit cards, and Citibank was the second largest bank in the United States. At the beginning of the day the merger was announced, the two companies were valued at $70.6 billion. By the end of the day the value had jumped to $83.6 billion. In 2002 the company was rocked by a wave of scandals that followed the stock market downturn. Weill was replaced as chief executive of Citigroup in 2003. He served as chairman until 2006. Weill's career was also marked by extensive philanthropy. He endowed Cornell's medical school in 1998 with a $100 million pledge, and it was named the Joan and Sanford I. Weill Medical College and Graduate School of Medical Sciences. As chairman of Carnegie Hall he raised $60 million for renovation of its facilities, and one of the concert halls is named for him. He was the principal sponsor of the High School of Economics and Finance in New York and worked with the Disney Company to create, at the children's museum in Baltimore, Md., a game to teach youngsters about capitalism.

[Stewart Kampel (2nd ed.)]

WEILL, SHRAGA (1918–), Israeli artist. Weill was born in Nitra, Czechoslovakia. He first studied sculpture with a local sculptor, but continued at the Prague School of Art. His first graphic works were produced during World War II, part of which he spent in prison, having been convicted of membership in the underground movement. Weill immigrated to Israel in 1947 and settled in kibbutz Ha-Ogen. During 1949–1955 he worked as an illustrator, illustrating several books of poems and biblical stories, such as Lea *Goldberg's "The Love of Samson," "The Song of Songs," and the "Dead Sea Scrolls," with drawing depicting desert landscapes or local people. In 1954, he studied in Paris at the Ecole des Beaux-Arts. Weill worked in many artistic media – painting, drawing, illustration, mural painting, and reliefs. In 1965, he illustrated *Kohelet* (the Book of Ecclesiastes) with more abstract stylization, but a continuity of his earlier style is still noticeable. He was commissioned to prepare several large works for public buildings, including metal reliefs for the doors of the main entrance to the Knesset building in Jerusalem (1966), in which he used popular symbols and motifs, diffusing them in an abstract composition with biblical and Jewish subjects; a relief for the Hilton Hotel, Tel Aviv; one for the Wolfson House at the Weizmann Institute, Reḥovot; and another for the Israel Pavilion at "Expo 67," Montreal, Canada. His works are represented in the Israel Museum, Jerusalem, the Nelson-Atkins Gallery of Art, Kansas City, Mo.; the William Hayes Fogg Art Museum, Harvard University; and Los Angeles County Museum.

[Judith Spitzer]

WEIN, GEORGE (1925–), U.S. pianist, jazz festival organizer, record label founder and owner, entrepreneur. George Wein is nothing if not a realist. When he realized that despite his family pedigree (his father was a prosperous doctor in Newton, Mass., who also played piano) he was more drawn to music than to grad school, he dropped out of Harvard to play jazz wherever he could in the Boston area. When he realized that, as he himself has said, he was not a great musician, merely a highly professional one despite training with Margaret Chaloff and Teddy Wilson, he started a Boston jazz club, Storyville, which quickly became a mecca for music both old and new. Wein was adept at finding and filling gaps in the music community; his most famous invention, the Newport Jazz Festival, first staged in 1954, was the first regular outdoor jazz festival in the world. When Newport became a less convivial venue in the 1970s, he moved it to New York without hesitation (although a small version has continued in Newport throughout). His programming has always been an inventive balance between the commercial and artistic, mixing every possible genre of jazz and related musical crossovers. As Wein has said, a jazz festival should offer "a broad spectrum of

what jazz is in any given year." Wein also pioneered the concept of corporate sponsor association with music events, putting sponsors' names on his festivals long before the practice became the norm. Among his many honors it should be noted that he was both a member of the Legion d'Honneur in recognition of his creation of the contemporary jazz festival, and a recipient of a Jazz Masters award from the National Endowment for the Arts. This is only appropriate for someone who single-handedly remade the business end of jazz. "Not many people can say they changed the world and make it stick," remarked Gene Santoro in *Nation*. "Without Wein everything from Woodstock to Jazz at Lincoln Center might have happened differently – if it happened at all."

Hentoff, "George Wein, a Life in and for Jazz," in: *Jazz Times*, at: www.jazztimes.com; F. Jung, "A Fireside Chat With George Wein," in: *All About Jazz*, at: www.allaboutjazz.com.

[George Robinson (2nd ed.)]

WEINBAUM, MARK EFIMOVICH (**Veinbaum**, 1890–1973), U.S. journalist. Born in Proskurov, Ukraine, Weinbaum went to the U.S. in 1913. He was associated with several Russian-language publications, joining the staff of *Russkoye Slovo* in 1914, and later founding his own journal *Russkiy Golos* (1917–20). In 1925 he became editor and co-owner of the influential *Novoye Russkoye Slovo*. From 1948 he was director and president of the Fund for the Relief of Russian Writers and Scientists in Exile.

WEINBERG, GLADYS DAVIDSON (1909–2002), U.S. archaeologist and daughter of Hebrew literary scholar Israel *Davidson and Carrie Dreyfuss Davidson, editor of *Outlook* magazine of the United Synagogue of America's Women's League. Weinberg was raised in New York City and received her B.A. from New York University in 1930 and her Ph.D. from Johns Hopkins in 1935 for a dissertation on the excavations at Corinth. In 1931, she joined the Johns Hopkins University expedition to Olynthus and continued her research in Greece from 1932 to 1939 as a Fellow of the American School of Classical Studies at Athens, and then as a member of the American School Excavations at Corinth. From 1940 to 1943, she worked as assistant curator of ancient art at the Princeton Art Museum. After marrying fellow archaeologist Saul Weinberg, she worked as translator and librarian in the Foreign Service Auxiliary of the U.S. State Department in Istanbul and Athens (1943–45), and then as librarian of the American School of Classical Studies in Athens (1946–48). Serving as editor of the magazine *Archaeology* (1952–67), Gladys Weinberg conducted excavations searching for ancient glass factories in the eastern Mediterranean, becoming a leading authority on glassmaking technology in ancient Greece, Crete, and Israel. Cofounder of the Museum of Art and Archaeology at the University of Missouri-Columbia, after 1962 she served as its curator of ancient art, then as assistant director and research fellow; she also founded and edited the museum's annual, *Muse*, from 1966–77.

In addition to publishing numerous articles, Weinberg coauthored and/or edited several important archaeological publications, including *Small Finds from the Pnyx*, I (1943); *Corinth: The Minor Objects* (1952); *The Antikythera Wreck Reconsidered* (1965); *Excavations at Jalame, Site of a Glass Factory in Late Roman Palestine* (1988); and *Selected Glass Vessels in Ancient Greece* (1992). She was made an honorary life member of the American Association of University Women and the Archaeological Institute of America. In 1985, Gladys Davidson Weinberg, together with her husband Saul Weinberg, received the Gold Medal for Distinguished Archaeological Achievement from the Archaeological Institute of America. The following year, she became the recipient of the Percia Schimmel Award for Archaeological Exploration in Biblical Lands from the Israel Museum. The Saul and Gladys Weinberg Papers can be found in the archives of the American School of Classical Studies at Athens.

[Harriet Pass Freidenreich (2nd ed.)]

WEINBERG, HARRY (1908–1990), U.S. philanthropist. Born in Sambur, Galicia, Weinberg immigrated to America at the age of four. He grew up in Baltimore in absolute poverty but, by the age of 40, he was a millionaire and, by the time he was 50, he was a billionaire. He lived in Hawaii for the last 20 years of his life where, for a time, he was the largest individual landowner in the state.

With all his money, Weinberg never indulged himself. In the 1950s, after purchasing the Scranton, Pennsylvania, bus lines, he lived in a rented, second-floor apartment, even though he could have bought the entire block the house stood on.

Weinberg was known for working seven days a week, and his main interest appeared to be in acquiring as much as he could. His chief hobby was charity. In the late 1930s, he pledged support from his then meager assets to enable many German Jews to reach safe haven in America. When his wealth had increased, he gave annual grants to yeshivot and Orthodox synagogues in Baltimore, even though he was not Orthodox. He donated $3 million to the Honolulu congregation for its building and an endowment fund. He aided the Associated Jewish Community Federation of Baltimore in many ways. He also gave funds to many non-Jewish institutions.

He established two foundations. The first, the Harry and Jeanette Weinberg Foundation established in 1959, had assets at his death of almost $1 billion and was the 11th largest private foundation in the U.S. By 2005 it was still one of the largest such institutions in the U.S., with assets of approxi-

mately $2 billion. The other foundation, the Harry Weinberg Foundation, was worth $90 million and was devoted solely to the benefit of the Associated Jewish Community Federation in Baltimore.

The larger foundation disburses $100 million annually. Its charter stipulates that 25% of its disbursements go to organizations that primarily benefit Jews and 25% to organizations that primarily benefit non-Jews. The remaining 50% goes to any groups – Jewish or non-Jewish – deemed worthy by the foundation's trustees. There are no geographical limitations on disbursements, and it was intended that both Israel's and Baltimore's homeless would benefit. It has expanded to include Hawaii, northeastern Pennsylvania, New York, and the former Soviet Union, providing grants for such needs as food, shelter, health, and socialization, and to enhance the individual's ability to meet those needs for himself.

[David Geffen / Ruth Beloff (2nd ed.)]

WEINBERG, JACOB (1879–1956), composer and pianist. Weinberg taught in his native Odessa from 1915 to 1921 and emigrated to Ereẓ Israel in 1922. He left for the United States in 1926.

His works include the opera *The Pioneers* (Philadelphia, 1926; *He-Ḥalutz* 1932), one of the first operas based on life in Ereẓ Israel; music for the Sabbath morning service, *Shabbat ba-Areẓ* (1939), an experiment in the use of Palestinian folk melodies in modern style in the synagogue; and *Tefillot le-Shabbat* ("Prayers for the Sabbath"). He also wrote oratorios, *Isaiah* (1953), and *The Life of Moses* (1955); music for texts from the Dead Sea Scrolls, and *The Gettysburg Address* (1954).

BIBLIOGRAPHY: L. Appleton (ed.), *Four American Jewish Composers – Their Life and Work: Gershon Ephros, Solomon Rosowsky, Heinrich Schalit, Jacob Weinberg* (1962–63), 25–33, includes bibliography; Sendrey, Music, index; Baker, Biog Dict s.v.

[Edith Gerson-Kiwi]

WEINBERG, JEHIEL JACOB (1885–1966), talmudic authority, thinker, and teacher. Weinberg studied in the yeshivot of Mir and Slobodka. In 1907 he was appointed rabbi in his native Pilwishki (in Lithuania). While there, he lectured to a group of advanced Talmud students and contributed articles to the periodical *Yagdil Torah*. With the outbreak of World War I, Weinberg went to Germany and studied at the University of Giessen, where he was granted his doctorate for his thesis on the masorah. He was appointed rabbi of the Charlottenburg district of Berlin and in 1924 began to lecture in Talmud and *halakhah* at the *Rabbiner-Seminar Fuer Das Orthodoxe Judentum, of which he later became rector. In his lectures and essays, Weinberg introduced German Orthodoxy to the viewpoints of the eastern European yeshivot. Following the closing of the Rabbiner-Seminar by the Nazis, he returned to eastern Europe and was later interned in various concentration camps. After the war, broken in health, he settled in Montreux, Switzerland, from where he exercised considerable influence, primarily through his writing. A profound talmudic scholar, at home in the critical-historical approach of modern scholarship, well read in general literature, and familiar with current problems, he educated a generation of intellectuals who became rabbis and communal leaders. He maintained close relations with the leading talmudists of his time and was held in respect by European scholars, becoming a link between eastern and western Jewry.

Weinberg's most important work is his responsa *Seridei Esh* (1961–69) in four volumes, the third and fourth volume appearing posthumously. Among the practical problems discussed are whether animals may be electrically stunned before *sheḥitah*, whether it is permitted to have a bat mitzvah ceremony for girls corresponding with the boys' bar mitzvah, and whether Jews may lecture on Jewish law to gentiles. In the course of his responsa, which reflect his independent and incisive reasoning, Weinberg elucidates many talmudic themes. He was considered an authoritative halakhist, and problems were addressed to him from all parts of the world. His essays (published in *Li-Ferakim*, 1936, and *Das Volk der Religion*, 1949) reveal not only his own originality, but the profound influence upon him of the ideas of Israel *Lipkin (Salanter) and Samson Raphael *Hirsch. His talmudic genius is apparent in *Meḥkarim ba-Talmud* (1937–38). Weinberg was also a frequent contributor to rabbinic periodicals. He died in Montreux and was buried in Jerusalem.

[Mordechai Hacohen]

WEINBERG, SAUL S. (1911–1992), U.S. educator and archaeologist. Born in Chicago, Weinberg received an M.S. in architectural history from the University of Illinois in 1933 and a Ph.D. from Johns Hopkins in 1935. He spent much time in Greece between 1936 and 1948. In 1948 he began his academic career at the University of Missouri and was appointed professor of classical archaeology in 1956. In 1957 he and his wife Gladys founded the Museum of Art and Archaeology at the University of Missouri, and in 1961 he became its director. Weinberg distinguished himself as a teacher, excavator, scholar, and museologist. He participated in or directed excavations in Greece (at Corinth and Elateia), Cyprus (at Kourion and Episkopi), Crete (at Tarrha), and Israel (at Tel Anafa and Shamir). In 1969 he became chief curator of the Biblical and Archaeological Department of the Israel Museum and also taught prehistory at The Hebrew University. In 1975 he was made a fellow of the American Academy of Arts and Sciences. In 1985 he and Gladys received the Gold Medal of the American Institute of Archaeology, and in 1986 they received the Percie Schimmel Award of the Israel Museum, Jerusalem, for archaeological exploration in Bible lands.

In addition to numerous articles, Weinberg published two volumes of the American School of Classical Studies at Athens publications, *Geometric and Orientalizing Pottery* (1943) and *The Southeast Building, The Twin Basilica, The Mosaic House* (1960), and also published *The Stone Age in the Aegean* (Cambridge Ancient History, 1 (1965²), ch. 10). He edited *The Aegean and the Near East: Studies Presented to Hetty Goldman*… (1956).

Gladys Davidson Weinberg (1909–2002), also an archaeologist, was one of the foremost authorities on ancient and medieval glass. She specialized in ancient miniature art. She was the editor of *Archaeology* magazine from 1952 to 1967 and curator of Ancient Art of the Museum of Art and Archaeology at the University of Missouri from 1962 to 1973. She served as assistant director of the museum from 1973 to 1977, after which she was a research fellow. She was made an honorary life member of the Archaeological Institute of America. Her books include *Small Objects from Pnyx* (with Dorothy Burr Thompson, 1942); *Corinth: The Minor Objects* (1952); *Excavations at Jalame, Site of a Glass Factory in Late Roman Palestine* (1988); and *Selected Glass Vessels in the National Museum, Athens, Greece* (1992).

[Penuel P. Kahane / Ruth Beloff (2nd ed.)]

WEINBERG, SIDNEY J. (1891–1969), U.S. investment banker. Weinberg was born in New York City and at the age of 16 entered the Wall Street investment banking house of Goldman, Sachs & Co. After serving in the navy during World War I, Weinberg rejoined Goldman, Sachs. He subsequently bought a seat on the New York Stock Exchange (1925) and became a firm partner (1927). Weinberg's reputation as a corporate finance expert was such that he once sat simultaneously on the boards of directors of 31 companies. In 1956 Weinberg supervised the $650 million sale of Ford Motor Company stock, then the greatest such undertaking in business history. A Roosevelt supporter from 1932, he was offered, but declined, the post of ambassador to the U.S.S.R. in 1936. In 1933 he founded the Business Council, a forum for presenting the business view on the state of the nation and economy to Washington. He served as assistant director of the War Production Board during World War II, special assistant in the Office of Defense Mobilization during the Korean War, and as unofficial financial and economic advisor to U.S. presidents from Roosevelt through Kennedy.

WEINBERG, STEVEN (1933–), U.S. physicist and Nobel Laureate in physics. Born in New York, Weinberg graduated A.B. from Cornell University (1954) and studied at Copenhagen Institute for Theoretical Physics before receiving his Ph.D. in physics from Princeton University (1957) under the direction of Sam Treiman. After appointments at Columbia University (1957–59) and the Lawrence Radiation Laboratory, Livermore, California (1959–60), he was successively professor of physics at the University of California at Berkeley (1959–69) and at the Massachusetts Institute of Technology (1969–73). He was Higgins Professor of Physics at Harvard University and Senior Scientist at the Smithsonian Astrophysical Observatory (1973–83) before moving to the University of Texas at Austin as Jack S. Josey – Welch Foundation Professor, Regental Professor of Science, and founding director of the Theory Group in the College of Natural Sciences. His research concerns the interactions between strong electromagnetic force and the weak forces which allow beta decays of the nucleus, and hence radioactivity. Neutrinos and, to a lesser extent, electrons account for these interactions. Weinberg's theoretical concept of these processes has been largely validated experimentally. This field has fundamental implications for understanding the formation of complex inorganic and biological molecules from elements formed in the evolution of the universe, with the ultimate objective of explaining the physical basis of matter throughout the universe. He was awarded the Nobel Prize (1979) jointly with Abdus Salam and Sheldon Glashow. His many honors include membership in the U.S. Academy of Sciences (1972), the JR Oppenheimer Prize (1973), foreign membership in the Royal Society of London (1982), the U.S. National Medal of Science (1991), and the Benjamin Franklin Medal of the American Philosophical Society (2004). He was visiting professor at the Weizmann Institute (1985). Among his many national and international commitments to scientific education and planning, he was director of the Jerusalem Winter School of Theoretical Physics from 1983. Weinberg was also active in teaching and writing on the social and philosophical implications of modern science. He served as consultant for the U.S. Arms Control and Disarmament Agency. His books for general readers include *The First Three Minutes: a Modern View of the Origin of the Universe* (1977), *Elementary Particles and the Laws of Physics* (with R.P. Feynman) (1987), *Dreams of a Final Theory* (1993), *Facing Up – Science and Its Cultural Adversaries* (2001), and *Glory and Terror – the Growing Nuclear Danger* (2004). His contributions to the field of scientific writing have been recognized by his receipt of the American Institute of Physics and U.S. Steel Foundation Science Writing Award (1977) and the Lewis Thomas Prize honoring the scientist as poet (1999).

[Michael Denman (2nd ed.)]

WEINBERG, ẒEVI ZEBULUN (1883–1971), Hebrew author. Born in Praga, near Warsaw, he became an instructor in Jewish subjects in Augustov, Suvalki, and Warsaw. In Warsaw, he established a Hebrew high school and was among the founders of the Polish Association of Hebrew Authors and Journalists, which he headed for a short time. In 1934 he emigrated to Ereẓ Israel, where he taught at the Tel Mond School.

His first story, *Nissayon* ("Test"), was published in *Ha-Zeman* (1905); subsequent stories appeared in various Hebrew periodicals. He served as an editor of the monthlies *Kolot* (1924) and *Reshit* (1933). While his early stories realistically describe Jewish life in Poland, those of his post-migration period relate the Israel experience. His books are *Bayit u-Reḥov* (1931);

Bi-Derakhim Afelot (1942); *Meḥizot* (1943); *Asher Avar* (3 vols., 1950–56); *Poh ve-Sham* (1954); *Adam be-Oholo* (1955).

BIBLIOGRAPHY: A. Ben-Or, *Toledot Ha-Sifrut ha-Ivrit ha-Ḥadashah*, 3 (1946), 244–51; Keshet, in: *Moznayim*, 33 (1960), 35–40.

[Jerucham Tolkes]

WEINBERGER, JAROMIR (1896–1967), composer. Born in Prague, Weinberger studied at the Prague Conservatory and with Max Reger in Leipzig. In 1922 he visited the U.S., and on his return to Europe he taught in various cities, but his center was in Prague. In 1937 he emigrated to the U.S., settling in St. Petersburg, Fla. Although best known for his operas, Weinberger also wrote orchestral, choral, and instrumental works. His early compositions were in the style of the French impressionists, but later works were inspired by Czech folk music and the school of Dvorak and Smetana. His picturesque folk-opera *Švanda dudák* ("Schwanda the Bagpiper," 1927), written in the tradition of Smetana, won Weinberger immediate popularity, and was translated into 17 languages and performed throughout Europe and the U.S. The opera's "Polka and Fugue" is a concert staple.

Other operas are *Lidé z Pokerflatu* ("The Outcasts of Poker Flat," after Bret Harte, 1932) and *Wallenstein* (1937), a lyric tragedy after Schiller. After leaving Europe, Weinberger became deeply influenced by American culture and completely changed his style. Among his later works are *Variations and Fugue on Under the Spreading Chestnut Tree* (1939), *Lincoln Symphony* (1941), *Ecclesiastes*, for soprano, baritone, mixed chorus, and organ (1945), *Prelude and Fugue on Dixie*, and *Legend of Sleepy Hollow.* Some of his music on Jewish subjects is still unpublished.

WEINBERGER, MOSHE (1854–1940), rabbi. Born in Hungary, he studied with Samuel Ehrenfeld, Elazar Loew, Moses Sofer, and Meir Perles and immigrated to the United States in 1880 for reasons unknown. Fervently Orthodox, deeply learned, and highly unsuccessful, he was in the wrong place at the wrong time, or he was the wrong man for his place and his time. A sense of his experience in the United States can be found in his book written in Hebrew, not Yiddish, on Jews and Judaism in New York (1887), in which he bemoans Jewish life in New York City and criticizes its materialism, its impiety, the low level of Jewish learning and Jewish life, and the terrible standards of *kashrut*. "Great cantors, but empty synagogues" is the way he characterized Jewish life. His message to those who had not yet come to the United States was simple: Don't! It was not a happy report, but it did not stem the tide of immigration. Jonathan Sarna describes his book as the best "single source for Orthodox Jewish life among early East European immigrants." It is a non-romantic portrait. The heroes resist and do not embrace Americanization.

He then became rabbi in Scranton, Pennsylvania, in 1890 and moved on to Philadelphia three years later, and his career was on the upswing. He then returned to New York to be rabbi of the Beth Hamidrash Hagadol, Anshei Ungarn (Hungary). He attempted to organize a Yeshivat Or-Hayyim but, in the end, could not open the school. His experience with his congregation was no better. His congregation was appreciative neither of his learning nor of his educational interests. He hung on but was not supported adequately, so he had to earn additional money elsewhere. In 1906 there was violence directed at him toward the end of Passover and the police were called in to settle the matter. He resigned, entered the *matzah* business and wrote an open letter to his congregation.

He wrote *Kuntres Halakhah le-Moshe* (1884), *Rosh Divrei Moshe* (1895), *Ho'il Moshe* (1895), *Halakhah le-Moshe* (1902); *Divrei Shalom ve-Emet* (1908), and *Dorosh Darash Moshe* (1914).

Sarna, *People Walk on Their Heads, Moses Weinberg's Jews and Judaism in New York* (1982); M.D. Sherman, *Orthodox Judaism in America: A Biographical Dictionary and Sourcebook* (1996); S.Z. Leiman "Yeshivat Or-Hayyim: The First Talmudical Academy in America?" in: *Tradition,* 25:2 (Winter 1990).

[Michael Berenbaum (2nd ed.)]

WEINER, ANTHONY (1964–), U.S. congressman. Born in Brooklyn, New York, Weiner attended Brooklyn Tech High School, then earned his bachelor's degree from the State University of New York at Plattsburgh in 1985. Following graduation, he relocated to Washington, D.C., to work for U.S. congressman Charles *Schumer, serving in various positions, including budget director, press assistant, and foreign affairs assistant. Weiner returned to Brooklyn as Schumer's district office liaison and later became his chief advisor.

In 1991, following a New York City charter revision that created new City Council districts, Weiner ran in the newly created Forty-Eighth District. He was elected, becoming at 27 the youngest person ever elected to the New York City Council. Weiner served on the City Council until 1998, winning reelection by large margins and earning a reputation as a gifted speaker and a leading consumer advocate. He chaired the Subcommittee on Crime in Public Housing.

In 1998 Charles Schumer vacated his seat in Congress to run for the U.S. Senate, and he endorsed Weiner's campaign to fill the Congressional seat. After winning the hotly contested Democratic primary, Weiner easily won election over his Republican opponent, Louis Telano. Weiner has since served as the representative of the Ninth District of New York, winning three successive reelections.

Weiner serves on Congress's Judiciary Committee, where his legislative efforts have included an increase in funding for DNA testing to solve crimes, as well as measures to protect women from sexual predators. He was a sponsor of the "COPS" program to increase police presence on city streets nationwide.

Following the September 11, 2001, terrorist attacks on New York and Washington, D.C., Weiner was appointed to the Homeland Security Task Force, the only Task Force member from New York. He worked to pass legislation that would increase the flow of information between state and federal authorities, and to overhaul building collapse investigations. In 2004, following conflicting statements from the Department of Justice, the Federal Bureau of Investigation, and the Department of Homeland Security regarding the likelihood of an impending al-Qaeda attack, Weiner called on President Bush to clarify the chain of command, stating that the conflicting statements suggested "an intelligence community in disarray."

In 2005 Weiner ran for the Democratic nomination for mayor of New York City, coming in second to Fernando Ferrer. When it initially appeared that the results might force a runoff election, Weiner withdrew and endorsed Ferrer, purportedly at the urging of high-ranking Democrats, including Schumer. Though absentee ballots in fact placed Ferrer's results over the required 40 percent, Weiner's withdrawal was seen as a politically savvy move that could serve him well in the next mayoral race.

[Dorothy Bauhoff (2nd ed.)]

WEINER, LAZAR (1897–1982), composer and conductor. Born at Cherkassy, near Kiev, Weiner immigrated to the United States at the age of 17. He settled in New York, where he conducted choral societies and the Mendelssohn Symphony Orchestra of Brooklyn. Weiner was also conductor at the Central Synagogue, New York City, on the Message of Israel radio programs, and of a YMHA chorus. From 1952 he taught at the Hebrew Union School of Education and Sacred Music. His compositions include the cantatas *Legend of Toil* (1933), *Fight for Freedom* (1943), and *To Thee, America* (1944), several Friday evening services, a Saturday morning service, ballets on Jewish subjects, and choral arrangements of Jewish folk songs. His son, YEHUDI (1921–), was also known as a composer. Weiner's musical score to a Yiddish play, *Generations of Green Fields,* played by the Folksbiene, was produced in 1974 and was widely acclaimed.

WEINER, LEO (1885–1960), composer and teacher. Born in Budapest, Weiner was professor at the Budapest Academy from 1908 to 1949, and gained a reputation as a teacher. As a composer, Weiner was a moderate modernist of a stature recognized beyond the borders of his country. His music, written in a Hungarian idiom, has a light and vivacious touch and shows the influence of both the French and German schools. Weiner wrote orchestral works, chamber music, piano pieces, incidental music, and music for children. He also published several books on music theory.

WEINER, RICHARD (1884–1937), Czech poet, author, and journalist. Weiner was born in Písek, Bohemia. Although for many years Paris correspondent of the leading Czechoslovak newspaper *Lidové Noviny*, Weiner was essentially a poet. His books of verse, *Pták* ("The Bird", 1913), *Usměvavé odříkání* ("Smiling Abandon," 1914), *Mnoho nocí* ("Many Nights," 1928), *Zátiší s kulichem, herbářem a kostkami* ("Still Life with Owl, Herbarium and Dice," 1929), and *Mezopotámie* (1930, 1965), made an original, substantially Jewish contribution to modern Czech poetry. In his short stories he displays typically Jewish qualities of irony and self-criticism and a desire to reconcile opposites. Weiner's prose, often reminiscent of *Kafka's in his use of a psychoanalytic technique, often, like a cubist painter, showing things simultaneously from different angles, provides a surprising contrast between the simplicity of his plots and the complexity of his characters. His short story collections include *Netečný divák* ("The Apathetic Spectator," 1917), *Lítice* ("Furies," 1916), *Škleb* ("The Grimace," 1919, 1993), *Lazebník* ("The Barber", 1929, 1967, 1974), and *Hra doopravdy* ("A Play in Earnest," 1933, 1967, 1974). His deep interest in the Jewish problem is revealed in a number of his essays. Weiner repudiated Jewish assimilation and admired Zionist ideals, without, however, joining the Zionist movement, and he remained a solitary, split character, like many of the characters he described in his stories. An anthology of Weiner's poems, *Sluncem svržený sok* ("The Rival Toppled by the Sun"), was published in 1989. After the fall of the Communist regime Weiner's collected works began to be published.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

WEINFELD, EDWARD (1901–1988), U.S. federal judge. Born in New York City and raised on Manhattan's Lower East Side, Weinfeld attended law school at night while working at various jobs. He received his LL.B. degree in 1921 and his LL.M. in 1922, both from New York University. Entering private practice in New York, he was active in the Democratic Party. In 1935, he served as chief counsel for the New York State Legislative Committee Investigating Bondholders Commission. In 1939, Governor Herbert *Lehman named Weinfeld as New York State's first housing commissioner, a post he held until 1942. He served as vice president and director of Citizens Housing and Planning Council for New York State from 1943 until 1950, when President Harry Truman appointed him as a judge in the U.S. District Court in the Southern District of New York.

Weinfeld gained a reputation as a dedicated jurist whose decisions were rarely reversed. His long career saw many notable cases, including the bribery trial of James Marcus, a former New York City Water Commissioner, and the Quentin Reynolds-Westbrook Pegler libel trial. In another prominent case, he ruled that Senator Joseph R. McCarthy's Committee on Government Operations lacked the authority to investigate

author Corliss Lamont. Yet Weinfeld maintained that "every case is important"; he was known for his extensive research and precisely written decisions.

A member of the American Bar Association and the New York State Bar Association, Weinfeld received numerous awards and honors, including the American Law Institute's Henry Friendly Medal in 1987 for outstanding contributions to the law, and New York's LaGuardia Medal in 1988. Justice William J. Brennan, Jr., of the U.S. Supreme Court, stated that "there is no better judge on any court." Weinfeld's biographer William Nelson, who holds the position of Edward Weinfeld Chair at New York University Law School, has described him as the "preeminent trial judge in twentieth-century America." Though many had hoped that Weinfeld would be named to the Supreme Court, he expressed pride in serving on the district court. At the time of his death in 1988 at age 86, he was the oldest active federal district judge in the United States.

[Dorothy Bauhoff (2nd ed.)]

WEINGARTEN, JOAB JOSHUA (1847–1922), Polish rabbi. Regarded by Abraham Bornstein of Suchaczew as his most brilliant pupil, he and his teacher exchanged numerous responsa. Weingarten had strong leanings toward Ḥasidism; from 1880 he was rabbi in several Polish cities and finally in Konskie, being thereafter known as "the Rabbi of Konskie." He was considered one of the greatest halakhic authorities in Poland, and many Polish rabbis addressed halakhic questions to him, but in his replies, contrary to the usual practice, he does not mention the name of his correspondents. His replies were always brief and to the point; he justified this brevity by stating that his decisions might not be regarded as the final *halakhah*. He was the author of *Ḥelkat Yo'av* on the four parts of the Shulḥan Arukh (2 pts., 1903–05). A second, revised, edition, with a supplement containing his glosses to the Babylonian and Jerusalem Talmuds, was published in Jerusalem in 1950. In this work he disagreed, at times in disparaging terms, with the views of several accepted halakhic authorities, charging them in the introduction with being ignorant of the stylistic features of Hebrew. His work became a classic among Polish scholars, among whom his novellae circulated. In the appendix to the work, entitled *Kabba de-Kashyata*, he lists 103 insoluble problems (the numerical value of *kabba* (קבא) being 103). His son Meir, who succeeded him as rabbi of Konskie, was killed by the Nazis.

[Itzhak Alfassi]

WEINGREEN, JACOB (1908–1995), Hebrew and Bible scholar. Born in Manchester, he graduated from Trinity College, Dublin, where he became professor of Hebrew in 1939 and served until his retirement in 1978. During the period immediately following World War II, he served as director of education in the Displaced Persons' Camp in Bergen-Belsen.

Weingreen's best-known publication, *A Practical Grammar for Classical Hebrew*, was published in 1939 and remained in general use 50 years later. A French edition, *Hébreu Biblique,* appeared in 1984. His other works included *Classical Hebrew Composition* (1957), *From Bible to Mishna – The Continuity of Tradition* (1976), and *Introduction to the Critical Study of the Text of the Hebrew Bible* (1982). His writings, as well as his teaching, were distinguished by their lucidity.

He received many honors and was president of the Society for Old Testament Studies, Great Britain and Ireland (1961), of the British Association of Jewish Studies (1976), and governor of the *Irish Times* Trust from 1974.

An abiding interest in archeology led to his foundation of what, on his retirement, was named the Weingreen Museum of Biblical Antiquities in Trinity College, Dublin. His contention that the Book of Deuteronomy is not, as widely believed, one of the main sources of the Pentateuch, because it bears the characteristic of a mishnah, caused a stir among biblical scholars.

[Asher Benson]

WEINHEIM, town in Baden-Wuerttemberg, Germany. In the latter half of the 13th century it had a relatively large Jewish community, but in 1298 the synagogue, in which 70 Jews had sought refuge from the *Rindfleisch persecutions, was burnt down. Among the martyrs were several of the *Kalonymus family. A smaller community was established soon afterward. During the *Black Death persecutions (1349), Duke Rupert I granted asylum to Jewish refugees. In his reign a synagogue and cemetery were in existence. After his death (1390) the community declined and left few traces until the late 17th century, when a synagogue was built for the 15-family community by its leader, Oppenheim. At that time a guild was organized which was against Jewish bakers and millers; market regulations assigned them a special quarter. In 1906 a new synagogue, financed by the Hirsch family, who owned the tanning factory, was dedicated. The community comprised 188 persons in 1910 (1.3 percent of the total population) and 168 in 1933; subsequently a decline set in. On Nov. 10, 1938, the furnishings of the synagogue were demolished by axe-wielding Nazis; later it was blown up. On Oct. 22, 1940, 40 Jews were deported to *Gurs. In 1967 two Jews were living in Weinheim. A plaque (mounted in 1967) commemorates the destroyed synagogue. Another memorial (mounted in 1999) is dedicated to the victims of the Nazi era. The 17th-century synagogue (which was sold in 1906) is now a residential building.

[Larissa Daemmig (2nd ed.)]

WEINHOUSE, SIDNEY (1909–2001), U.S. biochemist. Weinhouse was born in Chicago and obtained his B.S. (1933) and Ph.D. (1936) in biochemistry from the University of Chicago. After postdoctoral studies in Chicago, he joined Temple University Medical School, Philadelphia (1947), becoming professor at (1950) and director of the Fels Institute for Cancer Research (1963–75). His research interests concerned carbohydrate metabolism, leading him to discover the enzyme glucokinase and enzyme expression in cancers. Weinhouse was a lifelong gifted teacher, and his honors included election to the U.S. National Academy of Sciences (1979).

[Michael Denman (2nd ed.)]

WEININGER, OTTO (1880–1903), Austrian psychologist and philosopher. Weininger was born in Vienna. From 1898 he studied philosophy, biology, psychology, physics, and mathematics at the University of Vienna. He rejected his original positivistic view, and, influenced by, among others, Plato, Kant, St. Augustine, Neoplatonism, and Wagner, he converted to Protestantism the day he received his Ph.D. in 1902. He then wrote his major work, *Geschlecht und Charakter* (1903; *Sex and Character*, 1906), a philosophical justification of male superiority expressing misogynistic and antisemitic views. After its publication, he sank into a deep depression, culminating in his suicide, at the age of 23, in the same house in which Beethoven had died. Shortly after his death, his unpublished essays and aphorisms appeared under the title *Ueber die letzten Dinge* (1904[1]) and in a second edition with a biographical introduction by Moriz Rappaport (1907[2]). Much later, two other works were published: *Otto Weininger, Die Liebe und das Weib* (1917), and *Taschenbuch und Briefe an einen Freund*, ed. by A. Gerber (1919). In 1990 Weininger's collected works and letters appeared under the title *Eros und Psyche* (1990), ed. by H. Rodlauer. Weininger's *Geschlecht und Charakter* became well-known after his death; following Max Nordau's discussion of it in the *Vossische Zeitung*, it had almost 30 editions in German (Hebrew ed. 1953). Weininger's theory is based on a fundamental relationship between sex and character. Every human being is a combination of male and female elements. He saw Man as the positive, productive, logical, conceptual, ethical, spiritual force capable of genius, while Woman is the negative one, incapable of any of these virtues. Woman is either interested purely in sexual pleasure (the Prostitute) or in procreation (the Mother). As a result, the ideal Woman depends on Man, on the Phallus, and her emancipation, as well as the spiritual progress of Man, depends upon ending coitus.

In his discussion of Judaism, Weininger saw the characteristics of the Jew as even worse than those of Woman. The Jew is a force which exists within people, not just in individual Jews (it is found also in non-Jews). The disadvantage of the Jew compared to Woman is that the latter at least believes in the Male while the Jew believes in nothing. Hence the Jew gravitates towards Communism, anarchism, materialism, empiricism, and atheism. Zionism, Weininger claimed, could only come about after the rejection of Judaism, since Jews could not grasp the idea of a state. The Jewish religion he saw as belief in nothing, in contrast to the positive faith he found in Christianity. Weininger's views combined elements of romanticism, Wagnerianism, Nietzscheanism, modern psychology, and biology, with many original insights. His opinions and arguments were taken over by Nazi thinkers as justification for their views. After the war the attitude towards Weininger's work and figure shifted from an ideological use of his ideas towards a search for an understanding of his thoughts and behavior within the framework of the humanities and social sciences. In 1982 the Israeli playwright Y. Sobol wrote for the stage *Nefesh Yehudi: ha-Layla ha-Aḥaron shel Otto Weininger* (*Weiningers Nacht*, 1986, 1988[2]).

[Richard H. Popkin / Noam Zadoff (2nd ed.)]

WEINMANN, JACOB (1852–1928), Bohemian industrialist. Born in Dobra, near Klatovy (Bohemia), in 1874 Weinmann was placed in charge of the Aussig (Usti nad Labem) coal business which was then owned by the Prague Bankverein. After the collapse of that bank, he took over the coal business under the name of Eduard J. Weinmann and subsequently developed it into one of the largest enterprises in Europe. He was instrumental in the great expansion of the coal industry in northwestern Bohemia. He was also very active in charitable and humanitarian pursuits, both Jewish and non-Jewish, providing them with considerable financial support.

Jacob's son, FRITZ, conducted unsuccessful negotiations with the Nazis, who confiscated the Weinmann concern for the Hermann Goering Werke. His brother, HANS, was held as surety in Prague but escaped. Both arrived in America in 1941; Fritz changed his name to Frederick Wyman, and Hans' son, Charles, joined the Unitarian Church. A foundation bearing the Weinmann name was established in 1947.

[Oskar K. Rabinowicz]

WEINPER, ZISHE (pseudonym of **Zise Weinperlech**; 1893–1957), Yiddish poet, short story writer, editor, and essayist. Weinper was born into a ḥasidic family in Turisk (Ukraine). His father was a cantor and a member of the Trisker rebbe's

inner circle. As a youth, Weinper wandered throughout the Ukraine and Poland and in 1910 moved to Warsaw, where he began his literary career. In 1913 he emigrated to the U.S., where he became associated with the Yiddish literary group Di *Yunge. He continued his literary activities while also working as a house painter and elementary school teacher. In 1917, he edited the literary journal *Der Onheyb,* which included his own works as well as those of his contemporaries such as B.J. *Bialostotsky, Aaron *Nissenson, and Naphtali *Gross. In 1918, Weinper joined the British *Jewish Legion and served in the Middle East. After returning to New York, he resumed publishing his poems, short stories, and essays in Yiddish publications such as *Morgn-Zhurnal, Fraye Arbeter Shtime,* and *Tsukunft*. The Depression of the early 1930s and the rise of Hitler in 1933 led him to join the radical left, and he became the poet and moving spirit of the Yidisher Kultur Farband, the leftist Yiddish cultural federation. His lyric volumes *Poemen Vegn di Neviim* ("Poems about the Prophets," 1951) and *Leyd un Freyd* ("Sorrow and Happiness," 1954) gave expression to his later, less optimistic moods.

[Sol Liptzin / Marc Miller (2nd ed.)]

WEINREB, FRIEDRICH (**Fryderyk**, **Freek**, **Fischel**; 1910–1988), economist. An unprecedented controversy developed in the Netherlands in the 1960s over the World War II activities of Friedrich Weinreb, a native of Lemberg whose family had settled in Scheveningen during World War I. When the Nazis occupied the Netherlands in 1940 Weinreb was a senior staff member of the Netherlands Economic Institute in Rotterdam. In 1941, shortly after losing his job due to anti-Jewish measures, he started a swindle, telling fellow Jews that the Nazis had permitted him to set up emigration destined for unoccupied France and Portugal. Three to four thousand Jews paid him to be on his – unfortunately, only imaginary – emigration list. He also managed to deceive the Nazis, collaborating with them in a second imaginary emigration plan that helped the Nazis track down Jews and Jewish valuables. He went into hiding with his family in 1944.

After the liberation Weinreb was sentenced to six years of imprisonment for swindling and betraying fellow Jews. Some sympathizers regarded him as a second Dreyfus and campaigned for his release. Owing to Queen Wilhelmina's jubilee he was released in December 1948.

The debate about his war past began in 1965, when the Dutch-Jewish historian J. Presser, basing his opinions mostly on Weinreb's voluminous memoirs, declared him an alternative hero who had resisted the Nazis with cunning and deceit. After the publication of Weinreb's memoirs in 1969 many journalists, politicians, historians, and critical intellectuals became involved in a public debate. Two publicists, Renate Rubinstein and Aad Nuis, and a Weinreb Committee dedicated themselves to the cause of Weinreb's rehabilitation. The dispute split society into Weinreb believers and non-believers, the latter being a minority. In particular, the novelist W.F. Hermans and journalist and high school teacher Henriëtte *Boas became fierce opponents of Weinreb. The 1976 report issued by the Rijksinstituut voor Oorlogsdocumentatie (Netherlands Institute for War Documentation) determined that he was a fantasizer and swindler, whose memoirs were largely false, and that his collaboration had resulted in 70 deaths. His activities did contribute to some Jews' survival, but most Jews who fell for Weinreb's swindle were deported and killed.

The enigma of Weinreb's beguiling talents is the more interesting because he proved to be a charlatan in other spheres of life as well, conning high-ranking officials of the Dutch Ministry of Foreign Affairs, leading a group of religious followers from 1948, and being convicted in 1957 and 1968 for posing as a medical doctor and for sexual offenses. Eventually, to avoid imprisonment, Weinreb left the country in 1968. He settled in Switzerland, where he continued to be a religious guru until his death in 1988.

Weinreb inspired extreme characterizations ranging from "messianic" to "the embodiment of evil." He won goodwill and stirred up trouble wherever he went. For a small group of followers Weinreb remains a hero and a guru. In fact, he was both a villain and a victim, and his historical accounts proved a miscellany of fact and fabrication, hardly suitable as a reliable historical source.

His memoirs cover the following: on World War II, *Collaboratie en Verzet* (1969); on the aftermath, *De gevangenis, Herinneringen 1945–1948* (1989); on religion, *De Bijbel als schepping* (1963) and *Ontmoetingen met mensen en engelen* (religious memoirs; 1982).

BIBLIOGRAPHY: J. Presser, *Ondergang* (1965) (the paragraph on Weinreb was omitted in the English edition); D. Giltay Veth, A.J. van der Leeuw, *Rapport… inzake de activiteiten van drs. F. Weinreb…* (1976); R. Grüter, *Een fantast schrijft geschiedenis* (1997) (with extensive bibliography).

[Regina Grüter (2nd ed.)]

WEINREICH, MAX (1894–1969), Yiddish linguist, historian, editor. Born in Kuldiga (Latvia), Weinreich made his debut as a Yiddish writer at the age of 13, and became a contributor to various Yiddish, Russian, German, and later English publications. After studying at the universities of St. Petersburg and Berlin, he completed a doctoral thesis on the history of Yiddish philology at the University of Marburg (1923; *Geschichte der jiddischen Sprachforschung*, 1993).

Early in his career Weinreich became a prominent educator in various capacities, ranging from the teaching of Yiddish literature at the Vilna Yiddish Teachers' Seminary to serving as leader of a Yiddish scouting movement, Di Bin ("The Bee"). He was instrumental in giving Yiddish linguistics a solid, scholarly footing. Co-founder with Nokhem *Shtif, Elias *Tcherikover, and Zalmen *Rejzen of the *YIVO Institute (1925), and YIVO's guiding spirit, he was largely responsible for its achieving a worldwide reputation. As direc-

tor of YIVO's Research Training Division and organizer of its graduate school, Weinreich successfully educated young Yiddish scholars, among them, his son, Uriel *Weinreich. At the World Congress of Linguistics in Copenhagen (1936), he lectured on "Yiddish as an Object of General Linguistics," and in 1940, he immigrated with his son Uriel to the U.S., where he became the country's first university professor of Yiddish, teaching Yiddish language, literature, and folklore at the College of the City of New York and Columbia University, while serving as the scholarly director of YIVO.

Weinreich's wide array of books and studies include his *magnum opus*, *Geshikhte fun der Yidisher Shprakh* ("History of the Yiddish Language," 4 vols., 1973; Engl. transl. of vols. 1–2, 1980), the culmination of a half century of research on Yiddish sociolinguistics, tracing the thousand-year development of Ashkenazi culture and the Yiddish language as integral to the Jewish way of life. He studied the development of Yiddish from its origins in Germany, through Eastern Europe and into the second diaspora, creating the basic concepts and theoretical tools of the linguistic study of Jewish languages. Prominent among his other works are *Hitlers Profesorn* (1947; English transl. 1946) – probably the best documented indictment of German scholarship during the Nazi regime; *Shturemvint* ("Tempest," 1927), sketches on 17th-century Jewish history; *Bilder fun der Yidisher Literatur-Geshikhte* ("Sketches from the History of Yiddish Literature," 1928); *Der Veg tsu Undzer Yugnt* ("Path to Our Youth," 1935), a socio-psychological study of Jewish youth in Eastern Europe; and *Di Shvartse Pintelekh* ("Black Dots," 1939), a history of alphabets. Weinreich translated Homer, Freud, and Ernst Toller into Yiddish and edited the periodicals *Yidishe Filologye* (1924–26), *Filologishe Shriftn* (1926–29), *Yivo-Bleter* (1931–50), and the critical edition of S. *Ettinger's works, N. Stutchkoff's *Oytser fun der Yidisher Shprakh* ("Thesaurus of the Yiddish Language"), Y.L. Cahan's *Shtudyes vegn Yidisher Folkshafung* ("Studies in Yiddish Folklore"), and *Yidishe Folkslider mit Melodyes* ("Yiddish Folksongs with Melodies").

BIBLIOGRAPHY: *For Max Weinreich on his Seventieth Birthday: Studies in Jewish Languages, Literature and Society* (1964), incl. bibl.; LNYL, 3 (1960); M. Schaechter, in: *Goldene Keyt*, 50 (1964), 157–71; L.S. Dawidowicz, in: AJYB, 70 (1969), 59–68. **ADD. BIBLIOGRAPHY:** J.C. Frakes, in: M. Weinreich, *Geschichte der jiddischen Sprachforschung* (1993), vii-xxiv.

[Mordkhe Schaechter / Jean Baumgarten (2nd ed.)]

WEINREICH, URIEL (1925–1967), Yiddish and general linguist, editor, and educator. Despite his early death, he left behind him the equivalent of several lifetimes of research and creativity – an unbelievably wide range of investigations.

Born in Vilna, the son of Max *Weinreich and a well-known editor-educator, Regina Weinreich (Szabad), the young Weinreich was exposed from earliest childhood to the best Vilna had to offer intellectually. Uriel Weinreich went to the United States in 1940 and as a linguist he was an immediate success ("The twenty minutes that it took him to read, before a well-attended annual meeting of the Linguistic Society of America, his paper '*Sabesdiker Losn*: A Problem of Linguistic Affinity' transformed a practically unknown young man into an enthusiastically applauded leader of the new generation" [Y. Malkier]). The monograph *Languages in Contact: Findings and Problems* (1952), based on his doctoral dissertation, became a standard reference work in its field; the textbook *College Yiddish: An Introduction to the Yiddish Language and to Jewish Life and Culture* (1949) went through five editions and ten printings within a 10-year span. Appointed professor of Yiddish language, literature, and culture at Columbia University in 1959, Uriel Weinreich was also chairman of the university's Department of Linguistics (1957–65). His extraordinary teaching capabilities are attested to by the fact that some of his students became leading linguists at various universities. Equally impressive were Weinreich's achievements as editor of, for example, the U.S. State Department's *Problems of Communism* (1950–51), of the linguistic journal *Word* (1953–60), of the first three volumes of *The Field of Yiddish: Studies in Yiddish Language, Folklore, and Literature* (1954, 1963², 1969³), and of the *YIVO's *Yidisher Folklor* (1954–62). He was the editor of the Yiddish section in the Encyclopaedia Britannica's *World Language Dictionary* (1954). Special mention should be made of his *Yiddish Language and Folklore (A selective bibliography for research)* (1959), compiled jointly with his wife, Beatrice Weinreich.

Uriel Weinreich's research papers, written and published in Yiddish, English, Hebrew, French and Russian, ranged topically from a cultural history of Yiddish rhyme through such fields as phonology, grammatical theory, bilingualism, language standardization, dialectology, semantics, and lexicology. Almost every research paper and lecture of his was a trailblazing venture, greeted by acclaim on all sides.

The two crowning achievements in Uriel Weinreich's work are the pioneering *Language and Culture Atlas of Ashkenazic Jewry* (at Columbia University, 1950–) – one of the world's largest collections of spoken language – and the *Modern English-Yiddish, Yiddish-English Dictionary* (1968). The atlas, initiated, organized and directed by U. Weinreich under a grant from the National Science Foundation, is an ongoing, large-scale project designed to record and study Yiddish dialects by harnessing the methods of advanced linguistic research and computer data processing. The dictionary is a climax in the history of Yiddish lexicography, both in its unsurpassed scholarly quality and its immediate wide popularity.

Malkiel, in: *Language*, 43 (1967), idem, in: *Romance Philology*, 22 (1968), 128–32; M. Schaechter, in: *Goldene Keyt*, 66 (1969).

[Mordkhe Schaechter]

WEINRUB, MATVEY, Soviet lieutenant general, Hero of the Soviet Union. In World War II, at the battle of Stalingrad,

he commanded the armor of the 62nd army, and his small tank force twice succeeded in preventing the Germans from reaching the Volga. Weinrub was promoted to major general with command of the armored division of the 8th guards army which recaptured the Donets coalfield and Odessa and advanced to Berlin.

WEINRYB, BERNARD DOV SUCHER (1900–1982), economic and social historian. Born in Turobin, Poland, Weinryb studied in Breslau at the Jewish Theological Seminary and at the university, was librarian at the seminary in 1931–33, and worked on the editorial staff of the *Encyclopaedia Judaica* in Berlin and Zurich (1933–34). In 1934 he emigrated to Palestine, where he lectured at the School of Social Work and School of Economics to 1939. Moving to the United States, he taught at the Herzliah Teachers' Seminary and at the Jewish Teachers' Seminary, New York (1941–48). Weinryb was lecturer at Brooklyn College (1948–51), worked as an economist for the State Department (1951–55), and lectured at Columbia University (1950–56), Yeshiva University (1948), and as professor of Jewish history and economics at Dropsie College (from 1949).

To the economic history of Russian and Polish Jewry Weinryb contributed *Studien zur Wirtschaftsgeschichte* … (1933); *Neueste Wirtschaftsgeschichte* … (1934; Hebrew and English summary, 1939); *Te'udot le-Toledot ha-Kehillot ha-Yehudiyyot be-Polin* ("Texts and Studies in the Communal History of Polish Jewry," 1951, introduction and notes in English); *Be-Reshit ha-Sozyalizm ha-Yehudi* ("In the Beginnings of Jewish Socialism," 1940). On the sociology of the yishuv in Palestine he wrote *The Yishuv in Palestine: Structure and Organization* (1947); *Jewish Vocational Education* (1948); *Ha-Dor ha-Sheni be-Ereẓ Yisrael ve-Darko ha-Mikẓo'it* ("The Second Generation in Ereẓ Israel and its Occupational Status," 1954). Together with S.D. Loewinger, Weinryb prepared a *Catalogue of Hebrew Manuscripts in the Jewish Theological Seminary, Breslau* (1965) and *Yiddische Handschriften in Breslau* (1936). He also wrote *The Jews of Poland* (1972) and *Studies and Documents in Modern Jewish History* (1975). Weinryb edited (and contributed to) *Studies and Essays in Honor of A.A. Neumann* (1962). He published over 300 articles in periodicals.

WEINSHALL, Ereẓ Israel family. BEN ZION ZE'EV (Vladimir; 1863–1943) was born in Grodno, studied at the Russian Military Academy of Medicine, and served as a government doctor in the Caucasus. He was employed among the "*Mountain Jews" to fight cholera, while his permanent residence was in Baku, where he worked for 20 years (1902–22). He was a member of the Zionist movement from its inception, having joined Ḥovevei Zion in Minsk during the Bilu period (1882–83). During 1917–20 he edited the Russian-language Zionist newspaper in the Caucasus, *Yevreyski Kavkazski Vestnik*. He settled in Palestine in 1922, and, after serving as village doctor in Reḥovot (1923–24) and municipal doctor of Tel Aviv (until 1926), he settled in Haifa, where he opened a private practice. In 1928, he was elected president of the Haifa branch of the Medical Society.

His son JACOB (1891–?) was born in Tiflis in the Caucasus. Serving in the Russian army as medical officer in 1916, he joined Joseph *Trumpeldor in his attempt, after the Russian Revolution, to organize Jewish soldiers of the Russian army to effect a breakthrough on the Caucasus front and conquer Palestine. In 1922 he settled in Palestine, serving as a doctor in the *kuppat Ḥolim of the Histadrut until 1932. He was a member of the municipal council of Tel Aviv (1925–28), a delegate to the first and second Asefat ha-Nivḥarim, and a member of the Va'ad Le'ummi. He took part in the establishment of the Union of Zionist Revisionists at its founding conference in Paris (1925) and was chairman of its central committee in Palestine until 1928. After the assassination of Chaim *Arlosoroff, he published a novel based on the murder and trial, entitled *Ha-Mishpat Yatḥil Maḥar* ("The Trial Will Begin Tomorrow"), which appeared in the Revisionist newspaper *Ha-Am*. In 1939 he founded the biweekly *Ha-Ḥevrah*. A prolific writer, he favored the biographic and historic-novel form, including *Hans Herzl* (1945), *Marco Baruch* (1949), *Aggadat Onkelos* ("The Onkelos Legend," 1951), and others. He wrote a book about *Jabotinsky (*Jabo*, 1954).

His second son ABRAHAM (1893–1968) was born in the Caucasus. In 1920 he settled in Haifa, where he was appointed municipal legal adviser. An expert on questions concerning real estate, he was instrumental in the acquisition of valuable land for Jewish settlement, including the land for Nahariyyah, Shavei Zion, and a new commercial center in Haifa. Weinshall's legal essays were published in the professional organ *Ha-Peraklit*. He became chairman of the Revisionist central committee in Palestine. During 1925–31 he was a member of the Jewish community council of Haifa, also serving in 1927–33 as a member of the Asefat ha-Nivḥarim and the Va'ad Leummi. He published and edited the first newspaper of Haifa, *Ha-Ẓafon*, during 1926–27. In 1937 Abraham dissociated himself from the Revisionists and submitted a memorandum to the British government on the solution of the Palestine problem in the name of a group headed by him called Benei Ḥorin. In 1947 he was detained in the Latrun camp by the British authorities, together with other political leaders.

BIBLIOGRAPHY: Tidhar, 2 (1947), 602, 879–90, 901.

WEINSTEIN, AARON (known as **Yerahmiel** or **Rahmiel**; 1877–1938), *Bund leader in Russia. He was born in Vilna, and, while a student at the teachers' training college, he joined a secret socialist circle. In the late 1890s he headed the Bund organization in Warsaw. He was a delegate at the third (1899) and fourth (1901) conventions of the Bund and was a member of its executive committee from 1901 to 1920. Weinstein was among the Bund delegates at the Russian Social-Democratic congress held in London in 1907. He directed the authorized publishing house of the Bund "Di Velt," contributed to the Bundist press, and, during the period of reaction after the

abortive revolution in 1905–06, supported the "legalist" trend in the Bund. He was among the four Bundists who took part in the meeting of Jewish communal leaders held in Kovno in 1909, and a delegate at the All-Russian Convention of Craftsmen in 1911. Weinstein was jailed for political activities on several occasions, and during World War I was exiled to Siberia, from where he was released after the February Revolution in 1917. At the tenth conference of the Bund (April 1917), he was elected chairman of its central committee, and moved to Minsk. There he was also elected to head the town council. Up to 1918 Weinstein had identified himself with the right wing of the Bund, but at its 11th conference (March 1919) he veered to the left. With his sister-in-law, Esther (Malkah) Frumkin, he headed the pro-Communist majority at the 12th conference of the Bund (April 1920), but opposed hostile government action against the socialists. He played a decisive role in the incorporation of the Kombund (Communist Bund) within the Communist Party (1921). After this, he held important state functions: chairman of the Popular Economic Council in Belorussia; vice chairman of the Council of Popular Commissars in Kirghizia (1922–23); member of the Collegiate of the Commissariat of Finances, and other positions in the government and economic administration. His Jewish activities were essentially connected with the agricultural settlement schemes; he was vice chairman of Komerd and chairman of Gezerd in Moscow. At the time of Stalin's purges in the 1930s, he was accused of "Bundist nationalism" and arrested. He committed suicide in prison.

[Moshe Mishkinsky]

WEINSTEIN, BERISH (1905–1967), Yiddish poet. Born to a ḥasidic family in Rzeszow (western Galicia), he moved to Vienna in 1923 and to New York two years later. His first book, *Brukhvarg* ("Fragments," 1936), is a masterpiece of rough expressionism. In long, Whitmanesque lines, elliptical syntax, and Galician dialect, Weinstein describes the depths of eastern Europe and New York, a world of sailors, thieves, and bloodthirsty gentiles. In his second book, *Reyshe* ("Rzeszow," 1947), in which he recreates his vanished birthplace, a noted center of religious learning, Weinstein began an autobiographical trilogy, continuing with *Amerike* (1955) and *Dovid Hameylekhs Giter* ("King David's Estates," 1960), where he glorifies the formation of the State of Israel. In 1949 Weinstein collected his early poems into *Lider un Poemes* ("Poems and Long Poems"), where few pieces from *Brukhvarg* reappear, and even they are severely shorn of their roughness and descriptive detail: Weinstein had elided his original and daring modernism in order to write in the vein of nostalgia and nationalist Jewish unity demanded by conservative critical taste after the Holocaust. His last book of verse, *Basherte Lider* ("Destined Poems"), appeared in 1965.

[Leonard Prager / Itay Zutra (2nd ed.)]

WEINSTEIN, HARVEY (1952–) and **BOB** (1954–), U.S. entertainment executives. The brothers were raised in Flushing, New York. Harvey enrolled at the University of Buffalo, while Bob went to the State University of New York at Fredonia; however, neither Weinstein graduated. Harvey became involved in concert promotion on campus, and eventually purchased a theater where he booked music acts and featured films between performances. The Weinsteins went to the Cannes Film Festival in 1979 and purchased the soft-core film *Goodbye, Emmanuelle*, which enabled them to start Miramax. The studio, named for the Weinstein's parents and set up at first in Harvey's one-room apartment in New York, distributed independent and foreign films other studios refused to handle. The Weinsteins' first Academy Award win was for the Danish film *Pelle the Conqueror* (1987), which took the 1988 Oscar for best foreign film. When Miramax received a $5 million investment from Midland Montague in 1988, the brothers began producing their own films, such as *Scandal* (1989), about the British Profumo scandal. However, Miramax first major successes were *sex, lies and videotape* by Steven Soderbergh, which cost $1.1 million to make and pulled in $24 million in the North American box office, and the Oscar wins for *My Left Foot* (1989). *The Crying Game* (1992) led to another hit for Miramax, garnering six Oscar nominations and one win for the studio. In 1993, Bob Weinstein founded Dimension Films, a studio for genre films, such as *Scream* (1996) and *Spy Kids* (2001). *The Piano* (1993) was the next hit for Miramax, with three Academy Award wins and Cannes' Palme d'Or. In 1993, Disney purchased Miramax for $65 million, but left the Weinsteins in control of projects under $12 million. When the Motion Picture Association of America's Ratings Board handed down an X rating to the film *Tie Me Up! Tie Me Down!* (1990), the Weinsteins sued, which led the board to create the NC-17 rating for films featuring adult content that was not pornographic in nature. Miramax continued to rack up hits with *Pulp Fiction* (1994), *Il Postino* (1994), *Trainspotting* (1996), *The English Patient* (1996), *Good Will Hunting* (1997), and *Shakespeare in Love* (1998), among many other titles. In all, Miramax projects received 243 Academy Awards nominations and the studio enjoyed 57 wins before Disney took full control of the company and its film library in 2005. The Weinsteins still retained control of Dimension Films, and launched a new venture called the Weinstein Co.

[Adam Wills (2nd ed.)]

WEINSTEIN, JACK B. (1921–), U.S. federal judge. Born in Wichita, Kansas, Weinstein graduated from Brooklyn College of the City University of New York in 1943 and served as an

officer in the U.S. Navy during World War II. He received his law degree from Columbia University in 1948. In 1949 and 1950 he served as law clerk to Judge Stanley H. Fuld of the New York Court of Appeals. In 1953 Weinstein entered private practice and began teaching at Columbia Law School, where he continued to teach until 1998. From 1956 to 1967 he was County Attorney of Nassau County, New York.

Weinstein served as special counsel to the New York Joint Legislative Committee on Motor Vehicle Problems, and as counsel to New York State Senator Seymour Halpern. He was secretary of the Nassau County Board of Ethics, and he served as consultant and reporter for the New York Temporary Commission on Courts in 1966. In 1967 he served as adviser to the New York State Constitutional Convention.

That same year he was appointed by President Lyndon Johnson as a federal judge in the Eastern District of New York. Weinstein served as chief judge of the Eastern District from 1980 to 1988, becoming senior judge in 1993. He ruled on many high-profile mass tort cases, including those involving asbestos, Agent Orange, tobacco, and handguns, and the 1999 case of *Hamilton v. Accu-Tek*, in which damages were awarded based on negligent marketing. He is considered to have had a significant influence on the law of mass tort litigation. The *New York Times* called Weinstein the "quintessential activist judge."

Judge Weinstein was considered an authority on a wide range of issues, including procedure, legal ethics, judicial administration, and the role of science in the courts. He was the author of numerous articles for law reviews, and his works include widely cited treatises and casebooks on New York civil procedure and federal evidence rules, including *Reform of Federal Court Rule Making Procedures* (1976), *Basic Problems of State and Federal Evidence* (1976), *Mass Torts: Cases and Materials* (1994), and *Individual Justice in Mass Tort Litigations* (1995).

A member of the New York State Bar Association, Judge Weinstein was the recipient of numerous awards and honors, including the Judicial Recognition Award of the National Association of Defense Lawyers, the Edward J. Devitt Distinguished Service to Justice Award, the Columbia Law School Excellence Award, the Honorable William J. Brennan Award of the New York State Association of Criminal Defense Lawyers, and the *National Law Journal*'s Lawyer of the Year Award.

[Dorothy Bauhoff (2nd ed.)]

WEINSTEIN, JACOB (1902–1974), Reform rabbi. Born in Stephin, Russia, he immigrated to the United States at the age of seven with his family to Portland, Oregon, where he became a protégé of Charles E. Wood, the city's most prominent civil liberties and labor lawyer, whose clients included Jewish anarchist Emma *Goldman.

He went to Reed College in Oregon and then the Hebrew Union College, where he was ordained in 1929.

He was rabbi of Congregation Beth Israel in Austin, Texas, from 1929 to 1930. A year later he moved to San Francisco, where he was rabbi of Congregation Shearith Israel. He became involved in the Mooney Billings case, defending striking longshoremen, as well as urging higher wages for department store employees to a congregation that included the owners of these stores. His career in San Francisco did not last for long. He went to New York for three years and then returned to San Francisco, not as a congregational rabbi but as director of the School for Jewish Studies in San Francisco from 1935 to 1939.

Jacob Weinstein became rabbi of KAM in Chicago, Illinois, in 1939 and served there until 1967. He was a leading spokesman for Judaism's mission of social action in American society. A fervent opponent of racism, he helped integrate the Hyde Park neighborhood as a paradigm of solidarity and cooperation. He nudged the labor movement in the United States and in Israel toward egalitarian and humanitarian goals. He influenced such politically well-known Chicago figures as Arthur J. Goldberg and Abner Mikva, as well as Democratic presidential candidate (in 1952 and 1956) Adlai Stevenson and a host of younger rabbis and lay leaders in the Chicago and national communities.

During the years of World War II, Rabbi Weinstein served as public member of the Chicago area War Labor Board, which arbitrated a crushing load of contract disputes between workers and their employers. This experience led to subsequent arbitration assignments in the labor relations field. He served on the Public Review Board of the United Auto Workers, established by legendary Labor leader Walter Reuther in 1957 to mediate and adjudicate disputes within the union. Among his colleagues on that board were Msgr. George Higgins, chair of the Catholic Conference on Social Research; Prof. Frank McCulloch, formerly head of the Labor Education Division at Roosevelt University, and Dr. Robin Flemming, labor arbitrator and president of the University of Michigan.

He was president of the Chicago Board of Rabbis from 1947 to 1949, during the time in which the post-war transformation of the Jewish community was taking root and when the State of Israel was established. He was president of the Hyde Park Council of Churches and Synagogues from 1948 to 1950. Admired by his colleagues, nationally as well as locally, he was president of the Central Conference of American Rabbis, from 1965 to 1969. An ardent laborite and Zionist, he was President of the National Committee for Labor Israel in 1974. President John F. Kennedy, under the influence of Secretary of Labor Arthur J. Goldberg, appointed him to the President's Commission on Equal Employment Opportunity. He also served on the Business Ethics Advisory Committee to the secretary of commerce.

He is the author of *A Rabbi's Rabbi: The Life of Solomon Goldman*, his Conservative Colleague in Chicago, a tribute to their friendship and to his scholarship. An avid letter writer, he was both a serious pastor, writing to congregants in the army or after losses and at milestone occasions, and a significant and courageous, liberal political and religious leader.

[Michael Berenbaum (2nd ed.)]

WEINSTEIN, LEWIS H. (1905–1996), U.S. attorney and communal leader. Weinstein, born in Arany, Lithuania, was taken to the United States as an infant and grew up in Portland, Maine. He received his law degree from Harvard Law School in 1930. He was admitted to the Massachusetts bar and practiced law. During World War II he served in the army, in 1944 on General Eisenhower's staff as liaison to General Charles de Gaulle, and in 1945 as a lieutenant colonel and chief of the liaison section in the European Theater of Operation. He was among the Allied troops that took part in the liberation of the concentration camp prisoners at the end of the Holocaust. Weinstein returned to a Boston law practice and was active in local, state, and national bar associations.

Among his many interests was housing; he served as counsel for urban renewal agencies and on city, state, and federal housing agencies, and taught city planning at Massachusetts Institute of Technology and law at Harvard and other professional institutions. His wide-ranging interest in Jewish life led to his service as chairman of four national Jewish agencies: the Council of Jewish Federations and Welfare Funds (1965–66); the National Community Relations Advisory Council (1960–64); the American Jewish Conference on Soviet Jewry, which he helped found and which he served as cochairman from its inception and from 1968 as chairman; and the Conference of Presidents of Major American Jewish Organizations (1963–65). He also served a number of local, state, and national organizations, including the Temple Mishkan Tefila board, Boston's Hebrew College (president, 1946–53), and the Combined Jewish Philanthropies of Greater Boston as president and general campaign chairman.

At Harvard's Center for Jewish Studies, Weinstein established the annual Selma and Lewis Weinstein Prize in Jewish Studies, awarded to the best undergraduate essay in Jewish studies. Weinstein's autobiography *Masa: Odyssey of an American Jew*, which chronicles his journey from the shtetl to Harvard Law School, was published in 1989. His book *My Life at the Bar: Lawyer, Soldier, Teacher, and Pro Bono Activist* appeared in 1993.

WEINSTOCK, SIR ARNOLD, BARON (1924–2002), British industrialist. Born in London, the son of a tailor, Weinstock studied statistics before becoming a junior administrative officer in the Admiralty in 1944. He left government service in 1947 to engage in finance and real estate development, and in 1952 became the managing director of Radio and Allied Industries. In 1949 he married the daughter of Martin (later Sir Martin) Sobell, the head of the General Electric Company (GEC). He became a director of GEC in 1961 and served as its managing director from 1963 to 1996. Under his direction, after many economies in production and management, GEC quadrupled its earnings. In 1967 Weinstock won a prolonged, bitter battle for control over Associated Electrical Industries. GEC and AEI were merged into General Electric Ltd., which thus became the biggest telecommunications and electronics combine in Britain. In 1970 he received a knighthood for his contribution to the expansion of his country's exports. He was then invited by the British Government to head a new company responsible for the development of Britain's domestic nuclear power, in which GEC holds a 50% interest. He was described as "the ablest young industrialist in England" and became one of the most successful British industrialist of his time. He was given a life peerage in 1980.

[Morton Mayer Berman]

WEINSTOCK, HARRIS (1854–1922), U.S. businessman and communal leader. Weinstock, who was born in London, emigrated to the U.S. and settled in California in 1869. Entering business with his half brother David Lubin in Sacramento and San Francisco, he established the Weinstock, Lubin Company in 1888, which became known for its one-price policy and enlightened employee relations. In 1908 Weinstock established an automobile supply business in San Francisco, and was also vice president of the Weinstock-Lubin Real Estate Company. Weinstock's interest in labor relations and in civic government brought him invitations to participate in numerous civic activities. He was a member of the Board of Trustees of the State Library, the Board of Freeholders of the State Board of Horticulture, the Executive Board of the National Civic Federation, and others. In 1908 he was appointed by Governor Gillet to investigate labor conditions throughout the world, publishing his conclusions in *Strikes and Lock-Outs* (1911). President Wilson appointed him to the Industrial Relations Commission in 1913, and he also served on the Industrial Accident Commission at the invitation of Governor Hiram Johnson, a close friend. In 1915 he was appointed State Market Director. Weinstock, who was active in the California Progressive movement, was often called upon to mediate strikes. With David Lubin he was an influential supporter of cooperative marketing and agriculture reform.

Deeply interested in Jewish life, Weinstock served for a number of years as president of his congregation in Sacramento, where on occasion he conducted the service and delivered the sermon. He was author of a number of articles on Judaica, including religious and economic essays entitled *Jesus the Jew and Other Addresses* (1902). During World War I Weinstock led fund raising for the American Jewish Relief Committee.

[Max Vorspan]

WEINSTOCK, HERBERT (1905–1971), U.S. writer and musicologist. Weinstock was born in Milwaukee and attended the University of Chicago. He became a music editor at the New York publishing firm of Alfred A. Knopf (1943–59 and

1963–71). Weinstock was also a prolific writer and published books on *Tchaikovsky* (1943), *Handel* (1946), *Chopin* (1949), and *Music as an Art* (1953). However, most of his writings were more especially on operatic subjects, including *The Opera: a History of its Creation and Performance, 1600–1941* (New York, 1941; 1962[2] as *The World of Opera*); *Donizetti and the World of Opera in Italy, Paris and Vienna in the First Half of the Nineteenth Century* (1963), as well as his later works dedicated to the biographies of *Rossini* (1968) and *Bellini* (1971). From 1966 he was also New York correspondent for the British journal *Opera*.

[Max Loppert / Amnon Shiloah (2nd ed.)]

WEINTRAUB, SOLOMON (1781–1829), Polish cantor; also known as Solomon Kashtan, after his native town in Volhynia. He was cantor in Dubno, but often traveled from town to town giving performances, and was noted for his fervor and singular coloratura. He was the first cantor to leave written compositions, and he created an Eastern European style. Most of his works remained in manuscript (Hebrew Union College, Cincinnati), but a selection was edited and published in modern form by his son, ZEVI HIRSCH ALTER WEINTRAUB (1811–1882). The latter succeeded him as cantor in Dubno (1830–35), and was cantor in Koenigsberg (1838–80). He made his father's work part three of his *Schire Beth Adonai oder Tempelgesaenge* … (3 pts., Leipzig, 1860; 1955[3]).

[Ernst Daniel Goldschmidt]

WEINZWEIG, HELEN (**Tenenbaum**; 1915–), Canadian author. Weinzweig was born in Poland and immigrated to Canada at the age of nine with her divorced mother. She did not know her father until she was an adult. Weinzweig grew up in the Jewish immigrant district of Toronto and deliberately abandoned her native Polish and Yiddish languages. In Toronto, she attended school for the first time. Her mother remained a single parent and was sole provider at a time when women rarely found themselves in such circumstances. Weinzweig's story "My Mother's Luck," included in her short story collection and adapted as a one-act play, records the difficult life and dynamic character of her mother.

During adolescence, Weinzweig spent two years at a sanatorium while recuperating from tuberculosis. It was during this period that she developed the love of reading that continued throughout her life. After completing high school, Weinzweig was forced by the Depression to work successively as a stenographer, receptionist, and salesperson. She married the composer John *Weinzweig in 1940 and they had two sons.

Weinzweig's first novel, *Passing Ceremony* (1973), published when she was 58, is highly experimental in form and presents a somber, ironic picture of the ritual of marriage, the "passing ceremony" of its title. As an expressionistic work, *Passing Ceremony* employs strategies from other genres – film, painting, and music – to bring meaning and unity to an otherwise senseless marriage between a homosexual and a promiscuous woman. Weinzweig's narrative style blends the surreal and the gothic and communicates her belief in the paradox that tragedy always lurks beneath the comfortable and conventional surface of everyday life.

Basic Black with Pearls (1980), Weinzweig's second novel and winner of the City of Toronto Book Award, is an ingenious work of puzzles that also exposes the vacuousness of traditional marriage. Written as a highly subjective interior monologue, its protagonist is the respectable Shirley Kaszenbowski, née Silverberg, alias Lola Montez, a middle-class, middle-aged, married woman in a basic black dress and pearls who travels the world to meet her elusive lover, Coenraad, an alleged spy for an unidentified "Agency." Shirley's chameleon-like transformations imply that all behavior is mere acting, and Weinzweig's innovative use of the mask motif heightens the interplay of reality and illusion that is at the heart of this novel.

A View from the Roof (1989) is a collection of thirteen short stories whose range of themes and styles evoke Weinzweig's novels. The short story "The Sea at Bar" appeared in the journal *Parchment* (vol. 2, 1993–94).

[Ruth Panofsky (2nd ed.)]

WEINZWEIG, JOHN (**Jacob**; 1913–2006), Canadian composer and teacher. Born in Toronto to Polish immigrant parents, Weinzweig first studied music at the Workman's Circle Peretz School, at Toronto high schools, and privately. In 1934–37 he studied with Healey Willan at the University of Toronto, where he founded and conducted the University of Toronto Symphony Orchestra. At the invitation of Howard Hanson, he completed a M.Mus. (1938) in composition at the Eastman School of Music. Weinzweig's *Suite for Piano* (1939) contains Canada's first 12-tone writing.

Except for a 1943–45 stint in the RCAF, Weinzweig taught at the Toronto Conservatory from 1938 to 1960. Having composed music for four National Film Board movies (1941–45) and for about 100 CBC Radio dramas (1941–51), he taught composition and orchestration at the University of Toronto in 1952–78. Among his many renowned students were Murray Adaskin, Harry Freedman, Srul Irving Glick, and Brian Cherney.

Among his concert works are Divertimento No. 1 (1946) for flute and orchestra, which won the Silver Medal at the 1948 Arts Olympiad; the Cello Sonata "Israel" (1949); *Dance of the Massadah* (1951) for baritone and piano, based on Yiẓḥak *Lamdan poems and commissioned by the Canadian Jewish Congress; *Am Yisrael Chai!* (1952) for chorus, based on Weinzweig's translation of Malke *Lee's text; *Wine of Peace* (1957) for soprano and orchestra, dedicated to "the United Nations, where the dreams of mankind for peace on earth become a reality"; *Dummiyah/Silence* (1969) for orchestra, which he described as a reaction to the horrors of the Holocaust; and the choral "Prisoner of Conscience" (1986) dedicated to Amnesty International.

Weinzweig played a central role in founding both the Canadian League of Composers (1951) and the Canadian Music Centre (1959). In 1967, he was awarded the B'nai Israel Beth David Synagogue Scroll of Honour for outstanding contributions to Canadian culture. Other accolades include honorary doctorates from the Universities of Ottawa (1969) and Toronto (1982), an appointment as Officer of the Order of Canada (1974) and Member of the Order of Ontario (1988). A recipient of the Canadian Music Council Medal in 1978, Weinzweig was designated "President Emeritus" by the Canadian League of Composers in 1981. He is also the first composer to receive the Canada Council's Molson Prize (1981) and the Roy Thomson Hall Award (1991). Subsequently Weinzweig received the Toronto Arts Award for Music (1998) and the SOCAN (Society of Composers, Authors and Music Publishers) Lifetime Achievement Award (2004). He married the fiction writer Helen *Weinzweig.

[Jay Rahn (2nd ed.)]

WEISBERGER, BERNARD ALLEN (1922–), U.S. historian. Born in New York, Weisberger taught at several universities before being appointed adjunct professor of history at New York University. Weisberger won many awards and wrote books in a popular style supported by careful research and profound thought. He was a member of the National Hillel Commission and a dedicated participant in the civil rights movement. After teaching at such universities as Wayne State, the University of Chicago, and the University of Rochester, he gave up the classroom and dedicated his time to writing. He was a contributing editor for *American Heritage,* where he wrote a column entitled "In the News" for more than 10 years.

Among his many books are *They Gathered at the River* (1958), a provocative study of Protestant revivalism; *The New Industrial Society* (1969); *The American Heritage History of the American People* (1971); *Pathways to the Present* (1976); *The Impact of Our Past* (1976); *Reaching for Empire* (1980); *From Sea to Shining Sea* (1981); *The Statue of Liberty* (1985); *Many People, One Nation* (1987); *The La Follettes of Wisconsin* (1994); and *America Afire* (2000).

[Ruth Beloff (2nd ed.)]

WEISENBURG, THEODORE H. (1876–1934), U.S. physician. Weisenburg was born in New York City and, having suffered from a nervous disorder as a child, he determined to devote himself to the field of neurosurgery. In 1908 be was chairman of the American Medical Association's section on nervous and mental disorders.

Weisenburg taught at the University of Pennsylvania (1904–07) and at the Medico-Chirurgical College in Philadelphia. After the college became a part of the university, he became a professor of neurology (1918) and in 1920 a vice dean of the college. He became particularly noted as a pioneer in the use of moving pictures for the study of patients with nervous and mental disorders.

From 1905, Weisenburg was an active member of the American Neurological Association and became its president in 1918. In 1919 he became editor of *Transactions*, the association's journal. Weisenburg also edited the *Archives of Neurology and Psychiatry* from 1920 until his death.

With the aid of a grant from the Commonwealth Fund of New York City, Weisenburg embarked on a planned program of research, which included adult intelligence tests. In 1933–34 he was made president of the Association for Research in Nervous and Mental Diseases. He was also a member of the Examining Board for Certification of Specialists in Neurology and Psychiatry. His books *Aphasia* (1935) and *Adult Intelligence* (1936) were published posthumously.

WEISER-VARON, BENNO (1913–), journalist, author, diplomat, and university lecturer. Born in Czernovitz (Austro-Hungarian Empire), after the outbreak of World War I he moved with his family to Vienna. In 1938 he had almost completed medical studies. As a student he was active together with Teddy *Kollek and Ehud *Avriel in diverse Zionist student organizations.

After the annexation of Austria to the Third Reich, he left in autumn 1938 for Ecuador via Amsterdam and settled in Quito, where he succeeded in obtaining visas for his family and his fiancée. As one of the only European refugees to be proficient in Spanish, he was hired in April 1940 by the leading newspaper of Quito, *El Comercio*, to cover the events in Europe, on which he had a daily column, "El Mirador del Mundo" ("Observer of the World").

In 1945 he attended the first Latin American Zionist Congress in Montevideo and established close ties with leading Zionist activists in Latin America – among others Moshe Toff (later Tov). As a newspaperman he met for an interview in Buenos Aires Juan D. Peron, at that time Argentina's vice president. In spring 1946 he established, at the request of Nachum Goldmann, a regional agency for the Jewish Agency in Bogota. In June 1947 he was called to New York as acting director (for Tov), and later director, of the Latin American Department of the Jewish Agency. His main mission was to create and maintain Latin America's support at the UN for the Zionist cause and later for the State of Israel. Weiser succeeded in securing Ecuador's crucial vote, on November 29, 1947, at the special session of the UN General Assembly, in favor of the UNSCOP partition plan for Palestine, the decision for the establishment of a Jewish state.

In 1957, as ambassador of the State of Israel, he represented the country at the inauguration of Luis Somoza Debayle as president of Nicaragua. In 1960 he was asked to take over the Israel-Iberoamerican Institute of Cultural Relations in Jerusalem and moved with his family to Israel. He reported on the Eichmann trial for several newspapers. In 1964 Weiser was appointed the first ambassador of Israel to the Dominican Republic and adopted, on the advice of Prof. Efraim E. Urbach,

the name Varon, and in 1966 he was also named nonresident ambassador to Jamaica. As a result of the Six-Day War of 1967, Weiser was asked to proceed to New York to join the Israeli delegation to the UN, headed by Abba Eban. When Paraguay was elected to the UN Security Council for 1968–69, Weiser was appointed as the first Israeli ambassador to Paraguay. On May 4, 1970, the embassy offices in Asunción were invaded by two Palestinians intent on killing the Israeli ambassador. After shooting Edna Peer dead and wounding Diana Zawluk with five bullets (she survived), the invaders had no bullets left for the ambassador. Weiser-Varon terminated his diplomatic activities for the State of Israel in 1972.

In 1973 he moved to Boston and wrote articles for publications such as *Commentary*, *Midstream*, the *New York Times*, and the *Boston Globe*. In 1986 he joined the department for Jewish Studies at Boston University, retiring in 2001.

Among his writings are *El Mirador del Mundo* (1941), *Yo era Europeo* (1942), *Visitenkarte* (1957), and *Professions of a Lucky Jew* (1992).

[Gabriel E. Alexander (2nd ed.)]

WEISGAL, ABBA JOSEPH (1885–1981), *ḥazzan*. Weisgal was born in Poland where his father, the local *ḥazzan*, was his first teacher. After serving as *ḥazzan* in Ivancice, Czechoslovakia, he emigrated to the United States in 1920 and became *ḥazzan* of the Chizuk Amuno congregation of Baltimore, Maryland, officiating for more than 50 years. Joseph Levin, a *ḥazzan* and musician, wrote a work entitled *Emunah Abba* about Weisgal's compositions and published it together with those compositions in a volume called *Shirei Ḥayyim ve–Emunah* (1982). Weisgal was the brother of Meyer *Weisgal and the father of Hugo *Weisgal.

[Akiva Zimmerman (2nd ed.)]

WEISGAL, MEYER WOLF (1894–1977), Zionist. Born in Kikol (near Lipno), Poland. Weisgal emigrated to the U.S. in 1905. From 1921 to 1938 he served as national secretary of the Zionist Organization of America, and became Chaim *Weizmann's personal political representative in the U.S. In 1940 he participated in the establishment of the U.S. section of the Jewish Agency for Palestine, serving as its secretary general until 1946. He was appointed organizing secretary of the *American Jewish Conference in 1943. In 1944 Weisgal began his dynamic public relations activities on behalf of the *Weizmann Institute of Science. He established his residence in Israel in 1949 on the campus of the Institute at Reḥovot and took over the management of its affairs as chairman of the Executive Council. He served as president from 1966 to 1969 and then as chancellor. Weisgal was closely connected with the arts in the U.S. and Israel. He edited several newspapers and books of Jewish interest (*The Maccabean*, 1918–21, and *New Palestine*, 1921–30), and produced a number of plays, including Franz Werfel's *The Eternal Road*, directed by Max Reinhardt in 1937 in the U.S. He edited the book *Theodor Herzl, a Memorial* (1929), and two books on Weizmann: *Chaim Weizmann: Statesman, Scientist, Builder of the Jewish Commonwealth* (1944), and *Chaim Weizmann: A Biography by Several Hands* (1963[2]). Weisgal's autobiography, … *So Far*, was published in 1971 and the Hebrew translation, *Ad Kan*, in 1972. He was buried on the grounds of the Weizmann Institute.

[Rinna Samuel]

WEISGALL, HUGO (1912–1997), composer, conductor, and teacher. Born in Ivancice, Czechoslovakia, Weisgall emigrated to the United States in 1920. He conducted orchestras in Baltimore and was active in Jewish musical life, directing the Har Sinai Temple Choir (1931–42) and the Youth Alliance Orchestra (1935–42). From 1946 to 1947 he was a cultural attaché at the U.S. embassy in Prague. Weisgall also taught in New York City at the Juilliard School of Music (1956–60) and at Queen's College (1960–1983), and from 1952 was faculty chairman of the cantors' institute of the Jewish Theological Seminary of America. He was a nephew of Meyer *Weisgal.

His compositions include operas, such as *Six Characters in Search of an Author* (1956), *Athaliah* (1964), and *Nine Rivers from Jordan* (1968), as well as ballets, and choral and orchestral works.

WEISS, ABRAHAM (1895–1970), East European talmudic scholar and Zionist. Weiss was born in Podhajce, eastern Galicia. He completed his studies in history and classical philology at the University of Vienna in 1921 and received ordination at the Vienna Rabbinical Seminary in 1922. He taught Talmud and rabbinics at the Institute for Jewish Science in Warsaw (1928–1940) and at Yeshiva University in New York 1940–1967. In 1967 he settled in Israel, lecturing at Bar-Ilan University. From 1935 to 1940 Weiss was vice president of the Mizrachi Organization in Poland; he was also active in the World Zionist Organization for many years. Weiss was noted for his pioneering talmudic research, embodied in several articles dealing with the complete range of tannaitic, amoraic, and early gaonic literature. Most noteworthy for his examination of the Talmud's history and development are *Hithavvut ha-Talmud bi-Shelemuto* (1943), *Le-Ḥeker ha-Talmud* (1954), and *Al ha-Yeẓirah ha-Sifrutit shel ha-Amora'im* (1962). The application of scientific methodology to the clarification of talmudic law and literature and his resultant conclusions are best exemplified in *Seder ha-Diyyun; Meḥkarim be-Mishpat ha-Talmud* (1957), and *Diyyunim u-Verurim be-Bava Kamma* (1966). His views on the Mishnah's composition and structure are given in *Le-Ḥeker ha-Sifruti shel ha-Mishnah* (HUCA, 16 (1941), 1–33, Heb. sect.). His findings on the Babylonian Talmud's evolvement and the saboraic and early gaonic activities opened many new avenues in talmudic jurisprudence and historiography.

[Meyer S. Feldblum]

WEISS, ALBERT PAUL (1879–1931), psychologist and social philosopher, Weiss, who was born in Steingrund, Germany, went to the U.S. as a child. He spent most of his teaching and research career at Ohio State University. He was one of an important group in the U.S. who demanded an objective and natural science approach to all behavior, including human. Weiss held a reductionist view that psychology is a sector of biology, and biology ultimately a sector of physics, but he also especially emphasized the key role of social factors in determining human behavior. Terms such as "biosocial behavior" and "social status" were used by Weiss to describe the human being as a social reactor in a social context without compromising his belief in the physical nature of man, as well as of man's environment. Thus, even in his treatment of human learning and processes of behavior modification, Weiss dwelt more on social variables than on neurophysiological ones. Weiss sought to realize a mission for scientific psychology in practical human affairs, the goal being to achieve greater human welfare in a stable, rational, and peaceful society under the guidance of "behavioristic ethics." Weiss' major works include: *A Theoretical Basis of Human Behavior* (1925); and "Feeling and Emotion as Forms of Behavior," in: *1st International Symposium on Feelings and Emotions, 1927* (Wittenberg, 1928).

[William N. Schoenfeld]

WEISS, AURELIU (1893–1962), Romanian literary critic. A leading Bucharest lawyer, Weiss wrote original and scholarly studies of Romanian and foreign authors collected in *Studii literare* (1922) and *Autori si păreri* ("Authors and Opinions," 1929). Weiss made his reputation, however, when he settled in Paris after World War II. His later works, many of which appeared posthumously, include *Le destin des grandes oeuvres dramatiques* (1960; Eng., 1965); *Le théatre de Luigi Pirandello dans le mouvement dramatique contemporain* (1964); and *Le monde théatral de Michel de Ghelderode* (1966).

WEISS, AVI (1944–), Orthodox Jewish activist. Avraham "Avi" Weiss was born in New York City and received his rabbinical ordination at the Rabbi Isaac Elchanan Theological Seminary (Yeshiva University) in 1968. He quickly established a reputation as an activist on behalf of Jewish communities everywhere and served for 10 years as Chairman of the Student Struggle for Soviet Jewry (SSSJ).

Through the 1980s, Weiss extended his passionate but non-violent activism to a wide range of Jewish causes. In 1985, he traveled to Bergen-Belsen to protest President Reagan's visit to the Bitburg military cemetery. In 1989, Weiss led demonstrations at the site of a Carmelite convent that had been established at Auschwitz, which, he asserted, threatened to "Christianize the memory of the Holocaust," and which had already desecrated the burial site of over a million murdered Jews. In 1991, he rose to the defense of the Lubavitch community of Crown Heights after anti-Jewish riots broke out there, accusing the mayor of New York and the city's police department of turning a blind eye and allowing the rioters to vent. He went on to found the grassroots organization AMCHA/Coalition for Jewish Concerns, of which he continues to serve as national president.

On issues pertaining to the State of Israel, Weiss was a vocal opponent of any recognition of the Palestinian Liberation Organization or of its leader, Yasir Arafat. He led numerous public demonstrations against the PLO and Arafat in front of the PLO's offices in Manhattan, and was an outspoken critic of the 1993 Oslo Accords. In 1994, he was arrested in Oslo while protesting the awarding of the Nobel Peace Prize to Arafat.

In addition, Weiss emerged as a Modern Orthodox visionary due to his position as congregational rabbi at the Hebrew Institute of Riverdale. Under Weiss' leadership, HIR quickly grew into a formidable synagogue. Weiss taught and practiced a unique inclusive philosophy, throwing open the doors of his Orthodox synagogue to the Orthodox and the non-Orthodox alike, as well as to the physically and mentally challenged. He launched innovative programs to include women in Orthodox practice, establishing a Women's Prayer and Torah Reading Service in 1974, and, in 1999, naming a *madrikhah ruḥanit* (religious mentor) at HIR, the first woman to serve an Orthodox congregation in a quasi-rabbinic role. At the same time, Weiss mentored numerous assistant rabbis and rabbinic interns at HIR, many of whom went on to assume major pulpits of their own.

In 2000 Weiss founded Yeshivat Chovevei Torah (YCT), the Modern and Open Orthodox Rabbinical Seminary. The mission of YCT is to produce rabbis who are classically trained and dedicated to strict halakhic observance, and who are open and inclusive in their construction of Orthodox communities, sensitive to the religious aspirations of women, and welcoming of Jews of all backgrounds.

Weiss is the author of two books, *Principles of Spiritual Activism* (2002), and *Women at Prayer: A Halakhic Analysis of Women's Prayer Groups* (1990).

[Yosef Kanefsky (2nd ed.)]

WEISS, ERNST (1884–1940), Austrian novelist. Born in Bruen, Weiss studied medicine and traveled to the Orient as a ship's doctor. During World War I he served as a medical officer in the Austrian army on the eastern front. After achieving some success as a playwright, he devoted himself to literature, working in Berlin and Munich. A pupil of *Freud and a friend of *Kafka, *Werfel, and *Brod, Weiss was a master of the psychological novel. His basic theme is strife between individuals – son against father, husband against wife, lover against beloved. The heroes are often physicians.

His novels include *Der Kampf* (1916), *Tiere in Ketten* (1918), *Nahar* (1922), *Georg Letham, Arzt und Moerder* (1931), and *Boëtius von Orlamuende* (1928). He also wrote a successful drama, *Tanja* (1920); *Das Versoehnungsfest* (1920), a verse collection; and several volumes of short stories. During the Third Reich, Weiss fled from Vienna to Prague, and from Prague to Paris. Two of his last novels were *Der Gefaengnisarzt oder Die Vaterlosen* (1934) and *Der Verfuehrer* (1938). When the Nazis

entered Paris, the embittered and lonely writer committed suicide. *Der Augenzeuge* (1963), a posthumous novel, describes the ordeal of a Jewish physician whose ex-patient, an unbeloved World War I soldier, becomes the *Fuehrer* of the Third Reich. In 1982 an edition of selected works appeared in 16 volumes, edited by P. Engel and Volker Michels.

[Sol Liptzin]

WEISS, ISAAC HIRSCH (1815–1905), scholar and writer on the history of the Oral Law. Weiss, who was born in Gross-Meseritsch (Velke Mezirici), Moravia, studied in the yeshivot of Trebitsch and Eisenstadt. He subsequently engaged in business, corresponded on halakhic topics with leading rabbis, and for a short time headed a yeshivah in his native town. In 1846 he began publishing Hebrew poems and studies on the Talmud. After losing his wealth, he migrated to Vienna and became a proofreader in a printing press. In 1864 he was appointed lecturer in talmudic literature in the Vienna Bet ha-Midrash founded by A. *Jellinek. Weiss was opposed both to the conservative spirit prevailing in the Hungarian yeshivot and to extreme Reform. His aim was to blend fundamental talmudic condition with secular culture and the critical scientific method. His moderate position aroused against him not only the anger of the rabbis of the older generation and the Orthodox, but also the criticism of the Reformers. He was opposed to the Ḥibbat Zion movement and to the idea of settling Ereẓ Israel, regarding them as dangerous since they accorded with the view of the antisemites that there was no place for Jews in Europe. In his opinion the nationhood of Jews consisted of their Torah and religion, and they must await in exile the redemption of Heaven. On the other hand he understood the importance of the Hebrew language and wrote his compositions in it.

Weiss' scholarly work was wholly devoted to the study of the Oral Law. He published two **midreshei-halakhah* with introductions and notes: the **Sifra* (1862) and the *Mekhilta* (1865), and wrote a grammar book, *Mishpat Leshon ha-Mishnah* (1867). He published many articles, some of which appeared in periodicals which he founded and edited (both *Beit ha-Midrash* (1865–66) and *Beit Talmud* (1881–86; founded jointly with M. *Friedmann)).

Weiss' largest and most important work is the five-volume *Dor Dor ve-Dorshav* (1871–91). This work, in which he described the history of the Oral Law from its beginning (before the Written Law) until after the expulsion from Spain, deals not only with the sequence of the *halakhah*, but also with the development of the *aggadah*, with the history of talmudic and rabbinic literature and with the character traits of important sages. From his critical approach to the sources, Weiss understood the development of the *halakhah* and its historical background. Into this vast amount of material Weiss brought system and order without multiplying small details. The work is distinguished by its picturesque and fluent language and by its vivid descriptions. At times, however, there are errors in his conclusions and it is also tendentious. Weiss, who belonged to the *Haskalah generation, frequently imposed his own view upon the sources and described the characters of scholars and works in accordance with his own views. Sometimes he drew general conclusions from particular points or concepts without properly examining the material. N. *Krochmal's *Moreh Nevukhei ha-Zeman* gave Weiss the impetus to write this work. He also transferred from the domain of history to that of rabbinic literature, though without justification, the view of Krochmal that a period of decline in Jewish history began from the 13th century. In its time *Dor Dor ve-Dorshav*, which was published a number of times and had a large circulation, particularly in eastern Europe, exercised great influence. However, there were also among the scholars of the older generation radical opponents who wrote works critical of it, some of them attacking Weiss personally. (The most important of his critics was Isaac *Halevy in his *Dorot ha-Rishonim*.) Despite all its faults – or perhaps just because of them – its contribution to the study of the Talmud was great. Its very composition was audacious, and nothing similar has

subsequently been written. "There are things which Weiss completely demolished; and there are also things which he built permanently" (L. Ginzberg). Weiss also composed an autobiography with the title *Zikhronotai* (1895); it appeared in serial form in *Genazim* (1, 15–53 (1961)) with an introduction and notes by G. Kressel.

[Moshe David Herr]

WEISS, ISAAC JACOB (1902–1989), rabbinical scholar. Born in Dolina, Poland, Weiss studied in various yeshivot and became head of the Yeshivah of Munkacs (Mukachevo; then Czechoslovakia, now Soviet Ukraine), at the age of 20. In 1929 he was appointed *dayyan* of the important Jewish community of *Oradea.

During World War II, he and his family escaped deportation and found refuge in Romania. Returning after the war, he became the spiritual leader of what was left of the community and took a prominent part in its reconstruction. In 1949 he immigrated to Britain where he was appointed senior *dayyan* of the Manchester and Salford Jewish Community, and was soon recognized as an outstanding halakhic authority. His first halakhic work, *Divrei Yiẓhak*, appeared in 1941. From 1955 successive volumes of his responsa (*Minhat Yiẓḥak*) began to appear, and a six-volume edition was published in Jerusalem (1973–75), including homiletic material, which also appeared in a separate volume under the same title. An appendix to the first volume of the second edition, titled *Pirsumei Nisa* (pp. 265 ff.), gives a moving description of life under the Nazi-dominated Hungarian regime and of his miraculous escape into Romania. In 1968 Weiss was appointed head of the *bet din* of the ultra-Orthodox Ashkenazi community (*Edah Ḥaredit*) of Jerusalem.

[Alexander Carlebach]

WEISS, JIŘÍ (1913–2004), Czechoslovak film director. Weiss made documentaries and won an international prize in 1934 at the Venice Biennale and the Czechoslovak Stage prize in 1937. During World War II, he made films for the exiled Czechoslovak government in London. He returned to Prague in 1945 and won the State film prize for the historical picture *Vstanou noví bojovníci* ("New Fighters Will Rise," 1951) a film on coal miners without professional actors. He also won the Critics Prize, Berlin, for *31 ve stínu* ("31 Degrees in the Shade," 1965). His best film, *Romeo, Julie a tma* (1961) was based on an anti-Nazi novel by Jan Očenášek. In 1966 he made *Razda po nazdem* ("Murder Czech Style"). After the Soviet invasion in 1968 he fled the country, returning in 1989 to make *Martha und Ich*, his first film in 23 years. In the interval he lived in the United States, teaching at Hunter College, New York, and Santa Barbara, Calif., and writing two plays and a volume of memoirs.

BIBLIOGRAPHY: R. Bergen, Obituary, in: *The Guardian* (May 27, 2004).

WEISS, JOSEPH G. (1918–1969), researcher of Ḥasidism and Jewish mysticism. Weiss was born in Budapest, Hungary, to a *Neologist family. In 1939 he immigrated to Palestine and studied medieval Jewish-Spanish literature at The Hebrew University of Jerusalem. Under the influence of Gershom *Scholem he changed his field of interest to Jewish mysticism and specialized in the doctrines of Rabbi *Naḥman of Bratslav. In 1951 he immigrated to England. He studied and taught in Oxford, Leeds, Manchester, and London, where he stayed for the rest of his life. From 1959 Weiss was the head of the Institute of Jewish Studies and, later on, also a professor at the University College London, as well as editor of the *Journal of Jewish Studies*. Throughout his life Weiss maintained a close and complex relationship with his teacher Gershom Scholem, and was considered by Scholem as one of his closest and most talented pupils. The results of Weiss' works in the field of research of Bratslav Ḥasidism and the Ḥasidic Movement in general, published in many articles, were innovative and influenced by his unique personality. He had an existential view of the figure and doctrines of Rabbi Naḥman ("*Ha-Kushya be-Torat Rabbi Naḥman*," in: *Alei Ayin* (1952)), which changed over time to psychological and mythological analysis ("*Iyyunim bi-Tefisato ha-Aẓmit shel R. Nahman*," in: *Tarbiz* (1958)). In this article he emphasized the notion that all the writings of Rabbi Naḥman, especially his stories, are actually a mythological autobiography of Rabbi Naḥman himself, and the figures mentioned in the texts are reflections of his tormented personality. Weiss' work was collected after his death in a Hebrew volume *Meḥkarim be-Ḥasidut Braslev* (1974), ed. by M. Piekarz, and in *Studies in Eastern European Jewish Mysticism* (1985, 1997), ed. by D. Goldstein.

Heller Wilensky, in: *ibid.*, 10–41; J. Dan, in: *Studies in East European Jewish Mysticism and Hasidism* (1997), ix–xx

[Noam Zadoff (2nd ed.)]

WEISS, JOSEPH JOSHUA (1907–1972), British radiation chemist. Weiss was head of the chemistry department in the Textile Institute, Sorau, Germany (1928–30) and worked at the Kaiser Wilhelm Institute for Physical Chemistry, Berlin-Dahlem (1930–33) and then at University College, London (1934–39). He was professor of radiation chemistry at the University of Newcastle (1956). Weiss was an authority on chemical reactions induced by atomic radiations, particularly gamma rays.

WEISS, JOSEPH MEIR (1838–1909), Hungarian rabbi and author. Weiss was born in Munkacz (Mukachevo), where his father Samuel Ẓevi was the head of the *bet din*. He studied under his uncle Yiẓḥak Izak Weiss in the small town of Svalyava (now in the Ukraine), later at the yeshivah of Meir Eisenstadt

and his son in Ungvar, and subsequently in the yeshivah of Shmelkel Klein in Nagyszőllös (Vinogradov). After his marriage he conducted a yeshivah in Brusa, Turkey. On the death of his wife he returned to his parents' home in Munkacz. After his remarriage, he stayed with his father-in-law. Weiss was an adherent of the ḥasidic rabbi Isaac Izak Eichenstein of Zydaczow (Galicia), whom he considered to be his teacher in *Kabbalah, and with whom he stayed for a time. After Eichenstein's death many of his Ḥasidim regarded Weiss as his successor and began to attend upon him frequently in great numbers. He also visited Ḥayyim Halberstam, the ḥasidic rabbi of Zanz, whose authority he accepted. He became the founder of the ḥasidic dynasty of *Spinka, which combines the characteristics of those of Zydaczow and Zanz. Many legends and remarkable stories circulated about him, some of which are given in the *Pe'er Yosef*, and he was the author of *Imrei Yosef*, a work on the Pentateuch. He also published *Likkutei Torah ve-ha-Shas* of his teacher and uncle, Yiẓḥak Izak of Zydaczow.

[Samuel Weingarten-Hakohen]

WEISS, MANFRÉD (1857–1922), industrialist and a pioneer of industry in Hungary. Born in Pest, Weiss founded, together with his brother Berthold, the first canning factory in Hungary, which was later enlarged and converted into the armaments factory at Csepel, a suburb of Budapest. The latter enterprise was capable of supplying all the armaments of the Hapsburg Empire in the event of war, and during World War I, 30,000 workers were employed in it. After Hungary's defeat in World War I, Weiss began to manufacture household appliances, agricultural machines, and motorcars. He was the founder of the national union of Hungarian industrialists (GYOSZ) and was also involved in Jewish public life, founding several charitable institutions, among them a Jewish maternity home (named after his wife), and a hospital for chronic diseases. He also fostered such Jewish public activities as the national council for the preparation of a united Jewish autonomy (1912), which included both *Neologist and Orthodox members.

[Jeno Zsoldos]

WEISS, MEIR (1902–1998), Bible scholar. Born in Budapest, he became a rabbi and received a doctorate from the Royal Science University of Hungary in Semitic linguistics, history of the Ancient Near East, and Roman history. He immigrated to Israel in 1945 and worked as a teacher and principal in various schools. From 1957 he lectured in Bible at Bar-Ilan University and from 1960 at The Hebrew University, where he became a professor in 1972. He was a pioneer among modern biblicists in his holistic appreciation of each book for its own sake; he published collections of articles and a commentary on Job. In 1990 he received the Israel Prize for Jewish studies. Among his writings are *Ha-Mikra ki-Demuto* (1967, 1987); *The Story of Job's Beginning* (1983); *Mikra'ot ke-Havanatam* (collected essays; 1987); *Sefer Amos* (1992); *Emunot ve-De'ot be-Mizmorei Tehillim* (2001).

[Fern Lee Seckbach]

WEISS, MELVYN I. (1935–), U.S. lawyer. Born in the Bronx, N.Y., and educated at City College's Baruch School and New York University Law School, Melvyn Irwin Weiss practiced law in New York while building his firm, Milberg Weiss Bershad Hynes & Lerach, into the country's premier securities class-action law firm. Its lawyers became corporate America's most aggressive and nettlesome private legal adversaries. Weiss embodied one of Wall Street's worst nightmares: the shareholder lawsuit. He was one of the first to test a 1966 law that permitted them, and he became dean of the practice. Along the way, he forced Wall Street to be more accountable to investors. He won nearly $30 billion from more than 1,000 companies, including Prudential and Drexel Burnham Lambert as well as Charles Keating's failed savings and loan empire. His later targets included several public investment banks and Enron, the energy company that bilked states and others with false companies. Weiss also earned the enmity of the accounting profession for his long-standing accusations of laxity in corporate oversight, and accompanying lawsuits. After working together for nearly three decades Weiss and one of his partners, William S. Lerach, parted bitterly as both came under investigation by Federal prosecutors. Weiss was honored many times, and his awards included the Anti-Defamation League humanitarian award, the United Jewish Appeal's Proskauer award, and the B'nai B'rith of Argentina Dignity and Justice Award. He served as a director and member of the executive committee of the Israel Policy Forum and the American Jewish Congress.

[Stewart Kampel (2nd ed.)]

WEISS, PAUL (1901–2002), U.S. philosopher. Weiss was born in New York and studied under Morris Raphael *Cohen. He received his Ph.D. from Harvard University in 1929, where he studied with philosopher Alfred North Whitehead. He lectured for a year at Harvard and Radcliffe and then taught at Bryn Mawr. Weiss began as a logician and later went into metaphysics, art, and aesthetics. In 1946 he was the first Jew to be appointed to the faculty of the undergraduate college at Yale, and from 1963 he was professor until he retired in 1969 as professor emeritus. In 1947 he founded the Metaphysical Society of America and its academic journal *The Review of Metaphysics*, which he edited until 1964. Through his teaching and writing Weiss was influential in the revival of interest in metaphysics in the United States and played an important role in the Peirce Society and the Metaphysical Society of America. Together with Charles Hartshorne he edited *The Collected Papers of C.S. Peirce*. He was active in Jewish affairs.

After his retirement from Yale, Weiss began to challenge the issue of age discrimination. He was offered a chair at Fordham University, but it was later revoked because he was too old (69). Weiss sued the university in 1971 for age discrimination but lost the controversial $1 million suit. Again, after having taught for many years as the Heffer Visiting Professor of Philosophy of Catholic University in Washington, he discovered that the university's refusal to renew his contract was due to his advanced age. After an official inquiry into the matter by the Equal Opportunity Commission, the university reinstated him for two more years, after which he retired. Weiss was elected to the Library of Living Philosophers, which published *The Philosophy of Paul Weiss* in 1995 as part of a series of volumes devoted to influential philosophers.

The man who staunchly fought against age discrimination lived to be 101.

Weiss's major works include *Reality* (1938); *Nature and Man* (1947); *Man's Freedom* (1950); *Modes of Being* (1958); *Nine Basic Arts*; and *The World of Art* (both 1961); *Religion and Art* (1964); *The God We Seek* (1964); *Making of Men* (1967); *First Considerations* (1977); *You, I, and the Others* (1980); *Privacy* (1983); *Toward a Perfected State* (1986); *Being and Other Realities* (1995); *Emphatics* (2000); and *Surrogates* (2002).

[Richard H. Popkin / Ruth Beloff (2nd ed.)]

WEISS, PETER (1916–1982), German playwright and author. A half-Jew, Weiss, who was born near Berlin, left Germany in 1934, spending two years in England and two more in Prague, before settling in Sweden in 1939. There he made his career as a painter, film producer, and writer. At first he wrote stories such as *Der Schatten des Koerpers des Kutschers* (1960) and *Abschied von den Eltern* (1961; *Leavetaking*, 1966), but broadened his scope in the novel, *Fluchtpunkt* (1962; *Vanishing Point*, 1966; together with *Leavetaking* as *Exile*, 1968). This last is an autobiographical work of passionate intensity covering the career and successive exiles of the hero from the age of 18 until his 30th year. The book reveals the young art student's rebellion against middle-class conformity, and the anguish of a Jewish manufacturer's son who, on his mother's side, belongs to the nation of the persecutor. As a dramatist, Weiss gained international fame with his play, *Die Verfolgung und Ermordung Jean Paul Marats …* (1964; *The Persecution and Assassination of Jean-Paul Marat as Performed by the Inmates of the Asylum of Charenton under the Direction of the Marquis de Sade*, 1965). In his *Die Ermittlung* (1965; *The Investigation*, 1966), Weiss made use of the documentation produced at the Frankfurt trial of the Nazi war criminals responsible for the brutalities at Auschwitz.

His other works include *Der Gesang vom lusitanischen Popanz* ("Song of the Lusitanian Bogey," 1966), *Diskurs ueber die Vorgeschichte und Verlauf des lang andauernden Befreiungskrieges in Viet Nam* (1968), and, in Swedish, *Sangen om Utysket* ("The Song of the Scarecrow," 1968), and *Trotskij i exil* ("Trotsky in Exile," 1970).

BIBLIOGRAPHY: L. Kahn, *Mirrors of the Jewish Mind* (1968), 232–6.

WEISS, SAMSON (1910–1990), U.S. rabbi and Orthodox leader. Born in Emden, Germany, Weiss received his rabbinical diploma at the yeshivah of Mir. He received his Ph.D. summa cum laude at Dorpat University, Estonia, after studying at the universities of Breslau, Berlin, and Zurich. He headed the Hebrew department of the Jewish teachers' college in Wuerzburg, Germany, before immigrating to the United States in 1938. After teaching at the Ner Israel Yeshivah in Baltimore (1938–40), Weiss moved to Detroit to direct Yeshivath Beth Yehudah in that city (1941–44). He moved to New York in 1944 where he became rabbi of Congregation Orach Chaim and organized *Torah Umesorah, a national association for the promotion of Hebrew day-school education. In 1945 he founded and became director of Young Israel's Institute for Jewish Studies and two years later was made director of the National Council of *Young Israel, serving in this position until 1956, when he became executive vice president of the *Union of Orthodox Jewish Congregations of America. Weiss resigned from the latter position in 1972 to settle in Israel. He maintained his position as professor of Jewish philosophy at Touro College and was first chairman of the Department for Judaica Studies at Touro.

WEISS, SAMUEL ARTHUR (1902–1977), U.S. congressman and judge. Weiss, born in Krotowica, Poland, went to the United States as an infant and was educated at Duquesne University (1927). He played football while in college, retaining a devotion to athletics throughout his subsequent career. Admitted to the Pennsylvania bar in 1927, he organized a private practice in Pittsburgh. He was elected to the state legislature as a Democrat in 1934 and served there from 1935 to 1939. Weiss represented the 31st Congressional District in the U.S. House of Representatives from 1941 to 1946, the first Jew elected by the district. His congressional activities reflected a continuing interest in Jewish matters, as well as in promoting physical fitness. He resigned from Congress when he was elected judge of the Allegheny County Court of Common Pleas, sitting on that bench from 1946 to 1967.

He was a referee for the National Football League from 1942 to 1954 and officiated in collegiate football as well. Long associated with B'nai B'rith in his home state, Weiss served as national vice president from 1949 to 1967. He was tri-state regional chairman of the United Jewish Appeal from the 1950s.

WEISS, YAACOV (1924–1947), Jew executed by the British in Palestine. Weiss was born in Nove Zamky, Czechoslovakia, and joined the local Betar as a boy of ten. In 1945 he was apprehended in attempting to enter Ereẓ Israel "illegally" and was imprisoned in Athlit. On his release he joined the IẒL and

took part in many of its operations, the last being the break into Acre prison when, with Avshalom Ḥaviv and Meir Nakar, he was captured, sentenced to death, and hanged.

WEISSBERG, ISAAC JACOB (1840–1904), Hebrew writer and linguist. He was born in Polonka in Minsk district and contributed to various publications, including **Ha-Meliz, *Ha-Maggid*, and *Ha-Asif. He opposed both modern Hebrew style, because of the linguistic innovations it contained, and the infiltration of European literary movements into Hebrew literature. His own style is biblical and florid.

He collected and published the letters of J.L. *Gordon (2 vols., 1894), the letters of I.B. *Levinsohn to Dr. R. Kalischer (1896), and the letters of Isaiah Tugendhold (*Divrei Yeshayah ben Ya'akov Tugendhold*, 1896). His works include *Ga'on ve-Shivro* (1883); *She'elat ha-Nashim al pi ha-Talmud* ("The Question of Women According to the Talmud," 1890); *Dalet Tekufot le-Divrei ha-Yamim li-Venei Yisrael* ("Four Periods in the History of the Children of Israel," 1898); and *Mishlei Kadmonim*, ("Ancient Proverbs," 1900).

[Gedalyah Elkoshi]

WEISSBERG (Veysberg), JULIA LAZAREVNA (1878/80–1942), composer and critic. Born in Orenburg, Russia, she studied at the historico-philological faculty of the Women's University and graduated from St. Petersburg Conservatory in 1912, where she studied composition under Rimsky-Korsakov, whose son, Andrei, she later married. From 1912 to 1914 she studied in Berlin with Humperdinck and Reger. From 1915 to 1917 she was coeditor of the periodical *Muzykalny Sovremennik*. Not evacuated from German Nazi-blockaded Leningrad, she perished during the siege. Her compositions were often lyrical and sometimes in an exotic vein. She also wrote music for children. Among her works were operas, including *Rusalochka* ("The Little Mermaid"; 1923), *Gusi-lebedi* ("Geese-Swans"; 1937) and others; a cantata for chorus and orchestra *The Twelve* (1925); a symphonic poem, *At Night* (1935), and songs.

BIBLIOGRAPHY: NG^2; M.F. Gnesin, *Moi vospominania o N.A. Rimskom-Korsakove* ("Thoughts and Reminiscences on Rimsky-Korsakov"; 1956), incl. Weissberg's writings and correspondence with A.K. Glazunov.

[Marina Rizarev (2nd ed.)]

WEISSBERG, MEIR (Max; 1856–1930), scholar and historian of modern Hebrew literature. Born at Bukaczowce in Galicia, he was appointed teacher in the public school system in Galicia in 1884, became headmaster of the Stanislav public school and, from 1888 until 1925, served as instructor in Jewish religion and the German language at the government high school of the city. He devoted himself to the study of Hebrew Haskalah literature, especially that of Galicia with which, being one of its products, he was thoroughly familiar.

He published a large number of essays on the subject in German, Polish, and Hebrew. His principal works are: *Die neuhebraeische Aufklaerungsliteratur in Galizien* (1898); *Wo-elwel Zbarazer, der fahrende Saenger des galizisch-juedischen Humanismus* (1909).

[Gedalyah Elkoshi]

WEISSENBERG, ALEXIS (**Sigismond**; 1929–), pianist. Weissenberg was born in Sofia. He studied piano with his mother and then with Pancho Vladiguerov. During the German occupation he and his mother were briefly confined in a concentration camp. He was taken to Ereẓ Israel in 1945, where he gave his first performance with an orchestra. In 1946, he entered the Juilliard School of Music as a pupil of Olga Samaroff, and also studied with Arthur *Schnabel and Wanda *Landowska. Having won the Leventritt Award (1947), he made his New York debut with G. *Szell and the New York Philharmonic, and thereafter commenced his American, and later (1951) his European career. He settled in France and in the early 1950s retired from the concert hall in order to study and teach (at the Accademia Chigiana, Siena, where his pupils included Rafael Orozco); he returned only in 1966, with performances in Berlin. From that time he refashioned an important international career as a virtuoso pianist of great (if sometimes eccentric) prowess, noted for his interpretations of Romantic music.

[Max Loppert / Naama Ramot (2nd ed.)]

WEISSENBERG, ISAAC MEIR (**Itshe**; 1881–1938), Yiddish novelist and dramatist. Weissenberg was born in Zelechow, Poland, and began his literary career in 1904 as a disciple of Y.L. *Peretz, with realistic tales of small town life in Poland. In his earliest story, "*Dor Hoylekh ve-Dor Bo*" ("One Generation Passeth Away and Another Generation Cometh," 1904), he depicted an undernourished father who collapsed in a shoe factory, his son being expected to replace him as an object of exploitation. In "*Di Meshugene in Dorf*" ("The Village Madwomen," 1905), he showed a young girl desperately resisting her mother's efforts to compel her submission to the unloved husband imposed on her. His best work of fiction was his novella *A Shtetl* ("A Town," 1906), which dealt with the conflict between the older Jewish generation, steeped in tradition and following the guidance of religious leaders, and the rising generation which was receptive to new ideas, especially Bundism and Socialism, and which relied more upon pistols

than upon the Psalms. In Weissenberg's stories, Jewish workers were beginning to become class-conscious, engaging in strikes, organizing demonstrations, rebelling against Czarist officials and local bosses.

Weissenberg edited *Yudishe Zamlbikher* (1918–20) the literary organ of the Yiddish intellectuals of Warsaw after the death of Peretz. As editor and critic he was an embattled figure, engaging in constant polemics with the outstanding Yiddish writers, but also encouraging young novelists, such as Oser *Warszawski and Simon Horenczyk, to follow in his footsteps and to write in a purely naturalistic style. Weissenberg visited the U.S. in 1923, but returned to Warsaw to continue the struggle for his ultra-realistic literary approach. His dramas, praised by the discerning critic *Baal-Makhshoves, did not meet with general acclaim. His translation of the *Thousand and One Nights* in six volumes (*Tauzent un Eyn Nakht*, 1922) achieved considerable popularity. A full list of his works appears in his *Geklibene Verk* (1930).

[Sol Liptzin]

WEISSENBERG, SAMUEL ABRAMOVICH (1867–1928), Russian physician and anthropologist. He was born in Elizavetgrad in the Ukraine. After Cesare *Lombroso, Weissenberg was perhaps the most distinguished of that first generation of Jewish anthropologists who became interested in Jewish ethnic and physical characteristics. For his anthropometric research on the Jews of southern Russia, which was published in *Archiv fuer Anthropologie* in 1895, he was awarded a gold medal by the Moscow Society for Natural Sciences. His research culminated in his book *Wachstum des Menschen nach Alter, Geschlecht und Rasse* ("Growth of Man as Related to Age, Sex, and Race," 1911). Weissenberg traveled extensively, amassing material for anthropological studies of the Jews of Palestine, Syria, Iraq, North Africa, and Yemen, as well as of various Karaite communities. Many of his essays on Jewish folklore, proverbs, and folk music were published in the influential journal *Globus*.

[Ephraim Fischoff]

WEISSER, ALBERT (1918–1982), U.S. musicologist, composer, editor, and choral conductor. Born in New York City of Russian-Jewish parentage, he attended high school in Queens and sang in the choir of his uncle, the renowned cantor Joshua S. *Weisser. He studied piano with Isaiah Seligman and played with various dance and jazz bands prior to entering New York University in 1940. In 1942 he was drafted into the U.S. Army, and later earned a Purple Heart for wounds received during the Normandy invasion. While convalescing in England, he studied privately with composer Ralph Vaughn Williams. He resumed his studies in composition (at NYU) under Miriam Bauer and Philip James. Upon graduating in 1948, he entered the master's program in musicology. Under the guidance of Curt Sachs, he wrote his thesis on "The Jewish National Music in Russia," which was later published as *The Modern Renaissance of Jewish Music: Events and Figures, Eastern Europe and America* (1954). He also studied privately with Lazare *Saminsky, who encouraged his work on the St. Petersburg School. He was music director of Temple Israel (Great Neck) until 1960. He taught at Brooklyn College from 1959 to 1969 and at the Jewish Theological Seminary (New York), where he taught the history of Jewish music and music theory from 1970 until his death. While serving as first president of the newly founded *American Society for Jewish Music (1974–82), he conceived the scholarly journal *Musica Judaica*. He published *Bibliography of Publications and Other Resources on Jewish Music* (1969), and "The Music Division of the Jewish-Ethnographic Expedition in the Name of Baron Horace Guinsbourg (1911–1914)," in *Musica Judaica,* 4 (1981–1982), 1–7.

BIBLIOGRAPHY: I.J. Katz: "In Memoriam: Albert Weisser (1918–1982)," in: *Musica Judaica*, 4 (1981–1982), 87–98 (includes his complete writings and compositions).

[Israel J. Katz (2nd ed.)]

WEISSER (Pilderwasser), JOSHUA (1888–1952), *ḥazzan* and composer. Born in Novaya Ushitsa, Ukraine, Weisser studied with several notable *ḥazzanim*, including Eliezer *Gerovich, before taking his first position as *ḥazzan* in Vinnitsa at the age of 20. He emigrated to the United States in 1914 and officiated in various New York synagogues. Weisser composed music for each synagogue service, including the usually neglected weekday service.

He published several collections of liturgical music, including *Ba'al Tefillah* (2 vols., 1936–40) and *Shirei Beit ha-Keneset* (2 vols., 1951–52). His work *Avodat ha-Ḥazzan* (2 vols., 1943–48) is a valuable reconstruction of the east European cantorial style. Weisser was also active in publishing ḥasidic songs, including those of *Modzhitz and *Ḥabad, and notated the music in S. Zalmanoff (ed.), *Sefer ha-Niggunim*, 1 (1948).

BIBLIOGRAPHY: E. Zaludkowski, *Kult-Treger fun der Yidisher Liturgye* (1930), 279–81; M. Wohlberg, in: *Cantors Voice* (Sept. 1952), 2, 7; A. Weisser, *Modern Renaissance of Jewish Music* (1954), 144–5; P. Kavon, in: *Journal of Synagogue Music* (Jan., 1968), 16–42.

WEISSKOPF, VICTOR F. (1908–2002), physicist. He was born and educated in Vienna before gaining his Ph.D. in physics at the University of Goettingen under the supervision of Eugene *Wigner (1931). He worked with Erwin Schroedinger and Werner Heisenberg at the University of Berlin (1931–32) and in Niels *Bohr's laboratory in Copenhagen (1932–33), supported by a Rockefeller scholarship and supplemented by a stipend from the Carlsberg brewery. He next worked with Wolf-

gang *Pauli at the Federal Institute of Technology in Zurich (1934–36). Aware that the rise of Nazism precluded a career in Germany, Weisskopf went first to Kharkov, Ukraine (then in the Soviet Union), where he worked with Lev *Landau. After eight months he was offered both a position at the University of Rochester, New York, and a better-paid post in the University of Kiev, Ukraine. His impressions of the Soviet Union persuaded him to move to Rochester (1937). In 1944 he joined the Manhattan Project in Los Alamos as a group leader in the Theoretical Division. After World War II Weisskopf joined the Massachusetts Institute of Technology (MIT) (1946–60) before moving to the Centre Européenne pour la Recherche Nucleaire (CERN) in Geneva, initially as one of five directors but as director-general after one year (1961–65). He returned to MIT as head of the department of physics (1967–73), but he taught in Geneva every summer. He continued his research after 1973. Weisskopf was a theoretician who entered the then very small and illustrious coterie of nuclear physicists. He was admired for his ability to reformulate abstruse mathematical concepts in comprehensible physical language. In the 1930s he was concerned with the application of quantum mechanics to electromagnetic fields and devised mathematical solutions that accelerated progress in this contentious subject. His main contribution to the Manhattan Project was to calculate the effects of nuclear fission explosions, but he also worked on the peaceful applications of nuclear energy. In Geneva, despite the physical problems of a hip injury sustained in a traffic accident, he presided over the introduction of the challenging and ultimately highly successful program in accelerator physics designed to study the interaction of subatomic particles colliding at high velocity. Weisskopf was renowned for his helpfulness to his colleagues, regardless of their status. His books for students and laymen were highly influential, and *Knowledge and Wonder: The Natural World as Man Knows It* (1962) was selected as the science book of the year for young people. Weisskopf's concerns over nuclear weapons began in 1944, and he was a founder member of the Federation of Atomic Scientists. These concerns were heightened when he witnessed the Trinity test, and by the Hiroshima and Nagasaki bombs. He was present at the first Pugwash meeting (1957) and prominent in the subsequent organization. His honors included membership in the U.S. National Academy of Sciences and the (70-member) Pontifical Academy of Sciences (1975). His awards included the Max Planck Medal (1956), the U.S. National Medal of Science (1980), the Wolf Prize in physics (1981), the Oppenheimer Medal (1983), and the Public Welfare Medal of the U.S. National Academy of Sciences (1991). He was also a Mozart scholar.

[Michael Denman (2nd ed.)]

WEISSLER, BARRY and **FRAN**, U.S. theatrical producers. Fran Weissler majored in drama at New York University, while her husband, she said, dropped out of Rutgers Law School after a year. Both started out in retailing but formed the National Artists Management Company in 1970 to bring classic plays to children. Beginning in 1982 with *Othello,* the Weisslers produced 19 plays on Broadway through to a revival of *Sweet Charity* in 2005. Their presentations on Broadway, including *Medea* (1982), *Your Arms Too Short to Box With God* (1982), *Zorba* (1983), *Cabaret* (1987), *Macbeth* (1988), *Gypsy* (1989), *Cat on a Hot Tin Roof* (1990), *Fiddler on the Roof* (1990), *Grease* (1994), and *Chicago* (1996), which ran for 10 years as a revival. They received five Tony awards, for *Chicago, Othello, Fiddler on the Roof, Gypsy,* and *Annie Get Your Gun* (1999).

[Stewart Kampel (2nd ed.)]

WEISSMAN, BARUCH MORDECAI (1887–1966), Russian Yiddish and Hebrew writer. Weissman was born in Slovechno, Ukraine, where his father was a poor farmer. Before and during World War I he taught Hebrew in Jewish religious schools in Bessarabia, but in 1917 he lived in Odessa where he became friendly with Ḥayyim Naḥman *Bialik and Ahad *Ha-Am. He abandoned an attempt to leave secretly for Ereẓ Israel via Romania in 1919, fearing that the authorities might not let his family join him, and in the mid-1920s he moved to Kiev where he taught in Jewish schools. Having become an ardent advocate of the Soviet regime, he published articles in Soviet periodicals in Yiddish, mainly condemning the Jewish religion. In 1933 he went with his family to Birobidzhan, where he taught at a secondary pedagogical school and also contributed to the local *Birobidzhaner Shtern*, but returned to Kiev in the late 1930s. Under the influence of the state-inspired antisemitism of the Stalin regime in 1937–38, the Holocaust, and especially after the establishment of the State of Israel, however, Weissman came to terms with the Jewish religion again. In 1952 he began writing a diary in Hebrew, which he continued until September 1956. Some of the entries are in the form of letters to the future reader. Toward the end of 1955 they started reaching Israel by devious ways and were published in the newspaper *Davar* under the title *El Aḥi bi-Medinat Yisrael* ("To my Brother in the State of Israel") and were also broadcast. In 1957 a limited edition of a book with the same title was published containing extracts from the diary "by an anonymous Soviet Jew," without the author's name, and his authorship was revealed only after his death. He was nevertheless arrested in 1957 and sentenced to five years imprisonment in labor camps on charges of Zionist activity. In 1960 he was released on account of old age and poor health, and settled in Boyarka, near Kiev. A posthumous edition of Weissman's diary, which included only part of the 1,300 manuscript pages, was published in 1973 under the title *Yoman Maḥteret Ivri* ("Hebrew Underground Diary"). The diary is further evidence of the continuing tradition of the literary activities in Hebrew in the U.S.S.R., decades after it was forced underground by Soviet authorities. Simple and unsophisticated in form, written in the Hebrew style of the beginning of the 20th century, the diary is a moving human document full of sorrow for the cultural traditions of the Jewish people, ruthlessly persecuted in the U.S.S.R., imbued with indignation and sarcasm directed against those responsible for the state antisemitism in

the U.S.S.R., and filled with a profound love for Israel which he saw as the sole assurance of Jewish survival.

[Michael Zand (2nd ed.)]

WEISSMANDEL, MICHAEL DOV (1903–1956), rabbi and Jewish resistance leader. An Orthodox rabbi, son-in-law and close associate of Rabbi Unger of Nitra, Weissmandel began his public and social activities during the Nazi period when Jews were deported from Slovakia, engaging non-Jewish emissaries to send food, clothing, and money to the deportees temporarily "settled" in the territories of the General Government in Poland. Weissmandel belonged to the core of the underground "Working Group" and was the initiator of the *Europa Plan to rescue the remnants of European Jewry, seeking to bribe Nazi officials to forestall the deportation of Jews. When an initial $20,000 ransom to Dieter Wisliceny, Eichmann's deputy in Slovakia, which he reported to his superiors, halted a limited deportation, the Working Group and Weissmandel in particular thought they had hit upon a formula that might save Jews. When the vast sums promised were not forthcoming from the West, most particularly from the *American Jewish Joint Distribution Committee, which was prohibited by law from transmitting funds behind enemy lines during wartime, Weissmandel turned bitter and interpreted the slow responses that he was receiving from Switzerland as indifference born of assimilation. In a remarkable and extraordinary situation, he worked closely with a woman Zionist leader, Gisi *Fleischman, in a rare display of cooperation. Fleischmann and Unger were cousins and this certainly helped mediate the vast political divide. His letters, addressed to the Jewish leadership of the free world "in the style of the Marranos," castigated indifference and begged for action to save the Jewish remnants from extermination. He was frantic and he communicated this both in his letters and his postwar memoirs. He sought $200,000 as a down payment on a $2 million ransom. In April 1944, he warned Hungarian Jewry of the impending deportations. He was part of the group that received the report from Rudolf Vrba and Alfred Wetzler, who had escaped from Auschwitz on April 7 and reported both on the activities of Auschwitz and of the plans for the impending arrival of Hungarian Jews. On May 27 two more Jews, Czeslaw Mordowicz and Arnost Rosin, escaped; their report was direct evidence of what was happening to Hungarian Jews (437,000 Jews were deported on 147 trains from May 15 to July 8, 1944, mostly to Auschwitz, where most were gassed upon arrival). The Working Group passed on this information to world leaders, the government of Slovakia, and the Catholic Church. Weissmandel implored world Jewish leaders to demand that the Allies bomb the murder installations at Auschwitz. In the autumn of 1944, the deportations from Slovakia resumed. He was deported with his family but jumped from the transport on its way to Auschwitz. His wife and children were killed at Auschwitz. Later he was on the Kasztner train that went to Switzerland. After the war he lived in the United States and reestablished the Nitra Yeshiva in Mount Kisco, New York, where he died. His book of memoirs, *Min ha-Meẓẓar* ("From the Depths"), was published posthumously in 1960. It is a bitter, condemnatory work, powerful and furious. It is also a problematic work for historians as it is difficult to tell what he wrote and what was written by his brother and students after he died.

WEISSMANN, ADOLF (1873–1929), music critic and writer. Born in Rosenberg, Silesia, Weissmann settled in Berlin, and became music critic of the *Berliner Tageblatt* and the *Berliner Zeitung am Mittag*. He died in Haifa while on a lecture tour. His lively and original books include studies of Bizet, Chopin, Verdi, Puccini, *Die Musik in der Weltkrise* (1922; *The Problems of Modern Music*, 1925), *Die Musik der Sinne* (1925), and *Die Entgoetterung der Musik* (1928; *Music Come to Earth*, 1930).

WEISS-ROSMARIN, TRUDE (1908–1989), U.S. editor, scholar, author, lecturer. Born in Frankfurt am Main, she was the daughter of Jacob Weiss, a prosperous wine merchant, and Celestine Mulling. Although her parents attended Jewish religious services, they were highly acculturated to German bourgeois life. In Frankfurt, Weiss-Rosmarin studied at the Freie Jüdische Lehrhaus established by Franz *Rosenzweig. She was a university student in Berlin, Leipzig, and Würzburg, where she received her doctorate in 1931 in Semitics, archaeology, and philosophy. Her dissertation, "Mention of Arabia and the Arabs in Assyrian-Babylonian Texts" was later published. In 1930 she married Aaron Rosmarin, a Russian Jewish scholar; they immigrated to the United States in 1931 and had one son. Unsuccessful in obtaining a university position in Assyriology, Weiss-Rosmarin established in Philadelphia, under the auspices of Hadassah, the School of the Jewish Woman, modeled on Rosenzweig's Frankfurt Lehrhaus; she served as director from 1933 to 1939. Weiss-Rosmarin designed a rigorous curriculum for Jewish women, based on Hebrew, Yiddish, biblical studies, rabbinic sources, Jewish history, and philosophy. As an intellectual feminist, she hoped that serious education would overcome women's traditional exclusion from Jewish learning. Hadassah withdrew its support in 1936, following disputes with Weiss-Rosmarin, and the school closed in 1939. However, Weiss-Rosmarin and her husband continued publication of the school newsletter, *The Jewish Spectator.* Weiss-Rosmarin became sole editor in 1943, and over the next 40 years the journal became an influential voice for rabbis and Jewish professionals on a wide range of topics. Weiss-Rosmarin was a popular and provocative lecturer; she contributed widely to other publications and she also taught Jewish history at New York University. Her books include *Religion*

of Reason: The Philosophy of Hermann Cohen (1936); *Hebrew Moses: An Answer to Sigmund Freud* (1939); *The Oneg Shabbat Book* (1940); *Jewish Women Through the Ages* (1940); *Jewish Survival* (1949); *Saadia* (1959); and *Jewish Expressions on Jesus: An Anthology* (1977). Weiss-Rosmarin was a national co-chair of education for the Zionist Organization of America and served on the advisory boards of the National Jewish Curriculum Institute and the Jewish Book Council. Her first marriage ended in divorce in 1951; she later married Nissim Sevan. Weiss-Rosmarin moved to Santa Monica, California, in 1978; she died there of cancer. Her papers are in the American Jewish Archives in Cincinnati, Ohio.

WEISZ, MAX (1872–1931), Hungarian rabbi and scholar. Weisz was born in Budapest, where he received rabbinic ordination at the Landesrabbinerschule. He became a rabbi in Pest and professor at the Landesrabbinerschule. A pupil of David *Kaufmann, Weisz did research in Jewish history, history of civilization, and literature. When the Kaufmann library became the property of the Hungarian Academy of Sciences, Weisz was named its archivist.

He prepared the *Katalog der hebraeischen Handschriften und Buecher in der Bibliothek des Prof. Dr. David Kaufmann* (1906), and edited, from this collection, the ritual book *Seder Troyes* by Menahem ben Joseph (in: *Sefer Yovel … Moses Aryeh Bloch* (1905), 97–137, Heb. pt., and in the same year also separately), and an Italian-Jewish *minhag* book from the 13th century (in *Ha-Ẓofeh, le-Ḥokhmat Yisrael*, 13 (1929), 217–45). As a result of his studies of the Kaufmann *genizah*, he published letters he had discovered, the liturgic compositions of a *paytan* he called Samuel (*Seridim me-ha-Genizah*, 1924), geonic texts (in: *Ve-Zot li-Yhudah … li-Khevod … Yehuda Aryeh Blau* (1926), 159–63), and *Festschrift … der … Landesrabbinerschule* (Heb. pt., (1927), 77–97).

[Alexander Scheiber]

WEISZ, VICTOR ("**Vicky**"; 1913–1966), British caricaturist whose incisive drawings and gift for portraying political personalities in mock-heroic attitudes won him a wide following. Born in Berlin of Hungarian parents, he was trained at the Berlin Art School and worked for German newspapers. He immigrated to England in 1935, became attached to the *New Chronicle* in 1941, and later joined the *Daily Mirror.* He was naturalized in 1946. He did much of his best work for the *New Statesman* from 1954, and for the *Evening Standard* from 1958.

He illustrated several books and also published several collections of his work: *Stabs in the Back* (1952); *New Statesman Profiles* (1957); *Vicky's World* (1959); *Vicky Must Go* (1960); *A Selection of "Evening Standard" Cartoons* (1962); and *Home and Abroad* (1964). "Vicky" was one of the most famous political cartoonists in modern Britain. He was termed "the fifth estate of the realm" by Michael Foot, and was responsible for such popular political images as that of Harold Macmillan (British prime minister, 1957–63) as "Super-Mac." In private life, however, Weisz was extremely insecure. He was married four times, suffered from depression, and committed suicide at the age of 52.

WEITER, A. (pseudonym of **Eisik Meir Devenishski**; 1878–1919), editor, political agitator, and Yiddish writer. Born in a village near Vilna, Weiter early joined the revolutionary movement, becoming active in the Jewish Labor *Bund. Imprisoned in 1899 and in 1902–04, he participated in the 1905 Revolution. In 1910 he became the first editor of the Vilna-based Boris Kletzkin Yiddish publishing house. He proposed its strictly non-profit character and aspiration to maximize the author's royalties. In 1912, he was exiled to Siberia, where he remained until the outbreak of the 1917 Revolution. He then lived in Petrograd and Nizhni Novgorod and at the end of 1918 settled in Vilna, where he was shot by the Polish Legionnaires who occupied the city in 1919.

Weiter wrote plays, short stories, and essays. In his early period (1898–1906), most of his writings were of a political nature, but in his second period (1906–19) his plays were free of any political motifs. In his blank-verse play, *Fartog* ("Dawn," 1907), he displayed in symbolic form the moods of the Jewish intellectuals on the eve of the 1905 Russian Revolution. In his second play, *In Fayer* ("In Fire," 1910), Weiter expressed the alienation and loneliness of the younger generation and their longing for a full and creative Jewish life. In his third drama, *Der Shtumer* ("The Mute," 1912), he portrayed the suffering of his generation, whose expectations of a new freedom were not fulfilled. Weiter was one of the first writers to give expression to the estranged Jewish intellectual's longing to return to Jewishness and to his renewed search for Jewish roots and Jewish values.

In 1908, A. Weiter, together with S. Gorelik and Samuel *Niger, edited and published the *Literarishe Monatshriftn*, a journal which became a rallying point for the young writers who believed in a renaissance of Jewish life and letters and a revitalized Jewish culture. Among the works that Weiter translated were Gorki's *My Childhood* and Max Halbe's *In Stream* (together with Z. *Rejzen). Weiter's works were published in a one-volume edition in Vilna (1923), edited, with a full biography, by A.J. Goldshmidt.

[Elias Schulman / Gennady Estraikh (2nd ed.)]

WEITZ, JOSEPH (1890–1972), Hebrew author and a director of the *Jewish National Fund (JNF). Born in Burmel, Volhynia, Weitz went to Ereẓ Israel in 1908. He worked as an agricultural laborer and watchman and in 1911 was one of the founders of the Union of Agricultural Laborers in Ereẓ Israel (Histadrut ha-Po'alim ha-Ḥakla'im be-Ereẓ Yisrael). In 1915 he was appointed manager of the *Sejera farm, and between 1919 and 1932 he was inspector of plant and afforestation in the JNF settlements. From 1932 Weitz was director of the JNF's Land Development Division and, from 1950, a member of its board of directors. In these capacities he played an important role in the acquisition and development of land for the JNF and in the planning of agricultural settlement.

Weitz's literary work is varied and encompasses both Israeli agriculture and children's stories. He is outstanding in his descriptions of the landscape of Israel, which are noteworthy for their lyricism as well as their profound knowledge of the country. He wrote books and pamphlets of belles lettres and on various agricultural and land settlement themes. His principal work is *Yomani ve-Iggerot la-Banim* ("My Diary and My Letters to My Sons," 5 vols., 1965). *Bi-Netiv ha-Hagshamah*, a collection of essays published in 1950 in honor of his 60th birthday, included a biography, a bibliography, and an appraisal of his work. *Adam im Aẓmo* ("Man by Himself") appeared in 1966 in honor of his 75th birthday and includes a bibliography of his writings.

His son RA'ANAN (1913–1998), who was born in Reḥovot, held the posts of the head of the Land Settlement Department of the *Jewish Agency, chairman of the National and University Institute of Agriculture, and head of the Settlement Study Center. Among his works are *Derakheinu ba-Ḥakla'ut u-va-Hityashevut* (1958), *Agriculture and Rural Development in Israel: Projection and Planning* (1963), *Ideology and Farming – Characteristic Variables in the Moshavim* (with D. Solomanica and U. Shaked, 1975), and *The Southern Project, A Proposal for the Development of a Rural Region in the South of Israel* (1975), and numerous publications on agriculture and rural development. In 1973 Weitz was appointed a member of the Council for Higher Education, as well as professor of regional development theory in the School of Social Work, Haifa University, relinquishing the position in 1978 when he was appointed to a similar position at Bar-Ilan University. He lectured on the subject at many international conferences held in Germany, Italy, Brazil, Costa Rica, Venezuela, Mexico, and South Africa. Upon his 70th birthday, friends presented him with the book *Ḥaverim Mesiḥim im Ra'anan* (1983). In 1990 he was awarded the Israel Prize for exemplary lifelong service to society and the State.

Another son, YEḤIAM (1918–1946), who was born at Yavne'el, was killed during the struggle against the British regime while dynamiting the bridge at Achzib in Western Galilee. A book of his letters appeared in 1948 and in 1966, and kibbutz Yeḥi'am in Western Galilee is named for him.

WEITZ, NAPHTALI (1866–1935), physician and *yishuv* leader. Born in Odessa, Weitz was active in the *Ḥovevei Zion movement from 1884. He studied medicine at Kharkov University, where he became a member of a Jewish national student association in 1885. From 1888 Weitz studied at the Sorbonne in Paris. He attended an international conference of Ḥovevei Zion in Paris in 1894 and was elected to the movement's central committee. In 1898, at the request of Baron Edmond de *Rothschild, he and his wife, Hannah, who was also a physician, went to Ereẓ Israel, where Weitz was employed as a physician in the settlements of Upper Galilee and in *Zikhron Ya'akov, and they worked hard to eradicate malaria. In 1907 he moved to Jerusalem, where he practiced medicine in various medical institutions. He was a founder of the Jerusalem Hebrew Gymnasium (high school) and the Bet ha-Am cultural center. As a Russian national, he was deported to Egypt during World War I; there he served on the Refugee Aid Committee and helped found the Zion Mule Corps. When the British conquered Palestine, he was the first to receive a permit to return.

[Israel Klausner]

WEIZMAN, EZER (1924–2005), Israeli air force commander, politician, and seventh president of Israel, member of the Ninth, Eleventh, and Twelfth Knessets. A nephew of Chaim *Weizmann, he was born in Tel Aviv. He learned flying at the Haifa Aviation Club, joined the British Air Force in 1942, obtained his pilot's wings in 1944, and served in Egypt and India. In 1946 he joined the IZL. In 1947 he joined the Haganah's air service, which preceded the establishment of the Israel Air Force of which he was one of the founders. At the beginning of the War of Independence he was sent to Czechoslovakia to learn to fly Messerschmidt planes and fly one of them back to Israel. In the course of the war he participated as a fighter pilot on all fronts, and flew ammunition and supplies to the Negev and to *Gush Etzyon. He was appointed squadron leader in 1949, and in 1950 was named head of operations of the Air Force staff. The following year he attended the RAF Staff College in England and became wing commander in 1953. Weizman was appointed commander of the Israel Air Force in 1958, serving in that position until 1966. During his tour of duty he formulated the air-force strategy that was successfully implemented in the first hours of the Six-Day War of 1967. From 1966 to 1969 Weizman served as head of the Operations Branch in General Headquarters, and was appointed deputy chief of staff with the rank of major general under Chief of Staff Yitzhak *Rabin. When Rabin suffered a 24-hour break-

down at the outbreak of the Six-Day War, he asked Weizman to take command but soon returned to active service. In 1969 Weizman retired from the army, and joined the *Ḥerut Movement. Though not elected to the Seventh Knesset in 1969 he was appointed minister of transportation on behalf of Gaḥal in the second government established by Golda *Meir, resigning from the government, along with other members of Gaḥal, against the background of Meir's willingness to consider the Rogers Plan. From 1971 to 1972 he served as chairman of the Ḥerut movement but resigned over a controversy with Menaḥem *Begin on the distribution of seats in the party's Central Committee. He rejoined the Ḥerut Movement in May 1973. After his son Shaul was wounded in the course of the Yom Kippur War, Weizman started to become more moderate in his approach to the conflict with the Arabs. In the 1977 elections he served as the Likud's campaign manager, and was elected to the Knesset and appointed minister of defense.

He played a major role in the peace process with Egypt, establishing warm relations with Egyptian President Anwar *Sadat and Prime Minister Mustafa Halil. He was a member of the delegation, headed by Begin, which negotiated the Camp David Agreement with Egypt in September 1978, and participated in the negotiations leading up to the Peace Agreement with Egypt in March 1979. He was responsible for the Litani Operation in Lebanon in March 1978 but soon thereafter proposed the establishment of a National Peace Government – an idea rejected by Begin. Weizman became increasingly critical of the government's attitude toward a settlement with the Palestinians and clashed with Ariel *Sharon over his settlement activities. In May 1980 he resigned from the government, allegedly over cuts in the defense budget, but in fact because he disagreed with Begin over the way in which the negotiations on autonomy for the Palestinians were being conducted. In November 1980 he voted against the government in a vote on a motion of no-confidence. As a result he was expelled from the Ḥerut Movement, but refused to relinquish his Knesset seat. From 1980 to 1984 Weizman engaged in business, but before the elections to the Eleventh Knesset in 1984 he decided to form a new party by the name of Yaḥad, which won three seats. Soon after the elections, however, he joined the Alignment, and thus helped tip the balance in favor of the establishment of a National Unity Government based on parity between the two main political blocs and a rotation in the premiership. From 1984 to 1988 Weizman served as minister without portfolio, in charge of Arab affairs. In the government formed by Yitzhak *Shamir in 1988 Weizman was appointed minister of science and technology. However, at the end of 1989 Shamir threatened to fire him from the government because he had had unauthorized contacts with PLO members. After the breakup of the National Unity Government in March 1990 he decided to distance himself from politics, and in February 1992 resigned his Knesset seat, calling upon Shimon *Peres and Yitzhak *Rabin to do the same.

The following year he was elected as Israel's seventh president. He was Israel's most political president, frequently speaking his mind and being criticized for it. When Rabin was prime minister, Weizman was disappointed with the way the peace process with the Syrians was progressing and hoped to meet with President Hafiz al-*Asad in Jerusalem or Damascus, feeling that he had much in common with the Syrian president, since both were presidents, both had been pilots, and both had lost sons in accidents. But Asad did not respond, and Weizman adopted a more rigid position toward Syria. After the Palestinian terrorist attacks in the beginning of 1996, he called for the suspension of talks with the Palestinians. After Binyamin *Netanyahu was elected prime minister he criticized him for the way he was conducting the peace process, and enraged Netanyahu by visiting President Hosni *Mubarak of Egypt to discuss ways of getting the peace process out of the stalemate it had entered. He was also criticized by Yosef Tomi *Lapid for going to see the mentor of Shas, Rabbi Ovadiah *Yosef, to try to convince him to support the peace process. Weizman managed to enrage many women by expressing chauvinist positions regarding the place of women in society, the homosexual community by making homophobic remarks, and many citizens for his frequent refusal to reduce the sentences of prisoners imprisoned for criminal offenses. Nevertheless, due to his charm and sincerity, and his practice of visiting the families of fallen soldiers, and visiting many of the wounded in the hospital, he was extremely popular in the general public, and was viewed by many as "the ultimate Israeli" – for better or for worse. Weizman was elected to a second term as president in 1998, and could have remained president until 2003. However, following a police investigation over alleged improper financial contacts with the French millionaire Eduard Sarousi (the investigation was closed for lack of evidence), and failing health, he decided to resign in July 2000, and retired to his home in Caesarea.

He wrote *On Eagles' Wings: The Personal Story of the Leading Commander of the Israeli Air Force* (1979); *The Battle for Peace* (1981); with Dov Goldstein, *Lekha Shamayim, Lekha Ereẓ* (1993); and *Rut Sof: Biografiyah* (2002).

BIBLIOGRAPHY: S. Eilati (ed.), *Yaḥad Shivtei Yisrael: Rav Si'aḥ im Nesi Medinat Yisrael* (1996); Y. Kotler, *Hapolet: Ezer Weiẓman Kemot Shehu* (2000).

WEIZMANN, Russian family, one of whose members, Chaim *Weizmann, became the first president of the State of Israel. There were 15 children in the family. OZER (1850–1911), the head of the family, was a timber transporter and the only Jew appointed *starosta* (head of the village) in Motol. In about 1894 he moved to Pinsk and succeeded in business there. He was a *maskil*, versed in Judaism, and an early Zionist, as well as representative to the Sixth Zionist Congress (1903). RACHEL-LEAH (1852?–1939), his wife, settled in Palestine in 1920 and established the first home for the aged in Haifa. Their daughter ḤAYA (later LICHTENSTEIN; 1878–1959), a teacher, settled in Palestine in 1921 and taught at the Herzlia High School in Tel Aviv, and later in the Levinsky Teachers' Seminary in Tel

Aviv. She was the president of the Benot Berit Society from 1946 to 1950 and published her memoirs in two volumes (1947–48 and 1952–53). Another daughter GITA (later DOUNIE; 1884?–?), a music teacher, studied at the Warsaw Institute of Music (1901–05) and settled in Haifa in 1911. She was one of the founders of the Haifa School of Music (1924), now known as the Dounie-Weizmann Conservatory. A son MOSES (MOSHE; 1879–1957), a chemist, settled in Palestine in 1924, lived in Jerusalem, and in 1947 was appointed the head of the organic chemistry laboratory of The Hebrew University, where he became professor. Another brother, MIKHAIL (YEḤIEL MIKHL; 1892–1957), an agronomist and the father of Ezer *Weizman, settled in Ereẓ Israel in 1914, becoming director of the Palestine Government Department of Agriculture and Fisheries (1920–28) and manager of the Imperial Chemical Industries, Middle Eastern Zone (1928–35). Later he worked independently in industry in the development of Tel Mond. Another brother SAMUEL (SAMUIL; 1882–?), an engineer, joined the Zionist Socialist Workers' Party (Territorialist) c. 1906. He was engaged as an engineer in Kiev and during World War I in the Moscow Machine Tool Factory. After the Russian Revolution he directed industrial plants in Soviet Russia. He died after World War II in a penal camp. ANNA (ḤANNAH; 1886?–1963), a chemist, worked on the staff of the Moscow Institute of Biochemistry. She settled in Palestine in 1933 and was appointed to the staff of the Sieff Research Institute in Reḥovot (later the Weizmann Institute of Science).

WEIZMANN, CHAIM (1874–1952), first president of the State of Israel, president of the (World) Zionist Organization (1920–31 and 1935–46), and distinguished scientist. He was born on Nov. 27, 1874 (8 Kislev 5635), in the village of Motol near Pinsk, in the Russian Pale of Settlement. He was the third child of Ozer Weizmann, a timber merchant, who made his living by floating logs to and along the Vistula for processing and export in Danzig, and of Rachel-Leah, daughter of Michael Tchemerinksy (see *Weizmann family). They were married when the husband was 16 years of age and his bride less than 14. Chaim was one of 15 children, of whom 12 survived infancy and lived to old age. Chaim's childhood years were typical of the Jewish *shtetl*, an autonomous island within the vast and hostile Russian world. In his autobiography *Trial and Error* he wrote: "We were strangers to their ways of thought, to each other's dreams, religions, festivals, even languages. There were times when the non-Jewish world was practically excluded from our consciousness, as on the Sabbath, and still more on the spring and autumn festivals.… We were separated from the peasants by a whole inner world of memories and experiences. My father was not yet a Zionist, but the house was steeped in rich Jewish tradition; and Palestine was at the center of the ritual.… The return was in the air, a vague deep-rooted Messianism, a hope which would not die" (1949 edition, pp. 10–11). Weizmann's early education was imparted by a *melammed* who taught him the Bible and Hebrew grammar, and immersed him in memories of departed Jewish glory. The Weizmann Archives in Reḥovot display a Hebrew letter which young Chaim wrote at the age of 11, containing this stirring call: "For why should we look to the Kings of Europe for compassion that they should take pity upon us and give us a resting-place? In vain, all have denied: The Jews must die, but England will nevertheless have mercy upon us. In conclusion to Zion Jews to Zion let us go."

At the Realschule in Pinsk, he showed an early talent for scientific studies. His family had fallen on hard times, and the boy had to give private lessons in Hebrew and other subjects to children of wealthier Jewish families. On completing his secondary school course at the age of 18, he already displayed a versatile intellectual energy. He was known for hard and tenacious labor and was prominent among his contemporaries for a bent for ironic humor and a tendency to dominate any company in which he found himself. As it was difficult for Jews to obtain entry to Russian universities, where a *numerus clausus* was strictly applied, Weizmann set out in 1892 to study in Germany, where he enrolled at Darmstadt Polytechnic, supplementing his frugal means by teaching Russian at a Jewish school in a neighboring town. After two terms at Darmstadt, he moved to Berlin to study biochemistry at the Institute of Technology in Charlottenburg.

First Zionist Steps

In Berlin, he joined a glittering circle of Zionist intellectuals, Der Juedisch-Russische wissenschaftliche Verein, including Nachman *Syrkin, Leo *Motzkin, and Shemaryahu *Levin. It was a period of strong ideological conflict within the Zionist Movement, and Weizmann and his friends soon came under the spell of *Aḥad Ha-Am, who defined the object of Jewish nationalism in cultural and spiritual terms. In 1896, the Jewish world was electrified by the appearance of Theodor *Herzl with his revolutionary vision of separate Jewish nationhood and the establishment of the Jewish State. Weizmann and his followers were already steeped in this concept, which was not new to his generation of Russian Jews, but they were attracted by the political sweep and emotional depth of Herzl's call, despite his lack of roots in the authentic Hebrew traditions. Above all, the Russian Zionists were elated by the unexpected adherence to their cause of a sophisticated Western Jew, whose dignity of bearing contrasted with the somewhat bohemian and untidy atmosphere in which Russian Zionism flourished. Owing to a visit to Moscow during the summer vacation of 1897, Weizmann was unable to get back in time for the First Zionist Congress at Basle, but he was a delegate to the second in 1898. In the same year, he went to Fribourg University, Switzerland, to complete his doctorate. He sold his first chemical patent and, in 1901, laid the foundations of his academic career, when, at the age of 27, he became an assistant lecturer at Geneva University. From this point onward, his life was to be divided between his Zionist passion and his scientific vocation. He soon became a prominent figure in the Zionist Movement. He did not doubt Herzl's primacy, and admired the patience with which the leader pursued his political

aims; but he developed a critical attitude to Herzl's emphasis on the external forms of diplomacy and his relative indifference to the need for creating tangible social facts. On the eve of the Fifth Zionist Congress in Basle in 1901, Weizmann and his friends created the *Democratic Fraction whose aim was to break out of Zionism's diplomatic emphasis, in order to develop cultural, educational, and social institutions in Ereẓ Israel which would both symbolize and stimulate the concrete work of state-building. At this formative stage in his political evolution, Weizmann was already displaying the skeptical, hard-headed empiricism which held his visionary emotions in check. While Herzl pursued a charter from the sultan of Turkey and worked himself toward an early grave amid ceaseless interviews with European dignitaries, Weizmann and his group devoted themselves to the dissemination of Hebrew culture and published a pamphlet, *Eine juedische Hochschule*, calling for the establishment of a Hebrew university which would be Zionism's spiritual center and scientific bulwark. Hundreds of Weizmann's early letters are devoted to this project.

In 1903, the Movement was torn apart by the *Uganda controversy. The British foreign secretary, Lord Lansdowne, had tentatively suggested Jewish settlement in an area of 5,000 square miles in the East African Protectorate. The most powerful state in the Western world had taken Jewish nationalism seriously enough to offer it a territorial abode, at a time when the fearful persecution of Russian Jews seemed to make their physical rescue more urgent than anything else, and Herzl was inclined to accept the offer as a *Nachtasyl* – a temporary shelter – on the road to Zion. The Russian Jews, however, led by *Ussishkin, would not agree to a Zionism without Zion. Weizmann, deeply rooted in Jewish tradition and East European Jewry, ultimately came down on the side of Herzl's opponents. The great leader died in 1904, a broken and frustrated man, and yet a splendid figure, bequeathing his legend to the Jewish people as the symbol and portrait of its future sovereignty.

Zionism was in the doldrums, and Weizmann's post in Geneva was petering out. He felt the need for a new start and decided to leave for England in 1904 to open the second chapter in his Zionist and scientific life. In 1906 he married Vera Chatzmann (see below), a medical student from Rostov-on-the-Don, whom he had known for five years and wooed in an ardent correspondence. He had started research at Manchester University in 1905 and began to lecture and hold tutorial classes in his subject. In 1907, he was appointed senior lecturer. He maintained his ties with the Zionist Movement, and at the Seventh Zionist Congress, in 1905, was elected to the Larger Actions Committee (later called the General Zionist Council), the supreme body in inter-Congress periods. For the greater part of his remaining years, English life and culture were to excite his admiration. He was deeply impressed by the order, courtesy, reticence, symmetry, and tranquil superiority of the English temperament in its best expressions, and he had a premonition that the decisive turning point in Jewish history would come through intersection with British interests. In 1906, he had a sudden opportunity of explaining the Zionist idea in Manchester to the prime minister, Arthur James *Balfour. Balfour had been puzzled by the Zionist rejection of the Uganda opportunity and wanted to meet an anti-Ugandist who would explain this quixotic step. When Balfour asked Weizmann why he was against Uganda, the younger man, with some effrontery, asked Balfour whether, if he were offered Paris, he would abandon London. Balfour answered, "No, but London is the capital of my country." Weizmann replied, "Jerusalem was the capital of our country when London was a marsh." It was from that date that Balfour became a captive of the Zionist dream.

In Manchester, Weizmann's scientific work became more fertile than ever before. He strove to break down the social barriers which cut him off as a young foreigner from the life of British Jewry, and to make contact with a group of young Manchester Jews, Simon *Marks, Israel *Sieff, and Harry *Sacher, who, in their subsequent affluence, were to help carry him forward to the full expression of his powers. These three, together with some London colleagues, Leonard *Stein, Leon *Simon, and Samuel Landman, formed a nucleus around which British Zionism was to grow. Weizmann soon resumed touch with European Zionism. In 1907, the year in which his eldest son, Benjamin, was born, he delivered an important speech at the Eighth Zionist Congress at the Hague, making a fervent plea for practical work in Ereẓ Israel, in addition to diplomatic activity. "If we achieve a synthesis of the two schools of Zionism," he said, "we may get past the dead points … If you tell me that we have been prevented by local difficulties, by the Turkish authorities, I will not accept it. It is not wholly the fault of the Turks. Something can always be done." He pleaded that, even if a charter, such as Herzl had dreamed of, were possible "… it would be without value unless it rested, so to say, on the very soil of Palestine, on a Jewish population rooted in that soil, on institutions established by and for that population" (*Trial and Error*, p. 122).

This "synthetic Zionism," as it came to be known, was thenceforward the principle of his Zionist work and exercised a significant influence on the Movement as a whole. At the end of the Congress, he paid his first visit to Ereẓ Israel. He was acutely depressed by the experience. Zionism had hardly made any visible impression on the country's landscape. The Turkish government and the major Western powers – Britain, France, and Germany – regarded the Movement as a wild obsession. It was also held in visible contempt by the powerful Jewish communities in London, Paris, and Berlin. But it was this contact with the realities of Ereẓ Israel that stimulated him to press with redoubled energy for immediate practical work there; it was then that he laid out the program of his Zionist work for the next eight years. As chairman of the Standing Committee, he was now able to exercise more influence on the proceedings of the Congresses. At the same time, he was strengthening his roots in English life. In Manchester, he became reader in biochemistry and began to make his mark as a teacher and research worker. The course of his life and, therefore, of Zionist history was nearly changed when he was

frustrated in the hope of obtaining a professorship in Manchester, but he sought to balance academic disappointment by intensified Zionist activity. In 1914, he joined in the struggle to ensure that the language of the new Technical School (*Technion) in Haifa, established by the German-Jewish community, should be Hebrew and not German. As a scientist, he knew the limitations of the Hebrew language, but he felt that the Movement would lose its spirit once it cut itself off from its roots in the Jewish past.

World War I

The outbreak of World War I brought Weizmann from the margin to the center of Jewish history. He was now 40 years of age, holding no executive position in the Zionist Movement. Indeed, the Zionist Executive in Berlin found it necessary to reinforce its position in London by sending Nahum *Sokolow and Jehiel *Tschlenow to London. Supported by the English Zionists, by Aḥad Ha-Am, by Haham Moses *Gaster, spiritual head of the Sephardi community, and by Vladimir *Jabotinsky, who shared a flat with him in South London for a time, Weizmann embarked upon an independent effort to win political support for Zionist aims. He paid no attention to his own hierarchical deficiencies. There seemed to be a promise in the air of new opportunities to be snatched from the changing interests and fortunes of the powers. He gathered his friends around him, watched and nursed his chances, and then intervened in the central political arenas with such massive authority and sureness of timing as to change the direction of his people's history.

The link between him and the British government was created by C.P. *Scott, editor of the *Manchester Guardian*, who maintained close relations with cabinet ministers, and especially with *Lloyd George. Weizmann charmed Scott into the understanding and support of Zionist aims. The first contacts which Scott made for him were with Herbert *Samuel and Lloyd George. Samuel was then head of the Local Government Board in Asquith's Cabinet; later he was to hold the posts of postmaster-general and home secretary. To Weizmann's surprise, this cool, rational, unsentimental Jew had already been fired by the emotion of Zionism, and was even preparing a memorandum proposing the establishment of a Jewish state in Palestine after the defeat of the Turkish Empire. The prime minister, Mr. Asquith, and most of his colleagues were unimpressed by the memorandum, but Lloyd George enthusiastically accepted Samuel's approach. More surprisingly, the foreign secretary, Sir Edward Grey, revealed a sympathetic attitude. Thus, Weizmann found his field already plowed to good effect.

It was not until 1916 that he took the initiative of Zionist advocacy in British governmental circles. In that year, when the prospect of Allied victory was dim, his access to British ministers was facilitated by his successful establishment of a process that would yield acetone, a solvent needed for the production of munitions, which brought him into contact with all kinds of people in the British government, including such men as Winston *Churchill, the first lord of the admiralty, and Lloyd George, minister of munitions. In connection with his work, he moved to London, where he had more leisure for his political work. When the Asquith government resigned, Lloyd George became prime minister and Balfour, foreign secretary. Fortune had smiled broadly on Weizmann's efforts; the two British statesmen, a Welshman and a Scot, most sensitively attuned to his ideas, now held the central place in Britain's international relations.

The practical calculations which drove British statesmanship to support of the Zionist program have never been precisely explained. It is certain that one of the aims was to strengthen the British sympathies of American Jews, and especially of Zionist leaders such as Justice *Brandeis of the Supreme Court, who was a friend of President Wilson. But British policy was also inspired by the hope of keeping Palestine out of the hands of France, which, through its traditions of ecclesiastical protection, had a stronger status in the Levant. This was certainly the chief impulse which moved Sir Mark Sykes, one of the secretaries of the British War Cabinet, who met Weizmann in the early part of 1917 at the house of Moses *Gaster. Some military commentators and strategists were sponsoring an idea of a Jewish homeland in Palestine as an assurance of British interests at a strategic point along the route to India. Others were impressed by the ardor of Zionist conviction in Russia. Thus, they came together in a somewhat quixotic alliance to create a strong movement on Zionism's behalf in Whitehall. Opposition, however, came from some British Jews, led by Edward *Montagu, later to be secretary for India, and Claude *Montefiore, president of the Anglo-Jewish Association, who feared that recognition of Jewish nationhood would cast a shadow on the allegiance of Jews to countries of which they were citizens. At one stage, in 1917, Weizmann felt so frustrated by this opposition, as well as by bureaucratic obstruction to his scientific work in the admiralty, that he decided to resign his chairmanship of the English Zionist Federation, to which he had been elected that year. It was at this stage that his friend and mentor, Aḥad Ha-Am, commanded him in paternal tones to follow his destiny to the end, arguing that, since he had never been appointed by anybody to lead the Zionist Movement, there was nobody to whom he could properly submit his resignation; nothing but the commanding attributes of his own personality and the new opportunities of Jewish history had laid the charge upon him.

Weizmann went on building his structure of support and brought his efforts to a triumphant consummation in the early fall of 1917. Despite the opposition of some British Jews and skepticism in some parts of the British Cabinet, Lloyd George and Balfour eventually approved his request for a statement of sympathy for Zionist aims, and the famous *Balfour Declaration was issued on Nov. 2, 1917. The Declaration, which was Weizmann's primary achievement, was a turning point in modern Jewish history. The idea of restoring Jewish political nationhood had passed from fantasy into the world of politics. A leading diplomatic historian has described Weiz-

mann's role as "the greatest act of diplomatic statesmanship of the First World War," declaring that "not even … Masaryk and Venizelos can compare in stature with Weizmann" (Sir Charles Webster, *The Art and Practice of Diplomacy* (1961), 114). The spectacular nature of his achievement had made him the central figure in the public life of the Jewish people; he was recognized as such by Jews and non-Jews alike. His position in international life even conveyed a premonition of Jewish sovereignty. Heads of state, ministers, and high officials, behaved toward him as though he were already president of a sovereign nation equal in status to their own. He and they knew that this was not strictly true; but something in his presence and in their own historic imagination forbade them to break the spell.

Weizmann's Jewish and international eminence was immediately reflected in the tasks now laid upon him. In 1918, he was appointed head of the Zionist Commission then sent to Palestine by the British government to advise on the future settlement and development of the country. He was ceremonially received in audience by King George v beforehand. After a reunion with Jabotinsky in Cairo, he arrived in Palestine, where he was greeted rhapsodically by the Jewish community and with greater reserve by the British military authorities. The conqueror of the Holy Land, General *Allenby, showed a respectful deference, but both he and other British authorities were skeptical of Weizmann's prospects of success, unless he could achieve an understanding with Arab nationalism. Weizmann crossed to Akaba to meet Emir Feisal, son of the sharif Hussein of Mecca, and undisputed leader of Arab nationalism, to whom the British government had made promises of Arab independence throughout Syria and Iraq, but not in Palestine. Feisal made written pledges to Weizmann promising to recognize Zionist aims in Palestine, provided that the aims of Arab nationalism were achieved in Iraq and Syria. The hour of grace was short. Feisal did not obtain what he had hoped from the Allies in Syria and Iraq. He therefore felt released from his promises to Weizmann. The Arab-Jewish alliance was frustrated because its basis and conditions had been undermined by the Western Powers. In 1918, Weizmann laid the foundations of The Hebrew University of Jerusalem. In 1919, he led the Zionist delegation to the Peace Conference at Versailles, where the committee of ten victorious Allies heard him, together with Sokolow and Ussishkin, plead for international ratification of the Balfour Declaration. By this time, the influential supporters of Zionism were not confined to Britain. President Wilson, General *Smuts, and others helped Weizmann to bring about the adoption of the Mandate for Palestine. In this document, whose preamble referred to the historical connection of the Jewish people with Palestine, the realization of the Zionist dream became an integral part of international law.

The Balfour Declaration had been greeted by world Jewry as a kind of Magna Carta; the caution and ambivalence of its formulation could not dim its inner glow. When the Mandate embodying the Declaration was ratified by the international community, Jewish hopes had no bounds. In some parts of the Diaspora, the messianic fervor was so intense that Weizmann found it necessary to sound a cautious note: "A state cannot be created by decree, but only by the forces of the people and in the course of generations. Even if all the governments of the world gave us a country, it would be a gift of little worth, but, if the Jewish people will go and build Palestine, the Jewish state will become a reality."

The 1920s and 1930s

During the 1920s and 1930s, he worked within the gap between the dream and the reality. He was confronted by formidable difficulties, not all of them from without. In 1920, at the Zionist Conference in London, he was elected president of the Zionist Organization, thus achieving formally a position already unchallenged in practice. But now, for the first time, his leadership was disputed. The American Zionists, led by Justice Brandeis, openly questioned his empirical, pioneering approach and the centralized character of the organization. He was forced to defend the principles which had inspired his Zionism from the days of his youth. He could not compromise with the concept of organizational centrality; unless the Jewish people were a single historic unit, there would be no reason to justify its specifically national claims. He was convinced that a nation cannot be arranged from above; it must build itself from below. In the economic sphere, he believed that there should be an attempt to enhance the status of national institutions in the hope that they would evolve into sovereign authorities. He was suspicious of excessive emphasis on financial orthodoxy. He attached vital importance to the social originality of the cooperative villages (moshavim) and collective settlements (kibbutzim), just as he continued to foster and promote the seed of an independent Jewish culture. From his own humble origins and from the atmosphere of the Pale of Settlement he had absorbed a populist emphasis which remained with him at every stage of his career.

In any case, he was now politically indispensable. He was universally recognized as the most authoritative figure in Jewish life, and after much argument and contention he usually got his way. The position was different in his contact with the Mandatory power. The appointment of the Jew, Sir Herbert Samuel, as the first high commissioner of Palestine had messianic implications for Jews in Palestine and elsewhere. But the British administration in Palestine soon fell away from the generous visions which had inspired Balfour and Lloyd George. Its main objective now was not so much to promote the Jewish national home as to mitigate Arab resentment at its progress. Immigration was cut down. Little protection was offered to Jews attacked by Arab gunmen, and embarrassed efforts were often made to persuade the Arabs that the Balfour Declaration meant even less than it said. In these conditions, every Jewish immigrant brought to Palestine and every acre of land purchased there were the fruit of a bitter struggle which Weizmann and his colleagues had to wage with the Manda-

tory administration in Jerusalem and with the Colonial and Foreign Offices in Whitehall.

Weizmann bore the fatigue of this effort with stoic dignity and patience. He did not believe that spectacular turns of fortune, such as that which he had instigated in 1917, were part of normal historic development. He faced his querulous people with the harder doctrine of gradual evolution to be maintained by sheer hard work. A Jewish national society could be built only "house by house, dunam by dunam." The political struggle would only be resolved if diplomatic efforts were reinforced by facts more substantive than diplomacy. If the reality of a Jewish nation were created, then the recognition of it would only be a matter of time and fortune. Not all Zionists shared this view. No sooner had Weizmann emerged victorious from his struggle with Brandeis than a more serious conflict broke out between him and his friend Jabotinsky, who, in Weizmann's eyes, attached an excessive importance to the declaratory aspects of diplomacy and gave less attention to the prosaic construction of social facts. Jabotinsky's *Revisionist Party, as well as some other Zionist groups, also opposed Weizmann's proposals for the establishment of an "enlarged" *Jewish Agency, incorporating the Zionist Organization and providing a framework for enlisting the support of all Jews, Zionists, and non-Zionists, for the development of the national home. However, Weizmann, who attached historical importance to the scheme, persisted, and in 1929, after bitter and prolonged debates in the Zionist Movement and negotiations with non-Zionist bodies and personalities, the first conference of the enlarged Jewish Agency for Palestine met in Zurich, with some of the most glittering figures in Jewish life standing behind him on a common platform.

Weizmann attached great importance to the Arab problem. He thought that a major effort should be made to secure regional harmony. The key to the situation, he said, lay in "genuine friendship and cooperation with the Arabs to open the Near East for Jewish initiative. Palestine must be built without violating the legitimate interests of the Arabs. Not a hair on their heads shall be touched. The Zionist Congress … has to learn the truth that Palestine is not Rhodesia, and that 600,000 Arabs live there, who, before the sense of justice of the world, have exactly the same right to their homes in Palestine as we have to our National Home." This utterance was later to have a prophetic ring. It did great credit to Weizmann's statesmanship; on the other hand it elicited no response from Arab leaders. In 1920, 1921, 1929, and 1936, murderous attacks were launched upon Jewish communities, often with heavy loss of life. On each occasion the British government responded by penalizing the victims and rewarding the authors of the assaults.

In 1930, the British abandonment of obligations toward the Zionists was so blatant that Weizmann angrily resigned his office. A vast wave of public protest rose up against the colonial secretary in the British Labour government, Lord Passfield, whose White Paper threatened to strangle the Jewish national home. Ramsay MacDonald, the prime minister, had to acknowledge the force of public dissent by sending a letter to Weizmann in which he renewed the main assurances which Zionists considered essential in the policy of the Mandatory power.

A year later there was a stormy Zionist Congress meeting in Basle at which Weizmann was not reelected to office. He had undermined his position by refusing to placate his critics; he had even been quoted in a newspaper as holding no special brief for the idea of a Jewish majority in Palestine. This was undoubtedly a misrepresentation of his philosophy; his empirical mood always forbade him to adopt slogans which were not effective for the task at hand. He believed that a Jewish majority would ultimately be brought about, not by premature incantation but by the assiduous addition of immigrant to immigrant, house to house, village to village, city to city. The paradox of Weizmann's dismissal was underlined by the election of his closest colleague, Sokolow, as president of the Jewish Agency. This was a confession that no policy other than that of Weizmann could command support.

Hitler had now come to power in Germany; the shadow of future Jewish disaster was growing longer. Weizmann devoted the years of his removal from office to projects closest to his heart. He undertook fund-raising tours for Zionist agencies, threw himself into the work of rescuing refugees, and made special efforts to salvage for Ereẓ Israel some of the Jewish scientific talent being destroyed in Nazi Germany. In 1935, after four years of non-presidency in which his preeminence was, if anything, emphasized by lack of office, he was restored to the helm. The story of Weizmann's life between the two world wars is one of patient accumulation against obstacles created by Arab hostility, British coldness, and Jewish dissension. He saw, in spite of everything, the contours of Jewish nationhood becoming firmly set, the national home growing in cohesion and individuality: by 1939 it had a population of 450,000; its economic and technological levels were spectacular by Middle Eastern standards, although well below the best European average; but it was a source of pride for the Jewish people and, for the world, a fascinating and original spectacle. Here, and only here, the Jews faced history in their own authentic image; they were not a marginal gloss on other societies.

To preserve his personal and intellectual independence, Weizmann had clung tenaciously to his scientific interests; in the early 1930s he laid the foundations of the Daniel Sieff Institute at *Reḥovot, which later burgeoned into the *Weizmann Institute of Science, and in 1937 he made his home in Reḥovot.

A significant Zionist breakthrough was achieved in 1937, when a British Royal Commission headed by Lord Peel agreed, under Weizmann's prodding, to recommend the establishment of a Jewish state in a part of Palestine. In that plan the territorial provisions for Jewish statehood were very disappointing; the area allotted for Jewish sovereignty was little more than 2,500 square miles. But, once Jewish statehood had been proposed as a serious and practicable solution, it was never to

leave the international agenda. It may even be said that from 1937 onward the establishment of a sovereign Jewish state was only a matter of time. This brilliant achievement owed much to a remarkable oratorical success by Weizmann. Appearing before the Royal Commission, for over two hours he delivered an address of towering majesty and deep pathos. One passage in particular was never to be forgotten: "There are in this part of the world 6,000,000 people doomed to be pent up in places where they are not wanted and for whom the world is divided into places where they cannot live and places which they cannot enter." At the Zionist Congress in 1937, Weizmann proposed that the principle of partition be accepted while an effort be made to improve its territorial provisions. The Arabs rejected the entire proposal. In Britain, a majority of the House of Commons supported the plan; but the government gradually retreated from it, under the impact of Arab resistance and in obedience to a growing national timidity.

Weizmann, together with *Ben-Gurion and most – but not all – of the Palestine labor leaders, was fully aware of the limitations of the truncated state that was offered to them, but they were obsessed by the idea that the whole future of the Jewish people was in the balance. With civil war in Spain, Italian aggression in Abyssinia, and the German *Anschluss* with Austria, the international horizon was growing darker. The spirit of appeasement and cowardice to be later reflected in the Munich Agreement had its reflection in the British attitude toward the Jewish national home. In 1939, after conferences at St. James' Palace, in which the Jewish delegation was again led by Weizmann, a White Paper was published which effectively proposed to bring an end to Zionist aims. Severe restrictions were imposed upon the purchase of land by Jews; and after five years, during which a maximum of 75,000 immigrants were to be admitted, no further immigration could be admitted except in the improbable contingency of Arab consent.

In the summer of 1939, Zionist leaders assembled at Geneva for their biennial Congress in a mood of tragic expectation. A great doom was in the making, and it seemed to be coming on relentlessly. While the Congress was debating the British betrayal of its obligations to a small people which in Weizmann's words was "battered and bleeding from a million wounds," the news came of the Soviet-German agreement which heralded the assault on Poland and the outbreak of World War II. In the closing moments of the Congress Weizmann loomed with tragic tenderness above the delegates, many of whom knew that their own fate, as well as that of the communities of which they were members, was horribly sealed.

World War II

When World War II broke out, Weizmann immediately promised the British government all possible aid by the Jewish population in Palestine and the Jewish people outside. He also tried to renew the scientific cooperation which had enhanced his political status in Britain in World War I. His efforts now were less fruitful. Although hard pressed for manpower, the British government found ways of delaying the proposed formation of a Jewish military unit. Weizmann's scientific offers were rebuffed. In 1942 his son Michael was killed in action with the Royal Air Force over the English Channel. In the early years of the war, his influence and pressure did not enable him to prevent such tragedies as that of the vessel *Struma*, which sank with Jewish refugees aboard in the Black Sea, owing to the refusal of the Mandatory government to give them entry to Palestine.

The national home was not static during the war years. Its population grew by immigration, authorized and unauthorized; its manpower increased its defensive capacity by massive enrollment in the British forces; and its incipient industrial potential found an outlet through supplies and manufacture in support of the Allied war effort in the Middle East. But the main thrust and accent of Weizmann's work were aimed at obtaining a satisfactory political settlement at the end of the war. In London, he invested much effort and persuasion on Winston Churchill, who gave him frequent and sometimes dramatic assurance that he would not let Zionism down. But there was nothing in the daily practice of Whitehall, or of the administration in Jerusalem, which gave any support or reinforcement to Zionist hopes. In any case it was evident that the balance of world power was changing. To Weizmann, as well as to Ben-Gurion, it was evident that the United States was destined to have a strong and perhaps decisive voice in the Middle Eastern future. In 1941 and 1942, Weizmann spent much time in New York and Washington in a sustained effort to enlist American leadership on behalf of Zionist aims. In a notable article, written in the New York quarterly, *Foreign Affairs*, he outlined the project for the establishment of a Jewish commonwealth in Palestine. In April 1942, under Ben-Gurion's initiative, this concept became official Zionist policy. The resolution, adopted at a conference in the Biltmore Hotel (the *Biltmore Program), spoke of a Jewish commonwealth in the entire area of Western Palestine. When the physical danger to Palestine was removed through British victories against Rommel's armies in the western desert, Zionist prospects appeared temporarily to improve. In August 1944, Churchill instructed his secretary of state for war to reply affirmatively to Weizmann's request for the formation of a Jewish fighting force. At the same time, it became known that British ministers were actively discussing and analyzing various partition plans, which would involve the establishment of an independent Jewish state as soon as the war came to an end.

But these hopes were fragile and transient. As the fearful dimensions of the Jewish Holocaust in Europe became known, Weizmann began to wonder whether any victory for Zionism would come in time to save his people from a fatal and horrible depletion of its resources and strength. The assassination of the British minister of state in Cairo, Lord Moyne, by Jewish underground fighters acting against the will and authority of the Jewish Agency, brought about a temporary alienation of Churchill from his Zionist sympathies. The work on partition proposals was suspended, and the British government turned

instead to the task of suppressing the growing movements of Jewish resistance in Palestine.

To add to his burdens, Weizmann found that his leadership was no longer unquestioned throughout Palestine Jewry. He arrived in Jerusalem on Nov. 15, 1944, and later celebrated his 70th birthday amid a deep chorus of public affection. But among the leadership there was a different story. New forces were jockeying for position, and Ben-Gurion no longer found himself working in fraternal association with his older chief. In particular, there was a demand, even in responsible Zionist circles, for a more militantly anti-British attitude than Weizmann, with all his frustrations, seemed willing to accept. When the war with Germany ended in May 1945, Weizmann's troubles were compounded by the first serious breakdown of his health. He became affected by glaucoma and was condemned to temporary blindness and tense, agonizing operations. Less than two months after the end of the German phase of World War II, he was shatteringly disappointed by a letter that he received on June 9, 1945, from Churchill, stating: "There can, I fear, be no possibility of the question being effectively considered until the victorious allies are definitely seated at the peace table." Weizmann's hope that a substantive move would be made as soon as the German war was over, had thus been shattered. Churchill was winding up his historic ministry with the 1939 White Paper unabrogated, with no commitment on the record, and with Weizmann left high and dry, standing before the Jewish people baffled, enraged, and empty-handed. A week later Churchill was out of office and, a few months after that, his voice from the opposition benches was castigating the new Labour government for not giving Zionism its due. By this time President Roosevelt was dead. He had shown an ominous coolness toward Zionism at the end of his final presidency; but his administration contained many stalwart supporters of Weizmann's cause. Now, with Churchill and Roosevelt both gone, Weizmann had to begin again.

The Bevin Period

In London, he was to know nothing but discouragement and defeat. The Labour government, under Prime Minister *Attlee and Foreign Minister *Bevin, turned its back drastically on previous British commitments and on its own far-reaching promises of support for Zionism. In the United States the Zionist cause prospered more; but when President Harry S. *Truman urged the Attlee-Bevin government to admit 100,000 Jewish *displaced persons from refugee camps in Europe to Palestine, he met with a flat refusal. A joint Anglo-American commission of enquiry recommended the immediate entry of 100,000 immigrants, but Attlee and Bevin found reasons for evading the recommendations of a body which they themselves had appointed. The deadlock was sharp. It was constantly deepened by an almost inevitable growth in Jewish resistance activities in Palestine. The relations between Britain and organized world Jewry became so embittered that the years of grace, beginning with the Balfour Declaration and the Mandate, were almost entirely lost from memory. It was against this unpromising background that Weizmann's position as leader of the Zionist Movement came to an end. When the first postwar Zionist Congress assembled in Basle, in 1946, the British connection and the Zionist attitude toward the Mandatory power were the fundamental issues before it. Weizmann returned to London, defeated as a champion of the "Anglocentric" point of view, although he had in fact no illusions left about the attitude of the British government toward Zionism.

With leadership passing into other hands, it seemed as if Weizmann's public life was finished. There was, however, to be a dramatic and moving series of epilogues. In February 1947, the last Zionist efforts at reaching a solution within the British Mandatory framework ended in failure. The British government submitted the future of Palestine to discussion and recommendation by the General Assembly of the United Nations. Weizmann now held no official position in the Zionist Movement, but it was taken for granted that he must be a principal spokesman of the Jewish national cause in what was evidently going to be a crucial and decisive phase. When a United Nations special committee went to Palestine in the summer of 1947, its members conferred in detail and at length with Weizmann, who now openly advocated a partition compromise. Later in the year, despite the burdens of age and illness, he went to New York, where he made a moving and unforgettable appeal to the General Assembly. He knew that this would be his last appearance at the bar of the nations. He showed all his old qualities of eloquence and sardonic humor. He made light of the Arab spokesmen's assertion that the Jews were the descendants not of the Hebrew kingdoms, but of the Khazars of southern Russia. "It is very strange, all my life I have been a Jew, felt like a Jew, and I now learn that I am a Khazar." On the idea that the Jewish national home should accept minority status within an Arab state, he said, "Those of us who made our homes in Palestine did not do so with the object of becoming Arab citizens of the Jewish persuasion." In a final grand and weary gesture he reminded the General Assembly's committee that it was meeting under the providence of history. "The Lord shall set His hands the second time to recover the remnants of His people, and He shall set up an ensign for the nations and shall assemble the outcasts of Israel and gather together the dispersed of Judah from the four corners of the earth."

In the next few months he was destined to be the primary architect of two achievements: the retention of the Negev area in the United Nations plan for a Jewish state; and the spectacular recognition of Israel by the United States. He secured these results by capturing the trust and imagination of President Truman. In each case the president, under Weizmann's urging, overruled powerful interests within his own administration which favored a more reserved attitude toward Zionism and a purposeful attempt to win Arab support for American policies. Thus, on Nov. 29, 1947, when the United Nations voted the partition proposal with the Negev included in the Jewish

state, and on May 14, 1948, when Palestine Jewry proclaimed its statehood, Weizmann stood in the center of his people's gratitude. He had been specially insistent that the Palestine Jewish leadership proclaim Jewish statehood on the withdrawal of the British, no matter what was said or proposed by the United Nations or the major powers. It was a strange role for the so-called "moderate" to be summoning the Jewish people to the utmost intransigence and tenacity. His feeling was that war with the Arab world had become inevitable. For that very reason it was essential that the ordeal be faced from the starting point of an existing Jewish statehood.

May 14, 1948, was a red-letter day for Weizmann in New York. His colleagues and rivals in Tel Aviv had proclaimed the Jewish state to whose establishment he had dedicated his life and dreams; and President Truman, in direct response to Weizmann's letter, had authorized the recognition of Israel by the United States. Moreover, before the day was out, a telegram had come from Israel on behalf of the Palestine labor leaders, expressing their intention to propose him for the presidency of the new state. "Mine eyes have seen the coming of the glory of the Lord," wrote Justice Felix Frankfurter; "happily you can now say that and can say what Moses could not." Albert Einstein wrote to him, "I read with real pleasure that Palestine Jewry has made you the head of their state and so made good, at least in part, their ungrateful attitude toward you." A few days later Weizmann went to Washington, where he was received by President Truman with the full trappings belonging to his presidential status. He secured from Truman a promise to finance Israel's early economic development by a loan of $100,000,000; and to establish full diplomatic relations with Israel once its first government was democratically elected.

First President of Israel

In February 1949, the first elected parliament of Israel, meeting specially in Jerusalem, elevated Weizmann from the presidency of the Provisional State Council to the title of president of the State of Israel. But age and sickness had now overtaken him at a point at which he could give little consecutive service to the state. He was sufficiently alert and competent to express fierce resentment and surprise at the rigid limitations of his office. He found himself virtually confined to those ceremonial activities in which he had at no time in his life shown the slightest interest. The Israel government of the time showed a lack of imagination and a failure of historic deference. Weizmann's name was not included among those who had signed the *Declaration of Independence; and even his request to receive the Cabinet minutes regularly was not fully answered.

His final months were spent in sharp ambivalence of feelings. On the one hand, he had, unlike Moses, passed beyond Pisgah into the Promised Land. His historic imagination could not fail to be stirred by the thought that he had come the full circle, from Motol, near Pinsk in the Russian Pale of Settlement, to the presidency of an independent Jewish state, which to less sensitive minds had seemed such a wild and chimerical dream. The Weizmann Institute of Science, which was inaugurated on Nov. 2, 1949, as a growing complex of laboratories and libraries, already showed promise, later amply fulfilled, of placing Israel high in the universal enterprise of scientific research. On the other hand, he chafed at his inability to impress the new society with his own message of social progress, intellectual integrity, aesthetic refinement, and manifest dedication to peace. Israel had been born in violence and conflict; it continued to live an embattled existence.

There were times when Weizmann was seized by a poignant concern for Israel's inner quality; but, whenever he fell into doubts and regrets, he looked through his window at Reḥovot upon the verdant rolling plains and rich orange groves surrounding the scientific laboratories established under his inspiration. On a clear day his gaze would go as far as the Judean Hills. The landscape in between was dotted with villages and townships indicative of the new impetus given to Jewish national vitality. And then a deep contentment would come upon him, and his mind would become serene, as befitted a man who to a degree unshared by any figure in contemporary history had seen an improbable vision translated, largely through his own effort, into vibrant and solid reality. After a long and painful illness, which for some months left him entirely incapacitated, he died on Nov. 9, 1952. He was survived by his wife, whose implacable loyalty and devotion had sustained and consoled him throughout the years; and by his elder son, Benjamin. His grave was situated at his own wish in the garden of his home in Reḥovot. At the initiative of his closest friend, Meyer *Weisgal, who had helped him found the Weizmann Institute, a graceful plaza was constructed in his memory by *Yad Chaim Weizmann* (Weizmann National Memorial), with the assistance of the government and the Jewish Agency. His archives and library were established in the Weizmann memorial area.

Weizmann's autobiography, entitled *Trial and Error*, appeared in 1949. A selection of his speeches from 1901 to 1936, entitled *Devarim*, appeared in four volumes in 1937. Some of his speeches and essays include: *Eine juedische Hochschule* (1909) written together with M.M. *Buber and B. *Feiwel; *Die Hebraeische Universitaet in Jerusalem* (1913), a speech at the laying of the cornerstone for The Hebrew University (1919); *The Jewish People and Palestine*, a statement made before the Palestine Royal Commission on Nov. 25, 1936, on Palestine's role in the solution of the Jewish problem in *Foreign Affairs*, 20 (1942), 324–38; *We Do Not Want to Return to the Past* (1946); *We Warned You, Gentlemen* (1947). His letters and papers are being prepared for publication. The first volume of the *Letters and Papers of Chaim Weizmann* appeared in 1969 and publication was completed in 1980 with the 23rd volume.

[Abba Eban]

As Chemist

In 1910 Weizmann became associated with a British team seeking (unsuccessfully) to make synthetic rubber. A possible starting point was butanol. Weizmann, who had been study-

ing chemical reactions effected by bacteria, isolated a starch-decomposing anaerobic organism *Clostridium acetobutylicum* which produced butanol, acetone, and ethyl alcohol by fermenting a mash of cooked corn. In World War I the ministry of munitions needed great quantities of acetone, and Weizmann went to work in the Lister Institute and at the Admiralty Cordite Factory, Poole. His efforts were directed toward developing his laboratory work into a technical process – the first use of a biological process for industrial production (other than the age-old procedures for making alcoholic beverages). Because there was insufficient grain in wartime Britain, plants were set up also in India, Canada, and the U.S. After the war the U.S. plants became the Commercial Solvents Corporation, which went on making acetone by the Weizmann process for many years, until overtaken by purely chemical processes. Later he worked on naphthacene derivatives from phenols and phthalic anhydride, on the photochemistry of aqueous solutions of amino acids, and on the reaction of acetylene with ketones, but mainly on the production of aromatic hydrocarbons by high-temperature cracking of petroleum. This process was developed after the war at Partington, Lancashire, by the Manchester Oil Refinery and Petrochemicals Ltd., the plant being later acquired by Shell. Weizmann wrote many papers and took out some 100 patents (in which he called himself Charles Weizmann).

[Samuel Aaron Miller]

His wife, VERA (née Chatzman; 1882–1966), was the daughter of an assimilated well-to-do Jewish family beyond the *Pale of Settlement in Rostov-on-Don. She studied medicine at the University of Geneva, where she met Weizmann, and she married him in 1906. Soon after their marriage they went to Manchester, where she worked for a number of years as a medical officer at Manchester clinics for schoolchildren. At all times she was of great help to her husband in his Zionist work. She was a co-founder of *WIZO, for many years the chairman of its executive, and later its honorary president. During World War II she was chairman of *Youth Aliyah, and after 1948 she devoted much of her time and effort to Magen David Adom and the organization for disabled veterans. Her memoirs, *The Impossible Takes Longer*, were published in 1967.

WEIZMANN INSTITUTE OF SCIENCE, a center of scientific research and graduate study, is located on 300 acres (1.2 sq km) of lawns and gardens in the town of Reḥovot, Israel – 14 miles (22 km) south of Tel Aviv and 35 miles (50 km) west of Jerusalem. In 1996, the Institute community numbered 2,400 scientists and support staff, including more than 850 scientists-in-training pursuing advanced degrees at Weizmann's Feinberg Graduate School. In 2005 it numbered 2,500 scientists.

The Institute's campus of some 40 buildings grew out of the Daniel Sieff Research Institute, founded in 1934 by Dr. Chaim *Weizmann, the distinguished scientist and Zionist leader President of Israel. The Sieff Institute was established in memory of Daniel Sieff by his parents, Israel and Rebecca *Sieff of the United Kingdom. On November 2, 1949, with the agreement of the Sieff family, the Institute was renamed and formally dedicated as the Weizmann Institute of Science.

The Institute is administered by a board of governors and an executive council. It is headed by a president assisted by four vice presidents and the deans of the five faculties and the Feinberg Graduate School.

The Institute consists of 18 research departments grouped into five faculties: Biology (Biological Regulation, Immunology, Molecular Cell Biology, Molecular Genetics and Neurobiology), Biophysics-Biochemistry (Biochemistry, Membrane Research and Biophysics and Plant Genetics), Chemistry (Chemical Physics, Environmental Sciences and Energy Research, Materials and Interfaces, Organic Chemistry and Structural Biology), Mathematical Sciences (Applied Mathematics and Computer Science, and Theoretical Mathematics), and Physics (Condensed Matter Physics, Particle Physics and Physics of Complex Systems).

To promote the interdisciplinary contacts which increasingly characterize today's front-line science, the Institute has created 19 research centers, generally organized as intellectual rather than physical entities.

The presidents of the Institute have been: Chaim Weizmann (1949–52); Abba *Eban (1959–66); Meyer W. *Weisgal (1966–69); Albert B. *Sabin (1969–72), Israel Dostrovsky (1973–75), Michael Sela (1975–85), Aryeh Dvoretzky (1985–88) and Haim Harari (1988–2001), and Ilan *Chet (2001–). From 1952 to 1959, Meyer *Weisgal headed the Institute as chairman of the Executive Council.

The Institute's budget (approximately $181 million in 2004/5) is covered mainly by funds from the Israel government (36%), private donations and research grants (24%), as well as financial and other revenues.

Institute scientists acted as pioneers in various areas of science locally. They were the first to introduce cancer research in Israel, to design and build the first computer in Israel and one of the first anywhere, to establish the first nuclear physics department, the first research accelerators for the study of atomic nuclei, the first and, so far, only, submicron research facility for advancing the electronics industry, and the first advanced solar energy research facility in Israel and one of only a handful worldwide.

More than half of all Institute research is aimed – in one way or another – at battling cancer. Among past achievements

is the identification of the genetic origins of some types of leukemia as well as of genes that induce or suppress malignancies. Major efforts are directed at the study of autoimmune diseases, and two medications for multiple sclerosis based on Institute research are already reaching patients. Basic research is elucidating brain structure and function and neurological disease.

At the solar facilities, researchers pursue the development of new ways to harness the sun's energy. Scientists engaged in environment-related studies analyze local aquifers, develop water protection and purification systems. Institute chemists work in areas ranging from basic investigation of the elements to the development of new materials. Photochromic materials that reversibly darken when exposed to sunlight are the result of a Weizmann Institute discovery.

Accomplishments of Institute mathematicians include the development of "smart cards" and decoders that prevent unauthorized access to confidential computer data and commercial satellite TV, and software architecture allowing people to meet "virtually" through the Internet.

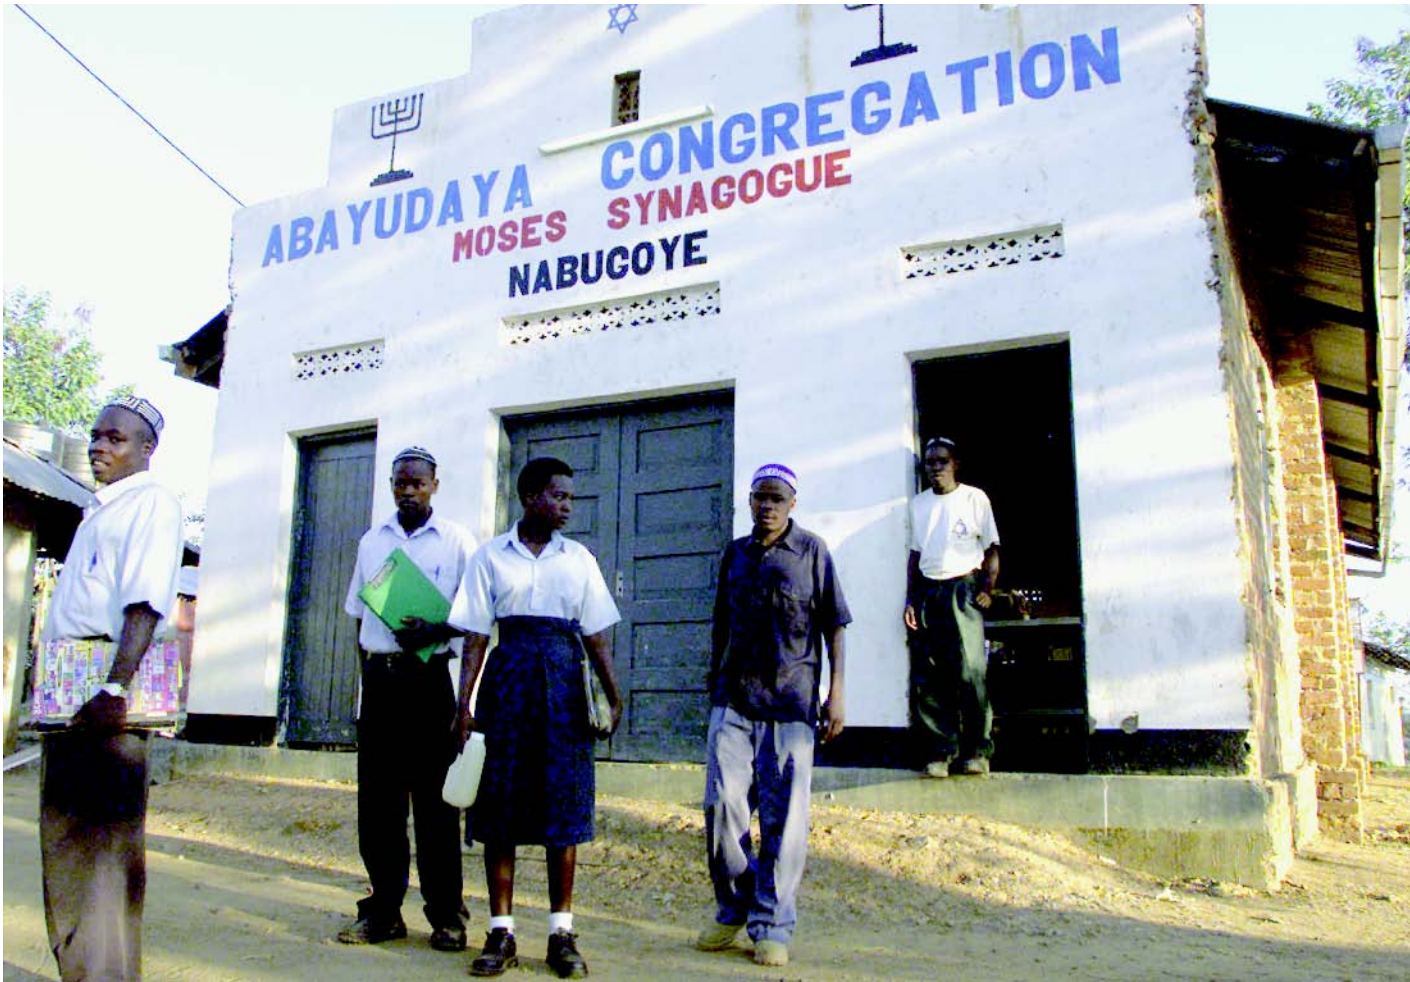
Institute physicists first proposed the existence of an elementary particle called the top quark, and contributed to the identification of another particle called a gluon. They now conduct advanced experiments at the European Laboratory for Particle Physics (CERN) in Geneva and at the DESY Laboratory in Hamburg. In the new field of submicron research, scientists are growing crystals in layers no more than a few atoms thick which will result in smaller and faster computer chips for the electronics industry.

The Institute's Feinberg Graduate School, operating under charter from the State of Israel and the Board of Regents of the State of New York, confers M.Sc. and Ph.D. degrees in the life sciences, chemistry, physics, mathematics, computer science and science teaching. More than 10 percent of the student body hails from abroad and English is the official language of instruction. Over the years the Feinberg Graduate School has produced more than 30% of Israel's Ph.D.'s in science and its alumni hold key positions both in Israel and overseas.

The Science Teaching Department has played a pioneering role in raising the level of science teaching in primary and secondary schools, and the Youth Activities Section's extracurricular programs introduce thousands of Israeli youngsters each year to the thrill of scientific discovery. The Section also runs the Institute's Garden of Science, a unique hands-on outdoor science park.

The Institute's Yeda Research and Development Company was founded in 1959 to promote the commercial applications of Institute research. By the mid-1990s some 10% of the Institute's operating budget was derived from Yeda's activities. Yeda has been involved in the licensing of scores of patents and technologies to industry, and in the establishment of numerous spin-off companies in Israel and abroad.

The Weizmann Institute played a key role in the founding of Israel's first high-tech industrial park, Kiryat Weizmann, and a new science-based industrial park now under construction near the campus.



The Institute maintains strong ties with preeminent research institutions throughout the world, attracts many foreign scientists (about 600 a year work in its laboratories for varying periods of time), and is a venue for international scientific conferences.

Yad Chaim Weizmann is a memorial area covering Dr. and Mrs. Weizmann's private estate, their graves near their former home and a memorial plaza. It was established after Weizmann's death in 1952 by the government of Israel and the Jewish Agency Executive and incorporated as a separate institution in 1955. The primary objective of Yad Weizmann was to promote the "Weizmann heritage" in humanitarian, cultural and aesthetic terms. To this end, the memorial foundation has, among other programs, sponsored lectures in the sciences and humanities by leading world scholars and savants, and organized a variety of events. The foundation is responsible for maintaining the Weizmann Archives and for publishing more than 25,000 of Weizmann's papers and letters in 25 volumes. Its permanent exhibition reflects Weizmann's lifelong activities as scientist and statesman. Yad Weizmann conducts tours of the historic home of Dr. Weizmann designed in the 1930s by architect Erich Mendelsohn.

In 2005, the worldwide Jewish population was estimated to be close to 14 million persons, with its largest numbers in North America and Israel. Despite the large concentrations in these two geographical areas, there are Jews all over the world who come from a variety of racial and ethnic backgrounds. Here are a few faces that illustrate the diversity and vibrancy of Jewish life in its many world-scattered communities.

COMMUNITIES
